During the first generation of the period, the great question was the national decision between Protestantism and Roman Catholicism. If "the ancient Church of Scotland died of sheer moral decay through the unfaithfulness of its own ministers," and the reformed religion commended itself to the highest consciousness of the people, yet the national triumph of the Reformation was essentially assisted by the mutual jealousy of France and Spain, which relieved the pressure upon Protestantism in England, and indirectly upon Scotland. The varying phases of the religious revolution under the numerous regencies during the reigns of Mary and James VI., as well as under the active government of Mary, are firmly and lucidly presented. In the delineation of Mary, one of the most trying tasks of the historian, Prof. Hume Brown displays judicial ability and discretion. He allows for her very exceptional difficulties, admits "her brilliant gifts," her promptness, her decision, her resourcefulness; but

Of her grave defects as a woman and as a queen, her career can leave us in no manner of doubt. In self-respect, in self-control, in that balance of mind and character which gives weight to judgment and action, Mary was so grievously deficient that we can only regard it as the irony of destiny that so ill-assorted a part was assigned to her in the scheme of things.

Apart altogether from the Casket Letters, the author holds that "from Mary's relations to the various parties, and from her conduct before and after the deed, we are justified in concluding her guilty" of connivance at the murder of Darnley. He rises to the occasion in the description of the strategic contests of Knox with Mary of Lorraine, and with her clever and perverse daughter. The part played by Moray in the religious drama of the time has been largely overshadowed by the popular personality of Knox; and it is gratifying to find that Dr. Hume Brown points out that "of the two men it was Moray who indubitably did the most to ensure the success of the Scottish Reformation."

Under the next four Kings, during more than a century, the religious struggle proceeded, with more bitterness and more calamitous incidents, but on different lines of controversy. The divine right of kings was opposed by the divine origin of presbytery; and the pretensions of the Crown were resisted by the convictions of the Kirk, supported by the mass of the people. This disastrous policy, inaugurated and pushed in practice to despotism by James VI., fanatically enforced by Charles I., upheld by relentless coercion by Charles II., and exacerbated by the Roman Catholicism of James VII., necessarily involved continual turmoil and the eventual expulsion of the Stewart line of Kings. The motives of parties, and the co-operating forces, foreign as well as domestic, are carefully noted by the author, and the great movements, ecclesiastical and military, are well described. No previous historian, we should say, has done such scrupulous justice to the aims and acts of James VI. Prof. Hume Brown touches briefly, at points, on the social, economic, and literary progress of the country, but not so fully as modern ideas of historical presentation require. At the same time this volume strengthens the claim of the first to a place in the working library of the student of history.

Historical Essays by Members of the Owens College, Manchester.

Published in commemoration of the Jubilee (1851-1901).

Edited by T. F. TOUT, M.A., Professor of History at the Owens College, and JAMES TAIT, M.A., Lecturer in Ancient History at the Owens College. (Longmans.)

At the close of the first fifty years of its existence the Owens College may well look back with pride on all that it has accomplished and derive from its past success encouragement for the future. While it has devoted itself chiefly to natural science and technical education, it has done first-rate work in other lines of study, and especially, as this volume bears witness, in history. We have here twenty essays, five by past and present teachers, and fifteen by past students of history at the college, all of them worth printing, and most of them of no

small value. The book is, indeed, a memorial creditable alike to the college and to the professors and others who have built up its school of history. In that light, and apart from the merits of this or that essay, it is specially important as a proof of the completeness and variety of the work carried on by the faculty. History has many aspects, and, if it is taught thoroughly, will attract students of different tastes. Here we have satisfactory evidence that it is so taught at Manchester, for this volume contains studies on political, religious, social, economic, biographical, and local history, and, though no one of them deals specially with constitutional questions, they afford satisfactory evidence that that branch of history also receives adequate attention.

In political history we have an able essay by Prof. Tout on the parts played by the Welsh and the Marchers in the "Barons' War" of the reign of Henry III. The close connexion between the affairs of England and Wales during that struggle has hitherto been too much overlooked by historians, and this essay is, to some extent, an excursion into untrodden country. Each crisis in the English struggle which had so strong an influence on constitutional development was largely determined by the attitude taken up either by Llewelyn or by the Marchers; and conversely, as Mr. Tout points out, Llewelyn's principality owed its existence to the general disturbance in England and to the feuds of the Marchers, as well as to the indomitable spirit of his own people. The story of the quarrels and petty wars of the Marchers is difficult and dreary reading, though, if we knew more about it, we should doubtless find it stirring enough. Its picturesque incidents, however, are for the most part unrecorded, and Mr. Tout, excellent as his work is, does not handle his subject in an attractive manner. In a shorter and more brightly written paper Mr. Dunlop sketches the Irish policy of Henry VIII., and discusses, with marked ability, the causes of its failure. A hitherto obscure question is settled by Mr. Tait, who shows that there is no longer any room for doubting that Richard II. caused his uncle Gloucester to be murdered at Calais. His argument is, briefly, that Parliament was informed of the duke's death some time before it took place, and that Richard delayed the murder because Gloucester refused at first to make a confession. The mystery attending the mission of Rickhill, who was sent over to procure the confession, and the omission of certain clauses in the confession as made public, explain difficulties which caused the late Bishop Stubbs to come to the conclusion that "it is not clear that Gloucester was murdered."

The biographical side of history is illustrated by a pleasing essay by Dr. Ward on the Princess Elizabeth, daughter of Elizabeth of Bohemia, a learned disciple of Descartes, who, as Abbess of Herford, gave shelter and hospitality to Labadie and his followers, until they were forced to flee elsewhere by a threatened invasion. The Labadists, a small and unpopular sect, which practised community of goods, and, according to vulgar report, carried the doctrine of community still further, included in their number more women than men, some of them women of quality. An unsuccessful attempt at union with them was made by the English Quakers, and brought Elizabeth into communication with Penn and Robert Barclay. Two essays deal with Napoleon I.: one, of considerable interest, on the sources from which he derived his military education, is by Mr. Spencer Wilkinson; the other, on his detention at St. Helena, by Mr. J. H. Rose, who, writing on a matter peculiarly his own, vindicates the British Government and Sir Hudson Lowe from charges lately revived by Lord Rosebery in his brightly written volume on the "Last phase" of Napoleon's life. A fragment on Sebastian Gryphius, the famous Lyons printer, by the late Mr. R. Copley Christie, will be read with melancholy interest by all—and they are not a few—who know how much the cause of good learning lost by the author's death. His splendid library, now at the Owens College, contains, we are told, not fewer than six hundred volumes printed by Gryphius, some, of course, common enough, others, like the magnificent Latin Bible of 1530 and the two tracts edited by Rabelais as genuine productions of ancient Romans, though really written one in the fifteenth and the other in the early years of the sixteenth century, of great rarity and value. Economic history is represented by essays on the loans of the Italian bankers to Edward I. and Edward II., and on the "Beginnings of the National Debt." Under the head of religious history we may, perhaps, class Mr. Fiddes's interesting inquiry into the origin of Caesar-worship, which, as he shows, was not a

sudden or surprising phenomenon, but rather a development from the religious position accorded in the provinces to certain Roman governors, and in Rome itself to democratic leaders such as the Gracchi, after death, and the prætor Gratidianus in his lifetime. An essay on the contribution of the Moravians to the Evangelical revival in England is of some interest so far as the history of the Moravian Church is concerned, but does not, we think, sufficiently illustrate its contribution to the Evangelical movement, for the author contents himself with the brief and unsupported remark that it introduced a gentler and more humane type of piety through its authorized hymn-book. We do not deny this theory, and only complain that we are asked to accept it without proof. Mrs. Tout's careful and thorough treatment of the legend and cult of St. Ursula and the eleven thousand virgins must not be passed by without a word of well deserved praise. Two essays deal with local history: Mr. Clemesha's highly satisfactory sketch of the Gild Merchant of Preston, and a narrative of the siege of Manchester in 1642. Finally, our readers will give a special welcome to two able and suggestive papers on the teaching of history in secondary and in elementary schools by Mrs. Haworth and Mr. T. Bateson respectively.

Advanced Physiography. By A. MORGAN, M.A., D.Sc. (Price 4s. 6d. Longmans.)

Physiography is defined by the author in his opening words as the study and explanation of the chief phenomena of Nature. These (following the Science and Art Department) are taken to include portions of physics and the elements of meteorology, terrestrial magnetism, physical geology, and astronomy; but not such important subjects as the geographical distribution of animals and plants, the laws of variation, and the theory of evolution. Thus, we may have a description of the fauna of the deep sea, but not of that of the dry land, and a discussion of underground temperature without any reference to the laws of the conduction of heat. For this the author can hardly be accounted responsible, but we could wish that he had omitted the first five chapters, which, after all, are not full enough to be of much value to previously uninformed students, and, assuming his readers' knowledge of elementary physics, had devoted the space so gained (about one-fifth of the whole) to the fuller treatment of physiography proper.

Taking the book, however, as a reflection of the syllabus, and remembering the wide range it covers, it must in every way be regarded as a satisfactory work. The style is fresh and interesting, and this is due purely to the author's manner, for historical or personal notes are few and far between. In spite of the amount of material—and it is wonderful how much has been compressed within the limits of four hundred pages—the book is never wearisome, even when several chapters are read consecutively, a result which is probably owing to the comparatively full discussion of the more important subjects. To take one example: in addition to the orthodox account of the formation of the rainbow, we have an explanation, rendered clearer by diagrams, of the circularity of the bow, and the extent of the arch or its invisibility, as depending on the altitude of the sun.

The illustrations (more than two hundred in number) are a special feature of the book, and one to which attention should be directed. Many of them are reproductions of recent photographs, and are of considerable interest, such as those illustrating the different forms of forked lightning, the solar prominences, and various star-clusters and nebulae. More than one-third of the figures are copied from other books, and the author has in all these cases noted the sources from which they were derived. Some are taken from the "Challenger" Reports, but the majority from text-books of physics, geology, and astronomy. Among the best illustrations are those of the submerged forest on the coast of Cheshire, the bird's-eye view of the Niagara Falls and River, the striated rock in the glacier-garden at Lucerne, and the copies of two of Mr. Lowell's drawings of Mars.

The extent of the debt to text-books in the matter of illustrations suggests that the author's knowledge is largely drawn from such works. Many discoveries and investigations of recent date are described, but, with few exceptions, they are not those of the last year or two. They have already found a place in other elementary works. Thus, we see no reference to Mr.

Griffith's redetermination of the mechanical equivalent of heat, to Mr. Marr's papers on lake-basins, or to M. de Montessus' researches on the geographical distribution of earthquakes. Nor is there any allusion to the occurrence of seiches in lakes, the surface of zero-strain in the earth's crust, thrust-planes or reversed faults, and but little to the recent interesting observations of very distant earthquakes, and their bearing on the conditions of the earth's interior. The exceptional cases—such as the new star of the present year and the audibility of the minute-guns fired during the funeral of our late Queen—if anything, support the view that the author draws but little from the original sources of our knowledge.

In a work of such wide extent, it is only natural that a few errors and omissions should occur. Thus, it is not correct to say that, within the limit of elasticity, solids like indiarubber and glass are perfectly elastic. The description of the rainbow, good as it is, contains no reference to the secondary bow or the brighter space within the primary; and the author would add point to his accounts of the rainbow and of the colours of the sky if he were to give a brief description of the formation of monochromatic red bows at the time of sunset. Again, those who believe that the earth is solid at the centre as well as at the surface attribute the solidity at the centre to pressure and not to cooling by conduction, for the rate of cooling must be imperceptible at the depth of a very few hundred miles. The form of horizontal pendulum now used by Prof. Milne is incorrectly described, and its principle (which is very simple) is not explained. Also, the statement with regard to the depth of seismic foci is somewhat antiquated, and the modern views of the causes of earthquakes are not completely indicated.

We have touched on some points on which change seems to us to be necessary or expansion desirable. They are few compared with the total number of subjects considered. But, that we may not appear to give a wrong impression of the book, we repeat, in concluding, that it is clearly written and full of interest. It is, indeed, one of the best on the subject that we have yet seen.

The Choephoroi of Æschylus. With Critical Notes, Commentary, Translation, and a Recension of the Scholia. By T. G. TUCKER, Litt.D., formerly Fellow of St. John's College, Cambridge; Professor of Classical Philology in the University of Melbourne. (Price 12s. 6d. Cambridge University Press.)

Prof. Tucker has, on the whole, achieved a success with this edition. Of course, as he himself says, he does not say the last word on Æschylus; but he does sum up the results of recent study in so far as they touch the "Choephoroi," and adds something more. Prof. Tucker, we are glad to see, follows the judicious principle of most modern editors, and gives greater importance to the MSS. than used to be done. It is true there are many and manifest faults in the best MSS.; but editors have been very perverse in dealing with MS. evidence, not so much endeavouring to understand what they read as to give what they thought their author ought to have written. The evidence of papyri for the essential soundness of our texts has not been lost on Prof. Tucker. By a change in punctuation here, and an apt parallel there, he brings sense out of more than one passage which has puzzled generations of scholars; and where he does adopt a conjecture, although all his changes have not the same power to convince, he is careful both to keep close to the *ductus litterarum* and to account for the corruption. The one point of principle where he seems to have gone too far is his wholesale change of η to α in lyric passages, wherever α is the true form of the Doric. This at once neglects the MSS., and assumes something which has been lately called in question and may yet prove to be false—the theory, namely, that Attic choruses have borrowed their dialect from the Doric. *A priori* it is unlikely that Athens would imitate an alien dialect; as Prof. Ridgeway has suggested, the so-called Doric may be the ancient Attic in survival, and, if so, the ancient Attic may have been influenced by the tendencies which produced what we call Attic, unevenly and sometimes wrongly, so that inconsistencies may have been found in it during the period of transition.

To take an example or two of Prof. Tucker's conservatism. The phrase $\epsilon\iota\varsigma\ \delta\epsilon$ in line 231 has suggested several conjectures, one at least drastic; here it is kept and interpreted as adverbial, $\epsilon\iota\varsigma$ being due to the motion implied in $\sigma\pi\acute{\alpha}\theta\eta\varsigma\ \pi\lambda\eta\gamma\acute{\alpha}\varsigma$, the figures being *struck into the web* by the batten. Lines 319–21 are

taken to be a question: "When Atreidæ stand before thy doors, is a lament still counted to them for a deed of grace?" In lines 515–6, by pointing with a question after $\acute{\epsilon}\pi\acute{\epsilon}\mu\pi\epsilon\tau\omicron$, the passage is made credible thus: "Was it for a dead man without wit that the paltry boon was meant? I cannot guess it so." The word $\alpha\eta\lambda\lambda\theta\omicron\nu$ in line 534 is defended by parallels, and it is shown that the aorist has special point which is lost in the conjecture $\alpha\eta\theta\omicron\nu$. Such passages as the nurse's speech, lines 730 *et seq.*, are left in their ruggedness, which is regarded as an intentional dramatic note—rightly, we think. In line 601 $\omicron\upsilon\chi\ \acute{\upsilon}\pi\omicron\pi\tau\epsilon\rho\omicron\varsigma$ is satisfactorily defended. Of conjectures adopted, we may mention $\acute{\epsilon}\nu\ \sigma\acute{\alpha}\phi\prime\ \eta\eta\epsilon\iota$ (for $\acute{\epsilon}\nu\ \sigma\alpha\phi\eta\eta\eta$, line 196), "charged me with one clear course, to spurn away this lock"; $\phi\alpha\upsilon\sigma\alpha\iota$ (for $\phi\alpha\upsilon\epsilon\iota\sigma\theta\alpha\iota$, line 416), "to make all clear"; $\acute{\alpha}\tau\alpha\iota\varsigma\ \acute{\alpha}\alpha\tau\alpha\iota\varsigma$ (for $\acute{\alpha}\tau\alpha\iota\varsigma$, line 596); and, less convincing, line 542,

$\omicron\upsilon\phi\iota\varsigma,\ \acute{\alpha}\ \pi\alpha\iota\varsigma\ \acute{\alpha}\nu,\ \sigma\acute{\alpha}\rho\gamma\alpha\nu\ \eta\mu\omega\phi\lambda\acute{\iota}\zeta\epsilon\tau\omicron,$

and, line 612, $\phi\omicron\iota\nu\acute{\alpha}\ \sigma\kappa\acute{\upsilon}\lambda\alpha\zeta$. The commentary is remarkable for its store of parallels and illustrations; to which we could add but few, although a very apt illustration of $\acute{\alpha}\tau\iota\mu\omega\varsigma\ \acute{\epsilon}\lambda\epsilon\gamma\alpha\varsigma$, line 433, is Thuc. I. 21, $\acute{\alpha}\pi\iota\sigma\tau\omega\varsigma\ \acute{\epsilon}\pi\acute{\iota}\ \tau\omicron\ \mu\upsilon\theta\omega\delta\epsilon\varsigma\ \acute{\epsilon}\kappa\nu\epsilon\iota\kappa\eta\kappa\omicron\tau\alpha$. Equally valuable is the dramatic appreciation of action and character, which shows a sure touch. The remarks on the Recognition in the introduction are especially good; it is conclusively shown (1) that a recognition scene was expected, (2) that the means used were actually appealed to by Greeks in recognition, and (3) that the dramatic fitness of Electra's acceptance of the proof does not depend on its validity. There is no over-subtlety in the interpretations, although there is sometimes a harshness. The translation might well be simpler, and we could wish Prof. Tucker would not so often drop into verse.

We cannot do justice to the remaining parts of the work, its historical and critical introductions and the appendix. We can only say that they are scholarly and full of instruction, and that Prof. Tucker is to be congratulated on a solid contribution to the study of the Greek drama.

Five Stuart Princesses. Edited by ROBERT S. RAIT, Fellow and Lecturer of New College, Oxford. (Constable.)

A volume of this kind deserves a welcome, because it will probably find its way into many places which would not admit any more serious book on history, and may very likely lead its readers to venture a little further along the path of historical study than it can itself lead them. In any case its sketches of the characters and lives of its five heroines are more profitable, and to our taste not less interesting, than books which purport to describe the experiences of various fictitious Elizabeths and other ladies, whether Englishwomen or Germans. Each of these Stuart princesses has here a biographer of her own, one of the younger historical lecturers or students of Oxford, and all five essays are creditable, though of different degrees of merit. The first of them, on the Princess Margaret of Scotland, the daughter of James I. of that kingdom, and the wife of the Dauphin Louis, afterwards Louis XI., deals with a far earlier time than the other four, of which the heroines are all descendants of James I. of England. Margaret's piteous little story is well told. Married as a mere child to a cold and hard-hearted man, she was, if not actually "done to death by slanderous tongues," at least so cruelly maligned that her death from a fatal disease was probably hastened by her distress of mind. The longest and one of the two most interesting essays in the volume is that on Elizabeth of Bohemia, the "Queen of Hearts," in whose cause so many gallant Englishmen sacrificed their lives. Its author, Mr. R. H. Hodgkin, while giving his readers enough history to make Elizabeth's life fully intelligible, always keeps her in the foreground of his narrative, and depicts her character in bright and attractive colours. He should, however, have attached more importance to the death of Epinay at the hand of her son Philip, of which he merely gives a cursory notice in his account of the careers of her children. Philip's violent act, and the bitterness with which his mother resented it, brought dissension into her family. Though there was no ground for the scandalous imputations made against her, she certainly allowed this French noble, a reputed lady-killer, to have too much influence over her, and her intimacy with him is an illustration of the levity of her disposition.

Not less interesting is Mr. Rait's shorter paper on Elizabeth's twelfth child, the Electress Sophia, that wonderful lady who so nearly became Queen of England in her eighty-fifth

year, and died in full possession of her mental faculties and with little of the physical weakness of old age. She had a singular matrimonial experience, for her accepted suitor, George William of Hanover, repented of having undertaken to fulfil the duties of married life, and passed her over to his brother, Ernest Augustus, promising himself to remain unmarried, so that the issue of the union might inherit from him. Sophia acquiesced in the transference, and found her position extremely difficult, for after her marriage George William took up his residence at Hanover, where she and her husband lived, and paid her attentions which caused some trouble. He did not exactly keep his promise of remaining a bachelor, for he married a French lady, though he re-affirmed his renunciation of the succession for his children. By this marriage he became the father of Maria Dorothea of Celle, the "uncrowned queen" of Sophia's son, the Electoral Prince, afterwards George I. of England. In the conspiracy against this unhappy and guilty lady Sophia, as Mr. Rait points out, had no share; the triumph of the Platen gang at the Electoral Court caused her to withdraw from it some years before the fall of her daughter-in-law. The two other Stuart princesses whose fortunes are described here are Henrietta Maria, Duchess of Orleans, a daughter of Charles I., and her sister, Mary Princess of Orange, whose husband, the Stadtholder William, left her a widow at the age of nineteen, and on the eve of the birth of her child, the sickly boy destined to break the power of France and to reign over England as William III. Of this excellent lady far less is told us than we should like to have read, and the article on her short life—she died when she was but thirty—is filled with matters known to every student of history.

Notes of Lessons on the Herbartian Method. By M. FENNELL and Members of a Teaching Staff. (Price 3s. 6d. Longmans.)

Consciously or unconsciously, all true teachers are Herbartians in a greater or less degree, and apply the doctrine of apperception to every lesson with more or less success. These notes of lessons cover the whole of the ordinary school curriculum, exclusive of divinity and morals, and in each the Herbartian schedule—preparation, presentation, association, application, recapitulation—is strictly followed. Whether more is not lost than gained by this rigid adherence to the form is questionable. A lesson, after all, is not (like a play) a complete work of art, with the dramatic unities preserved, but one of a series, comparable rather to a single act, or sometimes a single scene, in a play. The method lends itself much more easily to scientific than to literary subjects, and the notes on physics and physical geography seem to us far more valuable than those on language and literature. Thus the first lesson is on early English prose and poetry. It begins with a definition of literature: "A collective term for all writings not connected with any special art or science" (a definition which would exclude Virgil's "Georgics," Descartes' "Discours de la Méthode," and Ruskin's "Modern Painters"), and proceeds to discourse of Homer, Caxton, Chaucer, &c., ending with a short essay on the difference between a modern and an early English school. The lesson provokes all sorts of questions. Where does it come in the series? How much literature is the class supposed to know? If they do not know what a rime is, will they be able to understand "alliteration or head-rime"? Could children "age eleven to thirteen years" assimilate all this new and varied information, and that in half an hour? The second lesson is: "Explanation and Paraphrase of a Poetical Extract": to wit, "Breathes there a man?" &c. Here, too, we seem to have at least three lessons rolled into one—a lesson on Scott (literary biography), a lesson on poetical language (metaphor, inversion, &c.), and a lesson on paraphrasing. We have taken the first two lessons as indicating what strikes us as the weak point in the book. It is not possible, within our limits, to show in the same way where its strength lies, but we can strongly recommend it to teachers of object-lessons and elementary science. Latin is not touched, and the French *laisse à désirer*.

The Growth of the Empire. A Handbook to the History of Greater Britain. By ARTHUR W. JOSE. (Murray.)

"We still lack," writes Mr. Jose, "the Imperial historian—the man who shall do for Seeley what the Herschels did for Newton." And the main interest of the present volume may be said to lie in its expression of a need. A history has yet to be written that will meet the demands not only of Britons in this island, but of that vast number beyond the seas of whom the writer is evidently one. It may seem early days to look for this when the full meaning of the British Empire and its attendant obligations are only just coming home to the minds of men; but Mr. Jose's vigorous handbook will supply boundless incitement for such a task from the brief recital of the exploits of the Elizabethan adventurers down to those of the latest of the Empire builders, Mr. Cecil Rhodes. "The British Empire would suffer less than most if its history were written in a series of bio-

ographies; for, as it is maintained by the strenuous devotion of innumerable citizens, so it was built by the unconstrainable genius of a few. It is, therefore, quite in keeping with the general plan of the fabric that South African history for the last twelve years should be essentially the history of one man, Cecil Rhodes, a deviser of far-reaching schemes alike in finance and statecraft, strong willed, and silent in executing them, than whom no man of the last half-century has made more bitter enemies or more devoted followers. This, indeed, is the common lot of our Empire builders. Raleigh and Cromwell, and Clive and Grey, and the rest—they have worked with the tools they had, careless how their hands might roughen in the using. They have had, and displayed, the defects of their qualities, and the Briton of the home islands ranks character so high above achievement that qualities which in India, or Africa, or Australia earn for the notable man his comrade's love are in England liable to be over-shadowed by the memory of their defects." This characteristic paragraph is also typical of the enthusiasm which never fails to accompany the traditions of Greater Britain, whether they cluster around the administration of a Dalhousie or the incorruptibility of a Gordon, whose name "stirred in the common heart of the race a sense of the best it could be, the best it ought to do." Considerable space is rightly devoted to the formation and development of the great Indian Empire, the only portion of British possessions, as the author is careful to show, which is administered by a central Government composed of a race alien to the governed. There is plenty of information; but it suffers, except in rare instances, by a compression and a want of dignity and lucidity of style, which is not necessary, we imagine, even in a handbook. The "Imperial historian," when he comes, must be readable, and should combine, like Thucydides, the power of graphic narrative with depth of insight into the nature and causes of events, often best viewed, like mountains, from a slight distance. The case of contemporary Imperial politics is often a difficult one—more difficult than the writer seems to imagine. Only a careful examination of the correspondence and memoirs of the period can be expected to throw full light on some of the vexed questions of the day; yet care has, undoubtedly, been taken in the compilation and verification of facts, and there are numerous maps. The fact that the book has been well received in Australia is, perhaps, not the least of its qualifications for the consideration of English readers.

The Mind of a Child. By ENNIS RICHMOND. (Price 3s. 6d. net. Longmans.)

Mrs. Richmond needs no apology for adding another book to those written about children. From the author of "Boyhood" we may safely look for originality and sound sense. "The Mind of a Child" may be not unfairly described as a counterblast to "Die Seele des Kindes." We all remember the distinction that Wordsworth drew between "a daisy" and "the daisy." "We are quickly getting to the point at which children will exist for us no longer, and all our attention will be centered on 'the child.'" This supposed antagonism between analysis and synthesis we hold to be radically false, and to be disproved by the fact that the best child students (Froebel, Darwin, Quick, to name only the dead) have been also the best of parents. And this prejudice against what Mrs. Richmond calls "the craze for child analysis" infects and mars a thoughtful treatise on the duties of parents. It even gives to the style a self-assertiveness which belies the author's true character as a teacher. Thus: "The sort of child-analysis which I decry is not due alone to the only right reason for which it should exist for us, but is due largely to giving importance to a side of childhood which should have but little importance given to it, sinking gradually out of sight the real reasons for which we should respect childhood"—a sentence which deserves to find a place in our Extra Prize competition.

Westminster, by REGINALD AIRY, is the latest addition to Messrs. Bell's interesting series of "Handbooks to the Great Public Schools." Bound up, as Westminster School has been, with the life of the great Abbey of which it forms a part, its history could not fail to be of exceptional interest. Mr. Airy's account of his school does not profess to rival in importance Mr. John Sargeaunt's "Annals," which saw the light about two years ago; but, for all that, it is a capital bit of work, and should be much appreciated by Old Westminsters in particular. In describing the old buildings the author follows a safe guide, deriving much of his information from a contribution of Mr. J. T. Micklethwaite's to the *Archæological Journal*. Chapters v. and vi., which give us pictures of life at Westminster at the present day in minute detail, claim the particular attention of those who would know the individual character of the school as distinguished from other foundations which resemble it in the main outline but have their own peculiar features. The acting of a Latin play at Westminster was enjoined by the ordinances of Elizabeth, and survives, after many vicissitudes, as its most cherished institution. An appendix gives in full the prologue and epilogue, with English translations, to the "Trinummus" as performed in 1893. It is needless to say that Busby has a chapter to himself, in which it is shown how the school really owes its continuance to the sagacity and skill with which he piloted it safely "through the most troublesome storms that ever gathered round

Queen Elizabeth's foundation." Some attempt also is made to undermine the popular belief that Busby wielded the birch with exceptional vigour and frequency even in days when flogging was considered a necessary part of the educational system. This volume is embellished with fifty-one illustrations, well chosen and clearly reproduced, and is fully worthy of a place in the series of public-school histories.

Chambers's Cyclopædia of English Literature. New Edition, edited by DAVID PATRICK. Vol. I. (Price 10s. 6d. net. Chambers.)

'Tis sixty years since the first part of that great undertaking with which the name of Robert Chambers as publisher and joint editor combined will be even more permanently associated than that of George Smith with "The Dictionary of National Biography." Various editions oringing the work up to date have since appeared; but the time is ripe for an entire recast, and the mass of new material necessitates the addition of a third volume. Dr. Patrick is no less a competent editor than Dr. Carruthers was in his day; and, as no one man is now competent to deal with the whole of English literature, he has retained for the various periods the best specialists. The names of Stopford Brooke, S. R. Gardiner, Andrew Lang, and A. W. Pollard—to take at random a few of the most distinguished—are a sufficient guarantee of accuracy and finished workmanship. A reference to the articles on Layamon, Malory, and Ben Jonson will show how far our knowledge has advanced since 1842. The portraits of the old edition (many of them of doubtful authenticity) have been replaced by reproductions of the best likenesses in the National Portrait Gallery and other collections, public and private. It is a work that no school library should be without; a book on which the boy with a literary bent will delight to browse, devouring the lives of authors and the admirably chosen extracts, if he only nibbles at the commentary.

Prospect: Sermons preached in Clifton College Chapel by the Rev. G. M. GLAZEBROOK. (Price 4s. 6d. net. Rivingtons.)

The title, we take it, was suggested by the famous lyric of Browning, the poet most often quoted in the volume, with whose tone and temper Mr. Glazebrook has most sympathy. "I was ever a fighter" is the key-note of the sermons on Courage, on Life as a Warfare, on the Intellectual Side of Patriotism—the last a fine discourse on the duties of those who serve and wait, a prophetic counterblast, as it were, to Mr. Kipling's blatant Tyrtæanisms. With this exception, and one or two passing allusions as to the strike of the South Wales miners and a shrewd thrust at the Ritualists (Mr. Glazebrook is not ashamed of calling himself a Protestant), the sermons are not topical, and this, in our judgment, is rather a merit than a defect. Mr. Glazebrook is at his best when expounding a lesson of Old Testament history or bringing out the significance of the Psalms or Ecclesiasticus. In his occasional flights of poetry he is less happy, and his spring idyl leaves us unmoved. "It is to men of education, and, therefore, to the public schools, that the masses of England look for leaders." So says Mr. Glazebrook. The *Times* holds, or held not so long ago, a different view: "Our geniuses turn up from every quarter rather than from our public schools." It would be interesting to take any list of leading men either of thought or of action and see what proportion were public-school men—for instance, the fifty names of the proposed philosophico-historical Academy, or the first hundred names in "Who's Who?"

The Fables of Orbilius. Part I. By A. D. GODLEY. (Price 9d. Arnold.)

Mr. Godley, the humourist, the poet laureate of the *Oxford Magazine*, is inimitable; but when he strays into our preserves we are bound to warn him off as a trespasser, and fine him for having no licence. The "Fables of Orbilius" are modelled on Mrs. Hugh Bell's "French without Tears," and attempt to instil Latin by ringing the changes on a limited number of words and combining these words in simple and interesting stories. The principle is thoroughly sound; it is with the execution that we quarrel. Rousseau objected to La Fontaine's "Fables" as a first reading-book on the score of the low morality inculcated; and we may with greater justice take exception to Orbilius' cynical humour in the nursery. Henry devotes half of his worldly possessions—twopence—to the poor. One penny he loses, but does not grieve, because that was the penny meant for the beggar. Truthful Bill has the misfortune to break his father's fiddle, and owns up. The father gives him one licking for his carelessness and another for confessing. All this may seem very innocent fun, but not so in the infant school. To many schoolmasters this objection will doubtless appear prudish or pedantic; but we have a further quarrel with Mr. Godley on the score of his Latinity. Charity or the printer may cover mistakes such as *arbor* of the masculine gender or *vulnerare* of the second conjugation on page 24, but we are constantly confronted by constructions which, if not absolutely wrong, are at least rare and questionable: "Bibes eam quater indie, medicus inquit"; "Fit iratus"; "Leti erant quia Henricus aliquando piscem cepisset"; "Postquam erat venatus"; "Ad locum ducem conveniendi";

"Fabula quæ vera est, argumentum esse videtur,"

an hexameter which the beginning of Tacitus's "Annals" will hardly justify. A classical scholar is not supposed to know English grammar;

and it is perhaps hypercritical to object to the parsing in "Hints for Teachers" of "it" as a personal pronoun, and of "his" as a possessive pronoun. Let us quote, in conclusion, a specimen of genuine Godleyan humour, the morality as impeccable as the Latinity: "Paulus Oceanum Pacificum inter Europam et Americam esse credit: id quod sine dubio non verum est." We hope that Part II., where Mr. Godley's wit will have freer range, may give us more of this quality.

Latin Composition based upon Selections from Cæsar. By Prof. D. L. D'OOGHE. (Price 2s. 6d. Ginn.)

The method is one with which Mr. Siepmann has familiarized us in his French and German texts, with a new departure in one particular. As far as words and phrases go, the sentences for composition follow closely the Latin text, but in syntax the logical grammatical order is maintained. Dr. D'Ooghe's experience is that boys are incapable of synthesizing their syntactical acquisitions, or, in plain English, of picking up their syntax at haphazard. On this point authorities will differ, but the plan of giving three oral exercises in preparation for one written will commend itself to most teachers. The fact that the book is based on Greenough's "Selections" will handicap it in England, but the "Selections" themselves are so good that we hope many will be induced to give the two a trial.

A First Latin Reader. By R. A. A. BERESFORD, M.A. (Price 1s. 6d. Blackie.)

The English schoolboy would be proud indeed if he knew the number of people who have devised, or are devising, plans to smooth his path to the difficulties of Cæsar. Mr. Beresford's plan appears as a book which has much to recommend it. He has made many of the sentences and exercises in it himself, introducing words that the boy will be likely to meet with in the formidable author looming in the background. There are no notes; for the writer believes that the teacher at this stage should furnish the commentary to the text with his tongue; which is a sound opinion. The learner is beguiled onward by a swift succession of pictures. But what most distinguishes this "Reader" from its competitors is the clearness and boldness of the type, a matter of more importance than the inexperienced might suppose. It is something of a shock to find (sentence 47) that small boys are taught to say: "Juppiter, rex deorum, in quadriga vehitur," since the plural *quadrigæ* is the classical form. But this fault, as well as a few misprints—e.g., *cum* for *cum* on page 58—can easily be corrected. We consider that the book is likely to serve its purpose if carefully used. It is provided, as might have been expected, with a vocabulary.

Poucinel. By EDOUARD LABOULAYE. Edited, with Notes, Vocabulary, &c., by W. M. POOLE. (Price 9d. E. Arnold.)

Three fairy stories well adapted for preparatory schools, or for boys as they now enter public schools, where French ranks a little lower than Greek accents. The second one, "L'Histoire des Nez," is most to our taste, a modern *fabliau* which successfully hands down *l'esprit gaulois* without its coarseness. Mr. Poole has done his part of the work very thoroughly, and there is little to criticize. Perhaps there is too much formal grammar for this stage, but, as this is relegated to an appendix, masters can use their discretion as to enforcing it. No account is taken of the Minister of Instruction's options—wisely, we are inclined to think; but on page 58 *des mauvais crayons* should be admitted at least as an alternative, and *de* should not figure as a partitive article.

Laurie's Une Année de Collège à Paris. Adapted and Edited by FABIAN WARE; Notes and Vocabulary by C. S. H. BRERETON. (Price 2s. Macmillan.)

Not knowing the original, we cannot profess to judge how Mr. Ware has performed his task of adaptation; but we can say that he has given us a spirited story of life in a *lycée* which will interest English schoolboys. There is plenty of fun without any of the dead cats and horse-play of "Stalky & Co." Mr. Brereton's notes and vocabulary give all that is needful, and nothing more. *Quartier* wants explaining, and *la bibliothèque banale* is surely "the common class-library," not "vulgar," "commonplace."

Scènes de la Révolution Française. From the History of the Girondins. By ALPHONSE LAMARTINE. Edited by O. B. SUPER. (Heath & Co.)

If Lamartine is not above suspicion as an historian, he is most readable as author of the story of the Girondins. Mr. Super has selected portions of the story covering a period ending with the execution of Louis XVI. Introductions enable the reader to find his bearings, and notes explain difficulties contained in the text. We are not sure that the pronunciation of the name Sieyès is well represented by "ci-é-ess," or that the Jardin des Tuileries can now be said to be situated in front of the Palace of the Tuileries. In other respects the book can be recommended as a useful easy "reader."

Les Français en Voyage. By J. S. WOLFF. (Edward Arnold.)

A narrative in dialogue of the travels of a French family, living in Paris, to Lausanne, Courmayeur, and elsewhere. Notes are added to explain the French text. The book is intended for "public-school

boys and men." The present reviewer has read the book with pleasure; but he is ready to believe that schoolboys will look on it as a French "Sandford and Merton." On the other hand, older readers, especially those who know something of the Lake of Geneva, will probably not object to visit the Castle of Chillon and the Rochers de Naye in company with Monsier Tournelle, even if he is a little verbose.

French Commercial Correspondence. By A. STARCK. (Blackie.)

A useful book. The author recognizes that it is not possible to learn French correspondence in a week, and takes the student along by easy stages. The system seems a good one, and proceeds from simple exercises to commercial letters. One rather shudders at elementary exercises made up of business terms. "I have the tallow"; "He will have the bill of the lace"; "You had sent the draft to a bank porter." One is tempted to ask: What demand is there in England for clerks who are able to conduct foreign correspondence? Is it not a fact that one man is able to write all the letters that many a large house requires written in French, and that posts for foreign correspondents are very rare?

Commercial French. Part II. By W. M. POOLE and M. BECKER. (Price 2s. 6d. Murray.)

An excellent reader, the plan of which we explained in noticing Part I. "Commercial" is interpreted in a large and liberal sense. About, Daudet, Paul de Kock, Louis Blanc, Labiche, and Molière are all for the nonce "commercial." This is as it should be; the romance of commerce, its connexions with everyday life—food, clothes, locomotion—should precede the esoteric mysteries of double entry and bills of lading. "The notes and questions are written in French throughout." We incline to think that this sound principle has been driven to an extreme. The notes are almost entirely definitions or explanations of difficult words, and for a pupil who possessed the *Beaujean-Litré*, or even the small Larousse dictionary, would be superfluous. Often a single English word would save much beating about the bush in French with no certainty of catching the hare. Even Mr. Poole is forced against his principles to give an English vocabulary of names of trees, and we hope that in a second edition he will unbend still further.

Deutsche Sagen. A Course of German Reading, with Vocabulary, by FRANCISKA GEIBLER. (Price 2s. Longmans.)

The object of the Reader, as stated in the preface, is to provide solid and yet digestible food instead of "trivial books of an inane simplicity quite unsuited to the better tastes of adolescent Americans." We cannot pronounce these *sagas* an improvement on our old favourites, Niebuhr's "Heroen-Geschichten," Hans Andersen's "Fairy-Tales," and Lessing's "Fables," all three of which are simpler than this miscellaneous collection of *sagas* (many of them are not German); and, as to inanity, the charge recoils. What, for instance, can be more inane than "Der Pfaffe Amis," which reads like a tale from the "Gesta Romanorum"? The vocabulary is not complete—it does not give declensions or conjugations, and notes are a *desideratum*. The adolescent American must be 'cuter than his English congener if he can construe without help *gratia vester*, page 23.

Glück auf! A First German Reader. By MARGARETHE MÜLLER and CARLA WENKELBACH. (Price 3s. 6d. Ginn.)

In spite of the fanciful title, a very sensible progressive Reader, beginning with very simple stories of home life and ballads, like the "Lorelei" and "Erlkönig," with myths and *sagas* for the second stage leading up to recent history, with some humorous anecdotes as dessert. Why the authors should call these last *pièces de résistance* we know not. We like the notion of making English and German cognates the first lesson. Sentences like "Gott ist gut," "Es ist heiss im Sommer" will agreeably give the lie to the proverb "Aller Anfang ist schwer." The prophet's curse seems to attach to Grimm and his wheel, to which Mr. Phillpotts used to bind the student of Scott's poems. Even the correspondences here given do not correspond; "find," for instance, should be "finten," not "finden." On the other hand, the parallels given in the vocabulary—*Blatt*, "blade"; *Baum*, "beam"—are helpful, and the indication of tonic accent is a good point.

Outlines of Physiography. By A. J. HERBERTSON. (Price 4s. 6d. Arnold.)

The author does not specify the class of student for which this book is written. Whilst hardly simple enough for beginners, it is not sufficiently thorough for advanced readers, and a number of most important physical phenomena are very imperfectly dealt with. The enunciation of the law of gravitation (page 32) is incorrect: "proportional to the mass" should be "proportional to the product of the masses." Again, we find that "lodestone" is called "magnetic iron," and in explaining the phenomenon of magnetic dip the necessity of balancing the needle before it is magnetized is passed over in silence. The cause of glacier motion is dismissed in an altogether unsatisfactory manner, and no attempt is made to elucidate the effect of pressure upon the melting point of ice. With these exceptions there is much in the book worthy of praise, those chapters dealing with land sculpture and formation being particularly good. The printing and illustrations are excellent.

(1) *Alfred the Great.* By G. F. BOSWORTH. (Price 1s. 6d. Macmillan.) (2) *A Reading Book in Irish History.* By P. W. JOYCE. (Price 1s. 6d. Longmans.)

(1) This is a competent and interesting short history of Alfred, one of the numerous books that have arisen out of the millenary celebration, but, as far as we have seen, one of the best. It is attractively got up, with a number of excellent illustrations, including such subjects as the well known "Alfred Jewel," a representation of White Horse Hill (the supposed site of the battle of Ashdown), besides several imaginary pictures, such as must always appeal to young readers. Mr. Bosworth's style is simple and pleasant. He has wisely given due prominence to the legendary as well as to the certain incidents of his hero's career, which, in the case of Alfred, probably give a better impression of the man than any amount of dryasdust details. We have also an excellent bibliography and good maps. Well selected portions of poetry add to the attractive look of the page; though it is noteworthy here, as we have often had occasion to observe before, how very little of so-called "patriotic" poetry has any real vitality. Altogether, a most suitable book to be used as a reader for the younger forms in schools, or even to be presented as a gift to an intelligent "home" child.

(2) This little book is intended presumably, in the first instance, to be used in Irish schools, but there is much in it that would be new and attractive to English children. It is strictly a "reading book" rather than a formal history, the writer's object apparently being to awaken an enthusiasm for the subject by offering the plums, as it were, from the big dish. The last story is of the quarrel between the Earls of Ormond and Kildare, when peace was made between them for a time by the shaking of hands through the chapter-house door of St. Patrick's Cathedral. This brings us only as far as to the reign of Henry VII., after which the more controversial portions of the history would begin. One cannot but feel how striking is the contrast between the early records of the Irish and the English with regard to the romantic and picturesque elements. For Irish children these stories must be supremely interesting, and the use of such a book in English schools might tend, we think, to a better understanding between our matter-of-fact compatriots and their often so strangely antipathetic, because imaginative, fellow-subjects. The stories of the "Children of Lir," of Saint Columkille, of Maildune, &c., are most fascinating. Portions of translation from the original documents are given; and, when Dr. Joyce speaks in his own person, his language is of the simple picturesque sort that suits the style of the early world of which he treats. The poetry, including Tennyson's version of "The Story of Maeldune," is much superior to that in the "Alfred" book mentioned above, from the fact, no doubt, of the greater store of wealth from which the compiler had to draw. The illustrations are somewhat small, and the notes strike us as unnecessary; otherwise, the book is in every respect to be recommended.

History of the City of Rome in the Middle Ages. By FERDINAND GREGOROVIVS. Translated from the Fourth German Edition by ANNIE HAMILTON. Vol. VIII., Parts I. and II. (G. Bell & Sons.)

We congratulate Mrs. Hamilton and ourselves on the completion of her translation of this famous book. Her task has been admirably performed. These last two volumes—or, rather, parts—begin with the overthrow of the power of Cesar Borgia, after the death of Alexander VI., and the author's work ends at the death of Clement VII., the last Pope who attempted to defend Italian liberty against Imperial authority and foreign dominion. Mrs. Hamilton has compiled an excellent index to the whole book.

A Short History of England for School Use. By KATHARINE COMAN, Ph.B., Professor of Economics in Wellesley College, and ELIZABETH KENDALL, M.A., Associate Professor of History in Wellesley College. With Maps and Illustrations. (Macmillan.)

Without its numerous illustrations this book would make a small volume, and therefore when we say that it contains a very slight sketch of English history we do not speak in disparagement. The narrative is simply and pleasantly written. The authors observe in their preface that they have given few dates; we think that their book would have been better adapted for educational use if they had done otherwise. A strong point in their work is the skill with which they sum up the character of events in a few words. They show some mastery of their subject, but here and there a statement of fact calls for elucidation. For example, the Scots, Aidan and the rest, who carried on the work of evangelization among the Saxons, were not fugitives from Britain; Stephen was scarcely "a dashing young man" when he came to the throne, for he was about thirty-six, and men aged earlier in those days than they do now; and it is strangely misleading to speak of George III. as dismissing a Whig Ministry when Grafton resigned office. There are several maps, some of them roughly drawn, and not, as we think, prepared with much care.

Shakespeare in Talk and Verse. By LOIS G. HUFFORD. (7½ × 5½ in., pp. ix., 445; price 4s. 6d. Macmillan.)

This is an endeavour—and a charming and successful endeavour—to introduce Shakespeare to the young, with the stories of the plays

simply told, the intricacies of the plots disentangled, and all that is really difficult for a beginner made clear and intelligible. There is not too much exposition, no forcing of points, and as far as possible Shakespeare is allowed to tell his story in his own way. The passages quoted are numerous and well chosen, being excellent in themselves, and of special value in the revelation of character. And here we have the most marked difference between Mrs. Hufford's *Tales and Lamb's*. Lamb quotes much from the plays, and, though he uses Shakespeare's language as far as he can, he paraphrases while he quotes so as to bring out the meaning clearly and completely. Mrs. Hufford quotes the *ipsisima verba* with just a hard word here and there explained. The young, we think, require rather more explanation than this gives them; not so much of hard words and meaning of passages. The mode and—but of the general force and meaning of passages. The mode and form of expression puzzle beginners far more than the occasional hard words. We must say however that the quotations are so chosen and so inserted amongst the surrounding prose that, as a rule, paraphrase is very little needed. (Foot-notes in any number would of course be a mistake.) Fifteen plays are chosen; but five of these we cannot but think should not have been included. "The Taming of the Shrew" is very little Shakespeare's; "The Comedy of Errors" is young and not very original work; "The Two Gentlemen of Verona" is young and poor in characterization; "King Lear" and "Othello" are unsuitable in subject for the young, and have to be very much bowdlerized when included. On the other hand, we are not given "Much Ado about Nothing" nor a single historical play. Lamb, we may mention, also admits all the historical plays, and his list sins far more than Mrs. Hufford's by what it includes. When all is said, however, the fact remains that Mrs. Hufford has given us a charming book—well written, well printed, and neatly bound. It deserves to become, and we trust will become, a great success. As students and lovers of Shakespeare we thank her.

"Blackie's English Classics."—Robert Browning: *Strafford*. Edited by AGNES WILSON. (7 x 5 in., pp. xlv., 112; price 2s. Blackie.)

This is a satisfactorily edited little book. The introduction gives a clear and simple account of the historical *Strafford*, and of the main features of his times as far as these are needed for the understanding of the play; and it points out in what respects Browning has departed from history and his reasons for doing so. It provides also short sketches of the other *dramatis personae*. No very profound knowledge of history is required to enable us to realize that the relations of *Strafford* with Pym and of Lady Carlisle with *Strafford* are purely imaginary; and so to a great extent are those between *Strafford* and the King. And yet, as Prof. Gardiner has pointed out, Browning has managed to give us the real *Strafford*, "the man of critical brain, of rapid decision and tender heart, who strove for the good of his country without sympathy for the generation in which he lived." He does also, as Miss Wilson maintains, give us a valuable insight into the time—the drama throughout is thoroughly imbued with its spirit. Moreover, the play is a fine play, finely imagined, genuinely tragic, and full of powerful character sketching. The notes at the end are adequate, though rather too much mere matter of fact, and dealing too little with the play as a play, and as a work of literary art. The notes introductory to each scene, however, are specially helpful and are marked by sympathetic insight. On the whole the edition does Miss Wilson credit.

Legends of King Arthur and his Court. By FRANCES N. GREENE. (7 1/4 x 5 in., pp. xxii., 126, illustrated; price 2s. 6d. Ginn.)

We have here a rendering in simple prose of seven of the legends used by Tennyson in his "Idylls," told as he tells them—and very simply and charmingly are they rendered. We should ourselves have chosen "Enid" and "Geraint" rather than "Gareth and Lynette," if choice had to be made; and we do not think we should have included "The Holy Grail," though that gives Miss Greene the chance of quoting in full that loveliest of all Tennyson's Arthurian poems, "Sir Galahad." But these are merely matters of personal taste, and in no way detract from the merits of this excellent little book. The introduction deals briefly with matters relating to chivalry—the training of a knight, and tournament, &c.—and is adequate to its purpose, though of course, and very rightly here, the poetical legend of chivalry is dealt with instead of the much less beautiful historical fact. The illustrations are well imagined, and as a rule satisfactorily drawn. Our readers will do well to remember this little book when Christmas comes again.

The Fight with France for North America. By A. G. BRADLEY. Second Edition. (Price 6s. Constable.)

This excellent book was noticed at some length in our columns at the beginning of last year, and it is not necessary to say much about what is, in fact, a mere reprint. While reduced in price, it has been embellished by some admirable portraits; but the revision seems to have been confined to such verbal corrections as could be made without disturbing the type. For instance, on page 183 "Sir Charles Hay" has been altered to "Lord Charles Hay," but he is still described as "the same officer who made the famous request at Fontenoy that the French Guards should fire first." Carlyle has shown (as we pointed out) that this famous request was never made. In his "Life of Frederick"

he quotes a letter from Lord Charles Hay to his brother, written three weeks after the battle, in which he says:—"It was our regiment that attacked the French Guards: and when we came within twenty or thirty paces of them, I advanced before our regiment, drank to them, and told them that we were the English Guards, and hoped that they would stand till we came quite up to them, and not swim the Scheld." No doubt Hay's words were misunderstood, and Voltaire gave currency to the revised version of them. The point is a small one; but it is a pity to perpetuate an error which has been set right, and Mr. Bradley would have done well to recast his sentence. Most of the misprints have been corrected, but we notice in two cases "who" for "whom" (pages 289 and 357).

The Girl from St. Agneta's. By J. H. Yoxall, M.P. (Ralph, Holland, & Co.)

"A Phantasia on a Fugue" is the second title—an extravaganza, or, in plain English, a screaming farce, would be nearer the mark. Mr. Yoxall does not love the English parson, still less the parson's wife, and, if the parson happens to be the "one man" manager, and himself managed by his better half, the elements of a tragi-comedy are ready to hand. The first scene opens with a sermon by the "sky-pilot with a Trinity certificate," that is, the reverend principal of a woman's training college, on the immorality of girls falling in love before they have gained their parchment, he himself being all the while madly in love with Madcap, the heroine. The scene shifts to Caen, where the principal, who is acting as temporary chaplain, again preaches to Madcap, who is attending a holiday course. Our readers must find out for themselves the sequel. There is plenty of variety—a socialist, a Lothario baronet, an emancipated Girton girl, are among the chief of puppets. For the sake of weak nerves, we may betray this much of the plot: "the rufous young yachtsman is left rueful"; and Madcap does not really murder the emancipated Girtonian who has "fugued" in her father's clerical garments and is rescued by the hero.

The Tutorial Arithmetic. By W. P. WORKMAN, M.A., B.Sc., assisted by R. H. CHOPE, B.A. (W. B. Clive.)

Although a complete treatise on arithmetic, this work is not intended to be put into the hands of a beginner. The four rules are, therefore, rightly dismissed with scientific brevity; whilst the methods expounded are those on which the art of quick and accurate reckoning is based. The treatment of fractions is, in many respects, a great improvement on that usually found in school arithmetics. There is, however, still room for exactness. The various meanings of a fraction should have been brought out clearly, and the notation for complex fractions should have been shown to be consistent with all these meanings. From the teacher's point of view the development should have been inductive. In "Recurring Decimals" the authors are somewhat diffident in their attempt at logical preciseness. The difficulty involved can, after all, be fairly faced only by the introduction of the geometrical progression. To "determine the generating fraction of .407" by multiplying by 1,000 and subtracting, without taking cognizance of the remainder, is disingenuous, and likely to bewilder the thoughtful pupil. We are somewhat disappointed with the chapter on "Approximations," which exhibits reasoning of the usual slipshod kind. "As there are a good many rows to be added together, we retain six decimal figures instead of five as before." Why? For the decimalization of money, the authors express their indebtedness to Messrs. Sonnenschein and Nesbitt; and we are glad to notice that the process is applied pretty generally to "Commercial Arithmetic." A very interesting chapter is that on "Congruences." The examples throughout the book are numerous and well chosen.

What is Shakespeare? An Introduction to the Great Plays. By L. A. SHERMAN. (Price 6s. net. Macmillan.)

Prof. Sherman, of the University of Nebraska, holds that Shakespeare *laudatur et alget*. He is bought and quoted, but the inner mind of the dramatist is a book with seven seals. Prof. Sherman therefore offers himself as interpreter, and gives an exegetical comment on three plays—"Cymbeline," "The Winter's Tale," and "Romeo and Juliet." The lectures, we confess, remind us of the old-fashioned sermon—an elaborate exposition of a text or portion of Scripture, bringing out the significance of each phrase and word. We may take as an example the first scene in "Cymbeline." "The reason of the Queen's suggestion to Posthumus that he lean unto his sentence is, perhaps, some fear lest he linger about the capitol [sic] disguised and continue his witchcraft over her prisoner. . . . Most Imogens would have been upset to the point of prostration over that; but Imogen is content with what would break the heart of most of her sex. . . . But he (Posthumus) is ill at ease, and talks quite otherwise than in a sustaining way, while Imogen, in silence, hangs about him." This is not inspiring criticism. "Tout genre est bon excepté l'en-nuieux."

A First Course of Essay-Writing. By J. H. FOWLER. (Price 6d. A. & C. Black.)

Mr. Fowler has followed up his manual by a course for beginners, presumably boys in the preparatory school stage. There is an all too brief introduction followed by hints for thirty-seven essays. The subjects of these are well chosen, and the hints are mainly in the form

of questions. Thus, on "The Story of a Shilling": "Where and when was it born? What did it look like? Invent some adventures for it," &c. It is, on the whole, the best practical introduction to English composition that we have seen. We could have spared the "grammar" and "punctuation" of the introduction. It is not true that "clearness depends mainly on (1) writing our sentences grammatically, (2) punctuating them properly."

"Heedless of grammar, they all cried 'That's him!'" is a perfectly clear sentence.

JOTTINGS FROM A REGISTRAR'S NOTE-BOOK.

JANUARY 27.—I have been carrying on a correspondence with a would-be high-school mistress: her testimonials and her certificates are all right; yet she has been seeking an engagement since last August. I felt puzzled, and asked her to come over (she lives ten miles off) yesterday. Directly I saw her I knew that it was her personal appearance that was the obstacle. She was very chatty over afternoon tea; I then discovered that she attributed her want of success to the fact that she was a Baptist. "Over and over again I have lost the chance of an engagement, simply because I am not a Churchwoman." In her case it may have been merely an excuse, but I have been considering the question on general lines since. After dinner to-day I fetched our registers and went over the back entries, discovering that nearly every one inquiring for a governess added: "She must be a Churchwoman." On the other side, three-fourths of the teachers declared that they were Episcopalians or "would be willing to go to church." While thinking it over, other facts came back to my mind, and I wondered that Nonconformist teachers didn't make a stand against their exclusion from public and endowed schools.

An endowed day school near here is a case in point. The trust deed provides that the teaching is to be undenominational and no religious test is to be applied to teachers; but the committee of management privately agreed to choose only a Churchwoman as head, and she tacitly arranged to choose all her assistants from the same body. I suppose it is practically impossible to expose such conduct, for it never gets into the minutes. Of course, the trustees are all Churchmen; if there were any Nonconformists among them, it would be different. If I were a Dissenting parent, I should make a fuss, insist on a proportion of the trustees being Nonconformists, and a certain proportion of the teachers. But they are a sleepy set; they grumble occasionally over the teaching their girls receive, while making no effort to alter it.

The truth is, Anglicans have grasped the all-important fact that it is essential to bring up the young in a definite religious belief, while Nonconformists haven't realized it yet. They are apt to think that home influences are always strongest. If a Church school happens to be more fashionable or more select than its Nonconformist neighbours, it gets the preference. If the Board of Education were to get a return of the children of Dissenting parents attending secondary schools with definite Church teaching, I believe every one would be amazed. We hear a great deal of the hardships experienced in villages on this head, but in secondary schools this attendance is voluntary. I am not proposing that the sects should each have their educational establishments—that would be disastrous—but I like to see fair play. If Dissenters prefer to send their children to private schools for Church people, let them insist on their going to chapel, and also that some of the teachers should be Dissenters also. Let them keep a watchful eye on public institutions, and see that the religious bodies have turn and turn alike in the appointments.

January 29.—Studying the advertisement columns of our local paper yesterday, I came across this announcement: "Engagement desired as Visiting Pianoforte Teacher. 4d. per hour." This registers the lowest fee of my experience. I don't fancy it means reduced circumstances; so pity need not be wasted on the advertiser. Probably the lessons are only worth the pence demanded, if they are worth as much. Still, such an advertisement is significant of many things. Soon afterwards a trained music mistress came in, and I showed it to her.

"I can beat that," she said smiling, "for I once gave a lesson for a penny. It was in my young days, and I was staying in a boarding house at the seaside. Among the inmates—it was a very modest establishment—was an elementary teacher, with whom I chummed. She came back from after-

noon school once with a raging headache, and I insisted on putting her to bed and taking an impending music pupil. A shabbily dressed little girl turned up, who, at the lesson's close, slipped a penny into my hand. That poor little woman actually gave any of her pupils, who would come to her, music lessons for a penny each. Of course they didn't practise, for there were no pianos at home; but they could talk proudly about 'my music teacher' and 'my music lessons,' so their mothers were more than satisfied."

It's wonderful how easily parents are deceived. A widower, down here on a visit, came in to consult me last Tuesday about a school for his little girls. I gave him a prospectus, lots of good advice, and sent him away, as I fondly hoped, with his feet set in the way he should go. Thursday he turned up again, sorely perplexed. He had seen the advertisement of another school (one I won't have on my books) in a London paper, and had inspected it, as well as the one I had recommended.

"So far as I can see," he said, "one is as good as the other, and both ladies promised to carry out my wishes exactly. Yet the fees in the school you mentioned are twice as much as in the advertised one."

I tried to explain the difference between silver and plated articles, but it was of no avail; the cheap and pretentious won the day. You can easily guess the quality of the teaching from the fact that the principal's crowning achievement, the pride of her heart, is the entertainment which her pupils give every Christmas. The preparations for this event usually occupy the greater part of the previous term, and lessons go to the wall—but then, after all, they are only a detail!

I have lately been reading Arthur Young's Life, and was much struck with his description of his daughter's school. Can we say the genus is extinct to-day?

My dear angelic child went to school in January in good health, but never in good spirits, for she abhorred school. Oh, what infatuation ever to send her to one! The rules for health are detestable: no air but in a measured formal walk, and all running and quick motion prohibited. Preposterous! She slept with a girl who could hear only with one ear, and so ever laid [*sic*] on one side; and my dear child could do no otherwise afterward without pain, because the vile beds are so small that they must both lie the same way. The school discipline of all sorts, the food, &c., &c., all contributed. She never had a hearty breakfast. Detestable this at the expense of £80 a year!

February 3.—I had an amusing interview with one of the incapables this morning. She was sent by Canon F—, who wrote me that she was "a gentlewoman, without any means, lately left an orphan." My sympathies were aroused, and when a lady of uncertain age, dressed in deep mourning, arrived I was prepared to do my very best for her. A few preliminary questions showed me that she was utterly untrained and unskilled. Then:

I: "What have you thought of doing?"

She: "I was shown your advertisement for a secretary. I think I could undertake that."

I (surprised): "You understand shorthand, then, and French and German?"

She: "Oh, no!"

I: "You have had some experience in secretarial work, perhaps?"

She: "I used to write dear Mamma's letters."

I: "I am afraid you are hardly able to take this engagement. What do you consider your strongest point?"

She (brightening): "I can paint on velvet."

Something is wrong somewhere when a "live lady," as the charwoman puts it, has nothing but painting on velvet between her and the workhouse.

I wonder if snobbishness will ever die. Soon after the incapable left, a stranger came in and asked me to recommend her a school. She was most particular about inquiring "what class of children they took," as she "objected to tradesmen." Curiosity took me past the address she gave me, when I discovered she was a butcher's wife.

February 4.—One of my clients was in this morning—Miss T—, the head of a very large boarding school for girls just outside the town. After her business was settled she stayed on chatting. Among other things, she told me that she had been brought up by a widowed grandmother who had sent her to this school as a pupil when six years old. At

eighteen she began to teach, still in the same school, and eventually rose to be its principal. She has lived in the same house practically all her life. I believe nothing has ever happened to her beyond the humdrum monotony of school life.

Just consider what that means! Her horizon is bounded by the walls that enclose the garden; her past, present, and future are alike peopled by girls—girls of varying ages and dispositions, of course—still, the atmosphere in which all these years she has moved and had her being has been purely feminine. To make matters worse, she invariably spends her summer vacation (the only time in the year that she leaves home) with two maiden aunts. Naturally, she has no friend of the masculine persuasion, and in a burst of confidence she confided that she was always rather afraid of men, especially when *tête-à-tête*. She is a gentle and most kind-hearted woman; nevertheless, I feel sorry for the girls under her charge. She should have been the superior of a convent in the eleventh century. What possible point of contact can she have with present-day young women?

Curiously enough, while she was here another lady came in—a spinster, too. The eldest of a large family, she possesses no less than six brothers. In her home the masculine element predominates. I'm afraid that familiarity has bred contempt, for she undoubtedly considers men shiftless, helpless creatures. How I longed to introduce these two opposites!

CECIL VINCENT.

CORRESPONDENCE.

HIGHER-GRADE SCHOOLS.

To the Editor of The Journal of Education.

SIR,—In an editorial note in your issue of October last you remarked in a comment on the Return relating to Higher-Grade Schools that the figures showed that Sir John Gorst ought to have used the word "bogus" instead of "shoddy" in describing the kind of secondary education given in these schools. You justified your emendation by pointing out that only 9.8 per cent. of the scholars in the schools of science attached to these schools survived to the third year, and only 2.4 per cent. till the fourth year. You also pointed out that only 26.9 per cent. of the scholars in the school of science were over fifteen years of age, and remarked that the smallness of this percentage showed how fictitious was the agitation in favour of retaining these older scholars in the schools instead of turning them into the streets.

A new return, recently published, enables comparisons to be made between schools of science in secondary schools and schools of science in higher-grade schools (Tables I.A and III.A), and, to use your own expressive language, blows your whole case into the air.

Looking first at the position of the scholars in the schools, the totals show that, whereas the higher-grade schools have 2.8 per cent. in the fourth year and 9.6 per cent. in the third year, the secondary schools have 4.5 per cent. in the fourth year and 16.6 in the third year, while twenty-eight secondary schools have no fourth year at all.

The difference in the totals is small, and even then it is more apparent than real, as will be seen on looking at the columns relating to age. The higher-grade schools retain 27.1 per cent. of their scholars beyond the age of fifteen, but the secondary schools have only 19 per cent. of such scholars.

The writer of the article on which your editorial comments were based puts forward the absurd theory that the smallness of the upper classes in higher-grade schools is due to a systematic endeavour to maintain a good, but ill-deserved, reputation for efficiency by unduly delaying the entrance of pupils into the school of science. He overlooks the fact that by adopting this course a school would suffer a loss of some £6 on every boy it thus kept down, and would greatly injure its chances of obtaining that "fair proportion" of boys in the third year on which the reputation of the school depends a good deal more than it does on examination successes.

Now, although the secondary schools have 8.1 per cent. fewer scholars over fifteen, they have 8.7 per cent. more scholars in the advanced course than the higher-grade schools have. The obvious inference from these facts is that they admit boys to

the school of science at a lower standard of age, and, to that extent, of attainment, than do the higher-grade schools, and that in order to increase the numbers in the third year they allow some pupils to "skip" the second year. By adopting this course of action they earn considerably more grant, and evade, if they do not comply with, the requirement that a "fair proportion" of scholars must be in the advanced course. There is actual evidence that this "skipping" takes place, for Mr. T. B. Shaw, speaking of the London grammar schools, says: "Scholars frequently spend only half the time they should do in a form, or in many cases skip a form altogether; this arrangement has a particularly disastrous effect in a school of science, where the passing over of a form may mean entire loss of instruction in one branch of science" (Forty-sixth Report, Science and Art Department, page 17). I venture to think that on reflection you will feel that you have been somewhat hasty in using the term "bogus," which of course imputes dishonesty to the head masters of the schools concerned. If the kind of secondary education given in higher-grade schools is "bogus," then that given in the secondary schools of science contained in Table A is clearly still more so, and the imputation of dishonesty must apply to the head masters of these schools also. I feel sure that you would not be intentionally discourteous to any teacher not employed in public elementary or in higher-grade schools, and I therefore invite you to withdraw an expression which must, as the returns show, give pain to a great many head masters whom I am sure you did not mean to attack.—I am, Sir, yours faithfully,

W. DYCHE,

Hon. Sec. Association of Head Masters of
Higher-Grade Schools and Schools of Science.

Halifax, April 16, 1902.

[We cannot admit the accuracy of Mr. Dyche's quotation from our note of October last. The final words of his first paragraph, "turning them into the streets," are a gloss of Mr. Dyche's. The proper place for children of ability at fifteen (and earlier) is the secondary school; for the others the workshop and the evening technical institute, not the streets. The new return, even on Mr. Dyche's own showing, establishes our case. 21.1 per cent. in the advanced stage, as against 12.4, is a pretty good majority in favour of the secondary school. The proportionate percentage of scholars retained to the whole proves nothing, for the secondary school takes most of its children in at eight or ten, while the higher-grade, though apparently for the computation a separate school for older scholars should have added on the numbers of its lower elementary school; its percentage then would be about 3. On his next paragraph we refer him to a recent debate at the London School Board, when special penal regulations were made to prevent this "keeping back" of children and loss to the Board's funds. But the whole comparison is misleading. The secondary schools are still in their infancy as regards those regulations, and the force of the regulations is such that efficiency in numbers or grants only comes with age. Let Mr. Dyche institute a comparison between the two classes of schools, taking only those of five years' standing as against those of seven or eight years', and he will see the force of our contention. We have too much respect for schoolmasters to apply to them the term "bogus," or to blame them for carrying out loyally of the policy of their Boards; it is the School Board policy which is responsible for the "bogus" school.—ED.]

BRITISH ASSOCIATION COMMITTEE ON HEALTH IN SCHOOLS.

To the Editor of The Journal of Education.

DEAR SIR,—At the last meeting of the British Association a Special Committee was appointed to consider the conditions of health essential to carrying on the work of instruction in schools. The Committee consists of Prof. C. L. Sherrington (Chairman), Mr. E. W. Brabrook, C.B., Dr. C. Childs, Dr. Clement Dukes, Miss Findlay, Dr. C. W. Kimmins, Miss A. Ravenhill, Mr. J. Russell, B.A., Prof. L. C. Miall, Dr. Sydney Stephenson, Dr. C. Shelley, Prof. H. L. Withers, Dr. W. H. K. Rivers, Mr. E. White Wallis (Secretary).

In the first instance the Committee are collecting information upon the following subjects:—(1) A collection and tabulation of records of original observations on the periods of day appropriate for different studies, the length of the lessons, and the length of study suitable for children of different ages. (2) A collection and tabulation of anthropometrical and physiological observation forms in use in various schools

with a view of preparing a typical form for general use. (3) A collection and tabulation of anthropometrical and physiological observations recorded in different schools for a series of years on the same children. (4) A collection and tabulation of recorded investigations into the causes of defective eyesight in school-children and a definition of the conditions necessary for preserving the sight. (5) An inquiry into the practical knowledge of hygiene possessed by school teachers.

As the subject is one of general interest and importance, the Committee hope that you may be able to find space in your columns to bring these investigations under the notice of your readers, and ask their co-operation in obtaining information on the several points. Any facts or references relating to the subjects under consideration, if sent in to the Chairman or myself, will be very helpful.—Yours faithfully,

E. WHITE WALLIS, Secretary.

The Sanitary Institute, 72 Margaret Street, London, W.,
April 16, 1902.

THE FRANCO-ENGLISH GUILD AT PARIS.

To the Editor of *The Journal of Education*.

DEAR SIR,—May I ask you, in the interests of English teachers and students intending to visit Paris, to be good enough to make known a fact which may be of great moment to them? The Franco-English Guild, of which Miss Williams is President, and which has hitherto been obliged to restrict its services to women, is now opening a section for men. This new step has been taken on the suggestion and with the direct help of the "Comité de Patronage des Etudiants Etrangers à la Sorbonne," a committee which has as its President M. Casimir Périer, and among its members most of the leading men at the Sorbonne. M. Léopold Sudre, Docteur-es-Lettres, the distinguished philologist, is the "Directeur des Etudes" of the men's section. Englishmen will be able to obtain information and advice not only about their studies, but about many other matters which concern foreigners in Paris, by applying to the Secretary, the Franco-English Guild, 6 Rue de la Sorbonne, Paris.—I am, dear Sir, yours faithfully,

Owens College, Manchester.

H. L. WITHERS.

March 29, 1902.

WILLIAMS'S EDITION OF MACAULAY'S "CLIVE."

To the Editor of *The Journal of Education*.

SIR,—In a notice of my edition of Macaulay's "Clive," your reviewer says "the notes, with but few exceptions, are merely abridgments, without acknowledgment, of those in another annotated edition of the essay." The notes are the result of a first-hand use of authorities, and are independent of any other annotated edition.

A comparison of the two editions with the authorities would have satisfied your reviewer as to the nature of the notes before him. The pains taken in getting data may be guessed at from the fact that he credits me with "a general introduction to the study of Macaulay," although it is signed "B."—Yours truly,

A. M. WILLIAMS.

April 7, 1902.

[The notice was written with both editions before me. I apologize for overlooking the "B."—YOUR REVIEWER.]

WORLD-HISTORY FOR SCHOOLS.

To the Editor of *The Journal of Education*.

SIR,—I wonder if your correspondent "E. L." has seen (1) Arnold's "Britannia History Reader," Book IV., "Men and Movements in European History," price 1s. 6d.; (2) "The Making of Europe," by Nemo (Nelson). The latter has a companion volume on the British Colonies. All these books are good and up-to-date.—I am, Sir, yours truly,

W. CAMPBELL PENNEY.

Elizabeth College, Guernsey, March 3, 1902.

OPINIONS OF PUBLIC MEN ON THE EDUCATION BILL.

THE BISHOP OF SALFORD heartily approves the Bill, and believes that it will pass. "The Government stake their reputation—and it is not on too stable a basis—upon this Bill. Everybody will be crying out against their impotency and incapacity if they allow it to fall through. . . . I think it is generous for us Catholics to say that we will build our own schools and offer them as an asset for national education, but after that it is nothing but just that the maintenance should come out of the rates."

DEAN LYNCH likewise approves, but there is one great blemish which must be removed in Committee:—"The managers of the school shall, out of funds provided by them, keep the schoolhouse in good repair," &c. This clause, if the Voluntarists are not extremely careful, may land them in the awful predicament of being forced practically to rebuild most of the voluntary schools in the country.

SIR JOHN HIBBERT approves the Bill as a settlement of the growing friction between Board and voluntary schools. He would retain the permissive clauses, but would raise the limit of population subject to which the non-county boroughs and the Urban District Councils may become the Education Authorities for their areas.

THE BISHOP OF CHESTER commends the Bill, on the ground that it will establish a quasi-parental relation between the Local Education Authority and the various schools of the area. It will draw the most venomous sting out of the competition between denominational and non-denominational schools. It will confer on our school system the benefit of a true orientation. Further, it will meet all that is most reasonable in the *ad hoc* demand. The most valuable members of School Boards will find a welcome on the Education Committees, while not a few persons who do not care to face the ordeal of a contested election, but whose fitness for the work is eminent, will be quietly enlisted.

THE REV. HUGH PRICE HUGHES joins with Dr. Parker, of the City Temple, in declaring that the consciences of Nonconformists will not allow them to pay a new and exceptionally unjust Church rate. Sectarian education must be, in part at least, self-supporting, and in no case supported in any degree by the rates.

THE RIGHT HON. JAMES BRYCE holds that "it is not an Education Bill: it is simply a Voluntary Schools Endowment Bill."

SIR JOSHUA FITCH writes:—"The dominant purpose of the Bill is to encourage the multiplication of denominational schools, to remove the 'intolerable strain' from the shoulders of the Church to those of the ratepayers, to strengthen the denominational system and give it a renewed chance of permanence."

THE BISHOP OF ROCHESTER (Dr. Talbot) welcomes the Bill, but points out, as grave defects, that it leaves undenominationalism in undisturbed possession of the larger part of our urban areas; that, by requiring that a third part of the managers shall be appointed by the Local Authority, it traverses trust deeds and traditions.

PROFESSOR MEIKLEJOHN.

BY the death of Prof. Meiklejohn, which fell on April 5 after a short illness, the sequel of an attack of influenza, the *Journal* has lost one of its oldest and most constant contributors. John M. D. Meiklejohn was born in Edinburgh in 1830, the son of a private-school master. From his father's school he proceeded to the University of Edinburgh, where he won the gold medal for Latin. The twenty years that followed his graduation were spent mainly in tuition. He started a school, first in the Lake district, and then in London. When his preparatory school in Orme Square was transferred to Mr. Quick, he established another in York Place, which, under his lieutenant Mr. Blair, flourished greatly. This was his main work, but his restless activity found vent in other directions. He wrote for the press, he lectured, and in the Dano-German war he acted as war correspondent, and was arrested as a spy. In 1874 he was appointed Assistant Commissioner to the Endowed Schools Commission for Scotland, and two years later he was nominated Professor of the Theory, History, and Practice of Education, being the first occupant of the Chair founded by the Bell trust. The endowment was meagre, but the duties of the professor were not arduous, and the business of his life thenceforward was the composition of the many and various school books which have made his name famous. History, geography, grammar, composition, from an A BC for infants to a history of English literature for advanced students (the work on which he was engaged at the time of his death), there was hardly a branch of class teaching that he did not touch, and we can add: "Nihil quod tetigit non ornavit." His text-books are often inaccurate and defective, but they are never dull. He had the supreme gift of the teacher, the power to seize the salient points and to drive them home. It is remarkable that his most serious work as an author—the translation of "Die Kritik der reinen Vernunft"—should have been made when he was scarcely out of his teens. His vigour and adventurousness were conspicuous in his business. Dissatisfied with his treatment by publishers, he determined to publish for himself, and set up and managed to the last the house in Paternoster Square.

We may add one or two traits of character. His keen sense of humour could hardly be suppressed. It appears in "The Life of Dr. Bell" and in the notice of himself contributed to "Who's Who": "Fought in two General Elections; beaten both times. Compiler of numerous *biblia abiblia*. Recreations: golf every morning, whist every evening." It betrayed his anonymity in a somewhat embittered controversy which he waged in this journal about a year ago—the bitterness was not on his side. He loved a free fight, and was careless whom he attacked, but he never lost his temper, and was as ready to take as to give blows. Against hypocrisy and stupidity he was never tired of tilting, and, like Dr. Johnson, he was a good hater. Yet at bottom he was the kindest and most lovable of men, public-spirited and generous to an extreme.

OCCASIONAL NOTES.

THE readings of the Bill are not timed opportunely for a monthly journal, and we must wait till July before pronouncing on the measure as it emerges from the

Committee stage. Nothing that has been said or done since we last wrote—neither the speech of Mr. Bryce nor the letter of

Mr. Eve—leads us to alter the provisional opinion that we expressed last month. It is quite true that the Bill has been riddled with small shot, by Mr. Lyulph Stanley with his *Contemporary mitrailleuse*, and by lesser sharpshooters, but it has so far received no mortal wound, and its strength has been proved by the inability of the Opposition to suggest an alternative policy. Why the Government should not have withdrawn the optional clauses it is hard to divine; that they will be withdrawn we may gather with certainty from Sir Richard Jebb's speech. After all, the main argument against the Bill resolves itself into this: it satisfies the Church party. A singularly weak argument, it seems to us, as though one man's gain must needs be another man's loss. We hold no brief for or against the Church, and we are convinced that in conceding the principle of public control, with whatever safeguards and reservations, Churchmen are granting *in posse* all that we educationists demand.

CHURCHMEN are agreed that religious education is not a matter of a religious half-hour a day, but of the tone and influence of the whole school day in a school of which religion is the chief element."

The Claim of Churchmen.

Not only Churchmen, but all true educationists, will agree with the sentiments of the *Guardian*; but what most Churchmen do not see is that this is fatal to their claim, if not for absolute control, at least to be the dominant power in Church schools. It is idle to tell the Dissenter that Churchmen bear one-tenth of

the cost and demand less than a tenth of the time for Church teaching. An indeterminate equation cannot be solved by the rule of three.

THE most important utterance of the month on the Education Bill is unquestionably Lord Rosebery's general approval of the municipal principle in his speech at Colchester. As a matter of fact, if the other critics of authority like Mr. Acland would fasten their attention upon the same point, which is really the main issue, there would no doubt be quite a chorus of approbation. In the second reading debate in the House of Commons not a single speaker was found to question the competence of County Councils—acting through a selected Committee—to deal with secondary education; while, as regards elementary education, the only points at issue were whether it was expedient to give the Councils this extra burden with all its controversial side issues. On the platform and in the Press, with the single exception of the "Free Church" protests and, naturally, the cries of the doomed School Boards, where *ad hoc* still struggles in its last ditch, the broad municipal principle has suffered no serious attack. Adverse speeches and letters have been upon matters for the Committee stage rather than for the second reading. The proportions of the various elements on the Education Committee, the option clause, rate-aid *versus* tax subsidy, and the management of denominational schools are all of importance, but they are matters of detail upon which, as Mr. Chamberlain has broadly hinted, the Government are prepared to make concessions. Important as these points are, they hardly affect Lord Rosebery's wide issue as to whether the trusted and elected authorities dealing with all the comforts, duties, and amenities of adult life are also to be entrusted with the education of the children.

WE wish that it could be made compulsory for every speaker on the Education Bill to pass a competitive examination in two subjects. The first set book would be "Hansard's Parliamentary Debates" for the year 1870, and the second some four volumes of Mr. Sadler's "Special Reports" on Continental education. Recognizing, no doubt, that we have not yet reached this stage of perfection, our contemporary the *County Council Times* started in May a remarkable series of extracts dealing with the salient points of both "papers" as far as they concern matters now in controversy. Mr. W. E. Forster, Mr. Gladstone, Mr. G. Dixon, and Mr. Mundella all stand out in strong relief as opponents of *ad hoc* election, and as in favour of the municipal principle. With deep reluctance and fear, they show themselves driven from their position solely through the incompetence and small area of the vestries in rural parishes. Reflections from these leaders of thought, all too true, as to friction, sectarian squabbles, and an inferior class of administration as the result of direct election, accompanied their surrender of principle. From first to last the "Free-Church men" on their own side denounced Mr. Gladstone's Government for their aid to voluntary schools, and for not forcing on them also the Cowper-Temple clause. How hollow does all this seem now when we are told that what was then denounced is as the Ark of the Covenant! As to Continental analogies, the "Special Reports" show that everything declared impossible or unworkable or unconstitutional in the Bill is found in full working order among all the best educated of our industrial rivals. Is it too much to hope that members of Parliament, at any rate, will digest these facts?

SOME teachers are disappointed that no announcement has yet been made by the Registration Council inviting applications for admission to Column B. We suspect there is much ground to be cleared first. At any rate, we know that the Council is holding bi-weekly meetings, and that an advertisement has been issued in regard to the Registrarship. This advertisement must have caused some disappointment. The salary offered is £500, rising to £600. We were not alone in demanding that, in order to secure a Registrar of the right calibre, the sum of £1,000 should have been offered. There are one or two names that rise instinctively to the lips when one questions who the Registrar will be. But these men are not likely to leave their present work for the salary offered. Of other applicants there will be no lack, and the Council have a difficult task before them. We suppose the appointment will be made by the middle of this month, and, if the Registrar appointed is able to take up the work at once, teachers may possibly have an opportunity of sending in applications before the end of the summer term. But it is more probable that nothing will be done till September.

*The
Registration
Council.*

THE chief preliminary difficulty is to decide the connotation of the term "recognized schools." The larger number of applicants for registration will base their claim upon two points: first, that they possess a University degree or its accepted equivalent; secondly, that they have taught for three years in a recognized school. No one, then, can make a claim under these clauses until he knows which are the recognized schools. There exists nowhere—not even in the pigeon-holes of South Kensington—a complete list of "schools other than elementary." Mr. Sadler's list was confessedly incomplete, and we believe nothing has been done subsequently to finish the inquiry. This is the *crux* with which the Registration Council is faced. On their report, when it is made, the Board of Education will settle the question. We do not see how any convenient line can be drawn between recognized schools and those not recognized without a preliminary inquiry. Are private schools to be excluded? This would be manifestly unjust. But how to discriminate? We suppose the Council will eventually decide to put a series of questions to each head master, and, on his reply, supplemented possibly by inspection, the Board will add his school to the list or not.

*The
"Recognized"
School.*

AS so much time is necessarily lost in preliminary inquiries, it would seem fair to extend the limit of time allowed for registration under the easier clauses. And it is stated that the Consultative Committee has proposed to the Council an extra year's grace. We may safely assume that the Council will make the meshes of their net as wide as the Order in Council permits. There are excellent men and women who have been teaching for ten or twenty years who deserve to be admitted, though they do not possess the necessary qualifications. We hope such people will be dealt with generously. They cannot be expected now to pass qualifying examinations. Others who are younger may well take the necessary steps, easy as they are, within the next three years—or, perhaps, four years. Eventually, we hope that the standard of registration will be screwed up on the professional side, until registration becomes the genuine mark of the member of a "learned" profession. But there are few of us to-day with paper qualifications attesting our training, and for the present no existing teacher of satisfactory powers should be debarred if he or she wishes to register.

*The
Time Limit.*

THERE are those who ask what is the good of registering and who prophesy that the whole scheme will end in failure. And they argue further that there can be no hardship in exclusion when there is no advantage in admission. Yet there is no danger that the columns of the Register will remain empty. Already advertisements may be seen in the papers which ask for such qualifications for the teacher required as would lead to admission to Column B. The Board of Education has issued new regulations with regard to secondary day schools. Among these we read that the teachers in such schools must be properly qualified, and that the inclusion of the teacher's name in Column B would constitute such qualification. The Local Authorities will be sure, for the sake of convenience, to expect candidates for appointments to have their names on the Register. And the public schools will be drawn in for this reason, if for no other: public-school masters may expect sometimes to be applicants for head masterships of schools under County Authorities. The worst they can say is that there is no harm in it, that it may do good, and only costs a guinea once paid.

*Who
will Register?*

ENOUGH attention has not been directed to the Duke of Devonshire's defence of the genesis of the Education Bill at the Coronation Dinner of the County Councils Association. His keynote was "irresistible necessity." Consequences had followed both the Acts of 1870 and 1889, which "were not foreseen at the time of their adoption." That a "demand would arise for the instruction of children who had left the elementary schools," and that "Technical Instruction Authorities would make themselves Secondary Education Authorities" were quite outside the prophetic vision of either Mr. Gladstone's or Lord Salisbury's Governments. Now there is nothing to be ashamed of in this. In every other branch of legislative activity the same thing is seen, and unexpected developments necessitate amendments in the law. But the Duke went further. He showed that those two unexpected results caused a collision of administration, with, as a natural consequence, waste and overlapping. Three courses were open. First, the general supersession of all others by one Authority, as in the Bill; secondly, the drawing of a hard and fast line between the grades—an inevitable preliminary, by the way, to Mr. Acland's solution; thirdly, to let the Authorities fight the matter out at the cost of the ratepayers, which is just what the School Boards and Free Churches desire—especially the "fight." The Lord President had no doubt in his mind that the most difficult, because the boldest, course was the only one open to responsible statesmen. He concluded by a word of advice to the new Authorities to "lay down general principles of finance and administration," and in the actual management to "continue to make use of the assistance of all that is best in the present Authorities." This we heartily endorse, and hope to see all active and public-spirited School Board members on the Sub-Committees of the Education Authority—a position not less dignified than their present ones.

*The Duke
of Devonshire
on Genesis
of the Bill.*

THE attempt of Sir W. Harcourt to belittle the attitude of the County Councils Association on the Education Bill was too transparent. Because they agreed to say nothing about the extent or limitation of the rate in their approval of the secondary part of the Bill, and expressed their wish that *all* the extra elementary expense should not fall upon the ratepayers, but that the Chancellor of the Exchequer should do his share, Sir

*Sir W. Harcourt
and the
County Councils
Association.*

William tries to saddle the Association with giving its approval of the Bill only as long as it had not to pay for it. As a matter of fact, the proceedings at the meeting in question show just the opposite tendency. Many members hold that there should be no limit to the rate (as do representatives of most of the large county boroughs), but that Councils should be trusted "all in all" in the matter, while others hold that the Welsh Intermediate system of concurrent rating and Treasury equivalent grants is the best. It was in an attempt—and a successful one—to unite all these into giving a general and *unanimous* approval of the secondary portion of the Bill that all allusion to the rate was omitted from the resolution. Sir William is apparently not aware that, over and above the actual local taxation grant, the Councils, *since* the Royal Commission reported in 1895, have, either by direct rate subsidies or by loans for buildings on rate security, given just over a *million of money* mainly to secondary schools. This is not the class of Authority likely to refuse to pay for its privileges. On the "elementary" question, the proposer of the resolution distinctly affirmed that some of the extra cost should come out of the rates, and an amendment to ask for it all from the Treasury did not even find a seconder. Curiously enough, in the debate on the Bill of 1870 it was Mr. Vernon Harcourt who proposed the sharing of School Board cost in this way and that the extra outlay should not be entirely a rate charge. But consistency is not Sir William's strong point.

THE point we raised last month has been taken up and emphasized in many influential quarters. The influx from all parts of the globe of scholars to Oxford in far greater numbers than has been the case in the past will force the University to consider its position, and to inquire whether its resources are equal to the demands that may be expected. Frankly, they are not. Oxford is the home of linguistic, historical, and legal studies. The influence and charm of the education it gives arise from a thousand and one sources too subtle to analyze in an occasional note. But, if its students ask for elaborately fitted medical schools or electrical laboratories, the University can but answer that for the last two years its accounts have shown a loss, and there is no fresh source of income available. A few more millions spent in buildings and endowments would enable Oxford to become an Imperial University, with a faculty in every known subject of study. Benefactors who give scholarships do not always realize that the sum paid does not cover the cost of the education given. It is so with secondary schools. The County Council scholar pays the school fees, which probably—almost certainly—fail to cover the cost of education, without counting rent of buildings. But there is this difference: the County Council also makes a grant to the school, in addition to the sum paid by the scholars.

THE undergraduates have decided by a large majority in an Union debate that Mr. Rhodes's benefaction is to be welcomed. It is probable that the Common Rooms would, if polled, say ditto. And yet there must be feelings of anxiety in addition to the monetary ones mentioned in the preceding note. What sort of men will Oxford get, and how far will they accept the traditional discipline of the University? Will the new-comers show even the *modicum* of respect that the existing undergraduate does to the proctor's bulldogs? Will they come to work or play? Mr. Rhodes's ideal is not a bookworm. Germany has plenty of intense students; but will the Emperor select these to send to

Oxford? We are rather inclined to think that from Germany at least will come the future diplomatist or administrator, the man of action rather than of letters. From America and the Colonies we shall probably have men eager to share in the general life of the colleges outside the lecture-rooms, rather than to pursue, as their main object, some special line of study. Mr. Rhodes, who is said to have mastered the details of his scheme, may have had this in his mind when he decided upon three years instead of four as the period of University life for his scholars. Three years is ample time to taste Oxford life, and affords opportunity also for one Honour school, either in Moderations or in Greats.

MR. JAMES BRYCE, in the *Nineteenth Century*, criticizes the Bill under the five points of a charter which he holds educational reformers would all sign: (1) Provision of secondary education where lacking and raising of quality where it exists; (2) improvement of rural schools and raising age of attendance; (3) better provision for training of teachers and abolition of pupil-teacher system; (4) enlistment of popular sympathy with, and popular interest in, schools; (5) elimination of sectarianism from teaching and management of schools. He demonstrates that, by the Bill, defects (1) and (3) are left uncured; (4) and (5) are actually aggravated; while to (2) there is applied a remedy both costly and uncertain. We cannot here attempt to traverse the argument, and will only note two points. First, he differs from the vast majority of educationists in not desiring a single Authority, and saves his self-consistency by pointing out that the Bryce Commission of 1895 dealt only with secondary education. Secondly, his arguments under (1) and (4) cannot both be pressed. He lays down at starting that nothing will be done for secondary education, because there is no compulsion, and the County Councils will grudge the money. Then he urges that the motive power in educational progress is popular sympathy and local interest. But the County Councils, who will be the paymasters, are more truly representative bodies than School Boards, elections to which are tainted by the cumulative vote.

THE new Matriculation scheme of the University of London is a signal triumph for the Modernists. Latin was the Hougoumont of the battlefield, and Latin is now relegated to an alternative subject. Only one foreign language is now compulsory, and this may be either ancient or modern. A candidate must take five subjects—(1) English, grammar and composition, including questions on English history and general geography; (2) Elementary Mathematics (two papers of three hours each); (3) Latin, *or* Mechanics, *or* Physics, *or* Chemistry, *or* Botany. Two additional subjects must be taken from a large group which includes virtually every subject taught in secondary schools. Thus, a classical boy might pass in English, Mathematics, Latin, Greek, and Ancient History, and a modern-side boy in English, Mathematics, French, German, and Modern History; while a special science candidate might substitute for French and Modern History any two branches of science or Geometrical and Mechanical Drawing. The scheme will be a welcome relief to head masters, and put an end to that miserable excrescence the Matriculation class. It is true that a pass will henceforth lose its value as a leaving certificate; but it will far better serve its primary object as a test of fitness to profit by University instruction. We detect only one blot—there should have

been two papers in English, a wider subject, and in our opinion a more important one, than Elementary Mathematics.

THE important meeting held at the Mansion House on May 9 had two concurrent objects—the raising of funds for the endowment of University College and its incorporation with the University of London. So far the call for a million has met with a half-hearted response, and the municipal public spirit of Birmingham is still to seek in London. The fact is that London is a convenient geographical expression for postal and other purposes, but has no more unity or coherence than the Holy Roman Empire. London merchants have not yet realized the benefits that will accrue from incorporation. The teachers will, at starting, be the same, though they may bear a higher title; the buildings will be the same, though they may be enlarged and better equipped; the fees will be the same, though they will be regulated by the University instead of by the Council of the College. All very true; but what the public do not see is that the other affiliated colleges will be compelled to follow suit, and that before long we may hope to find a group of co-ordinated schools all regulated by a single Authority which will be able at once to prevent unnecessary duplication of chairs, to supplement the teaching when defective, and to fill up many lamentable gaps. The University of London will no longer be *magni nominis umbra*, whose very habitat is known only to the initiated.

DR. J. H. GLADSTONE deprecates the Education Bill on the peculiar ground that it will tend to retard and throw back the new learning. By the last returns of the Board of Education (why is it we have none later than 1899-1900?) it appears that the attention given to the scientific subjects of instruction is more than twice as great proportionally in Board schools as in voluntary schools. But surely the explanation is not that the voluntarists are opposed to science, but that they cannot afford the more expensive kind of instruction; and, whatever else the Bill does, or fails to do, it will remove this financial disability. Whether County Councils are less likely than School Boards to support the more modern and practical views of education of which Dr. Gladstone has been the apostle remains to be seen.

THE "Regulations for Secondary Day Schools," which have just been issued as a separate publication, differ considerably from those of last year included in the "Science and Art Directory." The term, by a happy oxymoron, now includes boarding schools and also private schools, the clause, "not conducted for private profit or farmed out to the teacher" having disappeared. The minimum of local contributions—under which head are included fees, grant from Local Authorities, and endowments—insisted on before a school can receive a grant from the Board is now fixed at 25 per cent., a very moderate requirement. The Register casts its shadow before, and we read that, "inclusion of the teacher's name in Column B of the 'Official Register of Teachers' will be accepted by the Board" as evidence that a teacher is duly qualified. The grants will be at the rate of 70s. to 120s. per student in the Elementary Course, and of 80s. to 180s. in the Advanced Course.

THE scheme of the London County Council for a day training college seems at last, after some vexatious delays, to have taken definite shape. The college will be open to King's Scholars, of both sexes, and to any students who wish to become teachers in either primary or secondary schools. No less than a hundred scholarships are to be offered for competition. These appear to be intended for primary teachers, as the candidates for them must be qualified to hold a King's Scholarship. The other condition—that candidates must have passed the Matriculation Examination of the London University—implies that the college, besides giving a course of training that will lead to the "certificate" or other diploma, will also provide a course of education leading to a degree in one or other of the University faculties. The news that the scheme has been approved by the Council is very welcome. London has waited long for an official training college; but so far as can be judged the present scheme contains all the essentials for a great success, though it will not provide, what is even more needed, training for secondary teachers.

THE practice of teaching boys and girls together in the same classes for at least a considerable part of their school life is steadily on the increase. Secondary schools are, as a rule, conservative in habit and action. The example from Scotland, and more recently from America, was ignored or scouted; but the Welsh Intermediate schools are too near our doors to be overlooked, and from them we get nothing but favourable reports. In England, too, not a few pioneers have shown that boys and girls can be educated together no less thoroughly than apart, and, further, that considerable advantages in character and conduct accrue to both boys and girls in what are known by the somewhat ugly phrase of "mixed" schools. We refer to the matter again here because we want to suggest a fresh field of operations to those who are working to overcome prejudice. There are, we believe, quite a number of schools up and down the country where boys and girls are lodged, by the charity of some society or religious body, under the same roof, and meet one another, perhaps, in the dining hall, but otherwise are kept rigidly apart; except that brothers may see sisters on Sunday afternoons. In such schools reform is easy, and, in our opinion, desirable.

THE current number of the *Modern Language Quarterly* contains several articles of special interest to the teacher of French or German. Among them, of course, the New Method is not neglected. It is certainly remarkable to note the rapid spread of this method since the publication of Messrs. Dent's handbooks. And it is perhaps still more remarkable to note the steady perseverance with which the method is urged in spite of difficulties. These difficulties are many and various; we call attention here to a difficulty in one type of school that is felt by some teachers to be so great that in despair they abandon the New Method. In an intermediate school of the newer type it is simple to start in the lowest form with the Hölzel pictures, and even to continue this work in the form next above. These children, after, say, two years of this work, are moved up into a higher form, and have to work with a number of new pupils—County Council scholars very frequently—who are beginners in the foreign language. Each teacher will, in practice, have his or her way of solving the difficulty, which is further increased by the fact that

A New Training College.

Co-education.

Modern Language Teaching.

these scholars have probably within three years to pass a qualifying examination such as the "Junior Locals."

THE regulations issued by the Head Master of the Cheltenham College for boys with regard to the *exeat* for the Coronation holiday have aroused the indignation of at least one parent. Sunday travelling is rendered compulsory, says Mr. Diggle in the *Times*. Railway companies are warned not to be unpunctual; and the sins of the fathers and of steam-boat companies are to be visited on the children. The circular ends with the stern decree: "No answer will be returned to requests for longer leave." Head masters have a reputation as autocrats, but even the down-trodden parent may turn. Seriously, the question of granting leave on a special occasion like the Coronation is one that demands care and prudence in its solution. Dr. Field strikes the right note when he urges that the Conference should decide upon, and issue, a policy in reference to the occasion. The independence of the great schools is a splendid thing: but in certain details even a great head master may be strengthened in his position by union with his fellows. Another grievance crying aloud for reform is the varying date of the Easter holidays. If the Conference would act as a united body on such questions as these, parents would soon give their assent, and existing and justified grumblers would hold their peace.

TECHNICAL EDUCATION.

THE excellent progress made by the London County Council with their scheme for technical instruction is fully illustrated in a report which has just been issued. It is nine years since the County Council commenced its operations, and during that period great developments have taken place, not only in the provision of polytechnics and technical institutions, but in the co-ordination of educational agencies of various grades so as to provide continuous educational facilities from the lowest to the highest grade of work for all classes of students. Out of the sum of two millions and a quarter which the County Council has received as the residue under the Local Taxation (Customs and Excise) Act, 1890, £1,000,170 has been allotted to technical education. And the amount required each year is rapidly increasing. The estimated aggregate expenditure for the year ending March 31, 1902, is £215,000.

THE practical instruction for apprentices, improvers, and journeymen in the principal London industries has, from the outset, occupied a leading place in the Council's work. It is noted that ten years ago it was extremely difficult to establish such instruction, owing to the extent of the buildings and the special character of the equipment required, and, above all, the extreme difficulty of obtaining teachers who, possessing practical knowledge of the trades dealt with, also understood the scientific or artistic principles involved in their work, and who possessed the ability to teach. There was another difficulty from the fact that for many years such classes as had existed had been out of touch with the workshop, and workmen had scarcely begun to find that the training provided in a properly conducted technical school might be of service to them in their daily work. In 1894 97 classes in technological subjects were available. There are now in London no fewer than 35 well equipped and efficient centres of definitely practical instruction in various trades, and during the present session about 200 separate classes are being conducted.

THE twelve polytechnic institutes working in conjunction with the County Council are estimated to be spending, in all their departments, a total of £175,000, per annum, of which, roughly speaking, £40,000 is provided by the City Parochial Trustees, £50,000 by the London County Council, £22,000 by the City Companies, £10,000 by private subscriptions and other endowments, £10,000 by Government grants, and £43,000 by students' fees. The total capital expenditure involved in these institutions is said to exceed £600,000. During the past session a total of 30,000 separate students have been under instruction in all subjects, as compared with a corresponding total for 1892-3 of not more than 10,000. It may be noted that evening instruction in

mechanical engineering, electrical engineering, carpentry and joinery, plumbing, and other building trade classes, experimental physics, chemistry, and mathematics has during the past nine years increased almost fourfold—that is to say, the number of "student hours" in these subjects in 1893-4 was 118,732. In 1900-1 the total was 454,363. The work of a London polytechnic is of an extremely varied character. Within the walls of a single institution theoretical and practical instruction is given in many branches of science from the elementary to the most advanced stages. Thorough courses of training are provided for mechanical and electrical engineers in laboratories and workshops of the newest types; on the art side, not only is teaching given in the ordinary branches of drawing, painting, and modelling, but students are specially trained in the application of design to existing industries. In view of the steady growth of students, the polytechnics are likely to require additional buildings in the course of a very few years, and the Technical Education Board contemplate an expenditure of £70,000 for this purpose.

It is pointed out that the policy of the Board with reference to the reorganization of the University of London has, from the first, had in view (a) that its advantages should be effectively open to evening students; (b) that adequate recognition should be given to the more advanced work of the polytechnics; (c) that there should be no discouragement of "technical education" by its exclusion from University degrees; (d) that, in particular, engineering and the subjects of higher commercial education should be given a due place. These objects have been attained. Teachers of suitable classes in polytechnics or other institutions are entitled to be recognized as "teachers of the University," on exactly the same conditions as teachers in the older colleges, and duly matriculated students pursuing approved courses of study, under such teachers, become internal students of the University with full privileges. At the same time, it may be noted, the Board has given no countenance to the idea, expressed by some, that the polytechnics should actually become "schools of the University," or in any way diminish their more elementary work in science, art, or technology, or subordinate it to higher studies. It is regarded as of primary importance that the polytechnics should continue to provide every grade of instruction from the elements up to the most advanced and specialized work. Not more than 10 per cent. of the aggregate work is above matriculation standard, and the Board do not look to see this proportion increased. But it is of vital importance to the other 90 per cent. of the work that there should be no check or discouragement to those students who pursue their studies to an advanced stage.

FROM the outset of the work of the London County Council the importance of a complete scholarship system has been fully recognized. The scholarships now awarded form a connected series which may enable a scholar to pursue his or her education from the time of passing the sixth standard until a University degree of corresponding qualification is obtained at the age of twenty-two or thereabouts. The successful working of the system is shown by the two following facts brought out by the scholarship competitions held last year:—(1) At the last competition for Intermediate County Scholarships 79 per cent. of those offered were obtained by those who had held Junior County Scholarships, while (2) at the last competition for Senior County Scholarships four out of five were obtained by candidates who had originally held both Junior and Intermediate Scholarships. The scheme is also to be viewed in its relation to the education of London as a whole. In this respect it has acted as a bridge connecting together various parts of the educational organization between which there was formerly insufficient communication.

THE BLUE-COAT BOY.

By A FORMER MASTER.

NOW that this particular specimen of boy is about to disappear, it may be well to put on paper some of the features that have helped to distinguish him from other boys. He who is now writing knows quite well that a school which means to call itself Christ's Hospital is to start soon on its career at Horsham, and it is quite possible that the familiar dress may be worn in those "fresh woods," and that the mantle blue may be twitched in "pastures new"; but no one who knows anything about the old conditions of existence and the plans which have been laid down for the school that is to be can imagine for a moment that the Blue boy of the future will be the same as the Blue boy of the past. He may be something far superior—that is not the point—but he will not be the same, and, therefore, as has been remarked before, it may be no bad thing to put on record some of the salient

features of the creature who has been known (and liked) by many as "the Blue-coat boy."

Of boys in general it is not necessary to say much. A boy is a queer, attractive person, as full of surprises as "a surprise packet," idle, affectionate, with a strong sense of justice—even for assistant masters—as full of rules of "taboo" as a savage, and with some odd notions as to right and wrong. So much for the general; now for the particular. To begin with, up to recent days, the Blue has not been rich; indeed, it used to be a *sine qua non* of his "presentation" that his parents, if they yet existed, should be poor. One result of this was that he was not difficult to please; he was not *blasé*. A day in the country was delightful; a theatrical *matinée* was a revelation—even tea at an assistant master's home was not despised. To find boys so easily amused and pleased was a pleasant change to one who had been an usher at a school intended to prepare the boy for Eton. The boys were nice enough, as boys usually are; but, as they came from lordly or luxurious homes, as they began the day with made-up dishes, such as curries, devilled kidneys, omelettes, and continued until night "according to that beginning," and as they could criticize every play and entertainment, it was not easy to give those young gentlemen a treat. Mr. Peter Magnus's friends were easily amused: Blue-coat boys were easily amused—and pleased.

Another striking feature about Blues arose from the conditions of their life in London. For reasons of economy, they had no servants waiting on them. The ward servant attended on the matron and helped to keep the ward clean; but each boy made his own bed, blacked his own boots, laid the cloth for dinner, carried in the joints, did all the "waiting" in the hall, and so on; consequently the Blue was a most handy, helpful creature—not only able, but anxious, to help a friend—even a master, in any detail of practical affairs, such as serving out books, addressing magazines connected with the school, &c., and it is possible that such experience, such habits of order and of methods were found useful in the business-life to which many were to go.

Perhaps even the lack of games was not an unmitigated evil. A school which organizes games as thoroughly as it organizes work must have a tendency to turn out machines rather than living, thinking creatures. The present writer knows the use and good of games as well as most folk; but, at the present moment, he is thinking of one special aspect of the question. A Blue had leisure to think out his own tastes and methods. Some "loafed," no doubt, but many developed their own tastes and used their leisure in wise ways. The masters, being practically daily tutors, could not be always worrying and drilling, as is the tendency of some conscientious creatures who are serious and "earnest." If a Blue-coat boy wanted advice, wanted a quiet talk, wanted, in a word, a friend, he generally knew where to find one, and few notions can have had a slighter base of fact to rest upon, for the last twenty or thirty years, at all events, than the one that Christ's Hospital contained two camps: some masters who heard lessons and used canes, some boys who got the thrashings and who howled—"lugentes campi" of the City, in a word. The next characteristic of the Blue-coat boy seems to be connected with his dress. There can be little doubt that the quaint garb came to him as the local and spiritual successor of the monk—*i.e.* of the Grey Friars who lived upon the City site long before Christ's Hospital was founded. Doubtless it is true that "cucullus non facit monachum"; but it does not follow that a certain garb may not, without the wearer's consciousness, carry with it something of the spirit of the friars. Be that as it may, it is on record that, in Charles Lamb's day, the little Blue was marked by a certain reserve, aloofness, dignity, and that these marks have survived till recent times. If some members of the school, in the last year or so, have not exhibited these traits, it must be borne in mind that, for the last ten years, some boys have got in, not by presentation, but by competition; have missed the staring newness of the Board school, have gone without the valuable training of the nursery at Hertford, have had no fancy for a boarding school, and, in a word, have felt no love for, or pride in, the old school. But, speaking generally, the Blue was civil, courteous, yet reserved. Two instances may prove this fact more clearly than a series of general remarks.

About a quarter of a century ago a tragedy occurred among the Blues that may occur at any school (especially one that

lays, or has laid, itself out to catch the failures and the oddities): a boy destroyed himself. A certain master warned his boys when they were going home that they would be much pestered by inquiries about the matter, chiefly on the part of strangers, and that for their own sake and the school's sake the less they said the better it would be. One boy bettered his instructions; for on being asked by a stranger: "Well, now, what about the boy who hanged himself?" the little Blue replied, with the angelic air that most boys can at will assume: "Oh, he's dead!"

An old clergyman to whom the writer told this anecdote produced from his own experience a confirmation of this tendency to reticence: he was one day travelling by train and came across a company of little Blue-coat boys (he had in his boyhood had the offer of a "presentation" to Christ's Hospital, but, for some cause or other, he had gone to Marlborough): anxious to hear something of Christ's Hospital from inside, the clergyman left his carriage, bought a store of buns and oranges, and joined the little Blues. They munched and sucked like children at a school treat, but were silent as Trappists.

Now the whirligig of time is bringing these two schools together. What has been Christ's Hospital is to reappear at Horsham as a sort of Marlborough with its hostel system and unmarried masters. It may be a copy; it may be a caricature; it may be a great improvement on its old self and its model; but, for divers reasons known to many, the school will not be what it has been, and the Blue-coat boy that has been will be seen and known no more.

SCHOOL PUNISHMENTS.

(Continued from page 319.)

VERY needful it is not to overdo punishment. The best schoolmaster is often voluntarily blind; he shuts his eyes when he knows that he can do so with safety. On the other hand, one is bound to be perfectly rigid, and a law once laid down must be kept. This thought indeed leads to a difficult problem—How far is it desirable to have a code of penalties, how far to vary penalties even for the same offence? By having a code we at least gain the semblance of exact justice to all; but it may be a semblance, and a semblance only, as no allowance is made for difference of disposition. With graver offences I think most would admit that a code is more or less inevitable; it does not do to cane one boy for stealing and to let off his comrade, on promise of amendment, with nothing more than the lecture. But for minor offences I am not so sure that to have a code is the right step. Forgetting books or dropping pens may have a regulation penalty attached—marks lost, perhaps, if marks are used, or the addition, as I have recently seen proposed, of marks to others not so careless; but, with talking in class or inattention, or even, it may be, coming late, it is, perhaps, not so well to be quite rigid. Temptations to an offence of this character vary greatly in strength with different boys. But even here it may be well to copy our legislators and have a maximum penalty and a minimum, with various possibilities of gradation in between. But this leads to the objection that one boy will think himself unfairly treated because punished for apparently the same misconduct with greater severity than another; it is not always possible for a boy to know exactly all the conditioning surroundings. Nor is it always possible in such cases to explain. Hence the great difficulty of an apparent injustice even where really there is none. True, if we have established a reputation for justice, we can, perhaps, afford to disregard the danger and justify ourselves when a challenge comes, but this line of conduct we must pursue with caution: it is not wise to follow it far.

To this point I have dealt mainly with the reforming side of punishment. But one of the great advantages of school education over the treatment of individuals is that every act by every boy can carry with it a lesson for all—each punishment can be made exemplary, a warning to others besides the offender. From this fact arises the difficulty I have been discussing—the difficulty of dispensing an even-handed justice. But with it come also great advantages. It means that often one punishment is enough; one individual suffers, twenty go free. The warning, too, given by the first punishment may often lead others who, having the same tendencies, have not yet

yielded, or, at least, have not committed the sin which is unpardonable—the sin of being found out—to watch themselves closely, and to learn resistance to temptation without suffering first. Fear, it is true, is at the bottom of such conduct; but, even so, we are surely acting better than when following the right from a mere sense of suffering. Morality based on a fear of the imagination stands, does it not, on a higher plane than morality based upon a physical knowledge of the painful connexion between cause and effect? It is this consideration of the influence of example which makes it so important to be absolutely certain that not merely is the nature of the offence understood, but the reason why the punishment is inflicted as well. The giving of the reason is vital and imperative. Many people, I know, do not act on this view, and refuse to give reasons even when challenged; they content themselves with resting upon their mere will, or, worse, upon the fact of their physical superiority or position as tyrants beyond appeal. Nothing can be more vicious. The more readily reasons are given the more readily obedience is returned. Children like to be treated as rational beings, and give to such treatment a glad response. Apart, too, from learning obedience more readily, they soon come to see that nothing is arbitrary—that we ourselves also are under the rule of law, acting as we do because we have no choice. And this knowledge will enable us to deal with those cases—for such cases do occur—when it is well-nigh impossible, or sometimes undesirable, to explain to minds not yet fully developed all the considerations which have led to our action. Reticence is at times inevitable; but, if our habit is to be quite candid, and to be willing wherever possible to explain the reasons for our conduct, we evoke the faith of the children in ourselves. They will rest content and believe our word when we say we have good reasons for our action which they are not as yet able to understand, but will see for themselves when they are men. This is the only case where that unsatisfactory answer: "You will know when you are older" can be in any way taken as sound, at least in connexion with punishments. And mark that in this way we are teaching children reverence, to learn that others are wiser than themselves—that faith is an element in life sometimes, and is, indeed, our only guide at least until the mind is capable of grasping the ultimate facts which lie behind it.

The remembrance that punishments are an example to others will sometimes make us modify the punishment we inflict, often in the direction of greater severity. A light penalty would suffice in the case of certain individuals, but many would treat with reckless indifference what for one offender only would be quite enough. We have, therefore, to keep an eye on all, and, by stretching the punishment, ensure its effectiveness. Nor is this unjust, for, in the long run, it saves everybody. But I would repeat that, once secure in our position, when all know well that we do not lightly forgive, even those punishments I have called severer we shall in reality take care to make slight. We can afford to be gentle when our gentleness is known to be the gentleness of strength. Often, too, the exemplary nature of punishment is heightened by association with a touch of humour. I have before now, if a boy has made a litter, told him that he has got to play the part of a housemaid, and, sending him to fetch a dust-pan and brush, have made him restore the room to tidiness. The boy feels a fool, but is also amused; the others laugh, and the lesson remains. After all human nature is needed in punishment, perhaps more than in any other branch of our work. When they know that they are dealing with one as human as themselves children soon lose their fear and inclinations to rebel.

One important principle must be set forth plainly—we must never be vindictive. Easier said than done, you will say, and I grant it. But to punish in hot blood is to throw away half our influence and all the real good of the punishment. Boys, at least—I do not know if the same is true of girls; though, from stories I have heard, I think they are not far behind their brothers—will have their revenge at last. There is nothing they lay themselves out for so much as "drawing"—once more I use their own slang—a master whom they know to be irritable, and that simply for the delight of annoying and watching him. It is part of their love of experimentation and cruelty. Rather than lose this pleasure they are willing to undergo any suffering you please. I have seen this with boys in our own country. I have seen it, too, in the much-vaunted land of education—Germany. Quietness and self-control are of the essence of good punishment. The memorable story of the Greek philosopher

standing with his arm arrested in mid-air when about to chastise a slave, because he felt he was acting in passion, is a story which every teacher should have always in his mind; it is one of the great moral lessons of the world. The head master of one of the English public schools once gave me some advice I have not forgotten. "Do not punish," he said, "at once. Tell the boy you are going to punish him, and call him in quietly after school; then do what you think fit. The mystery attached to this course will strengthen the influence, and you will be able to get hold of the boy's nature more effectually. Above all, it will show that your action is not in anger." I have seen this advice extended, with the more serious penalties, to hearing and considering the case on one day and inflicting the penalty, if any, the next. The principle is a good one, if not always easy to carry out. But, whatever may be our line of action, remember we must that we are sitting as judges; and, difficult though it be to combine with strict fairness the *roles* of the prosecution, the judge, and the executioner, we have to try. If we are regarded as fair when we are judging, the fact that in the anomalous conditions of school life we have to play the other parts also will not tell too heavily against us. Sometimes, however, when we are personally aggrieved, and are conscious, perhaps, of a bias against the offender, it is well to hand over to some one else the actual infliction of the penalty. We at least do not have to play the executioner, and we emphasize our desire to be strictly just.

In Count Tolstoi's narrative about his village school, to which I have already referred, there is a striking passage directed against the use of the sense of shame. I suppose every teacher would admit that grave dangers attend an appeal to this motive. It is certainly possible, as Tolstoi's instance shows, to so work upon the sense of shame as to produce a dogged determination not to yield—a callousness, real or assumed, to the opinions of others, than which nothing could be worse for the moral well-being of the offender. Locke tells a tale of a child being kept in order simply by a threat to take off her shoes. The story shows how easily a young child at least may be trained to self-control by artificial means. One lady I know used to keep her charges in order by saying: "If you do so, woe betide you!" This terrible threat, the meaning of which seemed to them beyond measure awful, seldom failed of its effect. It suggests the great value of mystery in punishment. Nothing is so appalling as the unknown, and this is one reason why it is unwise to have a fixed scale of punishments for definite offences.

But, whatever our punishments, the chief aim should be to make the offender feel that all punishment is disgraceful, and that, therefore, the chief motive for trying to avoid it should be the sense that it brings of degradation to ourselves. This result is not always quite easy to attain, but it should not be forgotten: it appeals to the sense of shame in not an undue way, and helps to strengthen the moral and social effect of punishment. The wrong use of shame is seen in making a child a butt for the laughter of his fellows, and in continuing its use so long as to render him insensitive and callous. Gentle ridicule is often effective, but it must never be bitter, and, above all, it must not lead the child to think that he has fallen so far as to have sunk hopelessly below the normal level of morality prevalent in his sphere; all punishment must be tinged with hope.

One excellent way of utilizing the feeling of shame, or rather its opposite, a just pride, is a device I have known adopted in more than one girls' school—among boys I have never heard of it in exactly this form—a silver or a golden list is posted on the board with the names of all the girls in the form enrolled; then the name is crossed off of any girl who has fallen below standard to any marked extent. At the end of the week those names which remain are read out in public before the school. By this means legitimate pride is fostered and a stimulus applied to the more unworthy. It is true that at bottom this appeal is to shame; but the effect is disguised, and rarely could it lead to callousness or despair.

There remains another important question: how far is it good to keep a record of punishments? No one, I fancy, would hold that this should be done for every trifling offence, though even here such a record is of use for reports; but there is much to be said for permanent records in the case of misdeeds of a serious kind. With large numbers it is otherwise almost impossible to be clear about the character of each boy or girl. Such a record I have found useful in both directions,

for, when the offender knows that his offence is being entered for future reference, should need arise, it tends to increase his watchfulness over his conduct; indeed I have known many cases where the mere entry of the record has been sufficient to keep a boy on the right path altogether. On the other hand, the absence of any such entry may constitute a claim for lenient treatment on the occurrence of either a first offence or an offence renewed after a long interval. There is a sense of justice in such a proceeding which appeals keenly to a boy's mind; he feels that we are trying to weigh him fairly, and this is an important thing. If we wish to secure good results from our punishment, we must see that we carry the children with us. Sometimes for this purpose we have to explain our reasons; but, as a rule, not. Boys have a sense of what is fair and not fair; and, though perhaps in some directions this sense is artificial and artificially created, still they accept the conditions of school life as they are, and are content if we can show that we fall in with those conditions, whether the punishment be natural and ideal or not.

To sum up, then, I would say that punishment is an evil, but in schools, as in life at present, inevitable. Nothing, however, must allow us to forget that evil it is and evil must remain; but, if only we bear this constantly in mind, we may do much to lessen its evil effects. And one chief way of lessening these effects is to explain quite clearly, when needful, the grounds of our action. We must not assume, as is often done, that the grounds are always seen of themselves. We must try, as far as possible, to carry with us the sense of justice possessed by the boys; so we win great support. Anger should not be an element in punishing, save in those rare cases where righteous indignation is a proper result of the breach of the moral law. Punish, I would say, as little as may be and as lightly as you can; of two alternatives choose the less severe, if you can hope on reasonable security that the end you have before you will be attained. Frank forgiveness is occasionally the most effective means of all. In every case we must show that our aim is the good, not of ourselves, but of the sufferer; and this can best be done by always acting calmly and in a judicial frame of mind, bringing out, as far as possible, the pain caused to us as well as to others by the offence. We must appeal to the boy's higher self, even under circumstances of extreme provocation; and, above all, must show that we are actuated by that high motive which a child feels so readily and so readily responds to, even when other motives fail—a sense of sympathetic affection and desire to help forward in the least offensive way the weakness of erring imperfect human nature.

F. H. MATTHEWS.

CALENDAR FOR JUNE.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—Guildhall School of Music. Send in forms for July Exam.
- 1.—Royal University of Ireland. Send forms for Engineering Exams.
- 1.—London University Intermediate and B.Sc. and Preliminary Scientific (M.B.) Exam. Return forms.
- 2.—Rugby School. Scholarship Exam.
- 2.—Birmingham University Matriculation Exam. begins.
- 2.—London University M.A. Exam. begins.
- 2.—Society of Arts Music Exam. Return forms.
- 2.—University of Wales Matriculation Exam. Return forms.
- 2-4.—Institute of Chartered Accountants Preliminary Exam.
- 3.—National Froebel Union Elementary Certificate Exam. Return forms.
- 3.—London University Intermediate Medicine Exam. Return forms.
- 4-6.—Marlborough College. Entrance Scholarship Exam.
- 5.—Oxford Exams. for Women. Second Public Exam. for Honours begins.
- 6.—University College, London. Foundation Day.
- 7-9.—Herts County Council Intermediate Scholarship Exam.
- 8.—Royal University of Ireland First Exam.
- 9.—London University Matriculation Exam.
- 9-10.—Institute of Chartered Accountants Intermediate Exam.
- 10.—College of Preceptors Diploma Exam. Return forms.
- 10.—Return Form 400 for Whitworth Scholarships; also return form for Free Admissions for Science Teachers, Royal College of Science, Science and Art Department, South Kensington.
- 10.—Victoria University, Manchester, Preliminary and Honours Exams. in Arts, Science, and Law begin.

- 10.—St. David's College, Lampeter. Responsions.
- 11.—College of Preceptors. Evening Meeting.
- 11.—Sheffield University College Scholarship Exam. Return forms.
- 12.—University College, London. Clothworkers' Company's Exhibitions in Chemistry and Physics. Last day for notice of intention to compete.
- 12.—Irish Intermediate Board Exams. begin.
- 12.—College of Preceptors Pupils' Certificate and Lower Forms Exams. Return forms.
- 14.—College of Preceptors. Council Meeting.
- 14.—University College, London. Last day for notice of intention to compete for the Hollier Scholarships (Greek and Hebrew). Last day for notice of intention to compete for the Tuffnell Scholarship (Chemistry).
- 14.—Oxford Exams. for Women. First Public Exam. Scripture.
- 15.—Post Translations, &c., for *The Journal of Education* Prize Competitions.
- 15.—Pharmaceutical Society's Exam. Return forms.
- 16-18.—Law Society's Intermediate and Final Exams.
- 16-19.—Sheffield University College Scholarship Exam.
- 16-21.—Cambridge University Higher Local Exam.
- 17-19.—Dublin University (Trinity College) Entrance Exam.
- 17-19.—Institute of Chartered Accountants Final Exam.
- 18.—Oxford Exams. for Women. Responsions. Return forms.
- 19-20.—Becford College, London, Scholarship Exam. (Term ends 20th.)
- 19-21.—Nottingham University College. Open Scholarships Exam.
- 20.—Oxford Exams. for Women. First Public Exam. Honours, Mathematics.
- 20.—Society of Arts Practice of Music Exam. begins.
- 22.—Post School News, items for this Calendar, &c., and Advertisements for the July issue of *The Journal of Education*.
- 23.—University of Wales Matriculation Exam. begins.
- 23-24.—Cambridge Teachers' Training Syndicate Exams.
- 24.—Aberdeen Local and Highe. Certificate for Women Exams. begin.
- 24.—Cambridge Easter Term ends.
- 25.—College of Preceptors Pupils' Certificate Exam. begins.
- 25.—Bedford College, London, Scholarship Exams.
- 25-26.—Herts County Council Major Scholarship Exam.
- 27.—Bristol University College Entrance Scholarship Exam.
- 27.—Royal College of Science, South Kensington. Student Teachers to send in Form 1,019 for Free Admission.
- 28 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the July issue of *The Journal of Education*.
- 29.—Royal University of Ireland Engineering Exams.

The July issue of *The Journal of Education* will be published on July 3rd, 1902.

HOLIDAY COURSES.

- ABERDEEN (University of).—July, August, and September. Special Courses in French and German for Teachers. Apply to Lecturers in Modern Languages, Marischal College, Aberdeen.
- ABERYSTWYTH.—During August. Sloyd. Under direction of Miss Andrén. Address—31 Bleenheim Road, Bradford, Yorks, or apply to Mr. Cooke (see under Naäs).
- AMBLESIDE.—During August. Sloyd. Under direction of Mr. J. Vaughan. Apply to Mr. J. Cooke (see under Naäs).
- ÁVILA (Spain).—August 4-25. Spanish. Apply to the Director of Technical Instruction, County Technical Offices, Stafford.
- CAEN.—July 1-30, August 1-30. French. "Alliance Française" Courses. Apply to Mr. Walter Robins, B.Sc., 9 Northbrook Road, Lee, S.E.
- CAMBRIDGE.—University Extension Summer Meeting, August 1-10, August 14-26. History, Literature, Science, Economics, Music and Fine Arts, Education, Theology. Programme, 7d. post free, from K. D. Roberts, M.A., Syndicate Buildings, Cambridge.
- DOVER.—June, July, August, September. Short Courses in the Oxford Shorthand and Phonetics, by Percy Kingsford. Apply —Excelsior, Dover.
- GENEVA.—July 16-August 28. French. Apply to Monsieur Charles Seitz, à l'Université, Geneva.
- GREIFSWALD.—July 14-August 4. German. Apply to Prof. Dr. Siebs, Ferienkurse, Greifswald.
- GRENOBLE.—July 1-October 31. French. Apply to Monsieur Marcel Reymond, 4 Place de la Constitution, Grenoble.
- JENA.—August 4-24. German. Apply to Frau Dr. Schnetger, Gartenstrasse 2, Jena.
- KIEL.—July 6-26. German. Apply to Herr Nissen, Holtenauerstrasse 38, Kiel.
- LAUSANNE.—July 22-August 30. French. Apply to Monsieur J. Bonnard, Avenue Davel 4, Lausanne.
- LEIPZIG.—July, August, and September. Sloyd. Apply to Dr. Pabst, 19 Scharnhorst Strasse, Leipzig, or to Mr. Cooke (see under Naäs).

- HONFLEUR.—August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, London.
- MARBURG.—July 7-27. Modern Languages. (Second Course, August 4-24.) Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
- NÄÄS.—June 11-July 23, July 30-September 9, November 5-December 16. Sloyd. [The courses at Nääs, Leipzig, Aberystwyth, Ambleside, and Penarth have been arranged by the Sloyd Association.] Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.
- NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.
- NEUCHÂTEL.—July 15-August 10. (Second Course, August 12-September 7.) French. Apply to Monsieur P. Dessoulavy, Académie de Neuchâtel.
- OXFORD.—July 2-August 28. English Language and Literature for Women Students. Apply to Mrs. Burch, 20 Museum Road, Oxford.
- PARIS.—July 1-31. French. (Second Course, August 1-31.) Apply to Monsieur le Secrétaire, l'Alliance Française, rue de Grenelle 45, Paris.
- PARIS.—Christmas and Easter Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
- PENARTH.—During August. Sloyd. Under direction of Glamorgan-shire County Council. Apply to Mr. W. Hogg, Technical Instruction Committee, Glamorgan, or to Mr. Cooke (see under Nääs).
- SANTANDER (North Coast of Spain).—August 5-25. Spanish. Apply to General Secretary, Teachers' Guild, 74 Gower Street, W.C.
- TOURS.—August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, W.C.
- VILLERVILLE-SUR-MER, TROUVILLE.—August 5-26. French, preparation for exams., "Alliance Française." Apply to Prof. L. Bascan, rue Caponière 49, Caen.

Programmes of most of these courses can be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W., where a Table of Foreign Modern Language Holiday Courses, prepared by the Special Inquiries Branch of the Board of Education, can be obtained.

Information as to lodgings for students at Honfleur, Tours, and Santander (Teachers' Guild Courses) will be found in the Handbook, 6½d., post free, from the Teachers' Guild, 74 Gower Street, London, W.C.

A list of addresses in several other Holiday Course centres will be found in "Holiday Resorts," 1s. 1d., post free from same address.

The advertisement columns of *The Journal of Education* ("Continental Schools and Pensions") may also be consulted with advantage.

JOTTINGS.

THE Oxford School of Geography has arranged for a Long Vacation Course, from July 29 to August 19. The course is intended primarily for teachers, and the whole of Wednesdays will be devoted to surveying and drawing sketch-maps in the field. The fee for the whole course is £2. 2s.

MR. JOHN MURRAY has appointed Mr. F. A. Martin to represent him in visiting the great public and secondary schools. Mr. Martin is well known in scholastic circles, having for several years past represented Messrs. George Gill & Sons, Limited.

MR. GRAHAM BALFOUR, M.A. of Oxford, has been appointed to the position of Director of Technical Instruction rendered vacant by the appointment of Mr. T. Turner, B.Sc., A.R.S.M., to the Professorship of Metallurgy in the University of Birmingham. Mr. Balfour enters upon the duties of his office on June 1. He has travelled widely, having been twice round the world, and has a wide educational and literary experience, having acted as Assistant Secretary to the Oxford Local Examinations Delegacy for some years, and has also taken a keen interest in matters affecting the education of women. Mr. Balfour was called to the Bar, Inner Temple, in 1885. He is the author of the standard work on the "Educational Systems of Great Britain and Ireland," and is also known as the writer of the biography of his relative Robert Louis Stevenson. It has been decided by the University of Birmingham that Prof. Turner shall leave for America early in June, in order to visit some of the most important colleges in Canada and the United States, before the designs for the new University buildings are finally adopted.

THE annual exhibition of work executed in the Board schools of London will be held at the Examination Hall, Victoria Embankment, W.C. (adjoining Waterloo Bridge) on Wednesday, June 18, 1902, and the three following days. The exhibition will be opened by Lord Reay,

Chairman of the Board, at 3 o'clock p.m. It will include specimens of drawing, colour work, modelling, wood-work, wood-carving, metal-work, needlework, infants' work, cookery, laundry-work, housewifery from the day and evening schools, work from the schools for the blind, deaf, and special instruction, and work from the truant and industrial schools. There will also be included scientific apparatus which has been constructed by the teachers and pupils. The exhibition this year should prove of particular interest, and it is hoped, inasmuch as admission to it will be free, that the people of London will take this opportunity of seeing the really marvellous results obtained.

COMMERCIAL EXAMINATIONS.—The number of candidates who entered for the recent examinations of the Society of Arts was 16,344. The actual number of papers worked was 14,776—an increase on last year of 649. The examinations were held at 302 centres, in the week ending April 19. There are two grades, Preliminary and General. In both grades the most popular subject was bookkeeping, for which there were in Grade I. (Preliminary) 1,507 candidates, and in Grade II., 3,800. Shorthand comes next with 1,454 and 3,101. Of the other subjects there were, in Grade II., 795 candidates for typewriting, 544 in French, 270 in German, 222 in arithmetic, and 170 in Spanish. The numbers entering for the other commercial subjects were comparatively small. In Grade I. there were 471 in typewriting, 607 in French, 190 in German, and 276 in arithmetic.

"I AM commanded to say that the approaching meeting, and any practical steps resulting from it, has His Majesty's warmest sympathy, and that he trusts the movement may lead to such an increase to the permanent annual income of the fund as will for ever testify," &c. This extract from a letter, dated from Buckingham Palace, which appeared last month in all the papers, seems to show that royal secretaries are as much to seek in English grammar as Cabinet Ministers who write King's speeches.

MESSRS. GILL & SONS have determined the agreement with their late representative Mr. F. A. Martin, and, in future, Messrs. Slater, Knott, and Bartlett will respectively represent them in London and home counties, North of England, and the Midlands, &c.

THE Board of Education have, in order to meet the convenience of the training colleges, given directions that the King's Scholarship Examination for 1902 shall begin on Tuesday, December 16 next, instead of on Tuesday, December 9.

JOHN BELLOWES, Quaker, printer, and philanthropist, died at Gloucester on May 5 in his seventy-second year. His French Dictionary, a marvel of typography, has endeared his memory to a whole generation of tourists.

THE London School Board has made further provision for physically afflicted children by establishing six scholarships for blind and deaf children. The scholars will be trained in suitable branches of work whereby they can earn their living.

WOULD-BE students at the University of Paris can now see at the Board of Education Library the programme of University lectures for the year beginning in November next.

IN answer to a petition preferred by the National Union of Teachers, the King has intimated his desire that in honour of the Coronation a week's holiday should be granted to schools during the summer. The big boarding schools will probably add on a week to the summer holidays, which are already too long in the opinion of many parents. Day schools will no doubt give a week's holiday at the time of the festivities; though whether the week should be from Monday to Saturday or from Wednesday to Tuesday is still an open question.

IN the Regulations for Secondary Day Schools, just issued by the Board of Education, it is explained that the term excludes evening schools, but not boarding schools.

A NEWSPAPER estimates that between the ages of ten and nineteen an English schoolboy works for 16,500 hours and plays games for 4,500. In Germany the hours are said to be 20,000 and 650.

IT has been decided that a petition shall be addressed to the King by the Finance Committee of the Liverpool City Council praying for a charter to establish a University in Liverpool.

THE enormous painting by Antonio Verrio which used to hang in the large hall of Christ's Hospital has been successfully removed to its new position in the Horsham buildings. The picture is ninety feet in length.

DR. R. D. ROBERTS, of Cambridge, has been appointed Registrar of the Board of the London University to promote the Extension of University Teaching.

THE N.U.T. has appointed Mr. Sharples and the Teachers' Guild Mr. Storr upon the Registration Council. Mr. Pollard represents the Head Masters' Conference, and Dr. R. P. Scott the Incorporated Association of Head Masters.

THE University of Yale has conferred the degree of L.L.D. on Lord Kelvin.

PRESIDENT BUTLER, of Columbia University, has drawn up a programme for Mr. Alfred Mosely's Educational Commission; but the date of starting will not be fixed until the question of an autumn Session of Parliament is decided. If there is no autumn Session, the Commission will probably start in September.

WHEN the *Pall Mall Gazette* gets upon the subject of primary education we do not expect argument: "From free pianos and Cinderella dances the London School Board has now gone a step further, and has decided to supply free rocking-horses to the children of this metropolis." And again: "The unlucky small ratepayer who cannot afford expensive toys for his children may well wonder what next." If the small ratepayer cannot afford his own rocking-horse, he pays his share for one which is used by hundreds of children. This is sound economics, and on a par with free libraries.

THE same paper trots out the following story to show how unsatisfactory is the education given at a Board school: "Coroner, to girl of fourteen: Do you know the nature of an oath?—Yes, sir; it's a lie." A parent came the other day—this is a fact—to complain that her child was not getting on. The teacher looked up the register, and found that the child had made twenty-one attendances out of the sixty possible since it entered the school. We will leave the *Schoolmaster* to ram home the moral.

THE Glasgow and West of Scotland Joint Committee on Secondary Education, in an open letter to Sir Henry Craik, proffer what seems to us a very reasonable request regarding the Leaving Certificate. They point out that while, by the new regulations, subjects are grouped so as to meet the case both of the classical and the science pupils, no similar arrangement is made for the modern language pupil. If the candidate chooses French and German as two of his subjects, he must take either Latin or science as a third. They therefore suggest as a modern language group, "English, mathematics, French, and one other subject." It will hardly be disputed that this curriculum may constitute a liberal education, and that it would be a great loss, if, as the Joint Committee fear, German should disappear as a school subject.

AN Exhibition and Conference on Science Teaching and Nature Study will be held at the Hartley College, Southampton, on the 14th. Intending exhibitors, whether schools or publishers, should communicate at once with the Secretary of Hartley College.

BRITISH CHILD STUDY ASSOCIATION.—On Tuesday, June 24, a conference will be held at Normansfield, Hampton Wick, at 3 p.m. A garden party will follow. Members of any branch will be cordially welcomed. Tickets can be obtained by sending a stamped addressed envelope to Miss K. Stevens, Carlisle House, Dartmouth Park Hill, N.W.

CORRESPONDENCE.

ORAL TESTS IN EXAMINATIONS FOR CERTIFICATES IN MODERN LANGUAGES.

To the Editor of *The Journal of Education*.

SIR,—Dr. Findlay, in the May number of *The Journal of Education*, suggests that the comparison of different experiments should be of great assistance to examining bodies and others in attempting to solve the difficulties confronting them in their endeavours to carry out a system of oral examination.

During the twenty-two years of the existence of the London International College at Isleworth, from 1867 to 1889 (when it was sold to the Borough Road Training College), the experiment was made of teaching French and German as living languages to every boy, together with practical chemistry and physics. The difficulty very early presented itself of having no outside test of the oral work done, and during the first few

years of my tenure of the head mastership I inspected the upper forms myself. Later, however, on applying to the Secretary of the Oxford and Cambridge Joint Board for some practical test of our oral teaching, in addition to the written certificate papers, French and German examiners were sent down, who each took the different forms for about an hour. I gathered from them, and my own experience bore this out, that it would be extremely difficult to do more than give a general idea of the work done, and that for the purpose of placing the pupils in order of merit it would be necessary principally to rely upon the written examination.

I may mention that, while employing the reading-book as the basis of all practical teaching, and utilizing it for *vis à voce* practice in phrases and exercises in syntax and idioms, it was also found advisable to have a list of stock phrases, which every boy was expected to know, illustrating the use of the commonest French idioms, especially those in which errors most commonly occurred, such as the use of the article in place of the English possessive pronouns, the French method of asking questions, the different renderings of "whose," the relative positions of the personal pronouns as direct and indirect objects, the position of the adverb in French, &c. Plenty of drill, too, was given in the more common irregular verbs, which (including the auxiliary verbs) will be found to occur on every page of even the most elementary reading-book far more often than the regular verbs.

Of late years the Joint Board has offered to send down examiners to any school desiring to have its oral work tested, and now the Cambridge Syndicate has made the same offer in the case of Senior candidates attending their examinations.

It would be interesting to know how many schools care to avail themselves of these offers, but I fear the day is far distant when a large proportion of schools will feel themselves in a position to do so, in spite of the admirable series of text-books now being published which give every assistance to those who desire to carry out a more practical method of teaching modern languages. If I am right in my surmise, the cause appears to me to lie in the absence of a sufficient number of qualified teachers, and the dearth of such teachers must continue to exist until sufficient inducements are offered for them to qualify themselves, such as already exist for the most part in the case of teachers of practical science.

The many holiday courses now held in France and Germany are doing much towards increasing the number of qualified teachers, but one can hardly expect that they should bear the expense of such courses without any pecuniary assistance from the school or other authorities. In connexion with this question, I notice that the Franco-Scottish Society has just awarded three travelling bursaries of £30 each. Is there no similar body in England to do something of the same kind?

So long as the teaching of modern languages is left in the hands of the form-masters, many of whom would be only too ready to admit that they have no practical qualification for teaching them as living languages, so long will the teaching be more or less inefficient. I can testify, however, both from the experience of inspecting schools officially and also privately, that very good work, within certain limits, can be accomplished where properly qualified teachers are employed. Beyond those limits it would appear absolutely necessary that pupils should have the opportunity of continuous practice in speaking in a foreign country, either during their vacations or at the end of their English school course.

That much remains to be done before schools are in a position to apply generally to be examined orally is evidenced by the reports of the examiners in French in the Oxford and Cambridge Local Examinations for 1901. The Oxford examiners' report of the Senior candidates that "with few exceptions the work in French composition was very unsatisfactory. The most striking feature was the gross carelessness of nearly all candidates. Such mistakes as a masculine singular noun qualified by adjectives in the feminine plural occurred repeatedly." The report on the Juniors states: "Many candidates were unable to translate such idioms as 'there was,' 'there was not.' The Cambridge examiners report of the Seniors: "The short sentences for translation into French gave rise to many bad mistakes, but there were some extremely good pieces of work"; and in speaking of the composition the report adds: "Most of the candidates had a fairly extensive vocabulary at their command, but in numerous cases there was a failure to observe some of

the most elementary rules of French syntax." The report on the Juniors says: "The composition generally was very weak, and the renderings of the detached sentences set for translation from English into French were equally unsatisfactory. In some exceptional cases, however, the composition was excellent."

The results of examining officially several thousand papers during the past twelve months fully bear out the statements of both reports, and, for further confirmation, one has but to read the papers on "Common Examination Errors in French" in the March and April numbers of the *School World* for 1901, by Mr. Cloudesley Brereton.—Yours, &c.

H. R. LADELL.

"LATIN VERSE."

To the Editor of The Journal of Education.

SIR,—I am a little surprised that no one has attempted to answer the challenge which I gave in my letter on Latin verse, which you printed in February. I asked if any one could name anything now done at school which equally cultivated the constructive faculties and also had a humanizing educative influence. In asking this I raised a much broader question than that of Latin verse, for the present cultivation of the receptive faculties at the expense of the constructive is a very serious matter indeed. The whole tendency of our present examination system is not to teach boys to think, but to reproduce results which have been thought out by others.

There is another point of view which I did not bring forward in that letter, but which appears to me to be also worthy of consideration. There is no doubt that the public opinion of schools does not pay nearly so much honour as it used to pay to intellectual success. It will, of course, be said that this is due to the worship of athletics. There is a grain of truth in this answer, but *only* a grain. All boys at school used to go through the same curriculum. Credit constantly was attached to those who did eminently well in what all tried to do, and could therefore to some extent appreciate. This was particularly the case with Latin verse, because to give a really happy rendering of an English poem in the strictly conditioned metres of the inflected languages implied the possession of powers which a mass of boys felt to be superior to their own, and which were more attractive to the imagination and to the perceptions of beauty and art than the parallel powers implied in the solution of mathematical problems or investigations in the laboratories. But now there is nothing of the kind. Not only cannot a modern boy be expected to admire the performances of the classical, or the classical of the modern; but these performances are not now usually of a kind to attract the sympathies of boys.

It is unfortunate, but it is true, that excellence in some departments of athletics has usurped the place in boys' admiration which excellence in verse composition did certainly at one time hold, though not, perhaps, to the same extent. For not only is there a wholesome and natural admiration for such courage and endurance and such triumphs of perseverance as are shown in many branches of athletics, but there is also in some of them an opportunity for the training and manifestation of those qualities of reasoning and initiative which have far too little place in our modern school work.

In football the number and the speed of the brain processes which have to be gone through when a player has to decide in an instant of time which of five or six different modes of action he will adopt constitute a brain education of no mean order. And I am to some extent consoled for the extent to which the constructive powers of the mind are falling into abeyance in the schoolroom by the extent to which they have become developed in the playground. But it would be, to my mind, a step in the right direction if all questions about languages and literature disappeared from examination papers. Mastery of any language, whether ancient or modern, can be adequately tested by translation into it and from it, with, of course, the exception that, when a language is learned for utilitarian purposes, a large amount of credit should be given for conversational proficiency.

There should also be a clean sweep made of all book-work questions in mathematics, and of all cram questions in science papers. We should try to test not what a boy has learnt, but what he can do; not how he can reproduce the thoughts of others, but how he can think for himself. So long as we subsidize information, and do little or nothing to encourage

initiative and intelligence, it is vain to protest against the unreasoning spirit and the constant slavery to rule and regulation of which I fear that our military administration, though a notorious, is not a solitary instance.

More than thirty years ago the late Rector of Lincoln wrote as follows:—

We are underrating and letting slip that one feature in our grammar-school system which the German theoretical *Pädagogik* has stamped with its approval, and which practical schoolmen in Germany would wish to naturalize at home. We are slowly imbibing from the example of German Universities a habit of scientific examination of the material contents of classical literature. Are we not, in the process, in danger of throwing away a discipline of which the German schools envy us the possession?—(Pattison's "Suggestions on Academical Organization," page 284.)

His warning has been unheeded, to the great injury of education.—I am, yours &c.,

North Esk Lodge, Musselburgh,

H. H. ALMOND.

May 14, 1902.

STATISTICS OF SCHOOLS OF SCIENCE.

To the Editor of The Journal of Education.

SIR,—Mr. Dyche's courage is admirable, but he surely ought to recognize that he is fairly beaten. Let us briefly review the acts of the little drama.

1. The higher-grade masters protest vehemently against the proposal to convert their schools into higher elementary schools, alleging that thousands of the clever children of the working classes will be "thrown on the streets" as soon as they reach fifteen years of age.

2. The Board of Education therefore collects *the facts* relating to these pupils over fifteen, and finds that the immense majority of them are not "clever" at all, but backward! And, since "the working man" does not, as a rule, permit his children, if idle or backward, to remain at school beyond fifteen, the public concludes that these pupils who are to be turned on the streets (and quite time too!) are the children of the lower middle class, shopkeepers and others, who fancy themselves a step above the working class, and have sent their children to higher-grade schools as a finishing school of superior social grade to the elementary school. Thus the huge higher-grade schools are exposed as a kind of dumping ground for dull children whose parents can afford to keep them at school over fifteen. These have been leavened with a few—a precious few—clever boys and girls whose praises have been sung all over Great Britain when they have won a scholarship or a place in the London Matriculation.

3. The higher-grade masters admit the accuracy of their figures, but have replied: "We may be bad, but the grammar schools are worse! Why does Government not publish similar statistics of schools of science attached to grammar schools?" (See the presidential address of Mr. Cox to the higher-grade masters last November.) Whereupon Government *does* collect statistics of grammar schools also, and here they are. The result ought surely to convince any one who understands figures that the higher-grade schools have had their day. The genuine secondary schools have poor buildings, have had no rates to keep them and no powerful public support, their staffs have been reproached as being inefficient and "untrained"; their science departments have been only lately organized: and yet they show nearly twice as great a percentage in the fourth year, *combined with a considerably lower age!* Further, it must be remembered that, while the higher-grade schools of science include every capable boy in the school, the secondary school is only a section of a school, and is bound to exclude a number of boys from the advanced course, because they desire to specialize in languages or mathematics. Let your readers, instead of being content with Mr. Dyche's views, spend 2d. in purchasing a copy of the Return; let them compare the figures for any two rival schools, in Oldham, Birmingham, Leeds, Leicester, London, Huddersfield, Stockton, or Wolverhampton (Bradford is the only exception to the rule). These large schools come out of the ordeal far better than the small country schools. If the returns from *large* schools (higher grade and grammar respectively) are taken alone, the grammar schools show the up to most conspicuous advantage. Everywhere the true secondary school shows a higher ratio of pupils doing more advanced work at a younger age, or, conversely, a lower proportion of stupid, aged pupils. The Govern-

ment has, in fact, produced a startlingly efficient criterion of efficiency. Your readers may, if they will take the trouble, prepare a curve of efficiency as I have done. (I should be glad to publish it if you can find room.) Taking the ratio of equality between "under fifteen" and "in elementary course" as the normal condition of things which should prevail in a decently good school, we find nearly all the Board schools of science at the bottom end of the curve, while the grammar and technical schools run ahead beyond it. Thus Leeds Central and Cardiff are down in the depths, while Wyggeston, Leicester, and Carlisle soar away to the maximum of efficiency. Never was there a more convincing exposure of inefficiency—never a more eloquent testimony to the quiet unostentatious progress which the secondary schools have made during the last ten years. I agree with you, Sir, that the higher-grade masters are not to blame for this; they have done their best under most impossible conditions; but Mr. Dyche cannot explain away statistics. These are based upon an absolutely fair comparison, produced at the challenge of his own friends, on work inspected by men of experience who, whatever their faults, are certainly not biassed in favour of grammar schools.

The only possible conclusion is that this ignoble contest between rival Authorities and rival schools must be ended by a firm decision from the Board of Education. Being only a head master of one of these incompetent secondary schools (not sufficiently worthy even to become a school of science), it will suffice if I subscribe myself,—Yours, A HEAD MASTER.

May 15, 1902.

SCIENCE TEACHING IN SECONDARY SCHOOLS.

To the Editor of the Journal of Education.

SIR,—The following passage occurs in the "Report of the Examiners" with reference to the Board of Education Chemistry Examination, 1901 :—

It is difficult to avoid the conclusion that the teachers of these day classes are, in many cases, not sufficiently qualified to teach chemistry at all; they are not able to train their pupils to observe for themselves, and they evidently cannot impart in a satisfactory manner even the most elementary fundamental principles of science.

This is a strong indictment. Is it an accurate statement of fact? Possibly it is.

The following extracts are also from Blue Books issued by the Board of Education. For purposes of reference the full title is given: "Report of Board of Education 1900-1, Vol. II." Inspectors' reports: (a) page 259:

While dealing with secondary schools there are two matters which call frequently for amendment. I refer to the general understaffing and the inadequate salaries paid to assistant masters. . . . It is by no means uncommon to find teachers who, after being occupied the whole of the day, are compelled to teach three, or even five, nights a week in addition, in order to obtain a sufficient competence. Such a state of things must be opposed to the best interests of education, and cannot in the long run be true economy.

(b) Page 287:

The principal of a large technical school receives, as a rule, a smaller salary than the head master of a small grammar school, and the responsible heads of departments less than a foreman in a small works. . . . If highly qualified teachers are to be obtained, better salaries will have to be paid.

(c) Page 289:

It seems quite impossible at present to expect men of high attainments to offer themselves as teachers in many of the secondary schools. In a very important secondary school, containing 350 scholars, the following salaries are paid to assistant teachers:—men: £200, £130, £110, £110, £110, £110; women: £95, £95, £85, £85.

This is by no means the worst case I have come across. One cannot too strongly urge that, unless much better salaries are paid, the work will not be done in as efficient a manner as it should be.

(d) Page 290:

In some cases the head master himself gets a bare livelihood out of the schools, and nearly everywhere the assistant teachers are underpaid.

These are the opinions of men who know more about school life than anybody else. It does not require much imagination to see that the passages (a), (b), (c), (d) are intimately connected with the quotation from the Examiners' Report. The average salary of an assistant master in an English secondary school is £104 per annum. Can the examiners expect—does the nation expect—to obtain teachers qualified to teach chemistry or any-

thing else for such a pittance? Teachers receiving such salaries are obliged to remain celibates or to live in a condition of squalor and absolute poverty, cruelly calculated to kill all mental development. Moreover, holidays—holidays without a cent to spend—are a curse to such men; yet proper holidays are necessary for efficiency.

Advertisements such as the following are by no means uncommon:—(1) "Wanted, a care-taker for the X. Y. Z. School. Salary £2 a week." (2) "Wanted, a second master for the X. Y. Z. School. Salary £100 per annum."

Two remedies for this condition of affairs suggest themselves: (1) The formation of a regular trade union for teachers—the very idea is repugnant, but, nevertheless, almost absolutely necessary; (2) the refusal of the Board of Education to pay grants to schools which sweat their teachers. When reasonable salaries are paid to teachers, then more capable men will enter the profession. Till then things will remain much as they are, and no Education Bill will greatly improve the standard of work and tone of our schools; for, after all, the character of school work depends more on the teaching staff than on anything else.

It is sincerely to be hoped that influential men who know the actual conditions of school life will take up this practical question, and hammer away in season and out of season at the anomaly of expecting anything but inefficiency under present conditions.—Yours, &c., R.

THE COLLEGE OF PRECEPTORS AND THE EDUCATION BILL.

To the Editor of The Journal of Education.

SIR,—In "Second Thoughts on the Bill" in the May number of *The Journal of Education* it is remarked that there are sufficient grounds for stating that the College of Preceptors regards the Bill with favour. May I call this statement in question? I have certainly heard the Bill strongly condemned by leading members of the Council; others, no doubt, think that something may be made of it. But there is certainly nothing like a consensus of opinion in its favour. Personally, I thoroughly dislike it. It is not necessary to go through the arguments against it, so lucidly summed up by Mr. Bryce; I would only remind you that it bids fair to increase the baneful influence on our profession of religious tests, that extraordinary survival which it is impossible to describe in Parliamentary language. Mr. Chamberlain's position is difficult to explain except on the principle of Napoleon's Concordat with the Pope. This would be an excellent opportunity for an imitator of Alfred de Vigny's famous conversation between those two potentates to extemporize an imaginary interview between the Archbishop of Canterbury—"quantum mutatus ab illo!"—and the Colonial Secretary.—I am, Sir, your obedient servant, College of Preceptors, May 21, 1902. H. W. EVE.

CORRELATION OF SUBJECTS.

To the Editor of The Journal of Education.

SIR,—The correlation of the various subjects which make up a school time-table is an act of economy and common sense, and when one teacher is responsible for several subjects some degree of correlation between these subjects is practically inevitable, and may well be made as complete as possible. But when several teachers have each a subject under their charge it may be questioned whether the efforts they make to correlate their different subjects do not tend in the direction of reducing the educational efficiency of each teacher, as such a teacher is, as a rule, most effective when he is working freely at his own subject along his own lines.

Correlation is, after all, interesting rather to the philosopher who dreams of an underlying unity in the universe than to the teacher who aims chiefly at developing his pupils' intelligence by means of the study of the phenomena among which both live.

To the teacher, then, correlation plays the part of stevedore, or rather economizer of intellectual effort, or else helps by increasing the interest of school work to stimulate the thought and fix the attention of the pupil. But the intellectually gymnastic value of a subject of study does not depend upon its relation to other subjects, and the most effective teacher is he who can, by means of the subject he teaches, best develop his pupils' mental powers, and possibly the dissimilarity and separation of the various subjects increase their value as intellectual exercises. We do not correlate cricket and football, hockey and lawn tennis. The value of a complete change of occupation is not to be forgotten.—I remain, yours faithfully, FRANK J. ADKINS.

78 Gilda Brook Road, Eccles, May 20, 1902.

"CHILD-STUDY" AND THE STUDY OF CHILDREN.*To the Editor of The Journal of Education.*

DEAR SIR,—“The Mind of a Child” is not a good book; it is weakly put together, and the sentence you quote is perhaps the weakest in the book. I hope some day to re-write it, and for its faults I am much to blame. I wrote the book during ill-health, which is an immoral thing to do from all points of view. But I earnestly believe it has in it things worth saying, if they are said rightly, and not the least of these, in my opinion, is the objection to “child-study.”

“Child-study” (in inverted commas) and the study of children are two different things, and it is not fair of you to quote Darwin and Froebel as exponents of the former. To study children with the end in view of improving children's lives so that they may be at once happier creatures, and have it put into their power to become virtuous men and women, is a task worth all other tasks put together. To study physical development in infancy and childhood as a means of attaining greater knowledge of the laws of evolution is a legitimate use of childhood, and one that in no way directly affects the child as a child. Neither of these is the “child-study” that I decry. This last is, as I interpret it, an attempt to take the immortal part of a child—what I have in my book called his mind—and to put it under the scientific microscope. I consider this attempt to be an immense irreverence.

I cannot here go into the thesis which I have tried to work out in “The Mind of the Child,” that any study of childhood for scientific purposes alone, unless it is limited to physical development, is bound to be futile.—I am, faithfully yours,

ENNIS RICHMOND.

St. Edmund's Lodge, Hindhead, Surrey,

May 2, 1902.

TRAINING COLLEGES.*To the Editor of The Journal of Education.*

SIR,—All parties are agreed that an increase in the number of trained teachers is one of the most pressing of our educational needs. This increase can be brought about immediately and quite apart from the present Education Bill by an act of simple justice—the alteration of Article 127 of the Code (under revision till June), which regulates grants to day training colleges. Training colleges are of two kinds—residential and day; admission to either is gained by means of a King's Scholarship, won, as a rule, in a national competitive examination. If a King's Scholar spends three years in a residential training college, he costs the nation £150; if he becomes a member of a day training college for the same period, he costs the nation £105 only. Equality of financial treatment in educational matters is much under discussion at present, and the inequality revealed by the preceding figures calls for immediate redress. If day training college students were given an extra £15 a year, the number of King's Scholars able to afford a course of training would be considerably increased and the King's Scholarship would become less of a mockery than it is at present. Mr. Rhodes thought £300 a year a reasonable University scholarship. The Government imagines that £35 a year is quite enough.—Yours, &c.,

FRANK J. ADKINS.

78 Gilda Brook Road, Eccles, May 10, 1902.

CERTIFICATES FOR THE TEACHING OF FRENCH.*To the Editor of The Journal of Education.*

DEAR SIR,—I should be very grateful for information through the medium of *The Journal* as to the best course to adopt in order to obtain a diploma which will specially qualify for the teaching of French in England. Is there any examining body granting a certificate solely for French?—Yours sincerely,

A TEACHER.

May 22, 1902.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members “The Journal of Education”; but the “Journal” is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

“ANY fool can teach” was, or is, a generally accepted maxim: “trainers,” with aspirations after teaching diplomas, might be worse employed than in discovering the logical relationship of this maxim to Mr. Page's dictum in his letter to the *Times* of April 22, “the young man who enters it [i.e., the scholastic calling] thereby gives such practical proof of folly as to make it doubtful whether he is fit to instruct anybody.” The “trainer” might then justify or refute each text in a series of dilemmas based on information supplied by the A.M.A., such as follows. A most aristocratic body of governors is preparing to appoint a new head master, and informs candidates for the post that

(Continued on page 380.)

HEAD MASTERS of PUBLIC SCHOOLS, GRAMMAR SCHOOLS, and all AUTHORITIES over SECONDARY EDUCATION who desire to give their pupils a thorough training in Commerce, should lose no time in introducing

HARPER'S NEW INTERNATIONAL COMMERCIAL SERIES,

being descriptions by practical experts of the economic and commercial conditions now existing in the principal countries of the civilized world.

The importance of the study of commerce and of practical economics is constantly insisted upon by Lord Rosebery, Mr. Balfour, Mr. Chamberlain, Mr. Bryce. HARPER'S COMMERCE SERIES is an attempt to supply the books necessary for the purpose.

HARPER'S INTERNATIONAL COMMERCE SERIES.

Edited by FRANCIS W. HIRST.

Cloth, 3s. 6d. per volume, with Map.

INDIA.	[Ready.]	JAPAN.	[Ready.]
UNITED KINGDOM.	[Ready.]	UNITED STATES.	[Ready.]
GERMANY.		HOLLAND.	

*Other volumes to follow.***OPINIONS ON THE INITIAL VOLUME.**

Sir CHAS. DILKE, M.P., writes:—“I have read your volume on Japan with great interest, and think it useful.”

Col. Sir HOWARD VINCENT, M.P., writes:—“It appears to put the whole of the facts most clearly, and should be of great value.”

CLINTON DAWKINS, Esq., writes:—“There is very little, if any, information that any business man can want about Japan which is not contained in your admirably arranged pages. I wish every success to your new series, and believe it will be of great use, and attain the popularity it deserves.”

EDUCATIONAL FOUNDATIONS OF TRADE AND INDUSTRY.

By FABIAN WARE.

Crown 8vo, gilt, 3s. 6d.

Mr. SPENSER WILKINSON says in the *Morning Post*: “If the value of a book bears relation not to its size, but to the national importance of its subject and to the writer's mastery of it, Mr. Fabian Ware's new volume should take high rank among the books of the year. . . . It supplies precisely the knowledge most needed at the present moment by legislators. Ought to be read and pondered by every one who takes part in the educational discussions of the current year.”

HARPER & BROS., 45 ALBEMARLE STREET, LONDON, W.

£x will be "allowed for assistant masters, ordinary repairs, servant man, and scavenging." The servant man and the scavenger will doubtless get pensions, which will keep them respectable and respected to the end of their days; but let not the assistant master presume to rank himself with such useful members of the community as they. The A.M.A. did presume to present to County Governing Bodies in Wales a memorial in support of the Welsh Pension Scheme, and we must gratefully admit that in some instances our memorial received gracious or favourable consideration; but the Secretary of the Newport Governing Body informs us that the Body "was unable to accept the pension scheme of the Central Welsh Board, and further disapproved of the organization of such scheme for teachers in their intermediate schools."

Those teachers who have already given practical proof of their folly need not in despair resort to sleeping draughts or drinking whisky at one another's expense, as some darkly hint; let them read "Pastor Agnorum," or even contemplate the well directed activity of the Lancashire and Cheshire Branch during the recent Bury election. The successful candidate, Mr. Toulmin, assured a deputation from the Branch of his sympathy with our aspirations in respect to tenure, pensions, and salaries, and promised to do all in his power, if elected, to forward our interests; and the defeated candidate, Mr. H. L. W. Lawson, also promised to "support any fair and well considered measure likely to improve the status and prospects of secondary teachers." "I agree," he continued, "with Mr. Cripps in thinking that proper provision ought to be made for their declining years. An opportunity will doubtless occur for the introduction of some machinery for the purpose, in the course of the reorganization of secondary education, which is bound to come."

Further consolation may be derived from the indefatigable efforts of Mr. F. S. Stevenson in overcoming opposition to his motion in the House of Commons for a "Return showing the salaries, emoluments, and conditions of tenure, of masters in all schools under the Endowed Schools Acts in the several counties of England and Wales." His motion has been abandoned only on account of pressure of work at the Board of Education, and we have every reason to hope that next Session the Return will be granted.

The attitude of the Association towards the Education Bill is one of grateful acceptance modified by a strong desire to stiffen what is loose, without sacrifice of elasticity, and here we find ourselves in conflict with those opponents who appear to favour a formless fluidity, and to justify the American boy's definition of a demagogue, as "a vessel for holding beer and other liquids." We desire, as most reasonable critics do, that the optional clauses shall become compulsory; and we suggest that the teachers registered in Columns A and B of the new Register shall be empowered to nominate members of the Education Committees. We also heartily support an amendment of which Mr. Cripps has given notice to the effect that a Treasury grant shall be made to the Local Authority equal in amount to the sum raised by a rate for the purposes of secondary education. The support which this proposal has received is greater than we dared to hope for; but we fear that the decision is still in the laps of Steyn and Delarey.

Our monthly "Circular" is assuming a more literary character, as befits the organ of a body not entirely composed of mere schoolmasters. In "Matthew Arnold as Critic" we have a criticism not unworthy of the great master; a prophet interprets a prophet in a review of "Pastor Agnorum"; and finally in "The Parting of the Ways" we have poesie which needs no defence, though possibly the opening words, "Good-bye dear lad," may offend such as hate to be styled "teachers." This may sound trivial, but trivialities play an important part at one period of an assistant master's life. Three candidates for head masterships attribute their failure with some show of reason to the following causes:—The hair of one was tinged with grey; the second on the great day wore a jacket; and the third, who lost by one vote, offended an influential governor by speaking of an educational practitioner as a teacher. They manage these things better abroad.

NORTHERN WOMEN GRADUATES' ASSOCIATION.—A meeting of women graduates was held last month in Belfast to consider the formation of an association to guard the interests of women with reference to University education. A vote was taken as to whether Northern women graduates should form a separate association or a branch of the Irish Graduates' Association; and it was decided by a large majority that, for convenience in meeting and to safeguard specially Northern interests, a distinct association should be formed, maintaining friendly relations with the Irish Association, and with the understanding that each would communicate with the other before taking public steps. A representative Committee was formed, and the following office-bearers elected:—President, Mrs. Hanna, B.A.; Secretaries, Miss McNeill, B.A., and Miss Brittain, M.A.; Treasurer, Miss McKinney, B.A. It is proposed to embody the views of the Association on certain questions connected with University education for women in a memorial to be laid before the Royal Commission.

Mr. Edward Arnold's Educational List.

NEW BOOKS.

AN ARITHMETIC FOR SCHOOLS. By J. P. KIRKMAN, M.A., and A. E. FIELD, M.A., Assistant Masters at Bedford Grammar School. An entirely new text-book based upon the most recent methods of instruction. Contains an Appendix on some of the possibilities of Squared Paper, a knowledge of which is required by some Civil Service Examiners. 500 pages. Crown 8vo. With or without Answers. Cloth, 3s. 6d.

A FIRST COURSE IN ENGLISH ANALYSIS AND GRAMMAR. By RICHARD WILSON, B.A., Author of "Arnold's Language Lessons." Cloth, 1s.

A complete course for junior pupils. The book is not divided into Accidence and Syntax, but both are taught together, the whole work being based upon Analysis. The progressive exercises in Analysis and Parsing form a special feature of this new junior grammar.

THE AUSTRALIAN COMMONWEALTH. Its Geography and History. A reading book for Schools. 144 pages. With Illustrations and Coloured Map. Cloth, 1s.

This book has been written by an Australian, and the illustrations consist of reproductions from photographs and from drawings made by an artist who has spent many years in Australia.

A TEXT-BOOK OF PHYSICS. With Sections on the Applications of Physics to Physiology and Medicine. By Dr. R. A. LEHFELDT, Professor of Physics at the East London Technical College, Finsbury. Fully illustrated. Crown 8vo, cloth, 6s.

PHYSIOLOGY FOR BEGINNERS. By LEONARD HILL, M.B., F.R.S., Author of "A Manual of Human Physiology." 128 pages. Illustrated. Cloth, 1s.

PREFACE.—"The author has set himself the difficult task of putting in simple language the essential facts concerning the structure and functions of the human body. These facts cannot be properly learnt without the aid of practical demonstration. This book is designed to assist students who are attending lectures and classes where such demonstrations are given."

NEW BOOK BY PROFESSOR OMAN.

SEVEN ROMAN STATESMEN. A Detailed Study of Cæsar, Pompey, Sulla, Marius, Cato, and the Gracchi. By C. W. OMAN, M.A., Fellow of All Souls' College, Oxford. With reproductions of Coins in the British Museum. Crown 8vo, cloth, 6s.

A HISTORY OF ENGLAND.

By C. W. OMAN, M.A., Fellow of All Souls' College, Oxford. Fully furnished with Maps, Plans of the Principal Battlefields, and Genealogical Tables. 760 pages. Revised Edition. Crown 8vo, cloth, 5s.

SPECIAL EDITIONS (each Volume containing a separate Index).

In Two Parts, 3s. each: Part I., from the Earliest Times to 1603; Part II., from 1603 to 1885.

In Three Divisions: Division I., to 1307, 2s.; Division II., 1307 to 1688, 2s.; Division III., 1688 to 1885, 2s. 6d.

* In ordering please state the period required, to avoid confusion.

A BOOK WITHOUT PRECEDENT.

AN ILLUSTRATED SCHOOL GEOGRAPHY.

By ANDREW J. HERBERTSON, Ph.D., F.R.G.S., Assistant to the Reader in Geography at Oxford University, and ALEXIS E. FRYE. With sixteen pages of Coloured Maps, and nearly 700 Illustrations. Large 4to (about 12 in. by 10 in.). 5s.

Never before has such a magnificent series of Photographic, Relief, and Coloured Maps, nor such a wealth of Illustration, accompanied a text-book of Geography.

Sixth Edition now ready.

PSYCHOLOGY FOR TEACHERS. By C. LLOYD MORGAN, F.R.S., Principal of University College, Bristol. Crown 8vo, cloth, 3s. 6d.

Catalogues on application.

London: EDWARD ARNOLD, 37 Bedford Street, Strand.

NOW READY.

POESIES DE L'ENFANCE CHOISIES.

By FRANCOIS LOUIS.

Seventh Edition. Fcap. 8vo, cloth, 1s. 6d.

This collection of French Poetry for Children contains Nursery Rhymes and Short Essay Pieces, &c.

As a collection of childish verse this volume deserves to be widely known. We cordially commend it to the notice of our readers."—*Teachers' Aid*, March 8, 1902.

RULES OF**FRENCH GRAMMAR AT A GLANCE.***For Teachers and Students.*

By O. F. CAMPHUIS.

Being a Summary of the Difficulties of the Language, in a Practical and Simplified Form, as a Text-Book for use in the Class, and in Preparation for Examinations.

Demy 8vo, wrapper, 1s.; cloth, 1s. 6d.

"Candidates for examination will find this summary of rules and exceptions very useful."—*Cusack's Journal*.

FRENCH GRAMMAR.

By Dr. F. AHN.

(MARLBOROUGH'S EDITION.)

Ahn's Original Work. A New, Practical, and Easy Method of Learning the French Language. Author's Fourteenth Edition. Revised and Edited by C. A. THIMM, F.R.G.S. 220 pp., demy 8vo, cloth, 2s. 6d.

"Appears to be particularly suitable for self-instruction."—*Modern Language Teachers' Guide*.

Key to the Exercises. By C. A. THIMM, F.R.G.S. 39 pp., demy 8vo, wrapper, 1s. E. MARLBOROUGH & CO., 51 OLD BAILEY, LONDON, E.C.

Seventh Edition. Revised and Enlarged. With an Appendix of Easier Exercises.
Fcap. 8vo, cloth, interleaved, Price One Shilling.

HINTS ON FRENCH SYNTAX.

By F. STORR.

PREFACE TO THE SEVENTH EDITION.

At the request of several Masters and Mistresses who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*Athenaeum*.

"There is in the book a maximum of knowledge in a minimum of space. No words are wasted, and there is no hint given which does not need to be emphasized."—*Educational Times*.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

NOW READY.

LARGE PORTRAITS IN COLOUR

OF

HIS MAJESTY KING EDWARD VII.

AND OF

HER MAJESTY QUEEN ALEXANDRA.

Reproduced from Oil Paintings by Mr. W. H. MARGETSON, who was specially commissioned by Messrs. Cassell & Company to prepare them.

Each Portrait is printed on plate paper about 20 inches by 14 inches.

These magnificent Portraits are issued at **6d.** each, printed on plate paper suitable for training; or mounted on cardboard, with suspenders (for hanging on school walls), price **1s.** each.

Can be seen at the leading Educational Booksellers throughout the Kingdom.

A HISTORY OF ENGLAND. By H. O. ARNOLD-FORSTER, M.A. Fourth and Revised Edition. From the Landing of Julius Caesar to the Present Day. 852 pages. Copiously Illustrated. Price 5s.; or cloth gilt with gilt edges, 6s. 6d.

CASSELL'S LESSONS IN FRENCH. An entirely new Edition. Revised and Modernized by JAMES BOIELLE, B.A. Parts I. and II., each 2s.; complete in One Vol., 3s. 6d. KEY, paper covers, 1s. 6d.

Thirty-First Thousand. Price 7s. 6d.

A FIRST SKETCH OF ENGLISH LITERATURE. By Prof. HENRY MORLEY.

THE STORY OF ENGLISH LITERATURE. By ANNA BUCKLAND. Cheap Edition. Cloth boards, 3s. 6d.

BY PROF. J. P. POSTGATE, M.A., Litt.D.

THE NEW LATIN PRIMER. 2s. 6d.**THE FIRST LATIN PRIMER.** 1s.

By M. A. BAYFIELD, M.A.

LATIN PROSE FOR LOWER FORMS.
2s. 6d.

Cassell's Unrivalled Dictionaries.

CASSELL'S FRENCH DICTIONARY.
(French-English and English-French.) 615th Thousand. 1,150 pages. Cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S GERMAN DICTIONARY.
(German-English and English-German.) 277th Thousand. By ELIZABETH WEIR. 1,120 pages, demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S LATIN DICTIONARY. (Latin-English and English-Latin.) 132nd Thousand. Cheap Edition, 3s. 6d.; half-morocco, 5s.

Cassell's Educational Catalogue will be sent, post free, on application.

CASSELL & COMPANY, Ltd., Ludgate Hill, London, E.C.

W. & R. CHAMBERS'S SCHOOL BOOKS.

Selections from the Best English Authors. Edited by Professor A. F. MURISON, M.A., LL.D. With Portraits. Price 2s. 6d. This book aims at exhibiting, in chronological order, representative specimens of representative authors throughout the whole course of English Literature from Beowulf down to the present day.

Selections from the Best English Authors. PART II. From Dryden to R. L. Stevenson. Price 1s. 6d.

Chambers's Higher English Reader. An entirely New Reader for Advanced Classes, consisting of Selections from the Best Authors. Illustrated with Portraits. 275 pages, price 2s.

Chambers's School History of the British Colonies.

Greater Britain: Its Rise and Growth. Price 1s. 6d.

A brightly written and attractively illustrated volume, giving a most interesting account of the Acquisition and Growth of the Colonies and Foreign Possessions of Great Britain.

Chambers's School History of the Victorian Era.

The Reign of Queen Victoria, 1837-1901. Price 1s. 6d.

The leading events in the Reign of Queen Victoria are treated in this volume in a vivid and picturesque manner, and it will be found an excellent little text-book for the Lower Forms.

Chambers's New Scheme Readers.—History of England.

From the Year 55 B.C. to the Death of Queen Victoria. Profusely Illustrated by means of Sketch Maps and Pictures. Price 1s. 6d.

Chambers's Geographical Readers of the Continents.

EUROPE (including the British Isles), **ASIA, AFRICA, AMERICA.** Price 1s. 6d. each. **AUSTRALASIA.** Price 6d.

Beautifully Illustrated in Colour and in Black and White.

Geographical Manuals of the Continents. (To accompany above Readers.)

EUROPE. Price 4d. **ASIA, AFRICA, AMERICA.** Price 2d. each. **AUSTRALASIA.** Price 1d.

Arithmetic, Theoretical and Practical. By J. S. MACKAY, M.A., LL.D., Author of "Mackay's Euclid." Price 4s. 6d.

The Educational News says:—"Altogether the work is of outstanding interest, and ought to take its place as a standard text-book on the subject."

The Elements of Euclid. By JOHN S. MACKAY, M.A., LL.D.

Books I. to VI., and Parts of Books XI. and XII. Price 3s. 6d., cloth.

With numerous Deductions, Appendices, and Historical Notes. Also can be had separately: Book I., 1s.; II., 6d.; III., 9d.; XI., XII., 6d.

"This is, in many respects, the best school Euclid in existence."—FREDERICK SPENCER, M.A., Cambridge.

Chambers's Algebra for Schools. By WILLIAM THOMSON, M.A., B.Sc.; formerly Assistant Professor of Mathematics and Mathematical Examiner, University of Edinburgh. Price 4s. 6d.

"Among the very best elementary text-books this work will take a prominent place."—*Journal of Education.*

Chambers's Elementary Algebra. Up to and including Quadratic Equations. By WILLIAM THOMSON, M.A., B.Sc. Price 2s. With Answers, 2s. 6d.

Organic Chemistry. By W. H. PERKIN, Jun., Ph.D., F.R.S., and F. STANLEY KIPPING, Ph.D., D.Sc. Lond. Part I., price 3s. 6d. Part II., price 3s. 6d. Appendix, adapting the work to the latest requirements of the Medical Syllabus of the University of London and other Examining Boards, price 1s. In One Volume complete with Appendix, price 7s. 6d.

Physics. By C. G. KNOTT, D.Sc. Edinburgh, F.R.S.E., Lecturer on Applied Mathematics and Physics (Medical) in the University of Edinburgh. An Elementary Text-book for University Classes. Price 7s. 6d.

"One of the best of recent elementary treatises."—*Athenæum.*

Elementary Book-keeping, in Theory and Practice.

Containing numerous Examples and Exercises, together with Solutions. By GEORGE LISLE, C.A., F.F.A., Lecturer on Book-keeping at the Heriot-Watt College, Edinburgh. Price 2s. **Two Ruled Exercise Books** for above, DAY BOOK and LEDGER, each 6d.

CHAMBERS'S COMMERCIAL HANDBOOKS.

Commercial Arithmetic. By W. WOODBURN.
112 pages. Cloth, 8d.; with Answers, 1s.; Answers only, 6d.

Commercial Geography of the British Isles. By Dr. A. J. HERBERTSON.
140 pages. Cloth, 1s.

Commercial Correspondence and Office Routine.

FIRST YEAR'S COURSE. By G. R. WALKER. 128 pages. Cloth, 1s. | SECOND YEAR'S COURSE. By G. R. WALKER. Cloth, 1s. 6d.

W. & R. CHAMBERS, Ltd., 47 Paternoster Row, London, E.C., and Edinburgh.

METHUEN'S NEW BOOKS.

A HISTORY OF RUSSIA FROM PETER THE GREAT TO ALEXANDER II. By W. R. MORFILL, Jesus College, Oxford. With Maps and Plans. Crown 8vo, 7s. 6d.

This history, by the most distinguished authority in England, is founded on a study of original documents, and though necessarily brief, is the most comprehensive narrative in existence. Considerable attention has been paid to the social and literary development of the country, and the recent expansion of Russia in Asia.

A HISTORY OF THE BRITISH IN INDIA. By A. D. INNES, M.A. With Maps and Plans. Crown 8vo, 7s. 6d.

CROMWELL'S ARMY: A History of the English Soldier during the Civil Wars, the Commonwealth, and the Protectorate. By C. H. FIRTH, M.A. Crown 8vo, 7s. 6d.

An elaborate study and description of Cromwell's army by which the victory of the Parliament was secured. The "New Model" is described in minute detail, and the author, who is one of the most distinguished historians of the day, has made great use of unpublished MSS.

A HISTORY OF ENGLISH LITERATURE: From its Beginning to Tennyson. By E. ENGBL. Translated from the German. Demy 8vo, 7s. 6d. net.

This is a very complete and convenient sketch of the evolution of our literature from early days. The treatment is biographical as well as critical, and is rendered more interesting by the quotation of characteristic passages from the chief authors.

THE FRENCH REVOLUTION. By THOMAS CARLYLE. Edited by C. R. L. FLETCHER, Fellow of Magdalen College, Oxford. Three Volumes. Crown 8vo, 6s. each. [*In the press.*]

This edition is magnificently equipped with notes.

THE LIFE OF LORD TENNYSON. By A. C. BENSON, M.A. With 12 Illustrations. Fcap. 8vo, cloth, 3s. 6d.; leather, 4s. net. [*In the press.*]

HEAD-HUNTERS, BLACK, WHITE, AND BROWN. By A. C. HADDON, Sc.D., F.R.S. With many Illustrations and a Map. Demy 8vo, 15s.

A narrative of adventure and exploration in Northern Borneo. It contains much matter of the highest scientific interest.

THE ANCIENT RUINS OF RHODESIA. By R. N. HALL and W. G. NEAL. With numerous Illustrations. Demy 8vo, 21s. net.

This book contains descriptions of two hundred ruins of temples and forts, and of their types and ages of architecture. It describes also the Sabæan and Phœnician occupations of Rhodesia; King Solomon's gold, ancient burials, ancient gold-mining, &c. It is profusely illustrated, and contains many maps and plans.

THE CHIEF TRUTHS OF THE CHRISTIAN FAITH. By J. STEPHENSON, M.A. Crown 8vo, 3s. 6d.

An attempt to present in clear and popular form the main truths of the Faith. The book is intended for lay workers in the Church, for educated parents, and for teachers generally.

The Works of Shakespeare.

An edition of Shakespeare in single Plays. Each play is edited with a full Introduction, Textual Notes, and a Commentary at the foot of the page. Each Volume, Demy 8vo, 3s. 6d.

JULIUS CÆSAR. Edited by M. MACMILLAN, M.A.

THE TEMPEST. Edited by MORTON LUCE.

The Little Library.

Pott 8vo. Each Volume, cloth, 1s. 6d. net; leather, 2s. 6d. net.

"The volumes are compact in size, printed on thin but good paper in clear type, prettily and at the same time strongly bound, and altogether good to look upon and handle."—*Outlook.*

SELECTIONS FROM THE EARLY POEMS OF ROBERT BROWNING. Edited by W. HALL GRIFFIN, M.A.

ELIA, AND THE LAST ESSAYS OF ELIA. By CHARLES LAMB. Edited by E. V. LUCAS.

IN MEMORIAM. By ALFRED, LORD TENNYSON. Edited by H. C. BEECHING, M.A.

EOTHEN. By A. W. KINGLAKE. With an Introduction and Notes.

METHUEN & CO., 36 ESSEX STREET, LONDON, W.C.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.; each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."] All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

POPULAR ELECTION:

By H. MACAN.

THERE can be no doubt that the controversies relating to educational administration which have raged round the various Government Bills introduced since 1896 have gone far to educate the so-called "educated public" into a familiarity with constitutional questions hitherto relegated to the care of the political student or Government official. I propose very briefly, in relation to the latest Education Bill, to set out just a few of the salient facts bearing on the specious cry for popular election as an essential of educational control. One read quite recently with some amazement, in leading Liberal papers, that the introduction of the London Water Bill by the Government was made an occasion of attacks upon the educational policy supposed to be maturing, in so far as it leaned to the side of the County Councils rather than to that of the School Boards. "Here," they said, "is fine consistency. The Government will give to the County Council 'education,' but it won't let it have 'water' in its care. They attack *ad hoc* in education; yet they constitute an *ad hoc* Board for water administration." Here we have set out two primary fallacies, one relating to area and the other to constitution, which shall form the text of this article. In the first place, there are no means known to the British constitution by which a rating authority can exercise jurisdiction outside its own area. The Royal Commission dealt fully with the necessity of combination among the smaller counties and county boroughs, but made it quite clear that this could only be brought about by a voluntary agreement and union between the Councils concerned, and not by an award of extra-territorial jurisdiction to one Council or the other. To give to the London County Council, in spite of its many good deeds, control either in education or water over half the home counties would be an act of spoliation quite unknown to the legislature of this country. This very point here involved—namely, that of the rating and controlling areas being always identical—is one of the strongest in favour of constituting large areas for educational purposes. It is only thus that the difficulty created by the non-coterminous boundaries of Town Councils and School Boards can be got over when the two rating Authorities are merged in one.

The second and greater fallacy is involved in the loose use of the words *ad hoc*. The Royal Commission and all the Government Bills since are entirely in favour of an *ad hoc* Authority for

Education. Every Committee of the County Council, and especially those which are hybrid and have powers delegated to them, are *ad hoc* bodies—that is to say, they are specially constituted, selected, for a particular purpose. And it is only by the selection of the fittest, whether business men or experts, that a proper Authority can be obtained. What, of course, is being attacked alike by the Government Bills and by the Municipal Authorities is “election” *ad hoc*. Now really a contradiction in terms is involved in these words. They imply that “the man in the street” is so highly educated in political and social questions that he separates in his mind education as an administrative function from every thing else. He only elects one man to Parliament to deal with South Africa, shop hours, and deceased wife's sister; he even allows this man to pass Education Bills. He only votes for one councillor to look after free libraries, small-pox hospitals, tramways, and main drains, and this man may vote a penny rate for technical education. But when it comes to any other education question every voter has a double dose of discrimination given to him, and by his vote finds out a separate and distinct man to do his administrative work; of course, if the member so elected is not distinct, why the extra election? Mr. Voxall, M.P., has in the most delicate manner insinuated the reason for the separate election: “a desire to continue the opportunities afforded by the School Board elections of placing upon the Local Authorities persons who go there for reasons not purely educational, elected by the cumulative vote.” It is noteworthy that the School Board party are, and always have been, opposed to a proposal to elect an Education Authority without the cumulative vote and for ordinary local government areas; the obvious reason is that they know that “separate” persons would not thus be elected. Here one is met by the argument that it is *essential* that two classes of “separate” persons should find seats on the Authority—viz., women and ministers of religion: in fact, Mr. C. P. Scott proposes to amend the Bill in this way. Admitting that such persons did in the past useful work on some School Boards, it must be remembered that School Boards, by law, are managers (*i.e.*, governors) as well as Local Authorities; while the new Authority will not, in the words of the Commission, “itself manage any school”; it is just in the field of activity thus deliberately excluded that these “separate” persons found their principal utility. But, as a matter of fact, on 2,200 School Boards there are only about 360 women, and, if we except London, it is in many of the largest and most progressive Boards—Manchester, Birmingham, Leeds, &c.—that there are no women at all.

As to ministers, they will not care to seek seats in bodies with no functions of internal management and no control except in matters secular. They are eligible for County Councils, but very seldom get elected. Besides, a sufficient answer to the whole contention is that co-optation can secure for *certainly* what is only a matter of *chance* at elections. But, to go a little nearer the root of the matter, how does the ordinary man vote? He either uses his suffrage on behalf of “measures” or on behalf of “men.” In a political election, the average man votes his “party ticket,” because he wants certain measures advocated by that party to be carried, or a certain line of policy to be successful. In education properly considered and concerned solely with the interests of the children, there is no line of cleavage which admits of any such distinct vote “aye” or “no.” Therefore if this “man in the street” vote is to be secured, it is essential to import the cries “Church or Chapel,” “Tory or Whig,” into the controversy. There can be no *referendum* or *ad hoc* vote on purely educational issues. Switzerland, the home of the *referendum*, has no elections *ad hoc* for education or anything else. But the average elector can, and outside the sphere of politics and religion does, vote for “men”—the best all-round men. Except in London and a rapidly diminishing number of large towns (where political parties are always wanting dress rehearsals), no municipal elections—county, town, district, or parish—take place on so-called issues. The two or three best all-round men in a district fight it out. The result is that most county councillors, after their one initial fight, hold their seats uncontested. Five per cent. to ten per cent. of contests is the maximum. Here, of course, as there are no issues, one gets the natural and best constituent “electoral college,” a body competent to pick out the men most suitable for any *ad hoc* purpose. Hence logic as well as expediency demonstrates that efficient administrative *ad hoc* control cannot be secured by an *ad hoc*-elected body.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

SINCE the publication of the last Quarterly Report (March 1) there have been three meetings of the Council—on March 6, March 22, and May 3.

At the first of these meetings the newly formed local Guild in Guernsey (thirty-seven members) was affiliated as a Branch. Mr. Francis Storr was unanimously appointed the representative of the Guild on the Teachers' Registration Council, on the proposal of the Chairman (Canon Lyttelton), seconded by Mrs. Bryant, D.Sc. A series of representations to the Lord President of the Council on the Draft Order in Council establishing a Teachers' Registration Council was settled as follows:—

“1. The Council would respectfully urge that, under Clause 1 of the Order, in the appointment of six members of the Registration Council by the President of the Board of Education, the fact that teachers in private schools and assistant masters and mistresses are not directly represented should be taken into account.

“2. That under Clauses 20 and 21 of the Schedule, inasmuch as it is provided that no fee for registration shall be charged to teachers to be registered in Column A of the Register, while teachers to be registered in Column B will be charged a fee, the Treasury should defray the cost of registering the teachers whose names shall be entered in Column A.

“3. That under Clause 3 (1) of the Schedule a large class of exceptionally competent teachers, in particular those employed in kindergartens, will be excluded by this test.

“4. That under Appendix A the Associateship of the Royal College of Science and of the Central Technical College are hardly sufficient tests of general culture to rank as qualifications equivalent to a University diploma.

“5. That under Clause 3 (2) (i.) of the Schedule the exact meaning of the term ‘student-teacher under supervision’ should be defined, and that the word ‘unpaid’ should be added before the word ‘student-teacher.’

“6. That in Clause 3 (2) (ii.) and elsewhere in the Schedule the expression ‘recognized school’ should be defined by the Board of Education.

“7. That under Appendix B the Associateship of the College of Preceptors should be added to the Licentiate'ship of the same college among the diplomas mentioned.

“8. That under Clause 4 (2) (ii.) of the Schedule the words ‘teaching of a purely elementary character’ might, as they stand, be taken so as to exclude many teachers of the lowest classes in secondary and preparatory schools who should be admitted.”

At the same meeting the Council directed that a letter should be sent to the Honorary Secretaries of the Central Guild and the Branches, together with a short list of questions as to the right order and relation of subjects in secondary schools. The Councils of the Central Guild and Branches were invited to deliberate on the questions, and afterwards to take the opinions of their members on their conclusions and to consult other qualified authorities, if they think desirable. Results of deliberations to be sent in in January next. It was also decided to get the question of school curriculum brought forward at the Belfast Meeting of the British Association this year, if possible.

At the meeting on March 22 the arrangements for the Annual General Meeting of 1902 were settled. It was decided to invite the Right Hon. A. H. Dyke Acland to fill the post of President of the Guild for the year 1902-3, in succession to Prof. Butcher, and to give his Presidential Address after the Annual General Meeting. A detailed discussion of the Annual Report by delegates from the Central Guild and the Branches was planned, and it was decided to make a special effort to secure the presence of Branch Delegates.

At the meeting on May 3 the Chairman's list of nominees for the five vacancies among the twenty General Members of Council was settled and the Annual Report of the Council was drawn up. The report begins with a criticism on the new Education Bill, which the Council find to be “on the strictly educational side sound, and on the political side stimulating,” inasmuch as the Government is thus put on its mettle. “The Bill,” the report says, “meets the main aspirations of the Guild.” “It aims at raising the standard of efficiency in all elementary schools to the level of the best equipped and best organized, putting the national need above all objections, however well founded they might be if put forward in a young country without a long history.”

The report passes on to deal with the Order in Council appointing a Teachers' Registration Council, on which the Guild is directly represented, and welcomes the Order as “establishing a single Register, though with a sharp distinction between primary and secondary school teachers, and exacting evidence of teaching power, though not a thorough professional training in all cases.” Reference is made to the Joint Memorandum of the College of Preceptors, Teachers' Guild, and Private Schools' Association to the Lord President of the Council on certain main points in connexion with the organization of education.

The work of the Political Committee during the winter months is

next set out. This includes the drafting of Leaflet No. 6, on "Educational Legislation and the Future of the Higher-Grade School"; the revised resolutions on Tenure, settled with special reference to the transfer of the educational powers of the Charity Commissioners to the Board of Education; the Memorandum of the Guild on the Organization of Education and the main points that should be included in the Education Bill of 1902; the consideration of and report on the Order in Council establishing a Teachers' Registration Council; and the examination of the Education Bill of 1902.

The work of the Education and Library Committee follows under the three heads of the Programme of the Educational Conference of last January; the Letter and Questions on Curriculum; and the Library, mention being made of the supplement to the Catalogue, including all new books of 1900 and 1901. Next comes the section dealing with the Modern Language Holiday Courses arrangements for August next at Tours, Honfleur, and Santander, with short notices of the work of the Holiday Resorts and Finance Committees during the year. A fuller notice is given to the new Organizing Committee, which, it is hoped, will strengthen the Guild with new Branches and Local Correspondents. A paragraph is given to the new organ of the Guild—the *Teachers' Guild Quarterly*—and it is stated that "the correspondence section" of this publication "awaits the enlightening letters which do not come." A short paragraph on the President of 1901-2 and the President-elect introduces the conclusion, which points out the immediate duty before the Guild as the Council conceives it.

It should be noted that the arrangement of the Report under the various heads of Committee work was intended to help the discussion by the Annual General Meeting.

The Council decided to have a special discussion of the Leaflet on Higher-Grade Schools on May 31, after the President's Address, and to invite the Association of Head Masters of Higher-Grade Schools to send three representatives to take part. This was thought to be the best method of dealing with the Protest against the Leaflet, signed by ten head masters of such schools, members of the Guild, which would be most satisfactory to the signatories.

At the three Council Meetings, 73 new members of the Guild were enrolled—viz., Central Guild, 22; Branches, 51, of whom 36 were the members of the new Guernsey Branch. The others belong to the Branches at Dublin, Durham, Folkestone, Ipswich, Manchester, and Oxford.

CENTRAL GUILD. LONDON SECTIONS.

Two meetings of Sections in June are announced, viz., the excursion of Section G to Windsor, on the 6th, and a lecture by the Rev. S. C. Tickell to Section E, at St. Mark's College, Chelsea, on "How to become a Humourist," with recitations, on the 12th. The arrangements of other Sections for summer excursions, if made, can be learnt from the Hon. Secretaries.

On March 10 a meeting of Section A was held at the Central Foundation School for Girls, Spital Square, when a most interesting and suggestive paper on "Practical Arithmetic" was read by Miss Storr. A very animated discussion followed.

BRANCHES.

Cheltenham.—At a meeting of the Branch in March last the draft Order in Council for the formation of a Register of Teachers was discussed. The attendance of members, particularly of those connected with the staff of the Ladies' College, was large, and the Rev. J. A. Owen, M.A., was welcomed on his first appearance in the capacity of President of the Branch. Feeling called upon to deliver something in the nature of a Presidential Address, Mr. Owen explained that he had only consented to take the office upon knowledge of the facts that the Principal of the College felt himself unable to give adequate attention to the duties, and that Miss Beale was also unwilling to accept them. The mention of Miss Beale's name naturally led him to refer to the distinction which Edinburgh University had just conferred upon her, and he added that they were looking forward to the pleasure of seeing the new LL.D. arrayed in the splendid robes which were about to be presented to her. (At a later stage of the meeting a resolution of congratulation to the Lady Principal was passed.) Commenting upon the essential object of the Guild, Mr. Owen interpreted it to be the promotion among those engaged in teaching of a wholesome professional feeling. In England, he observed, there was rather a strong objection to professionalism. For instance, it was said that in the Army a large number of officers, instead of studying military science, preferred to spend their time in playing golf and polo. A similar remark might apply to the clergy of the Church of England, who, indeed, were the least professional of any clerical body in existence. Thus, seeing that the administration of charity was a matter closely connected with the work of the clergy, it might be expected of them that they should understand on what principles charitable and social work should be conducted; but this was not usually the case. Again, it might be expected that they should keep themselves abreast of the philosophical and general literature of the age, but many of them would admit that this was not the common practice. And so, again, in our secondary schools, professionalism was conspicuously absent. He had recently read a book in which the writer spoke of the head masters of secondary

schools as being for the most part "amateurs,"—a term which it was to be hoped was not applicable to head mistresses, and which, certainly as applied to music, was customarily intended to convey strong condemnation. It seemed to him that there was a good kind of professionalism and a bad kind. The first was exemplified where people took an interest in their work, tried to learn all they could about it, endeavoured to apply the best and most approved methods, and were willing to exchange ideas and experience with others engaged in the same sort of work. But that was a wrong professionalism where people combined merely for trade protection and, in their own selfish interests, for the prevention of changes which might be to the general advantage of the community. Speaking for himself, he deplored very much that when he first engaged in the duties of a teacher he had not had, besides his University education, some definite training in the art of teaching. It was mainly to promote the efficiency of its members in methods of imparting instruction that the Guild was established, and they would all acknowledge that the influence of the lectures and debates had been beneficial, and that there was good hope of this influence being continued in the future.—The discussion on the Registration proposal was introduced by the Rev. Dr. Macgowan, in accordance with a request made very shortly before the meeting. No elaborate criticism was attempted, the speaker contenting himself with pointing out the salient features of the draft Order, which he did in a tone of gentle irony. He remarked that when he was present, as a member of the Central Council of the Guild, at Manchester some ten years ago, he brought forward the question of registration, and at that time it was suggested that an educational "Crockford" would suffice. Since then, and the publication of an article on the subject in *The Journal of Education* in 1894, he could not say that he had given much attention to the question. His first comment upon the provisions now contemplated was that, as they were not embodied in a draft Bill printed by order of Parliament, but were to come into operation as an Order in Council, that meeting would have no power to alter the clauses by one jot or tittle. As regards the constitution of the Registering Authority, the members were to be appointed for three years, and were to be representative of the Association of Head Masters (2), the Association of Head Mistresses (1), and various other educational societies, including the Teachers' Guild and the National Union of Teachers. As to the last named organization, he confessed that he did not see why it should be included in the list, or why elementary teachers should have a column allotted to them in the proposed Register, seeing that they were already registered in the books of the Board of Education. That being so, it seemed unnecessary to burden this huge book with the names of elementary teachers, especially as these were not to be charged for the privilege, whereas those whose names were entered in the B or secondary teachers' column would be required to pay a guinea, and for every subject which they were competent—or incompetent—to teach an extra half-crown. In criticizing the schedule, Dr. Macgowan referred to the Bill recently laid before the House of Commons by Mr. Agg-Gardner for the Registration of Teachers of Music, and observed that the Bill would now be rendered unnecessary, because under this Order in Council teachers of the various arts were to have their names put down in a supplementary Register. In conclusion, he pointed out that, as the Order was to be purely permissive in its working, and was evidently only tentative, he welcomed it in principle, though for those secondary teachers who were already registered in "Crockford" he failed to see of what practical use it could be. In the general discussion Miss Sturge agreed with Dr. Macgowan's suggestion that there should be two volumes, and objected that there was no definition in the Order of the term "recognized school," and no machinery at present for giving meaning to the term. It would be a good thing to have a Register, but it was premature, and inspection of schools should come first.—Miss Laurie regarded the Order as a step in the right direction; its chief use would be not for the teachers, but for the parents, who were at present without any protection whatever. She agreed with a remark which had fallen from Dr. Macgowan that the Association of Assistant Mistresses, equally with that of Assistant Masters, should be represented on the Registering Authority.—Mr. T. A. Stephens also welcomed the Order as a progressive step. They had no desire to make the teaching profession a "close" profession, but they did desire to make it more difficult for incompetent people to extract fees from parents. Undoubtedly the Order was open to the charge of vagueness, and a clear definition of what was meant by "recognized school" was needed, either through the financing of schools by the Local Authority which has yet to be created, or by some authoritative inspection of schools. He looked upon such phrases in the draft Order as "student-teacher," "probationary teacher," "fitness for teaching," &c., as prophetic, because they were meaningless without inspection.—Mr. F. Prior, as Treasurer of the North Gloucestershire Branch of the Assistant Masters' Association, urged the claims of that body to have a representative on the Registration Committee. In view of the fact that the Head Masters were so strongly represented, he felt that, as an act of justice, the Assistant Masters' Association and the Association of Assistant Mistresses should each have a representative.—Miss Louch then continued the discussion, emphasizing the fact that the Order was intended to benefit chiefly younger teachers rather than those

who had already established a position in the profession. Like Miss Laurie, she considered the Order a step in the right direction, and agreed with previous speakers as to the difficulty connected with "recognized schools." She rather welcomed the vagueness and comprehensiveness of the proposed Order, as it would allow all secondary teachers now actually engaged in practical work, who could bring testimonials as to their efficiency, to be enrolled on the Register.—After some further discussion the President called upon Dr. Macgowan to reply; and the proceedings terminated.

Manchester.—At a meeting of the Branch held in the Girls' High School in Dover Street, on March 7, a paper was read by Mr. L. W. Lyde on "The Life of a City." The purpose of a highly suggestive paper was to draw an analogy between the life of a human being, in its growth, maturity, and decay, and the whole life of a city. Just as the life of the individual could be explained by reference to his surroundings, so geography could be called in aid to explain the phenomena of the life of cities. Leaving aside the races that are essentially "anti-city" in their character, such as the Esquimaux and the Arabs, the lecturer described the birth and growth of cities among the peoples who of necessity live in groups. Cities arose either from natural or from artificial causes. In the first place cities grew up naturally in places to which people instinctively resorted for purposes of defence. Mr. Lyde dealt in an interesting way with the influence of natural advantages—such as a supply of water, the presence of a hill—in the formation of cities. Some kind of natural wealth was essential to the site of a city, and in the first instance the natural wealth was invariably food. Accordingly the oldest towns were built on the flint ranges, where there is the best pasture, and which yield the flint from which weapons could be made. In a more settled state of society the builders of cities left their sites on hills, which had been chosen for purposes of defence, and cities grew up on the clay, because clay could be utilized for the utensils necessary in domestic life. Mr. Lyde traced the artificial birth of cities to three causes—the tyranny of the political despot, the tyranny of the priest, and the tyranny of the monied despot. He went on to show how the character of the industries of cities has been determined by slight variations in the geographical conditions, and how the prosperity of many cities has resulted from their own deliberate foresight in developing their natural advantages. He spoke also of the decay and death of cities, either through the apathy of the inhabitants, the failure of natural resources, or through sudden disaster.

A meeting of the Branch was held on May 12, in the High School for Girls, Dover Street, Manchester, to consider the Education Bill. Miss S. Burstall presided, and amongst others present were Prof. Wilkins, Prof. Herford, Mr. J. E. King (High Master of the Grammar School), Mr. W. B. Hard (Science Inspector for the Manchester District), Mr. T. C. Horsfall, Miss Dendy, Mr. Lupton, Mr. H. A. Johnstone, and Dr. Hall. A resolution adopted by the Council was submitted for the approval of members by Prof. Wilkins. It was as follows: "That this Branch of the Teachers' Guild approves in general of the Education Bill before the country, if the inclusion of elementary education be made compulsory, but recognizes that the Bill should be further amended on the following points:—(1) That the inclusion of women on the Local Education Authorities be made compulsory; (2) that it should be the duty of the Local Education Authority to supply deficiencies in secondary education in its area; (3) that teachers—men and women—be directly represented on the Education Authorities; (4) that the limitation of the rate for secondary education be withdrawn; (5) that, in view of the unjust inequality in the incidence of local rates, additional grants be made to the Local Authorities from the Imperial Exchequer; (6) that the Bill provide that where there is only one school in a locality, and that in the possession of a particular denomination, arrangements be made whereby young persons intending to become teachers, who may not belong to the denomination, may have the benefit of training and experience."

Dr. Wilkins moved: "That this Branch of the Teachers' Guild approves in general of the Education Bill before the country, if the inclusion of elementary education be made compulsory." He said it was with some diffidence that he ventured to differ from such authorities as Mr. Bryce, Mr. Acland, and others whose letters and speeches on the Bill had been printed in the public press. The Bill was not a perfect one, nor did it represent an ideal. Its best friends would admit that it could be amended in Committee, and even then would fall far short of what ought to be presented in such a connexion in the twentieth century. He entirely agreed with the qualifications which the Council of the Guild had laid down as conditions of their acceptance of the measure. They did not mean that there were not other matters in which the Bill might be amended, but these represented the essentials. First they placed the inclusion of women, which everybody agreed was a necessity. With regard to secondary education, too, everybody was agreed as to its importance and the necessity of doing something in the matter. On this question, certainly, there ought to be no option. On the compulsory inclusion of elementary education under the purview of the Local Authority, not even the extreme partisans—and there were many of them—seemed to hold a different opinion. The limitation of the rate for education, he thought, should be withdrawn. It was not, perhaps, as important in all cases as it was, for example, in Manchester,

where the technical schools alone would probably swallow up the proceeds of a twopenny rate, but he thought the amount might well be left for the locality to determine. He did not see how people could argue that there was no provision for popular control when every penny for the schools would come to them by the channel of directly elected representatives of the ratepayers. He ventured to think that those who held this view were entirely mistaken. Then there was the argument that because the representatives who were placed on the managing body of a voluntary school were not in a majority they could not do effective work. This view he would strongly deprecate. The question of appointing a larger number might well be a subject for discussion in Committee, but he was quite sure that even one would stop the possibility of a "job" or any shady course, even if such were desired. It had been said that the Bill was an endowment of voluntary schools, but he would rather call it a Bill for promoting the efficiency of these schools. They were not living in Laputa, but in England, and had to face the facts as they found them. They had encouraged and even helped in the growth of a network of voluntary schools, and he would ask: What was a responsible politician to do with these schools? No one would suggest sweeping them away, and he hoped none would try to starve them out of existence. There was no greater act of folly than to let them go on in a state of inefficiency. All kinds of charges were made against them, but he doubted if they were justified in more than a small percentage of the schools. Some criticism had been brought against the position of pupil-teachers, but he would remind the Guild of the resolution adopted recently by the Lower House of Convocation, that arrangements should be made for such cases. The Bill showed a thoughtfulness and tenderness in recognizing this difficulty, and he for one could not recognize any violation of the principles of religious equality and liberty in its clauses. He would not enter into the point of casuistry as to whether it was wrong to assist voluntary schools out of the rates and yet right to do so from the taxes. Mr. Acland said the Bill set up a cumbrous and barely workable machinery, but surely the exercise of common sense would make the Bill workable, just as other affairs of the Empire were worked by a spirit of give and take. He thought, on the whole, that, with amendments such as they were suggesting, the Bill would be recognized on all hands as an honest, a practical, and a workable measure.—Miss Burstall pointed out that the opposition to the Bill came largely from people who were unacquainted with the practical work of teaching, whereas it had been blessed, in principle at any rate, by the National Union of Teachers and the Teachers' Guild.—Mr. Horsfall thought they ought to ask for one man and one woman teacher representing the primary, the secondary, and the technical teachers of every district, making six in all, on every Local Authority. This would bring them into something like a line with States such as France, Germany, and Switzerland, where the experiment had been highly successful.—Mr. J. E. King hardly agreed with the proposal upon the supply or aid of secondary schools until he knew what price would have to be paid in control. Of this there was not a word in the Bill. He seconded Dr. Wilkins's motion.—Prof. Herford took his stand on the question of efficiency. The Bill might not be the second or even the third best possible, but it was not as bad as it might be. He entirely agreed with them on the question of secondary education, for, unless the inclusion of this branch were made compulsory, the Bill gave less than they could contentedly accept.—The resolution was carried with two dissentients, as were the six points set out in the resolution of the Council specified above.

Norwich.—At a meeting, held in February last, at the High School, Miss Hughes read a paper on "Methods of Teaching Modern Languages," prefacing her remarks by an acknowledgment of her indebtedness to Dr. Breu, of Cambridge, to the Master of Marlborough, and to Mr. Gould, of the Higher-Grade School, Norwich, for many practical hints and suggestions. Miss Hughes said that until about ten years ago little or no doubt existed among teachers as to the way in which instruction in modern languages was to be given. The system was in all respects modelled on that accepted as the best for teaching classics. Great accuracy was insisted upon; many rules were made, in the case of French, to correspond as much as possible to Latin ones. There could, of course, be no question as to the value of the accuracy, but in this system one fact was almost entirely left out of sight—that a living or spoken language was being dealt with, which must, at all events in some respects, be treated differently from a dead or classical one. It was no uncommon thing to meet a middle-aged person with an excellent and scholarly knowledge of theoretical French who could not go into a French post-office and ask for a stamp in such a way as to be understood. The methods of this classical system were well known to everyone, and it was still strongly advocated by many people, although its supporters would seem to be growing fewer every year. Many people have lately considered that the results obtained by this system do not compensate for the drudgery it involves, and they argue that the mental training given by it can be imparted much more thoroughly by Latin, upon which it is avowedly modelled. If, therefore, Latin forms a part of the school time table, French, and, in a lesser degree, German, may be taught chiefly as a literary medium, and to a certain extent also from the point of view of its commercial value. Reading, and not translating, should be placed in the foreground. A sufficient amount of

grammar should be learnt chiefly from the reading and a subsequent systematic analysis of the most important sentences. Miss Hughes then proceeded to describe this modern method of teaching languages at length. A discussion followed, in which Mr. H. Oake (who presided), Mr. H. R. Ladell, the Rev. H. Wimble, and Mr. W. R. Gurley took part, Miss Hughes being heartily thanked for her paper.

Three Towns (Plymouth, &c.).—On March 11 a paper was read by the Rev. J. Hirste Haywood, M.A., principal mathematical master at Plymouth College, on "The Teaching of Geometry." The chair was taken by the President, Miss Turnbull, Head Mistress of Plymouth High School for Girls. Mr. Haywood said that the main points of consideration in respect of the teaching of geometry, were (1) How much ought to be taught? (2) How much time ought to be devoted to it in the school curriculum? and (3) What is the best and most effective method to be employed to make the subject alike interesting and useful? He did not intend to discuss the first two, as he was convinced that none of them would agree, as they each had their own pet subject, and very naturally considered that it should be given a more prominent position. Before proceeding to the third, it would be well to consider in what respects mathematics differed from other subjects. In history, geography, &c., we are willing to accept certain facts on the authority of others whose testimony can be relied upon, but in geometry the student will expect to have his objections answered, and his difficulties overcome, not by an appeal to authority, but by argument and an appeal to the evidence of his senses. Our senses are our first and best mathematical teachers. Some pupils, he was of the opinion, never could be taught Euclid as it was at present taught. For, the more intelligent the pupil, the greater were the difficulties he would often meet with. One of the most difficult of all to teach was the one who, with a simple faith and beautiful trust, accepts the proposition because it was Euclid's, or because his master said so, and he thought he ought to know. That there were difficulties in teaching geometry he was sure they would all readily admit, some of which he enumerated, and instanced the amusing attempt of Sir John Gorst to teach some Maori boys the "Elements" of Euclid. As far as the removal of these difficulties was concerned, he saw no reason why Euclid should not be superseded as a text-book. Although Euclid's methods were very valuable as specimens of sound reasoning, he was quite sure that they were not the best means of teaching geometry. On the Continent and in America Euclid had been almost entirely abandoned, and there were signs that the same was taking place gradually in England. But, until some text-book was universally accepted, it was necessary to have some sequence, and Euclid's was, at any rate, a recognized sequence, though not in his opinion the best that could be devised. This was no new contention, and he instanced the opinion of Prof. Sylvester, in his address before the British Association, so far back as 1869, as well as the recent discussion in Glasgow last year. He strongly urged the necessity of an introductory course of geometrical drawing, and that they should be taught side by side. In German schools there was such a course as object lessons, which began with solids, which were handled, described, and measured. It was but a step to the drawing of figures, and this in turn formed a basis for the systematic study of plane geometry. Thus the pupil, by obtaining certain definite conceptions, felt himself on solid ground instead of wandering blindly in the dark Euclidean mists. Geometrical drawing led to the construction of accurate figures, which were especially valuable as enabling the pupil not only to avoid drawing false conclusions, but as suggesting certain relations which might not otherwise have been detected, as, e.g., Simson's line and Pascal's theorem. Though it was possible to insist too much on *minutiae*, he advocated the use of any symbol which was intelligible and which would shorten the labour of writing out, for they were, after all, only symbols to express a certain meaning, as writing itself was only symbolic of certain sounds. In conclusion, he expressed his entire sympathy with the use of a certain wise and intelligent pruning.

COLONIAL AND FOREIGN NOTES.

GERMANY.

Gradually the changes recommended by the last School Conference in Berlin are being introduced into the secondary schools. It will be remembered that at that Conference great stress was laid on the importance of Greek for a liberal education. This might seem, to any one acquainted with the traditions of Prussian secondary education even to-day, such an obvious commonplace that it hardly stood in need of the prominence that was given to it in the course of the debate. But the point of view has nevertheless somewhat changed. Greek culture is no longer an end in itself; but only to be studied because it contains within itself the beginnings of modern civilization. This is illustrated by the new Greek reading-book which, drawn up at the request of the Ministry by Prof. v. Willamowitz-Möllendorf, has recently been pub-

lished by a Berlin firm. In a circular letter to the *Provinzialschulkollegien*, the Minister authorizes its immediate introduction, and expresses his confident hope that it will enhance the value of the study of Greek. At the same time he adds a warning that its introduction is not to be sanctioned unless there is a guarantee that the teachers, by their capacity and personality, are likely to make a proper use of it. The book is divided into seven parts. The first contains fables and stories; the second, selections from Aristotle, Thucydides, Polybius, and Plutarch; the third deals with political theories; the fourth illustrates astronomical and geographical knowledge by extracts from the writings of Poseidonius and Strabo; in the fifth mathematics and mechanics are represented by Euclid and Archimedes; medicine in the sixth, by Hippocrates and Dioscorides. The seventh section concerns itself with philosophy; it contains no single work of Plato in its entirety, but extracts from the "Meno" and the "Phaedo," selections from Aristotle's "Ethics," Theophrastus, and early Christian writers. No selections have been included from Homer, the tragedians, Herodotus, or Xenophon, because it is expected that large continuous portions of these authors will still continue to be read. One of the main difficulties in the use of the book is that the selections are not arranged in an order of progressive difficulty; it is due to the accident of the material that the first section is easier than the others. The book is already under discussion. A number of teachers in Frankfurt have resolved to meet at regular intervals to work steadily through the whole book. Criticism will not be wanting, but it appears there are many who share the Minister's hope.

Another consequence of the Emperor's notable edict is the announcement recently made that the Ministers of Justice and Public Instruction have agreed to regulate the admission to the study of law in accordance with the following principles:—(1) The most suitable institution for the preparation for the profession of law is the classical *Gymnasium*. (2) Besides the students who possess the leaving certificate of a German *Gymnasium*, students possessing the leaving certificate of a German *Realgymnasium* or a Prussian *Oberrealschule* may also be admitted to a study of law. (3) In the case of students of the last two categories, as well as those coming from the *Gymnasium* with a lower mark in Latin than "satisfactory," it is left to them on their own responsibility to acquire such preliminary knowledge of the language, history, and customs as is required for a thorough understanding of the sources of Roman law. (4) Measures will be taken in the arrangements made for legal study and for the first legal examinations that the students referred to in (3) will have to give proof of the preliminary knowledge there alluded to.

Apparently the special supplementary examination by means of which a candidate, after judicious examining and assisted by eminent examiners, succeeded in securing privileges which were not his has been abandoned. A knowledge of historical development will be the first thing demanded; and it may be that the struggle between the old and new will break out within the modern school.

It is possible that a further result of these measures may be the more equal distribution of the various types of secondary schools over the whole of the kingdom. The *Gymnasien* of the small country towns, in which the upper classes, frequented by undesirable refugees from other places, are far larger than the lower, have given rise to frequent complaints and the desire to see the establishment of schools more suited to the needs of the towns in which they are situated. The current number of the *Pädagogisches Archiv* contains a very interesting analysis of the present position: in the Western provinces 54.3 per cent. of the institutions are classical, 18.1 semi-classical, and 27.6 modern; the corresponding figures for the Central provinces are 53.9, 17.2, 28.9; and for the Eastern provinces 72.4, 14.3, 13.3—Posen is the extreme instance—in all there are twenty-one higher schools, only two of which are not fully classical. Moreover, in the East there is far less movement: in all these provinces there is but one *Reformschule*—at Danzig. In this connexion the following table has much significance, showing how the various branches of study are represented among the teachers and *Provinzialschulräte*:—

	Theology.	Classics.	History.	Modern Language.	Mathematics.	Science.	Total.
<i>Provinzialschulräte</i>	3	17	2	1	3	—	26
Directors (1) ...	29	242	28	31	29	5	364
Directors (2) ...	15	53	19	41	34	7	169
Professors ...	202	800	264	205	348	95	1914
<i>Oberlehrer</i> (1) ...	109	667	242	349	343	115	1825
<i>Oberlehrer</i> (2) ...	176	734	276	532	464	144	2325
	534	2513	831	1159	1221	366	

Directors (1) are in charge of schools with nine consecutive classes (*i.e.*, *Gymnasien*, *Realgymnasien*, *Oberrealschulen*); the others administer schools of six classes (*Progymnasien*, &c., *Realschulen*). The professors are the oldest third of the teaching staff, and the *Oberlehrer* (2) are those appointed since April 1, 1892, at which date the new curricula came into force. Grouping together the theology, classics, and history as "Humanities" — *i.e.*, *Gymnasium* studies — it is remarkable how

large a number of higher places their adherents hold. Among the directors of the second class 24 per cent. are modern language teachers, due to the large number of *Realschulen*. Noteworthy, too, is the increase of the modern languages teachers generally; they represent 10.7 per cent. of the professors, but 23 per cent. of the youngest category of teachers. This increase has chiefly been gained at the expense of the classical teachers. The numbers of science men would probably be found to contrast strongly with those for this country, if similar figures were available. The distribution of the teaching staff between the various provinces is not given, but it will be proportionate to that of the various types of institutions. If any considerable expenditure were likely to be entailed by the suggested new distribution, it would be unreasonable to expect a speedy reform. This year's educational budget shows clearly the financial depression: there is no diminution in the regular expenditure, and provision is made for the normal increase; but in the non-recurring expenditure there is a reduction of the vote by over £750,000, more than half of this being saved on the elementary schools.

FRANCE.

Two resolutions as to the teaching of natural science, lately put on record by important bodies of French schoolmasters, are worth preserving:—(1) Instruction in natural history (zoology and botany) ought to be practical, elementary, and descriptive; the primary object of it is to give to the pupil a habit of observation. In order that it may not be a mere exercise of memory, children must have shown to them real plants and animals so that they may learn to love them. (2) Geology in elementary schools should be considered mainly as an introduction to physical geography. A third resolution, less commendable, suggests the teaching of chemistry in the early stages by means of typical bodies such as sulphur, iron, sulphuric acid, &c., without regard to nomenclature.

Is uniformity of text-books desirable? And do the functions of the State include the making of grammars? These are two questions, evoking abundant debate, that M. Leygues, Minister of Public Instruction, has raised by his recent action. The Conseil Supérieur de l'Instruction Publique decided that the theoretic teaching of Latin and Greek grammar in lower forms should be confined to general paradigms and the indispensable rules, and that nothing in the way of grammars should be used in those forms except outlines containing the strictly necessary information; and it has been held that the principle applies with still greater force to modern languages. M. Leygues has accordingly appointed a committee to simplify and unify the teaching of grammar. He proposes to substitute clear and concise summaries for the voluminous and learned treatises that repel children as being unsuitable for their age and intelligence. At present the text-book is changed in obedience to the wishes of the teacher, and it sometimes happens that a boy is obliged, in the course of his studies, to assimilate the principles and language of three or four different Latin grammars—to his own detriment and to the indignation of his parents. The English reader will get some notion of what is contemplated by imagining the Parallel Grammars voided of half their contents and forced by a ukase on all secondary schools. In France there is a strong body of opinion against the proposal, which, in any case, cannot take effect until the beginning of the next school year. For ourselves, we have frequently protested against any attempt to cripple the freedom of the teacher in the choice of books. Caprice on his part can easily be checked by a tactful head master, whilst a sober judgment, based on experience, is respected. Moreover, uniformity of text-books means the destruction of that individuality which is one of the few valuable assets of the English school system.

Dishonesty in examinations is not common in France; but a few recent cases have called forth a new law on the subject. Fraud in any examination or competition having as its object admission to the public service or the acquisition of a State diploma now constitutes a misdemeanour. To reveal the matter of an examination beforehand, to use false certificates of birth, &c., or to substitute another for the real candidate renders the offender liable to imprisonment for not less than one month or more than three years, and to a fine of from one hundred to ten thousand francs. What is noteworthy about the measure is the severity (not improper) of the penalties. A diploma entitling the possessor to teach morality and civic duty would be dearly got at a risk of three years' imprisonment and a fine of four hundred pounds.

To teach morality—by what means is it possible to do so? The problem has been occupying the attention of the Société pour l'Etude des Questions d'Enseignement Secondaire. The new time-tables require more lessons in morality to be given. The teachers naturally ask themselves whether instruction of this kind in the past has proved beneficial. Their experience appears to be conclusive that the theoretic teaching of morality to young pupils (those from thirteen or fourteen years of age are particularly in view) is thankless for him who imparts it and unprofitable to those who receive it. M. Bourdel, who reported on the subject to the Société, argues thus:—Morality as taught in the *lycée* is not, and cannot be, a morality resting on authority. Conceived apart from all forms of religion, it can and ought to appeal solely to the reason

and the conscience. It is in the reason and the conscience, then, that we must look for the notions and general principles from which the precepts of morality are deduced. These precepts ought to have their basis supplied as soon as they are formulated. The teacher is thus compelled to deal with notions and general principles, deriving their force and authority from their very abstractness and generality. To give them, that they may be understood, immediate illustration from familiar sources is to degrade them; it is to bring moral truth into relations in which it may seem disputable or self-contradictory. Moral teaching for the young must be general and unintelligible, or particular and delusive. The teacher, if he will be comprehended, must put affirmation for proof, the moral formula for the moral lesson, and anecdote for ethical illustration. True moral teaching can only be addressed to minds already capable of abstraction, capable, too, of seeing in a variety of maxims and a diversity of moral notions, not the confusions and contradictions by which scepticism is fed, but the constant striving of humanity towards a moral truth growing larger and larger, more and more comprehensive, and more and more strictly unified.

This brings us, of course, to example as the most legitimate moral influence in the school. We are not, however, discussing the French view, but reproducing it. Let us content ourselves with giving the two chief propositions submitted for the approval of the Société. They were as follows:—(1) It is not expedient to maintain, still less to extend, in lower forms any separate speculative and critical teaching of morality; (2) Moral teaching ought to be closely connected with the general teaching, and to be given by the form master as occasion arises. Both were adopted unanimously.

In the education budget for the year 1902 a sum of 2,149,859 francs is set apart to promote the secondary education of girls, of which 1,250,500 francs will be devoted to grants to *lycées* in which the receipts are inadequate to maintain the institution; 238,000 francs payable to towns for the support of *collèges*; and 310,000 francs in supplement of the salaries of officials in *lycées* and *collèges*. In calling notice to the figures we do not imply that the expenditure is novel or magnificent; we wish merely to indicate that the higher education of women is acknowledged by the Republic to be one of its duties.

UNITED STATES.

We have followed the progress of child-study sympathetically; nor have we now any wish to be numbered with those who disparage it. Yet it is fair for us to report that such persons do exist, and that tokens of a reaction are visible on the educational horizon. Have we really learned anything from the study? it is asked. Are we the better for having tabulated what we knew or divined before? The head of the University of Illinois deems the curious questioning of nature to be indelicate rather than beneficial; as witness a recent utterance of his in a paper prepared for the Howard Teachers' Association:—"There are some healthful signs that the child-study diversion which has been carried to such extremes has well-nigh run its length. It commenced with the infant in embryo, and has come down to adolescence. It has gone into some things from which miscellaneous assemblages should be secure. It has assumed to make some investigations in mixed gatherings of youth, and has talked and has printed details in public which should be resented by parents and, if necessary, prohibited by law. It has dived in the abnormal and attracted the morbid. It has made much of things arranged by nature, things about which one can think much and be very wise and very miserable, or which he can let alone and get on comfortably enough."

He gives his own notion of the procedure suitable for the school thus:—"I would manage children without so much reference to their weaknesses or peculiarities, recognizing these where so marked as to make it necessary, but not accentuating them in the mind of the child or in the thought of the school. I would not allow a teacher to put a hand on a child in punishment. I would not coddle; I would direct, encouraging comradeship as children grow up to it and prove worthy of it. I would make plans for normal children and, assuming that the crowd is normal, expect them to adjust themselves to the plans. I would give special help to the exceptional cases, if a little unusual help would suffice, and go on without saying much about it."

The very old question—how far ought the school to consider the individual, and how far should it regard its material as a mass? can only be met with the very old, and brutal, answer:—We can deal with the child as an individual in so far as the parent or the State will pay for the treatment. The new education as it is offered at Bedales or Hampstead is for rich men's children. To return, however, to President Draper, we learn that his name has been on many lips unhappily for something more serious than his reactionary views on child-study. On April 13 he was thrown violently from his carriage, and so severely injured that the amputation of a leg has been necessary. But it is hoped that he will soon be restored to health and his academic duties. Cambridge men will recall, to say nothing of those still living, one who did all his work blind, and Oxford men the fine scholar who learned and taught when crippled with paralysis.

The Simmons College for Women, with President Lefavour at its head, and having an endowment of two million dollars at its back, will

begin its business in the October of the present year. It has offices in Boston, and a "dormitory" or boarding-house for sixty-six students. The requirements for admission are such as are equivalent to a four years' course in a well equipped high school, or to a three years' course if the subjects demanded are studied exclusively. How are women to benefit by Mr. Simmons's liberality? For the present, six courses of study have been arranged:—(1) Household economics; (2) a secretarial course; (3) a library course; (4) science preparatory to nursing; (5) science preparatory to teaching. The third of these courses is a particularly happy inspiration. Woman as librarian or as assistant in a library is woman in one of her legitimate spheres.

The writer of this note was never able to learn by means of lectures, unless he had studied the subject-matter beforehand; and a competent literary authority has classified the lecture among the sources of boredom. Moreover, the principle of *telling* a person what he does not know is pedagogically unsound, *learning* being thus defrauded of its privileges and delights. Nevertheless, education by lectures is the order of the day; for, it is urged, they stimulate inquiry by awakening interest. To our thinking, whether they do or do not depends on the lecturer; and this is the main difficulty that the University Extension movement has had to encounter—to get the quickening lecturer and not the informing. In America the lecture system has been more successful, we think, than in England; and in New York, where the thirteenth season of free lectures is now drawing to a close, the results have been striking. More than half a million people, says the *School Journal*, attend the courses given under the auspices of the New York Board of Education each year, the average at each lecture being over two hundred. This marked success is largely due to Dr. Leipziger, the supervisor. He has conclusively demonstrated that one lecture on some topic in natural history, geography, natural science, physics, or literature, properly presented, particularly if illustrated by means of a stereopticon, has a more potent and lasting educational value than a week of purely book study.

NEW ZEALAND.

At the Annual Session of the Senate of the University of New Zealand several changes were made in the statutes. Notably it was resolved that post-graduate study and research should be encouraged by the offer of certificates and gold medals. Sir Robert Stout had proposed that the history, science, and art of teaching should be included among the subjects of examination for the B.A. degree. Although his motion had been rejected, it had led to the appointment of a committee to consider the attitude proper for the University in respect to the professional training of teachers. The report of the Committee, which was adopted, recommended that a certificate of proficiency in education be granted to every graduate of the University who complies with the following requirements:—I. (a) That he spends one year in a normal school, and obtains a certificate from the head master of the school that satisfactory work has been done by him; or (b) obtains a certificate from an inspector of schools that he is entitled to be placed in at least the second grade. II. That he passes an examination in the following subjects:—(a) History and principles of education (one paper); (b) practice of education (one paper)—(1) method, (2) school management; (c) educational psychology (one paper).

UNIVERSITIES AND SCHOOLS.

LONDON.

There is at last interesting and important intelligence sufficient to warrant a fairly long letter. First and foremost, our University has lost its head. The Earl of Kimberley, K.G., P.C., D.C.L., Chancellor of the University, died, after an illness of several months, on Tuesday, April 8. An Extraordinary Meeting of the Senate was held on Wednesday, April 16, at which a resolution was passed expressive of the deep sense felt by the Senate of the loss which the University had suffered by the death of its Chancellor, who for forty-three years had been a member of the Senate, and throughout that long period not only showed a strong personal interest in the progress of the University, but from his great experience in public affairs, his wisdom in council, and his characteristic moderation and candour, contributed materially to its welfare, and was of the utmost service during the critical period of the reorganization of the University.

A resolution identical in terms was proposed by the Chairman at the meeting of Convocation on May 13, and carried unanimously. At the same meeting the new Chancellor was unanimously elected. This important appointment has been hitherto in the hands of the Crown, but when, by the late Act reorganizing the University, the power of veto on any change in its constitution was taken out of the hands of the registered graduates the free election of the Head of the University was, as a high compliment, vested in that body. It will, perhaps, not be indiscreet to say they have fully realized their responsibility, and that

several important and influentially attended conferences were held, at which, amongst others, the high claims of Lord Avebury, formerly Sir John Lubbock, the late Member for the University and the champion of the rights of the graduates, were urged. The general feeling, however, was that adherence to the tradition of the election of a peer of high Cabinet rank, in the person of Lord Rosebery, perhaps the most brilliant personality of the day, would best promote the interests of the University as a whole. He was accordingly nominated and returned unopposed. The election is for life.

The Right Hon. the Earl of Rosebery, K.G., K.T., P.C., officiated as Chancellor on the following day, May 14, when he presided at Presentation, and handed their diplomas, medals, and prizes to the successful candidates.

The ceremony, which was a highly successful and imposing function, was held, as usual, in the Great Hall of the University building at South Kensington. The hall, which was crowded, was seated for 1,800 persons, and the string band of the Scots Guards played a selection of music before and after the proceedings, which had been elaborately organized, and began with the procession of presentees, followed by the Chancellor's procession, composed of City dignitaries and high Government officials and officers of other Universities, all the guests of the Senate, followed by the officers of the University, the Senate, and, lastly, the Vice-Chancellor and the new Chancellor himself, preceded in due state by the "Esquire Bedell" with the splendid new mace, the munificent gift of Sir Henry Roscoe, the retiring Vice-Chancellor. The colours of the varied academical costumes worn by the presentees and graduates in the audience made a brilliant display. The Vice-Chancellor expressed the satisfaction on the part of the Senate and all present at the nomination and election of Lord Rosebery, the entire audience rising and cheering the Chancellor.

Lord Rosebery feelingly expressed his gratitude both for his election and his reception that day, and his deep sense of his unworthiness to fill the chair occupied by so many illustrious dead friends of his, his honoured predecessors. Lord Derby he spoke of as the most fair-minded man he had ever come across; Lord Herschell as, at the time of his death, the most valuable servant possessed by the Crown in the Empire. Of Lord Kimberley he said no man with so great abilities was so little self-seeking. There was no one worthier of being Chancellor, at least on the side of the classics, to the perusal of which he would always return in the long recesses of Parliament; he even, as an old man, attacked and enjoyed Dante. Lord Rosebery then gave way to the Principal (Dr. A. W. Rücker), who briskly read his report of the work of the University during the year. As this is practically the first occasion on which any substantive information has been vouchsafed by the Senate as to the result of its deliberations, this report is of considerable interest. The Principal said there was no sign of falling off in the entries for examinations, those for the June Matriculation being 10 per cent. larger than the previous maximum. The humbler class were well represented. The department for University Extension and inspection of schools had now been organized, and Dr. R. D. Roberts appointed Registrar (formerly Secretary to the London Society for Extension of University Teaching).

The Principal now touched on a burning question, which has been agitating the Senate and its Councils for many months, though no word thereof has appeared in the *Gazette*. A new scheme for the Matriculation Examination (which, by the way, was entirely revised in 1899) had been decided on, the first examination under the new regulations to be held on September 15 next, for those candidates taking up courses for the next session. On and after September, 1903, the old regulations will be obsolete. This change will be referred to later in this letter. Another crucial point was next spoken of—viz., general regulations for intermediate examinations for internal students had also been approved by the Senate, and arrangements had been made for the holding of special intermediate examinations in University College and in the City and Guilds Institute. (This is by virtue of Statute 119, which empowers the Senate to hold intermediate examinations for the students of any "school" of the University jointly with the governing body of such school. These examinations, therefore, will doubtless be partly conducted by the teachers of the students, and partly based on their teaching. The effect of this evidently will be that students will pass almost as a matter of course.)

Regulations had also been passed for the admission of post-graduate students from other Universities to study for the Doctorate in London, and a number of young students were about to be placed on the books of the University. Thirty-five graduates of other Universities (eight from abroad) had studied, together with fourteen graduates of the University of London, in the London School of Economics during the present session. The next change announced is one that members of Convocation engaged in teaching have long demanded. It is that the Matriculation examiners shall be other than those for the higher examinations. This change will tend to allow larger numbers to pass, and, taken along with the general sweeping changes announced, will probably make the terrors of "Matric." as a stiff examination largely a thing of the past. The Principal next stated that a general scheme had been adopted for selecting teachers for the internal side to be paid and appointed by the University. Inquiry into the merits of candidates is

first to be made by a board, consisting of the Vice-Chancellor and six others, three being experts and not teachers of the University, the other three being chosen by the Senate at pleasure. The actual appointment of teachers had also occupied the Senate. With regard to the gift of £10,000 a year from the Technical Education Board of the London County Council, first, two Chairs of Chemistry were to be established at University College: one for general chemistry, filled by Prof. Ramsay; the other for organic chemistry.

It was hoped that this would be the beginning of a great chemical department worthy of London. The teaching of German was also organized, and instruction in that language was to be given by a group of teachers both in the colleges and in the polytechnics. Then a Professorship of Pedagogy was to be established in connexion with the new training college founded by the London County Council, on the governing body of which the University was largely represented. In future the University would appoint and pay the professors in the London School of Economic Science, while grants of £1,425 and £1,000 a year respectively were to be made to the City and Guilds Institute and to King's College in aid of their engineering departments. The negotiations with the governing bodies of the above institutions and the approval by the Senate of schemes for expenditure involved by the above arrangements had been satisfactorily carried out and accorded, and it was expected that the teachers would be nominated before the Long Vacation and the whole scheme be in full working order at the beginning of the next academic year.

In respect of the offer by the Drapers' Company to give £30,000 in aid of the incorporation of University College in the University, the main outlines of a scheme had been agreed to, provided that an initial sum of £110,000 could be raised. (This amount, it may be said, was promised at the meeting at the Mansion House on May 9.) But, in addition, the University had made a start with teaching on its own account. The leading physiologists of London were to give courses of lectures on that subject for advanced and post-graduate students; and Mr. Walter Palmer had given £2,000 and the University £400 to the scheme, and the latter had placed a suite of rooms at the disposal of the teachers as laboratories and lecture-rooms. Several students were already working in the laboratories, and more than sixty had entered for the first course of ten lectures. Two courses of ten lectures are being given during the summer term: on "Signs of Life," by A. D. Waller, M.D., F.R.S., Tuesdays at five, beginning May 13; and on "Respiratory Exchange," by Leonard E. Hill, M.B., F.R.S., Wednesdays at five, beginning May 14; admission by ticket, to be obtained on application to the Academic Registrar. It was hoped shortly to issue a scheme concerning the whole question of courses of lectures at polytechnics.

A body of very distinguished lawyers had been engaged in the discussion of regulations for the Faculty of Law. Again, the University's part in the organization of preliminary medical studies had been considered, and many other questions, such as the detailed syllabuses of the examinations and regulations for the various courses of study, were in a forward state. But, said the Principal, the University was not concerned with the organization of education only. One of its main objects should be the promotion of knowledge, and much was being done by the London teachers in that direction. He had asked the various recognized teachers of the University for a short statement as to the publications of themselves, their assistants, and students during the past twelve months. The Principal here read extracts from these statements, and concluded by emphasizing the need of organization to make such work more fruitful and the need of funds to supply the material for the work. It will be seen that the above account (with a few comments) gives a detailed report of a year's work of the utmost interest and importance.

BEDFORD COLLEGE.

At the presentation for degrees at the University of London on Wednesday, May 14, twenty-nine students of Bedford College for Women received degrees. A reception was afterwards held at the College by the Council and Principal, which was very largely attended.

On account of the dates fixed for the Coronation the term will end on Friday, June 20, but the libraries and laboratories will remain open for the use of students until Wednesday, July 23, except on June 25, 26, 27, and 28.

A course on "Bacteriology" is being given by Dr. A. H. Paine, which is taking a very interesting form, most of the instruction being in the nature of practical work in the laboratory.

Two scholarships, one for arts (annual value £31. 10s., tenable for three years) and one for science (annual value £48, tenable for three years), will be awarded on the result of an examination held on June 19 and 20. Forms of entry must be forwarded to the Principal on or before June 7.

OXFORD.

In the hurry of the opening of term I omitted last month to notice two losses by death of distinguished Oxford men which occurred in the

vacation. The most notable was, of course, Lord Kimberley, of whose long and important public service it is needless to speak. But it may not be known to all that (as Lord Wodehouse) he was a First Class in Lit. Hum. (from Christ Church) in 1847. The death was also announced (on March 29 in London) of Sir S. G. A. Shippard, K.C.M.G. (Hertford College), formerly Judge of the Supreme Court, Cape Colony, and Administrator of British Bechuanaland.

As regards the reform of Responsions, and in particular the anticipated proposal of substituting modern language equivalents for the Greek at present required, though there is a general belief that some such scheme will shortly be formulated, there is at present no definite knowledge of the shape it will assume. But the supporters of the existing system are already bestirring themselves. Prof. Case has written an article in the *National Review*, containing (among other things) a protest against the expected attack on compulsory Greek. In the *Oxford Magazine* (for May 7) appears a letter from Mr. C. R. L. Fletcher in support of Mr. Case, denouncing the scheme as "lowering the intellectual standard of the University in order to meet the conditions of the Colonial and American candidates for Mr. Rhodes's scholarships." Two things are quite certain: first, that no scheme will be proposed which lowers the standard of Responsions; and, secondly, that the movement for reform started before Mr. Rhodes's death, and has nothing whatever to do with his bequests. But it may be well to remind those to whom such arguments are addressed that the Greek required at present in Responsions is intellectually contemptible (as there is no proof the candidate can either read the language or write it) and educationally worthless or worse, while it is a vexatious waste of time for candidates from modern schools and modern sides who wish to study at the Universities and who are fully competent to do so with advantage.

A most important memorial has been sent to the Hebdomadal Council in favour of giving greater encouragement to the systematic study of economics and cognate subjects. The signatories (eighty-nine in number, including eleven professors, and many others whose opinions are of equal weight in regard to University studies) draw attention to the importance of economics both for business men and for administrative or other posts in the public service, as well as for ordinary citizens. They do not suggest either making economics into a new Honour School as an avenue to the ordinary degree, or increasing the importance of these subjects in the Honour Schools, where they already find a place. But they suggest that a new school should be established in these subjects, to be taken (as post-graduate study) by those who have already earned either the ordinary or the research degrees. This carefully considered and influentially supported proposal is certain to receive due attention from the Council; and it is much to be hoped that steps may be promptly taken to meet what is a very real demand, in regard to which Oxford has fallen behind other Universities.

Beyond these two questions, neither of which has reached the stage of statute, the only legislation (other than formal or minor changes of no general interest) is a statute to enable students from certain Colonial and Indian Universities, under specified conditions, to take the Oxford B.A. after two (instead of three) years' residence. Nothing in the German Universities is more sensible and convenient than the arrangements whereby the residence and study at one University can be counted for degree at another. We are far enough in England from anything like this; but the principle of the affiliated colleges statutes, and of the present Indian and Colonial statute, points in the same direction, and is entirely deserving of approval.

We do not often refer to college internal arrangements, which are held to be not fit subjects for public discussion; but the election of Mr. Ball to a fellowship at St. John's College calls for a word of comment. It is the removal, after a deplorably long interval, of what has been (in the view of all outsiders in Oxford) a state of things not creditable, and not to be found in any other college. No one would deny that Mr. Ball is the most important of the tutors at St. John's, and has been so for years: that at any other college he should have been left so long without a fellowship is, as every one knows, inconceivable. The mischief is repaired. No doubt efforts have been made before to repair it, but there has been some unseen obstacle.

The following special lectures are announced in the *Gazette*—several of them already delivered:—Prof. Hubert Parry on "Development of Music Style"; Prof. Wooldridge on "Various Italian Artists"; Prof. Bradley on "Shakespeare's Theatre"; Prof. Sanday on "Sacred Sites"; Prof. Sayce on "The Hittites in Cuneiform Inscriptions"; Bishop Baynes (late of Natal) on "The Present and Past Wars of Natal"; the Boyle Lecture, by Prof. Allbutt, F.R.S. (Camb.), on "Rise of Experimental Method in Oxford"; the Romanes Lecture (on June 7) by the Right Hon. J. Bryce, D.C.L., M.P., on "The Relations of Advanced and Backward Races of Mankind."

It is announced that four commissions in the Royal Artillery will be offered in July for competition by University candidates.

The regulations are printed in the *Gazette* for the Oxford Biological Scholarship at Naples—the scholar to be appointed by the Delegates of the Common University Fund on the recommendation of certain science professors. The scholarship is worth £150, and the scholar is to spend twenty-six weeks at Naples, and report on his work.

The following appointments are announced:—Prof. Love, D.Sc. (Queen's), to represent the University at the centenary of N. H. Abel at Christiania; to be Chairman of the Teachers' Registration Council, Prof. H. L. Withers, Owens College (Balliol); Mr. E. C. Marchant, M.A. (Trinity), to be official Fellow at Lincoln; Mr. Graham Balfour (Worcester) to be Director of Technical Instruction to Staffordshire County Council; Dr. Brereton Baker, M.A., late Scholar of Balliol, to be F.R.S.; Rev. W. H. Hutton, B.D. (St. John's), to be Bampton Lecturer; Rev. A. J. Carlyle, M.A. (University), to be Pro-Professor; H. E. Berthson, Hon. M.A., reappointed Taylorian Teacher in French.

Degrees:—M.A. by Decree of Convocation, H. N. Dickson (New College), Lecturer in Physical Geography; and A. J. Herbertson (Ph.D. Freiburg), Lecturer in Regional Geography.

University Prizes:—Ellerton Essay, W. R. Williamson, B.A. (Trinity); Stanhope Essay, A. E. Zimmermann, Scholar of New College; Gladstone Prize, P. M. Roxby, Scholar of Christ Church; Honourably mentioned, H. Sacher (New College), C. H. Noad (Corpus Christi College), D. Johnston (Trinity), K. H. Vickers (Exeter).

Chancellor's Prizes:—Latin Essay, no candidate; Latin Verse, H. L. Henderson, Scholar of Christ Church; English Essay, P. G. C. Campbell (Balliol); Newdigate (English Poem), E. A. Wodehouse, Scholar of Corpus Christi College.

Gaisford Prizes:—Greek Verse, E. W. M. Grigg (New College); Greek Prose, J. M. L. Watson (Oriel).

Somerville College Scholarships and Exhibitions:—Clothworkers' Scholarship (£50 for three years), T. De Sélincourt, for French (Streatham Hill and Notting Hill High Schools); Edith Coombs Scholarship (£50 for three years) in French, E. C. Jones (County School, Barry, Glamorganshire); Gilchrist Scholarship (£50 for three years), F. Lorimer, in Classics (Dundee and Notting Hill High Schools).

Exhibitions:—(£30 for three years) A. Sergeant (Hulme Grammar School, Oldham) for History; (£25 for three years) H. Jackson (Church High School, Derby) for Mathematics; (£20 for three years) Dora Hilgame (Dulwich High School) for History.

WALES.

The chief feature of Welsh education this month has been the installation at Bangor and Carnarvon of his Royal Highness the Prince of Wales as Chancellor of the University. Carnarvon was chosen by the unanimous vote of the members of the University Court as the place for this national ceremony. A strong claim had been put in for this honour by Cardiff and Swansea, among other places, but they both withdrew in favour of Carnarvon in order that the vote of the Court might be unanimous. It was generally felt that no more suitable place could be selected than the historic town with its historic castle—"the very home of the old spirit of national resistance of English sway and the centre of the old longing for national independence." "The town stands on the edge of a district famous for its old British encampments—the scenes of many a bloody fray between Briton and Goidel, Roman and Celt, Welsh and Dane and Norman, and in the long period of Welsh independence, from the Norman Conquest in 1066 to the fall of Llywelyn ein Llyw Olaf in 1282, Carnarvon has always been the home of the Welsh soldier and Welsh bard—the two agents who fanned the flame of resistance to Norman over-lordship." The ceremony of the installation in the pavilion at Carnarvon, which was witnessed by the ten thousand people who represented the aristocracy and the commonality of Wales, was in every regard an eminent success. Her Royal Highness the Princess of Wales was admitted to the honorary degree of Doctor in Music of the University, and a pretty touch to the proceedings was given when his Royal Highness the Chancellor took the Princess by the right hand and read the Latin form of admission. Principal Roberts then introduced one by one the distinguished ladies and gentlemen who were to receive honorary degrees. They were: The Chancellor of the University of St. Andrews (Lord Balfour of Burleigh), to receive the degree of Doctor in Legibus; the Chancellor of the University of Dublin (the Earl of Rosse), to receive the degree of Doctor in Legibus; Dr. Edward Caird, Master of Balliol College, Oxford, to receive the degree of Doctor in Litteris; Sir Richard Claverhouse Jebb, M.P., Professor of Greek in the University of Cambridge, to receive the degree of Doctor in Litteris; Dr. John Rhys, Principal of Jesus College and Professor of Celtic in the University of Oxford, to receive the degree of Doctor in Litteris; the Right Hon. Sir Rowland Vaughan Williams, K.B., P.C., Lord Justice of the Court of Appeal, to receive the degree of Doctor in Legibus. All these were greeted with applause as they came forward and were admitted by the Chancellor. The luncheon was given at Bangor, the site of the University College of North Wales. Lord Kenyon, the President of the North Wales College, presided, with his Royal Highness the Chancellor seated on his left, and her Royal Highness the Princess of Wales on his right. Earl Spencer proposed the health of "His Royal Highness the Chancellor." His Royal Highness, in responding, made a deep impression upon the guests. It was evident that the ceremonies of the day were to him not mere ceremonials, but were undertaken with a serious desire

to assist the object to which he so pointedly referred—the progress of Welsh education as a national movement. The ceremonies recalled the former occasion when the King, as Prince of Wales, was installed in the highest office of the University, and His Majesty has shown his appreciation of the ties which bind him to his Welsh *alma mater* by creating a new office and becoming her Protector.

Principal Griffiths of the University College, Cardiff, has made a liberal offer to the college of the valuable apparatus made and collected by him for the experiments made by him in heat, the value of which were recognized by men of science when he was elected a Fellow of the Royal Society. The authorities of the National Physical Laboratory have made an application for this apparatus, and, if the college at Cardiff cannot undertake to erect the research laboratory necessary for the use of this apparatus, Principal Griffiths will hand it over to the National Physical Laboratory. The wish of Principal Griffiths is that a research laboratory in physics should be founded in connexion with the University College in Cardiff, when to the apparatus which he now generously offers should be added the Lorenz apparatus which was erected by the late Principal Viriamu Jones, and with which he made his valuable experiments in determining the resistance of the ohm, and which has been presented by his widow to the college; that this laboratory should be called "The Viriamu Jones Research Laboratory" in memory of the late Principal, and that it should be open to all members of the University of Wales who may show themselves fit for research work, preference being given to those who have been students of the University College at Cardiff.

During the month of May an important meeting of science teachers in the Welsh county schools has been held in Festiniog.

SCOTLAND.

The number of Carnegie students for the present summer session and the amount of the fees paid on their behalf have now been reported to the executive committee of the Trust. A total sum of £12,019. 17s. has been paid for 1,536 students. The amount expended in the paying of fees for the whole academic year is thus £34,961. 13s. 6d., and accordingly there remains a balance of over £15,000 to be transferred from the fee-paying to the equipment side of the account. The number of Carnegie students who are matriculating for the first time this summer is 242, which cannot be considered large when it is remembered that most medical students begin their course in the summer session. On the other hand, of course, there is to be considered the fact that many medical students take an Arts course before beginning their medical studies, and accordingly no definite conclusion can be drawn from the figures as to the effect of the benefaction in increasing the number of students. It may, however, be of interest to note, for each University, the proportion and the number of Carnegie students this summer to the number last winter, and the corresponding proportions between the amounts of fees paid. These proportions are:—In Edinburgh, students about 72 per cent., fees about 58 per cent.; in Glasgow, students about 56 per cent., fees about 44 per cent.; in Aberdeen, students about 76 per cent., fees about 67 per cent.; in St. Andrews, students about 55 per cent., fees 38 per cent.

A small Committee of the Trust, consisting of the Earl of Elgin, Sir Henry Roscoe, and the Secretary, has been appointed to visit the various Universities for the purpose of getting further information regarding the statements of their needs which the Universities recently sent in. The report of this Committee will no doubt be useful to the Trust; but there is a fear that the time which the Committee is able to give to its inquiry may be insufficient for obtaining all the evidence which the University teachers may desire to give. Unless the Committee has ample time at its disposal, injustice to certain subjects is inevitable.

The movement for increasing the funds of University College, Dundee, has been remarkably successful. Subscriptions amounting to more than £24,000 have been received, and the debt on the college is thus extinguished, its share of the cost of the new medical buildings is provided for, and nearly £6,000 is available for the general extension fund, which it is hoped will now receive considerable additions.

The Scottish Education Department has issued an important circular, in which it indicates the general lines on which it proposes to institute a Commercial Certificate, and asks for the opinions of school authorities regarding its proposals. The circular points out that "the Merit Certificate and the Intermediate and Leaving Certificates recently instituted represent three well marked stages of general education," each of which might be taken as an introduction to a corresponding form of specialized instruction. So far as the Merit and Intermediate Certificates are concerned, the specialized instruction will usually be given in continuation classes or special institutions; but some amount of specialized instruction may also be given in day schools, and it is the work of the day schools which the department has in view in proposing to institute a Commercial Certificate. The question of specialized instruction for scholars who have taken merely the Merit Certificate is being considered by the Department; but, as regards this, no proposal is at present made. The Commercial Certificate is to be given after a course of special

instruction, which is to be begun after the Intermediate Certificate has been taken, and which is to extend over at least one year. The candidates must be not less than sixteen years of age on October 1 following the examination, and they must have been trained in a school which has "a regularly organized commercial department, the staff, appliances, and curriculum of which have been approved as satisfactory." The principal subject of instruction is to be a modern language other than English; but instruction is also to be given in commercial arithmetic, book-keeping, shorthand, and commercial history and geography. Candidates must pass in the higher grade in the Leaving Certificate Examination in one modern language, either as one of the subjects taken for the Intermediate Examination or subsequently, and they must also pass in the special commercial paper in that language. "Success in any grade of an additional language would be recorded on the certificate." In the approved curriculum leading to the certificate, specialized instruction in English will of course be included. Science and drawing ought to be included in the course of general education preparatory to the Intermediate Certificate. Up to the stage of the Intermediate Certificate "the only subjects admitted to the curriculum should be those which have a disciplinary value apart from the particular occupation which the pupil may intend to follow; on the other hand, the subsequent concentration upon distinctly commercial subjects may be expected to achieve results which could not be looked for were these subjects taken at infrequent intervals in a general curriculum extending over a longer period." Finally, the circular suggests that the Department may, at some future date, arrange for "a parallel course (with corresponding certificate) for the benefit of those pupils who on leaving school will enter a technical college, or will be engaged in technical or industrial occupations." With the Leaving Certificate as the point of transition from the secondary school to the University, the educational arrangements for primary and secondary schools would thus form a complete and definite system.

The Department has thus revised the opinion it expressed some time ago that commercial education is not to be promoted by the institution of new examinations. There will, no doubt, be difference of opinion regarding the details of the new scheme; but, considered generally, it has the great advantage of involving a much more complete organization of education, while, at the same time, it emphasizes the value of a good general course as the basis of all specialized instruction. An addition to the number of examinations is, no doubt, an evil, but it hardly seems possible to avoid it, and it may be hoped that the evil will be minimized by the obvious advantages of the new proposals. The success of the scheme will depend greatly on the extent to which the commercial community make use of the new certificates. If pupils and their parents find that the Commercial Certificate is a gain to them, a considerable step will have been taken towards solving the problem of modern languages in the Universities. For a greater demand will arise for teachers of these languages, and the Universities must provide the supply. But, if business men neglect the Commercial Certificate, it will become a dead letter.

The Glasgow and West of Scotland Joint Committee on Secondary (including technical) Education have sent a letter to Sir Henry Craik, in which they urge a change in the regulations for the new Leaving Certificate. They point out that the present arrangement of subjects provides for a classical group (English, mathematics, Latin, and another subject), and also for a science group (English, mathematics, science, and another subject), but that no corresponding provision is made for a modern language group, and they suggest that the grouping should be so modified as to permit of a "typical modern group, e.g., English, mathematics, French, and another subject." "Candidates for the Leaving Certificate may, indeed, as heretofore, choose French and German as two of their subjects, but in that case they must, according to the new provision, add Latin or science, thus charging themselves with a group which, on the present standards of examination, will entail a certainty of overpressure." The only alternative will be to drop a modern language, and in that case German will suffer.

IRELAND.

The examinations for Fellowship and scholarships in Trinity College, Dublin, have been proceeding during the past month. The most prominent candidates for Fellowship are Mr. Frazer (Mathematics) and Mr. Golligher (Classics). The other candidates are Mr. Alton, and two new competitors, Mr. Longworth and Mr. Webb.

The Board of Trinity College, Dublin, have taken counsel's opinion as to the legality of admitting women to Dublin University. The opinion of counsel obtained has decided that no legislation is necessary, that a King's letter would be sufficient to make the admission of women to degrees and teaching valid. It is not known if any further steps in the matter have been taken.

The Royal Commission on University Education in Ireland sat in London for the hearing of evidence during the week ending May 24. A number of prominent Irish people were examined. The Commission will hold their final sitting during the month of June in Dublin. It is not expected that the report will do more than recommend the reorganization of the Royal University and the establishment of teaching

colleges under it, as the exclusion of Trinity College from the terms of reference places any scheme involving Dublin University outside the scope of the recommendations of the Commission.

The Irish Association of Women-Graduates and Candidate-Graduates has now been formed, starting with a membership of over two hundred. The constitution of the Association includes a president, vice-president, and committee of twelve, with representative members for four Irish provincial districts, resident in those districts. Important matters will be submitted to the representative members (whose number is proportional to the number of members in the district), and their votes upon them will be counted with those of the committee. The objects of the Association are to secure the best advantages to women-students in Irish Universities, to bring University women into co-operation in all matters pertaining to their interests, and to maintain a register of those desirous of employment. The Association hope to lay their views before the Royal Commission during their June sittings.

The Rules and Programme of the Board of Intermediate Education for 1903 have just been published. They contain considerable modifications of those for 1902, partly to meet the serious criticisms the latter met with, and partly to remove some of the complications which rendered the first reformed scheme in some ways unworkable. The four examinations are still retained, but greater specialization has been introduced into the three higher grades. There are now four distinct courses, one of which each student has to choose—the classical course (English composition and literature, Latin, Greek, one mathematical subject, and two other optional subjects); the modern literary course (English composition and literature, two modern languages, one mathematical subject, two other subjects, one of which must be Latin or experimental science, and drawing); the mathematical course (English composition and literature), three mathematical subjects, and two other subjects, of which one must be Latin, and experimental science and drawing); and the experimental science course (English composition and literature, experimental science and drawing, one mathematical subject, French or German, and two other subjects).

Six subjects, with a percentage of 40, are still necessary for a pass, but in mathematics 35 per cent. will be sufficient for honours, and 20 per cent. for a pass on an honours paper. The number of set books has been much reduced in English literature, and the history of English literature entirely removed—the latter a serious omission. A new separate subject, history and political geography, has been added, and in it general European history has been introduced—a great improvement. It is, however, a drawback that only political geography connected with the period of history is given, general and physical geography being omitted in all but the Preparatory Grade, and also that Irish history (which every Irish child should know thoroughly) has been excluded from the two higher grades and from the Irish language courses. The courses are on the whole easier than those of last year, and in history, geography, and English literature are in fact too short. Irish is now made an honours subject. Music does not appear in the Programme.

The changes in the distribution of the school are the most important. The "Intermediate School Roll," with the payment of the grant on every pupil on the roll, whether he be examined or not, has vanished, probably because the scheme was found impracticable. By the new rules there will be a "normal school grant"—a capitation fee for each pupil who shall have passed the examination, which fee may be increased in the case of honour students. Besides this, there is the "bonus school grant," an increase of 10 or 20 per cent. on the "normal school grant," when the report of the inspectors is satisfactory, or highly so.

It cannot be said that these regulations are satisfactory. Except that the capitation fee is not calculated as so many shillings per hundred marks won by the pupils, we have the old evil system of payment by results back again. The bonus grant will not ensure the merits that good inspection should encourage. One or two honours pupils would earn the additional 10 or 20 per cent. more easily. Had the Board also laid down that the "normal school grant" would be wholly or partially withheld if the school did not satisfy the inspectors, it would be more efficacious. The provision that the exhibition won by a pupil may be applied to paying for his preparation during the previous year is likely to lead to the worst of the old evils, the speculative working up of pupils in the hope of future profit on them. It will always be impossible to award endowment on such a basis—the results of examinations—without producing evils and a defective kind of education. It is, however, possible that inspection may be made gradually of more importance, as it becomes possible to establish it on a good system. Six subjects, still required for a pass, is too large a number, and will continue to produce overwork, even if the examinations be made easy.

The Board have refused the request of the various educational associations that they should appoint a Consultative Committee composed of practical teachers, to whom they might submit important changes and their rules before publication for suggestion and criticism, and refused what seems to be an excellent proposal in rather a discourteous fashion.

During the month of May the Alexandra College Guild, composed of

past and present students of the college, held their annual conference, at which reports of the social and philanthropic work of the Guild were submitted, and very interesting papers were read by Miss Paget, Mrs. Tennant, Lady Coote, and Miss Ford.

SCHOOLS.

HIGHBURY AND ISLINGTON HIGH SCHOOL.—The annual prize-giving took place on May 2. Muriel Henderson (last year's head girl) obtained an entrance scholarship at Westfield College and the Reed Scholarship at Bedford College. She accepted the one for Westfield, and is now studying there. May Lewis gained full Certificate Universities Joint Board; five others first part of Certificate. London University Matriculation: four in First Division. Royal Drawing Society's full Honour Certificates, three. Other distinctions include two Diplomas, Royal Horticultural College, Swanley; Queen's Gold Medal for Design, Royal Female School of Art; Art Master's Certificate, South Kensington; Intermediate B.A., Andrews Scholarship for Classics, University College, London; B.A. London (three, one with Teacher's Diploma); B.Sc., London; Oxford Honours School in History, Second Class; Oxford Honours School in English, First Class.

HIGHGATE, THE GROVE SCHOOL.—Miss B. E. Gwyer, who went from this school to Lady Margaret Hall, Oxford, with a classical scholarship, in October, 1900, has just been placed in the Second Class in Classical Moderations.

MARY DATCHELOR GIRLS' SCHOOL.—The completion of a large gymnasium for the use of the school and of two Badminton courts in addition to the already existing arrangements for tennis, have given a stimulus to the interest of the girls in this school both in calisthenics and in games. A very good drill display was given in the large hall of the school on the last day of the Easter Term, and a similar performance took place in connexion with the annual reunion of Old Datchelors held on May 9. A studio has also been recently added to the school buildings. Like the gymnasium, it is the gift of the Clothworkers' Company, and is excellently equipped and fitted. Its influence is already seen in the increased interest of the girls in their art work. Additional help is being afforded to the practical study of botany by the laying out of a "school garden," which is intended to afford the girls facilities for the study of the development of plant life. The physical laboratory recently added to that for chemistry already possessed by the school is in almost constant use, and the interest of the girls in their science work is very marked. The school is to be examined, as usual, by the Cambridge Syndicate in June and July, and is also to be inspected in July by the Board of Education, in connexion with which the whole of the work in experimental science, mathematics, and drawing is being carried on.

MARY DATCHELOR TRAINING COLLEGE.—This college, which is one of the centres for the training of teachers in secondary schools recognized by the Board of Education, and included in the list of such places of training given in the draft Order in Council recently issued for the formation of a Register of Teachers, will be examined in July at the close of the fourteenth year of its existence, when the senior division students will present themselves for the Cambridge Teacher's Certificate. The most distinctive feature of the college this year is the size of its junior or preparatory division. The division consists of two sections, one working for the London B.A. degree, the other for the Cambridge Higher Local Honours Certificate. The work of the Cambridge section includes classics and mathematics, French, English language and literature, and history, ancient and modern. In September a class for logic will also be formed. All sections of the college—senior, kindergarten, and preparatory—meet weekly for criticism-lessons, and also for special lectures given by visiting lecturers. Since Christmas lectures have been given on Froebel's methods, and on the work of Pestalozzi, by Mrs. Turner (Miss A. J. Ward); on the teaching of Science, by Dr. Kimmins; on History and Literature, by Mr. H. E. Maldon, M.A.; and on Philosophy by Prof. Knight. Two former students of the Mary Datchelor College were presented for the B.A. degree at the London University on May 14; another has just been appointed head mistress of one of the provincial schools of the Transvaal, and sails this month.

PORTSMOUTH HIGH SCHOOL.—All the five candidates sent in for the Senior Centre Examination of the Associated Board of the Royal Academy of Music and the Royal College of Music were successful, one obtaining honours (piano). One Junior candidate also passed. Miss May Brice, from the Maria Grey Training College, has joined the staff this term.

ROSSALL SCHOOL.—Sir F. D. Lugard has been awarded one of the Royal Geographical Society's medals for this year. P. C. Phillips played hockey for Wales v. England. Term ended on April 3; we returned on the 29th. We were far more fortunate than most schools this spring in our health bill: work was little hindered by sickness. The sports were of unusual interest this year; larger fields entered than ordinarily, but no records were broken. Renton was sports champion, and Wilson's gained the greatest number of points and the challenge cup. A Moor Challenge Cup has been presented by five O.R.'s

JULIUS CÆSAR.

EDITED BY

M. J. C. MEIKLEJOHN, B.A.

This book has been specially published for students preparing for the College of Preceptors and other Examinations.

A Short Geography, with the Commercial Highways of the World. Nineteenth Edition. Crown 8vo, 196 pp. 1s. 0d.
"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.
"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. 6d.

Asia: its Geography, Resources, Commerce, &c. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 92 pp. (*Ready shortly*.) 6d.

Africa: its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. 4d.

The British Colonies and Dependencies: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Third Edition. Crown 8vo, 96 pp. 6d.

A Short History of England and Great Britain. B.C. 55 to A.D. 1890. Fourteenth Edition. Crown 8vo 1s. 0d.
"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

Outlines of the History of England and Great Britain to A.D. 1890. Fifth Edition. Crown 8vo, 84 pp. 6d.

A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Twelfth Edition. 1s. 0d.

A Short History of the English Language. Crown 8vo, 76 pp. 1s. 0d.

An Outline of the History of English Literature. Crown 8vo, 110 pp. 1s. 6d.

A New Spelling Book. With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. 1s. 0d.
"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

The Book of the French Verb. By J. DE CUSANCE. 107 pp. + viii. 1s. 0d.
This little book contains perfectly clear and open Tables of the Irregular French Verbs, each displayed across two pages. The chief Idioms connected with the Verbs are also given.

A First French Book. By J. DE CUSANCE. With a Preface by Professor MEIKLEJOHN. Crown 8vo, 120 pp. 1s. 0d.
"It is an uncommonly good French grammar, full of valuable material, and will make a thoroughly practical text-book."—*The Educational News*.

A Short Arithmetic. By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. 1s. 0d.
With Answers, 1s. 6d.
"For boys and girls competing for the various County Council Scholarships nothing better could be desired."—*The Teachers' Aid*.
"It is one of the best Short Arithmetics ever produced. A great feature is the large number of examples culled from the various public examinations."—*The Teachers' Monthly*.

LONDON: A. M. HOLDEN, 11 PATERNOSTER SQUARE, E.C.

FROM WILLIAMS & NORGATE'S LIST OF SCHOOL BOOKS.

EUGÈNE'S THE STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE. With an Historical Sketch of the Formation of French. For the Use of Public Schools. With Exercises. By EUGÈNE FASNACHT, late French Master, Westminster School. Twenty-second Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or separately, Grammar, 3s.; Exercises, 2s. 6d.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

EUGÈNE'S FRENCH METHOD. Elementary French Lessons. Easy Rules and Exercises preparatory to "The Student's Comparative French Grammar." By the same Author. Sixteenth Edition. Crown 8vo, cloth, 1s. 6d.
"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

EUGÈNE'S COMPARATIVE FRENCH-ENGLISH STUDIES. Grammatical and Idiomatic. Being an entirely Rewritten Edition of the "French Exercises for Middle and Upper Forms." Fourteenth Edition. Cloth, 2s. 6d.

BOIELLE (JAMES).—FRENCH COMPOSITION THROUGH LORD MACAULAY'S ENGLISH. Edited, with Notes, Hints, and Introduction, by JAMES BOIELLE, B.A. Univ. Gall., Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth, 3s. per volume.
Vol. I. *Frederick the Great*. Vol. II. *Warren Hastings*. Vol. III. *Lord Olive*.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

DELBOS.—THE STUDENT'S GRADUATED FRENCH READER. For the Use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LEON DELBOS, M.A., late of King's College, London. Twelfth Edition. 166 pages. Crown 8vo, cloth, 2s.
II.—Second Year: Historical Pieces and Tales. Sixth Edition. 180 pages. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

DELBOS.—LITTLE EUGÈNE'S FRENCH READER. For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Second Edition. Crown 8vo, cloth, 1s. 6d.

WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE. With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Rewritten. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German Grammar yet published in England."—*Journal of Education*.

WEISSE'S SHORT GUIDE TO GERMAN IDIOMS. Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

A SHORT SKETCH OF GERMAN LITERATURE. Prepared for the Scottish Leaving-Certificate Examinations. By VIVIAN PHILLIPPS, B.A., Fettes College. Thoroughly Revised. Second Edition, Pott 8vo, 1s.

ARMY SERIES.

EDITED BY J. T. W. PEROWNE, M.A.

LE COUP DE PISTOLET, &c. By PROSPER MÉRIMÉE. 2s. 6d.

"The first two volumes are an excellent choice, and we advise any one, whether candidate or lay, to purchase the volume of MÉRIMÉE."—*Journal of Education*.

VAILLANTE. By JACQUES VINCENT. 2s. 6d.

"The books are well got up, and in 'Vaillante' an excellent choice has been made."—*Guardian*.

AUF VERLORNEM POSTEN, AND NAZZARENA DANTI.

By JOHANNES V. DEWALL. 3s.

"The two stories by J. v. Dewall are well suited for their purpose; the style and diction are not too difficult for those whose acquaintance with German is not extensive, and ample explanatory annotation is provided."—*Saturday Review*.

CONTES MILITAIRES. By A. DAUDET. 2s. 6d.

"Written at fever heat immediately after the great 1870 war, they show Daudet's power in many ways at its highest. . . . We therefore do more than recommend—we urge—all readers of French to get the stories in some form, and the present one is both good and cheap. The paper is excellent, and the type clear and bold. . . . A neat map of Paris will assist the reader in following the movement of the stories."—*Schoolmaster*.

ERZÄHLUNGEN. By E. HOEFER, 3s.

Recently Published. Fcap. 8vo, cloth, 1s. 6d.

ELEMENTARY LESSONS IN CAPE DUTCH (Afrikander Taal).

By A. WERNER and G. HUNT.

Approved and adopted by the Educational Department.

"We most cordially recommend this book to any one going out to settle in South Africa. . . . The dialogues and exercises in the book before us are admirably planned."—*Reformer*.

"To those outward bound such a book is sure to be useful."—*Practical Teacher*.

A new edition of our Educational Catalogue is now ready, and will be sent, post free, to any applicant.

WILLIAMS & NORGATE,
14 HENRIETTA STREET, COVENT GARDEN, LONDON;
AND 7 BROAD STREET, OXFORD.
EDINBURGH AGENCY: 20 SOUTH FREDERICK STREET.

for the quarter mile. On March 10 the school readings were held, and were far above the common in every way. On the evening of the 2nd we had a delightful entertainment, musical and comic. The memorial scheme has now been promised £800. In the last hockey match of the season we defeated Old Rossallians by 2 goals to nil. In football we have played 12 matches, won 5, and lost 7; the second XI have won 5 out of 6 matches. In the Senior League Cordner's just appear above Worship's; in the Junior, Christie's. A pretty controversy has been stirred up in the *Rossallian* by the letter of an O. R., urging the abolition of our peculiar form of hockey on the shore; a clear majority are against him. The Rev. Canon A. T. Wirgman, V.D., Chaplain at Port Elizabeth, who was at school here in the sixties, preached this term, and in private conversation delighted his hearers by many quaint remembrances of his school-days.

SHEPTON MALLET GRAMMAR SCHOOL.—Mr. Herbert Hatch, B.Sc. (Vict.), has been appointed assistant science master, *vice* Mr. S. Slefrig, B.Sc., resigned.

STAMFORD HIGH SCHOOL.—The Local Centre Examination of the Royal Academy and Royal College of Music was held for the first time at Stamford on April 7. The following pupils of Fräulein Stellwagen were successful in passing the examination:—Senior Grade: M. E. Camm, E. M. Stapleton, F. M. Furley; Junior Grade: E. Smalley, A. Vergette.

UNIVERSITY COLLEGE SCHOOL.—W. McNaught has gained a Mathematical Exhibition at Worcester College, Oxford. The Old Boys' annual dinner took place on May 14 at the Hotel Cecil, Mr. Augustus Prevost, Governor of the Bank of England, in the chair. The annual school sports took place at Stamford Bridge at the end of last term. A. D. Gaye has won the Quarter-Mile Public Schools Championship.

PRIZE COMPETITIONS.

The Translation Prize for May is awarded to "Gwen." *Proxime accesserunt*: "Corbar," "Luz," "Gänseblume."

The Extra Prize for May is awarded to Miss Maud F. Brown-Westhead, Lea Castle, Wolverley, Worcestershire.

The winner of the Translation Prize for April is Miss Mary Margaret Ridley, Intermediate School for Girls, Cardiff.

Wir sind des Herrn, wir leben oder sterben!
Wir sind des Herrn, der einst für alle starb!
Wir sind des Herrn, und werden alles erben!
Wir sind des Herrn, der alles uns erwarb!

Wir sind des Herrn! so laßt uns ihm auch leben,
Sein eigen sein mit Leib und Seele gern,
Und Herz und Mund und Wandel Zeugnis geben,
Es sei gewislich wahr: Wir sind des Herrn!

Wir sind des Herrn! So kann im dunklen Thale
Uns nimmer graun; uns scheint ein heller Stern,
Der leuchtet uns mit ungetrübtem Strahle;
Es ist des Gottes Wort: Wir sind des Herrn!

Wir sind des Herrn! So wird er uns bewahren
Im letzten Kampf, wo andre Hülfe fern;
Kein Leid wird uns vom Tode widerfahren,
Das Wort bleibt ewig wahr: Wir sind des Herrn!

By "GWEN."

We are the Lord's, let life or death befall us!
We are the Lord's, Who death for all endured!
We are the Lord's, an heritage before us!
We are the Lord's, Who all for us secured!

We are the Lord's! to Him then let us tender
Body and soul in willing service free,
And heart and lips and life their witness render,
That this indeed is true: The Lord's are we!

We are the Lord's, so can no fear affright us,
Tho' dark the vale; for one bright star we see,
Whose ray undimmed doth ever lead and light us;
That ray the Word of God: The Lord's are we!

We are the Lord's! He will protect us ever
In our last strife, when other helpers flee,
Then death itself, we know, can harm us never,
That word is true for aye: The Lord's are we.

(Continued on page 398.)

GINN & COMPANY,

Educational Publishers,

9 ST. MARTIN'S STREET, LEICESTER SQUARE, LONDON, W.C.

Ginn & Company 9, St. Martin's Street W.C.

TO meet the growing demand for their school and college books, Messrs. GINN & COMPANY, the leading educational publishers of America, heretofore represented in London by an agent, have opened a Branch Office at the above address, under the management of Mr. FRED J. MATHESON, through which all business for Great Britain and Ireland, the rest of Europe, and all British Colonies and possessions, with the exception of Canada, will now be conducted.

INVITATION TO TEACHERS.

All interested in teaching are cordially invited to call at No. 9 St. Martin's Street, where special facilities are given for the inspection of the books published by Messrs. GINN & COMPANY, representative of the most advanced methods in American Education.

SOME SPECIAL FEATURES.

GINN & COMPANY desire to call special attention to their "College Series" of Greek and Latin Authors; "Latin and Greek School Classics"; their "International Modern Language Series"; and their books on Anglo-Saxon.

GINN & COMPANY publish a large assortment of English Classics edited respectively for children and for the students of Higher English.

Excellent stories of Plant and Animal Life, designed to encourage observation and Nature study by the young, are among the publications of this house which have proved most popular.

WORLD'S HISTORY.

A GENERAL HISTORY FOR COLLEGES AND HIGH SCHOOLS.

By P. V. N. MYERS, recently Professor of History and Political Economy, University of Cincinnati.

Half-leather, 7½ × 5 ins., x. + 759 pp., 31 maps, 145 illustrations, 6s. 6d.

A complete outline in one volume of the World's History from that of Eastern Nations to the present time, accepted and recommended by all leading Colleges and Universities in the United States as the best brief course in general history.

"This is a handsome volume, well printed on good, thin paper, admirably equipped with illustrations and maps . . . and bound in half-morocco. The text is clear, readable, and well proportioned (bisecting at A.D. 476), and it attains a high level of accuracy. Altogether, the book strikes us as by far the fullest and cheapest single volume manual of 'General History' with which we are yet acquainted."—*School World*, February, 1902.

Teachers desiring to examine this book with a view to its adoption for class use may obtain a copy on approval by writing for it.

GINN & COMPANY, Educational Publishers, 9 St. Martin's Street, Leicester Square, London, W.C.

NOW READY.

NATURE LESSONS WITH THE BLACKBOARD.

By F. F. LYDON,

Art Master, Parmiter's School; People's Palace School of Art; and Tottenham Training College.

Crown 4to, stiff boards, cloth back, 3/- net (postage 4d.).

This work consists of 43 lessons and 42 full-sized plates (printed white on black), representing blackboard illustrations, with Introduction and Directions for Drawing. The lessons deal with Plant Life, Insect Life, and the Comparison of Animals, and form a complete course of Object Lessons in Nature Study. The book will also meet the demand created by the modification of the Syllabus for Blackboard Drawing.

Prospectus, with Specimen Plate, free on application.

FLORAL DESIGN IN COLOUR.

By F. F. LYDON.

In two sets. Price 1/6 net per set (postage 2d.).

This work consists of two packets of cards printed in colours, and gives a progressive course in elementary design. In Set A the natural flower is conventionalized, and repeating patterns suitable for borders are worked out from the element thus obtained. In Set B the conventionalized plant forms are adapted to the filling of given spaces, or for all-over patterns, suitable for textiles. The whole course is designed to meet the requirements of beginners in floral design, and is therefore specially suitable for use in the Higher-Grade and Secondary Schools, and in Art Classes and Schools of Art.

BURNS & OATES, LIMITED,
28 Orchard Street, London, W.

THE MOST UP-TO-DATE ENCYCLOPÆDIA.

BY THE EDITOR OF

THE IMPERIAL DICTIONARY.

The POPULAR ENCYCLOPÆDIA is the leading reference book for people with modest purses. It is now being brought up to date by Dr. Charles Annandale, with the assistance of an army of experts.

The POPULAR ENCYCLOPÆDIA will consist of fourteen handsome Volumes, profusely illustrated, and bound in cloth with leather backs; the price of the whole being £8. 15s. Eight Volumes are ready for delivery, and the remainder will appear at intervals of two months.

By an arrangement with the Proprietors, the "Saturday Review" is enabled to offer the work on the instalment plan.

The POPULAR ENCYCLOPÆDIA is a Universal Gazetteer, an Atlas of the World, a Universal History, a Biographical Dictionary, a Commercial Dictionary, a Political Dictionary, a Dictionary of the Sciences, of Philosophy, of Theology and Religion, of the Fine Arts, of Handicrafts; in a word it is

A DICTIONARY OF GENERAL INFORMATION.

Dr. Annandale's name is a guarantee of the value of the new Edition.

ORDER FORM.

To the Proprietors of the "SATURDAY REVIEW," 38 Southampton Street, Strand, London, W.C.

Please supply me (carriage paid) with the eight volumes of the New POPULAR ENCYCLOPÆDIA, and the remaining six as published, on account of which I enclose initial payment of 5s., and agree to pay 10s. per month for seventeen months. I undertake not to part with the work until the payments are complete.

PROFESSOR SONNENSCHN'S NEW FIRST LATIN BOOK.

ORA MARITIMA.

A Latin Story for Beginners.

By H. A. SONNENSCHN, Litt.D., M.A.

With Grammar, Exercises, Vocabulary, and numerous Illustrations.

Price 2s., cloth extra.

A single Specimen Copy will be sent to Teachers by the Publishers on receipt of 6d. in stamps.

This book is the outcome of an attempt to combine the systematic order of the Grammar with the interest and vitality of the Story-book. The Latin story forms a continuous narrative from beginning to end, which, it is hoped, may be read with pleasure by those for whom it is intended. At the same time the successive sections of the narrative are accurately graduated from the grammatical point of view, so that the pupil is led, as on the old-fashioned grammatical method, through a regular course of elementary Accidence and Syntax, and anticipations of future grammatical lessons are carefully excluded.

Latin is here presented to the pupil not as a kind of Chinese puzzle the key to which is to be found by certain mechanical artifices, but as a living language. The results of modern experience in the teaching of languages are fully utilized, while the error of attempting to teach a language without grammar is avoided. The book contains all the grammar which the pupil needs at this stage.

Conversations and drill exercises, based upon the text, give plenty of practice in the use of the grammatical forms learnt. The book is thus a Latin Reading Book, a Latin Exercise Book, and an Elementary Latin Grammar in one.

The scene of the story is laid in Kent, and an opportunity is thus presented of describing visits to historical sites, such as that of Caesar's landing place. In connexion with this part of the story, Caesar's invasions of Britain are narrated in simple language based on the vocabulary of the "Bellum Gallicum." The book accordingly forms a convenient bridge to Caesar.

SWAN SONNENSCHN & CO., LIMITED,
Paternoster Square, London.

AMBLESIDE SUMMER COURSE

IN

Nature Study, Kindergarten, Drawing, and Manual Training, 1902.

The Course will be opened on July 28th, by A. EICHHOLZ, Esq., M.D., H.M.I.

LIST OF SUBJECTS.

Wood Work. Cardboard Work. CLAY MODELLING.
Sloyd. Metal Work. Paper and Colour
Carving. Repoussé Work. Work.
BLACKBOARD and Frearm Drawing. KINDERGARTEN.

NATURE STUDY.

Ambleside is an ideal locality for Nature Study. The Course will include a practical study of the life-histories of some common plants and animals, by field excursions, &c., under the guidance of Miss M. SIMPSON, of the Yorkshire College, Leeds.

The staff of Instructors includes eleven highly qualified tutors, under the direction of Mr. J. VAUGHAN, Glasgow.

To secure advantages of reduced scale of charges for apartments, &c., application forms must reach the Secretary before June 23rd, 1902.

Full Prospectus, Entry Form, Time Table, &c., post free, from

Mr. H. WAY, 111 Bamsden Road, Balham, London, S.W.

AMERICAN SCHOOL AND COLLEGE TEXT-BOOK AGENCY.

During the last week in June there will be a SPECIAL SALE OF BOOKS that have not been included in Catalogue. To be sold at less than cost price.

New Edition of Catalogue ready.

20 High Holborn, London, W.C.

(Close to Cray's Inn Road and Chancery Lane.)

We classify the 107 versions as follows:—

First Class.—Gwen, Oudemia, Borealis, Kaninchen, Fortes et Fideles, Quotus, Caller-Herrin, Corbar, Luz, Gänseblume, Bildad the Shuhite, A.S., Gothicus II., C.R.W., Lettie.

Second Class.—Altnacolle, Argonaut, Sub cruce salus, 100,000, Gothicus, Updown, A Speckled Bird, Tomtit, Balloo, Jan-San, Epimedium, Wyvern, Philo-deutsch, Welkin, Marigold, Eliac, Petra, Pegotty, E.A.M., E.H.O., W.R.B., Grunewald, Meliora sequor, A.M.W., Eothen, E.M.M., Mendicant, Psalter und Harpe, Unverdrossen, Agricola, Neith.

Third Class.—L'Inconnu, Helvetia, A.B.S. (Literal), Great Western, Terrasse, Ignoramus, Bernardine, Vedette, H.D.A., A.J.K., Scarrybreck, Peashooter, Mike, Urania, J.C.S., Urban (Aberdeen), Apogee, Owl, La Pierre Noire, Tireragh, Schon bestellt, Green, J.B.W., S.E.P., Ancilla, Tremartha, E.C.N., Elgin, Avon Bridge, Scuta, L.McD., Musca, Eilrig, E.P., H.F.R.V., Mungal-Bungal, Romany, Harcim.

Fourth Class.—St. Blaise, Niente, Yenadizze, A.B.S., Buckland, Little Britain, Kingston, Enilorac, C.C.C., Florenzo, Whitwarra, L. C. Wharton, Dr. Smyth, Cos (A + B), Sorella, Tibed, Helena Classory, Bunch, Sweet Pea.

Fifth Class.—Alibi, Glendower, K.M., Augusta Jeanneret.

The German hymn needs little comment. The double rimes presented no very formidable difficulty, and in so short a poem should certainly have been preserved. A prose version, however good, hardly deserved more than a fourth class. It was hard to trip, but "a brighter star" was not infrequent. "We are the Lord's, we live or else we die" is a platitude for which Spitta is not responsible. "Who once for all was slain" is an unfortunate ambiguity. "So 't be surely true the Lord's we be" is not euphonious.

EXTRA PRIZE.

SUBTILITIES FOR THE COMING CORONATION DINNER.

By F. V. B. T.

"This night I hold an old accustom'd feast."

("Romeo and Juliet," Act. I. Scene ii.)

"To entertain great England's lawful King."

("2 King Henry VI.," Act IV. Scene x.)

"Plant your joys in living Edward's throne."

("King Richard III.," Act II. Scene ii.)

A baker's dozen were all the "subtilities" sent in, and few of them showed any fancy or invention. Some were longer than the longest swan's neck, others solid and sententious enough to have stuffed a goose. Here is a passable Latin triplet:

"Septimus Edvardus sexti sex duplicet annos.
Te quoque, Alexandram, parili cumulam honoris.
Nobilium proles genitor sis nobiliorum."

A Prize of Two Guineas is offered for the best translation of the following piece of French prose:—

LA RÉVOLUTION DE 1830.

Les maisons royales ressemblent à ces figuiers de l'Inde dont chaque rameau, en se courbant jusqu'à terre, y prend racine et devient un figuier. Chaque branche peut devenir une dynastie. A la seule condition de se courber jusqu'au peuple.

Telle est la théorie des habiles.

Voici donc le grand art : faire un peu rendre à un succès le son d'une catastrophe afin que ceux qui en profitent en tremblent aussi, assaisonner de peur un pas de fait, augmenter la courbe de la transition jusqu'au ralentissement du progrès, affadir cette aurore, dénoncer et retrancher les âpretés de l'enthousiasme, couper les angles et les ongles, ouater le triomphe, emmitoufler le droit, envelopper le géant peuple de flanelle et le coucher bien vite, imposer la diète à cet excès de santé, mettre Hercule en traitement de convalescence, délayer l'événement dans l'expédient, offrir aux esprits altérés d'idéal ce nectar étendu de tisane, prendre ses précautions contre le trop de réussite, garnir la révolution d'un abat-jour.

1830 pratiqua cette théorie, déjà appliquée à l'Angleterre par 1688.

1830 est une révolution arrêtée à mi-côte. Moitié de progrès ; quasi-droit. Or la logique ignore l'à-peu-près, absolument comme le soleil ignore la chandelle.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by June 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

DENT'S MODERN LANGUAGE SERIES.

BASED ON THE PRINCIPLES OF THE GERMAN REFORM MOVEMENT.

Edited by WALTER RIPPMMANN, M.A.

DENT'S FIRST FRENCH BOOK

ARE YOU WANTING PUPILS ?

A large number of Parents from abroad will visit England for

THE CORONATION,

and will take the opportunity of choosing Schools for their children.

MAY WE SUGGEST TO YOU

a small scheme of insertions of advertisements in the best London papers, in order that your School may be brought to the notice of these Parents?

If you favour us with an enquiry, please send a copy of your Prospectus.

ARE YOU SATISFIED WITH YOUR PRESENT PROSPECTUS ?

It has to travel many miles—all over England, Scotland, Ireland, and Wales, and probably to India, the Colonies, and the Continent—and speak to parents on your behalf.

Does it do justice to your School?

Are the claims of your School amply set forth? Is it finely printed on good paper—and are your blocks the best that can be made? If not, and you will favour us with an enquiry, we shall be pleased to send you suggestions for a new one, and specimens of the Prospectuses we have printed—with estimate of cost, *free of charge*.

J. & J. PATON,
EDUCATIONAL AGENTS,

143 Cannon Street, London, E.C.

THE CARNEGIE TRUST IN OPERATION.

SO important are the educational experiments of the Carnegie Trust, and so far reaching in their potential effects, that the working of the Trust up to date deserves careful scrutiny—all the more so because primal precedent is only too apt to crystallize into hard and fast permanence unless the searchlight of criticism be promptly turned on its operation. Of the two departments of the Trust expenditure, that dealing with University equipment is generally conceded to be the more important. But, until more definite information is before the public as to the intentions of the Trust, criticism is best deferred. With regard to the plan of fee payment, it is now possible, more particularly with the aid of the first report, to glean some idea of how the magnificent innovation is going to work out. The trustees and the Trust officials deserve every credit for the promptitude of their initiative and the general smoothness of their arrangements. Necessarily some of the guiding principles adopted are tentative, and the Trust has already showed its willingness to accept modifications by consenting (very properly) to the inclusion of the veterinary colleges within the scope of the benefaction. This article directs attention to some points, not all of them minimal, which deserve further reconsideration.

One trivial point that has caused annoyance altogether beyond its importance requires Mr. McCormick's attention. The first Trust documents were sent out, like bucket-shop circulars, in envelopes endorsed outside in flamboyant crimson type, and open to every prying postmistress and inquisitive landlady. This seems hardly in accordance with Mr. Carnegie's expressed wish for privacy, and perhaps the secretary will see to it, when his first stock of stationery needs replenishment, that the halfpenny coloured envelopes are replaced by the more modest penny plain.

"Plus ça change plus c'est la même chose" is likely to be the first verdict on the Universities after their transformation. The fee subsidy is likely to prove less revolutionary than the 1892 Ordinances. The Scots student of tradition who perhaps (to borrow a pleasant phrase from Mrs. Oliphant) "had outgrown the parish school, and while hoeing the potatoes or digging the peats, had dreams of Glasgow college and the world," and whose adventure into the humanities was a conquering expedition over circumstances, survives chiefly to be exploited in fiction for the delectation of the Southron. A successor, more adapted to modern requirements, has been evolved, whose extreme efficiency in the examination room more than counterbalances his diffidence outside the routine of the frock-coat careers. The number of students has increased by a percentage so small as to be insignificant. But organic change is a plant of slow growth. It is easy to see that nine-tenths of the first beneficiaries would in any case have been attending classes the first winter. To cavil at their application would be uncharitable and misleading. The philippics of Principal Story may safely be discounted. The geographical location of the Scots Universities allows them to tap directly more than half the artisan population of Scotland, and this they have always done with success. To the relative poverty of the "poor professional class," especially those in the country districts who have to board their children away from home for education, the Trust will afford an appreciable alleviation. To take that profession alone whose statistics of income are most easily accessible, the stipends returned in the *Scottish Church and University Almanac* show that how the majority of country ministers manage to keep up appearances and educate even an average-sized family as they do is a sociological puzzle. But, because the expenditure in fee payment only amounted to £22,941 the first year, it would be premature to conclude that a marginal saving of £30,000 is likely to be transferred every year to the equipment fund. Allowance must be made for individual changes of plan and adaptations of school curricula to become manifest, and it is not improbable that the demands of the Trust will creep up perceptibly year by year. The Trust revenue is fixed, but the demands of Scotland in the matter of cheap education are very elastic. If Scotland were self-sufficient unto itself, there would be a natural check of the irruption into the professions, but, as it has an immediately inexhaustible outlet in the Empire of which it is a part, there seems every feasibility for driving a tremendous trade in the export of cheap and efficient professional labour. Clearly this is Scotland's

gain, even if it does further embarrass the Southron parent's problem of what to do with his sons. So far as home-staying Scotland is concerned, the most widely diffused advantages seem likely to be those accruing from the immense potential increase in the number of educated women. As a bridge between the schoolroom and marriage, the Universities will meet a long-felt middle-class want.

The qualifications demanded by the Trust as to connexion with Scotland are commendably liberal. The return of the native, drawn by the lode-star of his new birthright, is not likely to fail when the proof of his nativity consists in showing that at least one of his grandparents was Scotch. It is even possible that the soft option of two years' attendance at a Scotch school may come as a boon to half-pay legionaries, literary men, and straitened *rentiers* of origin other than Scotch who have children to educate, and will make Scotland a desirable halting-place for the peripatetic branches of the Civil Service.

With regard to the preliminary "proofs of capacity," the Trust has followed the standard of entrance laid down by the 1892 Ordinances for each faculty. The sweet reasonableness of this proposal is purely superficial. Entrance requirements are far from uniform. The danger of putting an undue premium on one faculty to the disadvantage of the others, and to the detriment of the normal balance of careers, has not been fairly faced. For the Trust to avoid an undue diversion of young brains into paths which may be a will-o'-the-wisp to them and the country is not easy, but to hold the balance even between the careers it does control is perfectly practicable.

A comparative study of the Trust statistics yields some interesting information. Out of a total disbursement of £22,941, the faculty of medicine claims £10,585, while all the other faculties together net £12,356. When the figures for the forthcoming summer session fall to be included, it will be found that medicine will absorb more than half the annual expenditure of the Trust fee fund. As the detailed statistics of attendance in the various faculties given in the current University calendars refer to 1900-01, and the Carnegie Trust figures to 1901-02, it is not possible to work out exactly the ratio in each faculty between the total number of students in attendance and the number of students receiving assistance. But, as the attendance does not vary much from year to year, and as the increment in attendance for the present year has been already authoritatively stated to be not great, amounting only to an increase of 155 at Edinburgh and 21 at Glasgow, it is easy to arrive at a rough approximation. As regards theology, the result is rather startling. The number of theological students on the books of the Trust appears to outnumber the total number of theological students in the Universities a year ago. Unless the fees of classes in the Free Church colleges are paid (and of this the returns make no mention), the deduction is inevitable that the well-to-do classes have practically abandoned the Established Church as a career for their sons. The medical faculties attract more non-Scottish students than any of the other faculties. In Edinburgh, last winter session, out of 1,403 students (which total leaves out of count over ninety women), 623 were from Scotland, 323 from England and Wales, 234 from British Colonies, 117 from Ireland, 77 from India, and 29 from foreign countries. Excluding the non-Scottish students at Edinburgh, and accepting the full totals for the other Universities, there emerges the conclusion that about 55 per cent. of Scottish medical students avail themselves of the Trust. It is unexpected to find the ratio of beneficiaries in arts a smaller one. Even the exclusion of the training college contingent (121 strong) does not wholly explain the disparity. About 42 per cent. of the students in arts have their fees paid by the Trust. The percentage of women arts students at Glasgow requiring aid is strikingly small. Science students seem still less privileged, for only about 27 per cent. of them profit by the Trust. But it is with regard to students in law that the most astonishing result is reached. There are about 600 matriculants in the law faculties. Of these only 56 have surmounted the barrier of the Trust requirements, being rather under 10 per cent.

It is an anomaly worth noting that, while it costs £5,292. 4s. to pay the fees of 381 medical students at Edinburgh, it costs only £1 more to pay the fees of 508 medical students at the other three Universities. The difference is mainly due to the fact that the usual fee for a curriculum lecture course in medicine at Edinburgh is £4. 4s., as against £3. 3s. over the rest of Scotland. Now that they know their necessitous

students are provided for, there is nothing to prevent the other medical faculties raising their charges by a guinea per class, a pleasant prospect for the independent parent. It is not likely Aberdeen, Glasgow, and Dundee will acquiesce silently in Edinburgh pocketing a 25 per cent. premium on the fees of every medical student. The 1892 Act imposed a uniform tariff of examination fees on the four Universities (one clause of which has been steadily infringed by Edinburgh University under the guise of re-examination fees on a scale which the Act never contemplated), and the fee list is also similar with the single exception of the Edinburgh faculty of medicine. It is desirable that this anomaly should be rectified, and the Carnegie Trust are obviously in a suitable position to press for some *modus vivendi* between the four Universities.

The most dubious line adopted by the Trust has been the avoidance of any attempt to define the minimum acquirement essential to University aspirants with a view to insisting on the same irreducible minimum from entrants in any faculty. Owing to the want of a common matriculation examination—rumour believes in the impending rectification of this defect—the Trust may well be pardoned for treating the initiatory year as exceptional, and recommending a temporary adherence to the discordant system of entrance tests in vogue. But such acquiescence should be clearly understood to be provisional. Consider the entrance exactions for the different faculties. Divinity is usually a post-graduate course, and all entrants must at least have attended an Arts course. The standard of entrance in the other faculties is primarily fixed by the Leaving Certificate examinations (with the ancillary test of the University Joint Board). For the curriculum in Arts the preliminary test comprises passes on the Higher Grade in mathematics, English, Latin, and a third language. The Science Preliminary is similar, with the option of substituting a modern language in lieu of a compulsory Latin. In Law the test is still stiffer. Only graduates in Arts are admitted to the LL.B., and for that unsuccessful innovation, the B.L. degree, not only must the Arts Preliminary be passed, but three subjects of the Arts curriculum on the M.A. standard as well. In glaring contradistinction to all this severity is the Medical Preliminary examination. Lower Grade passes in mathematics, English, Latin, and a third language suffice. This laxity is the root of the whole difficulty. In theory a year should elapse between passing four subjects on the Lower Grade and passing them on the Higher Grade. In practice the vast majority of pupils take from eighteen months to two years to complete the higher standard work.

This anomaly is not exactly the fault of the Universities. There are more complaisant medical schools elsewhere which, if the entrance exactions in Scotland were raised, might doubtless prove more attractive to a few of the Colonial and English students now instructed here. But, with the growth of well equipped medical schools at their own doors, their gradual defection is, as the last Edinburgh General Council report pointed out, but a matter of time. It is the General Medical Council, which is the real stumbling block. The Council is chiefly representative of a number of competing licensing bodies whose interest lies in obtaining a maximum of students for a maximum of time. How to steal the bread out of the mouth of the secondary schools is one of the problems this Council spends its life in solving. After having done good service in rescuing the medical profession from an intellectual slough of despond, the Council has itself got stuck in the mud. It seems to have exhausted its conciliation of the licensing bodies by arriving at a literary standard which is lower than the lowest group Leaving Certificate which will be granted in Scotland whenever Sir H. Craik's new circular comes into active operation. Meantime it devotes its energies to boycotting the English and Scottish Colleges of Surgeons for recognizing at last the sound and statesmanlike view that schools are the proper seminaries for the scientific alphabet. The thanks of all friends of Scottish education are due to Sir W. T. Gairdner, who, faithful among the faithless, has held tenaciously to the opinion that the real business of the medical colleges is to teach medicine with its anatomical and physiological bases, and not the rudiments of physics and chemistry, any more than the rudiments of Latin and arithmetic.

Obviously to raise the entrance requirements in medicine for every one is outside the province of the Trust. As a matter of fact the practice of undercutting the market in the matter of preliminary requirements has been a far from negligible factor in the rise of the Edinburgh Medical School. Sir William

Hamilton's stage thunder of half a century ago echoes still: "whether the Medical Doctorate was to be still further eviscerated of all literary qualification. . . . The medical aspirant who finds himself from want of Greek unable to rise into a Dublin apothecary is obliged to subside into an Edinburgh physician. . . . Medicine has ceased in Scotland to be a learned profession." But there is nothing to prevent the Trust demanding from applicants in medicine the same proofs of capacity as their contemporaries in other faculties.

Leaving out the Church, which superadds theology to arts, it must be remembered that the only two ordinary careers where the University curriculum is self-sufficient are secondary school-mastering and medicine. This is itself an inducement to study medicine, since the market price of mediocrity is higher therein. Most other openings do not dispense with apprenticeship, and owe a first allegiance to bodies outside the University. Students going to the Scots Bar usually graduate. But a glance through the Stamp Office list shows that four-fifths of the solicitors in Scotland do not. Practically all of them have attended the University. Until recently this attendance was compulsory, and the tradition is still followed. To exclude the majority of law students, as the Trust is doing, for failure to comply with the present preliminaries to a Law degree is pedantic. Every prospective law agent has to pass before his own Board a second general knowledge examination equivalent to the Arts Preliminary, save only that for the fourth subject in the Arts examination book-keeping is substituted. Furthermore, the Law degree is not on all fours with the Medical, inasmuch as the Law degree is a luxury entirely outside the ordinary course of qualification for the profession. Unhappily the Trust regulations are so framed as largely to warn off the course students whose professional traditions make a practical apprenticeship the primary part of their training, and lecture-room knowledge a subsidiary superstructure, in favour of those whose inclinations and opportunities are more sequestered and academic.

That technical and commercial education should no longer be considered the mere step-daughters of Minerva was understood to be one of the main motives of the benefaction. The Universities have but one link with organized commercial education. The Institute of Chartered Accountants has made it incumbent on apprentices to take out the classes of Scots law and conveyancing. The step shows liberality of view, though it does expose the apprentices to lengthy disquisitions on such extraneous subjects as criminal law. Before indenture accountants pass a general knowledge examination, rather easier than the Medical Preliminary. If it is desirable to bring such careers in closer touch with academic life, the fact of apprenticeship experience might surely be counted for righteousness. Here is the first nucleus of the desiderated Faculty of Commerce. Yet such students are thrust aside because they have no intention of taking a Law degree.

Of all the institutions whose students deserve the relief from the burden of fees the inadequately endowed technical colleges meet most directly the clamant needs of Scotland. Consider the Glasgow and West of Scotland Technical College, which only awaits the awakening of Glasgow to its responsibilities to become the chief technological faculty of the Empire. The study for the diploma is quite up to the usual standard for a University qualification. Yet the few students taking the ordinary day diploma courses for the A.G.T.C. have been ruled out. Some have been simply juggled out inasmuch as their diploma course will be counted for two-thirds of the Glasgow B.Sc., provided the University Preliminary in science is passed, and it is usual for the technological student to take this additional general knowledge examination after, rather than before, his Bath Street course. The general knowledge examination of the college compares not unfavourably with the Medical Preliminary. But surely it is a further proof of suitability, which only pedantry could fail to recognize, that many of these students have served the usual five years' active apprenticeship to their calling, and most of them have at least gone through considerable part of their workshop training. In a footnote to the reprint of his address at the British Association Glasgow meeting, Prof. John Perry remarks: "In spite of enormous loss continually going on through the ignorance of English-speaking engineers (I know of most dreadful examples), the great majority of English-speaking employers of engineers believe the unscientific English engineer to be preferable to the finished polytechnic engineer. As an employer, I myself used to feel

very undecided." Dr. Perry is an ardent advocate—none more so—of the scientific training of the engineer. But he recognizes that practice and theory take some reconciliation, and that too exclusive reliance on theory is an even worse state of affairs than rule of thumb. Now the Trust regulations put a premium on the polytechnic kind of man. However regrettable the fact may be, however much it may reflect on our chaotic system of education, the fact must be weighed that the vast majority of engineering students are not prepared at present to master their trade in the shops and at the same time meet their more bookish fellows on a literary level in the examination room. In a speech the other month M. Leygues, the French Minister of Public Instruction, justified his policy by the remark: "The *lycées* and the faculties must not be thrown open to all; for to do so would be to create a mass of educated men fit for nothing." Scotland is more fortunately situated in this matter, since the high road to England is always before our surplus intellectuals. Still the Carnegie Trust, if not wisely managed, does stand in danger of doing national disservice.

Now it is with regard to our ordinary technical students that the risk of fostering *déclassés* is least, and it is upon such men that the curse of literary examination weighs most heavily. It is not at all illogical, while pressing for the abolition of the present preferential tariff discriminating medicine from the other old-established professions, to advocate some relaxation of the literary demands which debar the vast majority of Scottish technical students from the advantages of the Trust. Men who are serving, or have served, an apprenticeship to some craft should not be handicapped at scratch along with their more leisured competitors. Apprenticeship is itself a valuable education, and should be counted as such. Even if it were not so, a strong case on the lines of Mill's "infant industry" argument could be made out for this advocated departure from educational free trade. If the present standard of the Medical Preliminary examination is to be retained as a minimum qualification, it should only be allowed to apply to students of the type here indicated, and the diplomas of the technical colleges should be admissible in themselves as a sufficient goal at present for the average applicant. One of the sanest addresses on the possible operations of the Trust—that of Prof. W. M. Ramsay, of Aberdeen—drew a parallel between the educational systems started last century in Greece and in Bosnia and Herzegovina. Supporting his contention that education still tends to be too pre-eminently literary, this distinguished scholar pointed out that modern Greece had gone from bad to worse chiefly through its literary exclusiveness in education, while Bosnia and Herzegovina, proceeding on opposite lines, had not only become more prosperous, but had even then not lost the appreciation of ancient literature, since there were always plenty of persons naturally inclined to such studies. It is to be feared that the Carnegie Trust treatment of the technical colleges smacks not a little of modern Hellenism.

The hundred and one other issues which the Carnegie report arises would lead one too far afield. "Quis custodiet ipsos custodes?" How is the Trust to know its students are getting value for the money? At least we may expect it, since "equal rights" are the mode of the moment, to see that its *protégés* are treated alike, and that such malpraxis as the shabby treatment of women medical students at Glasgow is disallowed. But it may be pointed out that the working of the Trust already emphasizes, and will emphasize still further, that it is not possible with comfort to pour new wine into old bottles. The times are ripe for a new Universities Commission. Indeed it is a question whether provision should not be made for a Revising Commission every ten years, so omnipotent does the dead hand become in education and so fatally paralyzing. The last Commission did a magnificent work in sweeping away anachronisms, but it did not know where to stop, and evolved a monumental compendium of red-tape ordinances full of commandments of this type: "Thou shalt not study A unless thou hast also studied B, and intendest to study C, and hast passed a preliminary examination in D." The Ordinance which moors Honours students in Philosophy to a special examination in Greek in addition to their ordinary degree subjects (which may not include Greek at all) has at last proved irritating enough to induce the Scotch teachers of philosophy to petition for its removal. It is a type of the many scholastic pedantries in the Ordinances. In the *Fortnightly Review* for December, 1900, appeared an article by Dr. William Wallace, which quotes a

list of suggested reforms obtained from a distinguished scholar who had held a chair in Scotland. One item was the suggestion that attendance on specified compulsory lecture courses should no longer be an essential condition of admission to degree examinations. This is a *sine qua non* of serious reform. The best short statement of the argument for lecture-room compulsion occurs in an early address of Huxley's in the collection of educational essays brought together in 1867 by the American educationalist, E. L. Youmans. But Huxley drew his facts from the Royal College of Science, where circumstances were vastly different from the Scots Universities and classes reasonably small. Even there has recently been an undignified squabble with dissatisfied students in metallurgy. The personal element in teaching will always be secure, and does not need bolstering up by any narrow monopoly. The case against the present system is, in part at least, set forth with tolerable effect by Dr. Ernest E. Greville, of Edinburgh, in his three recent essays on "The State and the Student," the most pungent critique of Scots University officialdom since the "Glasgow University Pamphlets" of the eighties.

Professors should not be exempt from the stern but efficient rule current in most departments of life, that, if a man's work is not as good as his rival's, his clients fall away. As Dr. Greville says: "Where we found a lecturer with the special gift of exposition he would never lack an audience." The lecture-rooms of the University, which stand vacant for most of the day, should be open to any graduate who desired to teach. The collections of specimens and apparatus should not be sacrosanct only to the professoriate. The biggest blunder both of the 1892 Commission and of its predecessor (which gave the proposal closer examination) was the declinature to sanction the acclimatization of something like the German *Privat-docenten* system. It is a great drawback to the beneficial working of the Carnegie fee fund that it threatens to rivet the fetters of Scots dependence on pontifical professorial prelections still more closely, while it tends to bribe away from the extra-mural lecturers in medicine (the only faculty where there is any approach to free trade in University teaching) some of the attendances formerly given by pupils studying for the medical licences, and attracted by the cheaper fee-scale fixed for them. How successful the competitive system may be even under the present hampering restrictions can be seen from Edinburgh. If it were not for the seventy extra-mural lecturers, the reputation of Edinburgh as a teaching centre in medicine would collapse to-morrow like a pricked bubble.

REVIEWS AND MINOR NOTICES.

The Student's Handbook of Stratigraphical Geology. By A. J. JUKES-BROWNE, B.A., F.G.S. (Price 12s. net. Edward Stanford.)

Students of all ages will welcome this handy volume; the undergraduate will take it as his guide on his first geological tour, and will not think it too heavy for his knapsack in the Isle of Wight or in the Lake District; the student of maturer age who has learnt by long experience how impossible it has been hitherto to get any trustworthy and readily accessible information as to the geology of any place to which health or pleasure may take him will certainly find room for it in his portmanteau; the more than mature will sit over the fire with it, or under the shady elm, and will rejoice over the wonderful development of stratigraphical knowledge since the days when he wielded pick and hammer on Lower Greensand and Lower Silurian; he will read that "the cumbrous designation of Old Red Sandstone should be relinquished"; he will be heard to mutter: "Vectian," "Selbornian," "Ordovician," "Valentian," and then, like the Lotos-Eaters, "all at once he'll sing":

May the devil run through't
With his cloven foot!
Give me the good old strain,
And the English pith
Of old William Smith;
We shall ne'er see his like again!

But he is only an old grumbler.

Beginning with a short introductory chapter and about thirty pages of admirably clear matter on the origin and succession of species and the classification and correlation of rock groups, we come to a very useful chapter on "The Literature of Historical Geology," maps, stratigraphy, palæontology, palæogeography, which was much needed, and for which many will be grateful. Then we plunge into the body of the book.

It is not any exaggeration to say that there is no single rock group of any importance, from the lowest pre-Cambrian of Lewis to the latest of post-glacial gravels, which is omitted from these pages; no smallest part of the country concerning which information is not to be found in them.

For example, in chapter vii.—"The Cambrian System"—we have, first, a short account of the Sedgwick-Murchison dispute, then a section on "The Life of the Silurian Period," with a catalogue of the principal characteristic species, and about two dozen figures illustrating it. This is followed by the stratigraphical part, which is the principal part of the chapter, in sections headed South Wales, North Wales, Midland Counties, Lake District, Scotland, Ireland, Continental Equivalents. Finally, we have a page on contemporary volcanic rocks, a couple of pages on the physical geography of the period, and a list of the original works quoted in the text. There are very clear geologically shaded maps of part of Pembrokeshire and of North-West Wales, and six sections across these and other Cambrian districts. A page is given to a most useful table, showing the correlation of the rocks in the different districts.

Thus, in thirty-six octavo pages the student will find what he would otherwise have to search for through many volumes and through endless numbers of magazines and journals.

Nor is Mr. Jukes-Browne content with merely stating in a general way that rocks of Cambrian age, more or less comparable with those of North Wales, are to be found in other districts, such as Shropshire and Warwickshire; he condescends to special, and almost minute, local information. The extract given below, greatly abbreviated, from page 87, will show what we mean:—

Passing again to Nuneaton, we have what appears to be a complete succession of beds without break or faulting—(iii.) Upper or Merevale Shales; (ii.) Middle or Oldbury Shales; (i.) Lower or Purley Shales. The fauna of the Purley Shales is comparable with that of the *Conorophye exulans* zone of Sweden, which belongs to the *Paradoxides* division, and homotaxial with our Menevian series. The Oldbury Shales are comparable with the black shales of Malvern and the lower Dolgelly beds. The Merevale Shales appear to represent the lower part of the Shinetun Shales and of the Malvern grey shale. No horizon comparable with the mass of the Lingula flags has been recognized; but this may be due to the scarcity of fossils in the lower part of the Oldbury shales.

We have taken as our example of Mr. Jukes-Browne's method the chapter on the Cambrian system almost by chance; any other chapter would illustrate it equally well. What he has done for one system he has done for all, and he has done it equally well. The book is an English book, and naturally treats chiefly of British rocks; but the rocks of the mainland come in for their share of notice, as we have seen in the case of the Cambrians, and they are even more fully treated of where, as with the Trias, the Continental series are taken as the standard with which our own are compared. But, of course, the Continental areas are far too extensive to admit of such minute description as is given to the British areas.

We, unfortunately, cannot close our notice of this most delightful and instructive book without a grumble or two. On page 16 we are reminded that Primary, Secondary, and Tertiary may be used as *time-words* equivalent to Palæozoic, Mesozoic, and Cainozoic; and on page 458 we find the heading: "Tertiary or Cainozoic Time." But we do not find any similar headings for the older eras, though at the beginning of chapter xiii. we read: "With the close of the Permian period the last remnants of Palæozoic life became extinct in the British area." And must English geologists of the future use the words "Palæogene" and "Neogene," signifying the older and the newer kind of Tertiary life? They surely by nature signify no such thing, and the "Palæogene Cainozoic" looks queer, to say the least of it. But "Hantonian" and "Icenian" are little better. Mr. Jukes-Browne must find the right words.

It is a pity that the vulgar misprint of *Productus* for *Producta* is perpetuated in this volume. It is not known when the mistake first arose, nor why *Voluta*, *Purpura*, *Limnea*, *Neptunea* have

escaped the same fate. It will probably be long before a fresh edition of the book appears—the labour of preparing one would be immense; but, when the time comes for it, we hope, for the sake of all history and of all grammar, that the correction will be made.

And, finally, we shall hope for an index of places; it would add greatly to the convenience of the student, as also would an index or a list of the maps and horizontal sections.

A History of English Literature; 600 to 1900 A.D. By E. ENGEL. Translated from the German. (8¼ × 5½ in., pp. xii., 491; price 7s. 6d. net. Methuen.)

This is a very uneven and, on the whole, a disappointing book. A great part of it is so well informed and shows such critical skill and sound appreciation that one is charmed as one reads; but a great part also is so poorly informed and is so uncritical and unappreciative that one wonders that any one should have cared to print such lame and impotent judgments. This is the more disconcerting in that the book is written for German and not English readers, and is liable to prove very misleading. The fact that it is written for German readers no doubt accounts for the constant dragging in of Goethe's opinion on all possible occasions—which ends by being tiresome. Great as Goethe was and in so many ways, he is not a recognized authority on English literature, and his pronouncements have not always stood the test of time.

Let us begin with the excellences of the book. The opening chapter provides a fairly satisfactory appreciation of "the character of English literature." Then the book proper begins. The period before Chaucer is treated briefly and somewhat as an introduction to what is to follow. But Chaucer himself and his writings are ably and sympathetically dealt with; while what is said of Chaucer's contemporaries is on the whole well said, though very briefly. There follows a brief account of what is called "old English national poetry"—for *national* we ourselves would read *popular*—namely, the more or less old ballads. The appreciation of their character and value is sympathetic and clear-sighted, and the examples given are well chosen. Satisfactory, and in the main good, also are the following chapters on "The Old English National Drama" and "Classical Antiquity in England." This brings us to the time of Shakespeare; and we are given three chapters, one on Shakespeare's predecessors, a second on Shakespeare himself, and a third on Shakespeare's contemporaries. Of the first and the third there is not much to be said; but that on Shakespeare, though far too long (sixty-three pages), is the gem of the book. It is, on the whole, well informed, and is intelligent and not too laudatory; moreover it is refreshingly free from that fancifulness and over-laboured interpretation which spoil so much of the best German criticism on Shakespeare. (We note by the way that Prof. Engel thinks very highly of Georg Brandes' "William Shakespeare." The Danish Professor's work is not nearly so well thought of by English scholars.) Take it for all in all, this chapter of Prof. Engel's is a good piece of work. But after this we get into shallow water, and are constantly running aground on reefs and mud-banks.

At the end of the Shakespeare chapter Prof. Engel finds that he cannot keep himself off the stupid Bacon-Shakespeare controversy; and he gets so angry and indignant over it that it is with difficulty that he allows any merit to Bacon at all—except a certain amount of learnedness and sententiousness. He finds him "the most prosaic, the most insipid, and the most pedantic" of all the better known writers of the sixteenth century, "even prose writers." This last phrase is significant—for Prof. Engel evidently has little interest in prose writers, and treats them all briefly. Some of his most marked deficiencies of appreciation are shown in connexion with them. (By the way, there is a mistake in Shakespeare's sonnet quoted on page 228.) Really, Prof. Engel must study his Bacon more carefully, and he should not quote Macaulay's Essay as an authority. It is one of the most faulty and grotesque productions of that vigorous writer. But at the same time, when revising, he might acquire some correcter information about "the notorious English Sunday, with its . . . crowds of drunken men and women in the gutters of the great towns." The description is picturesque, but untrue, and reminds us too forcibly of the general misrepresentation of England and things English so common in German newspapers.

But there are many other inept statements and ignorant critical opinions which Prof. Engel must reconsider and correct if ever he wishes to be considered an authority on English literature, at any rate on this side of the Channel. We will mention a few of these before concluding.

Here is one of the things which will not do. "Comus," we are told (on page 256), "is a graceful dramatic idyll, abounding in lyrically coloured descriptions, but of no higher poetical value; it is certainly the poem which least of all exhibits Milton's distinguishing characteristic. Nor can his 'Lycidas' . . . lay claim to permanent importance." And this is all that is said about them. O shade of Johnson! Again, Pope is in general poorly and sneeringly treated; and Gray's "Elegy" "cannot be regarded as poetry" (page 329). Things are a little better when we come to Byron; though the praise is exaggerated and often indiscriminating. The "beautiful musical diction" of Byron's lyric poetry is not one of its most striking characteristics to an English ear. To the Professor it "appears unspeakably comic that even at the present day people in England should be seriously inquiring 'which is the greater, Byron or Wordsworth?'" (page 367). Byron's greatness rests, we are told, on his life and his works. We do not remember anything of the nature of greatness in his life—except the ending of it, which, moreover, was affecting rather than great. We cannot, of course, expect any one not English to appreciate or even to understand Wordsworth. Prof. Engel certainly does neither. But it is somewhat startling to find that he cannot bring himself to admire Coleridge's "Ancient Mariner"—he finds the contents and the handling "so poor, so bald." Shelley fares much better, and the praise given him is, as a whole, discriminating and rightly placed; but the reference to his marriage and Harriet's death (page 387) is, to say the least, disingenuous. Of Tennyson the author has little good to say. "Not a line of Tennyson's numerous poems on Arthur will survive. . . . He was the inventor and most influential writer of immoderately long pieces of rhythmical prose without any pretence to art" (page 422). This we can only imagine to be a reference to Tennyson's blank verse. Of "Maud" and "The Princess" all that is said is that, though both are lovely, both are wearisome.

But nothing would be gained by giving further examples—though the number might be doubled—of Prof. Engel's lack of qualification for writing a critical account of English literature—he does not really attempt to write a *history*. He would have done far better had he restricted himself to Chaucer and Shakespeare and their immediate predecessors and contemporaries. On these he can write with knowledge and skill. But of most of the rest he neither knows nor cares to know much; and we can hardly imagine that he will find many more admirers at home than in England.

The Dawn of Modern Geography. Part II.: A History of Exploration and Geographical Science from the close of the Ninth to the middle of the Thirteenth Century (c. A.D. 900–1260). By C. RAYMOND BEAZLEY, M.A., F.R.G.S. (John Murray.)

It is quite natural that, in an age when geography has been admitted to an academic position, as in the University of Oxford, an interest should be felt in the origin and history of the subject. Nor is the development of the study of history without its influences in a deepened desire to understand historical and physical geographical conditions. The study of the educational values of history and geography has also led to the establishment of a correlation between them and the belief that the study of both is necessary for any valid account of the history of civilization. Especially interesting, therefore, is a history of exploration and geographical knowledge in the so-called dark ages. It is surprising to see how, in the hands of a competent guide, so much information is to be obtained which throws considerable side-light on the middle ages, and how there can be traced in the time which is supposed to have been so strongly marked by stagnation a distinct and somewhat surprising line of progress. Mr. Beazley, in fact, claims that the dark age of geography is to be taken as reaching from the conversion of the Roman Empire to the close of the ninth century, while that from the close of the ninth to the middle of the thirteenth century is "the dawn" of geography. The central point of such a narrative is the Crusades. "The discovery of a new world for trade," says Mr. Beazley, "is the permanent result of the Crusades and the sign and abiding

symbol of a true Mediæval Renaissance (eleventh to thirteenth century)."

In the earlier part of the work Mr. Beazley gives an account of Norsemen and their expeditions, A.D. 800 to 1070. The other topics to which chapters are devoted are: Pilgrim Travel; Benjamin of Tudela, and other Jewish Travellers to the middle of the Thirteenth Century; Diplomatic and Missionary Travel of the Thirteenth Century; Commercial Travel (A.D. 900-1260); Geographical Theory and Description (A.D. 900-1260). Omissions noted by Mr. Beazley himself are any treatment of Arab and Chinese exploration and earth study, and a comprehensive account of the geographical theorizing of the scholastics. Thus the author has foregone the temptation of introducing interesting matter concerning Roger Bacon, Albertus Magnus, Plato of Tivoli, and Gerard of Cremona.

Perhaps it will be felt on reading Mr. Beazley's book that it is somewhat too technical for the general reader, but, on the other hand, it is a storehouse of information on geographical progress, and a valuable reference for the student of political and social history and of the history of civilization. It is a real contribution to historical knowledge, and may tend to bring the physical science of geography into repute with the men of learning. Without going so far as to describe the book as a work of literature, it has a clear and suitable style. As to matter, the author sticks to his texts; but, as these are quite unknown to the ordinary man, and even to the ordinary geographer, no slight service has been rendered in making accessible to both the sum and substance of the mediæval authorities, the reading of which and study of their matter must have involved great labour to the author. Some recent writers—chiefly foreign—have also been consulted. Altogether, it is a book of conspicuous value, both for the teacher of history and the geographer.

An important feature of the volume is the inclusion of sixteen illustrations, giving the principal maps of the time. These maps are excellently reproduced, and form an admirable study in mediæval cartography. The appendix on maps is a valuable account of geographical points which arise in connexion with the maps, and includes much comparative research. A paragraph is given on representations of the world, on the coins of the middle ages, and the author even adds a word or two on the lost maps of the period.

Technical as the subject is, there is much of incidental interest in Mr. Beazley's book. The story of the Vikings, Olaf Trygvesson at Novgorod, Harald Hardrada at Constantinople and Jerusalem, are examples in the treatment of the Norsemen. In pilgrim travel we have the story of Sigurd in Spain, Adalard of Bath in the Levant, and John of Würzburg's narrative. The travels of Jews include the famous journey through Southern Europe of Benjamin of Tudela. There are accounts of the travels of Rubruquis and Carpini, which gave Europe ideas of the Far East stretching to the Mongols and to Cathay. Mr. Beazley institutes an interesting comparison between the work of Rubruquis and that of Carpini. Descriptive history is given of the development of Amalfi, and an attractive account of Venice and Genoa, Pisa, Marseilles, Montpellier, Narbonne, and Barcelona. On these and many other points, the teacher will do well to have "The Dawn of Modern Geography" at hand, for illustration and reference.

A Student's History of Philosophy. By ARTHUR KENYON ROGERS, Ph.D. (Macmillan.)

The history of philosophy may be said to need constant re-writing, for, as the writer of this volume justly observes, one of the aims of philosophical teaching is to show the labour involved in the most ordinary conceptions of the world around us. Hence the teacher must be fully aware of the latest modifications in the conceptions that go to make up the mental and spiritual world of the student, if he is to make the history of their formation at all vital and coherent to him. In his two-fold attempt Prof. Rogers, we think, has been successful, not only because he understands the minds of the philosophers, but, as we have implied, that equally important and long-suffering article, the mind of the youthful student of philosophy. It is just this vitality in his history that specially recommends itself to us. As he remarks in the preface, the personality

which gave birth to a thought will often afford a clue to its elucidation. This is happily shown in the case of Spinoza, the spirit of whose philosophy has certainly had greater influence on posterity than the abstract and obscure method in which it was formulated. The selections both here and in other instances from the writings of the philosophers are admirably chosen, both for their illuminating qualities and their literary merit.

On the other hand, the book is essentially a text-book to be used while the student is actually studying the systems described, or, as a revision of that study, preparatory to examination. A summary may be of assistance to one actually engaged in grappling with the thinkers, while it may be so incomplete as to be misleading, if the book be read *per se*. No cut and dried summary can represent thinkers like Plato and Kant. We would suggest in passing that Plato's political theories would have been rendered more comprehensible if reference had been made to the tradition of Lacedæmon and the characteristics of Athenian democracy, which, more than the mind of the philosopher, were responsible for their singular inelasticity. Considering the space allotted to minor philosophers, we are surprised that not more is given to so epoch-making a thinker as Kant. Still we by no means regret the somewhat unusual space accorded to two periods not usually so emphasized in short histories of philosophy—the late Roman period of the Stoics and Epicureans, and what is generally regarded as the dark void of the middle ages. The former period is particularly interesting as one when philosophy was not merely a speculation, but an actual religion of everyday life, Stoicism in particular, "creating," as the author says, "an ideal of personal life and character more profound than the Greek world has yet seen." On the other hand, as Mr. Pater shows in his "Marius," Epicureanism was often a much finer article than its modern representatives.

Prof. Rogers's references to Augustine, Anselm, Abelard, and Aquinas, and, finally, his slight sketch of Bruno, that most characteristic and fascinating figure of the early Renaissance, make pregnant a portion of history often completely overlooked by the philosophical student. He will be interested also to learn that the controversy between nominalism and realism was not merely a fine-spun web in the brains of the schoolmen, but one of the germs of the later divergence between the spirit of science and that of the Roman Church.

It was natural that the Church should be realistic. The hierarchical system of reality, which absorbed the part in the whole, the less general in the more general, was a counterpart, in the intellectual world, of the graded hierarchy of the Roman ecclesiastical system, at the top of which the Pope stood supreme as the representative of the Church universal. To admit that the individual alone is real, and not the class, would have been to deny that solidarity of the human race on which the whole Church doctrine of sin and redemption was placed. . . . Again, if nominalism were true, and particular things alone were real, then, consistently, men's attention ought to be directed to such things, and secular and scientific interests must take the place of religious and ecclesiastical.

The writer is to be congratulated on what he apologetically calls in the preface a somewhat mild reproduction of Hegel's philosophy of history. The fascination of Hegel for so many minds lies in the fact that he among moderns seems to have understood the problem of philosophy in all its fullness—"to think things together," and he, more than any other, has seen that intimate connexion between the history of civilization and thought which has linked at Oxford, for instance, the study of ancient philosophy with that of ancient history. To mystify the ordinary student with Hegelian logic would be unadvisable; but he should know something of Hegel's spirit, and this is what Prof. Rogers tries to ensure. The closing chapter on post-Hegelian philosophy strikes us as strangely hurried, but that, perhaps, is only another evidence of the supplementary nature of the book. The sketch of the Evolutionary theory, though slight, is very well put. In a fine passage, too long to quote, he concludes, after pointing out the incompleteness in Darwin's theory, by remarking that the philosophy of evolution is therefore not necessarily identical with Darwinism.

A propos of the claims of spirit, which he defines as the demand for freedom and the existence of ideals, and those of science (our knowledge of the laws governing the external world), he concludes that it is no longer a question of suppressing

either side, but rather of finding some way in which both may have their claims satisfied.

A very useful feature is the list of books at the end of each chapter, which form a valuable guide for a student's reading. If he were to read but half of what Prof. Rogers suggests, he would attain not only to a clearer understanding of the systems which form the history of philosophy, but to a keener appreciation of that many-sided life which philosophy exists to explain.

"The Semitic Series."—*The Social Life of the Hebrews*. By the Rev. EDWARD DAY. (John C. Nimmo.)

The series is edited by Prof. J. A. Craig, of the University of Michigan, who has enlisted the services of a number of eminent Semitic scholars in Europe and America, and already promises a dozen volumes, which, from their subjects and authors, are sure to prove most useful contributions to a popular knowledge of the results of recent scientific research in the history of the Babylonians, Assyrians, Hebrews, and allied races. Mr. Day deals with Hebrew social life during the period from the settlement of Canaan in two divisions—"The Time of the Judges" and "The Time of the Monarchy." Before the settlement we know too little for a basis of trustworthy statement. "We know next to nothing of the social life of the Hebrews during the time of their Egyptian sojourn," and "the records of their desert life are well-nigh as scanty as those of the Egyptian period"; while "of authentic contemporary literature we have little." These preceding experiences must, of course, have had their influence, especially on moral and religious development. "Whether the Hebrews had known God as one and as Yahweh prior to the Exodus, or whether, as Budde has so ably argued, they, through Moses, accepted Yahweh, the God of the Kenites, as their God, they surely emerged from their desert life as the people of Yahweh"; and, "up to this time, the world had probably not seen a loftier conception of the Divine Being."

Mr. Day speaks of "the Judges"; but he points out that they never became so in the popular understanding of the term; they were simply local vindicators or deliverers. His attitude may be gathered from two sentences—

Only men thoroughly imbued with the modern historico-critical spirit are able to open up to us intelligently in Old Testament study the original sources. All difficulties do not vanish under their leadership; but the worst and the most perplexing do. Besides, they lift from the back of faith by their critical separation and elucidation of the texts many a burden which faith should never be made to bear.

Though bold, he is cautious—much more cautious than his American directness of statement would at first blush seem to indicate. In speaking of the Hebrew environment, he agrees that, "though morally inferior, the Canaanites were certainly intellectually and industrially the superior of the Israelites," and holds that the Hebrew contact with them "was far from being an unmitigated evil." His chapters on the clan, the family, the social significance of sacrifice, the influence of individuals, and "characteristic stories," while containing nothing fresh to advanced students, group together, in a striking way, many facts that will be fresh and illuminative to the general reader. It may be shocking that Yahweh "seemed to require" of his worshippers "human sacrifice"; but such a shock is largely due to the delicacy of our authorized translators, and Mr. Day properly points out that the fact "need not be considered strange," and why. He admits that, in this period, "Yahwism was on its way towards something higher and purer, and was already a beneficent force in Israel as compared with other and more debasing types of religion," but asks us to remember "that among these Semites there were, unquestionably, relics of a primitive polytheism that must have held back socially the mass of the people." Nothing else could be expected once a process of development is admitted, and such a process cannot rationally be denied.

The real monarchy was much later than the formal election of monarchs; the unification of the people of the North and the South was necessarily a slow process. Still the sociologist can readily treat the Hebrews of the period as one people, noting outstanding differences in ideals and in life. He is less assisted now, however, by textual criticism; and Mr. Day elegantly remarks that he "has been forced to do much of his grubbing in the text unaided." He outlines firmly the changed environment, the decadence and passing of the clan, the growing

importance of the family and the home, the characteristic traits of village and city life, the increasing fullness and complexity of industrial life, the dehumanizing nature of warfare, the rise and spread of literature and education, and the various aspects of manners, morals, and laws. The chapter on the purification of Yahwism is a very able and courageous analysis. Altogether, the book must be admitted to be, as the author claims, "an honest and painstaking attempt to depict the social life of the Hebrews." Was this life to them interesting and joyous? Mr. Day answers: "Pre-eminently so." The value of the work lies in its grouping the facts of Hebrew social life under the strongest light of modern scholarship, and showing the groups in succession to the student or reader that is willing to learn.

Cromwell's Army. By C. H. FIRTH. (Price 7s. 6d. Methuen.)

The history of the British Army has yet to be written; but, at all events, Mr. Firth has shown how the work ought to be done, and has contributed a model chapter. There have been inaccurate and superficial sketches, such as Colonel Cooper King's, and there have been painstaking accumulations of material, such as Colonel Clifford Walton's and Sir Sibbald Scott's; but all these leave much to be desired in method or completeness. Mr. Fortescue's "History of the British Army," of which only the first two volumes have yet been published, is an admirable work, but it is rather a history of the achievements of the Army than of its growth and constitution.

The title "Cromwell's Army" does not convey the full scope of Mr. Firth's book. It is, as the title-page adds, "a history of the English soldier during the Civil Wars, the Commonwealth, and the Protectorate." After describing the so-called trained bands, which were almost the only military force in England when the Civil War began, Mr. Firth explains how King and Parliament raised their armies, and how these armies were transformed as the war went on. He is not writing military history, and therefore gives no continuous account of the battles, but makes repeated reference to them to illustrate particular points. He devotes separate chapters to Infantry, Cavalry, Artillery and Sieges, Supplies and Equipment, Care of the Sick and Wounded, and Discipline. It is characteristic of the force with which he is concerned that he has to add two final chapters: Religion in the Army, and Politics in the Army.

Throughout the book one aim is kept steadily in view: to bring home to the reader what the British soldier of that day was like, what were the conditions under which he fought and the factors of success. Mr. Firth not only brings to this task unrivalled knowledge and singular lucidity of exposition, but he buttresses his text at every stage with the aptest of quotations, drawn from sources familiar and recondite. His footnotes form a bibliography, and in an appendix of forty pages he gives extracts from drill-books and military regulations. There are occasional negligences of expression, as, for instance:—"The cause of the difference between the discipline of the two armies was mainly due to greater vigour in the administration of each" (page 285); but the book is most readable.

The increasing importance of infantry is one of the characteristics of the sixteenth and the seventeenth centuries. . . . Before the middle of the seventeenth century infantry had so much increased in efficiency that soldiers ceased to hold the traditional view that it was more honourable to serve in the horse than the foot. . . . In England, at the time when the Civil War began, it cannot be said that infantry was yet as highly esteemed as cavalry, but, as in the rest of Europe, it had greatly increased in efficiency, and therefore in honour.

This growth in the relative importance of infantry seems to be rather too broadly stated. Rüstow has pointed out that, while the wars in Italy and the Low Countries in the course of the sixteenth century had enhanced the value of infantry, the Thirty Years' War told in the opposite direction. The extent of the theatre of war led Gustavus and other leaders to cut themselves loose from their base, to set great store by mobility, and to increase the proportion of mounted men in their armies. Horsemen, abandoning the lance, took to firearms, and a writer of 1642 (quoted in Mr. Firth's appendix) dwells upon the helplessness of the pikemen against this form of attack. He concludes: "It is high time for the pikemen to look after another weapon, which can and will better defend themselves, and offend their enemies, than their pikes can do." It was not till such a weapon had been found, by the combination of musket

and bayonet, that infantry fully regained the position which had been held by the Spanish foot under Alva and Parma.

The same conditions operated in the English Civil War, and the Parliamentary victories were due to the superiority of their horse, as formed and handled by Cromwell, rather than to the excellence of the infantry of the new model. Mr. Gardiner has remarked that in those days it was impossible for infantry to march safely without a convoy of horse over open country; but the Swiss had not found it impossible when they escorted Charles IX. from Meaux to Paris in 1567. Sir Roger Williams knew no reason why two thousand pikemen and one thousand musketeers should not be able to make good their retreat across ten miles of open country in spite of three thousand horsemen, however well equipped.

Mr. Firth says that when the depth of files was reduced from six men to three, in order to present a broader front, this was called "doubling" the files. It might well have been so, but it seems to have been actually called doubling the front. "Double your files" meant, at any rate in the eighteenth century, doubling their depth and halving their number. But a reviewer is half ashamed to speak of such trifles in a brief notice of a work of this quality. It is a book to raise the standard of military literature, and we can only hope that it will stimulate other writers to deal with later phases of the history of the British Army in similar fashion. To take another point of view, it would not be easy to find a better historical text-book for a sixth form than Mr. Firth's "Cromwell," supplemented by his "Cromwell's Army."

The Story of Westminster Abbey. By VIOLET BROOKE-HUNT. (Price 6s. Nisbet & Co.)

How this latest version of the Story of Westminster Abbey came to be written is told us by Miss Brooke-Hunt in an interesting introduction. The young son of a colonial governor was on a visit to her house. He was a "much-travelled person," having accompanied his parents abroad, and, Odysseus-like, having seen the cities of many men and—to some extent at least—come to know their ways, and was a dreamy boy withal. "I wish," he said, "I could always learn things by seeing them," and so, the writer tells us, "I took Geoffrey at his word, and one morning we wandered down to Westminster Abbey for the ostensible purpose of seeing the Coronation Chair. Of course we saw a great deal more, and one visit led to another," and, in short, to the writing of this book at Geoffrey's request. For to his delight he found the Abbey "not a bit like a churchyard, though it is full of monuments," but "just a book about English history right from the very beginning."

And so what Miss Brooke-Hunt has written down is the story of a great book that covers eight centuries of our national history—a story that does not profess to be technical, exhaustive, or very erudite, but which is good even for Geoffreys of a larger growth to read.

The interest attaching to Westminster is so great and varied that the writer of a work upon it is embarrassed by the choice between treating it from the architectural standpoint and as our English Valhalla. To do full justice to both sides of the subject is a task which none but the foolhardy would attempt. Our authoress, however, without the use of technical forms, succeeds in making the reader perceive that the fabric has a history of its own, a history of structural growth and change, the stages of which she clearly marks, and at the same time she recalls in imagination its appearance in different times and circumstances. Her chief purpose, however, is by means of recalling historic events connected with the Palace of Westminster, the Abbey, and its Church to link with this little plot of venerated ground the memories chiefly of men who have made England great. From the Stuart period onwards her story becomes more biographical. Rambles among the monuments set her discoursing about the men and women and children who met beneath them, or whose names are honoured on them, though their bodies lie elsewhere. And in the later chapters we have fuller notices of her own and Geoffrey's particular favourites among statesmen, divines, poets, actors, musicians, and novelists; for, to account for her selection, she explains that "Geoffrey had his favourites and I had mine, for both of us in our different ways are hero worshippers." The reader must be content with the author's choice; but it may strike him as odd that Tennyson should have five pages to himself, while Dryden is dismissed

in three or four sentences, one of which tells us that "he was not a great poet, but he had the knack of reasoning well in verse, of choosing apt words, and of writing vigorously." But for all that Miss Brooke-Hunt's "meditations among the tombs," though not, to our judgment, the best part of the book, are pleasant enough.

We must not omit to notice the illustrations, of which there are thirty-two, mostly photographs of the building from different points of view. One of these is in error labelled "West Transept"; and it might be useful, at the risk of seeming ungracious, to point out one or two other slips. On page 172 Busby is twice called "Bushby," though elsewhere the name is properly given. On page 157 the prebendaries are called "prebends," which is as much as calling a parson a parsonage; and on page 214 we read how "English blood had flown [*sic*] freely." These trifles apart, we can most warmly commend "The Story of Westminster Abbey" as a book for every English boy and girl to read, and their parents, too, for that matter. It possesses the merits of a guide-book combined with the charms of a romance. Reading it we feel prouder than ever of our country, and of this the stateliest and most venerable of its splendid churches.

State Trials, Political and Social. Selected and edited by H. L. STEPHEN, one of His Majesty's Judges of the High Court of Calcutta. Second Series. Vols. III. and IV. (Duckworth & Co.)

These two volumes are edited on the same lines as their predecessors, and, like them, contain much delightful matter. Of the eleven trials with which Judge Stephen presents us here the most interesting is the case of James Annesley, the claimant, against the Earl of Anglesey, a fine specimen of the romance of the law-courts, used not very skilfully by Smollett in "Peregrine Pickle," by Scott in "Guy Mannering," and by Charles Reade in "The Wandering Heir." The claimant got his case, though his victory was a barren one, and a careful reading of the evidence leads us to doubt the justice of the verdict. On one side or the other—possibly on both—there must have been an enormous amount of "hard swearing." Lord Byron's fatal duel with Mr. Chaworth, and the trial of Count Königsmarck for the assassination of Thomas Thynne, "Tom of Ten Thousand," are such famous events that we are glad to have them recorded here. Historically the most important of the trials are those of the Earl of Essex in Elizabeth's reign, and of the three men who were unjustly executed for the murder of Sir Edmundsbury Godfrey, the first victims of the Popish Plot scare. The trial of Essex is taken from a hitherto unpublished MS. belonging to Lord Tolemache, which, as the editor remarks, gives special prominence to Bacon's part in the proceedings. Two of the trials propound puzzles on which the Judge asks for the opinion of his readers. In our opinion Perry, who accused himself, his brother, and his mother of the murder of his master, Harrison, was a malicious maniac. All three were executed, and Harrison, after a mysterious disappearance of two years, returned home with an improbable story, declaring that he had been spirited off and sold as a slave in Turkey for the contemptible sum of £7. He, too, we are inclined to think, was cracked, and his disappearance reminds us of a case which excited much interest in 1868. The hero of it, a clergyman and a member of a distinguished family, was found after six weeks, disguised as a carter, though, if, like Harrison, he had lived in the seventeenth century, he might easily have concealed himself for a long time. In the case of Barnard, we certainly agree with Judge Stephen that it is probable that he did write the threatening letters to the Duke of Marlborough of which he was accused. These volumes are well edited. Formal matters, and, for the most part, the evidence of witnesses who virtually repeated what had already been said, are merely indicated; the biographical notes are excellent, though something more might have been told us of the after-life of James Annesley; and there are two well executed portraits and a thoroughly good index. Such merits will incline the reader to be lenient towards a playful introduction addressed apparently to the members of a club in Piccadilly, and even to a silly note on the fable of the Essex ring. We are sorry that the Judge believes that he has exhausted the trials capable of being treated on his plan. We cannot think that this is so, and, as he asks for suggestions, offer for his consideration the trial of Nathaniel Fiennes for the

surrender of Bristol, and the intricate and curious story of the bigamous Duchess of Kingston. He will, we hope, make another attempt to find fresh material, for we should rejoice to receive at least two volumes more of his well edited "State Trials."

"Stanford's Compendium of Geography and Travel." (New Issue.)—*Central and South America*. Vol. II. *Central America and West Indies*. By A. G. KEANE, F.R.G.S. Edited by Sir CLEMENTS MARKHAM, K.C.B., F.R.S.

Geography has gone far from the first pilgrim itineraries and orthodox maps showing Jerusalem as the centre of the world, "the ark a-top of Ararat," and Paradise with its rivers and trees. The series to which this volume belongs has also developed since its appearance nearly a generation ago, when it was designed as a free translation of a German work. Through the late R. H. Quick, Prof. Keane, recommended by his linguistic requirements and his work on the former *Quarterly Journal of Education*, came to be employed in this translation, throwing himself into the task with a mastery that soon transformed his materials; and he now rightly stands as author of most volumes in the new and extended series. This volume well sustains his reputation by the success with which he has incorporated the results of recent travel with his own encyclopædic knowledge, particularly full on the ethnological side. Here are included with Central America and the West Indies the European possessions of Guiana, while the intervening Colombian provinces fall into the South American volume, a somewhat awkward arrangement, probably dictated by considerations of space; yet it might be defended as leaving the Hispano-Portuguese colonies to be dealt with *en bloc*. Prof. Keane shows himself practical and up-to-date in treating questions of present interest, such as the Panama Canal and the West Indian industries. As he does not shrink from historical sketches, we could have desired that on the Mosquito Coast he had made some mention of "Gregor McGregor, Cacique of Poyais," that real Tartarin whose exploits in more than one part of this region had once a resounding fame but faintly echoed even in the "Dictionary of National Biography." Any such omissions, however, seem slight among the mass of information packed together into a volume well provided with maps and plans.

A Primer of French Verse. By F. SPENCER. (Cambridge University Press.)

Prof. Spencer has supplied us not only with an excellent treatise on French prosody, but also with a capital collection of French verse. We have not noticed any mention of the rule in strict classical plays that the sequence of masculine and feminine rimes must be observed even at the end of one act and the beginning of the following; though Molière did not always observe it. And we should have welcomed more specimens of modern verse even if the question of copyright did stand in the way. Is it not a mistake to modernize the spelling of Charles d'Orléans's "Rondel of Spring"? We are only able to refer to Gaston Paris and to Sudre's version of Villon's "Ballade des Pendus." Both differ considerably from the one given by Prof. Spencer. Compare the first two lines of the "Envoi":

"Prince Jesus, qui sur tous as maistrise,
Garde qu'enfer n'ait de nous seigneurie." (G. Paris.)

"Prince Jhesus, qui sur tous a maistrise,
Garde qu'enfer n'ait de nous seigneurie." (Sudre.)

"Prince Jésus, qui sur tous seigneurie,^s
Garde qu'enfer n'ait de nous la maistrise. (Spencer.)
^s is Lord."

Bonnard and Salmon do not give *seigneurie* as a verb. In the absence of books of reference, we can only give the extracts without further comment. The high standard of Prof. Spencer's book leads us to believe that he has good grounds for the readings he has adopted.

A Primer of French Literature. By E. WEEKLEY. (Blackie.)

If any one is to be allowed to write an elementary history of literature, which we doubt, the privilege must be granted to Prof. Weekley. He has recognized that catalogues of names and records of dates do not constitute even a primer. Extracts are given (would that they could have been made longer and translated into Modern French); the customary lavish praise on stock subjects is omitted, and many neat turns of language impress a point—e.g., "The *esprit gaulois* is the satirical spirit of disrespect." We sometimes wonder why English writers on Old French employ the term "vulgar Latin." "Popular Latin" is a better name, and is far less likely to mislead. In his

remarks on the "Chanson de Roland," Prof. Weekley tells us that the Frankish Army was massacred by Gascons. Does he not mean Basques (Vascons)? No mention appears to have been made of Guillaume de Machaut, and the name of Christine de Pisan occurs in the text, and not in the index. Finally, is it true that the work of Hugo and Musset is (as far as their poems are concerned) "a learned literature, appealing only to the cultured"? We have cavilled a little because we like the Primer on the whole and hope to see a second edition. The book is well arranged, contains a mass of information, and is supplied with a good index.

Colloquial French, with Phonetic Pronunciation. By H. SWAN. (D. Nutt.)

This handbook for travellers, cyclists, and photographers has reached its sixth edition, and, consequently, may be considered to contain the required information and the colloquialisms most needed. No phonetic symbols other than ordinary letters, &c., are introduced. Examples are: "Poovè voo-dévelopè-ün plahk poor mwa?" "Lah Morrg (la Morgue), Pon-dee-ai-nah (Pont d'Jéna)." "Lah saen (senn) (La Seine)." Thick type is used to denote an accented syllable. The author gives a means for preventing sea-sickness that many people have found useful. "Breathe in when the boat is going downwards; breathe out when the boat is going upwards." This, with some attention paid to feeding, will mitigate nausea.

A New English and Spanish Vocabulary. (Price 2s. 6d. Hirschfeld Brothers.)

A great time-saver for all who require Spanish for professional or business purposes. Scientific and technical terms, familiar phrases, Spanish abbreviations, proper names, &c., are all to be seen at a glance. There are more than seven hundred pages of well arranged vocabulary, printed in such a manner that the book can easily be carried in the pocket. It is unnecessary to point out the many good features of this book; we need only state that the compilation has been made by the Taylorian Teacher of Spanish at Oxford. As an example of the careful attention to detail and of the up-to-date character of the compilation, we may mention that the "Vocabulary" furnishes distinct words for the various forms of the bicycle—the velocipede, the "ordinary," and the "safety."

Spanish and English Conversation: First Book. (Ginn & Co.)

Like all of Ginn & Co.'s Spanish texts which we have seen, this book is printed in very clear type on good paper. The firm deserves all praise for paying so much attention to these very important details. The book is divided into two parts: Part I. contains Spanish only—conversations, exercises, and stories; Part II. consists of an English translation of Part I. We wish that, in addition to the idiomatic rendering—as *echar agua en el mar*, "to carry coals to Newcastle"—a literal construe had been added. Great care has been taken to bring the book up to date, the accentuation conforming to the latest rules laid down by the Spanish Royal Academy. Teachers of Spanish, and students who are learning this language by themselves, will be delighted with this most useful "Conversation Book."

Amigos y Auxiliares del Hombre. (Ginn & Co.)

The object of this book, as set forth in a short and sensible preface, is to inculcate kindness to animals. With this object the author has collected stories well calculated to interest children and also to demonstrate the affection, gratitude, and fidelity of animals when properly treated. The stories do more than this—they show that systematic kindness to dumb creatures has a reflex influence on character. One of the chief charms of the book is the absence of direct "preaching." The illustrations—reproductions of Landseer, Rosa Bonheur, &c.—are admirably suited to fix upon the youthful mind the lessons taught in the book. "¡Pidemelo!" "Expulsada," and "¿No sabes hablar?" attract at the first glance and will remain indelibly fixed upon the memory. The book is attractively printed—very clear type, good paper—and well bound. It is in every respect worthy of this great American publishing firm. For scholastic purposes, an English vocabulary would prove a useful addition.

"Blackie's Illustrated Greek Series."—*The Odyssey of Homer*, I. Edited by the Rev. E. C. E. OWEN. (Price 2s.)

The best edition, take it all round, of a classical text that we have seen for many a long day. Mr. Owen gives just the right amount of help, grammatical, archaeological, and literary, that an upper fifth or sixth form boy requires. The illustrations are not only of high artistic merit, as that of the Naples Homer and the Vatican Zeus and the reproductions of Flaxman, but are some of them the best practical commentary, as those of dress and armour, ships and drinking vessels. The plan of a door and bolt is not so clear as that given in the last edition of Smith's "Dictionary of Antiquities." Some statements in the introduction would doubtless have been modified had Dr. Munro's monumental work appeared in time. Pope, we may remark, gave little more than his name to the translation of the "Odyssey," and, in consequence of a criticism of Lord Tennyson, "the man of many a shift" has been altered in later editions of Butcher and Lang.

"McDougall's Alexandra Readers."—*The Upper Reader.*

Verse and prose, grave and gay, are well distributed, and there are plenty of bold if somewhat rough illustrations. We do not care for the grammatical and philological illustrations. "All verbs that are used like those in No. 3 (if I write, &c.) to imply uncertainty and doubt are said to be in the subjunctive mood." We doubt if it is so, and are quite uncertain if in this sentence "write" is indicative or subjunctive. What again is the use of informing a sixth standard that "pilgrim" is derived from *ager* through the French?

The Sunrise of Revelation. By M. BRAMSTON. (Price 5s. net. Murray.)

This is a sequel to Miss Bramston's "Dawn of Revelation—lessons on the Old Testament which we commended as a useful guide to teachers. These lectures carry us from the birth of Christ (which Miss Bramston places in August or September of B.C. 6) to the death of St. John, but three supplementary lectures give the history of Christian writings down to the Council of Nicea. The object that the author sets before her is to produce intelligent Bible reading as opposed to the line upon line lesson which, we fear, is still the rule in high schools and public schools. To this task she brings considerable knowledge, and, what is even more important in a teacher, the power of selecting, grouping, and vivifying that knowledge. To criticize would far exceed our limits. It is enough to state that her standpoint may be fairly defined as that of the left centre, and that her principal adviser in the work was Dr. Sanday.

"The New Century Library."—*The French Revolution.* By THOMAS CARLYLE. (6 × 4 in., pp. x., 880, illustrated; price 2s. 6d. net. Nelson.)

Messrs. Nelson & Sons are giving us an excellent example, in this new series of theirs, of what can be done in the way of economizing size and weight without in any way sacrificing clearness of page and attractiveness of form. By the use of "royal" India paper—the thinnest that will stand printing—and of particularly clear long primer type, they are able to reduce books to about one-third of their usual size, and yet to keep the pages eminently readable and pleasing to the eye. Notwithstanding the extreme thinness of the paper, the printing hardly shows through at all—certainly not enough to be disagreeable. Sometimes the pages are a little difficult to turn over; but this is not always the case, and is the only drawback we have experienced. The thickness of the little volume before us is only slightly over half an inch; it is very prettily bound in limp leather; and is excellently suitable for slipping into the pocket. In cloth its price is 2s. net. The weight is about seven ounces. The series already includes the novels of Dickens, Thackeray, and Scott. Our readers should not forget this when holiday time comes.

Nelson's Literature Readers. No. 1. Selected and annotated by Dr. RICHARD GARNETT, C.B. (7 × 5 in., pp. viii., 280, illustrated; price 1s. 6d.)

It is a new thing to find a man eminent in literature condescending to compile a reading-book for schools; but, though new, and in a sense an experiment, we trust that the excellent example set by Dr. Garnett will be continued by him and followed by others. The pieces selected are, naturally, all good of their kind. They are also very suitable to the young; and, unless we are very much mistaken, a large number of them will be found fresh and new to young readers. This is not in any sense a first reading-book, but only the first volume of a series. It seems to us specially suitable to children between the ages of nine and twelve; but both younger and older children will find much that is charming in its pages. The keynotes of the book are freshness, simplicity, and objectiveness; though there are not wanting short pieces—especially amongst the selections of poetry—which appeal to the more thoughtful, and make for character. We heartily recommend this reader to schools, both for boys and for girls.

Social England. Edited by the late H. D. TRAILL, D.C.L., and J. S. MANN, M.A. Illustrated edition. (Vol. I., price 12s. net; Vol. II., price 14s. net. Cassell.)

This may fairly be called an *édition de luxe*; the ivory tint of the paper and the type, which is clear, but not staring, are particularly pleasant to the eye. No pains have been spared in the selection of the illustrations. The photographs of buildings and scenery, articles of use and ornament, as well as of rare MSS. in English and foreign collections, are for the most part well reproduced, and are exceedingly curious and interesting. The explanatory notes to them at the beginning of each volume add much to their value. In Vol. I. the photographs of stone and metal work are especially good, such as the effigies of Henry I. and Edith, of Roger the Poor, of Richard I. and Queen Eleanor, and of the Cobbler (pages 353, 366, 383, and 661). The old English metal work on page 211 comes out admirably, and no less good is the Viking ship (page 260). Among the most striking of the views are the Roman Bath (page 46) and the Norman House, Christchurch (page 537). In Vol. II. the shrine of St. Thomas Cantilupe (page 96), the traceried roofs (page 494) and the pilgrims' signs (page 377) come out well. Many of the reproductions from the "Luttrell Psalter" are excellent; and there is a delightful representation of the daughter

of Herodias dancing, on page 366. The edition contains about 2,500 pictures, besides numerous coloured plates; and the third volume is to appear in the autumn.

"The Century Science Series."—*Michael Faraday, his Life and Work.* By Prof. SILVANUS P. THOMPSON. (Price 2s. 6d. Cassell.)

The story of the life and work of Faraday must always be a source of wonder and admiration even to those who take but a passing interest in the history of scientific discovery, but to the student of physical science it appeals with double force. Other biographies of the great investigator exist, but they are, for the most part, now out of print, and this volume will be read with particular interest by those who possess some physical and chemical knowledge. The first quarter of the book is devoted to an account of the circumstances of Faraday's early life, first as bookbinder's apprentice, then as assistant to Sir Humphrey Davy at the Royal Institution, and later as director of that famous place. Much interest is imparted to this section by numerous extracts from his letters and diary. Then follow about a hundred pages dealing with the researches carried out by Faraday during the period 1816 to 1862. This part of the book is exceptionally interesting, and numerous abstracts from his laboratory note-book, together with many of the accompanying diagrams, are reproduced. An account of Faraday's middle and later life, his views on the pursuit of science and on education, and his position in matters of religion, conclude a most interesting and readable book. In educational matters, as in other directions, Faraday had ideas in advance of his times, and we find him earnestly advocating the introduction of science into school curricula in 1862. We may perhaps be permitted to make an extract from one of his lectures on "the kind of education which science offers to man." He says: "It teaches us to be neglectful of nothing, not to despise the small beginnings—they precede of necessity all great things. . . . It teaches a continual comparison of the small and great, and that under differences almost approaching the infinite, for the small as often contains the great in principle as the great does the small; and thus the mind becomes comprehensive. It teaches to deduce principles carefully, to hold them firmly, or to suspend the judgment, to discover and obey law, and by it to be bold in applying to the greatest what we know of the smallest." We heartily commend this book equally to those who have read other accounts of Faraday's life and to those who have not.

"Vanderbilt Oriental Series."—*A Grammatical Index to Chândogya Upaniṣad.* By CHARLES EDGAR LITTLE, Ph.D. (American Book Co.)

Prof. Little has two aims: "to classify the linguistic material of this *Upaniṣad* for the use of philologists in studying the life and growth of the language spoken by the ancient Hindus, and in determining the literary relation of the 'Chândogya' to other *Upaniṣads* and to the general mass of Sanskrit literature"; and "to furnish sufficient grammatical and lexical data to serve as a special dictionary for those who shall read this piece of literature for the first time." Why not write "*Upaniṣads*" in English? Prof. Little follows Böhtlingk's text, recording deviations. Was it necessary to manufacture the word "plutate" after Böhtlingk's *plutiren*? The work has been accomplished with care and thoroughness. We observe, with pleasure, that Prof. Little is engaged on a severe criticism of the text and also on a translation.

Quain's Dictionary of Medicine. Third edition. Edited by H. MONTAGUE MURRAY. (Price 21s. net. Longmans.)

This standard work, of which the fuller title will be found under "Books of the Month," does not fall within our province. It is sufficient to state that among the contributors will be found all, or nearly all, the leading authorities of the medical profession. It is a work that heads of schools or boarding houses should possess, not in order to treat their pupils (Heaven forbid!), but to know what is known about infection, and to be able to follow intelligently the treatment prescribed by the ordinary practitioner, and possibly to check it and take a second opinion or call in a specialist. There is, besides, a vast amount of general information under such headings as "Sanitary Law," "Röntgen Rays," "Personal Health," "Sea Sickness," which will appeal to the layman.

Physiology for the Laboratory. By B. M. BROWN. (Price 3s. 6d. Ginn & Co.)

This book provides concise directions for the performance of a large number of experiments illustrating the principles of physiology. The apparatus required is of the simplest character, and the specimens are easily obtainable. The general plan is similar to that adopted in text-books of practical chemistry based on the heuristic system, and the student who works through the exercises in an intelligent and conscientious manner will have secured a sound foundation for more advanced work. The printing is excellent, and the text is illustrated with nineteen diagrams.

Nelson's Commercial Arithmetic. By G. E. DENCH, B.A. (Price 2s. 6d.)

The chief features of a text-book of commercial arithmetic are the omission of all pure arithmetic which has no practical bearing and the

use of special methods of rapid calculation. Both these points are carefully attended to in this book. Pure arithmetic occupies no more than one-fifth of the whole, and even this amount might have been diminished by leaving out recurring decimals, which are of little practical value. There are some useful chapters on short methods of computation, and several of the later chapters on commercial arithmetic proper are so good that it would be hard to improve them. We have noticed a few mistakes that should be corrected in a second edition, which we have no doubt will soon be required. The rule for finding leap-year (page xii.) is incomplete. In contracted division, to ensure accuracy in the last place of the quotient, the number of figures retained in the divisor should be one more than the number required in the quotient (page 122); and in contracted square root the right-hand figure of the last complete divisor should be doubled before contraction begins (page 205).

Deutsche Prosa Zusammenge stellt. Von MARGARETA HENSCHKE. (Price 3 marks. Gera: Th. Hofmann.)

There are still teachers, and the present reviewer is one of them, who prefer a plain text without note or comment to the elaborate editions issued by the University Presses where the text is sandwiched between a bulky introduction and a more voluminous body of notes. To such we strongly commend Fräulein Henschke's "Prosa" as a reading-book for upper classes. It is not, like most readers, composed of extracts, but consists of essays and addresses, each complete in itself, though some have been curtailed. We have specimens of the best contemporary writers on history, literature, art, Nature-study, economics, and ethics. We can best indicate the character of the work by naming a specimen or two under each of these heads. History: Curtius, "The Greeks as Masters of Colonization"; Von Sybel on "The Monument to Stein." Literature: Grimm, "Goethe in Italy"; B. ten Brink, "Shakespeare as Poet and Man." Art: Burckhardt's "Temple of Poseidon at Paestum." Nature-study: Cohn, "Botanical Problems." Economics: Roscher on "Luxury." Ethics: Rein on "Pestalozzi." It will be seen that the editor has pursued the Herbartian aim of exciting many-sided interest.

The Youth's Pocket Note-Book. Compiled by G. N. HESTER. (Price 2s. net, leather; 1s. 6d. cloth. Houlston.)

A pocket diary with Chesterfield's "Letter to his Son" and Hazlitt's "Advice to a Schoolboy" as prelude—both excellent literature, but we doubt whether they would stand the test of daily wear and tear for a whole year. Each page is headed by a sentence or apophthegm—English, French, or Latin. These are well chosen and well translated. It may seem a little ridiculous to be reviewing a diary in June, but we are not responsible for the anachronism.

The Art of Teaching. By EMERSON E. WHITE. (New York: American Book Company.)

There is much of practical suggestiveness in this manual. The author claims that he has treated the subject apart from the domain of philosophy and especially the uncertain philosophy of education. Still it is perfectly clear that a knowledge of psychology and ethics is highly desirable before dealing with many of the problems presented. One interesting subject discussed in this book, which we have not seen so suggestively dealt with in the ordinary books, is the question of class instruction in its relation to individual appropriation and development. Other valuable points of interest in the book are the relation of book-study to instruction and the methods of teaching pupils in class, written exercises, and promotion examinations. Account is given of methods for teaching reading, language, arithmetic, geography. The book is certainly suggestive, and worthy of reference on many of the topics.

Comment élever nos Fils. Par JOSEPH DUHAMEL. (Price 3 fr. 50. Paris: Charpentier.)

This volume is at once a manifesto of the distinguished Harrow master who has just started a new educational experiment as the first Director of the Collège de Normandie. He strikes the happy mean between the Anglomaniacs and the Anglophobes. If M. Demolins, he observes, had lived, like the author, for fifteen years in close contact with English schoolboys, he would have needs put some shadows in his picture. Healthy animals, plucky, self-reliant, *bons enfants*—all this M. Duhamel endorses; but he feels bound to add that they can neither speak nor write correctly their own language, that their knowledge of their own literature is confined to a play or two of Shakespeare and the Bible, and that to all foreign literatures they are profoundly indifferent. We must sorrowfully own that this is a true bill. Let us hope that the Norman College will combine in just proportion English games and French humanities.

Shell Life: an Introduction to the British Mollusca. By EDWARD STRP. (Price 6s. Warne.)

This, like its companion volume, "The Romance of Wild Flowers," is written for the young naturalist, not necessarily identical with the young collector. It is well calculated to stimulate in him the spirit of observation, and lead him on to a more complete and scientific work, such as Cooke's "Molluscs." Of over 750 species of indigenous molluscs, 650 are described, and a good proportion of these are figured in these pages. We can strongly recommend the volume.

Optics. By A. S. PERCIVAL. (Price 10s. Macmillan.)

This excellent work will be found useful as a text-book on geometrical optics, but it is not intended so much for ordinary students of light as for those interested in ophthalmology. Special prominence is given to those parts of the subject which bear directly upon the optics of the human eye, its defects, and their remedy by the use of suitable lenses. Many numerical examples are worked out in the text, and a number are given at the end of each chapter for solution by the student. Although a good table of contents is provided, we miss an index. The book is excellently printed, and the diagrams are large and clear.

The First Book: Song and Story for Little Children. Edited by E. E. SPEIGHT and CLARA L. THOMSON. (Price 2s. net. Simpkin, Marshall.)

The "Junior Temple Reader" has taken its place in the scholastic world, and most teachers are familiar with its plan of composition. Of the present volume we need only say that the same method is carried a stage lower, and that the infantile folk lore and folk *Lieder* have been chosen with equal taste and judgment. There is music for the rimes, and illustrations on every page; those by the brothers Gould are admirable.

H. G. Wells, Les premiers Hommes dans la Lune. Roman traduit de l'Anglais par H. D. DAVRAY. (Price 3f. 50c. Société du Mercure de France.)

A very readable translation of Mr. Wells's fascinating book; and, so far as we have been able to compare it with the original, above the average in accuracy. Here and there we have found a phrase which seems hardly a full equivalent for the English; but, on the whole, we have been more inclined to wonder that so much of Mr. Wells's individual style can be retained in the process of translation. Any teacher who may be fortunate enough to have a really intelligent class, with no too importunate examination in view, might find it well worth while to try this book for reading "at sight."

SAFE NOVELS.

Michael Ferrier. By E. FRANCES POYNTER. (Price 6s. Macmillan.)—Miss Poynter has chosen for her hero a man of over-sensitive organization, and given him an education calculated to increase his tendency to morbidness rather than to brace his moral nerves. But she succeeds in making Michael Ferrier interesting, and we wish him well in his courtship of Helen Umfraville, a really charming girl upon whose successful creation the author is to be congratulated. Helen has also been unfortunate. She is motherless, and practically fatherless, for her father is incapable of bearing the restraints of family life, and arranges his life in Italy on lines not domestic at all. But Helen is well provided with the things of the world and she has an admirable friend and guardian in Miss Beavan, her volunteer governess. Between Miss Beavan, who is all sterling worth, common sense, and real refinement, and Lady Mills, the society god-mother, with a bias of falseness in her character, there is hostility, veiled or open, from the beginning of the book to the end. When Michael comes to London he gets his first lessons in worldly discretion from Lady Mills, and idealises her very completely. Disillusionment comes when Michael tells his *confidante* that he is in love with Helen—Lady Mills has meant Helen for her own son. Accordingly she lies to Michael, pretending that her boy and Helen are engaged. Complications arise and the situation gets distinctly uncomfortable. And then it is that the weakness of Michael—and also of the plot—declares itself. The pretensions of Henry Mills provoke Ferrier beyond endurance, and in a moment of passion murder is done. The sequel is distressing and depressing. But the constancy of Helen is touching, and, though we wish there had been another development of the story, we admire to the end its quiet delicacy and distinction of tone.

The Dark o' the Moon. By S. R. CROCKETT. (Price 6s. Macmillan.)—In "The Dark o' the Moon" Mr. Crockett carries forward the history of the Raiders. We have them in open insurrection under command of a Joan of Arc heroine called Marion of the Isle. Marion, in King George's uniform, makes a gallant figure in camp and fight. But she finds her master in Captain Austin Pendennis, and slowly but completely capitulates. Another heroine, Joyce Faa, not less heroic but more feminine in her action, belongs to the narrator of the story, Heron Maxwell. But he holds her through the greater part of the

book on the precarious tenure of distinterested love put under restraint by the fact that she is the betrothed wife of another. The novel is full of bustling life and fine scenic effects. It is not quite easy to understand the action in the beginning, but by degrees conviction warms the narrative and "it goes."

A Heart of Flame. By CHARLES FLEMING EMBRÉE. (Price 6s. Methuen.)—Santa Fé is the scene of Mr. Embrée's novel "A Heart of Flame." The plot hangs on the hostility with which two desperate brothers, Antonio and Patricio, regard the Church and its priests. The murder of a bishop brings things to a climax, and there is fine and moving action in the scenes that follow. The book ought to be a good one, for it is certainly clever and powerful. But the manner is too much that of the impressionist. Detail and surface effect are overdone, and we lose sight of the author's intention, while, as motives of action in the characters are never made clear to us, the general result is too indefinite to be satisfactory.

OBITUARY.—MISS CROMBIE.

By AN OLD PUPIL.

BY the death of Margaret Cuthbertson Crombie on the 13th of February the educational world lost one of its most enthusiastic and indefatigable members, and we whose great privilege it was to be trained by, and to work under, her lose a revered and much beloved friend. Hers was, indeed, a many-sided multifarious life, each day crowded with duties from morning not only until night, but to morning again. After but a few hours' sleep, she would rise and commence the day with an energy and interest which might well have put many of the younger generation of teachers to shame. "Teaching is my delight"—these were words often on her lips and demonstrated hourly in practice in her relations with her pupils. There was not a department in her establishment at Leylands, Kindergarten, School, or Training College, in the management and carrying on of which she did not take an active part. From the three-year-old mite, whose nearest approach to the utterance of her name was "Miss Tombie," to the senior student, one and all had her individual care and attention. Her infinite patience with the little ones and her skill in assisting them to make full use of their mental powers were impressive examples of the practical application of the theories put forward in her lessons on education. But the duties and interests did not begin or end with educational matters. Domestic, social, and political questions each claimed a certain amount of her time and attention, and one could only marvel how she knew and did so much. Enthusiasm for her work seemed to radiate from her; had she lived a hundred years she would still have been young. She created an atmosphere in which even those most disposed to feel disheartened were bound to find fresh hope and courage. Many of us after leaving her and taking up positions in schools where the ruling desire of the principal was for a display of "show" work at the term's end, to satisfy exacting parents, were apt to become callous and lose sight of the true purpose of education. But we had only to go to our dear mistress and friend, who was ever ready to help us out of our difficulties, and we would return to our work with renewed inspiration and fresh resolves and strivings to follow more closely in her footsteps. She was always so unconscious of what she stood for to us, her old students, that once—it was the last time I saw her—I tried to tell her how her influence had followed us into our different corners of the world and made life a different and more beautiful thing; how we spoke of her to one another with blessing and gratitude, knowing that she had made us better women than we could have become had her light been withheld. She listened with a beautiful smile on her face, and with tears freely falling, said: "It is too much—I could not have asked so much."

Pestalozzi never had a truer disciple than Miss Crombie, or one who more faithfully carried out his principles in her plan of work. She was often urged to reprint her translation of his life by Baron Roger de Guimps, but she would not consent to do so until she had revised her work. This was one of the many tasks that she tried in vain to find time for. In many ways she singularly resembled Pestalozzi—in her zeal for everything connected with education, in the entire absence of any self-interest or sordid motive in her work, in her great simplicity, which was as that of a little child: she was so good herself that she could see no evil in others. Truly may it be said of her that she was "a perfect woman, nobly planned." I have heard her say, when it had been suggested that she should some day give up teaching: "I hope I shall die in harness." Her wish was fulfilled. Only the week before she was taken from us she was struggling against complete physical exhaustion, although giving lessons as usual. But, alas! her splendid constitution, undermined no doubt by many years of overstrain, at last gave way, and death claimed his own. But her memory lives, and will live with all those who knew and loved her—and to know her was to love her. An idealist she was, and our ideal as well. We shall think of her always with love and reverence, and with gratitude in our hearts for having come under her influence and shared in her friendship.

OCCASIONAL NOTES.

THE religious question, which we heard the other day described as a detail, is the one serious stumbling-block in the way of the educational proposals of the Government.

The Education Bill.

Could we have had a clean slate, other proposals might have been more cordially welcomed. But, with the voluntary-school system in existence, compromise was imperative; and we have given our support to the main principles of this Bill chiefly because, first of all, one Local Authority is provided, and, secondly, because the Bill is not burdened with details. Each locality is left, to a great extent, to work out its own salvation. Even if, in certain backward localities, the progress should be infinitesimal, eventually, we feel sure, a far sounder system of national education will result than if an attempt were made from headquarters to direct the education of the locality in all its details. Three points we have raised as needing amendment before we can give our entire approval to the Bill. The voluntary clauses must be made compulsory. That this is the intention of the Government seems now beyond doubt. There must be an additional Treasury grant. This is now conceded by Mr. Balfour. Suitable arrangements must be made for pupil-teachers belonging to the Free Churches. This is a real grievance for which an acceptable remedy has yet to be found.

CLAUSE 1 has passed through Committee. Mr. Balfour, no doubt remembering the lesson he learnt in 1896, remained deaf to all blandishments. The Council

The One Authority.

of every county and of every county borough shall be the Education Authority. It would, of course, be contrary to all political experience in England if this clause were without modification. In the first place, London is excluded from its operation; and, secondly, boroughs with a population

of ten thousand, and urban districts with a population of twenty thousand, are to be the Authority for elementary education within their area. Mr. Balfour's financial proposals will, we venture to think, remove all opposition on this ground. In addition to the fee grant and the variable grant already contributed from imperial funds, the Treasury is willing to pay a sum equivalent to about 7s. 6d. per child. Of this grant a sum equal to 4s. per child will be paid to each school. The remainder will be apportioned according to the poverty or wealth of the area as shown by the produce of a penny rate. The existing special aid grant to voluntary schools and the grant to poor School Board areas will both be included in the new seven-and-sixpenny grant. The new grant doubles the old.

MR. BALFOUR agreed to modify the opening line of Clause 2 as follows: "The Local Education Authority shall consider the needs and take such steps after consultation with the Education Department as may seem to them desirable to aid the supply of education other than elementary."

Clause 2. It is curious, by the way, that Mr. Balfour and other speakers so often fail to give the Education Department its new statutory name. In the minds of many speakers the substitution of "shall" for "may" seemed an important point. We are inclined to doubt whether the new form of words is stronger than the old. We certainly hope much from the new Authority, but compulsory burdens are not always cheerfully accepted. A further amendment which follows the wording given above runs "including the training of teachers and the general co-ordination of all forms of education." The danger is that, if details are once admitted into the Bill, the idea may arise that what is not specifically included is not a duty of the Local Authority. These points are important, but certainly the original wording included them. Another amendment makes compulsory the spending upon education of the whisky money. We are glad to see the provision for training specifically mentioned. At the same time it was not excluded by the terms of the original clause.

THE most satisfactory feature of the almost interminable discussions on the Education Bill is the absolute unanimity of the associations of teachers and other experts in favour of the general principle. No less than ten of these bodies, representing every grade of secondary, technical, and elementary education, have dealt with the question in a broad and businesslike manner, avoiding all reference to sectarian questions, and suggesting amendments to make the Bill more workmanlike. Well might Lord Avebury express his astonishment at the unanimity in this matter of such a very mixed body as the Association of Technical Institutes. But the most remarkable sign of the times was the discussion at the meeting of the School Board Clerks' Association, which body declined to condemn the Bill. Mr. Hance, of Liverpool, probably our greatest expert in elementary administration, who was in charge of the subject, proved a very Balaam, much to the amazement of Mr. Lyulph Stanley and other political Balaks present. "The Bill," he said, "will set up immediately for five-sixths of the population bodies capable of dealing with all forms of education." Observe, as we say at school, the force of the word "capable" in such a connexion. But, further, "the Bill will extend to every child such advantages of education as can be secured by public expenditure directed to a greater or less extent by public control," and much more to the same effect. The hopelessness of the Free Church opposition is well shown by the *naïveté* of the latest suggestion

received at a London mass meeting with great applause—that these Ministers should go to the King himself to urge him not to sign such a wicked Bill in the Coronation year.

ONE of the most curious documents which have yet seen the light is the petition of the Durham County Council (Chairman, be it noted, Mr. S. Storey, ex-M.P.) against the Bill. This Council, it will be recollected, was one of the seven which opposed the Bill of 1896, as involving the County Councils in contentious business, “endowing sectarianism,” &c. It now makes the sixth Council in opposition to the present Bill, as against some forty, and, as far as we can find out, practically all the English County Boroughs on the other side. This document is based upon the common misconception that the “scheme” of the Bill is intended to settle the quality of the education of the county concerned, instead of only referring to the composition of the rating Committee. Hence the Durham people are much afraid of what will happen in the “less progressive counties.” One has hitherto been under the impression that the duty of a County Council was to consider the effect of legislation on its own county, and not on others. After that, we find the Bill condemned for “fostering discord” by “increasing sectarian teaching at the cost of public rates,” which, of course, is entirely contrary to the fact. The abolition of School Boards, “admirable and popular executive machines,” is deeply regretted. Then we come to the *crux* of the whole question. The ninety-six Durham County Councillors are so overworked, and the train service is so bad, that they really cannot do any more work for the State. The Bill exactly contemplates such a case, and provides for unlimited outside assistance. But, no, Durham won't have it any way, and insists that the Committee should be composed as to at least two-thirds of its number of the overworked Councillors. It is not to be wondered at that Mr. S. Johnson, the Chairman of the Durham Education Committee, has written to the papers in opposition to these views.

WE are quite content with the progress of the Bill so far. Clause 1 has taken three and a half days only to get through Committee, though on it practically all the speeches were of the second reading character. This is scarcely to be wondered at, as, in Mr. Balfour's own words, it contained the whole principle of the Bill, being designed “to get rid of the *ad hoc* business once for all.” Now the Bill of 1870, which contained a hundred clauses as against twenty in the present Bill, got into Committee on June 20, was just fifteen days in Committee, and reached the second reading on July 22. There are fifty-four pages of amendments left on the order paper, but no less than six have already gone. It is difficult to conceive anything more absurd than the glee with which the party papers contemplate the piling up of amendments. The writers forget that an amendment which does not contain a new principle is generally ruled out of order, and, in one day's debate, two pages suffered this fate. Besides, any amendment to, for instance, Clause I., necessitates consequential amendments to almost every other clause. Of the fifty-four pages, more than half are taken up in this way, and the decisions already given have made nearly ten pages so much waste paper. Further, no less than five pages more deal with financial matters bearing on the rates *versus* taxes controversy. These all vanish before the Chancellor of the Exchequer's concession. Finally, several of the clauses are merely of a drafting character, and are subject to but little attempt at amendment. Thus, with the aid of the closure, we do not despair

seeing this Bill, at any rate, made law without any carriage over into the autumn.

MEANWHILE it must not be supposed that all the amendments are of a frivolous or obstructive character. A group of members, notably Mr. Hobhouse, Sir F. Powell, Mr. Haldane, Mr. Warr, and Lord E. Fitzmaurice, acting on behalf of various associations, are doing their best to improve the machinery of the Bill in details which are beneath the notice of the politicians proper. Clauses 7 and 8, dealing with the constitution of the managing bodies of schools, are far from perfect. Mr. Hobhouse proposes to alter each managing body into a “committee of management.”

The Local Education Authority shall fix the number of members, and shall appoint one-half of the Committee. The other half shall be appointed as follows:—Within a borough or urban district by the Council of the borough or district, and within a rural district by the Parish Council, or, if there is no Parish Council, by the Parish Meeting. Provided that where schools are grouped for the purposes of management the Committee shall be appointed by such bodies and in such proportions as the Local Education Authority may determine.

And in Clause 8 he desires to insert a new subsection—

The Local Education Authority may, for purposes of management, group any schools not provided by them, but in such grouping shall have regard to the convenience of the managers and to the character of the religious teaching given at the schools.

It is obvious that the county proportion, if they are to be fit persons, must be few, and must not be swamped by an unlimited number of local persons. It is also of great importance that the whole of the municipal machinery should be brought into play, and every kind of council interested in the schools. There is no reason whatever why certain managers and teachers should not be common to contiguous schools, and considerable efficiency and economy must result from the formation of groups in this way.

THE amendments accepted by the Government to Clause 2 of the Education Bill go as far as can reasonably be expected. “Mandatory” words to Local Authorities like the English County Councils would not be of the slightest use, and would lead to endless friction, more especially as the Royal Commission distinctly declined to say what was adequate provision of secondary education and refused to accept any figures as regards a minimum statutory supply of such education. Mr. Acland (in the Acland-Roscoe-Hobhouse Bill) in 1894 certainly said “The County Councils shall supply,” &c., but immediately made the “shall” meaningless by the subsequent words “to such extent as they think fit.” Certain Opposition enthusiasts are now eager to adopt the Welsh system, and make the counties submit “schemes” of school provision, &c. Here, also, Mr. Acland is against them. He issued a memorandum to his Bill to show that the only reason for this provision in the Welsh Act was because of the “pooling” of endowments, which could only be effective with the consent of the Charity Commission. In the present Bill there are neither charities nor Imperial education grants in any way involved in the discretion of the Local Authority; hence there can be no need of a central direction or consent as regards the local expenditure. Ample control is exercised by means of the South Kensington grants, whose withdrawal from a recalcitrant Authority would mean bankruptcy or an intolerable strain on the rates. True, Mr. Bartley scents danger to private schools in the extra grant to elementary education: but his reasoning is too obscure, and the connexion is not obvious.

under
the Bill.*

WHEN the County Councils Association qualified its approval of Part III. of the Education Bill by a proviso that the whole of the additional expenditure should

*Part III.
made
Compulsory.*

not come from the rates a new Treasury grant was practically inevitable. Peace in South Africa made it certain. The proposal to abolish the partial and meagre special-aid and necessitous School Board grants, and substitute for them a consolidated grant averaging 7s. 6d. a head for every scholar, is an eminently practical and statesmanlike measure. It has an exact parallel in the action of Mr. Forster in 1870. Its consequences are likely to be far-reaching. In the first place, it necessitates the withdrawal of the elementary option as regards Part III., for, in an area not adopting that Part, the distribution of this grant will be impossible. Again, it sets free certain rate money which is much more likely to be devoted to secondary education. The great principle of county government, whereby the wealthier areas contribute towards the support of their poorer neighbours out of the common purse, receives emphasis from the method of distribution by means of a fixed 4s. grant and a variable addition, in proportion to poverty, of from a few pence to nearly 4s. 6d. more. The objection taken by many critics to the proposals of the Bill as regards new schools, that, as the special aid grant went only to voluntary schools, the Authority was practically bribed to let the increase of schools be in this rather than in the Board direction, is taken away, and the probability is that the Councils will now prefer to throw their influence on the other side. Possibly the best of all consequences, from the Government's point of view, is that it removes some six pages of amendments and breaks the back of the opposition from their own side of the House.

THE Council of King's College, London, has at last decided to fall into line with the general trend of University work by abolishing its religious tests. In our

Tests.

opinion it has long ago been proved that tests of this character fail in the desired result, and we welcome the news that in future appointments, with the exception of professorships or lectureships in the Faculty of Theology, no inquiry will be made into religious views. It is by no means to be wished that King's College should lose its essential differentiation from other University colleges. We do not doubt that its connexion with the Church of England will remain as close as before. It is well that each constituent college should have its special character, and the Council has added to its decision a statement declaring its unwavering determination to maintain its present position. The Universities of Oxford and Cambridge suffered long ago the abolition of their tests, and it is doubtful if the most rigid Churchman would wish to return to the former state of affairs. In all departments of life we are recognizing more freely than before that a man's religious convictions are for his own conscience alone. He is judged by his success or failure to perform the public work to which he is appointed.

THE Report of the Committee appointed to inquire into the education and training of military officers is a scathing document. "From start to finish," says the *Times*

*The Education
of
Army Officers.*

correspondent, "the report is a sweeping condemnation of the methods by which young officers are generally educated before joining the Army and technically trained after receiving their commissions." That matters have not been satisfactory on the intellectual side has long been known; but neither the public generally nor the schools in particular were prepared to find the evidence against the

results of existing examinations so overwhelming. Two years ago we heard much about the stupidity of our young officers in South Africa, and the feeling began to grow that competitive examination does not necessarily discover the qualities most needed in the examinees. But we must beware of too rapid a swing of the pendulum. There would seem to be no alternative between a competitive examination and a system that might result in the most complete and ineffective jobbery. There is little doubt that for close continuous work the Army class in a public school is ahead of the general school level. Is it possible that the application needed to ensure entrance to Woolwich or Sandhurst in itself destroys the wider development of intelligence that is known as common sense?

WITH a stiff examination ahead on which one's future depends, it is obvious that one's education will be within strictly defined limits. It seems to be beyond the

Cramming.

wit of man to devise an examination syllabus that does not open the way to possibilities of cramming. Possibly we are apt to forget that the mind is only a part of the complex human being. Possibly Mr. Cecil Rhodes was on the right lines in his proposals as to the examination of the Rhodes Scholars. It seems that we must have competitive examinations; the mistake is to make the examinations so largely literary. In the report Sandhurst comes in for more severe criticism than Woolwich. This is natural. The officer who, while ready for active warfare when called upon, has also in times of peace occupations and interests which are sufficient to keep his mind from stagnation, is likely to be more keen about his profession than the officer who, in times of peace, has no official employment of his time but a certain vexatious routine, and who is obliged to find the chief interests of his life in non-professional pursuits. It has been an inherent weakness of our Army in recent times that the want of actual warfare has deprived the officers of the real stimulus to efficiency. We would not have it otherwise; but the fact must be remembered, in apportioning blame.

A PROFESSION is understood to be that pursuit by which a man gains his livelihood. Without entering fully into the economical aspect, it is quite fair to hint that

The Amateur. the want of professional keenness to which so many important witnesses drew attention may be the indirect result of insufficient

pay. No officer goes into the Army for the purpose of earning his living. Is it not possible that as a result of this the more or less unconscious feeling has arisen that the Army is not a serious profession? The actual proposals of the Committee do not strike us as likely to lead of themselves to any great reform. To give more marks to English subjects, to fix a minimum below which no marks will count, to give less marks to mathematics—these are useful reforms in their way, but of no far-reaching influence. The choice between Latin and science as one of the four compulsory subjects seems comic. But the real importance of the report is the indirect result that it and the preceding inquiry will have of arousing keenness and energy by pointing out where these are lacking. Sandhurst and Woolwich will profit by the inspections they have undergone, just as many schools are now profiting by the recently established inspections of the Board of Education.

DISCUSSION is gradually bringing to light further anomalies and hardships inherent in the Registration Order as it now stands. We learn from the *Times* that the

*The Register:
its Anomalies.*

Consultative Committee has discussed the advisability of recommending the omission of the words "not being an elementary school" from Sections 3 and 4. But it seems that the Committee decided to take no steps in the matter. To ensure entry to Column B the present untrained teacher must have taught for three years in a school "not being an elementary school." This distinction between the experience to be gained in a secondary and in a primary school is artificial and illogical. The further difficulty of which we spoke last month still remains. The qualifying experience must be gained in a *recognized* school. What is a *recognized* school? We say again that nothing short of a general inspection can settle the question. It is conceivable that certain classes of schools may be "recognized" by reason of their reputation and position. But of the smaller private schools it would be absurd to argue that they should not be recognized because they are not publicly known. And it would be unjust to deny a competent teacher admission to the Register because he or she has taught in a school of which the Board of Education has no official cognizance.

IT is not altogether a gracious task to criticize the Register. Teachers have been working during the past fifty years for the establishment of this result. Now that the machinery

Remedies?

for registration is set up we are almost inclined to cry: "Accept and be thankful." But there are ominous signs that general acceptance will not be given. We do not want a partial or sectional register. The teaching profession must feel sure that the conditions of registration are not unjust before its members apply for recognition. Nothing is to be lost by waiting a few months until the associations of teachers have had an opportunity of speaking. An Order in Council can easily be supplemented by an amending Order. The Assistant Masters' Association is undertaking a useful piece of work by endeavouring to find out how many competent masters in schools of repute would be excluded under the present Order in the London area. If it is shown that the proportion excluded is large, as we fear must prove to be the case, then a reasonable ground for amendment will have been adduced. It is to be hoped that any London head master who has not yet filled up the return sent him will do so without delay.

SIR WILLIAM RICHMOND delivered an impressive address at the annual meeting of the Art for Schools Association. There is much truth in Sir William's contention

*Art
in Schools.*

that the pedagogue endeavours to influence the mind of the child by strictly intellectual processes, neglecting the education of the emotions that may be effected through the eye. Brought down to practice, this means that children should be surrounded by beautiful objects. Further reduced to the general conditions of school life, the meaning is that beautiful pictures should hang upon the class-room walls—not maps, not the Hölzel wall pictures, least of all physiological charts. These all have their uses, and should be rolled up after the lesson. Copies of works of art which train the taste and stimulate the imagination should be on the walls; and these the Association provides at a minimum price. In the course of the discussion it was made abundantly clear that the mere proximity of a work of art is not sufficient. We know how class-rooms are arranged. The pupils face the teacher and the blackboard, objects which do not necessarily allow scope for or arouse the æsthetic perceptions. The pictures are behind the children, and frequently placed far above the level of the eye.

MR. BARNETT told an amusing story to show that a child may spend years in a class-room and know nothing of the objects on the walls. It is needful

*Pictures
in Class-rooms.*

to direct the child's attention to the picture and to relate its story. Unfortunately, only a few teachers do this; and, as a class, we teachers are still too much the slaves of the old ground-glass theory, holding that the child's attention must not be distracted from the processes of pure reasoning by the prominence of external objects within his range of vision. So sky and trees are excluded, and inkstained whitewash and chalky blackboard made objects of devoted attention. At the same meeting Mr. Stewart Headlam told a pretty story to the effect that imagination exists even in the most prosaic surroundings. He had been talking of picture-galleries and had taken some children to the National Gallery, and afterwards, in the school, he asked: "Where can we see such beautiful treasures of art as the King can enjoy in Buckingham Palace?" Instead of the expected "In the National Gallery," came the timid reply: "Please, sir, in our minds."

THE popularity of the Senior Wrangler is a fact to afford food for meditation to the philosopher.

The Senior Wrangler of this year spent the early part of his life, previous to the age of twelve, in a Board school. The London School Board thereupon officially congratulate him, and

*Senior
Wranglers.*

one member speaks of the case as a proof of what Board schools can do. The real reason for congratulation is the proof afforded that machinery exists to enable a clever boy who starts in a primary school to procure scholarships throughout a course of secondary and tertiary education. "The Senior Wrangler," wrote Mr. Oscar Browning, "is the top man in the first part of a dwindling tripos." But to the man in the street he affords an excitement that is only equalled by the Oxford and Cambridge boat race. Mr. Browning further tells us that in this year five ex-elementary students have obtained honours in the final schools. These all come from the Cambridge Day Training College. Doubtless there are many others. And it is most satisfactory to know that the able son of the humblest parents has now an opportunity to enjoy the highest advantages of education. But we recommend the School Board for London to endeavour to assimilate the fact that the Mathematical Tripos is one examination out of many, and that success in other triposes may show equal ability.

OBJECTION has been taken to the statement in our last issue, that the London County Council's new training college will not provide training for secondary teachers. Our statement was prompted by

*London
County Council
Training
College.*

the conditions of the case. In October next this new institution will open its doors to a hundred King's Scholars, a number which it is proposed to increase materially within the first two years or so. For the *technical* training of this large body of primary-school teachers the staff is to be a Professor of Pedagogy (who, as principal of the college, will necessarily spend much time in administrative duties), assisted by a normal master and a normal mistress. If secondary-school teachers are admitted, they must be taught either with the King's Scholars or apart from them. If apart, then we do not see how the professor and his two colleagues can possibly do the work which such an arrangement will involve. Still less do we see how the "secondary" students, pursuing a *post-graduate* University course in pedagogy, can be profitably instructed side by side with undergraduates who, concurrently with their study for a

-degree, are attempting to master the philosophy and the *technique* of their future calling, or so much of these as are required by the regulations of the Board of Education.

THE Joint Committee on Training, at its meeting on May 30, adjourned *sine die*. The main reason for this euthanasia is, of course, the existence of the Registration Council, which may be regarded as a Statutory Committee on Training. This was the view evidently taken by the Head Masters' Conference, who formally withdrew their representative. Moreover, the two Secretaries of the Joint Committee, Mrs. Woodhouse and Prof. Withers, had resigned when they were nominated to serve on the Registration Council, and it seemed impossible to find two equally capable and willing successors. In spite of all these valid reasons, we hope that such a thoroughly representative body is not extinct, but only dormant. Not only as a link between the various associations represented, but also as a preliminary court of inquiry, it has still a place to fill. Thus, on the agenda of the very last meeting was a proposal to discuss the conditions under which the "student-teacher" of the Minute should be recognized; that the person in charge of student-teachers should not be the principal of a school or a regular class-teacher, but a qualified master of method; that there should be one such trainer to every fifteen students; that students should pay fees, and not be reckoned as part of the staff. We give this merely as an instance of the kind of inquiry for which the Joint Committee is better qualified than the Registration Council, which at present have more work than they can get through.

TECHNICAL EDUCATION.

THE proposed increase in the grant from the Government Exchequer for the purposes of elementary education will considerably facilitate the progress of the Education Bill. It is, of course, well known that a large number of voluntary schools have had their existence prolonged, not because their supporters love them more than schools of another type, but because they love rates less. Mr. Balfour's proposed supplementary grant will mean, roughly speaking, a relief to the rates of 2d. in the £. The amendment to the Bill definitely securing the residue under the Local Taxation (Customs and Excise) Act for education other than elementary will be generally recognized as desirable. There was an obvious danger that County Councils, burdened with additional responsibilities for elementary education, might have used an "option" in regard to the "residue" in favour of the rates.

THE County Council of Durham, concurring with its neighbour, the West Riding of Yorkshire, has expressed the opinion that the Education Bill now before Parliament "shows no promise of affording any satisfactory solution of the education question with which it deals." But Durham goes one better than the West Riding, and reveals the spirit of the party politician in nearly every clause of a tedious and verbose petition. In parts it is contradictory. Objecting to the substitution for what is termed the national scheme settled by Parliament of a series of county schemes, the petition urges the House to trust the County Councils all in all. It is scarcely in accordance with the facts for the petitioners to allude to the provisions of the Bill which tend to the increase of sectarian teaching in public elementary schools at the cost of the public rates, as sectarian teaching is specially excluded from the secular education provided at the public expense.

It is pathetic to read that the Council, ninety-six in number, is composed of a proportion of workmen and others actively engaged in business. Owing to distances and inconvenience of trains, it is said, attendance at a Committee meeting involves, for most of them, a surrender of a whole working day, and, even under present conditions, the Education Committee is the hardest worked of all Committees. To meet this grievous state of affairs, it is suggested that discretionary power should be given to the County Council to appoint one of their own members Chairman, or Deputy Chairman, of the Education Authority, with a suitable salary. It is not shown how the salary of one of the members will relieve the burden of the other ninety-five.

IN view of the resolutions adopted by the Durham County Council, the opinions of the Chairman of the Education Committee of that Authority are of special interest. Speaking altogether apart from any sectarian or party consideration, and purely as an educationist, it seems to me, he says, to be an honest attempt to deal with a very difficult question, and I deprecate very much the threats that have been made by a certain section of the religious community that, should the Bill pass, they will refuse to pay the education rate. "These threats may sound very defiant, and may lead the uninformed to believe that the members of the Free Churches are going to be called upon to subsidize various religious sects, and provide for the teaching of creeds and religious formulae which they do not believe, and thereby create unnecessary prejudice against the Bill. What surprises me most is that the religious denomination to which some of these denouncers belong have schools of their own of which nearly the total cost of maintenance is defrayed by the Imperial taxes; or, if it be wrong to maintain a voluntary school out of a local rate, it is equally wrong to use Imperial taxes for that purpose." As the *Times* put it the other day, the stress which Lord Rosebery and others have laid upon the iniquity of asking the Nonconformists to pay the rates for an object for which they have uncomplainingly paid taxes for a great number of years provokes a smile amongst carnal and worldly men, who are incapable of appreciating the nice distinctions which weigh with a tender conscience.

THE Report of the City and Guilds of London Institute—the pioneer of technical education in this country—is very satisfactory, and must be gratifying to the City Livery Companies which are responsible for its support. Since 1878 the City companies have subscribed £622,235 to the funds of the institute, the five largest contributors being the Goldsmiths, Fishmongers, Clothworkers, Mercers, and Drapers, the total of their donations and subscriptions being respectively £107,664, £94,910, £91,000, £63,000, £50,500. At the Central Technical College 277 regular students were under instruction, as compared with 281 in the previous year; while at the Finsbury Technical College there were 187 day students and 701 evening students. In the department of Technological Examinations 14,653 papers were worked, nearly double the total of 1891, and the number of students attaining certificate standard reached the total of 8,143.

THE PLACE OF LITERATURE IN EDUCATION.*

PLATO and Aristotle described the true education as that which causes a man to feel pleasure and pain at the right things—*χαίρειν τε καὶ λυπείσθαι οἷς δεῖ*. A modern cynic has said that public-school education consists in "teaching boys subjects they don't want to learn by methods which make them dislike them still more." May I take a third text for my discourse from my own personal experience? It was at a school debating society, and the subject was a poem of Mr. Rudyard Kipling's. There rose to defend the poem a sixth-form boy, a historian of some ability, and fairly widely read. "Hon. members," he said, "seem to forget that this is poetry. Now all poetry is rot, of course." I need not quote further—it is to that "of course," which was delivered with an air of simple conviction, that I want to call attention as a factor in the question which we are to consider.

Of the pupils who pass through our schools some, no doubt, are born Philistines, some—by too exclusive devotion to cricket or football or mathematics—achieve Philistinism. I sometimes wonder whether there be not some perhaps who have Philistinism thrust upon them. With the first two classes I do not wish to concern myself: I have no suggestion for their cure. But it is worth while considering how many boys leave our hands who, having the germs of literary appreciation in them, have had it crushed out by uncongenial methods or withered by neglect. I am not going to labour the point of the desirability of implanting this quality in the mind: if any one wishes to move the previous question on this head, let him do so. I shall take the liberty of assuming the desirability, and discussing how far it is possible by teaching to produce the desired effect.

We profess to give to the majority of our boys a literary education. What precisely that means I should find it hard to define. It certainly does not mean that every one who has been through a public school can read, write, and spell. My limited experience of boys and men goes to confirm the truth of Dogberry's saying that "reading and writing come by nature"; and nature is somewhat capricious in the distribution of her

* A U. U. paper read at Rugby, May 31, 1902.

gifts. But, at any rate, taking the ordinary boy, we concentrate his attention upon language: we begin early to make him, by translation and composition, think about the meaning of words and the construction of sentences; we try—often in vain—to give him some sense of the sound and rhythm of poetry by making him learn repetition and construct Latin verses.

It is true that in the earlier stages of all this he doesn't realize that he is learning language and its uses; he only conceives himself—for some mysterious purpose known only to the fates that control his education—to be grinding out some Latin or Greek construction, or doing puzzles with longs and shorts. But a subject is none the worse learnt because the process is unconscious, and that this training has a distinct bearing on the literary side of his education is not likely to be denied by any teacher. I fancy modern-side teachers of English literature would bear witness that a grounding in Latin is almost an essential preliminary or accompaniment of their subject.

I have so often, in argument, defended the cause of classical education that I cannot but be painfully aware of gaps in the defences which I would fain have repaired. I suppose the conventional lines of defence are two. We claim, first, that classics are the best mental gymnastic; and, secondly, that the classical literature and ideas are essential parts of the mental furniture of any truly cultured individual. For the favoured few I have no doubt that this double defence is strictly true. The ablest scholars who rise to the top of the school, and pass on to a classical career at the Universities, undoubtedly get both ideas and mental drill to a satisfactory extent. The higher stages of composition and translation provide them with a thorough training in style and language—in their own language just as much as in Latin and Greek; and their reading is wide and varied enough to cover all branches of literature, and open their minds to ideas. If we add exercises in the science of language, such as grammar and philology may well afford, and history and Scripture, I do not think that, either as mental training or as an initiation into the wide fields of literature, their education can be called unduly limited. Such boys are specialists with particular capacities for languages, and by means of these capacities we train their whole mind. If we fail with them, it is the fault, I believe, of us who teach, not of the system or the subject.

In the education of these boys, the classical specialists, who form the majority of the best boys in most, if not all, of our public schools, literature necessarily plays a large part. In the earlier stages, of course, of their classical teaching—that is to say, in the lower forms of a public school, and in the preparatory schools—the books read will be rather the means than the end. It is on the acquiring of the languages, not the understanding of the literature, that the attention is necessarily concentrated. There have, no doubt, been boys who, even in this first period, found Cæsar interesting and Xenophon exciting; but these are the negligible exceptions. Personally, I am inclined to doubt whether much attention to the subject-matter in the earlier stages is consistent with that grounding in language which is the primary object of our earlier classical teaching. So much the more reason that we should not grudge, at this stage, a liberal allowance of time to English literature, as the only kind of literature as yet accessible to our pupils.

But there will come sooner or later in the boy's progress up the school a period at which the situation is reversed. At first the book read was the means; the end was the learning of language. In the later stage the book is an end in itself; the problems of language are, or should be, a secondary consideration. It is at this stage that the difficulties become greater; it is far less easy to adapt the class system to the securing of our aim, and I doubt not that we lay ourselves open to cynical criticism, and are in danger of killing the very plant which it is our object to foster. "Then farewell, Horace, whom I hated so!"—Lord Byron is not the only schoolboy who has had that experience. Even Horace himself was not free from prejudice against the writers Orbilius taught him at school.

There are, I take it, so soon as we pass from the elements of language teaching, three branches of classical study—composition, science (by which I mean grammar and philology), and literature. May I add that the greatest of these is literature? Of course, the three divisions inevitably react upon one another. The more a boy reads, the better it will be for his composition, just as when he has tried and partially or wholly failed to produce good style himself there will be more chance of his appre-

ciating successful style in his author. Again, the words and phrases which he meets in his reading will no doubt provide material for his grammatical and philological studies, while those studies will enable him better to appreciate the precise meaning of words and phrases in his reading.

But I deprecate the making of literature subservient to either of the two other studies. If we set pieces of retranslation from the book we are reading, it is to fix the mind on the style and expressions of that book, not primarily for the sake of subsequent reproduction in prose or verse. If we stop over points of grammar, it is not because a particular line is a valuable illustration of a special construction, but because the understanding of the special construction is essential for the understanding of that particular line. Is it presumptuous or unpractical to plead that elaborate theoretical discussions of the origin of constructions and phrases, of your *οὐ μὴ's* and your *μὴ οὐ's*, belong to the department of scientific grammar, and should be treated in a special grammatical lesson, not as part of the time assigned to Aeschylus or Plato? Similarly, I have never looked on the learning of Anglo-Saxon as an essential part of a Shakespeare lesson; and I regard as the primary object of a lesson in Homer something quite other than the parsing and conjectural—generally *very* conjectural—derivation of obscure Homeric forms. I would far rather have the commendation given by a pupil to the lessons of a predecessor of mine—that "he made you feel what a beast the Cyclops was."

I do not want to be misunderstood. I am far from asserting that grammar, composition, and philology are negligible, or even unimportant, elements in the study of a language. But I do plead that they should be kept within due limits; that we have no right, if we profess to teach literature, to make them either in reality or in appearance the main subject of our teaching. If we do, we run the risk of disgusting appreciative boys with the very subjects which we most desire them to appreciate, and we destroy one of the main justifications of classical teaching, that it gives boys a chance of appreciating the best thoughts of the greatest thinkers.

I believe that the danger is much greater when we pass from the favoured few to those who are not really qualified to be classical specialists at all. So far I have been speaking of those to whom the classics open up a wide field of literary interest, who can afford to spend time on the preliminaries because they are to go through to the end with these studies, and can look forward to putting the coping-stone on them in "Greats" or Tripos. But what of the vast majority who never reach this standard, who have not the linguistic capacities to profit by the niceties of a classical education? My own impression—it is very likely a wrong one—is that the number of those who do so profit is smaller than we generally think. Even in our sixth forms,

πολλοὶ μὲν νερθηκοφόροι, βάκχοι δέ τε παῦροι.

there are many who wield the cane who are never initiated into the higher mysteries of the classics, and on whom a great deal of their classical study is wasted. And there are the many who never reach the sixth at all, who go through the same preliminary training as the favoured few, without attaining the final stage which is the main justification of that training. We say, no doubt, that they have had the benefit, the unquestioned benefit, of the preliminary digging and ploughing which classics give to the mind. But ploughing loses half its value if no sowing follows; and there are so many boys with whose minds the digging and ploughing process is repeated again and again and the sowing indefinitely postponed.

I do not see how we can justify theoretically the bringing up side by side of young boys with gifts for language and composition which will enable them to rise to the top of the school and take high classical honours at Oxford and Cambridge, and older boys whose school career will end perhaps in the fifth, and who will never touch the classics after they leave. Both have profited, I doubt not, by the early drill of Greek and Latin, and so far have had some literary training already. The classical specialist wants now the careful and gradual training in the details of language which will give him a scholarly appreciation of what he reads afterwards. The compositions he writes now are only stages on the road to the period when he will be able to aim at, and have some appreciation of, style and to produce something for himself which will give him some of the actual satisfaction of the artist. His fuller literary training will come afterwards, and he can afford to wait for it.

But cannot more be done for the boy to whom the forms below the top of the school are not a half way, but a final, stage in his career? If he has but slight linguistic gifts, Latin prose can never give him any of the pleasures of composition such as await his younger and more fortunate school-fellow. If we are right in claiming that the classical literature and its ideas are invaluable as a part of any man's education, ought we not to be giving these much more liberally to the ordinary boy? Is there any justification for keeping him grinding at niceties of language which he can never appreciate, for reading with him books which have not in themselves any interest, when there is the whole field of classical literature to select from?

I find it difficult to express my meaning clearly and definitely. I am rather asking for opinions than desirous to dogmatize. But what I feel is that we have no right to educate the average boy as if he were a classical specialist who was going through to the end with his classical studies. I do *not* mean that I disbelieve in a classical training for the average boy. I have sometimes dreamed of a classical training for boys who have reached a certain stage, which we may roughly represent as the upper school, in which classics should be taught on a broader basis and more general lines, in which we should abandon—may I say it?—the schoolmaster's fetish of accuracy in detail, and aim at giving the boy a wider, if a shallower, outlook into classical literature than we do at present. Let him do more, less accurately and less in detail; let him even be turned on to translations of some authors whose language is too hard for any but an expert; above all, let him not be set down to writers in whom the style only, and not the ideas and subject-matter, are the recommendation. I see no reason why such boys should be condemned to read any Cicero except perhaps the second "Philippic"; on the other hand, there is no reason why they should not read almost the whole of Homer.

I am aware, of course, that there are practical difficulties. The exigencies of "Smalls" and "Little-go" compel us to go on grinding boys in the details of grammar and the wearinesses of elementary Latin prose long after the stage when these are the appropriate training and discipline for the mind. But I don't think the dreaming of dreams is altogether a bad thing, even though they involve such impossibilities as the adaptation of present Oxford and Cambridge requirements to the general education of the average boy. Moreover, I have faith enough in literary studies, and in the classics, as a basis of general education, to believe that the present system might be modified so as to remedy many of the apparent deficiencies without the wholesale abolition of the classics from the curriculum of the majority of our boys. For I believe that, if we succeed in doing for the less gifted of our boys what we profess that the classics can do, and what we know that they do for the best of them, we shall hear less and less of the purely utilitarian view of education which clamours for modern languages and mathematics as the one thing needful, not because they develop the mind, but because they will be practically useful for engineering or on the Stock Exchange.

I am well aware that there are many practical difficulties in making literature, rather than language, the basis of our general teaching. Not the least of these difficulties is certainly the unequal and uncertain distribution of the faculty of literary appreciation, of the power of grasping ideas. Many boys fail altogether to admire what are to us jewels of literature, not because they are born Philistines, but because they have not yet the necessary experience of life to realize at all the truth of the literary representation of it. To a large number of boys the study of literature is too like making "bricks without straw." In such cases we, perhaps, do more harm than good by merely saying, "Ye are idle, ye are idle," or by prematurely cramming our own enthusiasms down their throats. Yet there are always boys—far more, I believe, than we often think—who are prepared to admire imitatively, if not with full comprehension, what they see that those more educated than themselves admire; and there will be a few whose enthusiasms outrun our own.

I am aware, too, that literature is *not* supposed to be a good disciplinary subject. It lends itself too much to dilettantism, and demands less of the element of strenuous application and brain racking that is needed, for instance, for Latin verse. But here I must fall back upon the doctrine of an essay published a few years ago in this journal by the present Head Master of Birmingham, that it is the function of the literary side of our

education to develop interests and appreciation rather than to grind boys into accuracy, and to stimulate, rather than to discipline, the mind. For the training in accuracy have we not modern languages and science, and for discipline mathematics?

I have said nothing about the teaching of English literature, nor, indeed, of modern literature at all. But I believe the principles are the same in all: indeed, I think we lose at present by making such a sharp distinction between the different branches of our literary teaching. With regard especially to modern languages, I do not see why the sixth-form boys of a school should not be taken appreciatively through the best French and German classics, as, I doubt not, in many cases they are. To my mind, this is both more possible and educationally more desirable than to give them a conversational knowledge of French and German.

But there will always be some boys in whom good literary powers co-exist with great incapacity for the acquirement of any foreign language. It must be a matter of common experience that literary appreciation and taste by no means invariably follows the normal lines of school progress. Indeed, it seems to be a plant of strangely capricious growth, springing up often in the most unlikely corners of our gardens, where we are not conscious of having sown the seed or even done any watering. Here and there in all parts of the school we shall find boys who read with avidity books other than magazines and ephemeral novels. We shall find middle-school boys who read "Omar Khayyam" and "In Memoriam," and, conversely, upper-sixth boys who say or think that "all poetry is rot." I may mention that the boy with whom I have found it most interesting to discuss books during the last few years was one who struggled with difficulty at an advanced age into the lower fifth, and left a term too early in order to "cram" prose and grammar for "Smalls."

Such cases are no doubt partially accounted for by a certain dilettante interest and ability counterbalanced by a dislike of the systematic application which is necessary for progress in the routine studies of the school. But I am not convinced that this is the whole account of the matter. Such boys, I think, have a real grievance against our system. They are boys with distinct gifts of their own, and have, I think, some claim on our special attention. It has been said convincingly that what we want is to get at boys through the subject, whatever that is, that they can do best, and develop their best capacities through that, giving them in other subjects just that amount of knowledge and interest which will make them an intelligent audience. We aim, in fact, at making our boy "Jack of all trades and master of *one*." This is the principle on which we are working now to an increasing extent. We let our boys specialize after a certain stage in mathematics, in science, in foreign languages dead and living. But we make no provision for the boy who has special gifts, but not such as come under any of these heads.

I have known many a boy with decent literary power and appreciation who never reached the sixth form, *i.e.*, the place where he would most be benefited by literary companionship, because he was hopeless at Latin prose, and very weak at Greek grammar. I should like to close my paper by asking whether we do not thereby waste some intellectual force which we might use. I take it that it is to the advantage of a school that the non-Philistine element should as far as possible rise to the top and be long-lived, just as it is for the advantage of individuals that the best parts of their minds should be developed and disciplined by having a congenial system of teaching and study, not cramped by Procrustean methods and unsuitable subjects.

Of course I am well aware of the objection that literature without a foreign language is not a severe enough discipline, and is too apt to degenerate into dilettantism. Yet I believe that it could be made disciplinary enough, and that an admixture of history and essay writing, and, perhaps, political economy, would provide the stiffening element which classics get from translation and composition. I am sure that a certain number of by no means our worst boys would gain in after-life from having had their tastes disciplined and their ideas pruned more systematically. Is there not a certain type of mind, such as tends afterwards to journalism, which would profit by a more regular training on these lines?

Let me say, finally, that I am conscious of having throughout this paper confined myself to one side only of education. No one is more conscious than myself that the literary side is in

itself an inadequate training, and that it needs to be brought into touch with reality lest we should train mere dreamers. How that may be done is a fresh problem altogether, and a very important one. Something, no doubt, we do by our sixth-form system, whereby, in true Platonic fashion, we compel our philosophers to be kings. But the point is too big a one to be discussed now, and I have not attempted to touch upon it in this paper.

FRANK FLETCHER.

THE USE TO THE STUDENT OF THE STATISTICAL METHOD OF CHILD-STUDY.

EVERY ONE who has charge of the lives of little children—parent, teacher, or nurse—must, consciously or unconsciously, be engaged in child-study. As soon as we become conscious of our own interest we begin to try to make our knowledge accurate and systematic. We go to physiology and psychology to learn what to expect of the child's body and of his mind; we study logic and ethics and try to form clear intellectual and moral ideals for his guidance. We keep a careful record of our own observations and experiments, and we study the accounts given by other observers in the same field. By these means much help and guidance may be gained for the choice of the path of least resistance in daily life and a keen interest in child-study is developed. But this interest is apt to lead to dissatisfaction.

The sciences we have been studying deal with abstractions—the child is one and indivisible, and, like a chemical compound, his possibilities do not answer at all to the sum of the possibilities of his component parts. At the same time, the knowledge of the whole child gained by study of a few children, though it may be founded upon sciences, is in itself empirical and cannot satisfy a real student. He is anxious to find some basis for generalization, but no such basis can possibly be provided by private individual observation of a few children. Variations are strongly marked and easy to note, but it is far more difficult to distinguish what great principles of growth and development underlie all these striking diversities. Only a small number of children can possibly be closely observed by any one student; and, moreover, there are several weaknesses necessarily inherent in the study of individuals.

First, each of us looks out upon the world through eyes that have been formed by process of slow development through the whole of our past life. Every circumstance of race, country, caste, creed, all the thousand and one influences of heredity and environment, have helped to make those eyes of ours, and we can use no others. Besides the prejudices due to the whole of our past, there are yet other prejudices due to position which add greatly to the difficulty of interpreting the child.

In order to understand what we see we have to try to remember our own past subjective experiences, to recover whatever dim and misty fragments still remain of our own thoughts and feelings when we were children. Unfortunately, selective attention has weeded these memories, and there are serious gaps in the hazy images that still persist.

Robert Louis Stevenson has thrown light upon this difficulty of understanding a being whose stage of development is quite different from our own, in his fable of "The Tadpole and the Frog":—"Be ashamed of yourself," said the Frog; "when I was a tadpole I had no tail." "Just what I thought," said the Tadpole; "you never were a tadpole."

We are ready enough to remember certain facts of our own early life—our activity, our daring, our power of eager enjoyment, but we are only too ready to imagine, or at any rate to assert, that when we were tadpoles we had no tails.

Our point of view has altered. As we look back we seem to see our elders in those old days as an entirely different race from what we ourselves are, now that we are in authority. We often found them absurd, still more often tiresome and exacting; we used to feel justified in making fun of them, and in sometimes disobeying them. Now, all the earnest thought and care of which children are unconscious forms part of our own subjective lives, and we are in danger of feeling impertinence or disobedience on the part of the child to be thoughtless ingratitude.

And it is not only our own personality, our own subjective life,

that influences our study—the personal reaction of the child has also to be reckoned with, and our instinctive response to his affection, and to his other attractions seriously disturbs our investigations.

The result of these investigations, however, in spite of all drawbacks, has the very greatest value for ourselves. We are generally able to get to know a great deal about the children we study, and our daily life is the easier for this knowledge. But we get no data for generalization. Our deductions are made to fit the particular cases we are studying: a useful generalization seldom, if ever, fits any particular case. The scientific order of knowledge has been summed up as:—(1) observation, (2) comparison and classification, (3) deduction, (4) verification. It is a common and a tempting error to stride from the first to the third step, and to go no further, to observe a few specimens, to make large generalizations from this limited study, and to rest satisfied without any attempt at verification.

Direct and careful observation cannot deal with examples enough for sound comparison and classification, and the deductions made as the result of individual study alone are likely to be true only of the individuals studied. We want some criterion by which to measure our children, some standard of normal development; we need help and guidance in our individual study. Earnest self-questionings will come to any one who knows and loves a little child over whose life he has a large power of control. "What ought this child to be able to do at this age? What motives are now ripe for my appeal? What interests may I fairly expect to arouse? What pursuits should I suggest or encourage? Am I treating him too hardly? Am I letting him fall behind what he might be and do?"

We may go carefully back over our own notes, and we may compare these with all we can find of other people's observations, but our results are apt to baffle all attempts at co-ordination. It is very difficult to compare one child with another child and to get any useful knowledge from the comparison; we want some common measure with which we may compare both individuals—something that may be called the normal child.

In order to find such a measure we have to try to shake ourselves as free as possible from all prejudice and to look straight at facts; we ought to eliminate the element of personal affection; we ought to study without having too definite an expectation of what we shall find; we ought to give ourselves an opportunity of generalizing from sufficient data.

It is now that observation of large groups of children of different ages will be found of immense value. Such observation is most easily carried on by collecting spontaneous, unprompted, written answers to carefully framed questions. Every class-teacher can learn much from the papers he has to correct every day if he gives suitable problems and systematically studies his results; but the work may be extended in a valuable way by the collection of papers from many hundreds of children.

It is in the framing of the question that the great difficulty of a statistical study lies. A clear and definite choice must be laid before the child, and his experience must be appealed to in such a manner that he may give a definite answer in few words. Any one who reads over some hundreds of papers written by children of various ages in response to a question that they have understood and taken an interest in will be struck with their spontaneous frankness. The fact that writing is an unaccustomed means of expression seems to make a child all the more self-revealing.

A schoolmaster who had been kind enough to let his boys write papers, out of pure friendliness and without much interest in the subject, gave testimony, all the stronger for its unconsciousness, to the value of material of this kind. "It is simply astonishing," he wrote, "how, after all our pains in teaching composition, their colloquial method of speech will show itself in writing the simplest stuff. The selfish, the kind and merciful, and the commercial stand out largely writ in their answers."

When the papers first come into the hands of the student he is keenly alive to their originality, their freshness, and to the amusing turns of speech and habits of thought he finds in them. The preliminary looking over of the first batch is full of amusement and interest. But the pleasure gained from the papers is due to elusive literary qualities; the charts that have to be built up from them contain nothing but dry facts. Anything unusual or unexpected is apt to strike the reader, and, if the impression

is deepened by several repetitions, he thinks of the point as important, whereas numerical investigation may show it to be hardly worth mentioning.

A definite choice has been presented to the children, and their answers must be classified according to the way they have chosen. Dot by dot the summary of results grows under the hand of the worker. He is little called upon to use his own judgment, and, whatever may be his prejudices, the facts he has to record remain independent of him and his ideas. He cannot even see what is coming out until his work is nearly done; for he takes the papers age by age, and cannot compare as he goes along. The chart records only the definite statements made by each child; all that is beautiful and suggestive in the individual papers must disappear. But when the work is finished, and the time comes to compare the numbers for the different ages and sexes, two results at least emerge of which some intelligible account may be given. The figures form a guide to the normal order of development, and to the differences existing between normal children of the same age due to sex, race, or environment.

From quantitative results, arrived at in such a manner, the drawbacks that hamper individual study are almost eliminated. There can be but little disturbance due to personal bias, as there is no personal contact between student and child. The question that is given to the children to answer must be framed in such a way as to bring out certain definite results, but the variations in the answers are not in any way under the control of the investigator, and the rise or fall of his percentages may come as a surprise to him.

Let us take an example of a generalization arrived at by means of a statistical study. A very interesting piece of work was done, some years ago, by one who had been for years an earnest and brilliantly successful history teacher. Its object was to ascertain at what age a class of normal children may be expected to begin to appreciate original documents. It is impossible to grasp the scope and value of the work without carefully studying the whole of it, but a single test may be selected as an example of what may be gained by a judicious and intelligent use of statistical methods. Two accounts of a military event were submitted to the children—one the signed despatch of the officer in command, the other a paragraph, well and simply written, giving the same facts. One thousand two hundred and fifty children of various ages were asked: "Which of these accounts would you keep if you could only keep one, and why?" Their answers, arranged in percentages, were as follows:—Despatch preferred because its truth is assured.

Age ...	9.	10.	11.	12.	13.	14.	15.	16.	17.
Boys	1	3	11	32	48	44	42	61	82
Girls	9	8	20	26	32	45	58	65	80

It is only possible to indicate briefly some of the points of interest in these figures. First, the children's appreciation of the original document *increases* in both boys and girls as they grow older; though there are interesting variations in the *rate* of increase. It appears, therefore, that such material need not be reserved for especially gifted pupils—it is of use for ordinary class-work. Secondly, not until the girls are between fourteen and fifteen, the boys between fifteen and sixteen, do half of them realize the value of the signed despatch. It would be wiser, then, to wait until the average age of the class was a little above this before allowing the bulk of their teaching to rest upon original sources; though children of eleven or twelve may be expected to begin to take an interest in the comparative value of evidence. Thirdly, the lines of development run extraordinarily parallel for the two sexes. No difference need, therefore, be made in this subject, at least, between the teaching of boys and of girls.

The comparison of many charts is necessary before the student can appreciate the interest and importance of the variations in the rate of development. Such comparison can only deepen the conviction that these tables of percentages give one a glimpse of great guiding principles—of irresistible tendencies of development.

No one child is likely to follow exactly the line indicated in such charts, either in his mental, his moral, or his physical development; but the probable limits of variation are not very wide. It is a great help and comfort to the parent or teacher to know what may fairly be expected of any child. We are all far more apt to expect too much than too little, and we seldom

make enough allowance for the effect of natural physical crises upon the mental and moral development. As we study the figures that show the gradual evolution of childish thought, an explanation is often suggested of phenomena that have perplexed or discouraged us. Changes that we were trying to explain by means of small personal causes are seen to be common to most children at that particular age, and to rest upon some deep physiological or psychological need; so that we are supplied with fresh confidence and invaluable guidance for the further study of individual children.

In order to make statistical studies practically useful, the standards of normal childish evolution that they suggest have to be carefully compared with actual children. And here it must be borne in mind that no single individual child can be expected to exactly follow the normal course that has been traced out.

A doctor compares the patient he is examining not with any other particular case, but with a generalized standard in his mind that never exactly fitted any patient. When the deviation from the normal type has been once ascertained, then useful comparisons may be made between particular cases.

Statistical studies help us to look at children with a view to finding out how they vary from the normal standard—we have neither hope nor expectation of finding, or making, them exactly fit it. The parent and the teacher *must* be engaged in child-study; their work is lightened if they can only realize that the phenomena of child-life are guided as surely by great evolutionary tendencies as any of the other phenomena of life.

MABEL A. MARSH.

JOTTINGS.

THE Board of Education have approved the appointment by the Teachers' Registration Council of Mr. G. W. Rundall as their Registrar. Mr. G. W. Rundall, who is an M.A. of New College, Oxford, was a master at Marlborough from 1877 to 1891, and Head Master of the High School, Newcastle-under-Lyme, Staffs., from 1891 to 1900. There were eighty-four candidates for the appointment.

THE *Schoolmasters' Year-Book*, which Messrs. Swan Sonnenschein announce for publication at the end of the year, is a much-needed work, which has often been schemed and twice, at least, attempted, in a tentative and half-hearted fashion. From the hearty response that the editor has already received, both from the leaders of the profession and the rank and file, there can be little doubt that even the first issue will contain the names of the vast majority of masters in all schools that have any claim to recognition, and in a few years the directory should be as complete a guide to schoolmasters as Crockford is to clerics. As to the Government Register the editor is misinformed. In pursuance of the Order in Council it must be published annually, and we may safely assume that Column A and Column B will appear in separate volumes. But the Official Register will give only in the barest outline the name, address, and qualifications, without any of the varied information which Messrs. Sonnenschein's forms suggest.

SIX HUNDRED AND SIXTY-FIVE candidates have entered for the Cambridge Higher Local Examination, which began on June 16 at twenty-one centres. The new regulations, which contain the announcement of set subjects in the various groups for December, 1903, and June, 1904, as well as for December, 1902, and June, 1903, can now be obtained from the local secretaries, or from Dr. Keynes, Syndicate Buildings, Cambridge.

MR. DAVID ROBERTSON, B.Sc., Lecturer in Electrical Engineering at the Bradford Municipal Technical College, and formerly Assistant Lecturer at the Glasgow and West of Scotland Technical College, has been elected to the vacant Chair of Electrical Engineering in the Merchant Venturers' Technical College, Bristol.

THE Cambridge University Association, founded in 1899, at a meeting held at Devonshire House, has already raised a benefaction fund of nearly £64,000. Of this £4,400 has been set aside as an endowment fund; how the rest has been expended has been duly recorded from time to time in our Cambridge Letter. The Vice-Chancellor now urges a fresh appeal. He estimates that to complete the new buildings and provide adequate University lecture and examination rooms would require an additional sum of between £80,000 and £100,000, and that a like sum is needed

to put the organization for teaching on a satisfactory basis. Compared with the million that Lord Reay asks to start a teaching University for London this is a moderate demand.

MR. ARTHUR SIDGWICK has been elected an Honorary Fellow of Corpus, Oxford.

MR. GRAHAM BALFOUR has been appointed Director of Technical Instruction for the County of Stafford.

THE Vice-President of the Committee of Council on Education has appointed Mr. E. Hackforth as his Private Secretary, in place of Mr. R. L. Morant, resigned.

MR. R. L. MORANT has been appointed additional Private Secretary to the President of the Board of Education.

THE *National Teacher* gives the following remarkable examples of scientific definitions taken from answers to examination papers:—"Porosity is a liquid which dissolves a solid. A triangle is a right angle having the third side produced. To find the value of a^0 write down a no times. An acute-angled triangle is a three-cornered square. A line is a line drawn straight which has no breath. A vertex is a figure with more than four sides. Antony and Bismark are two of the metals."

THE story of the schoolgirl who began an answer in a Divinity paper "Abraham was a bellowing sheep," her mistress having dictated "a Bedouin Sheik," is familiar, but it is capped by this *vera historia*. In a certain school where Scripture questions and answers *à la* Mangnall were dictated by the mistress to be got by heart, the following appeared in a girl's note-book: "What was the 11 of the Pharisees and what the eleven of Herod?"

EXTRACT from a boy's essay on "Cheap Literature":—"Many people have been hanged and even imprisoned for life by reading cheap biographies of Charles Peese, Jack Sheppard, &c."

A CLASS analyzing from Mason's "Grammar" "To me the meanest flower that blows doth give," &c., is asked: "Why does Wordsworth invert the natural order of words?" Bright Scotch boy: "Just to mak' the analysis most deeficult."

THE child who recently wrote, in an answer to an examination paper, that "the door shut with a trifric bang" is probably the victim of that careless speech that habitually talks of going in for examinations in order to win "stifcates."

MR. BALFOUR spoke admirably at the Mansion House on the leeway that England had to make up, "not merely in commercial education, which is a portion of technical education, but also in many of the wider and more important aspects of national education," and he appealed to our merchant princes to contribute sums proportional to the nine millions sterling given to the Leland-Stanford University.

THE deputation of musicians which waited on the Registration Council included the most prominent men of the profession, and it is to be hoped that the Committee on which they will be represented as assessors may arrive at some concordat. There will, however, be much prejudice to be overcome. That teachers of music can be taught to teach, that a knowledge of physiology and psychology can be of any possible benefit to them, seems to Sir Hubert Parry an absurd paradox. He holds that teaching of music comes only by experience, and that no two teachers go the same way to work.

MRS. BURCH announces her course on the study of English for women students in residence at Oxford from September 4 to December 11. For particulars apply to Mrs. Burch, 24 Norham Road, Oxford.

THE Cambridge authorities have decided to hold a Conference on the Training of Teachers in London towards the close of this month.

ON the last day of the month (too late for us to deal with it in "Occasional Notes") Mr. Balfour made an important concession, dispensing with the elaborate machinery of Provisional Orders and substituting the simple assent of the Local Government Board to a proposed extension of the 2d. rate. With an amendment embodying this alteration Clause 2 of the Bill was passed.

BOOKS OF THE MONTH.

Classics.

- The Elements of Greek. By F. R. Ball. Macmillan, 6s.
The First Latin Book. By Harold W. Atkinson and J. W. E. Pearce. With 12 coloured illustrations by M. C. Durham. Dent, 2s. 6d. net.
The Georgics of Virgil, Book I. Edited by S. E. Winbolt. Blackie, 1s. 6d.
Euripides, Alkestis. Standard plays for amateur performance, with costume plates, by Elsie Fogerty. Sonnenschein, 2s. 6d. net.
English Extracts for Latin Prose. By A. C. Champneys. Longmans, 2s.
"Blackwoods' Classical Texts."—Arrian, Anabasis, I–II. Edited by H. W. Auden.

Drawing.

- "Bacon's Art Series."—No. 1, Coloured Drawing Copies: Wild Flowers. 3s. 6d.
Nature Lessons with the Blackboard. By F. F. Lydon. Burns & Oates. 3s. net.

English.

- English Men of Letters.—(1) William Hazlitt. By Augustine Birrell. (2) George Eliot. By Leslie Stephen. Macmillan, each 2s. net.
"The Warwick Shakespeare."—King Lear. Edited by D. Nichol Smith. Blackie.
The Globe Poetry Reader for Advanced Classes. Macmillan, 1s. 4d.
The School Anthology. Edited by J. H. Lobban. Part I., Chaucer to Burns. Part II., Wordsworth to Newbolt. Blackwood. 2s. each.
Macaulay's Life of Pitt. Edited by J. Downie. A. & C. Black. 2s.

History.

- Making of the Empire. By Arthur Temple. Melrose. 5s.
History of the English Church in the Sixteenth Century. By James Gairdner. Macmillan, 7s. 6d.
Makers of Europe. By E. M. Wilmot-Buxton. Methuen, 3s. 6d.
"Nineteenth Century Series."—Progress of India, Japan, and China. By Sir R. Temple, Bart. Chambers, 5s. net.
Seven Roman Statesmen. By Charles Oman. E. Arnold, 6s.
The Principles of English Constitutional History. By Lucy Dale. Longmans, 6s.

Fiction.

- The Conqueror. By Gertrude F. Atherton. Macmillan, 6s.

Miscellaneous.

- Encyclopædia Britannica, the new volumes of; Vol. II. The Times Office.
The Popular Library of Art.—(1) Rossetti. By F. M. Hüfer. (2) Rembrandt. By A. Bréal. Each 2s. net. Grant Richards.
Familiar Wild Flowers. Figured and described by F. E. Hulme. Seventh Series. Cassell, 3s. 6d.
Pastors and Teachers. Six Lectures on Pastoral Theology by the Bishop of Coventry. Longmans, 5s. net.
Studies in the Lives of the Saints. By E. Hulton. Constable, 3s. 6d. net.
The Roll-Call of Westminster Abbey. By Mrs. A. Murray-Smith. Smith, Elder.

Modern Languages.

- Intermediate French Grammar. By G. H. Clarke and L. R. Tanqueray. Murray, 3s. 6d.
A Skeleton German Grammar. By H. G. Atkins. Blackie, 1s. 6d.
(1) Kröner's Zring. Edited by F. J. Halzwarth. (2) Wildenbruch's Harold. Edited by C. A. Eggert. (3) Seidel's Leberecht-Hühnchen. Edited by W. Spanhoofd. (4) Keller's Kleider machen Leute. Edited by M. B. Lambert. Heath, 1s. 6d. each.
Molière's Plays: Tartuffe, Don Juan, Love's best Doctor. French and English Texts. Grant Richards, 3s. 6d. net.

Pedagogy.

- The Teaching of History and Civics. By H. E. Bourne. Longmans, 6s. net.

Science.

- Aids in Practical Geology. Fourth Edition. By G. A. J. Cole. C. Griffin, 10s. 6d.
Metallography. By A. H. Hiorns. Macmillan, 6s.
Elementary Physical Geography. By W. M. Davis. Ginn.
The Hygiene of Schools and Scholars. By H. Beale Collins. Ralph, Holland.
Mammalia. By F. E. Beddard. Macmillan, 17s. net.
Elementary Science. By J. H. Nancarrow. Ralph, Holland, 3s. 6d.

COLONIAL AND FOREIGN NOTES.

FRANCE.

The "religious difficulty," from one point of view, is the same in France as in England, the problem there, as here, being to keep mischievous people from doing and making mischief in the name of religion. But the manifestations of it beyond the Channel are curiously unlike those with which we are familiar. The State has a firm grip on the schools, but finds it hard to defend in them the sanctity of republican institutions against the clerical attack. The manner in which the warfare is conducted receives an illustration from an order issued on May 26 by the Minister of Public Instruction. He directs that two books, entitled "*Histoire contemporaine à l'usage de la jeunesse*," by M. l'Abbé Courval, continued by M. l'Abbé Dubois, and "*Cours d'histoire, histoire contemporaine, de 1789 à nos jours*," by M. l'Abbé Gagnol, shall not be read, studied, or given as prizes in any school. We have not the treatises before us, but the guess is safe that the *abbés*, borrowing a hint from Dr. Johnson, have been seeing that the Republican dogs do not get the best of it. Good history, we are told, is history not vitiated by undue impartiality; but M. Leygues claims the right of determining the bias. Having launched this final shaft at the enemy, he now disappears, owing to a change of Ministry. Probably before many months have elapsed he will return to an office in which, on the whole, he has done good service to education.

To report faithfully we must say that there are signs of reaction not precisely against the reformed method of teaching modern languages, but against a slavish adherence to the original and strictest canons. Grammar has been pushed too far into the background; the attempt to extract it from the texts studied is a waste of time, and similar contentions reveal the mutinous spirit. So the resolution lately adopted by the Congress of Teachers in French Secondary Schools is, in effect, a plea for a certain amount of freedom. It has sufficient interest to justify us in giving it at length. "The Congress, having regard to the fact that the end fixed [by the ministerial circular] for the teaching of modern languages is the effective possession of the languages taught, that is to say, the power of speaking, reading, and writing them, and that two operations are necessary to acquire them—comprehension and reproduction—resolves that the method of teaching should be inductive and practical. As inductive, it will take as a basis the foreign language, and not the mother tongue; it will start from observation, and not from abstraction. As practical, it will accustom the pupil to express his thoughts by means of the vocabulary learned. At once inductive and practical, it will never separate practice from theory, but will develop the two simultaneously, the one by means of the other. All exercises, direct or indirect, appealing to the ear or to the eye, have a legitimate place in the teaching of modern languages, provided that they are inductive and practical. Such exercises are manifold and necessarily vary according to circumstances—according to the age of the pupils, their habits of mind, their general knowledge, their intelligence, their readiness to learn, the number of them, and the time at their disposal. It is for the master to adapt his procedure to the requirements of the case; and his liberty should have no restrictions except such as are imposed by the principle of the method."

UNITED STATES.

The suppression of cigarette-smoking is an object that American schoolmasters have much at heart. Since, although the habit is not common in English schools, it does undoubtedly exist in some, we call attention to statistics—supplied to the *School Journal*—intended to exhibit the consequences of it. In a school of about five hundred pupils it was found that the boys in general were inferior in every way to the girls, and, on investigation, it appeared that a large majority of the former were habitual cigarette-smokers. A certain number of smokers, and the same number of non-smokers, were then carefully observed for several months, the results being tabulated. Of the smokers 70 per cent., of the non-smokers 5 per cent., were nervous. Impaired hearing was shown by 65 per cent. of the smokers, by 5 per cent. of the non-smokers; defective memory by 60 per cent. of the smokers, and by 5 per cent. of the non-smokers. 95 per cent. of the smokers were older than the average of their class. Figures such as these, if they are trustworthy—and we take it that those before us are trustworthy—should be a warning to parents and teachers who regard smoking as a venial offence. It is not a crime, but it is a grave injury to growing boys. We allow ourselves further to reproduce *verbatim* the note of personal peculiarities remarked in the smokers:—"Boy No. 1 is undersized, wizened, unkempt, and sallow; No. 2 is unable to think at all at times; No. 3, weak, dull, often sick; No. 4 has headache, sick

spells, sore eyes, and short sight; No. 5 is mentally and morally dwarfed; No. 6 is bad from first to last; No. 7 is unreliable, a liar, and deceitful; No. 8 is abnormally weak and about to collapse physically; No. 9 is lazy; No. 10 has stopped smoking and is doing better; No. 11 has stopped smoking cigarettes, but smokes a pipe; No. 12 has stopped smoking and is improving; No. 13 is a type of hopeless unregenerate—has since been sent to the school for feeble-minded; No. 14 stops smoking by spells; No. 15, his neighbours, teachers, and others regard him a nuisance; No. 16 is low down in the human scale; No. 18 is a liar and a coward; No. 19 is five years behind his grade; No. 20 is simply a young tough." This is child-study with a vengeance. The average age of these young monsters was a little over fourteen years. We cannot help doubting whether a teacher who can describe his boys with such wild vehemence is the right person to win them from the evil habit, and reflecting how often a good cause is injured by extravagance of statement. Some English head masters expel for smoking; a few "have no nose for tobacco"; none, we think, would adopt the tone of moral despair in which the American investigator finds a gloomy satisfaction.

In England our boys are taught by men, our girls, for the most part, by women. We quote from the journal already named an extract showing how widely American opinion on this subject differs from English:—"The early educators of the race [says the writer] were men, and in several countries, notably Germany, the men continue to be almost the sole instructors of youth. The reasons for this are apparent to even the casual student of history, and are no argument that men are by nature the best teachers. In fact it seems quite generally conceded that women are usually better primary teachers than are men. As we go higher in the branches, however, and deal with boys and girls who are approaching maturity, the demands change, and women are not regarded as superior in adaptation to the new conditions. In fact, I believe that the best judgment of careful students of the educational processes which are shaping the destinies of the race agree that children, from about the age of nine or ten until maturity, should have the companionship and instruction of both sexes; that boys who mature wholly under the influence of men are not the best prepared for life's companionships which include women, and that boys who are confined to the companionship of women are not ideally equipped for coping with men in business and professional life. So it may be said of girls who are restricted to the instruction of one sex that they are not the best fitted for life's relations which embrace the two sexes."

INDIA.

The sum of forty lakhs is to be devoted this year by the Government of India to education. In a paragraph on the educational grants, Lord Curzon explains the meaning of this allocation:—"I have already mentioned the large grants that we are making in the forthcoming year to education. These are the prelude to a policy of educational reform that was inaugurated with the deliberations of the Simla Conference last year, that is now being further investigated in respect of University education—a most important branch of the subject—by the Commission that is sitting under the presidency of the legal member, and that will not stop until it has embraced every branch of educational activity—secondary, primary, technical, industrial, and commercial. In all these respects money has been grudged in the past, and effort has been wasted or diffused in the main from want of a definite plan. I conceive that a ruler could not bequeath to India a better legacy than the introduction of system, shape, and consistency into that which has hitherto been somewhat formless and void. Upon every one of the particulars that I have named, the local Governments have been addressed; their opinions have been invited as to positive suggestions and definite needs; and, before another year has passed, I hope that we may appear before the Indian public with a concrete policy that will communicate to education in its various branches an impetus that will not quickly faint or fade away. A Director-General of Education has arrived from England to act as adviser to the Government of India, and to assure that continuous interest in the matter at headquarters which has sometimes been lacking. There is only one consideration that I would ask the public to bear steadily in mind. Education, if it is to be reformed, must be reformed for education's sake, not for the sake of political interests, or racial interests, or class interests, or personal interests. If that golden rule be borne in mind, both by the Government and the public, we shall get through. If it be forgotten, then the most strenuous of efforts may be choked with disappointment, or may perish in recriminations."

SOUTH AFRICA.

As is appropriate to the situation, the news from South Africa is all of a pleasant character. We find the Victoria League originating,

OXFORD LOCAL EXAMINATIONS, JULY, 1903.

Mr. Murray's List of Special Text-Books.

ENGLISH LANGUAGE AND LITERATURE.

PRIMARY ENGLISH GRAMMAR FOR ELEMENTARY SCHOOLS. With 134 Exercises and carefully graduated Parsing Lessons. By T. D. HALL, M.A. 16mo, 1s.

This work aims at the clearest and simplest statement possible of the first principles of English Grammar for the use of children from about eight to twelve years of age.

SCHOOL MANUAL OF ENGLISH GRAMMAR. With Historical Introduction and copious Exercises. By Sir Wm. SMITH, D.C.L., and T. D. HALL, M.A. With Appendices. Crown 8vo, 3s. 6d.

This work has been prepared with a special view to the requirements of Schools in which English, as a living language, is systematically taught, and differs from most modern grammars in its thoroughly practical character. A distinguishing feature of the book is the constant appeal for every usage to the authority of Standard English Authors.

MANUAL OF ENGLISH COMPOSITION. With copious Illustrations and Practical Exercises. Suited equally for Schools and for Private Students of English. By T. D. HALL, M.A. Crown 8vo, 3s. 6d.

SMALLER HISTORY OF ENGLISH LITERATURE. Giving a Sketch of the Lives of our Chief Writers. By JAMES ROWLEY. Small crown 8vo, 3s. 6d.

The important position which the study of English literature is now taking in education has led to the publication of this work, and of the accompanying volume of specimens. Both works have been undertaken at the request of many eminent teachers, and no pains have been spared to adapt them to the purpose for which they are designed—as elementary works to be used in schools.

SHORT SPECIMENS OF ENGLISH LITERATURE. Selected from the Chief Authors and arranged Chronologically. By JAMES ROWLEY. With Notes. Small crown 8vo, 3s. 6d.

STUDENT'S MANUAL OF ENGLISH LITERATURE. A History of English Literature of the chief English writers, founded upon the Manual of THOMAS B. SHAW. A New Edition, thoroughly Revised. By A. HAMILTON THOMPSON, B.A., of St. John's College, Cambridge, and University Extension Lecturer in English Literature. With Notes, &c. Crown 8vo, 7s. 6d.

STUDENT'S SPECIMENS OF ENGLISH LITERATURE. Selected from the Best Writers, and arranged Chronologically. By T. B. SHAW, M.A. Crown 8vo, 5s.

AN INTRODUCTION TO POETRY. By LAURIE MAGNUS, M.A. Fcap. 8vo, 2s.

SCIENCE.

THE FACE OF NATURE. Popular Readings in Elementary Science. By the Rev. C. T. OVENDEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Fcap. 8vo, 2s.

A FIRST COURSE OF PRACTICAL SCIENCE, with Full Directions for Experiments and numerous Exercises. By J. H. LEONARD, B.Sc. Lond. With a Preface by Dr. GLADSTONE, F.R.S. Fcap. 8vo, 1s. 6d.

"The exercises described are suitable for quite young beginners, and they will serve the double purpose of applying the pupil's knowledge of arithmetic and developing a scientific frame of mind. . . . The experiments are described concisely and are well arranged."—*Nature*.

A FIRST COURSE OF CHEMISTRY. By J. H. LEONARD, B.Sc. Lond. 1s. 6d.

THE GROUNDWORK OF SCIENCE. By ST. GEORGE MIVART, M.D., Ph.D., F.R.S. Crown 8vo, 6s.

CHAPTERS IN MODERN BOTANY. By PATRICK GEDDES, Professor of Botany, University College, Dundee. With Illustrations. Crown 8vo, 3s. 6d.

THE STUDY OF ANIMAL LIFE. By J. ARTHUR THOMSON, Regius Professor of Natural Science in the University of Aberdeen; Joint Author of the "Evolution of Sex," Author of "Outlines of Zoology." With many Illustrations. Crown 8vo, 5s.

THE PHYSIOLOGY OF THE SENSES. By JOHN MCKENDRICK, Professor of Physiology in the University of Glasgow, and Dr. SNODGRASS, Physiological Laboratory, Glasgow. With Illustrations. Crown 8vo, 4s. 6d.

THE REALM OF NATURE. A Manual of Physiography. By Dr. HUGH ROBERT MILL, Librarian to the Royal Geographical Society. With 19 Coloured Maps and 68 Illustrations. Crown 8vo, 5s.

AN INTRODUCTION TO MODERN GEOLOGY. By R. D. ROBERTS, sometime Fellow of Clare College, Cambridge; Fellow of University College, London; Secretary to the Cambridge and London University Extension Syndicate. With Coloured Maps and Illustrations. Crown 8vo, 5s.

HISTORY.

SMALLER HISTORY OF ROME. From the Earliest Times to the Establishment of the Empire. Thoroughly Revised by A. H. J. GREENIDGE, M.A., Fellow of Hertford College, Oxford. With a Supplementary Chapter on the Empire to 117 A.D. by G. MIDDLETON, M.A., under the direction of Prof. W. M. RAMSAY, M.A., D.C.L. With Coloured Map, Plans, and Illustrations. Crown 8vo, 3s. 6d.

STUDENT'S HISTORY OF MODERN EUROPE. From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition. Thoroughly Revised. Crown 8vo, 7s. 6d.

STUDENT'S HISTORY OF EUROPE DURING THE MIDDLE AGES. By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

SMALLER HISTORY OF ENGLAND. From the Earliest Times to the Year 1837. Revised and Enlarged. By RICHARD LODGE, M.A. With Coloured Maps and 68 Woodcuts. Crown 8vo, 3s. 6d.

THE STUDENT'S HUME. A History of England, from the Earliest Times to the Revolution in 1688. By DAVID HUME. Incorporating the Researches of recent Historians. Revised, corrected, and continued to the Treaty of Berlin in 1873, by J. S. BREWER, M.A. With Notes, Illustrations, and 7 Coloured Maps and Woodcuts. Crown 8vo, 7s. 6d.

* Also in Three Parts. 2s. 6d. each.

I. From B.C. 55 to the Death of Richard III., A.D. 1485.

II. Henry VII. to the Revolution, 1688.

III. The Revolution to the Treaty of Berlin, 1878.

SIR WILLIAM SMITH'S EDUCATIONAL SERIES.

LATIN COURSE.

YOUNG BEGINNERS' LATIN COURSE. 2s. each.

I. First Latin Book. Grammar, Easy Questions, Exercises, and Vocabularies.

II. Second Latin Book. An Easy Latin Reading Book, with Analysis of Sentences.

III. Third Latin Book. Exercises on the Syntax, with Vocabularies.

IV. Fourth Latin Book. A Latin Vocabulary for Beginners, arranged according to Subjects and Etymologies.

PRINCIPIA LATINA.

PART I. Grammar, Delectus, Exercises, and Vocabularies. Thirty-eighth Edition. 3s. 6d.

Appendix to Part I. Additional Exercises and Exam. Papers. 2s. 6d.

PART II. A First Latin Reading Book. 3s. 6d.

PART III. A First Latin Verse Book. 3s. 6d.

PART IV. Latin Prose Composition. 3s. 6d.

PART V. Short Tales and Anecdotes for Translation into Prose. 3s. 6d.

GREEK COURSE.

INITIA GRÆCA.

PART I. A First Greek Course, containing Accidence, Rules of Syntax, Exercises and Vocabularies. Edited and carefully Revised throughout by FRANCIS BROOKS, M.A., Lecturer in Classics at University College, Bristol, and formerly Classical Scholar of Balliol College, Oxford. 3s. 6d.

Appendix to Part I. Additional Exercises and Exam. Papers. 2s. 6d.

PART II. A Greek Reading Book. 3s. 6d.

PART III. Prose Composition. 3s. 6d.

GERMAN COURSE.

GERMAN PRINCIPIA.

PART I. Grammar, Exercises, Vocabularies, and Materials for Conversation. 3s. 6d.

PART II. Reading Book, with Dictionary. 3s. 6d.

PRACTICAL GERMAN GRAMMAR. For Advanced Students. 3s. 6d.

ITALIAN COURSE.

ITALIAN PRINCIPIA.

PART I. Grammar, Delectus, Exercises, Vocabularies. A New Edition, thoroughly Revised and in Part Rewritten. By C. F. COSCIA, Professor of Italian in the University of Oxford. 3s. 6d.

PART II. A Reading Book. 3s. 6d.

A Complete Illustrated Catalogue of Standard Educational Works published by Mr. Murray may be had, post free, on application. This Catalogue includes Sir William Smith's Famous Series of Students' Manuals, Smaller Manuals, Dictionaries, Principia, &c.

LONDON: JOHN MURRAY, ALBEMARLE STREET, W.

NEW BOOKS AND NEW EDITIONS FROM MR. MURRAY'S EDUCATIONAL LIST FOR SECONDARY AND TECHNICAL SCHOOLS.

COMMERCIAL KNOWLEDGE. A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handelswissenschaft* is designed for the use of students who intend to enter the higher branches of commercial life. It includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Tariffs; Employers' Liability; Commercial Travellers; Consuls, &c.

"... contains concise and accurate descriptions of all kinds of commercial routine, from the functions of the Board of Trade to a facsimile of a bill of lading, and should be in the possession of every one who intends to embrace a commercial career."—*The Scotsman*.

COMMERCIAL FRENCH. In Two Parts. By W. MANSFIELD POOLE, M.A., Magdalen College, Oxford, formerly Assistant Master at Merchant Taylors' School, and MICHEL BECKER, Professor at the Ecole Alsacienne, Paris, Author of "L'Allemand Commercial," and "Lectures Pratiques d'Allemand Moderne." With a Map in each volume.

PART I. Consisting of Simple Sentences and Passages in French, with occasional Business Letters, and containing in an Appendix a clear system of French Grammar, with special reference to the Verb. Crown 8vo, 2s. 6d.

PART II. An Advanced Commercial Reader. Crown 8vo, 2s. 6d.

COMMERCIAL GERMAN. In Two Parts. By GUSTAV HEIN, University of Berlin, and Lecturer in German (Honours) to the University of Aberdeen, and MICHEL BECKER, Professor of Modern Languages in the Ecole Alsacienne, Paris.

PART I. with a Map will be published shortly.

This manual is uniform with the first part of "Commercial French" by Poole and Becker, and is specially adapted for the use of students in commercial classes and continuation schools.

FRENCH COMMERCIAL CORRESPONDENCE. By Prof. CHARLES GLAUSER, and W. MANSFIELD POOLE, M.A., Magdalen College, Oxford; Secretary to the Modern Language Association, and Assistant Master at Merchant Taylors' School. Crown 8vo, 2s. 6d.

INTERMEDIATE FRENCH GRAMMAR AND OUTLINES OF SYNTAX. With Historical Notes. By G. H. CLARKE, M.A., of Hymers College, Hull, and L. R. TANQUEREY, B.ès.-L. Crown 8vo, 3s. 6d.

PRACTICAL SPANISH. With Exercises, Vocabularies, and Materials for Conversation.

PART I. : Nouns, Adjectives, Pronouns, &c.

PART II. : Verbs, &c., with Copious Vocabularies.

By DON FERNANDO DE ARTEAGA, Taylorian Teacher of Spanish in the University of Oxford. Crown 8vo, 7s. 6d.

This book has in the main been formed on the plan of Sir William Smith's well known and deservedly popular "Principia Latina, Part I." It possesses, however, one new feature which is as novel as it is likely to prove valuable to the student who uses the book. English people, for the most part, who set themselves to learn Spanish are not children, but either would-be travellers in the country, students of its literature, or persons engaged in commerce with Spain or Spanish-speaking countries. It has therefore been the aim of the Editor throughout to avoid the old-fashioned Ollendorfen sentences in illustration of the grammar, and instead to make use of phrases and expressions which are likely to prove of practical use to the traveller and the man of business.

ALGEBRA. **PART I.** By E. M. LANGLEY, M.A., Senior Mathematical Master, Modern School, Bedford, and S. R. N. BRADLY, M.A., Mathematical Master, Modern School, Bedford. Fcap. 8vo, 1s. 6d.

This volume is specially adapted to the requirements of the First Stage of the Directory of the Board of Education, South Kensington. Answers, for teachers only, can be obtained separately.

Prof. JOHN PERRY, of the Royal College of Science, South Kensington, writes:—"I never do praise a book unless I believe it to be good. Your Algebra (regarded as a book for beginners) pleases me very much indeed. I cannot imagine an Algebra prepared for schools in general, and especially for use by teachers in general, which would come nearer to my notion of what an Algebra ought to be, than yours."

A FIRST COURSE OF PRACTICAL SCIENCE, with full directions for Experiments and numerous Exercises. By J. H. LEONARD, B.Sc. Lond. With a Preface by Dr. GLADSTONE, F.R.S. Fcap. 8vo, 1s. 6d.

These lessons are taught on the heuristic method, with a view to stimulating the learner's powers of observation and experiment.

"The exercises described are suitable for quite young beginners, and they will serve the double purpose of applying the pupil's knowledge of arithmetic and developing a scientific frame of mind. . . . The experiments are described concisely and are well arranged."—*Nature*.

A FIRST COURSE OF CHEMISTRY. By J. H. LEONARD, B.Sc. Lond. Fcap. 8vo, 1s. 6d.

BRITAIN OVER THE SEA. A Reader for Schools. Compiled and Edited by ELIZABETH LEE, Author of "A School History of English Literature," &c.; Editor of "Cowper's Task and Minor Poems," &c. With Four Maps of the British Empire at different periods. Crown 8vo, 2s. 6d.

This School Reader is conceived on novel lines. The extracts are arranged in sections, comprising "The English Colonies up to 1900," "Australia," "India," "South Africa," &c.; and the selections range from the works of Sir Walter Raleigh to the speeches of Lord Beaconsfield. It contains a literary introduction, and the name of the author, who is a contributor to the "Dictionary of National Biography," carries assurance that the editorial work is well done.

Mr. P. A. BARNETT (H.M. Inspector of Training Colleges):—"I congratulate you on the production of a very excellent piece of work. I hope the schools will use it, but it is almost too good for them."

An Historical Review of the Development of Greater Britain.

THE GROWTH OF THE EMPIRE. By A. W. JOSE. With many Coloured and other Maps and Diagrams. Crown 8vo, 6s.

"... an eminently useful book . . . as serviceable as it is readable. It is systematic in method and accurate in statement."—*The Globe*.

"... this excellent manual is written by an Australian Briton. . . . That the colonial history of Great Britain should be worthily told was a crying need, and we congratulate Australia upon producing the historian, and the historian upon the production of an admirable book."—*Daily Chronicle*.

A GENERAL HISTORY OF EUROPE, 350-1900. By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and Adapted to the requirements of English Colleges and Schools by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each Section. With Maps, Genealogical Tables. Crown 8vo, 9s.

The Mediaeval Period. The Empire, the Church, and the Invasion of the Germans—The Franks—The Dismemberment of the Empire—England and the Norsemen—Germany and France—Feudalism—Growth of the Papacy—Monasticism—Mohammed and the Crusades—Italy to 1494, &c.

The Modern Period. The Reformation and Counter Reformation—Spain under Charles I. and Philip II.—England under the Tudors—The Revolt of the Netherlands—The Reformation in France to the Edict of Nantes—The Thirty Years' War—England in the XVII. Century—Ascendancy of France under Louis XIV.—Rise of Prussia—The French Revolution—The Holy Alliance—The Revolution of 1830 and 1848—France under Napoleon III.—The Unification of Italy—and of Germany—Great Britain and Russia.

"... a model of condensation, omitting no essential facts. . . . The volume is greatly enhanced by a wealth of maps and chronological and genealogical tables. Among general histories this will take a leading place."—*Dundee Advertiser*.

TELEGRAPHS AND TELEPHONES. By Sir W. H. PREECE, K.C.B., &c., sometime President of the Institute of Civil Engineers. 2s.

ELECTRIC WIRING. By W. C. CLINTON, B.Sc. Lond., Demonstrator in the Pender Laboratory, University College, London. Fcap. 8vo, 1s. 6d.

The above two volumes are written with particular reference to the requirements of the Examination of the City and Guilds of London Institute.

THE FACE OF NATURE. Popular Readings in Elementary Science. By the Rev. C. T. OVENDEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Fcap. 8vo, 2s.

NATIONAL EDUCATION. Essays towards a Constructive Policy. Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford. 8vo, 7s. 6d. net.

JOHN MURRAY, ALBEMARLE STREET, W.

with the co-operation of the Superintendent-General of Cape Colony, a scheme of prizes for encouraging a knowledge of the geography of the British Empire, and the grave official *Education Gazette* describing the prize-books just arrived, including "a fine illustrated edition of Green's 'Short History of the English People,' tastefully bound in full smooth calf of a delicate rose colour, extra gilt, and beautifully tooled on the edges and margins of the boards as well as on the back." Surely such a peace-offering were apt to conciliate the most discontented little Dutchman. Coronation festivities fall during the winter holidays, and have been left to the care of the local managers; but, as a permanent reminder of the event, the Superintendent-General will give to each class-room of every State-aided school a wall portrait of the King and Queen in robes of State. Again, the Children's Sub-Committee of the Cape Town Coronation Celebration has decided to found two silver challenge shields for gymnastics in the white and coloured schools. The first competition will be on the day fixed for celebrating the Coronation, the memory of which will be annually revived by the recurring contests. These small things mean much under the present circumstances.

In our new possessions the standard of education must be not that of Cape Colony, but that which Dr. Muir has striven to establish. His efforts have been sorely crippled by the lack of properly qualified teachers. We are glad to see that, amid the scarcity of material, he still holds out for tests that will at least give him the best of that which is offered.

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.

THE Association of University Women Teachers held a meeting at Bedford College, York Place, on June 18, to discuss the now serious question of registration. About two hundred members were present, among whom were Miss Maitland and Mrs. Johnson, of Oxford, both honorary members. Mrs. Henry Sidgwick, President of the Association, took the Chair. The discussion was limited to the conditions laid down for admission to Column B in the Register, and those who took part in it viewed the question in its broader outlines and as it affects the whole teaching profession, apart from any personal bias or prejudice. The President threw a good deal of light on some of the rather ambiguous wording of the draft Order, and drew attention to the definition of the words "approved" and "recognized," showing that the recognition of a school for student-teachers and teachers on probation was of quite a different kind from recognition as a place for the training of teachers. Miss Fortey, dealing with the clause relating to student-teachers who could be trained in schools, feared there might be a loss of efficiency if schools competed against the training colleges, taking lower fees, and making the students do some of their work cheap. Miss Macklin and Miss Gruner pointed out the danger that salaries might be seriously lowered as a result of the proviso that teachers must teach one year on probation before they can be admitted to the Register. It was to be hoped that under this new Order the authorities inspecting the schools would investigate and bring to light all the conditions that produce inefficiency, either general or in special departments, in a given school. In not a few cases the inefficiency would very likely be traced to be due to the low salaries paid to the teachers, or to the tendency now prevalent of dismissing the older and well paid teachers in order to restaff the school with younger teachers at lower salaries, or to the frequent changes in the staff in consequence of this policy. Miss Skeat urged that all good private schools ought to make every effort to obtain recognition.

Since there was still a good deal of uncertainty as to the training and experience that the Registrars will recognize as sufficient, the meeting recommended its members generally to apply for registration, even if it seemed to them unlikely that their application would be accepted, since a large number of doubtful cases might lead to some alterations in the conditions; and, besides, a refusal to register an account of some definite deficiency of qualification might encourage the applicant to supply this deficiency, and so make herself eligible. Miss Macklin, 43 York Street Chambers, W., a member of Committee, was appointed to receive information from all those members of the Association who should apply for registration between now and Christmas and be refused admission. The working of the new Order could then be discussed again at the next General Meeting of the Association; when it might be found that grievances had disappeared. Miss Hurlbatt emphasized the danger that increased demand for qualifications, involving additional time and expense, might lead to an attempt to combine a degree course with the training course; the combination of the two kinds of work was found by those concerned in teaching under those conditions to be most unsatisfactory from the point of view both of academic work and of training.

PROFESSOR MEIKLEJOHN'S SERIES.

The Art of Writing English. A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. Third Edition. Crown 8vo, 340 pp. 2s. 6d.

"The Art of Writing English' teems with good advice."—*The Literary World*.
"Whatever Prof. Meiklejohn writes is sure to be vigorous and racy, and, on the subject of English composition, he is peculiarly well qualified to speak."—*The Journal of Education*.

One Hundred Short Essays in Outline. By Professor MEIKLEJOHN. Fourth Edition. 110 pp. 1s. 0d.

"This is undoubtedly one of the most useful books for pupil teachers, Scholarship and Certificate students, ever produced."—*The Practical Teacher*.

General Intelligence Papers; with Exercises in English Composition. By GERALD BLUNT, M.A. Crown 8vo, 130 pp. 2s. 0d.

"This little book is likely to be very useful. It avoids the faults of so many books of the same class; the questions are not too difficult."—*Rev. Joseph Wood, D.D., Head Master of Harrow School*.

A School Geography. With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. Second Edition. Crown 8vo, 410 pp. 2s. 6d.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—*The Educational Times*.

A Short Geography, with the Commercial Highways of the World. Nineteenth Edition. Crown 8vo, 196 pp. 1s. 0d.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.
"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

A School History of England. By J. M. D. MEIKLEJOHN, M.A., Professor of the Theory, History, and Practice of Education in the University of St. Andrews; and M. J. C. MEIKLEJOHN, B.A., sometime Adam de Brome Exhibitioner, Oriel College, Oxford. Crown 8vo, 470 pp. + viii. 2s. 6d.

"The book is clearly written and is not too full of details. The facts are lucidly expressed, and the maps and vocabulary of historical terms are exceedingly well done. We unhesitatingly recommend the book as admirably adapted for schools."—*The Educational News*.

A Short History of England and Great Britain. B.C. 55 to A.D. 1890. Fourteenth Edition. Crown 8vo 1s. 0d.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

A New Grammar of the English Tongue. With Chapter on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. Crown 8vo, 276 pp. 2s. 6d.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnstone, Esq., B.A., Elmhurst College, York*.

A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Thirteenth Edition. Crown 8vo, 176 pp. 1s. 0d.

This little book is written in the clearest and simplest style for beginners. It contains:—

- | | |
|---------------------------------|---|
| i. The Simplest Definitions. | iv. Graduated Methods of Parsing. |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables. | vi. Analysis, with Plain Diagrams. |

The Book of the French Verb. By J. DE CUSANCE. 107 pp. + viii. 1s. 0d.

This little book contains perfectly clear and open Tables of the Irregular French Verbs, each displayed across two pages. The chief Idioms connected with the Verbs are also given.

A First French Book. By J. DE CUSANCE. With a Preface by Professor MEIKLEJOHN. Crown 8vo, 120 pp. 1s. 0d.

"It is an uncommonly good French grammar, full of valuable material, and will make a thoroughly practical text-book."—*The Educational News*.

MR. EDWARD ARNOLD'S LIST.

A NEW GEOMETRY BOOK.

ELEMENTARY GEOMETRY. By W. C. FLETCHER, M.A., Head Master of the Liverpool Institute, late Fellow of St. John's College, Cambridge. Small crown 8vo, cloth. [*In a few days.*]

This book is meant to contain the irreducible minimum of geometrical knowledge, less than the whole of which is not worth considering as knowledge at all. It contains the whole substance of Euclid I.-IV. and VI., with the exception of the unimportant proposition IV. 10.

A FIRST GEOMETRY BOOK. A Simple Course of Exercises based on Experiment and Discovery, introductory to the study of Geometry. By J. G. HAMILTON, B.A., Lecturer on Geometry at the Froebel Educational Institute, and F. KETTLER, B.A., Head Master of Clapham High School for Boys. Crown 8vo, fully illustrated, cloth, 1s. Answers (for Teachers only), 6d.

HISTORY AND GEOGRAPHY OF AUSTRALIA.

THE AUSTRALIAN COMMONWEALTH: Its History and Geography. A Reading Book for Schools. With numerous Illustrations and a Coloured Map. 144 pages. Cloth, 1s.

This book has been written by a gentleman who has lived for some time in each of the Australian States, and who has an intimate knowledge of all that concerns the new Commonwealth. With the proclamation of the Commonwealth the island continent took a new place among the nations of the world, and its new importance is now being emphasized in the schools of the Mother Country.

LITERARY READING BOOKS.

IN REALMS OF GOLD. An English Reading Book for Junior Forms. Containing Folk-tales from many Lands, stories from Homer, Virgil, Chaucer, Malory, Froissart, Shakespeare, Scott, and others. Illustrated with Black-and-white Reproductions of well known Pictures. 224 pages. Cloth, 1s. 3d.

IN THE WORLD OF BOOKS. An English Reading Book for Middle Forms. Containing extracts from English prose and poetry by the best writers, selected to supply matter as suggestive as possible to the teacher of literature and general history. Illustrated with Black-and-white Reproductions of Pictures by Greuze, Turner, and other celebrated artists. 256 pages. Cloth, 1s. 6d.

TELLERS OF TALES. Biographies of some English Novelists, with Extracts from their Works. Edited by R. WILSON, B.A. 240 pages. Cloth, 1s. 6d. The authors represented are Scott, Dickens, Thackeray, Reade, Kingsley, Stevenson, George Eliot, and Charlotte Brontë.

LAUREATA. A Selection from the best Poets, from Shakespeare to Swinburne, including a number of Copyright Poems by W. E. Henley, Henry Newbolt, Rudyard Kipling, and Matthew Arnold. Edited by R. WILSON, B.A. 224 pages. Cloth, 1s. 6d.

MEN AND MOVEMENTS IN EUROPEAN HISTORY. From the Time of Charlemagne to that of Victor Emmanuel. 256 pages. Cloth, 1s. 6d.

A FIRST COURSE IN ENGLISH ANALYSIS AND GRAMMAR. By RICHARD WILSON, B.A. 144 pages. Cloth, 1s.

This book differs from others of similar scope and aim in the arrangement of the parts of the subject.

The broad division into accidence and syntax, the only logical division for a *synthetical* language, is discarded, and what remains of accidence in English, now an *analytical* language, is taught along with syntax.

The pupil is taken step by step through a course which does not permit him to forget what he has already acquired, and as soon as each grammatical principle has been explained he is taught how to apply it in the practical work of analysis and parsing.

ARNOLD'S NEW SHILLING GEOGRAPHY. The World, with special reference to the British Empire. With Diagrams and Sketch Maps, Statistical Tables, Questions, and Map Exercises. Suitable for Junior and Lower Middle Forms. 160 pages. Crown 8vo, cloth, 1s.

FRANÇAIS POUR LES TOUT PETITS. By JETTA S. WOLFF, Author of "Les Français en Ménage," &c. Well Illustrated. Cloth, 1s. 3d.

A Complete Educational Catalogue will be forwarded post free on application. Also a specially prepared list of books suitable for holiday tasks.

London: EDWARD ARNOLD, 87 Bedford Street, Strand.

BLACK'S ILLUSTRATED FRENCH TEXTS.

General Editor—F. B. KIRKMAN.

Elementary.

Small crown 8vo, strongly bound, price 1s. 6d.; or, without English Notes and Vocabulary, 1s. 3d.

LES CAULOIS ET LES FRANCS. Stories from Early French History. By F. B. KIRKMAN and J. M. PÉCONTAL.

"A decided success."—*Guardian*.

FRANCE DE MONTOREL. Story of the Hundred Years' War. By JULES DE GLOUVET. Edited by F. B. KIRKMAN.

"Well worthy of adoption in every secondary school."—*Educational News*.

CONTES DES CHEVALIERS. Stories from the *Chansons de Gestes*. Adapted and Modernized by Mrs. J. G. FRAZER. [*Ready in July.*]

MON LIVRE DE LECTURES. Stories of Everyday Life by A. VESSIOT and Mme. CHARLEVILLE. With Simple Poetry. [*Ready in July.*]

LA TRÈS JOYEUSE HISTOIRE DE BAYARD—Par le Loyal Serviteur. Modernized by W. G. HARTOG.

"Makes a capital reading-book."—*School World*.

AVENTURES DE CHICOT. By ALEX. DUMAS. Edited by A. R. FLORIAN, Manchester Grammar School.

"A racy historical story. Will be read with interest by pupils in middle forms."—*Guardian*.

Middle and Upper.

VOLTAIRE.—CONTES ET MÉLANGES. Edited by F. B. KIRKMAN. With Reform Oral Exercises. Price 2s.

"An excellent up-to-date French reader."—*Practical Teacher*.

GRANDS PROSATEURS DU XVII^e SIÈCLE. By Prof. BRANDIN, University College, London. Price 2s. 6d.; or, without Notes, 2s.

"A very useful book."—*Head Teacher*.

COURS DE GRAMMAIRE FRANÇAISE ÉLÉMENTAIRE. A French Grammar in French. By W. G. HARTOG. Price 1s. net.

THE AGE OF RICHELIEU. Edited by A. JAMSON SMITH, M.A. 2s.

"A really satisfactory reading-book for upper forms."—*Education*.

THE AGE OF LOUIS XI. Edited by F. B. SMART, M.A. 2s.

"This attempt to combine historical and linguistic training deserves every praise."—*Cambridge Review*.

BLACK'S ILLUSTRATED FRENCH TERM READERS.

Small crown 8vo, strong limp cloth, stitched, and moderately priced without sacrifice of print.

SPECIMEN COPIES SENT ON APPLICATION.

Preparatory and Elementary.

For first four years. Length of Text, exclusive of Illustrations, Vocabulary, and Notes, 20-30 pp. Price 6d.; or, without Notes and Vocabulary, 4d. All Texts under this heading are modern.

PETITES COMÉDIES, for Reading and Acting. By Mrs. J. G. FRAZER.

BERTHE AUX GRANDS PIEDS. A Modernized Story from the *Legendary Literature of the Middle Ages*. By Mrs. J. G. FRAZER. Illustrated.

CHEVALIERS DE CHARLEMAGNE. Stories from the *Chansons de Gestes*. By Mrs. J. G. FRAZER. Illustrated. [*Ready in July.*]

The above two, with additions, form the *Contes des Chevaliers*.

ÉPISODES DE LA GUERRE DE CENT ANS. Retold from the *Chronicle of Froissart* in Modern French by Mlle. NINET. Illustrated. [*Ready August.*]

RIRES ET LARMES. Prose Stories of Everyday Life by A. VESSIOT. With Simple Poetry. Illustrated. [*Ready in July.*]

CONTES ET PRÉCEPTES. Prose Stories by Mme. CHARLEVILLE. With Simple Poetry. Illustrated. [*Ready in July.*]

The above two, with additions, form *Mon Livre de Lectures*.

Others to follow.

Middle and Upper.

Length of Text, not counting Illustrations and Notes, 30-40 pp. No Vocabularies. Each Text can be had without English Notes. Texts, both modern and of the seventeenth and eighteenth centuries, will be found under this heading.

VOLTAIRE.—MÉLANGES. Edited, with Reform Oral Exercises, by F. B. KIRKMAN. Price 6d. Illustrated. [*Ready.*]

VOLTAIRE.—ZADIC. Edited, with Reform Oral Exercises, and carefully Revised, by F. B. KIRKMAN. Price 6d. Illustrated. [*In preparation.*]

MAÎTRE PATELIN (Comédie). Modern Rendering of the famous *Farce*, based on the edition of 1490. By Mlle. NINET. Price 6d. Illustrated.

CHICOT CHEZ HENRI DE NAVARRE. By ALEX. DUMAS. Edited by A. R. FLORIAN. Price 6d. Illustrated. [*Ready shortly.*]

Others to follow.

Upper.

Length of Text, not counting Illustrations and Notes, 40-50 pp. No Vocabularies.

LETTRES, MAXIMES ET CARACTÈRES DU XVII^e SIÈCLE. Contains Eight Letters of Sévigné, Maxims of La Rochefoucauld, and La Bruyère's chapter on *La Société et la Conversation*. Edited by Professor BRANDIN. Price 9d.; or, without notes, 6d. Illustrated. [*Ready.*]

BOSSUET.—LES EMPIRES. Contains *les Egyptiens, les Perses, les Grecs et Alexandre*. Edited by Professor BRANDIN. Price 9d. 22 Illustrations. [*Ready.*]

WATERLOO. By HENRI HOUSSAYE, de l'Académie Française. The most authentic and impartial account of the battle. Several Illustrations. [*In prep.*]

Others to follow.

10 words after, 6d.
Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.;
each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page.
[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."] All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

INSPECTION OF SECONDARY SCHOOLS.

By T. L. HUMBERSTONE.

BEFORE discussing the general question of Government inspection of secondary schools it may be well to describe briefly what may be called the "history" of the movement. In the dark ages the Science and Art Department was known in some few secondary schools as an official body residing somewhere in South Kensington, who awarded grants on the results of certain science and art examinations. The inspector first appeared on the scene—or at least assumed an important rôle—some ten years ago, when the scheme for organized science schools (as they were then called) was promulgated. It is impossible to say whether it was ever the deliberate wish of the Department that this scheme should be adopted generally by secondary schools; the fact remains that many of the more impecunious schools could not resist the offer of high grants; and, although the scheme as applied to secondary schools of the ordinary type was a thoroughly bad one, more and more applied for recognition as organized science schools. The many imperfections of the scheme as applied to these schools soon appeared; modifications were made in course of time, and quite recently changes in the method of assessing grants and in other respects have very much improved it. And, further, a second scheme—now known as the Scheme for Secondary Day Schools, Division B—was published in April, 1901. It has received the approval both of the Head Masters' Conference and of the I.A.H.M., and it may be said that the regulations are much more in conformity with the wishes of secondary schools, though the grants are not so large as for schools of science (or Division A schools). Lastly, there is an arrangement by which schools, on payment of a small sum, may be inspected by the Board of Education. As a result of these schemes the work of the inspector in secondary schools has become of great importance, and it is fitting that it should receive careful consideration.

The word "inspector," as applied to education, is chiefly associated at the present time with elementary schools. The elementary teacher often conceives him as an ogre whose visits are dreaded; as a monster who must be appeased at any price; as an educational hawk, whose piercing eye will detect the slightest faults of commission or omission.

The answer which a child once gave to the question: "Who is the Devil Incarnate?" shows that this feeling is not confined to the teachers. To attempt to decide whether this kind of inspection is either necessary or valuable in elementary schools would be out of place in this article: it will suffice to say, definitely and emphatically, that it is not required, and should have no place in secondary schools. In these schools the inspector is dealing with men of very different education and mental outlook from elementary teachers. However undesirable the self-sufficiency of the average secondary-school master may be, it must be accepted, like the weather, as a solemn, mysterious fact; and refusal so to accept it will entail endless friction. The function of the secondary-school inspector is not that of carping critic of details. Small defects—a piece of paper on the floor, a slip in the registration of a student—must not be magnified into gross faults. One example of the kind of inspection of which complaint is made will, perhaps, do more good than any amount of explanation in general terms. A Board of Education inspector visited not long ago a small secondary school in the provinces. He proceeded to inspect the chemical laboratory, obviously with the idea of pouncing on some small defect. At last his zeal was rewarded. A bottle containing hydrochloric acid had been temporarily labelled HCL by a laboratory assistant; whereas the correct formula is HCl. Any one who knows chemistry will see at once that this slip could not possibly cause any mistake or confusion as to what the bottle contained. But the inspector not only pointed out the mistake in his best inspectorial manner, but reported it to the head master; and, at a later stage, it was used as "official" evidence of the science master's neglect of duty. This may be a bad example; but the same sort of thing is going on at the present time in secondary schools. Well educated men who are working to the best of their ability with small salaries and poor prospects will not allow a new terror to be added to their lives in this way. It is primarily the duty of the head master to detect bad teaching and slackness of work. Criticism made to the head master by the inspector must be such as could be revealed, and criticism of a derogatory nature should only be made in extreme cases, if at all. There are possibilities of grave danger in the triangular relations between head masters, assistant masters, and inspectors. Unless a strict code of etiquette is established and enforced, a very unhealthy spirit may arise in secondary schools; and to eliminate that spirit, once it arises, will be the work of years.

In his relations with the masters of secondary schools the inspector should take the part of candid, but honourable, friend. He should be the adviser, but not in the sense that a doctor is one's medical adviser, whose advice must necessarily be followed. The support of his recommendation should be available in obtaining additional apparatus and appliances. His wide experience of schools and methods should be at the disposal of masters; but his prejudices, and even his mature judgments, must not be forced down their throats. It is the rightful boast of English schools that individuality of methods of teaching is encouraged; and it may as well be understood from the first that any attempt to introduce cast-iron methods is doomed to failure. It may also be noted that it is not one of the duties of an inspector to nominate masters for secondary schools, and practically to enforce their appointment. This is a practice which should be strictly forbidden. An inspector may perhaps allow his name to be used as a reference, and, if an inquiry is made, he may express his opinion of a master's work. But anything more than this is most undesirable.

There is no need to apologize for having dwelt at some length on the relations between the inspector and the teacher, and on the importance that these relations should be cordial. The other work which will be done by inspectors calls for little or no comment. To examine the sanitary arrangements, ventilation, and lighting of a school, the classification of the scholars, the adequacy of the teaching staff and apparatus—these and all other such duties are not likely to cause difficulty. Mrs. Sophie Bryant has suggested that this work alone should be done by the Board of Education, and that the educational side of the work should be entirely delegated to University inspectors. But surely His Majesty's inspectors are something better than plumbers; and, besides, the adoption of such a suggestion would tend to that over-inspection which Mrs. Bryant so strongly and rightly deprecated. Within the last few years some of the Welsh schools were visited by

Central Board inspectors, special science, manual training, and cookery inspectors for the Central Board; Board of Education Science and Art inspectors, Ablett's drawing inspector, and Oxford Local examiners—surely an extravagant and undesirable state of things. On the other hand, it is certainly desirable that the Universities—of Oxford, Cambridge, London, Birmingham, Victoria, Durham, &c.—should have some knowledge of the work of secondary schools, especially in view of the fact that by local examinations some of them will, in any case, retain an important part in assessing the work of the schools. The solution of the difficulty which was recently contained in a communication from the Board of Education to Cambridge University—viz., that the University and the Government inspectors should work together—is a singularly happy one; it is satisfactory from the official point of view, and also from the point of view of the schools and of the public.

The question of the reports to be written by inspectors and issued by the Board of Education is also an important one. Would it not be well if, as a result of the inspection, two reports were issued—one for the public and one for the teachers? This system has been adopted by the Central Welsh Board, and works very well. The unsatisfactoriness of the present system is well shown by the reports of Oxford and Cambridge inspectors, which are filled with technicalities and unimportant details. Head masters are placed in an awkward position; they have either to read the whole of the report—to the great weariness of the audience—or to read selections. We all know which solution is usually adopted. After all it is not a matter of any interest or importance to the public that Smith *minor* only obtained two marks in arithmetic; or that Brown failed to detect the ferrocyanide in his chemical analysis. But the public does want to know whether the examination results—to most of them meaningless lists—are satisfactory when compared with other schools and when all the circumstances are considered. It does want a concise statement of the work of the school as a whole; it would be interested to know in general terms what appears to experienced men to be praiseworthy about the school, and what is capable of improvement. On the other hand, the masters would welcome valid and constructive criticism of the teaching of the various subjects. The Board of Education would be doing a public service if it issued for every secondary school coming in its purview such reports as these. Given reasonable care, they could not possibly cause ill-feeling.

One other important point in this connexion must be emphasized. It is that the data from which criticism are made must be satisfactory. The latest regulations state explicitly that "the educational inspections will deal with all subjects comprised in the curriculum of the school, but not by way of systematic examination either written or oral." This can be understood if it means that the results of public examinations and the marks obtained in various subjects considered in relation to the papers set, are to be carefully studied by the inspector and used in drawing up his report. But, if it means that the opinions as to the quality of the teaching are to be expressed as the result of general impressions, the regulation must be condemned in unmeasured terms. There has in the past been too much of this "impressionist" inspection—hands in pockets (metaphorically speaking) the inspector walks about to see how the boys "go about their work." It will not do; there must be something systematic about the inspection if any definite opinion is to be published as the result of it. Masters will refuse to be either praised or condemned by casual inspection. One would have thought that the result of abandoning in elementary schools "systematic" inspection would have indicated the necessity of such inspection in secondary schools. No one, of course, would like to see the introduction into secondary schools of the system which formerly obtained in elementary schools; and there is no danger of such a thing being done. But the danger from the other extreme is equally to be avoided; and either the Board must accept the results of "systematic" examinations of other bodies, and must make arrangements for all schools to take these examinations, or they must institute for schools which do not at present submit to such examinations, some test of this kind. Scotland has it and so has Wales. With the abandonment of the annual inspection it is more and more necessary that some examination test should be applied to those "schools of science" and other secondary schools which do not enter for public examinations. It need hardly be said that such an examination is valuable for older

boys ; it is of little, if any, value for younger boys. But this is comparatively a question of detail.

The question of the *personnel* of the inspectorate remains to be considered ; it is one which has been discussed at different times and in different places with considerable candour. Thus a correspondent of this journal (February, 1901), referring to some appointments to junior inspectorships, wrote : " It is quite certain that, in spite of the definite statement of the Department that successful teaching experience would be an important qualification, a large proportion of the men appointed have had little or no experience in the type of school which they will inspect. Not very long ago the Vice-President of the Council, in an admirable speech in the House of Commons, stated the special qualifications which he considered desirable in an inspector—in particular a broad culture and wide interests. In the recent appointments these qualifications have been considered of no importance, and the Vice-President, to whom we looked to carry out his principles, has been a mere figure-head. The selected applicants appeared before him as so many waxworks ; he examined the cut of their coats and the shape of their collars, and left the matter to be arranged by the officials." At the University Extension Meeting at Cambridge, Dr. R. P. Scott said : " The Office must encourage in its inspectors and in its other officers both tact and insight in applying principles. The choice of a fit and adequate inspectorate will be a crucial test of the degree to which the new Office is rising to the level of its opportunities." And lastly, Mr. Swallow, in his trenchant speech at the Teachers' Guild Conference (January, 1902), said : " The list (of inspectors) is infected with the South Kensington bacillus. The present inspectorate of the Board is ineffective and insufficient." Much more of the same kind might be cited, if it were necessary, to show the general opinion. To be quite fair it must be remembered that most of the present inspectors were appointed before the inspection of secondary schools was at all developed ; they were chosen to inspect day and evening science and art classes. But, like the voluntary schools, they exist. The question is, therefore, more complicated than at first appears. It may be interesting to note that of the nineteen inspectors connected with secondary education who were given the title of His Majesty's Inspectors at the Court of St. James's, May, 1901, about half are graduates of a British University, and the number who have the qualifications demanded by the Board for a " recognized " teacher is probably smaller.

But the plea that only men with very high degrees should be appointed as inspectors is open to discussion. It is not uncommon that men with high degrees either become engrossed in their subjects or live on their reputation. Besides, what a man does at the age of twenty-one is not always a test of his potentialities. The matter for protest is that very few of the permanent inspectorate have had teaching experience in secondary schools. There are, for example, a former South Kensington official, two or three college lecturers, an Army officer, a college professor, and so forth ; but no one whose name is recognized as a former schoolmaster. The more recent appointments of the Board have shown a willingness to recognize this real grievance. It is the lack of experience which prevents a man from becoming a faddist. Not from books does he learn the abilities of boys at various ages : the intelligence of the intelligent boy and the dullness of the dull boy. It may reasonably be demanded that, in addition to possessing the usual credentials of an educated man, the inspectors of the future shall have had teaching experience in secondary schools. If it does nothing else, it will help to ensure a sympathetic attitude towards teachers.

And here arises a further question—the age at which a man should begin the work of inspecting. There are some who think that the inspectors should be chosen from ex-head masters—a plan which has serious objections. As Mr. Buckmaster pointed out, a successful head master, both from inclination and for pecuniary reasons, would not be likely to desire a change of work. On the other hand, there is a far more serious objection, as we have already insisted, to the appointment of men who have had no teaching experience. The question to decide is, how much experience is desirable. After a certain number of years passed in the profession a schoolmaster begins to assume the stigmata of the type. Dr. Johnson was once much annoyed by being addressed as Dominie. In a sense the title was correct, for the great Cham

of literature had been an usher at Market Bosworth, and the head of a private school near Lichfield. But to Johnson's mind the title of Dominie implied a certain narrowness of view. There seems to be much truth in the view that the work of inspecting is sufficiently special to constitute a distinct profession ; though the members of this profession must not consider themselves a distinct caste—" after the order of Melchisedec"—but rather an important subdivision of the great profession of schoolmasters. Men with good general qualifications and some five years' experience of teaching—if possible in different types of schools—are most likely to develop into efficient inspectors. From the ranks of these junior inspectors would be selected the inspectors, with perhaps an occasional direct appointment to the full dignity.

Little need be said in conclusion of the value to national education of inspection of an enlightened kind ; at last we have reached a subject on which there is likely to be unanimity. As the German professor says in " Harry Richmond," " Your country breeds honourable men, chivalrous youngsters. It is not enough—not enough. I want to see a mental force, energy of brain. If you had that, you might look for a match for it with my consent." Inspection of the right kind will tend to increase this mental force, energy of brain. But, if conducted in that repulsive spirit of petty fault-finding by men not possessing the special qualifications for the work, it will certainly do more harm than good.

TEACHERS' GUILD NOTES.

THE Government are gradually shaping up their Education Bill to be more and more such a measure as most teachers—certainly those whom the Guild represents—are desirous of seeing passed. From the first the Bill, as a whole, secured their support, largely because it gave them much of what they had been persistently demanding. On June 23 two further concessions to professional, as well as lay, opinion were made. There was a generally expressed feeling at the Annual General Meeting of the Guild, on May 31, that better results in education would be obtained if a larger share of the cost of education should be made an imperial charge, rather than a local burden. The happy conclusion of the war in South Africa has enabled the Government to promise a substantial addition of some £900,000 a year to the money already specially granted to voluntary schools under the legislation of seven years ago, and the whole sum—over a million and three-quarters—will be devoted to the relief of local elementary education charges according to a sliding scale, based on the amount per child produced by a 1d. rate. This will, indirectly, serve to make it easier for Local Authorities to provide a proper supply of secondary education in any area, by reducing the costs to the rates of primary education.

THE other concession—made on the same day—was a more timid one. The last of the eleven resolutions sent to the Lord President by our Council in February ran as follows :—" That it be the duty of the Local Authority, to be enforced by the Board of Education, to see that an adequate supply of primary, secondary, and technical schools is provided within its area." Our Manchester Branch has also publicly laid stress on this, though our Annual General Meeting did not deal with it. The resolution is met, in the opinion of some, by the arguments used by Sir John Gorst in his Bradford speech, when he asked us to " trust the Local Authorities, and give them ample powers, and leave them to exercise those powers for the benefit of the people whom they represent," justifying his exhortation by the conduct of the Authorities in dealing with the " whisky money." Mr. Balfour based his objection to Mr. Hobhouse's amendment (substituting " shall " for " may " in Clause 2 of the Bill, and thus meeting the demand of our resolution), mainly on the tendency that would result to throw on the Board of Education the duty of defining in detail what should be the statutory minimum supply of secondary education for each area, with, as outcome, " a formal and petrified system applied to all localities, uniform in its character and not fitting itself in with the local needs and the local purse." In the end,

he yielded so far as to make the "shall" apply to a *consideration by the Local Authority of the needs* of each area in secondary education, and the "may" to the subsequent *steps to be taken* after consultation with the Central Authority. It is a difficult question to decide how far the concession meets the need, but we are inclined to think that the definite announcement of the deficiencies of any area will be enough, in the present state of public opinion, to compel the remedy. Patriotic anxiety has come at last to the support of reason in this matter of secondary education.

THE Council of the Central Guild have done a good piece of work in drafting the subjoined set of questions on curriculum for discussion by the Central Guild. It is likely that they may be adopted by more than one of the Branches for local discussion. They do not cover the whole scope of the questions sent out by the Teachers' Guild Council to the Central Guild and Branches; but they have the advantage of focussing attention upon a number of practical points, and are not intended to oust the others that are set out or involved in the original circular. If the hopes of the Guild are realized, and a clear pronouncement on the right order and relation of subjects in a secondary school curriculum, based on these preliminary discussions, can subsequently be obtained from a body of fully qualified experts, the Education Committees of our new Local Authorities will be supplied with an excellent touchstone for the quality of any school which professes to supply a good general secondary education. The questions are:—

1. What subjects should form the curriculum for scholars intending to leave at the age of sixteen or seventeen?
2. In what way should the curriculum be modified to suit the needs of scholars leaving at the age of sixteen or seventeen for (a) business, (b) professional or scientific careers?
3. At what age should specialization begin in the case of public schools which mainly prepare for the Universities or professions?
4. Should Latin be included in the curriculum for schools where the leaving age is sixteen or seventeen?
5. Should Latin be begun before French, or *vice versa*?
6. When and how should the formal teaching of grammar be begun?
7. Should the use of Euclid's elements be continued?
8. What should precede formal mathematical treatment of geometry?
9. At what age should algebra be begun?
10. What course of natural history is best suited to preparatory schools and the junior pupils in other schools?
11. At what age should laboratory work be begun?
12. What proportion of school time should be assigned to (a) hand-work, (b) drawing, (c) music, (d) sewing, (e) physical education, (f) military drill, (g) natural history excursions?
13. To what extent should the study of practical physics be correlated with (a) mathematics, (b) workshop practice?
14. How should history be correlated with other subjects?

CALENDAR FOR JULY.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—Oxford Exams. for Women. Responses begin.
- 1.—Epsom College Entrance Scholarship Exam.
- 1.—Victoria University, Manchester. Return forms for School Preliminary Exams.
- 1-3.—College of Preceptors Lower Forms Exams.
- 1-5.—College of Preceptors Certificate Exam.
- 1-5.—Royal Holloway College, Egham, Exam.
- 2.—University College, London. Announcement of Scholars, Exhibitions, Prizemen, and Reading of Class Lists (Arts, Laws, and Science). Third Term ends.
- 2-3.—Law Society's Preliminary Exam.
- 3-5.—Canterbury King's School Entrance Scholarship Exam.
- 5.—King's College, London. Names of Candidates for Scholarships, &c., to be sent in.
- 5.—Oxford University Trinity Term ends.
- 6-8.—Edinburgh Royal Colleges of Physicians and Surgeons Preliminary Exams.
- 7.—Board of Education Exam. for Certificates.
- 7.—London University Intermediate Medicine Exam. begins.
- 8.—National Froebel Union Exam. for Elementary Certificates.
- 8-9.—Glenalmond School Entrance Scholarship Exam.
- 8-11.—College of Preceptors Exam. of Teachers for Diplomas.

- 10.—Brighton College Entrance Scholarship Exam.
- 10.—Eton College Entrance Scholarship Exam.
- 12.—Victoria University, Manchester, Preliminary Exam. in Schools.
- 13-28.—Oxford and Cambridge Schools Examination Board's Higher Certificate Exam.
- 14.—London University Intermediate B.A. and Intermediate B.Sc. Exams. begin.
- 14.—London University Preliminary Scientific (M.B.) Exam. begins.
- 15.—Oxford Local Exam. begins.
- 15.—Post Translations, &c., for *The Journal of Education* Prize Competitions.
- 18.—Merchant Taylors' School Entrance Scholarship Exam.
- 18.—London University Matriculation Pass List published.
- 21-23.—Surrey County Council Maintenance Scholarships Exam.
- 22.—Post School News, items for this Calendar, &c., and Advertisements for the August issue of *The Journal of Education*.
- 23.—London University Intermediate Medicine Pass List published.
- 23-28.—Oxford and Cambridge Schools Examination Board's Lower Certificate Exam.
- 26.—University College, London. Faculty of Medicine: Summer Session ends.
- 26 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the August issue of *The Journal of Education*.
- 30-31.—Bristol City Council Scholarship Exam.
- 31.—Royal Academy of Music. Return forms for L.R.A.M. Exam.

The August issue of *The Journal of Education* will be published on Thursday, July 31, 1902.

HOLIDAY COURSES.

- ABERDEEN (University of).—July, August, and September. Special Courses in French and German for Teachers. Apply to Lecturers in Modern Languages, Marischal College, Aberdeen.
- ABERYSTWYTH.—During August. Sloyd. Under direction of Miss Andrén. Address—31 Blenheim Road, Bradford, Yorks, or apply to Mr. Cooke (see under Nääs).
- AMBLESIDE.—During August. Sloyd. Under direction of Mr. J. Vaughan. Apply to Mr. J. Cooke (see under Nääs).
- ÁVILA (Spain).—August 4-25. Spanish. Apply to the Director of Technical Instruction, County Technical Offices, Stafford.
- CAEN.—July 1-30, August 1-30. French. "Alliance Française" Courses. Apply to Mr. Walter Robins, B.Sc., 9 Northbrook Road, Lee, S.E.
- CAMBRIDGE.—University Extension Summer Meeting, August 1-13, August 14-26. History, Literature, Science, Economics, Music and Fine Arts, Education, Theology. Programme, 7d. post free, from R. D. Roberts, M.A., Syndicate Buildings, Cambridge.
- DOVER.—June, July, August, September. Short Courses in the Oxford Shorthand and Phonetics, by Percy Kingsford. Apply —Excelsior, Dover.
- GENEVA.—July 16-August 28. French. Apply to Monsieur Charles Seitz, à l'Université, Geneva.
- GREIFSWALD.—July 14-August 4. German. Apply to Prof. Dr. Siebs, Ferienkurse, Greifswald.
- GRENOBLE.—July 1-October 31. French. Apply to Monsieur Marcel Raymond, 4 Place de la Constitution, Grenoble.
- JENA.—August 4-24. German. Apply to Frau Dr. Schnetger, Gartenstrasse 2, Jena.
- KIEL.—July 6-26. German. Apply to Herr Nissen, Holtenauerstrasse 38, Kiel.
- LAUSANNE.—July 22-August 30. French. Apply to Monsieur J. Bonnard, Avenue Davel 4, Lausanne.
- LEIPZIG.—July, August, and September. Sloyd. Apply to Dr. Pabst, 19 Scharnhorst Strasse, Leipzig, or to Mr. Cooke (see under Nääs).
- HONFLEUR.—August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, London.
- MARBURG.—July 7-27. Modern Languages. (Second Course, August 4-24.) Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
- NÄÄS.—June 11-July 23, July 30-September 9, November 5-December 16. Sloyd. [The courses at Nääs, Leipzig, Aberystwyth, Ambleside, and Penarth have been arranged by the Sloyd Association.] Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.
- NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.
- NEUCHÂTEL.—July 15-August 10. (Second Course, August 12-September 7.) French. Apply to Monsieur P. Dessoulavy, Académie de Neuchâtel.
- OXFORD.—July 2-August 28. English Language and Literature for Women Students. Apply to Mrs. Burch, 20 Museum Road, Oxford.

PARIS.—July 1-31. French. (Second Course, August 1-31.) Apply to Monsieur le Secrétaire, l'Alliance Française, rue de Grenelle 45, Paris.

PARIS.—Christmas and Easter Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.

PENARTH.—During August. Sloyd. Under direction of Glamorgan-shire County Council. Apply to Mr. W. Hogg, Technical Instruction Committee, Glamorgan, or to Mr. Cooke (see under Näs).

SANTANDER (North Coast of Spain).—August 5-25. Spanish. Apply to General Secretary, Teachers' Guild, 74 Gower Street, W.C.

TOURS.—August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, W.C.

VILLERVILLE-SUR-MER, TROUVILLE.—August 5-26. French, preparation for exams., "Alliance Française." Apply to Prof. L. Bascan, rue Caponière 49, Caen.

Programmes of most of these courses can be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W., where a Table of Foreign Modern Language Holiday Courses, prepared by the Special Inquiries Branch of the Board of Education, can be obtained.

Information as to lodgings for students at Honfleur, Tours, and Santander (Teachers' Guild Courses) will be found in the Handbook, 6½d., post free, from the Teachers' Guild, 74 Gower Street, London, W.C.

A list of addresses in several other Holiday Course centres will be found in "Holiday Resorts," 1s. 1d., post free from same address.

The advertisement columns of *The Journal of Education* ("Continental Schools and Pensions") may also be consulted with advantage.

ASSOCIATION OF HEAD MISTRESSES.

THE Annual Conference of the Association of Head Mistresses was held at the South Hampstead High School on Saturday, June 14, when 126 members were present; the President, Miss Connolly (Haberdashers' School, Hatcham) presiding.

The President's address followed the transaction of the usual yearly business. She first referred to the progress in education in England in recent times, and pointed out that from the Schools Inquiry Commission in 1868 may be dated the great interest taken in education by the best men and women of the country. In 1900 a great step was made by the Board of Education Act, when the President of the Board became a Minister of Education. The "Order in Council" of 1902 was, she said, a real attempt to make teaching a recognized profession. She regretted that, unlike doctors and dentists, who have their own professional Councils, teachers will, for the present, only have a limited voice in the Registration Council, and will, therefore, have their affairs managed for them. With regard to the training of teachers, she thought the voice of those already engaged in this work should be paramount, and that freedom and variety in the manner of imparting knowledge was, above all things, to be desired. The Education Bill now before Parliament was, however, a bitter disappointment, because it did not include women by statute on the Education Committees; and it was only fair to the thousands of girls in the country that they should not be deprived of the benefit of that special experience in educational matters which women only could give them. The expense of a University education would be considerably increased by the addition of a fourth year for training. It was, therefore, suggested that the County Councils in each county might, with advantage, replace some of their minor scholarships by scholarships to be offered to graduates to cover the expenses of their year of post-graduate training. The new regulations issued by the Board of Education regarding the time devoted to science and mathematics in the secondary day schools were then referred to, and the question was raised whether, for an ordinary girl, such division of time would be beneficial to her. In conclusion, she urged upon the members of the Association not to lose sight of the importance of doing their utmost to secure the best candidates for County Councils and Borough Councils.

During the discussion on the Education Bill the following resolutions were passed:—"That this Conference welcomes the Education Bill, 1902, as constituting a single Local Authority, and trusts that every means will be taken to enable it to deal adequately with forms of education other than elementary within the area of counties or county boroughs." And: "That while noting with satisfaction the opinion expressed by the First Lord of the Treasury on April 11, 1902, that women would not be ineligible as members of the Local Education Authorities, the Association of Head Mistresses urges that definite provision should be made by statute for the inclusion of women on the Education Committees of the Local Education Authorities."

The Conference then considered the regulations for secondary day schools issued by the Board of Education in June, 1902, and the following resolution was carried unanimously:—"That the Association of Head Mistresses desires to bring before the Board of Education

the serious injury to girls' education in secondary schools which must result from requiring that nine hours out of a maximum of twenty (the number of school hours in the majority of girls' day schools) shall be devoted weekly to science and mathematics as the condition of a grant, and desires the Executive Committee to draw up and forward a memorandum on the subject to the Board of Education."

Papers on "The Training of Teachers" were read by Miss Ottley (Worcester), Miss Rigg (Camberwell), and Miss Burstall (Manchester). The resolution: "That it is desirable a certificate of teaching proficiency should be granted by Government to teachers trained in 'approved' secondary schools upon the result of examination and inspection organized by the Education Department," was lost. As an amendment: "That this Association welcomes Clause 2 ii. in the Schedule of the Order in Council as making it possible for certain 'approved' schools to provide training for teachers. At the same time, it is of opinion that only those students should be admitted to such training as have passed one of the examinations named in Appendix A; that only such schools should be approved as can furnish liberal and comprehensive training under a duly qualified staff, and that the supervision required should be, as far as possible, in connexion with a University," was unanimously carried.

A discussion then followed on school-leaving certificates and certificates qualifying for admission to the Register of Teachers.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

THE first place in this notice must, in the interests of justice, be given to an apology hereby sincerely tendered to the Secretary and members of the Newport County Governing Body for the injustice done them in our notice which appeared in this journal last month. It was there stated that that Governing Body "was unable to accept the pension scheme of the Central Welsh Board, and further disapproved of the organization of such scheme for teachers in their intermediate schools." It was the Monmouth Governing Body that was responsible for this harsh resolution, whereas the Newport Governing Body gave not only a courteous, but a favourable, consideration to the memorial in support of the Welsh pension scheme which was presented to them by the A.M.A. We are happily confident that the friendliness of the Newport Governing Body is in no way diminished by the unfortunate mistake, for which the present writer alone was responsible. It is no merely formal apology, but an expression of genuine regret, to which he now gives utterance.

Next in importance is the great service which has been rendered to assistant masters by Mr. F. S. Stevenson (Member for Eye) in the House of Commons. In the debate on the Estimates for the Board of Education on May 26 he called attention to the conditions of tenure of assistant masters in the secondary endowed schools. He not only insisted that the present system involved the perpetuation of a grave injustice to one particular class of the educational community, but urged that this system must have the effect of preventing the best men from embarking upon an educational career. Mr. Stevenson stated that he had particulars of fifteen cases in which the arbitrary dismissal of assistant masters had occurred within the last few years. He referred more particularly to several of these cases, including that of the head master who, retiring in 1899, with a pension, dismissed the whole staff at the beginning of his last term because he was in doubt as to his legal liability in the event of the staff not being retained by the new head master. Assistant masters, and the readers of this journal, are so familiar with the excessive and unnecessary insecurity of tenure entailed by the arbitrary powers now given to head masters, that it is needless to reproduce completely the arguments with which Mr. Stevenson so ably enforced his contention. It is insecurity of employment after arbitrary dismissal which constitutes so grave a danger to the efficiency of secondary education. The member for Eye urged that the question should be referred to the Consultative Committee, as requested by the joint deputation of assistant masters and head masters which had waited on Sir John Gorst.

Major Rasch (Essex, Chelmsford) protested against the platonic sympathy of Sir John Gorst, and Sir Joseph Leese (Lancashire, Accrington) suggested that a provision should be put in the Education Bill which would give to teachers what was really their right in this matter.

Sir John Gorst, in reply, said that there was no occasion to bring in a Bill to ensure the security of tenure of teachers, because, to quote his words, "if the provisions of the Education Bill are not sufficient, a clause can be introduced into the Bill protecting the teachers against

wrongful dismissal." He expressed himself in favour of an appeal to a governing body as a remedy, and as being opposed to an appeal to the Board of Education. He declined to refer the matter to the Consultative Committee, but stated that, "if a practical plan were produced, it would probably be submitted to the judgment of a Consultative Committee; but there must be a practical plan before we can undertake to move in the matter at all."

The *'Schoolmasters' Year Book* promised by Swan Sonnenschein & Co. has attracted not a little attention. The preparation of the work is, we understand, entrusted to a member of the A.M.A., whose ability as a thinker and writer promises well for the usefulness of a much desired publication. The Association is in no way committed to any approval of the proposed book, nor in any way officially connected with its preparation, but individually a large number of members hail the prospect with delight, and will do all in their power to assist in establishing its success.

The "Circular to Members" last month had a literary flavour; this month it is more strictly educational. In "Latin at Bay" we have a plea for compulsory Latin at the London Matriculation Examination, and a fulmination against the revisers of the regulations who have left it optional. This is followed by a preliminary report on "The Teaching of Elementary Mathematics," addressed to the Committee appointed by the British Association to consider that subject, and a review of Dr. Gardner's "Classical Archaeology in Schools."

CORRESPONDENCE.

ONE, AMONG MANY, POSSIBLE MODES OF SECONDARY TRAINING.

To the Editor of The Journal of Education.

SIR,—It may be worth while just now to put in print a brief MS. which was shown by me, in 1893, to a number of colleagues at Rugby, as well as to the Head Master (Dr. Percival), and more or less approved. Nothing came of it then. I fell ill before long, and, later in the year, a roving commission to America ended my temporary connexion with Rugby. I feel sure that the present Head Master of Rugby would not approve the plan. I fear he will only under protest acquiesce in any plan of training; but I publish the paper now because I believe it to be immensely important for every possible scheme of training to be suggested.

The chief addition I would now make would be to urge that such student-teachers should not spend the whole year at the public school, but go to a University for one of the three terms in order to have a continuous course of study on the theoretical side. One term is not much, and my friends Dr. Fletcher and Mr. Keatinge will be up in arms against me for suggesting it. But the main points the next few years will be: (1) to prevent able men from refusing to enter our profession; (2) to secure the co-operation of good schools in the study of education.

The plan involves the co-operation of the staff, among whom one is somewhat set apart to take special charge of these few students; and, in spite of the contempt of "Trainers" (*vide* letter to the April number of this journal) I know that all good schools can provide such help. There is room enough for the training colleges, but they must not pour cold water upon the rank and file of the profession, or the douche will be returned.

It would be very helpful if you could publish a variety of suggestions from different quarters as to what is practicable. At Manchester, for example, Prof. Withers and Miss Burstall have floated an interesting scheme for women students of Owens College. The plan I outlined places the "supervision" wholly under the staff.—I am, yours, J. J. FINDLAY.
Cardiff.

TRAINING OF SCHOOLMASTERS.

§ 1. That three or four Oxford or Cambridge graduates, intending to teach, be invited to spend a year at Rugby for the purpose of training.

They would be men who, under other circumstances, would have been appointed to posts in public schools without any such preliminary period of probation.

§ 2. House masters interested in promoting the objects of training be invited to receive these men as their assistants, giving them residence in return for services.

These services might consist not only in helping in the oversight of the house, but in school work. Each assistant might take two or three hours per week of teaching in the house master's form, under his direction. He might begin by correcting papers, adding up marks, &c.

The advantages of this plan appear to be (1) that the assistant would gain an intimate acquaintance with a master's ordinary daily work, and, at the same time, would have leisure to watch the school processes, and to examine into the relation of cause and effect, as he cannot do when he is immediately plunged into full work; (2) the opportunity of acquaintance with *individual* boys, and thus of becoming familiar with their minds and their ways before being overwhelmed with *class* work in which there is little time to study each boy's case.

The *residence* seems to me to be the essential feature of the plan, since it gives the house master constant opportunity of informal discourse on the thousand and one incidents of school practice as *they arise*, without the effort involved in the formal preparation of pedagogic instruction to the assistant.

I am unable to judge whether the house master would consider that he would (or could) receive a proper equivalent, or any advantage at all, to compensate him for undertaking this charge. I can conceive that many house masters would be glad to have such an assistant, it being clearly provided beforehand that the latter held himself ready to undertake *any* of the great variety of duties which a house master has to perform; obviously the *less* responsible would be so delegated. To some an assistant of this kind might be more of an encumbrance than a help.

§ 3. The advantage to the school seems to be more evident. These assistants would presently be candidates for vacant masterships, and, although the school would have undertaken no obligation to prefer them to outsiders, it would have every opportunity of judging of their merits.

And, during the year of probation, the assistants would be ready for service, to *supply the temporary needs of masters who are unable to teach*, and perhaps to relieve masters of examination work. Probably each of the assistants would, in the course of the year, by this means receive altogether a small salary—sufficient to help him along.

§ 4. The above includes a large part of the ground covered by the word "training," but not the whole. It resembles very closely the plan that has been followed in Germany for eighty years or more in the *Gymnasien* under the name of the *Probe-jahr*.

In order to give systematic training the assistants would require to study their work on its theoretical side, and, so far as the conditions of class instruction in Rugby permit, to hear and to give criticism lessons—*i.e.*, lessons at which others would be present, and which would be subject to discussion. I should be prepared to offer myself to undertake the bulk of this work, although I believe that certain masters on the staff who are interested in special subjects of instruction, or special sides of school life, would do much to help.

§ 5. I venture to add one special argument in favour of this experiment of a training department at Rugby. It is everywhere admitted that the reforms in the immediate future must be reforms in *teaching*. Public-school reform during the last fifty years has touched every other side, but has mostly neglected this. I doubt whether the class-teaching of to-day is better than when Arnold and Bonamy Price taught in Rugby.

Such reforms are, from their nature, *very* difficult, and need much anxious discussion and thought; the presence in the school of a training department would serve as a challenge—on the one hand, the theories of education would constantly be challenged to prove their value in the practical work of the school; on the other hand, every one would be conscious of a demand to demonstrate the value of his methods and aims.

§ 6. Would it be possible, by way of experiment, to find three assistants who would work in this way between January and August of the coming year?

If the plan were successful, I believe that it would very soon be adopted elsewhere.
J. J. F.
December, 1893.

THE COLLEGE OF PRECEPTORS AND THE EDUCATION BILL.

To the Editor of The Journal of Education.

SIR,—Many members of the College will be astonished at a letter under the above heading which appeared in this month's issue.

At the first blush it may not be matter for surprise that Mr. Eve should publicly express an opinion on a subject of educational interest. What strikes one, however, with astonishment, in the first place, is the hasty way in which judgment is passed. When he ran his eye over his letter in cold print, I suspect it was not without a shudder.

What, *e.g.*, are we to understand by the sentence: "I would only remind you that it bids fair to increase the baneful influence on our profession of religious tests"? It takes a little time to understand that Mr. Eve probably meant to say: "... it bids fair to increase the baneful influence of religious tests on our profession (as teachers)."

In the Bill there is no direct dealing with religious teaching or with the imposition of tests. Such things are left to the strength of religious conviction and of the public conscience. These, however, are details overlooked by Mr. Eve. The Bill proposes that a state of things which has been gradually and naturally evolved in the course of more than half a century should be perpetuated under conditions more favourable to public control; but what Mr. Eve has cheerfully paid as a tax he suddenly scruples to pay as a rate.

Even with reference to the general question of denominational teaching in partially tax-supported schools, it is well understood that thousands of men—Mr. Eve's equals in honesty, conscientiousness, and religious feeling—see nothing in it but what is natural and proper.

What, however, I chiefly protest against in the letter is the assumption that Mr. Eve speaks as representative in this matter of the majority of the Council or of the members of the College. He is an official of the College in a peculiar sense; he dates his letter from the College—by inadvertence or otherwise. The form into which he has thrown his communication would convey the impression to many readers that it had a force other than personal. I question whether the Dean had any right to quote the opinions of certain members of the Council, even in the general way in which he puts the matter, unless he had their consent so to do. Remarks made in the course of conversation may convey a false impression, unless quoted with the qualifications which usually accompany them, when an intricate measure like unto the Education Bill is under discussion.

So far as the *Educational Times* is witness, this Bill has not been fully considered by the Council or by a general meeting of members. In the ordinary course of things the Council would probably touch on the subject in their report to the half-yearly meeting next month; and it is an unfortunate circumstance that the Dean should have fatally anticipated the discussions that must arise.

That differing opinions exist even amongst members of the Council is but to say, in another form, that where so many interests and prejudices are concerned "many men have many minds"; but, as a matter of fact, I am very much inclined directly to challenge Mr. Eve's statement "that there is certainly nothing like a consensus of opinion in its favour." If that mean that there is not complete unanimity, it is a mere truism; but I should be much surprised if, on a poll being taken, a sensible majority both of the Council and of the members were not found to be in favour of the general principles of the Bill, even as other important educational associations have declared themselves to be.

So far, however, as my present purpose is in question, I am not concerned to defend the Government measure. Indeed, to take one point, I believe that under its provisions the voluntarists would give up a considerable share of influence, and that it will require great wisdom and tact to safeguard their position and property in the future. But this is apart from the feeling which led me to write, and prompted me, as a member of the College, to register a respectful protest against the action of the Dean in arrogating to himself the right to make statements which, so far as one may judge from the official organ, are not supported by what has passed at the Council, or by what has been gathered from the general body of members in meeting assembled.—I am, Sir, faithfully yours,

J. O. BEVAN.

55 Gunterstone Road, London, W.,

June 7, 1902.

FREE CHURCHMEN AND THE EDUCATION BILL.

To the Editor of The Journal of Education.

DEAR SIR,—As a diligent reader of *The Journal of Education* for some years, I must protest against the very scanty justice you seem prepared to show towards the attitude of Free Churchmen in regard to the present Education Bill. You allow that it satisfies the Church party: by this is meant, of course, a large and influential section of the Anglican Church (for it must not be forgotten that the Church Association voted against the measure)—a section which refuses in many cases the name of Church to its opponents, which openly asserts its intention to train up Nonconformist children so as to turn them into good Churchmen, viz., Anglicans (from their point of view the two terms are synonymous). When you also take into account that

Free Churchmen, on account of their religious opinions *only*, are debarred from entering thirty-six out of forty-four training colleges which are chiefly maintained by public money, and that this present Bill in no way attempts to remedy this crying injustice, but in every way favours the promotion of National schools and the destruction of Board schools, have not Free Churchmen good reason for disliking this Bill? The gain to the Anglican Church *is* their loss, because, although in the London Board schools 73 per cent. of the teachers are Anglicans (which fact alone sufficiently discounts the statement that Board schools are Nonconformist schools), yet in National schools no Nonconformist, however well qualified, is eligible as assistant master or mistress.

This is not all. Free Church children are in many cases not allowed to attend the National school unless they give up their own Sunday school and attend the Anglican Sunday school; also in some districts (Kensington is one) pledges are exacted in which entering a "Dissenting chapel" is ranked with such sins as drinking and swearing. Is it strange that Free Churchmen are not anxious to pay for such instruction?

The Anglican Church is the richest Church in the world; the Free Churches are entirely self-supporting: surely the former should be willing to pay for religious teaching which too often consists in ridiculing and condemning the religious views of their fellow-citizens. Unfortunately, the "Church Party" represents rank, wealth, influence; but Free Churchmen do hope for fair play from educationists, who should regard the question from a catholic point of view which differs widely from that entertained by those communions which claim the exclusive use of it.

May I also add that on the Continent the religious difficulty does not exist in the acute form it assumes in England, for in State-aided schools no fully qualified man or woman would be excluded from the teaching profession simply on account of their religious views.—Yours, &c.

Claremont Terrace, Seaford.

L. MILNER.

[On the training question we fully sympathize with our correspondent. Intolerance such as is alleged to prevail in Kensington is, we believe, a rare exception.—ED.]

THE REPORT OF THE COMMITTEE ON THE EDUCATION OF ARMY OFFICERS.

To the Editor of The Journal of Education.

SIR,—With most of this Report every teacher who has had anything to do with the examination of candidates for the Army will most cordially agree. Especially will the Modern Language Association rejoice at the condemnation of the recent French and German papers, at which their *Quarterly* has been railing for the last two years. But the blot on the Report is the decision to abolish modern languages at Woolwich and Sandhurst. We can the less understand this as the Committee have made French or German one of the three compulsory subjects at the entrance examination, in which every candidate will have to obtain a certain minimum of marks. Rightly they insist on the importance of a knowledge of these languages to an officer, not only to enable him to converse with foreigners, but also for the purposes of studying foreign military books, which are usually far better than our own. They propose to increase an officer's daily pay if he passes the interpreters' examination in any foreign language. And yet they forbid him to continue his work during two of the most important years of his life. How many will take up languages again, after cramming them up for the entrance and dropping them for certainly two years, and probably for four or five? Whereas, if they knew their study would be continued and a minimum of 50 per cent. required at the leaving examination in order to gain a commission, candidates would work at them more seriously, and the number of educated officers would be increased.

The reason given in the Report for this abolition is that there is not enough time to devote both to military subjects and to modern languages, and that, if the latter are taught properly, many more instructors would be necessary. The latter reason should not hold for a minute, for the cost of military education has been decreasing for many years. As for the former, we believe it to be a mere excuse. The military instructors wish to get all their work done before lunch; whereas, if modern languages took up part of the morning hours, they would have

to do some out-of-door practical work in the afternoon. This dislike to work after lunch is the cause of another defect that we do not see mentioned in the Report—the farce of evening preparation which is supposed to be done in the cadets' own rooms. Their company officer always tells them at mess when he is coming round the rooms, and when he does come he says nothing as long as they have a book open. There should be definite supervision or no preparation expected.—Yours, &c.,
DE V. PAYEN-PAYNE.

UNIVERSITIES AND SCHOOLS.

LONDON.

Our Principal, Dr. Rücker, has been made an honorary Doctor of both Oxford and Cambridge, an honour that goes some way to atone for the absence of representatives of those ancient seats of learning at the great function held last May by their young and vigorous sister. Perhaps the most satisfactory feature of the Degree Day at London is the entire absence of the witless and undignified horseplay in evidence elsewhere, and a strong protest must be entered against the expression of regret, by a new-made Doctor, too, at the lack of these exhibitions at London.

The new University mace was presented by the Vice-Chancellor at the meeting of the Senate held just before Presentation. It has been specially designed and manufactured for the University; it is longer and more elegant than the municipal mace, and is appropriately modern in character. It is made of hand-beaten, wrought, and *repoussé* silver, gilt, with panels of translucent and *champlevé* enamel. The larger and crowned head is carried uppermost when preceding the Chancellor, and the reverse end bears four renderings of the University badge inverted, as this end is borne uppermost before the Vice-Chancellor.

The *University Gazette* has so far been a financial success.

Among distinguished graduates not presented were Frank Slaton, with a First Class and Scholarship in Mathematics at B.Sc.; and H. G. Wood, First Class and Scholarship in Classics at B.A.

At the General Meeting of Convocation Mr. Allen was re-elected as Clerk to Convocation; Sir Philip Magnus was elected Deputy-Chairman; and the vacancies on the Standing Committee were filled up. There was no contest, except in Arts; in that faculty the members elected who had not served during the past year were Messrs. Armitage-Smith, Hanford, Harris, and Blake-Olders; in Laws, Messrs. Sinclair, Taaffe, and Warren; in Medicine, Drs. Starling and Russell Wells, and Mr. Willcox; in Science, Dr. Travers.

It was resolved that the office of Deputy-Chairman should not be held more than two years in succession by any member of the House; and Sir P. Magnus took the opportunity to make a speech on his election, in the course of which he spoke favourably of the new regulations for Matriculation, stating that it would, he hoped, become a general "leaving examination" for schools, and that, in the future, there would be no need for schools to have a special "Matriculation class."

It was decided by the Senate that the new regulations for Matriculation are to be for all students, and an examination, as stated above, is proposed for September 15, for which classes are being rapidly formed in the technical schools and other institutions where evening study is held. The number of papers at Matriculation is to be cut down from nine to six; Latin is to be no longer compulsory! Science is treated similarly. Lord Avebury has, as expected, protested against the change. "General elementary science" (established 1899) is done away with, though one science or Latin must be taken. There is to be only one paper on English; a large choice of subjects is to be allowed, many new subjects being introduced, and there can be no doubt that the examination will be very much easier, or, as the phrase is, "more accessible." As the external graduates have little but the high standard of their degrees and examinations to rely on for their value, this new departure (which it must be admitted is exactly what has been predicted all along) is a great blow to their prestige.

Though uniformity is retained at Matriculation for both internal and external students, it has, as stated above, been frankly abandoned in the case of the Intermediate Examinations, general regulations for special intermediate examination of internal students having just been issued, one or two clauses of which are as follows:—"(4) For the purposes of this regulation a student in a school of the University shall be a matriculated student who is certified by the governing body of the school to be accepted by them as a student of the school. (8) Unless otherwise determined by the Senate in the case of any particular faculty or faculties, candidates for the Intermediate Examination for Internal Students shall be required to pass in four subjects; a candidate who passes in three subjects out of the four may offer the fourth subject alone at the following examination. (9) It shall be an instruction to the examiners that weakness in one of the subjects may be compensated by excellence in the other subjects." This special examination is for a pass only. It will be seen that these rules make the test less stringent

by far. Whether the Intermediate for External Students will follow suit remains to be seen.

WESTFIELD COLLEGE, HAMPSTEAD.

At the meeting of the Senate held on June 25 Westfield College was admitted as a school of the University of London in the Faculty of Arts. The college was founded in 1882 for the preparation of women students for the degrees of the University of London. The newly elected Vice-Chancellor, Dr. Robertson, is a member of the Westfield College Council.

OXFORD.

During the last month two veterans of a bygone age of Oxford have passed away. E. Poste, of Oriel College (of which he was a Fellow for no less than fifty-six years) was a man of wide and accurate learning, and especially a lover of classical literature in the old-fashioned way. He is best known as editor of Gaius, his book having been for many years the recognized edition. He also published translations or editions of the "Philebus," the "Posterior Analytics," the "Athenian Polity," Aratus' "Phænomena," and the newly recovered Bacchylides. Prof. Cook Wilson, who knew him for years, tells a characteristic anecdote about him in the *Oxford Magazine*—that on his deathbed, in May last, he asked for Ovid, "to see what Ovid had to say about May." The other loss was that of the still more aged Dean of Sydney, Dr. W. M. Cooper, who was born in 1810—the same year as the venerable Warden of New College, the only distinguished survivor of that epoch in Oxford itself.

In regard to the Greek question, the proposals (twice referred to in previous letters as under discussion) have at last been formulated. Following the precedent adopted in recent times (when important changes were in view), the Council intend to proceed by resolution, and not by statute. The feeling of the University must be tested on the main matter, to save the needless labour of drafting a long statute, and also to prevent a change which (it may be) the majority wish being thrown out on details or on minor issues. The resolutions rightly begin with the main question, and the first one runs: "That candidates shall not be required to offer both Greek and Latin in the stated subjects in Responsions." If this is not carried, all the remaining resolutions will be withdrawn, since, if Greek is to remain compulsory, the object of the movement will be defeated. The most important points that remain are: that the candidates are to offer two languages, one being ancient; out of the four—Greek, Latin, French, and German—that in the Modern Languages only unseen and prose composition will be set; and that the grammar paper shall be discontinued. Some people are disappointed that a more drastic reform was not put forward; but the Council are probably wise, in a matter which will certainly excite much interest and opposition, not to confuse the issues, and so lose the best chance of making a step forward. What the result will be no one can really tell. The importance of the proposed change is not denied on either side; and while, on the one hand, the Cambridge vote of some years ago was heavily against a similar change, on the other, a good deal has occurred since then to modify opinion and to emphasize the importance of modern languages; and those who best know Oxford report that the main change is viewed with favour in many rather unexpected quarters. Still, the change will be hotly contested. The *Oxford Magazine*, which, though not exactly progressive in educational matters, is usually moderate and courteous in tone, says, baldly, that "no general education can be really good without Greek," and even speaks of the proposers as "a noisy and obscurantist minority who want to get degrees cheap." As if anything could be cheaper than a language-test such as the present "Responsions" supplies; where the whole thing can be crammed without implying any power in the candidate to read Greek, still less, of course, to write it. Such language is regrettable; and it may even be doubted if it is good electioneering.

The only other legislation begun or completed within the month can be very briefly reported. A statute has been passed, of which the main object is to improve the Honour examination in Theology by better regulations in regard to the subjects offered by candidates, particularly Hebrew, and the method of options open to them. Those who are best able to judge approve the statute as likely to make the study more satisfactory, and it passed unopposed. Another statute has been introduced to transfer the supervision of the secondary training scheme from the Delegacy of Local Examinations to the University by the appointment of a special delegacy to administer. At the same time steps have been taken to give the head of the training scheme a University position, which may, perhaps, be done by the appointment of a Reader in Education. Nearly all the other English Universities have a Professor of Education, and it is generally recognized that, the experiment having been a success, the time has come to take a step forward. There is little doubt that this action has been quickened by the Board of Education having required a training diploma for the Junior Inspectorate, and the new Register instituted by the Consultative Committee, who have laid down as one of the conditions for admission in future that the candidate shall have been trained. To this statute also there has been so far no opposition.

The following announcements have appeared:—

Degrees: Hon. D.D. to H. N. Churton (University), Bishop-elect

of Nassau, and to J. E. Mercer (Lincoln), Bishop-nominate of Tasmania. Hon. M.A. to W. J. Smith-Jerome, Lecturer in Medical Pharmacology.

Honorary Degrees at the Encenia:—Hon. D.C.L. to the Hon. J. H. Choate, Ambassador Extraordinary of the United States; to his Excellency Viscount Hayashi, Envoy Extraordinary of the Emperor of Japan; to Lord Cromer, G.C.B., Minister Plenipotentiary in Egypt; to Count Matsukata. Hon. D. Litt. to F. Kielhorn, Professor of Sanskrit at Göttingen. Hon. D.Sc. to W. H. M. Christie, C.B., M.A. (Caub.), F.R.S., F.R.A.S., Astronomer Royal; to A. W. Rücker, M.A.; F.R.S. (Hon. Fellow of Brasenose College), Principal of London University.

Appointments:—A. E. Cowley, M.A. (Wadham) to be Research Fellow of Magdalen, and to give instruction in Rabbinical Hebrew; W. H. Hadow, M.A. (Worcester) to be Curator of the Schools; H. S. French, B.M. (Christ Church), and A. J. Jex Blake, B.A. (Magdalen), to Radcliffe Travelling Fellowships.

Honorary Fellowships:—Right Rev. C. Gore, D.D. (Trinity College); A. Sidgwick, M.A. (Corpus Christi College).

Lectures:—Prof. Flinders Petrie, at the Ashmolean (June 11), on "Early Egyptian History," illustrated; J. Bryce, M.P. (Oriel), on "The Relations of Backward and Advanced Races" (June 7); H. A. Redpath, D.Litt., on "The Geography and Mythological Terms in the LXX.," Prof. Sayce (June 12) on "The Hittites in Cuneiform Inscriptions."

Prizes, &c.—Ellerton Prize Essay ("Prophecy in the New Testament") to W. R. Williamson, B.A. (Trinity); for English Poem on a Sacred Subject, to Rev. A. S. Cripps, M.A. (Trinity); Hertford University Scholarship to E. A. Burroughs, Scholar of Balliol; *Prox. acc.*: W. Phelps, Scholar of Balliol; Distinguished: C. E. Rolt (Scholar of Queen's), L. Simon and G. L. Young, Scholars of Balliol.

Fellowships offered for competition: at Merton, for Law; at University, for Classics and Civil Law; at All Souls, for History and Law.

CAMBRIDGE.

The University is the poorer by the death, just at the end of the Term, of Henry Latham, Master of Trinity Hall, and Lord Acton, Regius Professor of Modern History. To those who know Cambridge it is needless to expatiate on the extent of the loss in either instance. Mr. Latham was in the highest sense the father, and one might also say the refounder, of his college. Certainly its present prosperity and repute are due to his life-long devotion to its interests. He passed away, as in sleep, on his return from the river, where he had been to cheer the first boat on successfully maintaining its high place. It is understood that he has richly endowed the scholarship fund of the college; and he has left a sum estimated at £17,000 to the University, to serve as the nucleus of a kind of benevolent fund for University and college officers, their widows and families, who have fallen upon evil days.

In Lord Acton's case our loss is more untimely; for reassuring reports as to his recovery had come from Germany, and it was reasonably hoped that next year he would be able once more to resume his work in Cambridge. Now the great "History of Modern Europe" which he designed must be carried on by other hands. The first volume, however, is nearly ready, and will be issued, under Dr. A. W. Ward's direction, in the autumn. A *requiem* for the late Professor was celebrated in the Roman Catholic Church; the service was attended by the Vice-Chancellor and many other University officials.

By the death of Lord Braybrooke the Master of Magdalene succeeds to the title and estates.

Mr. E. A. Beck, Senior Tutor of Trinity Hall, has been unanimously elected Master of his College. This brings up the number of lay Heads to six.

As the outcome of an important memorial, signed by a hundred and thirty members of the Senate, a syndicate has been appointed to inquire into and report upon the best means of enlarging the opportunities for the study in Cambridge of economics and associated branches of political science. Prof. Marshall has issued a pamphlet explaining the grounds of the "present discontents" with the position of economics. The subject is now dealt with partly in the Moral Sciences Tripos and partly in the Historical Tripos. In each case it is associated with extraneous subjects, which tend to hamper the comprehensive study of a wide and ever-growing science. Something like a Political Sciences Tripos is adumbrated: that will make the eleventh Honour Examination.

Mr. E. G. Browne, M.A., M.B., hitherto University Lecturer in Persian, and the author of valuable books on life, religion, and travel in Persia, has been elected to the Adams Professorship of Arabic, vacant by the death of Prof. Rieu.

Notwithstanding the opposition of the Registry and a few friends, the grace for the purchase of six acres of land from Downing College was triumphantly carried. Many would have liked that some of the money at least might have been reserved for favourite objects of their own; but the feeling was that the opportunity to provide room for expansion must be seized now, or let slip for ever, and particular interests were postponed to the general good.

A loan exhibition of about 1,200 pieces of pottery has been on view at the Fitzwilliam Museum for some weeks, and has been visited with interest by a large number of residents and others. The deplorable weather, which spoiled the usual outdoor festivities, made the exhibition a welcome distraction.

Of the fifteen newly elected Fellows of the Royal Society, Cambridge claims a share in no less than seven. Four of them—Dr. Bovey, of Montreal, Prof. Mitchell, of Melbourne, Mr. Hough, of the Cape Observatory, and Dr. Willey, of the Colombo Museum—we have lent, for a time, to the colonies.

The proposals for altering the regulations of the Natural Sciences Tripos so as to admit of greater specialization in Part II. were the subject of a wordy war of fly-sheets for a week. The most noticeable feature of the discussion was the "parallel" character of the arguments; though produced indefinitely, they never met. In the end the proposals were carried by a very small majority, and now, in good Cambridge fashion, both parties will doubtless do their best to make them work satisfactorily.

Honorary degrees, apart from the special batch at the end of term, have been conferred, *propter merita* or *jure dignitatis*, on Bishop Quirk, of Sheffield; Prof. Middleton, of the Department of Agriculture; Mr. I. Abrahams, Reader in Talmudic; Mr. A. P. Goudy, Lecturer in Russian; and Mr. Halil Halid, Lecturer in Turkish.

Mr. Oscar Browning has, after a tenure of twenty-one years, resigned the Treasurership of the Union Society. He is succeeded by Mr. J. R. Tanner, Tutor of St. John's.

The Committee of the Day Training College report that there are twenty-nine students in the primary department and five in the secondary department. Twelve of the students hold scholarships from Toynbee Hall, and twelve have exhibitions or sizarships at various colleges in the University.

The recipients of honorary Doctorates at the *Comitia Maxima* on June 10 were—Baron Hayashi, the Japanese Minister; Mr. Whitelaw Reid, the Special Envoy of the United States; H.H. Sindhia, Maharaja of Gwalior; H.H. the Maharaja of Kolhapur; the Duke of Argyll; the Master of the Rolls; Sir Joseph West Ridgeway; Sir Francis Grenfell; Sir Albert Hime, Premier of Natal; Sir Harry Johnston, of Uganda; Prof. Sanday; Principal Rücker; Mr. Frederic Seebohm; and Prof. Parker, of Yale. The ceremony was unusually brilliant, and the Public Orator excelled himself—as usual.

On Sunday, June 15, the Coronation was, by anticipation, celebrated at a University service in King's College Chapel, attended by the Vice-Chancellor, heads, professors, &c., in their robes of state. These walked in procession from Great St. Mary's after the usual University sermon. The array of scarlet was obviously impressive to the immense concourse of May-term and Coronation visitors who lined King's Parade. Unhappily the service of thanksgiving at the University Church, arranged for June 26, had to be transformed into a service of intercession for the King's life.

A Standing Committee, consisting of the Vice-Chancellor and the Secretaries of the Local Examinations Syndicate and the Highest Grade Schools Examination Syndicate, has been appointed for the conduct of the inspection of schools by the University under the Board of Education Act, 1899. The actual work of inspection will be carried out by the officials of the syndicates concerned, the Committee serving to delimit their respective spheres of interest.

St. John's has this year both the Senior and the Second Wranglers, with three other Wranglers; Trinity has also five Wranglers, the highest being bracketed third. Miss A. E. Bennett, of Girtton, is thirteenth Wrangler. As the daily papers have duly announced, Mr. Cunningham, the Senior Wrangler, began his studies in a London Board school. In the Classical Tripos, King's has three men in the first division of the First Class; Trinity and Caius one each. Eight men and three women are in the First Class of Part II. In the Modern Languages Tripos, four men and ten women are in the First Class. One man and three women gain the coveted "star" of special distinction.

The following elections and appointments have been announced during May and June:—Winchester (Reading) Prizes to A. J. Robertson, Trinity, and D. W. W. Carmichael, Christ's; Clark Lectureship in English Literature to Prof. Barrett Wendell, of Harvard University; Dr. F. J. Furnivall to be Honorary Fellow of Trinity Hall; Mr. J. R. Roxburgh, Trinity Hall, to be Bursar of Westminster College; Stewart of Rannoch Scholarships in Greek and Latin to C. R. P. Cooper, Caius, and P. C. T. Crick, Pembroke; Dr. Chase, President of Queens', to be Vice-Chancellor for the ensuing year; Mr. W. H. Macaulay to be Tutor of King's, in place of Dr. James, resigned; Dr. Caldecott and Mr. C. Anderson Scott, both of St. John's, to be examiners for the new B.D. degree of the London University; Mr. G. B. Mathews, F.R.S., to be Fellow of St. John's; Mr. W. Chawner, Master of Emmanuel, to be a Member of the Cambridge Training College for Women; Mr. A. J. Goodford, Trinity, to be a Governor of Bruton Grammar School; Dr. A. W. Ward, Master of Peterhouse, to be a Governor of St. Paul's School; Stewart of Rannoch Scholarships in Hebrew to William Leadman and N. C. Pope, both of St. John's College, and in Sacred Music to F. C. S.

Carey, of Clare College; Mr. W. Bateson, St. John's, to be Deputy Professor of Zoology; Mr. T. B. Wood, Caius, to be Reader in Agricultural Chemistry; the Le Bas Essay Prize to F. Noyce, St. Catharine's; the Tyrwhitt Hebrew Scholarships to C. A. L. Senior, St. John's, and A. S. S. Duncan Jones, Caius; the Rev. W. J. Caldwell, St. John's, to be Vicar of Ditton Priors, Hereford; Dr. Charles Wood to be University Lecturer in Harmony; Mr. E. Gordon Duff, of Oxford, to be Sanders Reader in Bibliography; Mr. J. R. Harris, to be Lecturer in Palaeography; Syed Ali Bilgrami to be Teacher of Marathi; L. Doncaster to be Assistant to the Superintendent of the Museum of Zoology; Dr. S. F. F. Fletcher, King's, to be Lecturer on the Theory, History, and Practice of Education; Mr. C. Bendall, Caius, to be Curator of Oriental Literature; Dr. Forsyth to be Governor of University College, Liverpool; Dr. H. J. Roby to be Governor of Manchester Grammar School; Mr. T. A. H. Hamond, Magdalene, to be Governor of Hamond's Free School, Swaffham; Dr. Holson, Christ's, and Mr. H. G. Comber, Pembroke, to be Proctors for the ensuing academical year; E. B. Bailey, Clare, to be Harkness (Geological) Scholar; O. T. Jones, Trinity, to be Wiltshire (Geological) Prizeman; A. J. H. Smith, Trinity, to be Gladstone Memorial Prizeman in Political Economy; Mr. R. A. Nicholson, Trinity, to be University Lecturer in Persian; Dr. W. H. R. Rivers, St. John's, to be University Lecturer in Experimental Psychology; R. McG. Dawkins, Emmanuel, to be Craven Student; A. J. B. Wace, Pembroke, to be Prendergast Student; Dr. E. L. Evans, Trinity, to be Horton-Smith Prizeman in Medicine.

SCOTLAND.

The Glasgow proposals for the extension of the session in Arts by spreading the courses of lectures over two or (preferably) three terms of about nine weeks each have led to prolonged discussion in Edinburgh regarding a general reform of the curriculum in Arts. Ten years' experience of the working of the present Ordinances has led to profound dissatisfaction with them in all the Universities. For a system absolutely rigid they have substituted one that is fatally fluid, without being altogether free from vexatious restrictions. Their leading principle, so far as they can be said to have any, is not that of securing a variety of educationally valuable courses leading to a degree, but that of allowing fair play in a scramble for students to almost all the Arts subjects at present taught in the Universities. The result is to throw upon the students the responsibility of choosing a line of study out of an enormous number of possible combinations of subjects. And, as boys and girls of seventeen or eighteen are not educational experts, they almost inevitably tend to become adepts in the choice of soft options. This tendency is strengthened by the fact that the same degree is given for an indefinite variety of courses, coherent and incoherent, good, bad, and indifferent. The M.A. degree, in short, has ceased to have any clear and definite value; it may mean almost anything or almost nothing. Further, the possessor of an ordinary degree cannot be regarded as competent to teach the subjects in which he has graduated. The University instruction in each subject need not occupy more than six months, and at the end of that time the student may pass the Degree Examination in the subject he has been studying and go on to something else. Thus Prof. Hardie, of Edinburgh, says: "In Latin, the student who just passes the Preliminary in October, and just passes the Degree Examination in April, has, at the end of his course a few years later, no such knowledge of Latin as would enable him to teach even the elements properly. Regarded as the minimum which a student should know of a subject which he is not going to teach, the Pass standard is perhaps fairly satisfactory. But it is also looked upon as a qualification for teaching, and in this respect its inadequacy is manifest."

With the view of obtaining, if possible, some general agreement as to a remedy for such evils as these and others which will suggest themselves to any one who is acquainted with the working of the Ordinances, the Edinburgh Senatus has published an elaborate set of proposals resulting from discussions in the Faculty of Arts. The extension of the session to June 30 is generally approved; but, "as the conditions vary in different subjects, it would be a mistake to make this extension uniform or compulsory." The particular arrangements should be left to the Senatus and the University Court in each University. Two new proposals are also made. In the first place, it is suggested that ordinary students, instead of (as at present) taking seven single courses in separate subjects, should be allowed to take double courses in one or two subjects, and thus to complete the degree in five or six subjects, an aggregate of seven courses being still required. "Also some of the minor restrictions on the Honours student might with advantage be removed. A greater variety of Honours groups should be recognized, and graduation with Honours in more than one group fostered by greater exemption from subjects taken on the ordinary standard." In the second place, it is proposed that, following the example of the American Universities and of the University of Birmingham, we should allow class-work to count in part for graduation, on condition (1) that it should not count for more than half of the Degree Examination, and (2) that the external examiners should, if necessary, have an opportunity of judging and reporting upon it.

As to details, a great majority of the Faculty of Arts is in favour of a

three-term session of at least twenty-seven teaching weeks, while the minority prefers the development of a summer session on the lines at present followed in Edinburgh. The majority is also in favour of regulations to the effect that the keeping of a term shall mean satisfactory attendance on two qualifying courses, or parts of such, extending over the whole term; that an academic year shall be completed by the keeping of at least two terms, and that the curriculum in Arts must in every case extend over not less than three complete academic years. A considerable majority of the Faculty is in favour of "giving an option (according to the subject) between two terms or three terms for a full qualifying course," while others are of opinion that in all cases the qualifying course should not extend over three terms. Prof. Laurie protested against making a three-term course absolutely compulsory in any subject, "on the ground that such a proposal would meet with serious opposition from the Churches and from the training colleges." On the question of the subjects to be taken for the ordinary degree, there was again some difference of opinion. Two schemes were voted upon. That which obtained most support prescribes (a) that a curriculum for the ordinary degree shall consist of seven courses in seven, six, or five subjects; (b) that every such curriculum must include (1) a language other than English, (2) one subject from each of the groups of Mental Philosophy and Science, (3) two out of the following three alternatives: Logic or Moral Philosophy, Latin or Greek, Mathematics or Natural Philosophy; (c) that a curriculum of seven or six subjects must include at least one, and a curriculum of five subjects at least two, pairs of cognate courses. Cognate courses are defined as distinct courses on the same subject or courses in subjects to be finally recognized by the Senate as cognate—e.g., Latin and French, Latin and Greek, Mathematics and Natural Philosophy, &c. "The candidate must pass a more stringent examination in the subject or subjects of his cognate group or groups," either by passing the ordinary examination with a higher percentage or in an extended form, or by passing an additional examination. The minority scheme proposed a wider option by omitting (c) (3) and by allowing, in the case of a five-subject curriculum, the taking of three cognate courses. It was further proposed that, in place of reconstructing the M.A. curriculum in accordance with such schemes, "a new degree should be instituted on modern lines"; and this was carried by a bare majority, some abstaining from voting.

With regard to the Honours degree, it was agreed, one member dissenting, that a candidate for Honours in one group should not be required to take up more than two subjects on the ordinary standard, in addition to his Honours subjects; and that he shall not be required to attend more than six courses, provided that among the whole of the subjects taken (Honours and ordinary) there shall be included one, at least, from each of three of the groups of Language and Literature, Mental Philosophy, Science, and History and Law. It was also agreed that: "A candidate for Honours in at least two non-overlapping Honours groups shall not be required to take any additional subjects on the ordinary standard, but merely to attend not less than six courses in his Honours subjects, two of which must be Honours courses in distinct subjects in one of his Honours groups, and two Honours courses in distinct subjects in another of his Honours groups." It was further agreed that practically all the limitations at present attached to candidature for the Honours degree—e.g., the requirements of Latin or Greek for Honours in any subject, Greek for Honours in Philosophy, &c.—should be abolished *simpliciter*. Further resolutions making it easier to complete a degree curriculum by attendance at different Universities, and proposing an increase of the fees for courses in Arts, were also adopted.

The adoption of the proposals of the majority would make a distinct improvement on the present state of things. The minority proposals, on the other hand, seem to err in the direction of extending rather than limiting the already too wide system of options. They make possible to the ordinary student such absurd courses as are at present sometimes taken by candidates for Honours. For example, it is already possible for a student to take a Third Class in Classics with Education, Botany, and Zoology as his ordinary subjects—Botany and Zoology being attended in summer sessions. A weaker degree it is scarcely possible to have, and yet the minority proposals would allow the ordinary degree to be taken in the same way.

The suggestion that a new degree should be instituted "on modern lines" has little to commend it. A new degree is about as hard to establish as a new daily newspaper. Very many years must elapse before its meaning and value are understood, and meanwhile the holders of it suffer. A better plan would be to revive the B.A. as a degree for those who take the present seven-subject curriculum, and to use the M.A. as the mark of a specialized ordinary or an Honours course of study. But, after all, what we require is neither a new degree nor the revival of an old one, but simply the M.A. in such a form that a man of ordinary intelligence can hope to understand it. This we shall never obtain so long as we continue to flounder in the morass of alternative subjects in which the last Commission has left us. It is right that there should be options, but the alternatives offered should be, not particular subjects, but complete courses. It surely does not pass the wit of the professorate to devise,

(Continued on page 462.)

BLACKIE & SON'S BOOKS

FOR OXFORD LOCALS, 1903

- Macbeth.** Edited by E. K. CHAMBERS, M.A. 1s. [Warwick Shakespeare.]
- Macbeth.** Edited with Introduction and Notes, &c. 1s. [The Picture Shakespeare.]
- Macbeth.** Edited by H. C. NOTCUTT, B.A. 8d. [Junior School Shakespeare.]
- Evangeline.** Edited with Introduction, Notes, &c. Paper, 3d.; cloth, 4d.
- Talisman.** School and Home Edition. Cloth, 1s.
- Galic War—Books IV., V., VI.** Edited by Professor JOHN BROWN, M.A. Illustrated. Book IV., 1s. 6d.; V., 2s.; VI., 1s. 6d. [Illustrated Latin Series.]

WRITE FOR COMPLETE LIST.

BLACKIE'S BOOKS FOR PRIZES.

Write for Complete Catalogue of Books for Prizes

(including G. A. HENTY'S Famous Historical Tales).

"The famous house of Blackie & Son maintains its leading position as the source of the best of the strong, stirring, healthy stories of adventure which are the delight of our youth."—*Pall Mall Gazette*.

"Both from the literary and artistic point all juvenile literature bearing the impress of Messrs. Blackie & Son is sure to be among the best."—*Westminster Budget*.

"The story-books of Messrs. Blackie & Son are delightful, brilliantly bound, and printed on paper that is a pleasure to handle."—*Daily Telegraph*.

**** Teachers are invited to call at Messrs. Blackie & Son's and see the Books.**

LONDON: BLACKIE & SON, LTD., 50 OLD BAILEY, E.C.

say, ten—or even twenty, if necessary—courses of study for the ordinary degree, each fairly equal in value and none educationally nonsensical. Among these the student might have a perfectly free choice, and both he and the public which is to employ him would certainly be better off than at present, when there are thirty thousand (or more) possible ways of taking the degree. We should still be far from perfection, but a reduction from tens of thousands to tens in the varieties of the degree would be an incalculable boon. Such good features of the Edinburgh scheme as the limitation of the number of subjects and the slight specialization of study might be retained, and the Honours degree might be remodelled on similar lines.

If the three-term session is to succeed, it should be made compulsory in most subjects. Prof. Laurie's objection is really an argument for taking the training of teachers out of the hands of the Churches and giving it to the Universities. At the same time it is desirable that education should cease to be an Arts subject. It is really a professional subject, and, as such, ought to be taken after the completion of an appropriate Arts course. Such a change would greatly raise the status of the teaching profession, and, with the Carnegie system of fee-paying, it would cause little, if any, hardship.

The John Usher Institute of Public Health, given by Sir John Usher, who was one of the chief founders of the Chair in that subject at Edinburgh, has been formally presented to the University. It will be of great advantage, not merely to the Edinburgh Medical School, but also to the Health Department of the city, which will find in it a thoroughly efficient laboratory for bacteriological and sanitary work.

The Glasgow Senatus has asked for the co-operation of the other Universities in endeavouring to secure that there shall be a proper representation of the Universities on the Local Authorities to be constituted under the forthcoming Secondary Education Bill for Scotland. It is to be hoped, in the interests of Scottish education, that this effort of the Universities will be successful.

Mr. Robert Latta, Professor of Moral Philosophy in the University of Aberdeen, has been appointed by the University Court of Glasgow to the Chair of Logic, vacant by the death of Prof. Adamson.

IRELAND.

The Royal Commission on University Education in Ireland met for three days in the beginning of June to take evidence. This is expected to be the last sitting that will be held, and the Report will be issued in the autumn. The third Blue Book will be published in about a month's time. Among the witnesses examined in June were some medical professors and professors from the Royal College of Science, the President of the Gaelic League, and representatives from St. Mary's Dominican College for Women, from the Loreto College for Women, and from the recently formed Irish Association of Women Graduates.

The new Fellow this year in Trinity College, Dublin, is Mr. W. A. Goligher, from Londonderry, who, after winning the highest distinctions in Classics and Modern Literature, went in for Fellowship for the six successive years ending with 1899. He has not been a candidate for the last two years, and appeared as an unexpected competitor against Mr. Frazer this spring. He won the Fellowship in Classics, Hebrew, and Logic and Ethics, with a total of 792, obtaining the highest marks given in Classics for many years. It is regretted that Mr. Frazer, who is very popular in college, was defeated in this, his sixth trial. His total, obtained in Mathematics and Experimental Science, was 751½, and he takes the Madden Prize for the third time. Mr. Alton (Classics) was third on the list, obtaining a £50 prize, and of the two remaining candidates (who both came up for the first time), Mr. Webb (Mathematics) and Mr. Longworth (Classics), Mr. Webb did remarkably well, obtaining a £50 prize and a total only lower by 53 marks than that of Mr. Alton, who has been a candidate four times.

The Graduates' Tercentenary Memorial was opened by the Lord Lieutenant on May 30. The Fellows gave a large garden-party, which, however, was completely spoiled by the wetness of the day. Prof. Mahaffy, in his speech, very frankly spoke of the hostility shown by the authorities to the formation of the Graduates' Union, which had delayed the project ten years, and prevented the subscriptions reaching as large an amount as they would otherwise have done. The Lord Lieutenant, with equal candour, rebuked the exaggerated and inaccurate language used in public speaking in Ireland and the political feeling shown by the college students in outbursts of high spirits. He also expressed a hope that Trinity College would some day develop the side of applied science in education as completely as she had done the literary side of University culture.

Much indignation has been created in Ireland by a circular issued by the Department of Agriculture and Technical Instruction announcing that it is under consideration to withdraw the "equivalent grant" obtainable under the Technical Instruction Acts of 1889 and 1891 from Ireland, in consideration of the Department having £55,000 a year to spend on Irish technical education. In the circular it was stated that, pending the decision of the Treasury, the Department had arranged that those localities which had enjoyed the "equivalent grant" previous to the establishment of the Department should continue to receive it for three more years, based, however, on the amount payable in 1901. This is a serious blow to technical education in Ireland, and involves

the technical schools started all through the country in difficulties. At the time of the passing of the Act establishing the Department no intimation was given that the "equivalent grant" would, therefore, cease to be available in Ireland. If such a thing had been mentioned, the scheme would not have been accepted by the Irish members. The local Councils have planned their schools, relying on the help of this grant, which the Department itself clearly stated would continue to be paid; and now it is threatened to be withdrawn. If this be done, Galway, as an example, instead of £773 per annum, will have only £600, the amount of the Departmental grant. The Dublin technical schools will lose £700 a year. In fact, Ireland will be worse off than if the grant had been left, and the Department never established—as far as help to technical education goes. It is a distinct breach of contract, which seems hardly comprehensible, unless the growing powers of the Treasury are now sufficient to undo an Act of Parliament.

Nothing can be more unwise politically than such treatment of Ireland on the part of the Government; but it is of continual occurrence. The amount available in Ireland for technical education is scandalously inferior proportionately compared with that bestowed on England and Scotland. A similar foolish and unjust parsimony has recently called forth remonstrances from the managers of all the Irish training colleges for primary schools. To the training schools attached to these colleges, in which the students practise, highly qualified teachers were attached, so as to give the students the best possible standard of teaching, and help in their training. Now it is announced that such superior and more highly paid teachers will not be allowed in the training schools, and that only teachers of the rank of those in the ordinary schools will be appointed.

In the same way the appliances required for the teaching of science and hand-and-eye training, introduced into the national schools under the recent reforms, are most inadequately supplied. By such petty parsimony work on which already large sums are being expended is frequently so crippled that it fails to do any good.

The Intermediate Examinations began this year on June 17. The total number of entries was 9,054, as against 8,117 in 1901. The increase was solely in the Preparatory Grade, the other grades showing a decrease. The total number of boys was 6,545, and of girls 2,509.

A great outcry has been raised concerning the papers set in the English courses by Mr. Magenis, F.R.U.I. The courses were exceptionally long and difficult, and the examiner has omitted any notice of large parts of the course, while his questions are of a philosophical, analytical, and critical character, admirable if the papers were set for advanced University students, but beyond the intelligence and range of reading of school-children. Notwithstanding this grave defect, the papers are in a style which would encourage more thoughtful teaching and better methods of study were they somewhat modified to suit the ages of the candidates. The papers set in languages were an immense improvement on those set under the old system.

SCHOOLS.

CLAPHAM HIGH SCHOOL.—Four successes have been gained in the Cambridge Triposes: R. Baldwin was placed among the Senior Optimes and N. Deane among the Junior Optimes in the Mathematical Tripos; in Part I. of the Historical Tripos O. Palmer gained a Second Class and K. Parr a Third Class. In the London University Matriculation Examination, held in January, A. Hutchings gained a First Class and E. Foster a Second Class. The Higher Certificates of the National Froebel Union have been gained by H. Bideleux, E. Brightwell, and C. Newton. The Royal Drawing Society has awarded a gold star to D. Hammonds, the Bousfield Prize and a bronze star to M. Tarrant, the Ablett and Art for Schools Prizes to E. Pattenden, and a bronze medal to G. Budge. In the holiday sketching competition the same society has awarded a silver star to D. Hammonds and a bronze star to M. Tarrant.

JERSEY, VICTORIA COLLEGE.—Mr. L. Dale has gone to Christ's Hospital, Mr. A. H. Belcher as sixth form master to Brighton, and Mr. H. L. Collen to Bradfield. In their places we have Mr. A. W. Holyoak, from Merchant Taylors' School, Crosby, Mr. C. H. Lea, and Mr. A. E. Kirk. The new school-house buildings are now occupied, and seem likely to be a great success. On July 29 the college celebrates its jubilee, having been founded in commemoration of Her Majesty Queen Victoria's visit to Jersey in 1847, and opened in 1852.

TONBRIDGE SCHOOL.—The following have been elected to scholarships:—E. E. H. Heriz-Smith (Tonbridge School), H. S. Bigg-Wither (Tonbridge School), L. F. O. S. Honey (H. Williams White, Esq., Holyrood, Bognor), E. M. Besley (T. Addison Chater, Esq., High Croft, Westerham), J. C. Barley (Tonbridge School), H. B. H. Dickinson (Tonbridge School), E. G. Kitchen (G. Gidley Robinson, Esq., Hill Side, Godalming), T. Tanqueray (Rev. E. F. Miller, Esq., The Knowl, Woburn Sands), T. E. Lister (Tonbridge School), B. W. Pigg (C. F. Sylvester, Esq., Branksome, Godalming), E. R. Mason (M. Roderick, Esq., Pretoria House, Folkestone), C. D. Twynam (G. Gidley Robinson, Esq., Hill Side, Godalming), H. J. W. Tillyard and L. V. M. Robertson have been placed in First Class, Div. II., Classical Tripos; R. F. Worthington and H. W. F. Cooper, Second

(Continued on page 464.)

J. & J. PATON,

143 Cannon Street,
LONDON, E.C.,

Beg respectfully to inform Head Masters that they insert SCHOLARSHIP EXAMINATION NOTICES and other Advertisements promptly and accurately in all LONDON and PROVINCIAL NEWSPAPERS and PERIODICALS throughout the United Kingdom, also in all Indian, Colonial, and Foreign papers.

The charges are at lowest office rates. Estimates and scheme of insertions forwarded free, on receipt of particulars of proposed expenditure, over given period.

PATON'S LIST OF SCHOOLS AND TUTORS, 1902.

720 pages, red cloth, post free, 1s. 6d.

ARE YOU SATISFIED WITH YOUR PRESENT PROSPECTUS?

It has to travel many miles—all over England, Scotland, Ireland, and Wales, and probably to India, the Colonies, and the Continent—and speak to parents on your behalf.

Does it do justice to your School?

Are the claims of your School amply set forth? Is it finely printed on good paper—and are your blocks the best that can be made? If not, and you will favour us with an enquiry, we shall be pleased to send you suggestions for a new one, and specimens of the Prospectuses we have printed—with estimate of cost—**free of charge**.

J. & J. PATON,
EDUCATIONAL AGENTS,
143 Cannon Street, London, E.C.

THE HIGHLAND RAILWAY.

BY ROCK, WOOD, and GLEN.	TOURS FOR THE SUMMER HOLIDAYS.	BY RIVER, LOCH, and SEA.
--------------------------------------	--------------------------------------	--------------------------------------

The Direct Route to INVERNESS and NORTH of SCOTLAND
is *via* PERTH and DUNKELD.

Leaving **Perth**, the line runs by **Dunkeld**, through the far-famed **Pass of Killiecrankie**, skirting the **Deer Forest of Atholl**, over the **Grampians**, and through **Strathspey**, affording magnificent glimpses of **Ben Macdhui** and the **Cairngorms**, on to **Kingussie** and **Aviemore**; from Aviemore a new and direct line to **Inverness**, traversing scenery of the grandest description, has been constructed, shortening the time on the journey by an hour. By the old route the line runs past the ancient Towns of **Forres** (where the traveller can diverge and visit **Elgin**, with its magnificent Cathedral) and **Nairn**, "the Brighton of the North," to **Inverness**, the **Capital of the Highlands**. Parties staying at Inverness can have a choice selection of Tours at Reduced Fares.

From INVERNESS Northwards

the line skirts the **Beaulieu Firth** to **Muir of Ord** (whence a Branch Line has been opened to **Fortrose**), on to **Dingwall**, from which point the traveller can visit the far-famed **Strathpeffer Spa**, "the Harrogate of the North," or proceed through grand and striking scenery to **Kyle of Lochalsh**, and thence by Steamer to the **Isle of Skye** and the **Outer Hebrides**, visiting on the route **Loch Maree** and **Gairloch**, or proceed North from Dingwall through **Ross**, **Sutherland**, and **Caithness** to **Thurso** and **Wick**, visiting **John o' Groat's House**, and thence by Steamer to the **Orkney** and **Shetland Islands**.

The whole route affords an ever-varying succession of the most Picturesque Scenery, and the

FINEST SHOOTING AND FISHING IN SCOTLAND.

List of Furnished Lodgings at Farm Houses and other places in the vicinity of the Highland Railway may be obtained on application at any of the Highland Railway Stations, or to the Traffic Manager at Inverness.

Tourist Tickets are issued from the principal Stations in England and Scotland by this route, along which there is now increased Hotel and Lodging accommodation.

For full particulars as to Trains, Through Carriages, Tours, Fares, Steamer and Coach Connexions, &c., see the Company's Time Tables and Tourist Programme.

INVERNESS, 1902.

T. A. WILSON, GENERAL MANAGER.

CHEAP CONTINENTAL HOLIDAYS.

IN

BELGIUM, INCLUDING BRUSSELS,

FOR

WATERLOO AND THE ARDENNES, &c.,

VIA HARWICH-ANTWERP EVERY WEEK-DAY.

Send post-card to the CONTINENTAL TRAFFIC MANAGER, Great Eastern Railway, Liverpool Street Station, London, E.C., for descriptive illustrated pamphlet (free).

Class Classical Tripos; G. Hemmant, Twenty-first Wrangler, Mathematical Tripos. On St. Augustine's Day, May 26, the new school chapel, dedicated to St. Augustine, was consecrated by the Archbishop of Canterbury. Four bishops took part in the service—Bishop Welldon, the Bishop of Kensington (O.T.), the Bishop of Melanesia (O.T.), the Bishop of Victoria (O.T.). The weather on the opening day was beautiful, and a large company of visitors was present. The services were most impressive, and the day, which marked an epoch in the school history—for we now have a chapel worthy of our name and ancient foundation—was in every way a successful one.

UNIVERSITY COLLEGE SCHOOL.—J. Taylor and A. Sinkinson (University College School), D. Betts (Holly Hill School), and C. H. Stokes and W. A. Stone (University College School) have been awarded entrance scholarships. C. D. Schlesinger has been awarded the Hulme Exhibition for Classics, Brasenose College, Oxford. We greatly regret recording the death of Mr. Richard Savory, who was a master in the school from 1866 till his retirement in 1898. An old boy has been ennobled by the Emperor of Japan. Baron Dairoku Kikuchi is Minister of Education, with a seat in the Cabinet. He is M.A. of St. John's College, Cambridge; nineteenth Wrangler, 1877. He has been actively engaged in education work in Japan. We may here mention his being Director of the Science College, Imperial University, and Professor of Mathematics there.

PRIZE COMPETITIONS.

The Translation Prize for June is awarded to "Shekels."

The winner of the Extra Prize for April is Miss E. A. Onions, 72 The Avenue, Bruce Grove, Tottenham.

LA RÉVOLUTION DE 1830.

Les maisons royales ressemblent à ces figuiers de l'Inde dont chaque rameau, en se courbant jusqu'à terre, y prend racine et devient un figuier. Chaque branche peut devenir une dynastie. A la seule condition de se courber jusqu'au peuple.

Telle est la théorie des habiles.

Voici donc le grand art : faire un peu rendre à un succès le son d'une catastrophe afin que ceux qui en profitent en tremblent aussi, assaisonner de peur un pas de fait, augmenter la courbe de la transition

jusqu'au ralentissement du progrès, affadir cette aurore, dénoncer et retrancher les âpretés de l'enthousiasme, couper les angles et les angles, ouater le triomphe, emmitoufler le droit, envelopper le géant peuple de flanelle et le coucher bien vite, imposer la diète à cet excès de santé, mettre Hercule en traitement de convalescence, délayer l'événement dans l'expédient, offrir aux esprits altérés d'idéal ce nectar étendu de tisane, prendre ses précautions contre le trop de réussite, garnir la révolution d'un abat-jour.

1830 pratiqua cette théorie, déjà appliquée à l'Angleterre par 1688.

1830 est une révolution arrêtée à mi-côte. Moitié de progrès ; quasi-droit. Or la logique ignore l'à-peu-près, absolument comme le soleil ignore la chandelle.

By "SHEKELS."

Royal houses resemble certain Indian fig-trees, each branch of which, by bending down to the ground, takes root and becomes itself a tree. Every member may become a dynasty. On the mere condition of bowing down to the people.

Such is the theory of the knowing ones.

This, then, is the grand art : to make success give forth a faint echo of catastrophe, so that those who profit by it may tremble withal ; to season a forward movement with fear ; to prolong the curve of transition until progress flags ; to take the colour out of this daybreak ; to deprecate and depreciate the asperities of enthusiasm ; to pare off corners and claws ; to deaden the sound of triumph ; to muffle right ; to wrap the giant people in flannel, and put him speedily to bed ; to prescribe low diet for this excess of health ; to put Hercules under convalescent regimen ; to drown emergency in expediency ; to offer to souls athirst for the ideal that nectar diluted with barley-water ; to take precautions against too much success ; to furnish the Revolution with a sun-blind.

1830 practised this theory, already applied to England in 1688.

1830 is a Revolution stopped midway. Half-progress ; quasi-Right. Now, logic ignores the "almost" as absolutely as the sun ignores the candle.

We classify the 187 versions as follows :—

First Class.—Coup d'Etat, Impotens, Vlaamsche Meisje, S.C.P., Chemineau, Shekels, A Key, Templier, Jarno, Peter Quince, E.H.O., 100,000, Manuela, Souvenir Perpetuel, R.C., Egea, Sansgène, Tchichi, Borealis.

Second Class.—Cham, Nessko, Herts, Severs, Cypher, Aziyadé, M.M.P., Pax, Tchinan, Sans Succès, Blobbs, Sirach, E.S.M., M.T.B., Blues, A.A., Prince Hawthorn, Ryde, Luz, Corbuchtet. Omen,

Hermione, Merrybent, Mubby, Pant y curyll, Argonaut, La Souris, Speranza, Victa, G.A.B., Sandy Tam, T.N.S., Limousine, Corbar, Paddy Aylesscroft, Fittcock, M.A.L., Day Dawn, Kingston, Banyan (Manchester), Eothen, Nolens volens, Gardez-bien, C.W.M., Paina, Durchlautet, Nescio quis, Emily, Olga von Stena, Marigold, Zaragoza, M.T.R., Sorosis, Union Jack, Neuenberg, Ignoramus (Peckham), Ken, Polignac, M.J.H., Pressé, A.B.M., France, Glenleigh, Corrie, Howt, Sleepy, Mabruk.

Third Class.—Trop tard, Erin, Francesca, Shark, Banyan (Cardiff), Great Western, B.H., Rae, Finis, X., M.M., Stedye, E.V.C., St. Blaise, Prig, Bittersweet, E.B.H., Cloudland, Mac, Fernia, Warwick, Crescent, Cogne, Chingleput, Pickwick, Lavender, Witto, Ulysses, Festival, Alert, H.A.E., Isa. Heb., Motor, M.A.V.N., Hitchhurst, Henri de Navarre, Joe, Excelsior, Oscille, Puzzled, Kaninchen, Hela, Utopia, Turlututu, Hydra, Davy, H.I.J.K., E.H. de R.B., Prestkrage, Mars, E.M.W., Alumnus, Katarina, S. Reate, St. Cloud, Niente, Ganseblume, Sola, W.R.B., C.R.W., M.E.T., Greeba.

Fourth Class.—Evelyn Hepple, Helvetia, Calliope, Anglaise (Peckham), Anglaise (Christchurch), Fortes et Fideles, E.C.N., Caen dhuv dheelish, Snowflake, Neith, Hannington, P.T.E., Rhona, Mont Blanc, M.R.P., Seagull, Ursuline, Lavengro, H.M.A., Augusta Janneret, Marie Stuart, X.Y.Z., Syotis, La Pierre Noire, Mobin.

Fifth Class.—Jeannot, Ignoramus (York), A.M.H., Myles na Copaleen, Alibi, Lotta, Whitwarrer, Glendower, Emilia Falaise, Sydney, In Haste, Penelope, E.H.T.

This passage from "Les Misérables" was set in the last Civil Service Examination, and it would be instructive to know what candidates writing against time made of it. Victor Hugo's metaphors and similes are numerous and very hard to translate; a literal rendering is often out of the question, and the choice lies between changing the metaphor, resorting to paraphrase, and converting the metaphor into a simile. Most to be avoided are mixed metaphors, such as "stem the tide and clip its wings." *Quater*, "to coddle," "to handle delicately"; *emmitouffer* connotes both "to disguise" and "to emasculate." The following "howlers" were common, the first almost universal:—*Ignorer* does not mean "to ignore"; *d'layer* is not "to delay"; *courbe* is not a "curb"; *ongles* means much more than "nails"; *faire un peu rendre* is certainly not "to do a little to render." The alliteration in *angles et ongles* should be preserved—"cut off corners and claws." *Habiles*, "experts," "professional politicians." *Art*, "mystery," "secret." *Délayer l'événement dans l'expédient*, "to pass off hard facts (firm realities) under the guise of expedients." *Etendu de risane*, "diluted with toast-and-water." *Abat-jour* is here "a shade to conceal the dazzling brightness." *Augmenter la courbe*, "to make the curve broader," not "to sharpen." *Affadir*, "to cast a sickly pall over."

A Prize of Two Guineas is offered for the best translation of the following passage from Brantome:—

Elle se mesloit d'estre poëte, et composoit des vers, dont j'en ay veu aucuns de beaux et très-bien faicts, et nullement ressemblans à ceux qu'on luy a mis sus à avoir faicts sur l'amour du comte de Bothwel: ils sont trop grossiers et mal polis pour estre sortis de sa belle boutique. M. de Ronsard estoit bien de mon opinion en cela, ainsy que nous en discussions un jour, et que nous les lisions. Elle en composoit bien de plus beaux et de plus gentils, et promptement, comme je l'ay veu souvent qu'elle se retiroit en son cabinet, et sortoit aussy tost pour nous en monstrier à aucuns honnestes gens que nous estions là. De plus, elle escrivoit fort bien en prose, surtout en lettres, que j'ay veues très-belles et très-eloquentes et hautes. Toutesfois, quand elle devoit avecques aucuns, elle usoit de fort doux, mignard et fort agréable parler, et avecques une bonne majesté, meslée pourtant avecques une fort discrete et modeste privauté, et surtout avecques une fort belle grace; mesme que sa langue naturelle, qui de soi est fort rurale, barbare, mal sonnante et séante, elle la parloit de si bonne grace, et la façonnoit de telle sorte, qu'elle la faisoit trouver très-belle et très-agrable en elle, mais non en autres.

Voyez quelle vertu avoit une telle beauté et telle grace, de faire tourner un barbarisme grossier en une douce civilité et gracieuse mondanité! Et ne s'en faut esbahir de cela, qu'estant habillée à la sauvage (comme je l'ay veue) et à la barbaresque mode des sauvages de son pays, elle paroissoit, en un corps mortel et habit barbare et grossier, une vraye déesse.

An Extra Prize of One Guinea is offered for the best Epigram (in the original sense of the word) on the postponed Coronation.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by July 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

EDWARD STANFORD'S PUBLICATIONS.

SUITABLE FOR PRESENTATION.

STANFORD'S COMPENDIUM OF GEOGRAPHY AND TRAVEL.

Revised, and in great part Rewritten, with new Illustrations and Maps. 12 Vols., large cr. 8vo, cloth, 15s. each (sold separately).

EUROPE.—Vol. I. The Countries of the Mainland (excluding the North-West). By GEO. G. CHISHOLM, M.A., B.Sc. With 31 Maps and 101 Illustrations.

EUROPE.—Vol. II. The British Isles, Scandinavia, Denmark and the Low Countries. By GEO. G. CHISHOLM, M.A., B.Sc. With numerous Maps and Illustrations. [Ready shortly.]

ASIA.—Vol. I. Northern and Eastern Asia, Caucasus, Russian Turkestan, Siberia, Chinese Empire, and Japan. By A. H. KEANE, F.R.G.S. With 8 Maps and 91 Illustrations.

ASIA.—Vol. II. Southern and Western Asia, Afghanistan, India, Indo-China, Malay Peninsula, Turkey in Asia, Arabia, and Persia. By A. H. KEANE, F.R.G.S. With 7 Maps and 89 Illustrations.

AFRICA.—Vol. I. North Africa. By A. H. KEANE, F.R.G.S., Author of "Asia" in the same Series, "Gold of Ophir," &c. With 11 Maps and 77 Illustrations.

AFRICA.—Vol. II. South Africa. By A. H. KEANE, F.R.G.S., Author of "North Africa" in the same Series, "Gold of Ophir," &c. With 11 Maps and 92 Illustrations.

NORTH AMERICA.—Vol. I. Canada and Newfoundland. By SAMUEL EDWARD DAWSON, Litt.D. (Laval), F.R.S.C. With 18 Maps and 90 Illustrations.

NORTH AMERICA.—Vol. II. The United States. By HENRY GANNETT, Chief Geographer of the United States Geological Survey. With 16 Maps and 72 Illustrations.

CENTRAL AND SOUTH AMERICA.—Vol. I. South America. By A. H. KEANE, F.R.G.S. Edited by Sir CLEMENTS R. MARKHAM, F.R.S. With numerous Maps and Illustrations.

CENTRAL AND SOUTH AMERICA.—Vol. II. Central America and West Indies. By A. H. KEANE, F.R.G.S. Edited by Sir CLEMENTS R. MARKHAM, F.R.S. With numerous Maps and Illustrations.

AUSTRALASIA.—Vol. I. Australia and New Zealand. By ALFRED RUSSEL WALLACE, LL.D., D.C.L., F.R.S. With numerous Maps and Illustrations.

AUSTRALASIA.—Vol. II. Malaysia and the Pacific Archipelagoes. By F. H. H. GUILLEMARD, M.D., author of "The Cruise of the *Marchesa*." With numerous Maps and Illustrations.

THE AUTOBIOGRAPHY OF THE EARTH: A Popular Account of Geological History. By the Rev. N. N. HUTCHINSON, B.A., F.G.S. With 27 Illustrations. Crown 8vo, cloth, 7s. 6d.

THE WAY THE WORLD WENT THEN. By ISABELLA BARCLAY. With Illustrations. Crown 8vo, cloth gilt, 4s.

Works by ARABELLA B. BUCKLEY (Mrs. Fisher).

THE FAIRY-LAND OF SCIENCE. Thirty-first Thousand. With 74 Illustrations. Crown 8vo, cloth gilt, gilt edges, 6s.

THEROUGH MAGIC GLASSES, and Other Lectures. A Sequel to "The Fairy-land of Science." With nearly 100 Illustrations. Crown 8vo, cloth gilt, gilt edges, 6s.

LIFE AND HER CHILDREN. Glimpses of Animal Life from the Amoeba to the Insects. Eighteenth Thousand. With upwards of 100 Illustrations. Crown 8vo, cloth gilt, gilt edges, 6s.

WINNERS IN LIFE'S RACE; or, The Great Back-boned Family. With numerous Illustrations. Seventh Thousand. Crown 8vo, cloth gilt, gilt edges, 8s. 6d.

A SHORT HISTORY OF NATURAL SCIENCE, and of the Progress of Discovery from the time of the Greeks to the Present Day. Fifth Edition. With 77 Illustrations. Crown 8vo, cloth, 8s. 6d.

MORAL TEACHINGS OF SCIENCE. Crown 8vo, cloth, gilt edges, 3s.

ANIMALS FROM THE LIFE. 255 Coloured Illustrations drawn by HEINRICH LEUTEMANN. With descriptive Letterpress. Edited by ARABELLA B. BUCKLEY (Mrs. Fisher). Crown 4to, cloth extra, 10s. 6d.

London: EDWARD STANFORD, 12, 13, & 14 Long Acre, W.C.

(Geographer to His Majesty the King.)

MESSRS. BELL'S NEW LIST.

New Educational List post free on application.

Crown 8vo, 4s. 6d.

DIFFERENTIAL CALCULUS FOR BEGINNERS.

By ALFRED LODGE, M.A., late Faraday Fellow of St. John's College, Oxford, Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill. With an Introduction by OLIVER J. LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham.

In the press. Crown 8vo.

ELEMENTARY GEOMETRY.

By W. M. BAKER, M.A., Head Master of the Military and Civil Department at Cheltenham College, and A. A. BOURNE, M.A., Senior Mathematical Master at Cheltenham College.

This volume is written on the lines recommended by a Committee of the Mathematical Association which was formed at the suggestion of the British Association for the purpose of making reforms in the teaching of Elementary Mathematics. It will consist of three Books, which will be sold separately, and also in a complete volume.

Crown 8vo, 2s.

AN INTRODUCTION TO CHEMISTRY.

By D. S. MACNAIR, Ph.D., B.Sc., H.M. Inspector of Science Schools.

This book is intended to provide a Second Year's Course in Practical Science for pupils who have already gone through a course of Laboratory Work in Elementary Physics. The aim of the author has been to lead the beginner in Chemistry, by a series of simple and logically connected experiments, chiefly of a quantitative nature, to an understanding of some of the most important principles of the science and of the methods of investigation by which they have been established. Beginning with a study of the changes which take place in the rusting of iron, the student is led on to the investigation of the composition of air and water, and so to the chemical changes that occur in the burning of a candle, in the conversion of chalk into quicklime, and in the action of common acids upon metals. The book will be found specially well suited for use in Irish Intermediate Schools, covering as it does the whole of the scheme outlined in the circulars of the Department of Agriculture and Technical Instruction.

Bell's Science Series.

NEW VOLUMES.

INJURIOUS AND USEFUL INSECTS.

By L. C. MIALI, F.R.S., Professor of Biology in the Yorkshire College, Leeds. With 100 Illustrations. 3s. 6d.

ELEMENTARY INORGANIC CHEMISTRY.

By JAMES WALKER, D.Sc., Ph.D., F.R.S., Professor of Chemistry in University College, Dundee. 3s. 6d.

"The book is an eminently practical one, and should be warmly welcomed both by students and teachers."—*Educational News*.

Uniform and Cheaper Edition of

MR. WALTER CRANE'S TEXT-BOOKS.

Crown 8vo, profusely Illustrated, 6s. net each.

THE BASES OF DESIGN.

With 200 Illustrations.

LINE AND FORM.

With 157 Illustrations.

THE DECORATIVE ILLUSTRATION OF BOOKS, Old and New.

With 165 Illustrations.

FOR OXFORD LOCAL EXAMS., 1903.

BELL'S ILLUSTRATED CLASSICS.

Edited by E. C. MARCHANT, M.A.

Pott 8vo, with or without Vocabularies, price 1s. 6d. each, except Greek Play, which is 2s.

CAESAR. BOOK IV.

By Rev. A. W. URCOTT, M.A., Head Master of Christ's Hospital.

CAESAR. BOOK V.

By A. REYNOLDS, M.A., Merchant Taylors' School.

CAESAR. BOOK VI.

By J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley.

HORACE.—ODES. BOOK III.

By H. LATTER, M.A., Cheltenham College.

HORACE.—ODES. BOOK IV.

By H. LATTER, M.A., Cheltenham College.

VIRGIL.—ÆNEID. BOOK VI.

By J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley.

EURIPIDES.—MÈDEA.

By Rev. T. NICKLIN, M.A., Rossall School. 2s.

London: GEORGE BELL & SONS, York Street, Covent Garden.

FALSE QUANTITIES.

IF to make one of these in the hearing of ears polite was amongst the unpardonable sins of fifty years ago, now that the goddess of classical education has been compelled at least to share her throne with the deities that preside over instruction in modern, scientific, and technical subjects, we ought to be growing more charitable when we hear false quantities, and more callous when we make them. But amongst the many pangs of society life there are few more bitter and lasting than the awful conviction that in the hearing of our educated fellow-creatures we have mispronounced a word. We would rather be detected in talking illogically. In one sense, our preference is for quantity before quality.

I wonder if Mr. Herbert Spencer ever spoke of "Iphigenia," and has never quite got over it. He remarks what a ridiculous thing it is that a man should be ashamed of making that false quantity and yet not be ashamed of ignorance of the position of the Eustachian tubes in the human anatomy. It is very difficult to agree with him, though it may not be very easy to reply to him. But certainly there is room for something to be said on the other side. We can hardly be expected to acquaint ourselves with all the natural sciences. To be well up in one or two of them is, as all will admit, infinitely better than to have a smattering of all; and a thoroughly scientific man who should have omitted anatomy from his curriculum would have no need to be ashamed of his ignorance regarding those same tubes. To know how to spell their name only would be practically useless. If he was suffering in them, the sensible thing would be to send for the doctor, and point out to him the part of the body affected. No more of a blessing attaches to the word Eustachian than to the word Mesopotamia; at any rate, unless it is pronounced in such a way as to be intelligible, the man who uses the term possesses in his knowledge of it only some information which, in Spencerian language, it does not concern him to have. For surely it does concern us not only to know how to spell the names of the persons, places, and things we talk about, but also how to pronounce them in order to make ourselves understood. Language is literally tongue-work, and serious consequences may arise from an incorrect use of tongue-work.

But no doubt the implication is that it is more important to know about the Eustachian tubes than to know about Iphigenia. That would seem to mean that a knowledge of the terminology of anatomy is more desirable in this world, where the medical man is ready to hand, than an acquaintance with the principal names that occur in classical literature; that one need not be ashamed of ignorance in the very A B C of the latter, but should be of ignorance of a detail in the former. The question makes a very pretty and a very familiar quarrel as it stands. It is only a tilt of scientific *versus* classical education. Practically it is enough to say that we cannot all be medical men, and that we had much better not try to be so: first, lest we become hypochondriacs; secondly, lest we injure our health; and, thirdly, lest by becoming every man his own physician we cause the professions of medicine and surgery to languish. Practical and scientific education is useful mainly with reference to the state of society in which we live. For the colonist and the traveller, no doubt, the more medical skill they possess the better their chances of survival; for the bulk of us such knowledge is rarely necessary. But it is always necessary to pronounce our words so as to make ourselves understood.

"Our rude forefathers," whatever we may think about it, did not like to be convicted of making false quantities. Not that they are likely to have looked at the matter with a philosophic eye. To make a false quantity fifty or seventy-five years ago was to argue oneself unknown at the great public schools, where one learnt Greek and Latin or nothing, and to confess to an ignorance of that "without which no gentleman's education was complete." As Charles the Second felt about Presbyterianism—that it was "no religion for a gentleman"—so was it felt, and so is it felt, by many of us about any other education than the literary and classical. The days are over when it was indispensable for a Parliamentary orator that he should possess a proper equipment of quotations from the classics; but not quite extinct are the old "Eton Latin Grammar" tags: "Timeo Danaos et dona ferentes," "Facilis descensus Avernus," "Non tali auxilio," and (I believe from Westminster) "Proximus ardet

Ucalegon"; and, while the orator loves to air his Latin, he will shudder at the idea of mispronouncing it.

Classical scholars and the supporters of classical education used to feel a little weary at one time of being told to notice the purity of style in the great orations of John Bright, who was said, like one greater than himself, to have "small Latin and less Greek." They were inclined to think that he might have been a still greater orator had he enjoyed a classical education. There would have been less reason for Mr. Birrell's complaint that his speeches lacked "a gracious somewhat." Certainly he would have had a better chance of appreciating his favourite poet Milton and his innumerable classicisms. The humanists probably felt somewhat avenged when it became known that Bright's literary taste was not on a level with his eloquence, and that the "Epic of Hades" was the poem that he ranked next to the "Paradise Lost." But, if from a literary point of view he then suffered a fall, more serious was the damage done to his reputation as a House of Commons orator when in an unhappy moment he spoke of the "Pitchley [*sic*] hounds." The country gentlemen were profoundly satisfied. How could he understand what he was talking about, when he could not put the right name to it? Justly or unjustly, his false quantity convicted him of ignorance of his subject; almost as plainly as the misconception of Joseph Arch, when he got himself into a state of indignation and a hobble about "hinds."

Very remarkable appear to have been the methods employed in the pronunciation of Latin in one great and popular seat of learning. Even to this day the vowels are pronounced after the British fashion in several of our chief schools, and frequently at the Universities; and students are taught to believe that Horace could perpetrate such a monstrous cacophony as (to spell the line as it is pronounced)—

Florees ameenee ferry jubee rosee.

Ruined, if not lost, by the British pronunciation is the noble sonorosity of such lines as Latin alone can supply. It is worth while trying the difference of effect produced (on such passages, for example, as Virgil, "Georgics" IV. 460-470, or Horace, "Odes" III. xxix. 33-41) by the use of the Continental vowel sounds. The naturalness of this system, as contrasted with the British code, has been strongly brought home to me in my own experience. Five-and-forty years ago we were all taught to pronounce the vowels as in English, and it was not till I had been teaching for some twenty years that I decided to make the change to the Continental vowel pronunciation. That change came to me quite easily, in spite of the fact that I had reached an age when things are pretty well stereotyped. But when, in conversation with friends, I have had to recur to the British style, I have found great difficulty in doing so; from which I argue in favour of the Continental method, as East in "Tom Brown" argued in favour of the "crib"—that Nature intended it to be used.

But at one great school it actually seems that boys were taught to make false quantities, and then flogged for making them—a shocking instance of "preachee and floggee too." I well remember how a pupil, who had been prepared by a recognized coach for that school, produced *viva voce* the second half of a pentameter (to spell his words phonetically), "Tee peereunty peerit." He used to say "eego" for the first personal pronoun, but no doubt would have suffered consequences had he made the word scan in his verses as he pronounced it.

A most objectionable plan, as it seems to me, and one productive of a plentiful lack of correct pronunciation, is the system of marking all the vowels as long or short in our grammars and dictionaries. Quantities should be learnt by the rules of prosody. When the rules do not provide for pronunciation, an occasional mark of quantity is admissible and helpful, as, for example, over the penult in the inflexion of *arbor* or the first syllable of such words as *veneo* and *venio*. But to mark quantities indiscriminately is to teach the pupil to pronounce by the eye, whereas the ear is the organ to be trained for the purpose. The latest edition of the "Eton Latin Grammar" is seriously vitiated by this method, and even in such a work as the edition of "Seyffert's Classical Dictionary," by Nettleship and Sandys, it has been thought desirable to mark the penults of "Jupiter" and "Justinus," and so to inform the tongue by the eye, and not by the ear. No wonder English schoolboys are slow to learn a modern language colloquially, when a "Latin exercise" is to them a task in which the work is done

only between the fingers and the brain, and to a very large extent in their linguistic studies the ear and the tongue are off duty.

There is no shuffling out of a false quantity, as there may be at times with other displays of ignorance. "Litera dicta manet." Your syllable has gone forth, and it remains to live it down. The least sensitive in such matters are probably mathematicians, who cannot bother themselves about such a trifle as the penult of "Uranus," and pronounce it on the analogy of "Silvanus" and such Latin words. A mathematical Vice-Chancellor of Cambridge is said to have made a practice of perpetrating five false quantities in eight words when conferring degrees: "In nōmine Patris et Filii et Spiritūs Sancti." But, of all who ever conferred degrees and blundered so badly as to show that they themselves were unworthy of one, probably none was a greater offender than the Iron Duke. In the list of benefactors at the Oxford Commemoration he announced "Jacōbus primus." "Jacōbus," your Grace, whispered the Vice-Chancellor at his elbow. "Thank ye, thank ye," said the Duke; and presently produced the name of "Carōlus primus." "Carōlus," your Grace, whispered the Vice-Chancellor; upon which the Duke is said to have uttered, in an audible undertone, the usual monosyllabic anathema upon Carōlus.

For those whose memories are plagued with the offence of a false quantity or two there are grains of comfort in the recollection of learned men who have gone wrong in their prosody. False-quantity makers have erred in good company. Prof. Mayor seems to find some satisfaction in adding a rather vicious note of exclamation to his remark that in Juvenal, "Satires," xi. 90, "the great critic Heinrich has proposed to insert a false quantity by reading *adhuc* for *autem*." Many a true story is told of mispronunciations by good scholars. One of the very best classical scholars living sent up *mālus* for "a mast," when sitting for a Trinity Fellowship. C. S. C.'s version of "Angustam amice pauperiem pati," &c., still runs: "Remember, friend," &c. A. and B., two examiners for the Bell Scholarship, once had an experience worth recording. They could not agree, and A., arguing against B.'s man, said: "I could never consent to award a University scholarship to one who made a bad false quantity in his Latin verse." B.: "What was it? I fear I overlooked it." A.: "Why he made the *i* of 'Titus' short." B.: "Well, it is only in a proper noun, and—if I am not very much mistaken, it *is* short." So it seems that the scholarly candidate was not far from failing in virtue of a correct quantity.

One reminiscence remains with me. The sixth form of which I was a member was being examined *viva voce* in Greek Testament by the well known commentator on the same, Dean Alford. The very reverend man used the word *κράβαρον*, and directly afterwards our show-boy pronounced the word *κράβαρον*. "What is your authority," asked the Dean, "for so lengthening the penult?" "Because," said the examinee, "it is the Latin *gravatum* in a Greek form." The Dean said something indistinct about analogy and the genius of the Greek language, and, rather hurriedly, as we thought, turned our attention to another passage. But, as Lord Grimthorpe knows, and has let others know, even if this was a mistake, Dean Alford was not the only "false-quantity making Dean." If, however, there is an excusable mistake of this kind, it is that common transposition of the first two monosyllables in the line:

Tempora mutantur, nos et mutamur in illis.

A reverend canon in print, and Sir Henry Campbell-Bannerman as reported, have recently produced something much worse. How did they suppose it possible that a line of Ovid could end with "fas est ab hoste doceri"? The very latest false quantity I have seen in print is in a recent number of *Punch*, in which a Fellow of Oriel misquotes "Nisi moderato [*sic*] splendeat usu."

It must be admitted that the Muse of English poetry suffers with the rest of us free-born Britons from insularity. She has given us Hecate as a dissyllable, Hyperion, Andronicus, and many another false quantity, that still produces a slight qualm in scholarly nerves. For centuries, I suppose, the educated and scientific world has been accustomed to speak of the complaint called "angina pectoris," and to make the penult of the first word long. Not long ago I was thankful, as a pedagogue, to be able to reply in the affirmative to a friend who wrote asking, "Did you know that X. is suffering from *angina pectoris*;" and

that the *i* in *angina* is short?" It was Prof. Munro, I believe, who in recent years called, or recalled, the attention of scholars to the fact that *angina* is a Latinized form of ἀγχόνη in the sense of strangulation. The incident is recorded in "The Life of Archbishop Benson. But, as Dean Alford surmised of κράβατον, that it could be pronounced on the analogy of similarly formed words in Greek, so may we, with a clear conscience, avoid pedantry, and continue to lengthen the penult, believing that Romans would so pronounce the word on the analogy of *doctrina*, *medicina*, and so forth.

What are we to think of Dryden's lines in the "Religio Laici"?—

The Deist thinks he stands on firmer ground;
Cries "εὐρεκα [*si*], the mighty secret's found."

Is it a case of "ignorance, sheer ignorance," or of pronunciation by accent and of spelling to suit it? He would be a bold man who would venture to write ἄνθρωπος, but it is not worse than εὐρεκα.

We have in our own language certain words that cause us a degree of uncomfortable feeling when we venture to use them colloquially. We can either find no rule, or more than one rule, by which to determine the accent, and we do not hear the words sufficiently often to be able to fall back upon a conventional pronunciation. Such a word is "decadence." Are we to follow the Latin prosody, and make the *a* short, or form it from the English "decay," and lengthen the middle syllable? In our divided state of mind we probably allow our prudence to limit our vocabulary. We fall back upon a synonym, and the word is left outside the circle of such as are pronounced by convention. The well known story of a late Lord Derby, corrected, but declining to receive correction, in the House of Lords, has effectually robbed "curator" of its terrors; but there remain others to plague us, especially such as admit of no sort of etymological argument, and are simply to be remembered, and yet are not so frequently in men's mouths as to be familiar. It is impossible with some to feel certain about "Sardanapalus" and "Culloden." With regard to some classical words, it is advisable to lengthen or shorten penults according to the company present. To a scholar you will probably speak of Ovid's "Metamorphōses," and of a "metamorphōsis" to a man of the world. It is said of a scholarly man of fifty years ago that, in his contempt for the literary inferiority of his fellow-guests at an official dinner, he deliberately spoke of himself as an "amicus curiæ." Much less brutal was the reply made by a head master when his health had been proposed by the worthy, but post-classical, mayor of the borough, as one who combined the *suaviter in modo* with the *fortiter in re*. In his response to the toast, he declared himself overwhelmed by the quantity, no less than by the quality, of the mayor's compliments.

Of false quantities perpetrated by adults there are two favourite homes: one, the room of the auctioneer, who seems to hover between the learned and unlearned professions, and is, consequently, flighty in his prosody. It is only a few months ago since I heard a gentleman of this profession speak of "myself and my learned brethren." But unwonted sounds are heard from the lips of the brotherhood when, in faltering accents, they offer for sale the Greek tragedians: "What shall we say, gentlemen, for this elegant edition of—ahem!—Euripides and—ahem!—two others?" Lord Brougham's pronunciation of the name would have afforded some support to the hesitating scholar-salesman.

The other and the most favoured haunt of the false quantity—to our shame be it said!—is the Christian house of worship, from the Cathedral to Little Bethel. There the purist loves to make a goose of himself: to air his learning in his pronunciation of "Debōrah," "Naphtālī," and "Bārabas." In the accent he gives to the last he may, or may not, be correct, and he has the authority of John Sebastian Bach, in the St. Matthew Passion Music; but we do not recognize the word so altered from the spelling of our Authorized and Revised Versions of the New Testament. The purist causes his choir to sing of Abraham and David, pronouncing the *a* as in "father"; and, while this gives them good, sonorous words to sing, the congregation are at no loss to recognize the names. But they fail to make much of Jacob as "Yakoob," or of Joseph as "Yusuf." And, in spite of his attempts to be consistent and correct, he will continue to speak of Attalia and Samaria, and probably is careful to make four syllables of Timōthēus, in opposition to Dryden, Handel, and Mr. Santley, who have long ago settled the point in "Revenge!

Timōthēus cries." But if he wishes to be "understood of the people," he may just as well say Timothy, and have done with it.

But not all the peculiar pronunciations echoed by the walls of our churches come from the correct purist and the youthful, and consequently infallible, curate displaying his erudition before his teachable rector. The downright unmistakable false quantity is there, as in school, the badge of the ignoramus, who too commonly goes by the name of the "literate" on the *lucus a non lucendo* principle. There are two names in the New Testament before which such an one is nearly certain to go down. It is no exaggeration to say that the word Urbane is read as a trisyllable, and supposed to be the name of a female, nineteen times out of twenty. The cure in this case, if it were only manners to apply it, would be to ask the offender why he should not speak of Pontius Pilaté. But there is yet a more insidious name occurring in one Second Lesson. The mighty in scholarship have fallen in respect of it. A true story is told of what happened in an East Anglian vestry one Sunday. "To think," said the late Venerable Archdeacon O—to his well read Etonian curate, the late Mr. E—, "that you should not know how to pronounce the name of our pious old friend the hero of the 'Æneid'!" The prudent curate knew better than to correct an archdeacon and a rector. He received the admonition with meekness of wisdom, and departed smiling within himself to think that his clerical superior should be ignorant of the fact that the penult of the New Testament name is an *epsilon*.

But the ignoramus makes his false quantities, it would sometimes seem, in pure wantonness, like that of Mr. Snob, who asked a stranger if he thought Publicoaler a fine writer. Incredible as the following examples may be thought, I heard them with my ears perpetrated in the same pulpit, before large and unmoved congregations, within the same year, and in each case by a preacher whose back was either unadorned or vested with a "decent tippet of black"—the "Acropolis" of Athens and "Veni Creator Spiritus" (the *i* pronounced as in "nice"). This last appeared so gratuitous an outrage on the ears of the flock that I put it to a learned friend: "How could a man mispronounce so familiar a word?" His explanation was that when a lame scholar attacks a word he is not sure of he thinks the most barbarous pronunciation will best suit the syllables that are foreign to him.

As for false quantities in school life, they are part of the pedagogue's daily bread and water of affliction until he gets callous by use. Pages might be filled with the mispronunciations heard in our form-room. One most unfortunate classical name for the schoolboy to manipulate is Lycoris. It is unnecessary to describe his rendering of it. And there is one name that boys have so persistently mispronounced in my hearing as to have made me slightly shaky about it myself—they will say "Boætia" for Bœotia.

To end with a story too good not to be true. Somewhere in Yorkshire a learned and cynical old don, of the high-and-dry school of churchmanship (we will call him Dr. Grimm), had in the next parish a clerical neighbour, Smith (*verbi causa*), who was a literate and belonged to the florid order of readers. One Sunday, when Dr. Grimm, in the natural order of things, might have been expected to be taking his usual constitutional and walking out of his parish after evensong, a friend found him walking towards his home. "Why, Dr. Grimm," said his friend, "where have you been this afternoon? I thought your service would have been just at an end, and I was hoping for a turn with you." "Why, where should I have been?" replied the crabbed old scholar. "Of course, I have been to hear Smith read the sixteenth chapter of the Epistle to the Romans."

J. H. RAVEN.

ATHLETICISM IN GREECE.

By E. NORMAN GARDINER.

AT the entrance of the Stadium at Olympia, the last sight that competitors would see before they entered the course, stood sixteen brazen statues of Zeus. They were called the Zanes, and were erected out of the fines imposed upon athletes who had behaved shamefully at the games. The first six were put up in the ninety-eighth Olympiad, in consequence of a certain Eupolus having bribed his rivals to let him win in the boxing. The inscriptions on the bases, which alone survive,

recorded that not with money, but with swiftness of foot and bodily vigour, must one win prizes at Olympia. Fifty-six years later six more statues were set up to commemorate a similar offence committed by the Athenian Callippus in the Pentathlon. On this occasion the Athenians haughtily refused to pay or to take any part in the Olympic festival, but the god at Delphi, indignant at such impiety, declined to give them any oracle till the fine was paid. This oracle was inscribed on the base of one of the statues, together with some lines warning all competitors against such conduct. The remaining four statues recorded similar offences on the part of certain wrestlers.

These statues are full of instruction. In the first place they give us some idea of the high standard of honour in Greek athletics. If we think of the thousands who must have competed in these games during the twelve hundred years that they were held, the fewness of the offences is truly remarkable. The greatest precautions were taken to safeguard the honour of the games: the competitors had undergone a month's training under the eyes of the magistrates of Elis; they had sworn a solemn oath on the altar of Zeus that they would compete fairly and abide by the rules of the games; and any transgression was therefore an act of sacrilege, an insult to the gods, and was punished as such.

But these statues are still more interesting from another point of view. Much indignation has been recently aroused by certain lines of Mr. Kipling's about "muddled oafs" and "flannelled fools." The very violence of the criticisms upon them, most of them utterly beside the point, shows that Mr. Kipling has touched a sore place. No intelligent person can imagine for a moment that Mr. Kipling intended to attack games or athletics in themselves. What he attacked was the over-athleticism which we see rampant around us, whether in the form of the professional pure and simple, who makes his living by affording a spectacle to loafers, or of the still worse professional amateur, who, having no need to work for his living, neglects his profession, if he has any, and devotes the best years of his life to purely selfish enjoyment. Such a life can no more make a man a useful citizen than reading newspaper reports or watching matches can make him a sportsman. It is a far cry from Mr. Kipling to Euripides, but, had Mr. Kipling lived in Athens at the close of the fifth century, he would have found similar cause for his indignation. The language of Euripides, if perhaps more refined, is no less scathing: "Of all the myriad evils throughout Greece there is none worse than the race of athletes; they never learn how to live well, nor can they endure poverty or evil fortune. Honoured in their youth they stalk about as public ornaments, but when old age comes upon them they are thrown aside like old coats that have lost their nap." Perhaps Euripides was prejudiced—his parents had tried to make him an athlete against his will—but the verdict of Plato, an enthusiast for physical training, and himself a competitor at the games, of Socrates, Aristotle and many others, is the same. Now it is to this period that the first Zanes belong. Never had athletics been more popular; but this popularity had brought its own dangers, and beneath its glamour the poet, the philosopher, the statesman could see the evils which were to sap the life of Greek athletics and render them an object of contempt to the more practical Romans. Let me try and describe briefly the character of the early Greek games and the causes that led to their decay.

Greek sports, as we read of them in Homer, and as they doubtless continued in the early days of Olympia, were merely an expression of intense national energy, the joy in all activity, physical or intellectual, by virtue of which all that is young and vigorous, whether nation or individual, loves to match itself against others in all contests of mind or body. This spirit of emulation and consequent love of adventure characterized the Greeks of old no less than the English of the Elizabethan age: in colonial activity and love of sport we are the heirs of Greece. So, as in the days of the tournament or the archery meeting, every important occasion would be celebrated by sports. No training was needed; war and the chase kept all the Homeric warriors in training, and the events in the games were all connected with these pursuits. But as life became more settled and more civilized, and men began to congregate in towns, war and the chase were no longer the conditions of everyday life, and it became necessary to supplement them by a system of physical training. The object of this was principally to make every man fit to defend his country. But the Greek was always an artist

and an idealist, and he introduced into his physical training the ideal of physical beauty, of harmony and symmetry. Every Greek had from boyhood to undergo such a training, not in one, but in many forms of exercise, the object being not to produce special development or to break records, but to make him a useful citizen, healthy and beautiful. This was the ideal of the golden age of Greek games, the beginning of the fifth century. It is the Graces, according to Pindar, that give victory in the games, "by whose gift come unto men all pleasant things and sweet, and the wisdom of a man and his beauty, and the splendour of his fame";* and Pindar never tires of singing of the beauty of the victor, "deft-handed, nimble-limbed, with the light of valour in his eyes." It was this ideal that made the Greek *gymnasium* and *palestra* the school of the finest sculpture the world has ever seen.

Hence, too, came the glory of the great Greek games: they were under the special protection of the gods, and poets sang how gods and heroes had founded them, and themselves had won the victors' crown. The victors themselves received honours almost divine: for they represented the embodiment of the nation's ideal. Sculptors and poets immortalized their beauty and their prowess for the imitation of posterity.

But towards the close of the fifth century there came a change in the attitude of poets and philosophers towards athletics. "Can a man fight against the enemies of his country with a *discus* in his hand?" asks Euripides. Even the beauty of the athlete is no more. "The runner," says Socrates, "has big legs and narrow shoulders, the boxer big shoulders and thin legs." Later on Epaminondas complains that athletics do not train a soldier. What is the reason for this change? It is the decline in the character of the games themselves: and this decline is due to two causes which are very much in evidence in our own times—money and professionalism.

In the earlier days rich and poor met on an equal footing in the *gymnasium* and at the games. Nobles and princes, even kings, competed in contests of strength or speed of foot, and rich and poor were honoured alike in their victory. If Pindar sings of the triumphs of the wealthy Diagorides, Simonides does not disdain to commemorate the victory of the poor fisherman "who once upon his shoulders carried fish from Argos to Tegea." But as the games, and especially the Olympic games, grew from local festivals into national, and princes and nobles flocked to them in ever greater numbers from the rich colonies of the East and the West, a different spirit grew up. These powerful princes and nobles from over the sea disdained the simpler contests of physical power, in comparison with the chariot races and horse races, where they might display their might and magnificence. A king of Macedon had once thought it an honour to be allowed to compete in the foot race: but this was no longer the spirit of the nobility, which was rather that of Alcibiades, who boasted that he had enhanced the glory of Athens by sending seven chariots to compete at Olympia, and winning three out of the first four places. The character of the chariot race itself had changed. In Homer the heroes drove their own chariots, and by their own judgment, skill, and nerve helped to win the victory. At Olympia it was no longer the owner, but the paid charioteer, who drove: the owner paid and took the crown and glory, but it was the horses, the trainers, and the drivers that won the race. Plutarch tell us a delightful story of the Spartan king Agesilaus, whose sister Cynisca won the chariot race at Olympia. Finding that the Spartans were growing too fond of horses and of chariots, he himself persuaded his sister to enter for the chariot race. "This he did to show the Greeks that a victory of that kind did not depend on any extraordinary spirit or ability, but rather upon riches and expense." What a comment on much of our modern horse racing and yachting!

But, if the simpler sports ceased to be fashionable, they were as popular as ever, and the rewards for the victors, if less in point of honour, offered still greater attractions from a pecuniary point of view. In early days the Greeks were a nation of athletes; jumping, running, throwing the disc or the javelin, wrestling, and boxing were a part of their everyday life, and no special training was needed: a simple training diet of figs, cheese, and bread was prescribed, possibly with a view of putting all, rich and poor, on an equality. Unfortunately, as the competition increased, it was discovered that special excellence

* "Odes of Pindar." E. Myers.

in special events could be produced by special training; the runner or jumper might need activity, but the boxer and wrestler needed weight. So one Dromeus in the fifth century introduced a diet of meat. The strong man trained on quantities of meat naturally became heavy and coarse: his beauty was gone. We can trace the gradual change in sculpture and in painting from the graceful figures of the sixth and fifth centuries to the brutal repulsiveness of the Roman boxers in the baths of Caracalla, with their clumsy, over-developed bodies and small narrow heads. A Panathenaic vase in the British Museum, dated 336 B.C., is an interesting example of the transition. The work of Dromens was completed by one Stymphalus of Selymbria, a contemporary of Socrates, "who ruined athletics by introducing elaborate rules for eating, drinking, and exercise."* This was the real beginning of specialization and of professionalism, the curses of true athletics: specialization produces one-sided development; professionalism converts what should be a means of education and of recreation into an end in itself. Instead of fostering the spirit of sport, and furthering the physical education of a nation, such athletics tend to produce a class of professional athletes and a nation of spectators. This is the athleticism that Euripides satirized in Athens, as Mr. Kipling has done in England.

And with professionalism came other evils: the high spirit of honour was lost, and corruption began to appear. The Olympic games had existed for nearly four hundred years before Eupolus was fined for buying his victory in boxing. It is most curious to note how history repeats itself. The two forms of sport which were the first to be corrupted by professionalism in Greece were, as in England, boxing and wrestling. The healthiest and noblest of all sports while practised in the spirit of amateurism, by reason of the high code of honour which they demand, they are the most readily degraded when practised as a means of living. For years they were utterly discredited in England in consequence, and only of recent years have they begun to revive.

With professionalism, too, partly as cause, partly as effect, came a great increase in the number of athletic meetings and the value of the prizes. At Olympia the prize was never more than a crown of olive; but even there the victor reaped substantial rewards on his return home, and elsewhere the prizes were often extremely valuable, and sometimes in Ionia took the form of money. Pausanias tells us of an Alexandrian boxer who was fined for being late at Olympia; he excused himself on the ground that his ship had been detained by contrary winds. It was proved, however, by witnesses that he had really been collecting money at the games in Ionia. This was in the late days of Olympia; but pot-hunting must have been common long before this time; for the great boxer and pankratiast Theagenes is said to have won no less than fourteen hundred crowns.

Such is briefly the history of athleticism in Greece. I have tried to point out some of the parallels which it affords with the present state of athletics in England. No nation ever had a higher ideal of athletics than the Greeks; nowhere did athletics hold a higher place, connected as they were with the whole life of the nation—religion, politics, education, art—and serving not only to develop the individual, but as a bond of union between the scattered members of the Greek race throughout the whole world. But Greek athletics failed to save the nation; they failed from neglect of that principle of proportion and harmony that distinguishes all that is best in Greek literature and art; over-developed and over-specialized they became the monopoly of a class, and ceased to affect the life of the nation. The older sports, in which all competed in friendly and honourable rivalry, gave way to professional displays where an unathletic crowd could enjoy the excitement of the contest by proxy. Love of excitement took the place of love of sport, and the last stage was reached in the brutal exhibition of the Roman gladiatorial shows. What athletics did for the Greeks of the fifth century, what they have done for our own race, it is hard to over-estimate. But let us take to heart before it is too late the lessons of Greek history by keeping athletics in their true place, as a means, not as an end; let us play in order that we may live, not live in order that we may play; and let us remember, too, that it is better to play oneself than to watch others playing.

REVIEWS AND MINOR NOTICES.

Thoughts on Education. Speeches and Sermons by MANDELL CREIGHTON, D.D., D.C.L., LL.D., &c., sometime Bishop of London. Edited by LOUISE CREIGHTON. (Longmans.)

We venture to predict that nothing done or written by Bishop Creighton will so endear his memory to the hearts of the general public as this volume of speeches and sermons, piously edited by his widow. The book is essentially a book of "thoughts." The several utterances—all good in themselves, while differing in tone and pitch, and scope and manner, according to the occasions on which they were delivered and the audiences to whom they were addressed—have the common mark that is given by convinced expression of thoughts brooded in the heart.

But, having said so much in warm praise of that side of the book which is fundamental and for all time, we must make haste to add that, as a guide to an educational policy to serve the complicated need of our own day, this volume of "Thoughts" is useless, and that to any who turn to it for immediate practical help it may prove not useless only, but mischievously misleading. All the best things that Dr. Creighton says about education are the thoughts of an idealist, not of a statesman. And, taken together, they betray the truth which he himself never fully realized, that he was at heart a sceptic as to all systems of State-controlled education. He believed in education. But the education he believed in was that which is given by the parent to the child, in the ideal home where only one opinion is heard, and that opinion has the sanctity of religious conviction and the authority of truth to support it. Such education—or training of the rising generation in the way of virtue, wisdom, and happiness—he cheerfully assumed to be the only cause worth the devotion, or even the continued existence, of middle-aged man or woman:

All of us who have once reached middle age know that the one thing we live for is the children, that we have discovered that we ourselves are not likely to do much good in the world, but that to give our minds to make the future better for those who come after us, to take out of their way some of the stumbling-blocks over which we have fallen, to see that they are better equipped for life than we were, is the greatest contribution that we can make to the future, and the best way in which we can make ourselves useful in the present.

But we must not imagine that, because we are middle-aged, and have had time to read many treatises on education in the abstract and to discover many faults in our own education in particular, we are qualified to direct the minds of the new generation of children from a vantage ground of superiority. On the contrary, we have to realize that the only education worthy to be called such is that which follows the "order of the child's mind," not "the order of the grown-up mind"; and, that if we would find out what this order of the child's mind is, we must "lay our mind alongside that of the child," and learn from the child how it understands, how it observes, what it requires to learn. But Dr. Creighton—

had lived long enough to know that no one with any conception of humility can claim to be able to follow that order [of a child's mind] completely, for this simple reason, that the more we see of a child's mind the more unfathomable becomes its mystery. The delicacy of its machinery, its potency for good, its splendid capacity for nobility and grandeur, make it a thing to be looked on with the deepest reverence.

And he showed his reverence for the mind of the child—and the mind of the man to which it is father—in nothing so much as in his repeated protests against that conception of education that lowers learning to the level of a commercial investment. The object of education is not to make a man succeed in life; it is rather to provide him with the means of consolation and happiness in the event of his not succeeding. This aspect of the matter is especially well dealt with in a speech given on a prize day at the Philological School in Marylebone Road in 1898:

I cannot say what is necessary to success in life. Sometimes things are required which are repugnant to one's better nature; and I, for one, do not feel interested in how people get on. I cannot tell you how to get on, nor even advise you to do so. I do not even think that education helps people to get on. I am sure that you will not get on without a certain amount of industry; but I cannot tell you what kind of education will ensure success. The education you get at school will not qualify you for it. You come to school to learn, not how to get on in life afterwards, but how to spend the leisure moments when you are not occupied in trying to get on.

Even technical education is to be approached in this liberal spirit. Technical education probably will help a man to get on in the world. But that is not the ground upon which we are to recommend it to him. We must take advantage of the fact that he is engaged in a particular kind of work, and, by being so engaged, more or less awakened to curiosity respecting the things touching his work. And, by that curiosity—and the observation ready to minister to it—we must catch him for the technical school, saying to him :

You are engaged in such and such work ; we want to explain to you fully the meaning of what you are doing ; we want to make you understand something about science and art through the material with which you have to deal ; to reveal to you the laws under which your work has to be carried on ; to put you in the way of understanding what at present you are only doing mechanically.

In this way may men be drawn to value knowledge for its own sake, or, in other words, because it makes life a more beautiful, a more intelligible thing to them.

Who that is not hopelessly sunk in commercial materialism will say that this is not the truer and deeper, as well as the nobler and more humane, way of considering the technical school? Yet who that has experience of the world of actual men and things will dare to hope that a Government scheme for technical education appealing only to the high motives recognized by Dr. Creighton will either get the support of the majority of ratepayers, or commend itself to the majority of parents struggling for daily bread for themselves and their children? If public education could be worked without funds and in regardlessness of votes, we should not hesitate to declare ourselves entirely on the side of the Bishop—so obviously also the side of the angels. We should even go with him upon the religious question, for in the same Utopia where the sons of tradesmen and day labourers thought nothing of worldly success there would surely be but one religion, and that so true and so simple that its incontrovertible dogmas would be the first things grown people would think of teaching their children, and men would know instinctively that the only way to communicate them in unadulterated and uncorrupted purity is by the magnetic influence of personal conviction expressed in the object lesson of perfect example. In that Utopia we should have no difficulty in accepting such a passage as that in chapter ii., where Dr. Creighton answers the "plain man's" protest against denominational teaching for children :

One argument which is used by the plain man, who is always with us, is : "Why perplex children's minds by teaching them what is denominational?" That seems a plausible argument. But is a child's mind perplexed by being taught something that is definite, rather than something that is vague? Take the child of religious parents who belong to some religious body. That religious body has certain definite principles. The father understands the connexion between his soul and God. The child is not allowed to be taught anything of the sort ; hence he does not learn to understand the religion of his parents. He is taught religion in the abstract, as though it were astronomy or some other science he were learning. A child is just the creature who ought to be taught the most dogmatic religion possible."

When he spoke those words, Dr. Creighton was clearly not thinking of Acts of Parliament and their hard and fast clauses, or of the problem of national education as it affects the children gathered in elementary schools. He was expressing his individual feeling and experience as a father "understanding the connexion between his own soul and God," and deeply conscious that the only vital religious example he was able to give to his own children was that of personal example, supplemented by such short and simple statements of the elementary truths he lived by, as English gentlemen are wont to use when compelled to break the reserve so much more natural to them than any kind of speech. In Utopia the child of the denominational parent will also be the child of the parent who understands the connexion between his soul and his God. And that will make a great difference. In the educational arena of twentieth-century England the child of the parent who wants "denominational" teaching is, nine times out of ten, the child of a parent who understands nothing of the relation of his soul to God. The same applies, in nine cases out of ten, to the child whose parent demands "undenominational" teaching. And the State is expected to provide for religious teaching in public schools under conditions in which it would be impossible to teach religion privately in homes—the condition of no vital

faith in the parents and no agreement as to the significance and value of the doctrine taught. In these circumstances the most practical as well as the most reverent policy is that which obliges the teacher to give in school as little direct religious instruction as possible, and advises him to avoid, to the best of his ability, those set phrases about sacred mysteries that the "plain man" has in mind when he protests against "dogmatic," "doctrinal," and "denominational" teaching.

But, as we said before, Dr. Creighton was, without knowing it, a sceptic as to public education, and was therefore liable to make grave mistakes when he wrote definite prescriptions for its guidance. From the paradoxes about children and dogma we turn gladly to another utterance bearing not less closely upon the question of religious education in schools, with which we are in thorough agreement :

If I were to choose between two systems of education, in one of which purely secular teaching was to be given by a religious man and in the other religious teaching by a secular man, I have no hesitation in saying which I would choose in the interest of religion as well as of education. I would rather have the religious-minded teacher, though the subjects he taught were secular, because I know that the devotion of his heart would penetrate whatever he did, and perchance the fire that was in him might fall on those with whom he came in contact, and kindle a corresponding flame in their hearts.

It may be objected against this volume that, of the best things said in it, none are new. That is true. But then, so are the sayings. They are truths of the heart, first principles of life, commonplaces of real experience. And these are just the things that cannot be said too often, provided they are well said. And they are never better said than by men like the late Bishop of London, who carried his heart not at all on his sleeve, but in the folds of the scholar's gown and under the habit of the world.

The Letters of the Earl of Chesterfield to his Son. Edited, with an Introduction, by CHARLES STRACHEY, and with Notes by ANNETTE CALTHROP. Two vols. (Methuen.)

"A new edition of Lord Chesterfield's 'Letters to his Son,' not only justifies, but requires, an introduction," says Mr. Charles Strachey at the beginning of the biographical chapter with which he actually introduces the new edition of the famous "Letters" to a generation of which the major part has hitherto only known of them by traditional hearsay. It is quite true that the book requires an introduction ; but we question whether Mr. Strachey has written the right one. He makes the apology of Lord Chesterfield, which comes too late to be of material consequence ; and what the world wants is the apology of the "Letters," and an apology that shall be not only an explanation of the element that shocks the better sense of every reader in whom convention has not finally quenched the spirit of righteousness, but a justification of the book's continuance upon our shelves as a classic. For such continuance there is, in the facts of life, an ample justification. The letters of Lord Chesterfield to his natural son rank high among the indirect testimonies of literature to a principle deeper than convention making or niarring the intentions of men and books. Mr. Strachey cites, of course, the succinct judgment of Dr. Johnson pronounced upon the "Letters" at their first publication—a book that teaches "the morals of a whore and the manners of a dancing-master"—and also, of course, the later revised judgment of Johnson. "Lord Chesterfield's Letters to his Son," Johnson said in 1776, "I think might be made a very pretty book. Take out the immorality, and it should be put in the hands of every young gentleman." Mr. Strachey reminds us, further, how "on another occasion Boswell relates that he 'surprised the company by this sentence : 'Every man would rather be called a rascal than accused of deficiency in the graces.'—a sentiment . . . which leads us to suppose that he [Johnson] had read the letters to some purpose." If "by some purpose," as we cannot help suspecting, Mr. Strachey means to imply that Johnson had been convinced by the "Chesterfield Letters" that their author's conception of the relative importance of morals and manners was a sound one, we can only record our flat disagreement with the inference. Obviously what the "Letters" did for Johnson was to "find out," in his stout heart, the weak point of respect for appearances, and sensitiveness to the social contempt even of the unworthy. And half the justification for the republication of

these "Letters" and their reintroduction to society is precisely this power that they have of piercing the joints of every man's harness, and convicting him of having that at the bottom of his soul which makes him at least a potential snob; though, to his habitual consciousness and in the eye of the world, he may wear the aspect of a Timon or an Alceste. The "Chesterfield Letters" are the work of a man who knew men as thoroughly as it is possible to know them, if we bring to our study of human nature and our judgment of human conduct no higher test or ideal than the standard of the world. They were written with a view to preparing a boy for a profession in which the act of trading upon the weaknesses of men and women is of the utmost utility; and the first and most obvious justification of the "Chesterfield Letters" is simply that they make the best text-book the world has ever seen of manners considered technically as a definite means to the definite end of using other people for our own or our country's purposes. One realizes this with pathetic irony when one watches the effect the book produces upon that curious class of amiable people who unconsciously combine the service of God with the worship of Mammon. The excellence of all the advice it gives, the seriousness with which it treats the *minutiae* of behaviour afford these good people a rare and exquisite pleasure, of which they are slow to suspect the cause—the cause being simply that Lord Chesterfield puts into plain words the secret convictions which have been so far a faith unconfessed even to themselves. But, if it only gave an illicit joy to self-deluded simpletons, or a new taste in irony to cynical students of mankind, the book would only be half-justified, and that is as much as to say that it would not be worth reproducing in new editions and preserving as a classic. The "Chesterfield Letters" do much more than this. They not only show up individual men and women, but they show up a corrupt convention which dominated society and literature, openly in the eighteenth century, and covertly in the nineteenth. That convention may be generally expressed as the pretension to accept the Divine authority of the moral and spiritual teaching of Christ, and, at the same time, respect and systematize a code of conduct and a scheme of life more completely opposed to the spirit of Christ than an act of stealing is to the commandment that forbids stealing. A criminal act may be only a lapse, leaving room for repentance and amendment; the corrupt convention is a deliberate pact with evil.

Mr. Strachey's defence of Lord Chesterfield is good. He shows very plainly how, according to the standard of his day and his world, he was not less, but more, honourable than the majority of his fellows; how, though he taught the art of time-serving, he was himself by nature too little of a time-server to keep the royal favour; how he dealt affectionately, kindly, liberally with his illegitimate son and with the boy's mother, and afterwards with the wife and the children of the son, who had concealed their existence from him. Mr. Strachey does justice to the father and to the son. Lord Chesterfield insisted over-much upon the "graces"—not because his own taste and character tended towards exclusive appreciation of them, but because he was by nature inclined to neglect the amenities of life; and Philip Stanhope failed to realize his father's ideal for him as an accomplished man of the world—not on account of any ingrained boorishness, but because he was more like his father than open to his father's teaching. He was too honest a man to be made into a perfect man of the world. All this is sound; yet one feels that Mr. Strachey has missed the mark in regard to the book and its final worth. He says well: "If any one should attempt to follow Johnson's advice, and to take out the immorality from these letters, I venture to say that he would be surprised both at the difficulty and the easiness of the task."

That is true. It would be very easy so to weed the "Chesterfield Letters" that they should become a perfect guide to the external behaviour of a gentleman, innocent equally of immorality and morality. But in doing so we should get rid of all the character and significance of the book, as well as of more than half its matter. But Mr. Strachey's next utterance will hardly stand examination:

It would be difficult to find the immorality, and easy to remove it when found. In spite of all that has been said to the contrary; in spite of the bad poetry of Cowper and the monstrous unfairness of Dickens, who, in the person of one of his characters, found some "captivating hypocrisy" or some "superlative piece of selfishness" in every page—in spite of the early Victorian prudery which impelled Lord

Mahon to pen the pompous period printed below, I maintain that all the advice contained in the Letters, which any unprejudiced unpriggish person might reasonably call immoral, could easily be contained in a very few lines of this large book; and, speaking for myself, I should call such advice *naughty* rather than *immoral*.

The practical advice that Lord Chesterfield gave his son at the moment when he was to enter society was—as all the world knows—that which has since been the stereotyped maxim of the manners which, in literature, we call "French"; the advice Tolstoy bitterly remembers as that of the aunt—herself a good woman—who brought him up: "If you want to learn good manners and get on in the world, establish an intrigue with a married woman in good society." And the whole edifice of the social education of the youth rests upon this basis of inculcated adultery. It is obvious that Lord Chesterfield gave the advice in good faith. He wished his son to do what he had *not* done—his own *liaison* was with a lady too obscure to help him on in the world. But then his position was established, and he could afford to be "lax." Laxity was not to be permitted to Philip Stanhope, who had to justify his right to exist. And that which makes this book of the "Chesterfield Letters" so remarkable, so unique, is that from first to last there is no hint anywhere that the writer doubted the moral soundness of his teaching. It not only represents a corrupt convention, but it represents it at that stage of corruption when self-consciousness has ceased to exist. In other words, it is the perfect expression of a society stirred by no breath of the spirit of religion, though still loosely attached to its forms. And the book is not only a monument of this corrupt state of things, but it is a monument of the futility of the standards appertaining to it. The "Chesterfield Letters" failed. Philip Stanhope disappointed his father. And, after all, though the book lives and must live as a classic on our shelves, Lord Mahon was absolutely right when he wrote:

Only those persons whose principles are fixed, and whose understandings are matured, will be able to read them [the Letters] with advantage—to cull their good from their evil, to profit by their knowledge and their experience, without the danger of imbibing their laxity of morals—to such persons only does the editor commend them.

For the books that are "classics"—from the Bible downwards—are always books which none can read safely without guidance, save those who have been made wise either by the experience of life or the illumination of genius. Those who are the schoolmasters of the world read them perforce, and find in them the lessons they must impress on the conscience of the many. And the great lesson the instructor may learn in the "Letters" of Lord Chesterfield is the everlasting truth that education always misses its mark when it aims below the highest. A sexual morality and a scheme of manners beginning with licensed adultery is bad enough among pagans and savages, but among people who give a legal endorsement to the Seventh Commandment it is a monstrosity that can only be tolerated while it is concealed in the secret places of corrupt minds. Lord Chesterfield, in perfect good faith, played the *enfant terrible* to his world, and gave its secret away in a series of letters that will never be forgotten. It is well that we have a new edition of them. But it is to be regretted that the introduction does not strike a truer note.

History of Intellectual Development: on the Lines of Modern Evolution. By JOHN BEATTIE CROZIER. Vol. III.: *Political, Educational, Social, including an attempted Reconstruction of the Politics of England, France, and America for the Twentieth Century.* (Price 10s. 6d. Longmans.)

We regret to learn that Dr. Crozier has felt it necessary to issue his third volume before the second, by reason of unsatisfactory eyesight, which delays the researches on which the second is based. In the present volume he seeks to "determine to what extent, if any, a knowledge of the Evolution of Civilization in general, and especially of its main trend and tendency, can be of service to the Practical Statesman of To-day." We must say at once that we find the discussion disappointing. Dr. Crozier warns us against the illusions of history and of the present, examines certain political and economic ideals, takes to task the practical statesman, and reviews certain aspects of practical politics, all under the general heading of "The Nineteenth Century"; and this occupies the first half of the volume. The large view he takes of the

trend of forces makes it well worth while to read so far—or, at any rate, six or seven of the nine chapters. Even well read men will be all the better for being reminded of the wisdom of keeping an eye on the leading courses of the movement of civilization, and of discriminating between essentials and accidents, means and ends. But we cannot hope that any really fresh or definite practical principle will reward their study, to say nothing of a specific scientific armament for future political warfare. Dr. Crozier urgently deprecates the mistaking of theories and doctrines—liberty, equality, and fraternity; universal suffrage, *laissez-faire*, &c.—for ends, instead of means. Technically, he is right; practically, what does it matter? At any rate, it does not matter until definite cases of mischief arise, and such cases he does not specify convincingly. We are all aware of the drawbacks of a widely extended suffrage, for example; but, after all, who shall say how much better it would have been to have drawn the line elsewhere, or that, in point of fact, that could have been done? We do not think that Dr. Crozier has sketched the Marxian socialism in terms that are quite fair to Marx, though his conclusion as to its wrong-headedness is sound. The one tangible point seems to be that practical statesmen should study history and civilization at large, and follow the teachings derivable therefrom. Certainly; and then what are they to do with the constituencies behind them and the Opposition in front of them? Dr. Crozier writes with a free flow of language, but he too often obscures his argument with comparisons, loading clause upon clause, and with quite intolerable “reverberations and repetitions.”

As Dr. Crozier himself has remarked upon illustrations of the extraordinary falsification of political prophecies, it argues no little confidence in his own grasp of the tendencies of civilization that he proceeds in the latter half of the volume “to outline a rough scheme of practical policy for the Twentieth Century or some part of it in England, France, and America respectively.” “Or some part of it”—there is a mark of saving grace in the limitation. In this speculation he applies four “general rules of Practical Statesmanship drawn from the Evolution of Civilization.” These are: (1) “the preservation of the organic type of any given historic society or people”; (2) “the reforming of that society and securing its progress, not by abstract ideals imposed on it in full panoply from without, as in the French Revolution, but by modification of its existing institutions in the direction of the ideal, by gradual increments and stages”; (3) “the keeping society all of a piece, as it were, and without deep gaps and trenches made in its ranks by caste, monopoly, and other causes, a free passage being secured everywhere, and for all”; and (4) “the concentration of attention primarily on those material, social, and industrial conditions which keep open these rents and divisions, rather than on the people who profit or suffer by them.” We confess we see nothing new here, and should be much surprised to learn that any practical statesman in this country for many a day past did not bear every one of these rules consciously in mind. The results may now and again have broken a rule, but that is a very different matter, and the causes are to be reckoned with in a much more specific fashion than Dr. Crozier, so far as we see, has done.

The reconstruction of English politics is the main interest for us. Here Dr. Crozier does good service at many points, by insisting on various principles that are apt to be overlooked or allowed to fall into a position of secondary or contingent consideration. Thus he emphasizes the supreme importance of utilizing our national stock of intellect, instead of buying intellect in other markets. Why should it have to be said, with so much truth, that “Germany and France and other Continental nations supply England with nearly all the new departures that have to be made in science and philosophy, in medicine, in scholarship and the higher criticism, in the art of war, in new chemical and industrial processes, and in the enlargements of the scope of music and of art”; that “from America, again, she imports new mechanical processes and inventions, new methods of industrial organization, and new applications of the mechanical arts to the comforts and conveniences of life, and so on”; that “nowhere, perhaps, in the world in a nation so advanced is interest in any new intellectual production, for its own sake, whether in thought, literature, politics, art, industry, or political economy, more cold and dead”; that, “as for the endowment of scientific research, on which the future of all industries whatever waits and depends,

there is not in England, alone in Europe (with a single insignificant exception), a penny in the Treasury for any such purpose—not if all the Faradays, the Davys, the Darwins, the Kelvins, and the Marconis of the world were blocked and reduced to impotence for the want of it”? Sometimes, naturally, Dr. Crozier makes a false step, from lack of special knowledge. “As the character of judges for incorruptibility is so much more important than the extent of their merely legal knowledge and acquirements, and as that character has never been gainsaid,” he remarks, “neither the profession nor the public can be said to suffer much from the anomalous methods employed in their appointment.” This is scarcely consonant with his ardent advocacy of the importance of intellect and of an open career; and surely character in this case might be taken as of course, and some adequate aptitude set down as a necessary equipment. The “anomalous methods” have become within easy memory a serious consideration, both juristically and practically. Dr. Crozier’s new “Political Bible,” “the true Bible of the nations”—a somewhat repellent nomenclature—would be the leading principles derivable from the evolution of civilization; but these principles he leaves in a vague fluidity of suggestion. How is this Bible—this political substitute for the Old Testament—the New Testament remaining in force for “individual ethics”—to get itself accredited? “By persuasion alone, by the free judgment of all those engaged in the formation of Public Opinion.” Then the educational hierarchy is to be improved, especially by more intermediate schools, and to be directed by experts in the evolution of civilization. Well, it is time this Bible were written, chapter and verse; but, if it really be the case that all our great historians, philosophers, statesmen, ecclesiastics, and everybody else, except Dr. Crozier, have failed to perceive the true teachings of civilization, the cure seems rather dim and distant. The volume, then, is a rousing personal speculation, supported by reference to principles that are believed by the author to lie in the true view of the evolution of civilization, but hitherto to have been discerned and acted on by nobody else, or by nobody else in any effective degree or form. Whether the second volume will provide an adequate tangible basis remains to be seen. Meantime Dr. Crozier appears to have erected some imposing castles in the air. Yet his speculations are well worth reading, for ideals do not always need the support of detailed facts; and he certainly offers many elevated suggestions that may not only take the popular fancy, but find a basis in the historical and political studies of some of the elect.

“Story of the Nations.”—*Wales*. By OWEN M. EDWARDS.
(T. Fisher Unwin.)

There is undoubtedly an educational renaissance in Wales. It is little wonder, therefore, that there is an earnest demand by some of those interested in Welsh education that in the Welsh schools there should be taught the general course of Welsh history. But the fact is that until lately there were not any text-books on the subject. Every one has been looking forward eagerly to the publication of researches on the subject by Welsh scholars. To no writer have the Welsh people more hopefully turned in expectation than to Mr. Owen M. Edwards. Of these hopes the book before us is a full justification. It may justly be said that no previous writer has brought such a rich sympathy combined with such careful study to the distinctly difficult task of the presentation of the main facts of Welsh history. That much remains to be done Mr. Edwards would be the first to admit. But at any rate, we now have before us the outlines of the subject clearly and graphically sketched. There is a grip of the subject which makes us realize how great a margin of knowledge is behind the book, and a sense of proportion which makes us feel that not only is the writer a Welshman, but also an historian.

Mr. Edwards begins by the presentation of Wales as a land of mountains. “Its mountains explain its isolation and its love of independence; they explain its internal divisions; they have determined, throughout its history, what the direction and method of its progress were to be.” This is the keynote of the work. The Roman influence and the persistence of Roman ideals are traced in the romances of Arthur. A sketch of the Welsh kings (681–1063) is given, and the effect of the Norman Conquest of England on Wales is described. Then follows the wars of Griffith ap Conan and Owen Gwynedd (in the twelfth century). Mr. Edwards then epitomizes the description of Wales from Geraldus Cambrensis, and proceeds to a striking

and highly interesting account of Llywelyn the Great (1194-1240). The story of the literary awakening of the second half of the fourteenth century is all too short. We get on to the more familiar ground of Owen Glendower and the Mortimers and Tudors; then we come to the Act of Union of 1535 and the establishment of the Court of Wales, and afterwards of the Great Sessions. Short, but important, sketches are given of the unwelcome Reformation (1535-1588) and the "blind loyalty" of Wales to the Stuarts. The attitude of Wales to Puritanism is well brought out, and the literary and social significance of Ellis Wynn's "Visions of the Sleeping Bard" (1703) and Theophilus Evans's "Mirror of the First Ages" (1716) is incisively shown.

Perhaps the portion of the book which will especially attract the educationist is that which deals with what Mr. Edwards calls "The Awakening" (1730-1832). This connects itself with the rise of the circulating schools in the early part of the eighteenth century—a movement due to Griffith Jones of Llanddowror. The "Awakening" is then traced through the "trumpet voice" of Howel Harris, the development of the hymn, through the Sunday school, through Goronwy Owen, and through the Eisteddfod. Finally, we have the industrial revolution and the new demand for higher education.

There is no need to recommend Mr. Edwards's book to the Welsh. Already the book has been read eagerly. But one word may be said further. The story of Wales should be read widely by English people. No one can rise from the reading of Mr. Edwards's book without feeling a deeper and more intelligent interest and sympathy with the struggles through which the Welsh have gone, and an admiration for their latter-day educational aspirations and achievements.

Chr. Fr. Grieb's Dictionary of the English and German Languages. Tenth edition, rearranged, revised, and enlarged by ARNOLD SCHRÖER, Ph.D. (Stuttgart: Paul Neff; London: Henry Frowde.)

The ninth edition of "Grieb's Dictionary" appeared in 1895. The English-German volume contained 1,140 pages, printed from stereotype plates which showed many signs of wear. The publishers commissioned Dr. Schröer, Professor of English Philology in the University of Freiburg i.B., to rearrange and revise the dictionary; and the first volume (English-German) now lies before us, a volume of 1,356 pages, admirably printed on good paper, serviceably bound, and issued at a price which brings it well within the reach of all teachers. Prof. Schröer has brought to his task exceptional qualifications and the earnest desire to produce a work which should be at once scientific and practical. He tells us that he has devoted to it *die besten Lebensjahre*; and his labours have not been in vain, for his venture is crowned with success. We do not hesitate to regard this as the best of handy English-German dictionaries, whichever feature of the work we consider.

To the pronunciation great care has been given; the awkward system of representing sounds to be found in the older "Grieb" has been discarded; in its place we have a phonetic alphabet which may be called a modification of the well known AF alphabet. The difficult question as to what is to be recommended as standard English is ably discussed in the introduction. With some of the statements about matters of detail we are inclined to disagree. Thus, in the speech of educated Londoners, the *e* in *bed* is not as open as in German *Bett*, the *o* in *stone* is not open, the vowel in *fool* is not identical with that in *Uhr*. But, on the whole, the description of English speech-sounds is very good.

The etymology of words is briefly indicated. Full use has been made of all available authorities; as far as we have tested it the book is trustworthy in this respect. No two compilers would proceed in the same manner in the selection of words. Prof. Schröer, of course, ignores the older periods of the language, Spenser being the most archaic writer included. Considerable space has been given to technical terms. Prof. Schröer gracefully acknowledges the great help which he has derived in this department from Muret's fine dictionary.

We have noted some omissions; for instance: "galley-slip," "to machine," "grotesque type" ("clarendon" is not properly explained), "process block," "half-tone block," "collotype," "half-timbered," "Sheraton" (Chippendale furniture is described as *leicht und elegant*!). The motor car and the free wheel

are probably too recent to be included; but pyjamas and the cummerbund have been with us some time. Perhaps the department least satisfactorily represented is modern slang; some may consider this an advantage. It is not at all clear what principle of selection was adopted with regard to these words. *Cracked* is given, but neither *dotty* nor *balmy*; *kicksies*, but neither *pearlies* nor *cady*; the *masher*, but not the *bounder*; *junk*, but not the *needle*; the *blues*, but not the *hump*. As a general rule, however, all words and phrases to be met with in good conversation and literature will be found here, with trustworthy German renderings. The arrangement of the various meanings of an English word is instructive, in many cases a lesson in what we are beginning to call semasiology. The improvement on the old "Grieb" is very marked. Prof. Schröer and his publishers deserve grateful recognition for producing this excellent book. We look forward with pleasure to the appearance of the second volume.

The Odes of Horace. Edited by STEPHEN GWYNN. With forty-eight illustrations. (Price 5s. Blackie.)

The illustrations, which are the distinguishing mark of this edition, vary in merit. The full-page ones (in particular the frontispiece, Hermes, Orpheus, and Eurydice of the Naples Museum) are excellent; the reproductions of statues and busts are poor. Mr. Gwynn contributes a graceful introduction on the genius of Horace, but he has no pretensions to be a critical editor. Thus he takes the old Oxford Pocket Text with all its faults of spelling. The notes are mainly construes, some extending over a dozen lines, and the real *crucies* are not seriously dealt with. Thus the very difficult stanza beginning "Immunis aram" is construed without a word of comment: "Si non periret immiserabilis" is left without a note. Sometimes the note, when there is one, does not agree with the construe: "mirum quod foret omnibus" is translated "that it might be a miracle," and *quod* is parsed as a consecutive relative; "reparavit oras" is translated "sought in exchange," and annotated "gained in exchange." In III. i., 9, "est ut viro vir" is not "it is a fact that," but "it may be that." In IV. iii., "O Melpomene, the man whom at his birth hour you shall once for all have beheld with gentle ray" is a schoolboy construe, or misconstrue, instead of "on whose cradle thou hast cast but one gracious glance." In the same ode, "O (*tu quæ*) donatura (*sis*) . . . si libeat" is a false construction interpolated by the editor. The appendices on metre are likewise perfunctory. The scheme of the Sapphic is given thus:

— — — — — || — — — — — || — — — — — ||

while for the Alcaic the possibility of an initial short syllable in the first three lines is not recognized.

"Blackwoods' English Classics."—(1) *Lamb, Select Essays.* Edited by AGNES WILSON. (7 × 4½ in., pp. xxxviii., 268, with portrait; price 2s. 6d.) (2) *Scott, Marmion.* Edited by ALEXANDER MACKIE, M.A. (Same size, pp. xxv., 276, with portrait; price 1s. 6d.) (3) *Pope, Rape of the Lock and other Poems.* Edited by GEORGE SOUTAR, M.A., Litt.D. (Same size, pp. liii., 240, with portrait; price 2s. 6d.) (4) *Hazlitt, Essays on Poetry.* Edited by D. NICHOL SMITH, M.A. (Same size, pp. xliii., 250, with portrait; price 2s. 6d.) (5) *Milton, Samson Agonistes.* Edited by E. H. BLAKENEY, M.A. (Same size, pp. xxxiv., 129, with portrait; price 2s. 6d.)

Most of our readers must be already well acquainted with the general excellence of this series. The volumes are carefully edited, well printed, and neatly bound. The introductions and notes are well informed, and diligently kept within the bounds of moderation. Taken as a whole, the series deserves to rank amongst the best of its kind at present being produced.

(1) Miss Wilson provides a simple, sympathetic, and sufficient introduction to the twenty-one essays which the volume contains. The essays themselves are well chosen, and the notes supplied are brief, well informed, and to the point. The only place where we find ourselves differing from the editor is where she styles Lamb's "Specimens of English Dramatic Poets who lived about the time of Shakespeare" a masterpiece of selection and annotation. It is a singularly interesting volume in the light it throws on what Lamb liked and thought; but it is not to our mind a masterpiece. This, however, is a matter of personal opinion. Miss Wilson's edition is in every sense a satisfactory one.

(2) Mr. Mackie's introduction is businesslike, and briefly touches on all the necessary points. The material of the notes was largely supplied by Scott himself, but Mr. Mackie has reduced these notes to reasonable limits, and supplemented them where necessary. They are not unduly numerous, nor do they contain any gratuitous learnedness. The result is a thoroughly serviceable edition.

(3) The "other poems" are the "Essay on Criticism," the "Essay on Man," the "Epistle to Dr. Arbuthnot," and the "Epistle to Augustus." Dr. Soutar supplies a short but well written and interesting introduction, dealing with Pope's literary life and the topics which

arise out of it, and in particular with the poems in the volume. His judgments are moderate and well expressed, and both the praise and the blame are fair and reasonable. His criticisms also are sound and satisfactory. The notes are well informed, sufficiently full, and not unnecessarily numerous; they explain clearly all that needs explanation, and supply all the references required. A short appendix on Pope's rhymes is added—interesting, very much to the point, and useful. The edition is a good one.

(4) We must confess that we are not amongst the ardent admirers of Hazlitt. Though his criticisms are frequently acute and sound, he does not seem to us to always write with his eye on the object or with sufficient information; he is prejudiced and at times bitter. At his best his style seems to us only a superior kind of journalesque. This may be prejudice on our part, but to our mind Mr. Nichol Smith's estimate of Hazlitt in his introduction is unduly high, well informed as that introduction otherwise is. Hazlitt had a vicious habit of loading his pages with quotations and references—the former being frequently inaccurate. Mr. Nichol Smith has traced most of the quotations to their sources, and corrected them where necessary—a work of considerable labour—and only a few are left unexplained. The same is true of the references. The volume gives ample evidence of careful editing.

(5) Mr. Blakeney gives us in his introduction a short account of Milton's life, and a few simple statements about "Samson Agonistes," short and to the point. Nor are the notes unduly long or unduly numerous; they supply all the help that the young student really needs. Mr. Blakeney acknowledges his indebtedness to other editors, and modestly makes no claim to originality for his edition. It is true that there is little room for originality with regard to a poem which has been so often and so fully edited; nevertheless, the work of selecting his material, and the form which he gives it in his notes, are Mr. Blakeney's own, and most satisfactorily has he performed his task. He has given us a very acceptable edition, and one far more suitable to the young student than some of its more elaborate predecessors.

Doña Perfecta. By B. PÉREZ GALDÓS. Edited by A. R. MARSH. (Price 4s. 6d. Ginn & Co.)

The editor's ably written historical sketch of the Spanish novel, though necessarily brief, leads up in a natural manner to the writings of Pérez Galdós, the celebrated Spanish author. In order to read "Doña Perfecta" intelligently, some acquaintance with the conditions under which it was written is essential. The dominating influences at work in the mind of the author, the general idea of the story, the particular stage of the author's literary career at which the work was produced—these are to a novel like "Doña Perfecta" what the setting is to a jewel. Knowing this, the editor has taken great care (in his introduction) to make these points quite clear to the reader. It is, we think, a mistake to tell of the "annihilation" of Pepe Rey in the introduction (page xi.), as it will tend to lessen the interest in the story. In "Doña Perfecta" "the new and the old are brought face to face." A population eaten up with self-satisfaction and conceit born of the grossest ignorance; murder committed at the command of a woman who, whilst exacting slavish obedience from her half-savage dependants, is yet the tool of a designing priest; intolerance, superstition, hypocrisy, cathedral dignitaries who call intelligent criticism "atheism," and who foster revolution—all these, the author tells us, existed (are they still to be found?) in Spain but a few years ago side by side with modern education, manly independence of thought, and scientific research. Feudalism, gross ignorance, and savagery co-existing with popular representation, general education, and *telegraph*! An almost inconceivable state of things. This novel forms part of Messrs. Ginn & Co.'s "International Modern Language Series." This means (as most of our readers now know) that the text is accurate, the type bold and clear, the paper good, the binding neat and strong, and the notes all that can be desired. Readers are fortunate in being able to procure such a really first-class edition of a first-class modern Spanish novel.

L. Moratin's El Sí de las Niñas. Edited by Dr. J. D. M. FORD. (Price 2s. 6d. Ginn & Co.)

There can be no doubt that the publishers have shown sound judgment in selecting this comedy of Moratin's to form part of their excellent "International Modern Language Series." D. Vicente Salva strongly recommended all who wished to learn "good Castilian" to read Leandro Moratin. The same writer said that Moratin's works possessed "regularidad y buen dialogo," and proclaimed them "modelos de lenguaje correcto y de otras infinitas bellezas." Dr. Ford, in his admirably written introduction, rightly calls "El Sí de las Niñas" a "masterpiece." When it was first produced in Madrid in 1806 it was most favourably received; performances were given in the provinces, and there was such a demand for the book that four editions were printed in Madrid in one year. Andres Prieto made his first appearance on the Madrid stage in "El Sí de las Niñas," creating a favourable impression in the part of Don Diego. Extracts from this comedy are to be found in most books of "Selections," whilst quotations are met with everywhere, even in the "Reading Books" of Mantilla and others, so that the student will, in reading this work, come across many old friends. On his introduction the editor traces the growth of the drama in Spain,

and gives a sketch of the author's life and works. The notes at the end will be of real service to the student. This edition of Moratin's masterpiece cannot fail to please all who are interested in Spanish literature.

Buller's Campaign with the Natal Field Force of 1900. By E. BLAKE KNOX. (Price 10s. 6d. net. Johnson.)

This is a very creditable piece of work by a young Army doctor. The general outline of the operations is taken from the published dispatches, but the author is able to supply a good deal of interesting detail from his personal experience. He was on Spion Kop when the fighting began; was temporarily made a prisoner next day, while attending to the wounded, and discussed the action with the Boers; was in the forefront of the fighting round Petershill, which led to the relief of Ladysmith, and was himself slightly wounded. He accompanied the Natal force across the Drakensberg and on to Lydenburg. He wisely abstains from criticism, and tells his tale simply without much striving after pictorial effect. In an appendix he adds a good note on the medical aspect of the campaign.

"Murray's Home and School Library."—*Introduction to Poetry.* By LAURIE MAGNUS. (Price 2s.)

The object of this book is "to convey the elements of taste and judgment in poetry by the natural or direct method of literature-teaching." We may fairly ask how a Poetics, be it never so simple and lucid, can lend itself to the direct method. The direct method of instilling a love and appreciation of poetry is surely to make the pupil read poetry that is at once good in itself and suitable to his age and temperament. The part of the teacher is to guide him in his choice, and he can do something more. If he loves the poetry himself, he can in more ways than one show the pupil that he loves it, and such love is infectious. There comes a later stage when it is possible to analyze poetry, and, to a limited extent, to point out the elements of beauty and pathos. It is at this stage, we take it, that Mr. Magnus intends to take his pupil, and he has much that is sound, if it is not strikingly original, to say about poetic expression and poetic truth, but it is no more the direct method than an essay of Ste. Beuve's. The volume is, in fact, a pleasant *causerie*, chats on philology and metrics, appreciations of Robert Browning and Stephen Phillips, and excursions on the meaning of *pietas* and Aristotle's *kathaparis*. The book provokes dissent, and this is a point in its favour: it will make the student think. We have not space to discuss any of Mr. Magnus' literary judgments, but we should like to break a lance over his classification by poetical merit of words (page 17). Why should *ambient* be barred as "a proud, stilted, white-fingered, mincing word"? Are Milton's "ambient light" and M. Arnold's "circumambient gloom" blots? "*Ambidextrous* cannot offer any good testimonials." Is not "these ambidexter Gibeonites" good mintage? "*Amble* has never shown any desire to go out of its own province." What of Crabbe's "their wanton ambling and their watchful wiles"? Words are ciphers, and their value varies infinitely with their collocation. What would Mr. Magnus say to "button," "dodge" "mixin"; yet each has been sublimed by a great poet.

Experimental Chemistry. By L. C. NEWELL. (Heath & Co.)

The method of instruction adopted in this book is based upon short descriptive paragraphs, interspersed with directions relating to experimental work to be carried out by the student himself. Appended to each section are questions, or suggestions, which are intended to arouse a spirit of deeper inquiry than can be satisfied by reference to this book alone. The general idea and arrangement are good, and the printing and illustrations are excellent. Nevertheless a large amount of space is filled with wearisome description of practical details which an experienced teacher would dispose of much more effectively by a few minutes' oral instruction. If the book is intended for the use of students who are quite ignorant of chemical manipulation, and have no instructor, then these *minutiae* are useful; but otherwise they are best omitted. The definitions of "acid" and "base" on page 128 might be improved, and surely it is not true to say that "bases, as a rule, turn red litmus paper blue." Again, on page 119, we find the serious misstatement that "hydroxides are usually called alkalies, and their chemical action is called alkaline." On attempting the experiment described on page 117 the student will soon discover that "*any* metal" will *not* react with dilute acids in the same manner as zinc. There is a suspicion on page 303 that the inactivity of aluminium towards dilute sulphuric acid has been overlooked by the author. The volume concludes with a glossary of terms, a list of useful books of reference, and instructions for preparing the common laboratory reagents.

Illustrations of the C.G.S. System of Units. By J. D. EVERETT. (Price 5s. Macmillan.)

Determinations and redeterminations of physical constants are continually being undertaken, and any collection of such data needs frequent revision. Prof. Everett's excellent book has now been in use for more than a quarter of a century, and the fifth edition has recently appeared, in which there is much that is new and interesting. It is

(Continued on page 486.)

A SELECTION FROM Cassell & Company's Prize Volumes.

Works by Sir ROBERT BALL, LL.D., &c.

THE EARTH'S BEGINNING. With 4 Coloured Plates and other Illustrations. Cloth gilt, 7s. 6d.

THE STORY OF THE HEAVENS. With 24 Coloured Plates and numerous Illustrations. New and Revised Edition. Cloth gilt, 10s. 6d.

THE STORY OF THE SUN. With 8 Coloured Plates and other Illustrations. Cloth gilt, 10s. 6d.

STAR LAND. Being Talks with Young People about the Wonders of the Heavens. With Rembrandt Frontispiece and 94 Illustrations. Revised Edition. Cloth, gilt top, 7s. 6d.

Works by R. KEARTON, F.Z.S.

WITH NATURE AND A CAMERA. With Frontispiece and 180 Pictures from Photographs direct from Nature by C. KEARTON. Cheap Edition. Cloth gilt, 7s. 6d.

WILD LIFE AT HOME: How to Study and Photograph it. Profusely Illustrated from Photographs direct from Nature by C. KEARTON. Cloth gilt, 6s.

OUR RARE BRITISH BREEDING BIRDS: Their Nests, Eggs, and Summer Haunts. With about 70 Illustrations from Photographs direct from Nature by C. KEARTON. Cloth, gilt top, 7s. 6d.

OUR BIRD FRIENDS. With 100 Illustrations from Photographs direct from Nature by C. KEARTON. Cloth gilt, 5s.

STRANGE ADVENTURES IN DICKY-BIRD LAND: Stories told by Mother Birds to Amuse their Chicks, and overheard by R. KEARTON, F.Z.S. Illustrated from Photographs taken direct from Nature by C. KEARTON. Cloth, 3s. 6d.; cloth gilt, gilt edges, 5s.

A MASQUE OF DAYS. From the Last Essays of Elia. Newly Dressed and Decorated by WALTER CRANE. Containing 40 pages of Designs printed in Colour. 6s.

MARINE PAINTING IN WATER-COLOUR. By W. L. WYLLIE, A.R.A. With 24 Coloured Plates. Cloth gilt, 5s.

LANDSCAPE PAINTING IN WATER-COLOURS. By J. MACWHIRTER, R.A. With 23 Coloured Plates. Cloth gilt, 5s.

PICTORIAL SCOTLAND AND IRELAND. With 320 Copyright Illustrations from Photographs. Cloth gilt, 9s.

FAMILIAR BUTTERFLIES AND MOTHS. By W. F. KIRBY. With 18 magnificent Coloured Plates. 6s.

QUEEN VICTORIA: a Personal Sketch. By Mrs. OLIPHANT. With 3 Rembrandt Plates and numerous Illustrations. 3s. 6d.

THE QUEEN'S EMPIRE. With nearly 700 exquisite Illustrations, reproduced from authentic Photographs. Two Volumes, 9s. each.

BRITAIN'S SEA-KINGS AND SEA-FIGHTS. By Popular Writers. Illustrated by leading Artists. Complete Volume, 7s. 6d.

POPULAR HISTORY OF ANIMALS. By HENRY SCHERREN, F.Z.S. With 13 Coloured Plates and numerous other Illustrations. Cheap Edition, 6s.

CASSELL'S MAGAZINE. Midsummer Volume. With about 600 Original Illustrations. 5s.

PERIL AND PATRIOTISM: True Tales of Heroic Deeds and Startling Adventures. 950 pages. Profusely Illustrated. Cloth gilt, 5s. (Also Edition on better paper, 7s. 6d.)

THE CHILD'S BIBLE. New Edition. With 100 Full-page Plates by Modern Artists, including 12 in Colours. 620 pages, handsomely bound in cloth gilt, gilt edges, 10s. 6d.

LITTLE FOLKS. Midsummer Volume. 3s. 6d. Cloth gilt, gilt edges, 5s.

UNDER THE GREAT SEAL. By KIRK MUNROE. With 12 Illustrations. 3s. 6d.

WITH REDSKINS ON THE WARPATH. By S. WALKER. With 8 Full-page Illustrations. 3s. 6d.

MRS. PEDERSON'S NIECE. By ISABEL SUART ROBSON. With 8 Full-page Illustrations. 3s. 6d.

A GIRL WITHOUT AMBITION. By ISABEL SUART ROBSON. With 8 Full-page Illustrations. 3s. 6d.

TOM AND SOME OTHER GIRLS. By JESSIE MANSERGH (Mrs. G. DE HORNE VAIZEY). With 8 Illustrations. 3s. 6d.

SISTERS THREE. By JESSIE MANSERGH (Mrs. G. DE HORNE VAIZEY). With 8 Full-page Illustrations. 3s. 6d.

ROBINSON CRUSOE. Cassell's Fine Art Edition. With 120 Original Illustrations by WALTER PAGET. Cloth, 3s. 6d.; buckram gilt, gilt edges, 5s.

TREASURE ISLAND. By R. L. STEVENSON. New Edition, reset, with 50 Original Illustrations by WAL PAGET.

THE BLACK ARROW. By R. L. STEVENSON. With 8 Full-page Illustrations by H. M. PAGET. Cloth gilt, 3s. 6d.

KING SOLOMON'S MINES. By H. RIDER HAGGARD. With 10 Full-page Illustrations by WAL PAGET. 3s. 6d.

ALFRED SHAW, Cricketer: his Career and Reminiscences. Recorded by A. W. PULLIN ("Old Ebor"). Containing 16 Full-page Illustrations from Photographs. 2s. 6d.

BRITAIN'S ROLL OF GLORY: or, The Victoria Cross, its Heroes and their Valour. By D. H. PARRY. Cheap Edition, Revised and Enlarged. With 8 Full-page Illustrations by STANLEY L. WOOD. Cloth, 3s. 6d.

CASSELL'S ILLUSTRATED PRIZE CATALOGUE, containing a list of Prize Books adopted by the London School Board, &c., and CASSELL'S COMPLETE CATALOGUE, giving particulars of several hundred Books suitable for presentation, will be sent, post free, on application.

much more than a mere collection of numerical tables, and contains an enormous amount of valuable information in a very concise form; references to the sources from which the data have been obtained are always given. No physical laboratory can afford to be without it. Although great care has in general been exercised in giving the latest determinations, yet an exception appears in the table of melting points, where antimony is stated to melt at 432°C ., which is much below its true point of fusion, and more accurate values might have been assigned to several other substances in the list.

Introduction to Chemical Philosophy. By W. A. TILDEN. Tenth edition. (Price 5s. 6d.; without Answers to Problems, price 5s. Longmans.)

For many years Prof. Tilden's work has occupied a unique position among text-books of chemistry, for the method of treatment is entirely different from that usually adopted in elementary works on the subject. The reader who wants a mere catalogue of the chemical properties of substances or a compendium of experiments will not find either in this volume. The student who has already a fair acquaintance with the common phenomena of chemical science is best fitted to appreciate the broad and general view of the subject so excellently placed before him by Dr. Tilden. He will be enabled to grasp, and make his own, the fundamental theories on which the whole fabric of modern chemistry rests, and he will realize how impossible it is to study the chemistry of any substance without considering its relationship to others. Much greater attention is paid to the consideration of questions of constitution than is generally the case, and many advanced students would do well to read the book, if for this only. The recent advances which have been made in physical chemistry have necessitated rewriting much of the former edition, and it will now be found quite up to date in this respect. We think that the work would be still more valuable to the earnest student if references to original papers were given.

(1) *Algebraical Exercises.* By H. S. HALL, M.A. (Price 2s. Macmillan.) (2) *Rivingtons' Junior Mathematics.*—*Algebra*, Part I. By H. G. WILLIS, M.A. (Price 1s.; with answers, 1s. 4d.)

(1) Mr. Hall has compiled a series of examples supplementary to the numerous sets contained in Hall and Knight's "Algebra for Beginners" and "Elementary Algebra" (chapters i.-xxvii.). They extend as far as problems leading to simultaneous quadratic equations, certain types being represented more fully than in these books. The problems leading to equations are classified under the heading of "Typical Worked

Examples," and there are five sets of test-papers for revision at different stages. There can be but one opinion as to the care with which the examples are arranged and every variety treated, but we feel that the continued use of such a book must lead to a good deal of mental idleness.

(2) Mr. Willis's collection goes as far as simple quadratic equations, and is arranged on a different plan. The examples are grouped in sets for an hour's work, with oral questions at the beginning and harder examples at the end, and throughout there are parallel sets for use, if required, in successive terms. The low price and the consideration shown for both dull and clever pupils are noteworthy features.

Elementary Geometry, Plane and Solid. By T. F. HOLGATE. (Price 6s. Macmillan.)

We feel sure that this work will meet with a hearty reception from all who are interested in the reform of geometrical teaching. In plane geometry there are few, if any, propositions that are not to be found in any one of the half-dozen best English editions of Euclid; but, being unhampered by Euclid's sequence, the author has grouped his propositions in the natural order. Algebraical methods are used in the discussion of proportion, and occasionally find a place (as in some of the theorems given in the second book of Euclid) when more strictly geometrical proofs might seem preferable. Solid geometry, as is usual in American text-books, is carried much further than with us; and the chapters on lines and planes in space, prisms and pyramids, cylinders and cones, and the sphere cover the course dictated by the London Intermediate examinations. Taken as a whole, the book seems to us an excellent one, and it would be difficult, we think, to find an introduction to geometry in which the natural development of the subject and attention to the needs of beginners are more successfully combined.

We have received the first number of the *Ancestor* (price 5s. net. Constable), a new quarterly of county and family history, heraldry, and antiquities. It is a substantial, well printed, and well illustrated volume, and is significant of the recent revival of interest in these subjects. Its articles are varied, but may be divided into two groups—descriptive papers, of which those by Mr. St. John Hope on the King's Coronation ornaments, and Lady Victoria Manners on the miniatures at Belvoir, deserve special mention; and controversial papers, in which Mr. Horace Round and his friends expose bogus pedigrees and the misdeeds of the heralds. It is a useful task, but the tomahawk is used rather too freely.

GINN & COMPANY,

Educational Publishers,

(LONDON, BOSTON, NEW YORK,)

9 ST. MARTIN'S STREET, LEICESTER SQUARE, LONDON, W.C.

(FRED. J. MATHESON, London Representative.)

A GENERAL HISTORY FOR COLLEGES AND HIGH SCHOOLS.

By P. V. N. MYERS, recently Professor of History and Political Economy, University of Cincinnati.

Half-leather, $7\frac{1}{2} \times 5$ ins., x. + 759 pp., 31 maps, 145 illustrations, 6s. 6d.

A complete outline in one volume of the World's History, from that of Eastern Nations to the present time, accepted and recommended by all leading Colleges and Universities in the United States as the best brief course in General History.

Mr. J. L. PATON, Head of University College School, writes of this book as follows:—"We had a thorough look round to see which was the best General History in the market for use in our Commercial Department. As the result we adopted Myers' book, and we have never regretted it. The book is well written, conveniently divided, well illustrated, and, above all, it has the right perspective. The teachers like the book to teach from; the boys like it to learn from, and use it freely for historical essay subjects. I have never hesitated to recommend it."

The *School World* says:—"This is a handsome volume, well printed on good, thin paper, admirably equipped with illustrations and maps . . . and bound in half morocco. The text is clear, readable, and well proportioned (bisecting at A.D. 476), and it attains a high level of accuracy. Altogether, the book strikes us as by far the fullest and cheapest single volume manual of 'General History' with which we are yet acquainted."

Teachers desiring to examine this book with a view to its adoption for class use may obtain a copy on approval by writing for it.

OCCASIONAL NOTES.

THE Bill is still in a fluid state, and we must wait for the Report stage—that is the Autumn Session—when we may hope that at least all inconsistencies will be removed and some of the numerous ambiguities cleared up, before we pronounce on it a final opinion. Politics, according to Prof. Seeley, are history in the making, but, with all his accomplishments, Mr. Balfour would find it an impossible task to write a clear history of the Bill. The optional clause was intended merely as a scaffolding, and has gone, as we foresaw; but the One Authority, which was proclaimed the corner-stone, has gone likewise. Yet, with all its shifts and changes, its compromises and vacillations, the main principle of the Bill is preserved, and this principle commends itself to us, not as by any means ideal, or one that any educator would sanction were he legislating for a new commonwealth, but as the best possible under the political conditions of the hour. It is that all schools of the people must be brought up to and maintained at a certain standard of efficiency; that, to secure this end, existing denominational schools must be utilized and supported at the public cost, their secular teaching being subject to public control, while as regards their religious teaching they retain their independence. We must wait to see the text before pronouncing judgment on Mr. Balfour's promised amendment to remedy the acknowledged grievance of Nonconformists in villages where there is only one Church school.

SO far, the amendments introduced into the Bill in July are all to the good. The one vital principle has not been shaken, but a good deal of backbone has been im-

Amendments to the Bill.

ported into the clauses. Mr. H. Hobhouse, the official spokesman of the County Councils' Association, has been by far the most successful amender of the Bill. On Clause 2, he succeeded in making compulsory the application to education of the whole local taxation grant, as well as in introducing words compelling Local Authorities to "consider the needs of" their districts. Again, it was on his initiative that the "elementary option," otherwise Clause 5, was first amended into absurdity and then deleted. Once more he was able to induce the Government to restore to all the minor urban bodies their concurrent rate, which they now employ under the Technical Instruction Acts. Finally, the amended form of Clause 7, set down by Mr. Balfour on July 17, whereby the number of managers of schools is to be fixed and representation given to Parish Councils and parents, was taken almost bodily from Mr. Hobhouse's proposal recommended for acceptance in these columns last month. Sir A. Rollit scored two points by inducing the Government to permit an unlimited secondary rate in county boroughs without any veto from above, and a similar rate in counties by simple consent of the Local Government Board, without the cumbrous machinery of Provisional Order. Sir W. Anson's exploit in introducing the Cowper-Temple clause into secondary education was no mean one, and served to show that the extreme clerical party, who were supposed to influence the Government so much, number only twenty-nine.

IT was certainly not very brave of Mr. Balfour to leave open the question of the elementary option and simply to support it in his private capacity. It is well known that the option was not in the Bill when it first went before the Cabinet. The Duke of Devonshire, however, was so frightened at the "alarums and excursions" of his own familiar county, the West Riding, that he gave instructions for something to be done to mitigate the terror of that Council. Mr. Chamberlain also desired to save the face of the School Boards in some of the large towns by holding out the possibility that after all they might not be swallowed up by the Town Councils. But, as we have pointed out, the case was already given away before Mr. Hobhouse's amendment was reached. Once the special aid grant was removed and a new Treasury grant offered to the Local Authorities, it was evident that these Local Authorities must be universal, or there would be no machinery to carry out the distribution of the grant. It is highly significant that the four teacher members of the House and several other leading Liberals voted for the removal of the option. Mr. Chamberlain's accident, which we all regret, was in this one respect *felix opportunitate*.

MR. BALFOUR'S proposed concession to the advocates of public control whereby the representation of one-third granted to the Local Authority is changed to two-sixths seems to commend itself to neither party. In the same column of the *Times* is a letter signed by the leading ecclesiastics of Yorkshire warning the Government that there must be no tampering with the clear working majority retained by the denominationalists, and a letter from Mr. E. N. Buxton protesting against the necessity of appointing a separate body of managers for each school. "Hitherto we have suffered under 'hole and corner' committees, 'hole and corner' parochial School Boards. . . . In my county, at any rate, we cannot keep up the standard of managing bodies if so many are required."

A MOST important concession, but, after all, an entirely just one, has been announced by Mr. Balfour. "His right honourable friend the Chancellor of the Exchequer"

Hostels.

has agreed that in future the day training student in a hostel should receive the same payment for his maintenance as is now granted to the students in residential training colleges. This concession will have two beneficial effects. It will remove the opposition to the existing sectarian teaching in training colleges—though the rigidity of this is distinctly modified by the Bill—and it will render the establishment of additional hostels and the enlargement of the day training system comparatively simple. We have never advocated the establishment of additional residential colleges. The solution to the problem of over-pressure is to be found, we are sure, in the increase of facilities for day students at Universities and University colleges.

PROF. BEECHING, in a pleasant volume of essays entitled "Religio Laici," adumbrates an education Bill such as should commend itself to the religiously minded

Prof. Beeching on the Bill.

laymen whom he addresses. He proposes that the whole cost of primary education should be borne by the State, for preference by taxes, and not by rates; that no distinction should be made between religious and secular teaching, the State grant being available for both kinds; that the Cowper-Temple clause should continue in force, but that the Apostles' Creed should be excepted as not a "formularly distinctive of a denomination." In return for this relief he would consent to the representation of the Local Authority to the extent of one-third upon Boards of Management in Church schools. Undenominationalism is scouted as a *caput mortuum*—what is left when the essential of each sect has been eliminated. We do not propose to discuss a scheme which even Lord Hugh Cecil would think too extravagant for practical politics, but will content ourselves with traversing a single point in the essay. Prof. Beeching claims to be interpreting the true mind of Mr. Forster in 1870, drafting such a Bill as he would have introduced had he now been living. How does this theory square with a quotation from Mr. Forster's speeches given in this very essay? "Surely the time will come when we shall find out how we can agree better on these matters, when men will find out that on the main questions of religion they agree, and that they can teach them in common to their children." But for one clear statement of fact we are grateful to Prof. Beeching. Ministers of religion are not teachers, and to hand over to them the religious teaching of school-children, to the exclusion of the regular teachers, would be mistaken in theory and impossible in practice. The parson, he sees, would fare no better than "Mossoo" did in public schools.

CANON MACCOLL evidently regards the Government Bill as pills against the earthquake. The mass of voters in England are divorced from the land, and live from

Canon MacColl on the Bill.

hand to mouth. The only safeguard against revolution is religious teaching; therefore "capitalists, employers of labour, and owners of property, whatever their own beliefs or non-beliefs, had the most vital interest, in a material sense, in the question of elementary education." The Canon's solution is universal School Boards, with facilities for every denomination to teach its own creed in all State schools. We may be mistaken, but it looks as if the Canon had borrowed a hint from Gibbon's "Decline and Fall":—"The various modes of worship which prevailed in the Roman world were all considered by the people as equally

true; by the philosopher as equally false; and by the magistrate as equally useful."

ARCHDEACON SANDFORD has published his recent charges under the title of "The Church and the New Century," and the last of these is devoted to the Education

Archdeacon Sandford on the Bill.

Bill. Though the Archdeacon blessed it, and would rather have it as it stands (or, rather, as it stood) than nothing at all, yet the defects he notes in it are neither few nor slight. In the first place, he complained that it gives secondary education the go-by. "The Local Authorities will have little time and less desire to give thought to secondary education, intent as they will be on elementary education, and fearing the increase of burden on the rates which any expenditure on secondary education will entail." Secondly, inspection is a double-edged weapon, and there is no provision for transferring local inspection and adjusting or subordinating it to central inspection. Thirdly, the smallness of the areas for which Local Authorities may be chosen is a grave defect. This is a serious enough indictment, and we pass over the objections which the Archdeacon as a Churchman brings against the Bill.

SIR JOSHUA FITCH sends a timely letter to the *Times* criticizing the attractive proposal for a direct elective representation of the parents on the managing bodies of

The Parent Manager.

voluntary schools. Parents are scattered units, and it is not to be expected that they will organize themselves for the sole purpose of electing one-fourth of the managing body. "The only practicable way of attaining the object," Sir Joshua continues, "is to take some public body known to the law, with responsible officers and an organization of its own, to choose for its purpose the one most likely to include the parents of scholars and to understand their interests, and then to confide to this body the duty of appointing members on the managing committee of each school or group of schools." The Borough Council and the Parish Council are obviously the local bodies best fitted to exercise this trust.

MR. BALFOUR'S first public utterance as Prime Minister was more witty than wise, and his double-barrelled epigram—"Certain gentlemen are anxious to de-

Wit and Water.

prive London of water lest the country should obtain education"—which he declared was an exact description of the present condition of affairs, scored at most an outer. All opposition is, or seems to the "ins," factious, and, in this case, the only just charge that can be brought against the Liberals is that they have no alternative policy to propose. The one serious announcement in Mr. Balfour's Fulham speech was the intention of the Government to introduce, next year, a Bill dealing with London *on the same lines*. This can only mean that the London School Boards will go the way of other School Boards, and that elementary education will be entrusted to the Borough Councils. By analogy, the London County Council, acting through its Technical Education Board, would continue, on an extended scale, the work of secondary education; but, in view of the strained relations between the Government and the Council, this would be an unwarranted assumption.

ON July 23 Mr. Eugene Wason asked the Vice-President: (1) How many of H.M. inspectors are at present engaged in inspecting secondary schools? (2) How

The Inspectorate. many of them are graduates of a British University? (3) How many have had three years' experience as teachers in secondary schools? (4) Will registration in Column B be in future a necessary qualification for appointment to inspectorships? Sir John Gorst's answer was evasive and unsatisfactory:— (1) All H.M.I.'s inspect secondary schools of some kind. (2) Most are graduates. (3) Most have had some experience as teachers. (4) As the Register is not yet in existence, the Board cannot give the pledge. To ascertain the particulars asked for under (2) and (3) would (Sir John added) need personal inquiry, and this would be invidious. The public have at least a right to know what are the qualifications of existing inspectors, and to be assured that in future a private secretaryship or a tutorship shall not be a back door to the inspectorate.

CANON LYTTTELTON writes to the *Pilot* re Sir W. Anson's amendment. He would resist the Cowper-Temple clause with might and main, but solely because it violates a principle—the liberty of the subject. Otherwise he believes that it will have little or no effect. The quality of a Bible lesson (and here we are entirely with him) depends on the spiritual convictions of the teacher, and it makes no material difference whether or no he is debarred from the use of formularies. But, while agreeing with his conclusion, we can hardly endorse his second argument, that the supply of religiously minded teachers is strictly limited, and therefore, if by the Cowper-Temple clause they are debarred from teaching in certain schools, the Church will lose nothing. The advocates of women's rights would hardly acquiesce in a law forbidding women to practise in hospitals on the ground that there are only a score or two of women doctors.

Protest of Disqualified Teachers. THE Incorporated Association of Assistant Masters, in pursuance of the resolution in Council that "provision should be made for the inclusion on the Register of all teachers who, by length of service and good work, have already proved themselves thoroughly efficient previous to the formation of a Register," invited the excluded teachers of London to a meeting held in King's College on the 21st ult. After a considerable debate, a resolution proposed by Mr. Daniel was carried as thus amended: "Clause 4 of the Order in Council should be amended so as to admit to the Register all teachers over thirty who can produce evidence that they have been engaged in teaching in secondary schools for five years, and for three years previous to the opening of the Register in a recognized secondary school." The extension of the years of grace from three to four is a real boon, but it is clear that, unless there is some further relaxation, a number of most meritorious teachers will be left out in the cold.

A fresh Cockerton Bill. UNTIL a week or two ago, it was quite possible, and indeed likely, that the Education Bill would have become law before the end of this Session. When it was seen that this had become impossible, Dr. Macnamara rushed to the rescue of the existing School Boards, and managed to pass through the House of Commons, with marvellous celerity, a one-clause Bill changing the date of the Cockerton Act from 1902 to 1903. Of course, the Government should have done this. The risk in leaving the matter to

a private member is great; for a single objector can block a private Bill. But Mr. Balfour had stated that members of School Boards would not run any personal risk of paying out of their own pockets for work condemned by the auditor, and, presumably, the Government thought this assurance was sufficient. Members of School Boards will certainly breathe more freely now that their "illegal expenditure" is authorized for another year.

IT is now definitely settled that the University of Cambridge will invite in the early autumn delegates from the professional associations and institutions to discuss the training of teachers in secondary schools.

Training. The Order in Council contemplates two methods of training. One is post-graduate, the other the training of the pupil-teacher. Conferences may be held and discussions continued without end; but we fear there will be no unanimity attainable. The weakness of what we call for convenience the pupil-teacher system is that general education is interrupted, and the student's energy is divided between acquiring knowledge for the development of his intellectual powers and acquiring in the class-room the practical solution of the problems of management and teaching. There is much to be said in favour of this view. The learning of theory is much more real to the student who knows somewhat of practice. But, on the whole, we incline to the view that general studies should go on continuously until graduation without the distraction of professional specialization.

The Coronation Holidays. MANY boys' schools are, we learn, adding, in response to the King's suggestion, an extra few days or a week to the already long summer holidays. But what is happening to the sisters? So far as our information goes, girls' schools are not giving any additional holiday, and it is pointed out that the King's suggestion only applied to the brothers. But why this injustice to the more industrious sex? Is it that no one has thought of writing to the Queen to ask her gracious intervention? Or is it that teachers in girls' schools feel that holidays are long enough as it is, and do not like to suggest any further encroachment on the precious hours of study? Seriously speaking, it does seem to us a blunder that head masters should be charged to give this holiday under a penalty of seeming to be disloyal, while for head mistresses of secondary schools no such dilemma has been prepared. For once the King's advisers have been caught napping.

The Birmingham Faculty of Commerce. THE Faculty of Commerce created in the University of Birmingham will begin its work in October, and the first Professor of Commerce, Mr. W. J. Ashley, has issued an admirable pamphlet setting forth its purpose and programme. Prof. Ashley brings to his task the wide experience he gained in the States, and he quotes an American correspondent to show what ails the rising generation of business men in England: "Americans succeed because of knowledge, a good start, no looking back, and no regrets. They take to business like a duck to water. Your English public-school men don't—they go into business because they are shoved in. They despise it; and they vow that when they have made money enough they will clear out as soon as may be." We may safely add that no student who has gone through the three years' course as mapped out by Prof. Ashley, beginning with languages and history, and ending with *Warenkunde*, will despise his calling.

TECHNICAL EDUCATION.

THE future position of local University colleges in a State- and rate-supported system of education has not been sufficiently defined. Of so various a character are the services rendered by some of these institutions that some time ago one of them was popularly termed the "Educational Whiteley's." It was not perhaps a distinction entirely appreciated by the unprogressive members of the professorial staff, but, at any rate, it implied a disposition to regulate the supply of instruction, not of one pattern only, but according to demand. The local University college of to-day is a many-sided institution: while, perhaps, primarily concerned in the attempt to do for the provincial locality what Oxford and Cambridge are supposed to do for the nation, it includes, according to circumstances, medical, legal, and theological schools, departments for the training of elementary teachers, and special faculties in agriculture, mining, engineering, weaving, brewing, and other branches of technology.

THE history of these colleges is a record of individual enterprise and private munificence. They represent in a very real sense the extension of University teaching, and in some cases originated with the popular movement of that name. Established without the assistance of the State and developed without the influence of codes or directories, a college is manifestly a spontaneous growth responding to local needs and adapting itself, as occasion arises, to local requirements. With one exception all the colleges have come into existence within the last thirty years, and the eleven institutions in England sharing in the Treasury grant represent a capital expenditure for buildings and equipments of nearly £2,000,000.

THE Report and Treasury Minutes on the University Colleges, which have just been issued, contain an interesting and impartial review of their work. The inspectors refer to the evidences of rapid growth as proved by the following statistics:—(1) The total amount of the benefactions received during the last five years by the twelve colleges amounts to close upon one million sterling. (2) The total number of day students attending the colleges during the session ending July, 1901, was 7,825, as against 7,186 attending during the session ending July, 1896. (3) The advance in the standard of work is more striking than the advance in numbers. This advance is best shown by the larger numbers of University degrees obtained by students. The aggregate figures for the two periods are:—1891-6, 1,437 degrees; 1896-1901, 2,186 degrees. An analysis of the statistics relating to students reveals that approximately two-thirds attend the colleges for professional or technological instruction.

THE Treasury, in apportioning the Government grant to the local colleges, rejects the figures which are estimated to relate to Fine Arts, Architecture, Music; Medicine, Law, and Engineering (in so far as these are of a practical character); and Technical subjects generally. At one college, it is reported, a Professor of Engineering pertinently inquired whether the Government proposed to subsidize only such courses of study as are not of a useful character. Referring to this inquiry, Mr. Higgs, the Treasury official, alludes to the fact that technical subjects and applied sciences generally are already assisted out of funds paid by the Central Government to Local Authorities, and observes that the instruction given in the college laboratories and workshops is sometimes tantamount to a course of apprenticeship, enabling the students to step at once from their college training into paid posts as skilled chemists or engineers. "While a carpenter or a bricklayer learns his trade entirely at his own charges, there is no equitable claim to further favourable treatment by the State on the part of those who are preparing themselves for professional careers by the pursuit of what are known in Germany as *breit studies*."

THIS attitude towards the work of local University colleges should not be allowed to pass without emphatic protest. Although the Treasury subsidy to local University colleges is in most cases inadequate, the influence exercised by its inspectors is considerable. That work of a "University standard" from these institutions is from every point of view a desirable and legitimate requirement. But that such work, if directly bearing on the great industries and employments of the country, should be discounted in any assessment of the relative merits of the colleges is in these days nothing short of academic pedantry and mischievous folly. A local University college will flourish or languish according to the success or otherwise with which it serves the community in which it is situated. The majority of those in a position to seek "a University education" naturally find their way to Oxford and Cambridge, which offer peculiar advantages, the like of which are not and can never be available in provincial centres. Consequently, with but few exceptions, those who resort to local colleges must invariably be those who require higher education for professional or industrial purposes. To discourage the colleges in their natural tendency to respond to these

requirements is as inexpedient as it is short-sighted. Moreover, as the inspectors themselves declare, "Every year the boundaries which separate pure science from applied science become more distinct." Why, then, endeavour to perpetuate a futile and unprogressive tradition?

It is not easy to appreciate the attitude of mind which will give an institution credit for enabling young ladies of leisure to graduate for the degree of B.Litt., and which rejects, as something alien to the true function of a University institution, the higher teaching of young men who are to occupy leading positions in the great industries. Mr. Higgs is labouring under a misapprehension if he imagines that, as a rule, the instruction given by a local college in, say, engineering or mining, is accepted in place of practical training at the workshop or the colliery. Like the carpenter or the bricklayer, the mining or mechanical engineer learns his trade at his own charges. But, unlike carpentry and bricklaying, the great industry of engineering—as even a Treasury official might be expected to know—involves, for those who successfully pursue it, a standard of mental training and an extent of scientific knowledge which is only to be secured at educational institutions. There is, of course, no analogy between the training of the bricklayer and that of the engineer, and to suggest one is to confuse the problem of technical instruction.

MR. CHAMBERLAIN, a few months ago, expressed the hope that the new University of Birmingham would take its proper place among the older Universities. But, he said, something more was necessary to justify the existence of the new institution. These distinctive qualifications would be found in the special attention to be devoted to research and to the establishment of a new Faculty of Commerce; and, above all, "in the extension of scientific training and inquiry in connexion with the trade and industry of the country, and especially its practical application to the trade and industry of the great Midland district." If such be the aspiration of a new University, it should assuredly be the aim of a local University college.

EDUCATIONAL TENDENCIES IN THE UNITED STATES.

By ALICE RAVENHILL.

"EDUCATION has always borne the impress of the civilization whose product it was." So writes Prof. N. Murray Butler, of Columbia University, in a recent survey of educational progress in the nineteenth century. He then proceeds to emphasize the fact that the "nineteenth century, with its greatness, its shortcomings, and its contradictions, was pre-eminently the period of individual liberty." If these assertions be accepted—and Dr. Murray is a leading authority—certain national characteristics of temperament and manners should be realized and borne in mind by a student of educational methods in the United States; while attention to the development of individuality should be found to constitute in these a prominent feature.

The difficulty of assuming an impartial, "outside" attitude of observation towards each other by the two nations so closely linked together by ties of race, language, custom, and history as are Great Britain and the United States is not always recognized; and to this cause may be fairly attributed a substantial percentage of the quaint social misjudgments passed by the people of the one country upon those of the other.

It is a far cry from London to San Francisco. Nevertheless, great as is the distance, it would scarcely, I believe, equal the mental chasm which separates the inhabitants of the States of the Middle West and West from the average untravelled Englishman. Not alone motives of action, manner, home life, and food, but even the habitual application of words in hourly use, are diversified in the two cases. In some instances the variation from a common standard may be very marked; in others the shade of difference is so subtle that a delicate discrimination alone would detect its existence. A small circle of American acquaintances, social or professional, the perusal of United States literature, and somewhat closer association during the outward voyage from England, are assumed by some to afford sufficient opportunity for making a preliminary, though perhaps limited, study of the typical American. The narrowness of these limits was abundantly apparent in my case after twenty-four hours in New York City. A fresh light was thrown on many unsolved problems, and the advisability of revising certain previous judgments was made manifest.

Three months' acquaintance with these "forceful" people naturally revealed much more of the complexity of the agencies at work moulding eighty millions of human beings into a closely knit nation, and sufficed to warn at least one visitor against the tempting impossibility of accurate generalizations. For these reasons some general impressions received during a recent tour in the United States of America are here briefly summarized for what they are worth, because of their inevitable influence upon my subsequent presentation of the impressions on educational tendencies which I gathered in the Eastern and Middle West States. (These together constitute one of the three major divisions into which marked variations of racial, climatic, social, and industrial qualities and forces have grouped the forty-five states and five territories which constitute the Federal Union.) In the Southern States and in those of the Far West other conditions obtain, other forces are at work, of which no opportunity presented itself during my brief visit to even receive impressions, far less to form or to record an opinion.

The country and its population invariably suggested to me comparison with vigorous youth; with, for instance, an average healthy English lad of fifteen or sixteen. The type is familiar—a figure somewhat out of proportion, overgrown here, undeveloped there; clumsy, because lacking in perfect muscular co-ordination; active, quick, clever; brimful of kindly good nature; with overflowing spirits, not yet tempered by experience or controlled by judgment, and so prone to outrun discretion; abundant energy which imperatively demands outlet, but often fails to find the wisest way, therefore apt to o'erleap itself, to the boyish consternation of its generator. To him the world teems with fascinating possibilities; the spirit of enterprise is strong; experiments *must* be made, somewhat premature upon occasion, but disappointment and failure act only as spurs to the eager spirit, to whom a temporary delay seems eternity, who falls only to spring to his feet with unabated zeal, and to whom the final accomplishment of his end is ample compensation for physical bruises and mental disillusion. Magnify this picture on a mighty scale and it would represent my conception of this nation at the present time—a phase of development possibly preliminary only to greatly increased capacity in its future maturity. The people and their habits, mental and physical, are undeniably influenced by the vastness of territory in the United States. Their remarkably open minds and general attitude of receptivity to new suggestions may be, in part, the outgrowth of this general magnitude of surroundings; there is a satisfying sensation of elbow-room, of outlet for individual contributions to progress, which engenders generosity. The consciousness of his own share and stake in the mighty national domain apparently permeates each unit of the populace, and undoubtedly promotes breadth of mental view, though occasionally it is apt to find expression in somewhat loud-voiced pride. The facilities of intercommunication may be also held partially responsible for the diffusion of marked national characteristics, which impress themselves so forcibly on men and methods that to a "foreigner," at first sight, portions of New York City and Chicago might, though a thousand miles apart, be easily interchangeable without detection. Another significant and very obvious characteristic of this adolescent among the world's nations is the unequal development of its parts, the general aspect of incompleteness in its cities—manifestations of advanced civilization in some streets cheek by jowl with the makeshifts of pioneer settlements; a merchant's palace side by side with a log-cabin; and the primeval forest within a stone's throw of all. Results must be gained with the least possible delay, and so the city outskirts forcibly resemble the untidy residue which marks the track of a boy's hot-haste achievements. The neat formalism of an old-world suburb would symbolize "waste of time" to the impetuous product of much racial intermixture plus a highly stimulating climate.

French and German influences predominate extensively in domestic matters and the conduct of daily life. Shops, houses, conveyances, food, and fashion in dress, all suggest, superficially, the Continent rather than Great Britain. Closer acquaintance reveals the admixture of American originality, which gives to all a flavour of its own, and has led to pronounced modifications to meet national needs. Little heed is given to convention and precedent; a man or woman must rely for bread and butter—not to say success—on self, not on social or official position. To all who possess a distinctive personality—which seems rather the rule than the exception—this liberty makes for opportunity;

it also permits of free experimentation. A fresh idea is presented, a new method is formulated, a progressive proposal is ventilated, and, almost simultaneously, the necessary opening is given to put theory to the test of practice, not in one calling or direction, but in all, and not least in the world of education. Money is more plentiful, more freely risked on problematical ventures than in the old country, and private means are ungrudgingly spent in the support of strong convictions. Failure does not spell disgrace or discouragement; it excites commiseration, perhaps generous assistance; in all cases, if there be "grit" and ability, it probably forecasts future success.

The coincident liability to a certain inaccuracy in mental perspective (eminently characteristic of adolescence) is realized by the thoughtful, and the possession of "poise" or balance is a quality highly appreciated; its development is one aim of modern United States educationists. The whole-hearted, bounteous hospitality, almost embarrassing in its profuseness, is suggestive also of the generous spirit found in young people. A complete stranger is readily welcomed into the home circle without ceremony or constraint. He is constituted a member of the family without thought of compensation; but a readiness to play the game of mental give in exchange for physical take seems implied and recognized; to "hear and to tell of some new thing" is a component part of American atmosphere. The average adult in the United States is endowed with keen, quick perceptions, a very active brain, marked mechanical ability, broad-minded, generous energetic instincts, a very fair physical development, and intense patriotism. These and many other fine qualities are handicapped by the impetuosity and occasional want of sense of proportion to which reference has just been made. The general self-satisfaction of the nation, an outcome of its great prosperity, demands the leaven of a spirit of sobriety, to the cultivation of which virtue salutary prominence is now increasingly given in the school world.

The system of free public education in the United States includes kindergartens, primary and grammar schools (which comprise Grades I. to VIII. or IX.), high schools (offering a choice of from three to seven courses, embracing Grades X. to XIV.), and State Universities, which have been described as completing the educational curriculum to which each individual is entitled, with Grades XV. to XIX. Nineteen years are thus required to carry through the whole programme, *i.e.*, from about five to twenty-three or twenty-four years of age. Private munificence is responsible for the existence also of numerous richly endowed Universities and magnificently equipped technical institutes.

The absolute faith reposed in education by the bulk of the population arises from the expectation that school life shall increase civic and individual worth, and, in spite of the great independence enjoyed and the absence of central control, the uniformity of school influence is remarkable.

What is the common bond which unites these varied types of educational institutions, if they are not linked by the chains of centralization, or coerced by required conformity to a legalized standard? A further quotation from a paper by Dr. N. Murray Butler on "The Status of Education at the Close of the Nineteenth Century" will answer the query in the words of a man whose skilled finger is ever on the pulse of educational life in the United States. He finds this connecting link "in the common purpose to cultivate the special powers and talents of the individual, while holding him in touch with the life and interest of his kind." Could one wish for sounder material from which to construct a driving band for the educational engine? The prevalent existence of the "elective system" of studies in the secondary schools and colleges, together with the limitations put upon it, are due, in this writer's opinion, to the desire to cultivate a real, as opposed to a sham, individualism, and are traceable, he considers, to one of the manifold implications of the doctrine of evolution which "cross fertilized" every conception of the nineteenth century, educational as well as other.

The demands in the United States for making elementary school instruction as little wasteful and as full of content as possible, for bringing forward studies which give adequate scope for expression in various forms, and the wish that the community shall relate itself to its educational system simply and effectively, are based, consciously or unconsciously, upon the desire to apply the teachings of evolution in the schools and to progress towards the ideal of a perfected individualism.

This passage glances at four, to me, evident educational tendencies now active in the States—(1) A recognition of the right of each individual to attain his highest degree of development by progressive, well-considered stages. (2) The organization of methods to help the child to understand and to interpret his environment as it is related to himself; to provide for him an increasing contact with the practical side of life; to “graduate a student into the world,” by putting all teaching in the setting afforded by the sociological point of view. (3) The perception that school education is not a preparation *for* life, but a process *of* life; therefore that it must be closely linked *with* life as a whole; hence the recognition that the business of school is not to depreciate or weaken family ties, but to deepen and extend a child's sense of the values bound up in his home life. (4) A patient, painstaking, scientific study of childhood, its periods of development, instincts, characteristics, stimuli, hindrances—an actual realization that, as Prof. Chamberlain has said, “the child is father to the man, and brother of the race.”

“Education is individualization, and self-realization is the trend and end of humanity”—such is the statement made by one educational expert in the United States. As a matter of fact the conception of instruction as a means of promoting the vital growth of self-activity is becoming general in that country, though not yet universally crystallized into practice. Two promoting causes for this sentiment may be found in the swift movement of the social and industrial forces and in the democratic form of government. Where a sudden discovery causes cities to spring up like mushrooms, and where one new invention or improvement is hardly on the market before it is superseded by a further novelty, a man, to hold his own, must possess resourcefulness, adaptability, fertility, versatility; he should be the owner of a level head, self-controlled, self-respecting. The political corruption in the States is actually becoming a factor in the promotion of that enlightened form of education which endeavours to bring each child into the freedom of his full individuality, and thus to give “to the citizens of the future opportunity and basis for forming intelligent convictions and the stimulus to live up to them.” The risks of such a system, unless it be judiciously safeguarded, are too obvious to need enumeration; the highest authorities believe, however, that due precautions are taken to prevent its abuse. It is their opinion that all true-hearted teachers “the world over” are disciples of the sound educational philosophy which teaches that the individual alone is nothing, but that the individual as a member of a society and of a race is everything. “*True individualism*” then is the watchword for to-day among American educationalists. By means of its cultivation the life of each should become enriched with the possessions of all; so that sham individualism, which is a synonym for selfishness, is obviously and absolutely excluded. The ideal is ambitious in truth; what promise of its attainment is perceptible in the schools?

Time does not permit the full analysis of procedure which the subject deserves, but I have selected three methods in general use which contribute to this end. The first impressed itself upon most visitors to the American Education Exhibit either in Paris or, later on, at Manchester. It might be described as the encouragement given to the children to record graphically rather than verbally, through the agency of concrete methods, the conceptions they individually form of the subjects to which they are introduced. The perceptible aim is freedom of thought and the development of power to express it. In the lowest grades the selected subjects are evidently the objects and surroundings of interest to the little child. Crudities of drawing are wisely condoned, in view of the thoughtful observation and personal application necessitated by a process which lends itself to the gradual development of the power to conceive and to realize the abstract through previous familiarity with the concrete. The hand and eye training inevitably combined with this method is one of its many advantages, of which another is the diminished use of text-books; these, though props appreciated by the teachers, conduce to uniform formality of expression among the scholars. A growing mistrust of dependence upon text-books is perceptible in the best American schools; they are recognized as a necessary assistance, particularly in some studies, but for most practical work I found typed or printed laboratory exercises more generally furnished to the students, usually compiled by the professor in charge, subject

to constant revision and permitting of great elasticity of programme.

The perceptible but indescribable difference of educational atmosphere where there is no centralized system of outside examination, where the details of the ground covered in a course are left largely to the discretion of the teacher, and where the element of mere memorizing is inconspicuous, must be experienced to be realized. No two opinions can be held as to the good influence on the quality of the individual work done: it compels a high standard of attainment in the teacher; it permits of interested assimilation by the pupil. Though the theories and practice of modern educational leaders in the United States rest upon the bed-rock principles of Froebel and Herbart, in Dr. John Dewey and the late Colonel Francis W. Parker have been found the most recent exponents of this conception of the meaning of true individualism in education, and they are largely responsible for its modified adoption in the public schools. In the experimental schools at Chicago opportunities are afforded for demonstration, by means of small classes under the guidance of skilled teachers, “that the primary root of all educative activity lies in the instinctive, impulsive attitudes and activities of the child, and not in the presentation and application of external material, whether through the ideas of others or through the senses; that, accordingly, numberless spontaneous activities of children . . . are capable of educational use—nay, are the foundation stones of educational method.” Also that “the peculiar problem of the early grades is to get hold of the child's natural impulses and instincts, and to utilize them so that he is carried on to a higher plane of perception and judgment and equipped with more efficient habits. He thus acquires an enlarged and deepened consciousness and increased control of the powers of action.” These educational pioneers have been the first to admit that, with all the resources at their command, their school practice as yet falls short of their ideal; but already their influence is at work for good in the public schools.

(To be continued.)

AGAINST POETRY AS A SCHOOL SUBJECT.

I ALWAYS liked poetry, and I like to read it with children; but I sometimes wonder whether it does not do more harm than good to make children learn poetry at school or even to make them read it. Times seem to have changed since I was a schoolboy myself. In those days we had a reading book to work through which contained a fairly well chosen selection of prose and poetry, and, as far as I can remember, we all used to like the poetry better than the prose; but that may have been because our teachers let us alone and did not worry us by pointing out the beauties of the piece we were reading. Neither did they interfere with our efforts to understand it; for they were too busily occupied in making us keep our fingers on the place, and toe the chalk line round which we had to stand to have any time left for spoiling our enjoyment of the piece we were reading by asking us to give synonyms for words which, after all, we understood as well as they did. We used often to get into trouble for reading off the page, and we were not infrequently caned for reading the poetry at the end of the book when we ought to have been spelling through some exceedingly dry natural history or other improving matter which formed the subject of the lesson for the day. We were allowed to pick for ourselves pieces for recitation at the annual prize distribution, and on one such occasion I remember that we had a long discussion as to which was the prettiest piece in the book, and that the majority favoured George Herbert's poem “Sweet Peace, where dost thou dwell?” We were mere grubby-fingered sixth-standard boys who had never heard that it was clever to like poetry, and still more clever to despise it; so that our views were quite free from affectation and we did not feel called upon to pose as martyrs when we were caned for surreptitiously reading George Herbert. In those days, too, we had a good deal of poetry to learn by heart—some three hundred lines a year—and, though we none of us liked the labour involved, yet I remember quite well that we took considerable interest in what we learned, and used to compare among ourselves the merits of the pieces we took in successive years. We liked “Marmion” and “The Lady of the Lake” better than “Sweet Auburn,”

and this again better than "The Prisoner of Chillon"; but we liked them all, and the pieces I learnt at school remain the most pleasant and vivid recollections of my school life. I was very much interested a year or two ago when an old school-fellow of mine told me that she used to spend hours in saying "Marmion" over to herself as she sat working at her sewing machine in a noisy warehouse. I look back with a sigh to-day and wonder whether it will ever be my happy lot to be called upon to cane a boy for reading George Herbert when he ought to be learning about H_2O , and whether the day will ever recur when grubby-fingered boys in the sixth standard will have an opinion of their own about the comparative merits of Scott and Byron.

I am, however, anxious to suppress nothing and to distort nothing in this lament for the golden age, and I therefore set it down here that a boy who had been playing truant did once give me as an excuse that he had stayed at home to read Gray's "Elegy"; but he only knew half my weaknesses, and did not allow for the suspicious attitude of mind which had been developed in me by much contact with the modern boy. I made inquiries, and to our mutual regret I discovered that he had spent the afternoon at the fair. He is now on the way to become a King's Scholar.

As head master of a large school with a numerous staff I dread the advent of a new assistant master. He is nearly sure to be reasonably efficient in most respects; but it is odds that his poetry lessons will make me ill. "Happy," I think on these occasions, "are the head masters of grammar schools, whom the glorious traditions of secondary education permit to be ignorant of all that goes on in forms which are not their own." For me there is no such bliss. My new assistant master will be nearly certain to have a completely wrong idea of the chief end of poetry coupled with a terrible efficiency in carrying his idea into practice. If only he descended upon me from the ancient Universities, shedding around him culture and Clarendon Press notes, there would at least be even odds that he would prove generally incompetent and would have to leave again; but the trained teacher is usually competent enough and I have to make the best of him. One type of teacher thinks that poetry is exclusively intended to train the memory; and him I can put up with. He merely murders the poetry with a simple and unaffected brutality which endureth but for a moment and leaves no sting behind. My own teachers were like this. They made us know our poetry, and, while we hated the trouble of learning it, yet, as nearly all our school work was mere learning by heart, it did not occur to us to hate poetry for a fault not its own, and so the beauty of the verses triumphed over the stupidity of the teacher. Another type of Philistine is the teacher who thinks that poetry was mainly written for the purpose of being parsed and analyzed. Him, too, I can forgive, because I can stop his nonsense. An order from me is sufficient to secure both laxity in the standard of learning by heart and the abolition of poetry as the raw material of parsing and analysis. There is, however, another and more common type, before whom I have to confess myself powerless. It is the man who is afflicted with a desire to explain. The disease shows itself in two ways. First of all he reads the piece in an aggressively explanatory tone and then he proceeds to explain every word in it down to the very conjunctions and definite articles. It is impossible for me to reproduce on paper the execrable misreading of which he is guilty; but, alas! the children imitate him with a fatal accuracy, and jewels five words long are flawed for ever. I will try to reproduce as well as I can the sort of reading I mean. It goes something like this:—

I come from haunts of coot and *hörn*,—

heavy emphasis on "hörn," with rising inflexion, indicating that in spite of all appearances to the contrary it is NOT "coot and cock-sparrow."

I make a sudden *sally*?—

ditto, ditto, on "sally," implied query why not "Mary Ann"? Nevertheless tone pervaded by smiling and sweetly reasonable tolerance called for because introduction says Tennyson is a great poet.

I sparkle out among the *fern*—

N.B.—Not "cabbages" nor "turnips," but the vascular cryptogams mentioned in our last Nature-study lesson. Corner of teacher's eye cries aloud on Herbert.

To *bicker* —

long pause; heavy emphasis implying that in the human boy this would be disreputable conduct—

— down a *valley*—

slightly rising inflexion indicative of mild surprise that in this twentieth century an electric tramway was not chosen as a more convenient path.

I have tried by a few notes to indicate roughly how this is read; but it is impossible for me to do justice on paper to the unction of the delivery, which is that proper to a teacher attempting by due emphasis to make intelligible the verbosity of Euclid's proposition that if two triangles have two sides of the one equal to two sides of the other, each to each, and likewise the angles contained by these two sides equal, then shall their bases or third sides be equal, and the other angles of the one to the other angles of the other, each to each, namely, those to which the equal sides are opposite. With this explanatory unction I cannot cope. There is no curing a man who is infected by it. If I can find time to take his poetry lesson myself, I do so and invent a reason to save his feelings. If I cannot, I turn tail ignominiously and let the thing go on, keeping well out of the way, to spare myself the pain of listening.

While it is impossible to eradicate the explanatory *tone* from a teacher's voice, it is, however, possible enough to keep in check the mania for giving explanations of words and phrases which are perfectly simple in themselves and need no explanation. I have sometimes thought that this widespread mania is one of the results of the clerical influences to which the majority of teachers are subjected during their stay in the training colleges, but I should not like to assert dogmatically that this is so. Certain it is, however, that I have heard explanations given in class which were quite as foolish and unnecessary as the elaborate explanations of the parables which are inflicted so often on a somnolent congregation. For instance, I once heard a teacher take three-quarters of an hour to explain to a class of fourteen-year-old boys the first two verses of

It was a summer evening,

Old Kaspar's work was done.

Most of his twaddle I have forgotten, but I know I timed him by my watch as having taken ten minutes to explain the line

That was so large and smooth and round.

He filled up the time by talking to the boys about the kindergarten gifts and the delight experienced by children of all ages in handling things that are large and smooth and round, going through the whole subject from Froebel to football.

The books issued for school use may possibly account for some of this tendency; but I suspect that they are rather a result than a cause of it. I frequently have specimens sent to me of "poetry cards" containing pieces for recitation with notes appended. As a rule, in the sets issued by certain publishers, these notes are fairly represented by the following specimens:—

Around the fire one wintry night

The farmer's rosy children sat—

Around: in a circle, with the fire as its centre.

Wintry: a night of winter; winter consists of the months of October, November, and December.

Rosy: like a rose, reddish in colour; their faces would be made red by the heat radiated from the fire.

His tears ran down his corselet—

Corselet: a coat of mail. Note that the tears ran down the *front* of the corselet.

Painter, paint me a picture—

What is a painter?—A man who paints. Paints what?—Pictures. Another name for a man who paints pictures?—Artist.

These are not imaginary examples. They are taken from "poetry cards" which are stated, I fear with some amount of truth, to have received the cordial approval of many of His Majesty's inspectors. Not all of these gentlemen are Matthew Arnolds, and I am rather inclined to think that some of this tendency to explain that which is already simple enough may be traced to the demands which they make upon the teachers. Only the other week, in a girls' school with which I am personally acquainted, the inspector was questioning the girls about the poetry they had learnt. They had used "The Golden Treasury," and, among other questions, he asked them why the name "Golden Treasury" was appropriate. After receiving, but not accepting, several answers, most of which gave the obvious

reason, he referred the girls to the last verse of Wordsworth's poem on "Daffodils," and told them that the poet retained in his mind's eye a beautiful picture of the daffodils, and that, just as they could turn on a tap and let the water flow out, so this picture might be called "The Tap of Happiness," and similarly "The Golden Treasury" might be called a "Tank of Happiness."

Not for Mr. X. the *dictum* that "A thing of beauty is a joy for ever"! Keats is dead; his words must be brought up to date—up to the date when education is to be put under the authority responsible for the gas and water, and when the name of Cockerton suggests the handiwork of the plumber.

On the same occasion Mr. X. drew the attention of the girls to the vignette which adorns the title-page of "The Golden Treasury." He had evidently been impressed more by the nudity of the figure therein represented than by the flute in its mouth and the Pan-pipes at its feet, for, after rejecting the fairly good answer that the figure represented a shepherd piping to his sheep, he said: "Notice particularly *how* he is." There was no answer; the girls, I suppose, did not know of the word "nude," and did not like to say "stark naked." After an impressive pause Mr. X. remarked: "He is a barbarian." How true it is that all honest criticism is autobiography!

I once met with a curiously close parallel to Mr. X.'s ignorance of Greek antiquity, but in this instance the subject-matter was early Christian history. A young man who had been trained in a denominational training college was giving a lantern lesson on the coast towns of the Mediterranean, in the course of which he drew attention to a statue of the Virgin and Child which surmounts, I believe, the Cathedral of Marseilles. He said something like this, speaking in a peculiarly jerky way: "This—is a Cathedral—Marseilles. Marseilles—Roman Catholic. Roman Catholics very good—to the poor. Roman Catholics think a lot—Virgin Mary. Virgin Mary very good—to the poor. This statue—Virgin Mary. See—Virgin Mary got a poor child—in her arms—now." I wonder which of these gentlemen Mr. Matthew Arnold would have preferred for a colleague.

It seems to me that the teaching of poetry in school suffers from the want of a little wholesome neglect. As a rule, children left to themselves, and turned on to read poetry to themselves, will enjoy such pieces as are reasonably within their grasp. Their pleasure is heightened, and their understanding of the piece is improved, if it is read aloud to them by a sympathetic reader. This reading aloud is the best kind of explanation, and is usually the only explanation necessary. Children gather the general sense of an obscure word easily enough as a rule from the context, and it is just as well for some reasons that their idea of it should remain vague. "Explanation" rubs the bloom off poetry, and is not only unnecessary, but positively irritating to a child of any intelligence. Far better that the poem should be to a child imperfectly remembered, misty, and beautiful, than that he should know it like the multiplication table, and hate it like a proposition of Euclid. X. Y. Z.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

WE have seen in the foreign press many remarks on the subject of the scholarships founded by the late Mr. Cecil Rhodes for the benefit of American and German students. Much of the comment, especially in Germany, has been ungracious, as of those who should examine the teeth of a gift-horse. It may be seemly to reject an offer; it is scarcely courteous to blaspheme the donor and deride the donation, since it appears that his bounty is, after all, to be accepted. Turn the table round. Let a German millionaire endow in like manner rich bursaries for the English at German seats of learning. Twenty fit candidates would spring up for every vacant place, and be grateful even for a prospect of success; the reason being that to know a new people and a new language is the goal of a spiritual voyage on which many of our young minds would be glad to enter. We leave aside, be it observed, the worldly gain to the future diplomatist, State official, or schoolmaster. As to the Rhodes scholarships, from the American side the *Columbia University Quarterly* is both sane and authoritative; it ignores, however, that higher object of a foreign sojourn at which we have hinted. Since the matter is of general interest, we may quote the *Quarterly* at length. After properly urging that the promotion of

Anglo-Saxon comity is a good cause, but the furtherance of a world-wide comity a better, the writer (it is the editor) continues:—

"But how will the plan work in practice? This is the question that peculiarly interests the academic mind. What will Oxford do with it, and what will it do with Oxford? British rimesters are already amusing themselves with comical forecasts of a time when the colonial aspirant who fails to pass Responsions will proceed to plead the size of his biceps or the strength of his moral constitution. As for the American part in the benefaction, the difficulties in the way of administering the trust in the general spirit, not to say the exact letter, of the testator's will are numerous. To draw up rules for the competition in such a way as to secure from the various States of this Union the kind of scholars that Mr. Rhodes dreamt of will strain the wisdom of the wise to the limit of madness. And when the proper man, or what appears to be such, has been found and passed through the portal of Oxford, it is very unlikely that his three years' residence there will, in general, have the effect of making him the kind of man that Mr. Rhodes desired. Sound theory requires that a young man who is to be most highly efficient shall receive his general education in the country where he proposes to do his work. The Rhodes foundation will not bring to Oxford the pick of American youth in the sense intended—that is, not of those who are seeking the best possible training for what are called practical affairs. What will happen, we venture to predict, will be that American collegians who have reached, say, the senior year, and have already chosen the career of teaching or of letters, will seek a Rhodes scholarship in the interest of their professional training.

"In other words, the Rhodes scholarships, so far as we Americans are concerned, will be the virtual equivalent of graduate Fellowships. They will divert to Oxford a certain number of young specialists who would otherwise go to Germany or pursue graduate studies at home. This will be very good for them, but it would be still better if, instead of spending three years at Oxford, they could put in a part of the time in France and Germany, and return with that degree which is more and more coming to be regarded in this land as a very desirable, if not absolutely necessary, badge of the higher professional teacher. To meet the American demand ideally, our British cousins will find themselves constrained to confer the degree of Ph.D. and to permit the Rhodes scholars to study on the Continent during that large part of the year in which the University of Oxford is not in session. If this shall be the course of things hereafter, the Rhodes bequest will prove to be a great and happy stroke for education. And it will produce, too, in very large measure, those ideal results of international good will, superior training, and practical efficiency which Mr. Rhodes had in his mind's eye. If, however, the controlling policy shall aim at a bumptious Anglo-Saxonism, or insist on the complete and exclusive Oxfordization of the young Americans whom it may attract to itself by the lure of £300 a year, then we prognosticate that the Rhodes foundation will accomplish nothing that our posterity will recall with satisfaction."

We can hold out no hope that the University of Oxford will be willing to confer the degree of Ph.D. as an equivalent (for this is meant) of the homely B.A. Indeed, the feeling is growing in England that the multiplicity of Doctors is one of the inconveniences of modern life. On the other hand, the Rhodes scholars, like all our undergraduates, will be free to spend their vacations where they will; and, if they are ambitious of the higher titles of learning—the University of Heidelberg caters for foreigners. In the practical working of the scheme projected by Mr. Rhodes the greatest difficulty that we can foresee is that of discipline. Speaking with full knowledge, we say that, whatever may be the case with the American student, the German at Oxford, unless he changes his ways, will discomfit tutelage or be discomfited by it. Yet that is the concern of the academic authorities. One word we will venture to add, hailing ourselves from another shore. Every comer, American or German, that submits himself to the gentle tyranny of the place will carry home with him an abiding sense of the ineffable charm of the University on the Isis. And, if the foreign student should reveal himself as the prince destined to awake the sleeping beauty, all Englishmen will rejoice with him in his sweet triumph.

We pass to a closely related topic. Oxford has lately been reproached in Germany for the weakness of its teaching in economics. Prof. von Halle declares that it has almost ceased, since the deaths of Toynbee and Rogers, to give efficient instruction in the subject. Now it is just for economics that the American student craves. A teacher lately asked two classes of pupils approaching the end of the high school course from what part of their work they expected to derive the greatest benefit in life. In one class 70 per cent., in the other 90 per cent., answered spontaneously: "From economics." He himself writes: "In all my school experience I have never seen such interest manifested in any line of work as I have seen sustained for a year in this sociological work. I have many evidences that this interest does not stop when the student leaves the school. The study both secures interest and stimulates thought during school-days, and inspires to activity and growth after school-days have ended." In hundreds of English secondary schools the subject so fascinating to American boys is never touched; nor do they stop, across the seas, at mere book-

work; as witness the two fellowships of 400 dols. each lately founded by the College Settlements Association, with the object of opening to well qualified persons (not necessarily educated at a college) the opportunity afforded by settlement life for the investigation of social problems. Experiment and experience are to be superadded to theory. But how a head master of the old school—Busby, for example—would have shuddered at the notion of training his boys in political economy, and sending them, to complete their education, not to Christchurch, but to the slums of Lambeth!

AUSTRIA.

The student at an Austrian University, as at a Scotch, must often win his way to learning through great privations. Last winter an inquiry was made into the circumstances of those students at Vienna who act as tutors; for to give lessons in private houses is the chief resource of the needy there. The cases investigated were those of 221 students, two of them women. Receipts from tuition formed the sole income of 49 per cent. and the chief income of 32 per cent. It was found that 5 per cent. had begun to give lessons when in the elementary school, 28 per cent. when in the *Untergymnasium*, 55 per cent. when in the *Obergymnasium*, and 11 per cent. at the University. Many had the greatest difficulty in providing themselves with food, being compelled to rely, for the most part, on dinner tickets (*Speisemarken*), and going hungry on days when none of these were distributed. Through a question as to the amount of income that these poor students had it was revealed that 5 per cent. earned by lessons 15 kronen a month, 47 per cent. 16 to 50 kronen, 33 per cent. 51 to 100 kronen, and 14 per cent. more than 100 kronen, the krone being worth about 10d. of our money. The two women were, strange to tell, among the most prosperous, one of them receiving monthly 175 kronen as a wage. Scanty as was the pay, the labour exacted for it was enormous. One student had to teach from 5 to 8 o'clock in the morning, and from noon to 9 o'clock at night, in return for a tiny sleeping-room, breakfast, and 10 kronen a month. Perhaps the Rhodes scholars, with their £250 or £300 a year, will cast at times a thought towards those who endure slavery for the sake of knowledge. But has Austria no Carnegies?

FRANCE.

To those who are interested in *écoles maternelles*, known to us as day nurseries and by other names, we commend an article in the *Revue Pédagogique* (issue of June 15) from the pen of Mme. Pauline Kergomard, who writes with authority as being Inspectress-General of such schools and a member of the Conseil Supérieur. She tells us of mothers who deliver their children up to the guardian at the earliest possible hour, who reclaim them at the latest, to spend the day, when rid of their charges, in gossiping before the door. And these not women only of the poorest class, but those also who have married tradesmen. We do not profess to deal here with French social life. But let us look about us at home. Surely it is a question that must rise in our minds as we walk the streets and see these institutions advertised, how far are we justified in defeating the pedagogic principle that the responsibility of bringing up the child, especially in the earliest stages, rests on the parent? If a mother can release herself from her obligations by paying 4d. or 6d. a week, she will be tempted to do so, scornful of pedagogy. Mme. Kergomard urges that you must at least make her pay for the contempt, she having in mind still cheaper schools where nothing is paid. Moreover, she contends, as we abridge her statements, that, given a healthy home, the child is better off there than in the maternal school. As against the restraint, the tying down of a child to a sedentary life, for that is what the grouping of a large number of infants in one house must mean, the manifold activities within the family are more pleasurable and more educative. She speaks, be it remembered, with knowledge. Only when the mother, the earnings of the father being insufficient for his family, must go out to win the children's bread should children be received in a day nursery, and careful inquiry into the circumstances of the applicant is needed in every case. Under the French system the training of those admitted, to give another of Mme. Kergomard's contentions, is, if we may put it so, too literary. Little mites less than six years old must learn about Louis XIV., Mme. de Maintenon, Mme. de Sévigné, and—it is very French—the duties of *le préfet*. She demands more regard for health and physical development, more movement and song. We note, however, with interest, that she will have little to do with Froebel: "The genius of our infants, made up as it is of spontaneity, originality, and creative imagination, could not adapt itself to the *minutiae* of the 'occupations'." This, again, is—we use the words with no unkindly meaning—very French. We commend once more the article to the notice of English readers.

NEW ZEALAND.

The New Zealand *Schoolmaster* supplies a fresh illustration of the fact that the British Empire is conscious of its duty to subject races.

"In connexion [says that journal] with its scheme for the improvement of the Maori race, the Government has decided to establish a village at Corinth, on the Wanganui River, where educated young Maoris of both sexes may live in European style and receive technical instruction. Married Maoris who have passed through the schools will be invited to reside in the village, and the students will live with them. The Government is to provide free instruction. The students will be required to keep themselves, but they will be allowed to grow fruit and vegetables for their own profit in leisure time. It is intended that the village shall be managed by a council of adult Maoris resident under rules to be drawn up by the Government. If the scheme is a success, similar villages will be established in other parts of the colony."

INDIA.

The ways of the Indian student are still at times as dark as those of the Chinaman who takes to poker. Thus the Syndicate of the Punjab University had recently before it for consideration a list of sixty-two offenders against the laws of examination morality. Eight were accused of improperly using condensed "notes" or text-books; they will not be allowed to present themselves again for two years. The same penalty falls on one who attempted to bribe an examiner. Fifteen had appealed to their interrogators for mercy; and, natural as their conduct seems, it has cost them their marks for the paper to which the prayer applied. One candidate had written at the head of his sheet "Oh, God help me!" Probably the petition was sincere and not blasphemous; nevertheless, he too is deprived of all marks for his work. Another relied on worldly agencies, seeking to influence the examiners by recording his father's name, as well as his own, on his answer paper. Since he escaped without even a reprimand, it is likely that next year every student with influential parentage will insinuate the fact into a geometrical problem or append it as an *explicit* to his discoveries in science.

We observe with pleasure that a wealthy Indian lady has decided to establish at Lahore a technical school for women, of which the Indian *Educational Review* supplies the following particulars:—"The inmates of the institution are to be Indian women, irrespective of caste or creed, and all of them will have to conform to the strictest privacy or *purdah*. The objects of the institution are to teach: (a) reading and writing Nagri, Gurmukhi, and Urdu, as well as arithmetic; (b) sewing with the hands as well as by machine all kinds of clothes, including measuring and cutting in all styles; (c) lace work and embroidering with silver thread and ribbon of all kinds; (d) *phulkari* work and embroidering on satin, broadcloth, &c., &c., with silk and cotton thread; (e) knitting, carpet-work, and embroidery in all its branches. No fee is to be charged for tuition. A house has already been secured free of rent."

JOTTINGS.

FOR the Registrarship under the Teachers' Registration Council there were eighty-four applications. These were reduced by the Appointment Committee to six—Mr. Ralph Beavor, of the Scholastic, Clerical, and Medical Association; Mr. Hallidie, Secretary to the Head Masters' Conference; Mr. Houghton, late Senior Inspector to the Ministry of Public Instruction in Egypt; Mr. Rundall, late Head Master of the High School, Newcastle-under-Lyme; Mr. J. E. Williams, Registrar of St. Andrews University; Mr. Selby, assistant master in Harrow School. We believe that the final choice lay between Mr. Hallidie and Mr. Rundall.

AN interesting experiment is being tried this week by Mrs. Humphry Ward at the Passmore Edwards Settlement—a holiday school, attended by two hundred and fifty children drafted from the neighbouring Board schools. Double this number of applications for admission were received, and it is hoped that after the first week the two hundred and fifty may be increased to four hundred. The courses consist mainly of Nature study, drill, and music. The idea is borrowed from the United States. In New York alone some seventy thousand children, who would else be playing in the gutter, attend a summer holiday school.

IN the Oxford and Cambridge entrance scholarship record compiled by the *Daily Chronicle* nine schools score double figures. St. Paul's, as usual, is an easy first with twenty, Rugby a good second with fourteen, and Merchant Taylors' falls to ten—or, if close scholarships are disallowed, to six. The other schools in the first class are (in order) Winchester, Manchester, Charterhouse, Westminster, Eton, Marlborough.

THE unequal distribution of educational endowments is well shown in a return prepared by the Technical Committee of the Liverpool City

Council. The annual value of educational endowments is in Birmingham £40,000, in Bristol £20,000, in Manchester £9,000, in Leeds £5,000, and in Liverpool only £385. This works out for every thousand of population: Bristol £89, Birmingham £79, Manchester £18, Leeds £14, and Liverpool 14s.

ANOTHER point in the report worth noticing is that one-fifth of the scholars in Liverpool secondary schools come from beyond the municipal borders. It is clear that the Local Education Authority should include at least Birkenhead, Bootle, and Wallesey.

THE Conference on the Training of Teachers, convened by the University of Cambridge, will meet in London on November 14 and 15. The numbers are limited to about fifty, and only principals of training institutions and representatives of associations interested in training will be invited.

THE new regime of the University of London, as concerns examinations, begins in September, and candidates will do well to procure the "Matriculation Directory" of the "University Tutorial Series," which contains the revised regulations, recommendations as to books, and other advice.

TEACHERS who desire a cheap summer trip to Switzerland or Germany are advised to procure the excursion time-tables of the Great Eastern Railway. For those who are not afraid of the sea voyage from Harwich to Antwerp, this is now the cheapest and pleasantest route.

HERE is an extract from the prospectus of a co-operative poultry society in the North of Ireland:—"The objects aimed at in the formation of this Society were the improvement of laying and table breeds of poultry and the marketing of the produce of its members. . . . There is a notable improvement on the cleanness of the eggs, and the despatch with which these are placed on the market, making bad or rotten eggs an impossibility, greatly tends to the faith of English and Scotch consumers in their claim to be 'New Laid.'"

MISS M. GERTRUDE FRODSHAM, B.A. Lond., resident lecturer at the Cambridge Training College, has been appointed Head Mistress of the new St. Saviour's and St. Olave's Grammar School for Girls, New Kent Road, Southwark, which will probably be opened in January next, in the new buildings now in course of erection. Miss Frodsam was a pupil at the North London Collegiate School for Girls, and a scholar of the Royal Holloway College, whence she took the London B.A. degree and Oxford Honours Mathematical Moderations, Class II. She received her professional training at the Training College, where she held the Gilchrist Scholarship and obtained the Cambridge University Teachers' Diploma, First Class (Theoretical and Practical). She was senior mathematical mistress at the Swansea High School, and since January, 1898, has been resident lecturer at the Cambridge Training College.

FROM a Parliamentary return we hear that the total amount of voluntary contributions for the year preceding the first payment of the aid grant under the Act of 1897 was £801,615; in 1898 it dropped to £751,084; in 1899 it rose to £783,292; and for 1900 it slightly exceeded the total of 1898, reaching £806,967. The amount of aid grant paid for the financial year ending March 31, 1902, was £618,232; of this Church of England schools received £462,438.

How hard it is to write history! Two correspondents in the *Spectator* were themselves among the victims of Dr. Keate's colossal flogging in 1832; yet Mr. F. Freeman says it was applied to "two forms—some sixty to eighty boys"; "E." says it comprised "three whole divisions of the school and can hardly have been less than a hundred and forty."

OF the many Coronation gifts none is more appropriate than that of Mr. Herbert L. Storey, who has placed £10,000 at the disposal of the Lancaster Town Council for the purpose of erecting a technical school as an adjunct to the Storey Institute, founded by his father, the late Sir Thomas Storey.

THE Supplementary Regulations for Secondary Day Schools and for Evening Schools just issued by the Board of Education may be confidently proclaimed the cheapest publication on the market—four hundred royal octavo pages, with illustrations, for 4d. Many not directly interested will care to possess it for the sake of the elaborate syllabuses of art and science teaching. It contains also the amended Teachers' Registration Order in Council.

MR. JOHN ADAMS, Rector of the United Free Church Training College, Glasgow, has been appointed by the Senate of the University of London Professor of Education. The chair, it will be remembered,

is held in combination with the Principalship of the London County Council Day Training College. There was a strong field of candidates, including Mr. P. A. Barnett, H.M.I.S.

THE University of London recently appointed two Professors of German, at a salary of £500 each—Dr. Priebisch and Dr. Breul. Fortunately for Cambridge, Dr. Breul could not be tempted to leave his present post. Dr. Breul is at present engaged in the revision of Cassell's "German Dictionary," which he hopes to complete by the end of the present year. It will be virtually a new work.

THE Council of the College of Preceptors have appointed Mr. T. Gregory Foster and Mr. A. T. Ashton Examiners in English. For the College Certificate in Practical Teaching there were this year eleven men candidates and nine women; all but three men passed.

IT has been arranged that the first Annual Conference of Science Teachers in the North of England shall be held at Manchester on Friday and Saturday, January 2 and 3, 1903.

ANOTHER New Testament manual by the Rev. T. H. Stokoe, D.D., will be issued by the Oxford University Press in the course of a few weeks—"The Life and Letters of St. Paul," procurable in one volume or in two, the life and letters separately. It will be remembered that the first volume of the manuals dealt with the Gospel history and the Gospel teaching. A third volume—"Early Days and Letters of the Church"—will be ready shortly.

THE Cambridge Training College is paying heavily for its merits, and loses not only its Principal, but two of its chief lecturers. Miss Punnett, as noted elsewhere, has been appointed Normal Mistress in the Training College of the London County Council; Miss Ainslie has been elected Head Mistress of the George Watson Schools in Edinburgh; and Miss Frodsam is Head Mistress elect of the new Girls' Schools, St. Olave's, Southwark.

To the perverted ingenuity of examinees there are seemingly no bounds. In a passage from "The Newcomes," set for French prose in a recent certificate examination, the words "He lies, Mr. Boulby," were rendered: "*Ci git, Monsieur Boulby.*" In the same examination "*La cigale innocente sur un arbuste assise*" was translated: "The innocent seagull seated in an arbour," but this appears a comparatively venial misunderstanding.

AT the half-yearly general meeting of the College of Preceptors the Dean proved that he was fully justified in the correction that he sent to this journal in June. The Report of the Council "abstained from pronouncing any opinion on the merits of the Bill," and a motion proposed by the Rev. J. O. Bevan, approving the principle of the Bill, met with hardly any support.

MR. KEGAN PAUL, who died on July 19, in his seventy-fifth year, was an Eton boy, and for nine years, from 1853 to 1862, a master at Eton, and for the most of this time Master of Collegers.

THE NATURE-STUDY EXHIBITION.

THE keynote of the very remarkable exhibition opened by the Duke and Duchess of Devonshire on July 23 is contained in a sentence from the very careful and full letter of explanation sent by Mr. Medd, the Hon. Secretary, to the Duke. Mr. Medd said: "We are anxious to show that for every child of every rank and age in every grade of school, urban and rural, Nature study, quite apart from any possible bearing it may have on rural pursuits or for its botanical or scientific importance, affords one of the most reliable means of developing certain faculties, upon the development of which education in its fullest sense and success in life must be based." Mr. Rooper, H.M.I., in his introduction to the catalogue, adds to this the pious aspiration that "to revive the lost or vanishing interest in the surroundings of the child's home is the aim of thoughtful parents and teachers, both in Europe and America." Great pains have been taken by the authorities of the exhibition to make clear the distinction between science proper—the knowledge of a special branch—and Nature study—the awakening of the interest of children in a world outside themselves. No wonder that much was sent in which could not by any means

be accepted, and that much had to be accepted which went a long way beyond (or below) the intentions of the Committee. On the other hand, it was practically impossible to show growing things or actual gardens, and, with the exception of a small tent of produce (not of the best), photographs of the gardens or of the students at work had to take the place of the real thing. It was fortunate that the Committee finally excluded all trade exhibits from the ordinary stalls, and insisted upon apparatus, collections, and designs being the original work of teachers and pupils. In future years, no doubt, a scene for the exhibition will be chosen where there is ample room for the best exhibits to be displayed, where a passing shower does not cause drips through the roof upon the stalls, and where teachers and pupils can visit the show without a long day's journey to a place where no refreshments are available.

When one considers that the Committee which brought the show into existence is not a year old, and consists largely of the "salvage" of the Association which collapsed after the failure of Lady Warwick's flower show mixed with a co-operative congress at the Crystal Palace last year the success of the venture can be appreciated. To Sir John Cockburn, the very business-like Chairman of the Executive, and Mr. Medd, the enthusiastic and untiring Hon. Secretary, this result is principally due. A word of praise must be given to Mr. A. Taylor, who was mainly responsible for the arrangement of exhibits. The series of conferences proceeding as we go to press, and under the care of eminent specialists in every branch of the subject, are not the least valuable part of the programme. They are daily attended by teachers in large numbers from all parts of the kingdom.

To turn to the actual exhibitors, these may be best dealt with under the headings of (1) colleges, (2) first-grade secondary schools, (3) second-grade secondary schools, (4) continuation schools, and (5) elementary schools. As regards the first group, every agricultural college of importance, most of the University colleges, and the principal training colleges sent in exhibits. Specially noteworthy are the sets of apparatus made of simple and cheap materials from elementary schools, which are employed to illustrate the teachers' holiday courses at Wye College, the scheme of vacation courses in use at the Harper-Adams College (especially Mr. Foulkes's agricultural chart), the diagrams of plants and plant diseases from Holmes Chapel College, Cheshire, and the complete scheme of study connected with the "Fall of the Leaf" sent in by Salisbury Training College. The other training colleges are disappointing, while the Froebel Institute sends in specimens which, though interesting, are wide of the mark.

Turning to first-grade schools, Eton, St. Paul's, and Cheltenham Ladies' College are the only ones to make a good show. Museum specimens abound; but St. Paul's shows some first-rate "out-of-school" work, no doubt compiled largely for the annual competition for the Smee Prizes; to this a bronze medal has been awarded. It is most important for such schools to have a field club. Eton shows a fine collection of dissections used in teaching. The second-grade schools are very much to the fore. The Girls' Clergy Orphan School at Beachey has delightful and artistic portfolios of specimens; but James Allen's Girls' School, Dulwich (bronze medal), has the best all-round exhibit in this class—the collections illustrating the dispersal of seeds and fruits are particularly noticeable, while the "Nature Calendars" are almost unique. Among the boys' schools, Bedales (bronze medal) is naturally to the fore with its illustrations of boys engaged in highly technical and practical occupations as part of their school work. Tiffin's School, Kingston (bronze medal), was singled out by the judges for special praise on account of its diagrams and specimens illustrating the geology of Surrey and its collection of useful insects; while the Countess of Warwick's School at Bigods has a capital illustrated scheme of work.

The continuation schools are not well represented in quantity, no less than six out of the eight in the group coming from Surrey and being included in the collective exhibit sent in by that County Council, to which alone of public authorities a bronze medal has been awarded. A complete series of photographs of school gardens, with the schemes of instruction for some dozen selected schools in the same district, are attached. Home-made apparatus, specimens of grafting, budding, and basket work occupy most of the space in this class. Elementary schools are well to the fore. Collective exhibits from

all the principal School Boards (that sent in from Liverpool being easily the best) take up most of the space. School journeys, meteorological work done by children and photos of them at work, observations by means of simple instruments, are alike admirable. Manchester School Board has a more formal exhibit—good of its kind, but not all Nature study; while London is disappointing. Nearly a hundred separate schools send in specimens and photos of pupils at work in the fields or in the school gardens. Three County Councils have anticipated the Education Bill by including the work of picked elementary schools in their collective exhibits. Cheshire selects nine schools, Hants seven, and Surrey nine, together with several day-school gardens. The maps of the districts shown by the Bunbury School, Cheshire, and Weybridge School, Surrey, attracted considerable attention, and received certificates of distinction; this work is highly educative, and quite the best way of teaching the elements of geography. There can be no doubt that the exhibition has proved that much more work in the direction of Nature study is being done than was supposed, and that our education is gradually becoming less bookish and more real, in spite of the wails of the despondent agriculturalists.

NOTES ON THE CHILD-STUDY CONFERENCE AT EDGE HILL TRAINING COLLEGE, MAY 9.

By A TEACHER.

FRIDAY AFTERNOON, MAY 9, 1902.—THE RECEPTION OF THE DELEGATES OF THE B.C.S.A. AT EDGE HILL TRAINING COLLEGE.

A SERIES of rapid, but distinct, impressions are taken during the first few seconds after one has entered the room, as the glance sweeps round and over all. These are they: There are few of those distressing spaces so depressing to a hostess; even now they are being rapidly filled up, and it is well within the first hour; this promises numerical success. The visitors are, for the most part, seated in tiny groups, chatting, very possibly, about the important Conference events of yesterday, to each other, or to some member of the college staff. On occasions of this sort no lady need suffer any anxiety connected with the dress question; it appears to be equally allowable to make oneself agreeable in a travelling costume, or to dispose an elegant silk train in picturesque folds on the floor, while having the satisfaction of making to fulfil its mission some afternoon blouse of fashionable fragility. The table at the far end of the room is a mildly refreshing sight; its tea equipage gives the room a home look. One notices the college colours in the long stalks of iris, an evident æsthetic decoration, joining with the apple-blossom picture and other floral wall-pictures (which one nods to mentally with the *camaraderie* of old acquaintance) to make a restful still-life fringe to the inner rectangle of life and movement. There is a lull in the subdued hum of voices as a part song, or Welsh song, is given by the students; ignorance greets knowledge with a respectful silence, while we listen blankly to a language as understandable to many of us as that of the Passamaquoddies.

One never realizes that the shape of a carrot matters much until one tries to model it, and succeeds only in making caricatures of Nature. Some of the inedible carrots which the students had almost finished modelling in clay were, however, certainly recognizable, for what they were intended to represent, by the child-study visitors to the college, who spent some well occupied moments, in this class-room full of students, looking at a variety of specimens of their Froebel work. Usually, those not initiated into the inner mysteries of the exercises connected with "Froebel's Gifts and Froebelian Occupations" cannot, at first, add sufficient imagination to what they see represented; and make-believes for the children are painfully or ludicrously difficult to reconcile with the group of ideas which the name calls up into consciousness. Children do not look at the world as grown-up people do, and Froebelianism in many ways helps the child-student to see as a child sees.

FRIDAY EVENING.—THE PRESIDENTIAL ADDRESS, AND THE DISCUSSION FOLLOWING.

We agree with the President in thinking that "stagnation is the result of routine work." The President's thought suggests a train of them. Routine work is following the so-called payments-by-results system into exile. The self-activity of what used to be called the faculties of our children must not be repressed; and it is striking a discord in the harmony of Nature if we introduce the ideas of adults among those belonging to an earlier stage in the history of the individual and of the race; these are present-day beliefs of many teachers. So far good! But, though the Land of Freedom is, undeniably, a fruitful

and beneficent one, it joins at one extremity the Land of Licence—we must not forget this. The stern old ways and rules of life are slackening for the young and for the adult. Is it humanitarianism or *laissez-faire* which makes us believe not in punishments? There is an acknowledged general tendency to float with the stream and not to row against it. When we have no wind and waves to occupy us we often fiddle or dream in our boats. This kind of life pleases the inherent idleness of our natures, and the next step is to make amusement and pleasure the aim of life. Is not this a way to degeneracy?

In the discussion which followed the Presidential address, one member spoke upon this very interesting matter of degeneracy in some of its other aspects from the medical standpoint. One felt sorry that the discussion could not turn upon this very important question for a time; there was more ground for expression of opinion in it than in the President's admirable address, which left unsaid whatever might be forecast to be debatable. The question of degeneracy, in its many phases, is one of the burning questions of the day, and, in our minds, at the time we heartily thanked the gentleman who brought it forward.

In the school world, how is it? Are we floating with the current or stemming it? In some schools this is the time of the year for choosing new school readers, and one naturally makes comparisons with the past ones. Year by year they become more gorgeously illustrated to make Herbert interested in the other contents of the book, which, in some cases, are becoming subordinated to the scheme of colour and form which occupies so much of the space between the paste-boards. Elsie must have fairy tales and pretty amusing stories; she doesn't like dry information. But Herberts and Elsie will probably have to do and bear many things in the grown-up days which they do not like. The President's voice struck in among these thoughts with the incontestable truism: "Schools should prepare for the probable future."

We were told also that it is a good thing to take our children to local museums. This is true; but there are teachers who would, without any hesitations or modifications whatsoever, put country excursions far before visits to museums. The President did not mention country excursions. When the children study mineral, plant, and animal where it is found naturally, the senses give them *Anschauung* in a very full way, and *Anschauung* is at the beginning of research work. The children can work accurately as little research students, with the teacher as guide and suggester, in the great laboratory of the open country. They can "observe, think, do, know." Only limited opportunities of doing part of these are possible in a museum. (Stress is laid on research work, because it is truth seeking.) Excursions into the country have a health advantage on their side not possessed by museum visits. In these days of nerves and ailments, the results of the departure from the natural, "we are far behind the greatest barbarians in the A B C of acts and actions" (gymnastics). Gymnasiums are the accompaniments of the artificialities of the age. Their exercises are needed; but let us have the less conventional physical exercises, too, if we can. A race down a hill in the sunshine, a climb in bracing moorland air give leg-drill and breathing exercises along with other health-giving accessories; while any one in need of special balance and arm exercise can be sent to climb for a flowering branch of sycamore at this time of the year, and join the group to examine the spoil, within eye-reach of the source of the subject of study. This is preferable, from physical and mental points of view, to looking at a mummy through a glass case in a musty-smelling room, and having the unsatisfactory ear-gate most in use for "Sie sollen es fassen nicht im Denken sondern in lebendiger Anschauung" (Fichte). There is a prospective moral good for society in country excursions, which give our boys and girls a love for pure air, sunshine, and what is naturally, and not artificially, beautiful. Nature study leads them to love animals, and that in itself will make the world less callous. Tinsel and paint, in murky yellow gaslight struggling through impure air, will have no attractions for a Nature lover.

"Girls should be educated as thoroughly as boys" caught the ears of girls' teachers. Some of us hoped to hear the President continue: "but in a different way." This he did not say; but we took it for granted that he meant it—that is, if we are to take seriously a previous statement that "schools should prepare for the probable future."

Some very good thoughts, altogether unconnected with the address, were voiced by those who took part in the discussion. It would be a good thing, one speaker suggested, if travel scholarships were more within the reach of teachers. Yes; but there ought to be a careful scheme, at the same time, connected with them to ensure that real merit wins the prizes. Two of the speakers who spoke from the medical point of view pleased, apparently, the thoughtful part of the audience by bringing to the front questions which need attentive consideration.

Miss Louch, of Cheltenham, gave much helpful advice to girls' teachers, many of whom would be pleased to hear her insist that backward children are not "stupid," but "interesting"—so they are, to a true teacher. When we think how much nearer to Nature children are than grown-up people, we feel sure that artificiality and insincerity must puzzle, distress, and even repel them; therefore we agree most heartily with the lady speaker in thinking that, "if our religion is to do any good to the children, it must be sincere."

From

MR. EDWARD ARNOLD'S LIST.

An entirely New Text-book of Arithmetic, based upon the most recent Methods of Instruction.

AN Arithmetic for Schools.

By J. P. KIRKMAN, M.A. Cambridge,

and A. E. FIELD, M.A. Oxford,

Assistant Masters at Bedford Grammar School.

500 pages, crown 8vo, with and without ANSWERS, 3s. 6d.

This work, which forms an addition to Arnold's already well known Mathematical Series, has been written with the object of supplying a Standard Text-book of Arithmetic, which is in all respects thoroughly up to date. The subject has been treated logically, and in such a manner as to promote good habits of thinking and a due understanding of the processes which underlie the practical use of numbers.

A large number of worked examples are given, and it is intended that these should illustrate methods of consecutive thought and economical arrangement of labour, rather than facilitate the reproduction of examples according to pattern, a dangerous practice that tends to inculcate purely mechanical habits. Many questions have been arranged in pairs, that the student may have an opportunity of strengthening weak points. In the hope of preventing the natural tendency towards the unnecessary performance of operations of Long Multiplication and Long Division, the Theorems of Remainders, Dissection into Factors and Prime Numbers have been introduced at an early stage.

JUST OUT.

ELEMENTARY GEOMETRY.

By W. C. FLETCHER, M.A.,

Head Master of the Liverpool Institute.

Crown 8vo, cloth, 1s. 6d.

This book is not meant as a substitute for a teacher. For good and evil we are relying now in schools on oral teaching, and a book is used as a guide and summary of results rather than as that from which knowledge is acquired. This volume is meant to contain the irreducible minimum of geometrical knowledge less than the whole of which is not worth considering as knowledge at all. It contains the whole substance of Euclid I.-IV. and VI., except the elegant, but unimportant, Proposition IV. 10.

A First Geometry Book.

A Simple Course of Exercises based on Experiment and Discovery, introductory to the Study of Geometry. By J. G. HAMILTON, B.A., Lecturer on Geometry at the Froebel Educational Institute; and F. KETTLER, B.A., Head Master of Clapham High School for Boys. Crown 8vo, fully Illustrated, cloth, 1s. ANSWERS (for Teachers only), 6d.

New Reading Books for Secondary Schools.

IN REALMS OF GOLD.

An English Reading Book for Junior Forms. Containing Folk-tales from many Lands, Stories from Homer, Virgil, Chaucer, Malory, Froissart, Shakespeare, Scott, and others. Illustrated with Black-and-white Reproductions of well-known Pictures. 224 pages, cloth, 1s. 3d.

IN THE WORLD OF BOOKS.

An English Reading Book for Middle Forms. Containing extracts from English Prose and Poetry by the best writers, selected to supply matter as suggestive as possible to the teacher of literature and general history. Illustrated with Black-and-white Reproductions of Pictures by Greuze, Turner, and other celebrated Artists. 256 pages, cloth, 1s. 6d.

ARNOLD'S New Shilling Geography. THE WORLD.

With Special Reference to

The British Isles and Empire.

160 pages, crown 8vo, cloth, 1s.

The writer of this new Elementary Geography has endeavoured to take a broad view of the subject, and to lead the pupil to the conclusion that the study of geography is not mere cape-hunting. The book is designed to form a companion to a good school atlas, and it is assumed throughout that, while using it, the pupil has the map before him. He is then shown how to examine it, and to make measurements from it, with the object of obtaining for himself much of the information which in the older type of geography manual would be formally tabulated and left to be learnt by rote—or neglected. "Can you teach geography to make people think?" asked Benjamin Jowett on one occasion. The task is not an impossible one, and this little book aims at being of some service in its performance.

Catalogues sent post free on application.

London: EDWARD ARNOLD, 37 Bedford Street, Strand.

UNIVERSITY OF LONDON.

Faculty of Economics and Political Science, including Commerce and Industry.

Mr. Murray begs to call the attention of Students to the following Works suited to the Examinations in the Faculty.

WORKS BY SIR HENRY S. MAINE, K.C.S.I.

ANCIENT LAW; its Connections with the Early History of Society, and its Relations to Modern Ideas. Sixteenth Edition. 8vo, 9s.

POPULAR GOVERNMENT. Four Essays. I. Prospects of Popular Government.—II. Nature of Democracy.—III. Age of Progress.—IV. Constitution of the United States. Fifth Edition. 8vo, 7s. 6d.

INTERNATIONAL LAW. The Whewell Lectures delivered at Cambridge in 1887. 8vo, 7s. 6d.

CHINA: Her History, Diplomacy, and Commerce, from the Earliest Times to the Present Day. By E. H. PARKER, Professor of Chinese at the Owens College; Acting Consul-General in Corea, Nov., 1886–Jan., 1887; Consul in Hainan, 1891–2, 1893–4; and in 1892–3 Adviser in Chinese Affairs to the Burma Government. With 19 Maps, &c. Large crown 8vo, 8s. net.

"Mr. E. H. Parker brings to bear upon his subject an experience, an amount of personal insight, and a capacity for criticism so unusual, as to endow his pages with an intrinsic merit practically unequalled. . . . Mr. Parker has produced a book which will be of value both on account of its wealth of information and independent criticism and for the additional light it sheds on Chinese topics treated of in other standard works."—*Pall Mall Gazette*.

ENGLISH COLONIZATION AND EMPIRE. By A. CALDECOTT, M.A. (Camb. and Lond.), sometime Fellow and Dean of St. John's College, Cambridge; University Extension Lecturer under the Cambridge Syndicate; Professor of Logic and Philosophy at King's College, London. With Maps and Plans. Crown 8vo, 3s. 6d. New Edition. With a new chapter, bringing the work entirely up to date, by F. A. KIRKPATRICK, M.A., University Extension Lecturer.

AN HISTORICAL REVIEW of the DEVELOPMENT OF GREATER BRITAIN. THE GROWTH OF THE EMPIRE. By A. W. JOSE. With many Coloured and other Maps and Diagrams. Crown 8vo, 6s.

"... an eminently useful book ... as serviceable as it is readable. It is systematic in method and accurate in statement."—*Globe*.
"... this excellent manual ... That the colonial history of Great Britain should be worthily told was a crying need, and we congratulate Australia upon producing the historian, and the historian upon the production of an admirable book."—*Daily Chronicle*.

COMMERCIAL KNOWLEDGE. A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handelswissenschaft* is designed for the use of students who intend to enter the higher branches of commercial life. It includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Tariffs; Employers' Liability; Commercial Travellers; Consuls, &c.

"The book should be used in every senior class both of our Board and private schools, and as an introduction to business life it should prove of great value."—*Statist*.

THE USE AND ABUSE OF MONEY. By W. CUNNINGHAM, D.D., Fellow of Trinity College, Cambridge; Professor of Economic Science, King's College, London. Crown 8vo, 3s.

CONTENTS:—Part I., Social Problems; Part II., Practical Questions; Part III., Personal Duty.

"To bring political economy down from the region of abstraction as Dr. Cunningham does, and to make it applicable to individual conduct, is not only perfectly legitimate, but a most fruitful and useful form of study. The whole book is worth reading, but especially the last chapters."—*British Weekly*.

* * Mr. Murray's Educational Catalogue, containing—

SIR WM. SMITH'S FAMOUS SERIES OF PRINCIPALS, SMALLER MANUALS, and DICTIONARIES; THE STUDENT'S MANUALS;

A SHORT HISTORY OF COINS AND CURRENCY.

By Lord AVEBURY, F.R.S., &c. With many Illustrations. Fcap. 8vo, 2s.

"... a treatise as fascinating as a romance."—*Outlook*.
"... a valuable and charmingly instructive member of Mr. Murray's excellent library."—*Glasgow Herald*.

A GENERAL HISTORY OF EUROPE, 350-1900.

By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each section. With Maps and Genealogical Tables. Crown 8vo, 9s.

"... a model of condensation, omitting no essential facts. . . . the volume is greatly enhanced by a wealth of maps and chronological and genealogical tables. Among general histories this will take a leading place."—*Dundee Advertiser*.

STUDENT'S HISTORY OF MODERN EUROPE.

From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition, thoroughly Revised. Crown 8vo, 7s. 6d.

"This is a work of sterling merit. It is an exhaustive compendium of the facts of the last four centuries, and at the same time an *histoire raisonnée* of the development of the modern European State system. It is characterized throughout by great clearness and masculine common sense."—*Oxford Magazine*.

STUDENT'S CONSTITUTIONAL HISTORY OF ENGLAND. From the Accession of Henry VII. to the Death of George II. By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

HALLAM'S CONSTITUTIONAL HISTORY OF ENGLAND, Chapters I. to IX. Bound together in One Volume for the special use of Candidates for the LONDON UNIVERSITY EXAMINATIONS. Crown 8vo, 5s.

NATIONAL EDUCATION. Essays towards a Constructive Policy. Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford. 8vo, 7s. 6d. net.

- 1.—**Aims and Methods.** By the EDITOR.
- 2.—**Church Schools and Religious Education.** By the Rev. BERNARD REYNOLDS, M.A.
- 3.—**Registration and Training of Teachers.** By FRANCIS STORR, B.A.
- 4.—**The Inspection of Secondary Schools.** By Sir JOSHUA G. FITCH.

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.
Situations Vacant and Engagements Wanted.—30 words for 2s.; each 10 words after, 6d.
Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.; each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."] All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

TRAINING COLLEGES OR STUDENT-TEACHERSHIPS?

AT last public opinion has pronounced clearly in favour of professional training for teachers in secondary schools, and a body of educational experts has declared that no secondary teacher shall (after the expiration of a short period of grace) be registered by Government as qualified to teach who has not gone through some course of training and passed some approved examination in the theory of teaching. In future it will not be sufficient for one to produce evidence merely of having received a satisfactory education; proof of scientific training for the profession will be equally a *sine qua non*. Mere empiricism, a mere following of traditional methods, however well these may have seemed to answer in the past, will not serve. There will have to be a systematic training, such as shall include intelligent study of the nature and needs of the child, some satisfactory acquaintance with psychology as applied to teaching, and with logic and ethics, and instruction in methods which have a logical basis in educational science. Also it will have to be a thoroughly *practical* training, for evidence of ability to teach will be required of all who seek registration by Government.

The attitude of those who have drawn up the Order in Council laying down regulations for the formation of a register of teachers shows plainly that the battle of training is won. But as to the when, the where, and the how of training there is no unanimity of opinion—probably there never can be any unanimity, probably also it is not desirable that there should be—for monotony is death, and life involves variety. Anyhow, we seem just now farther than ever from any agreement as to the best means of training. Yet surely there are some broad general principles upon which at least most of us would agree.

(1) When ought the professional training to come? Is it to be before graduation? (I use that term to include the getting of any of the certificates of general education recognized by the Order in Council.) Or is it to be after graduation? Or is the professional training to go on *pari passu* with the academic? For it to come before graduation seems harmful in two ways—wasteful of time, non-conservative of force. The girl (I write as a woman of women teachers) gets her training as a mere school-girl. She has not obtained the larger culture and the mental

development which the higher educational course would give her. And with her untrained school-girl mind, her limited experience, and her lack of the sense of responsibility, she comes to deal with the difficulties which confront the beginner in the work of education, both in the lecture-room and in the class-room. With these problems she would be far more competent to deal three years later.

Again, the girl whose professional training comes before graduation cannot go out at once to put into practice in the class-room, and to bring to the test of her own experience, the principles and methods in which she has been instructed in her professional course. She must lock them away to moulder and rust while she travels into fresh fields, and for the space of two or three years explores new regions of thought. Here is great waste of energy, great dissipation of force. When her academic course is over and she comes to teach she will probably find that she might almost as well not have had her year of professional training. Her mind will have been so long centred upon herself and her studies that she will be out of touch with children and their needs, and will find that she has forgotten much that she learnt in her training course.

If, again, the professional training go on side by side with the academical, as is the case in several of our Universities and University Colleges, there is, as those who work the system frankly confess, a distraction of mind injurious to both parts of the work and harassing to the student. The degree course is naturally that about which the student is most anxious; the other course is a secondary affair, and only half-hearted attention is given to it. The student probably takes a poorer degree than she would have done had she worked only for the degree, and she never becomes (as she ought to become) keenly interested in her professional training—it is a nuisance and a hindrance to her; whereas it should be a strong interest and a help.

If, then, there is one thing that seems clearer than another, surely it is that the professional training should come after the academical course, whatever the nature of that may be. If it be placed after that course, the student trained to habits of independent thought and work, with powers developed, and yet with mind absolutely free to give itself wholly to the professional course, enters on professional training in the best possible condition for profiting by it. Often strange and awkward at the work at first, such students usually shake off all that very quickly, enjoy the work, and do well. Many do well from the very first. For the study of a profession time is needed, leisure to ponder problems, to consider methods, to contemplate thoughtfully the great issues at stake in dealing with young, growing minds—such study is perfectly different in character from preparation for examinations and the sort of work necessary to get one's degree. It requires a mind at leisure from itself, a sympathetic attitude towards others, a mental condition incompatible with the claims made on one's energies in going through a graduate course. I have myself, in training young teachers, tried to combine the two courses, the academical and the professional, and have found the mistake of doing so. I have quite given up the attempt, and with us now the two courses are totally distinct.

2. The question of the best place and the question of the best means of training teachers form really but *one* question. For the place or the system which can afford the best means is of course the best—the how must settle the where.

The Order in Council recognizes three possibilities :—
(1) The courses of professional training devised by the Universities; (2) training colleges established for the express purpose of giving professional training; (3) the establishment of a system of student-teacherships. To the courses of training devised by the Universities so far, there seem to me two serious objections. The money difficulty has led the Universities to open their courses to students who have not yet completed their degree work. Such training is only a *pis aller*, perhaps better than nothing—though of that I am not sure—too often a mere *simulacrum* of training. Also there is far too little practical work. It is almost impossible for some of the Universities to get admission for their students to schools in which they may practise, and they have not practising schools of their own which at certain times may be manipulated wholly in the interests of students.

Of the work of training colleges I shall say something presently. Let us pass now to the third mode of training indicated.

The Order in Council seems to show a readiness on the part of the Board of Education to recognize as professionally trained those who have been student-teachers under supervision at some approved school for at least one year, and who have passed some approved examination in the theory of teaching.

Now, though the battle of training is won, the battle of the training colleges is not yet won. This clause in the Order in Council seems to show that, and the discussion which took place on June 14 last, at the Head Mistresses' Conference, on the question of training, showed that there are some amongst the members of the Association of Head Mistresses who are not altogether satisfied with the work of the training colleges, and who are wishful to attempt the training of teachers by making use of a system of student-teachership.

Now does the establishment of student-teachership as a mode of training mean that a small and very select number of our very best and largest schools, with good buildings and equipment, thorough organization, a first-class staff, money to spend on the work of training, and every means at their disposal necessary to make the training thoroughly efficient and liberal, shall become the training colleges of the future, training not only their own girls, but girls from other places of education? Does it mean that the training shall be post-graduate? Does it mean that the training department shall have its own properly qualified staff of lecturers and teachers of method? Does it mean that the number trained, while not too large for thorough work, shall be large enough to secure that variety of view and that *esprit de corps* essential to work of this kind? Does it mean that steps would be taken to get access for the students to other schools, and practice in other schools, besides the practice which their own school would afford? Does it mean also that facilities would be afforded for professional reading and for free discussion of the educational problems of the hour?

If it does mean all this, nothing happier could be conceived for the cause of training than that our great schools should put the topstone to their work by becoming training colleges. For every training college ought to be connected with and bound up with, ought to be an integral part of, a great school, in which all kinds of teaching can be seen and practised by the students. But the school *must become a training college*; it must fully organize a training department with a staff of its own and every means at disposal for doing the work of training thoroughly. Therefore, if the clause in the Draft Order in Council which authorizes student-teachership could in any way be construed to mean a system recognizing the formation of little groups of student-teachers working in schools under form mistresses without that large and liberal provision for training of which I have spoken, or if it could be construed to mean anything like the old system of student-teachership as so many of us have known it, there are numbers of heads of schools who would greatly regret that the clause had ever been inserted in the Draft Order. And, indeed, if our support of the principle of the clause could be interpreted by the general public as an expression of approval of what is usually understood by student-teachership, we should have done great harm to the cause of professional training for the teacher and true education for the child by giving our support to the clause. For anything like what is generally involved in "student-teachership" is to be deprecated on many grounds :—

1. The training course of the student-teacher is not by the wording of the clause bound to be post-graduate or post-academical. It might come, as it has almost always come in the case of the student-teachers of the past, *before* the academic course, and, if so, it would not come at the best time. It would have to be followed by an academical course; or there would be an attempt to combine the two courses, to the detriment of both. And, indeed, I very much fear that in most cases the student-teacher *would* be one who had not yet graduated, or gained whatever certificate of general education she might have chosen in place of a degree; for not many young people who had left school for three or four years to work for a degree would be prepared after that to become student-teachers either in their own school or in any other.

2. Poor schools would be tempted to try to get themselves "approved," and then to employ student-teachers, as a matter of economy; or, by remitting fees, schools might make use of the system of student-teachers to induce elder girls to stay on, to pass some examination which should bring credit to the school. The system seems one liable to many abuses.

There are here and there schools in which it is worked admirably; but in far too many the student-teachers are mere hacks and drudges, or they are set to do—and do it most incompetently—the most delicate and difficult and important of all work—the teaching of the lowest forms—or they simply idle away much of their time in irresponsible gossip, neither pupils nor mistresses, and often a source of friction and of mischief. In short, the evils of the student-teacher system are many—and very serious.

3. Is not a student-teacher usually a person who pays reduced fees or no fees at all? Would not student-teachership be understood by many to refer to the sort of arrangement covered by the odious expression “on mutual terms”? We shall never take our right place as a profession until we recognize that a person who wants to be trained to practise teaching must pay for the training, as surely as the doctor or the lawyer pays for his.

4. To train little groups of student-teachers in separate schools would be a most expensive matter, if the training is to be effectively done. Indeed, it is so costly a matter to train young teachers properly that only wealthy schools could do it adequately. If you have but half-a-dozen students, you must yet have your reference and lending library of educational works, you must have your teacher of method, who must be able to give his or her whole time to the students, and who must be a person of exceptional powers and knowledge, since he or she must be the lecturer on psychology and on teaching methods of all kinds, and must also be the critic and general supervisor of the practical work of the students, co-ordinating the theory of the lecture-room with the practice of the young teacher with the class. Nor would the teacher of method be the only lecturer needed.

5. But let us suppose, if you like, that we are to understand by “student-teachers” girls who have completed their academical course and girls who pay for their training, and let us suppose they are not student-teachers in the old sense at all, but quite a superior kind of article; let us suppose also that wherever they exist there is a mistress of method and at least one other lecturer at their disposal, and that they have access to libraries—even granted all that, they cannot in little groups working in ordinary schools up and down the country get an adequate training. They cannot get what a properly organized training college can give them.

And so now I come to speak of the third of the three modes of training mentioned in the Order in Council—the training-college course. In the training college the student has a whole staff of lecturers at her disposal. Psychology, logic, ethics; methods of teaching, both general methods and special; physiology in its bearing on school-work: hygiene and sanitation and their relation to school buildings and school conditions; class management and discipline—all these are dealt with by experts. Voice-production is studied; special training is given in blackboard drawing, and in the rapid making of illustrations before the class and other modes of visualizing facts. The history of education is studied and some of the most important works of thinkers on education are read. Special lectures are given from time to time by visiting lecturers. There is free discussion of educational problems—education becomes a question full of interest. The presence of a number of students all eagerly working at a professional training, in all the details of which each is keenly interested, stimulates and brings with it a breadth of professional culture and a widening of the view quite impossible when only a little handful of students work together in a school.

Then, again, the training college can get access for its students to other schools besides the one to which it is itself attached. We, for instance, at Camberwell have, during the last few years, besides the frequent practice in our own school of over four hundred girls, had our students practising in two private schools—one of them a large preparatory school for boys, an ordinary Board school, a higher-grade Board school, a Church elementary school, and a Church middle-class school.

I am afraid it is a difficulty for those at the head of training colleges to understand what it is in their modes of work with which the heads of schools are dissatisfied. But, if the heads of the colleges can meet (as we hope is to be accomplished shortly) some of the leading heads of schools for a conference on this question and have free and full discussion, it will surely be of very great service to us all. On the one hand, it must probably

be admitted that the colleges have been to blame in several ways.

1. The training they have given has not always been sufficiently practical. Pestalozzi talked of “that miserable divorce of words from things”; in too many of the training colleges, both the day colleges for elementary teachers and the secondary colleges, there has been a “miserable divorce of theory from practice.” You might almost as well undertake to train a doctor without his walking the hospitals as to train a teacher without a thoroughly equipped school of many classes in which practical work may be constantly studied. The training college needs a school into which the students may be turned loose whenever desirable; where they can be free to enter any classroom and see experienced teachers at their work; which during certain hours can be made their practising ground; the organization of which they can study; with the discipline of which they can become familiar; which can be their own school, to be known through and through, and not seen only at set times. Students should also be made definitely responsible for some part of the work of the school—giving courses of lessons, setting and correcting papers, making their own syllabuses; held responsible for the discipline and progress of the pupils in the subjects assigned them. The heads of schools need to bring all their influence to bear in the direction of securing a more practical sort of training.

2. Another evil, I fear, has been that the abler students in the colleges have not always had the kind of teaching practice that they most desired and needed. Where a college has no practising school of its own, or where its school is so small that it has no sixth form, and perhaps only a very small fifth, it is difficult to get teaching practice for students specially fitted and especially desirous to teach advanced work to older girls. Sometimes, too, the work of the colleges as a whole has seemed trivial to women of University training who have entered them. The better students need to be better cared for. Yet the colleges have perhaps been rather to be pitied than blamed for this; for they have had a good deal of poor material to work on, and in trying to do their best for the weaker students the abler ones have sometimes been fed with milk when they wanted strong meat.

3. The training course has sometimes been too short. It is matter of satisfaction that the Order in Council demands “at least one year” in a training college. We at Camberwell have often found it well to advise a student to remain an extra term, or even two terms, to get additional teaching practice.

4. We must admit that the tone of the training college student has not always been sufficiently humble; to use an expressive though inelegant colloquialism, she has been too “cock-sure,” she has too often worn the air of one who was perpetually wishing to assure the world that “It is we trained teachers who know.” But, if the colleges have had their faults, have not the heads of schools been sometimes a little unfair to the colleges? These young college-trained teachers must perforce be lacking in experience. Have not head mistresses often demanded too much of them? They are bound to make mistakes, and to fail more or less, as even we do sometimes, after all our years of experience. Perhaps, too, head mistresses have been a little unfair in another way. They have too often not encouraged their best pupils to get trained, but have sent to the colleges only their less promising pupils. This requirement of the Order in Council that *all* shall be trained will, it is to be hoped, send the colleges better as well as more plentiful material in future. Also, if it can only come to be recognized as a *sine qua non* that the academic course precede the professional, we shall have in this recognition a means of improving the material upon which the colleges have to work.

To sum up, it is devoutly to be hoped that—while, no doubt, many heads of schools will welcome the “student-teachership” clause (2, ii.) in the schedule of the Order in Council, as supplying a new means of training, and as making it possible for certain “approved” schools to become also training colleges for teachers—every effort will be made to secure (1) that only those schools shall be approved which are so equipped and staffed as to be able to fully organize a training department and to furnish liberal and comprehensive training of a strictly professional character; (2) that only students who have already completed their graduate or academical course shall be accepted as “student-teachers”; (3) that proper fees shall be charged to

students thus seeking training, while at the same time really promising but needy students are aided as far as possible by means of bursaries and loans; and (4) that the work shall be done under regulations laid down by one of the Universities (*i.e.*, Cambridge or Oxford), and that the examinations taken by the students, and the diplomas granted to them, shall be those of the University to which the training department of the school is affiliated.

CAROLINE E. RIGG.

TEACHERS' GUILD NOTES.

THE Council of the Guild have amended Leaflet No. 6, on "Educational Legislation and the Future of the Higher-Grade School," in accordance with the resolution of the Annual General Meeting in May last, and will publish it in its new form in the *Teachers' Guild Quarterly*, October 15. The original leaflet was published in October, 1901, and the new draft speaks as at that date. It is hoped that, in its new form, the leaflet may be acceptable to all members of the Guild.

MEMBERS are asked to bear in mind that there will be a General Conference of the Guild at Plymouth in the week after Easter Week, 1903. Among the subjects for discussion will be the following:—(1) "The Essentials of a School Curriculum (a) for Girls leaving School at sixteen or seventeen years of age, (b) for Boys leaving School at sixteen or seventeen years of age"; (2) "The Essential Principles of Educational Hand-work"; (3) "At what Stage or Stages should Nature-Study become (a) Botany and (b) Physical Science respectively?"; (4) "On what Conditions should a Secondary School become a 'Recognized School' so as to satisfy the various requirements of the Order in Council establishing a Register of Teachers?" A careful selection of proposed openers of discussion has been made, and some authorities in the United States on the subjects chosen will be invited to send short papers. The distance of Plymouth from London will deter many members from attending the Conference, but it is hoped that not a few will make a special effort to be present. Outlying branches welcome with special pleasure opportunities of intercourse with fellow-teachers from a distance.

CORRESPONDENCE.

THE REPORT OF THE COMMITTEE ON MILITARY EDUCATION.

To the Editor of The Journal of Education.

SIR,—Your Occasional Notes on this report tempt me to ask leave to say a few words about it. The *Times* regards it as "a sweeping condemnation of the methods by which young officers are generally educated before joining the Army, and technically trained after receiving their commissions," and you seem to see in it a breakdown of the competitive system. "Is it possible," you ask, "that the application needed to ensure entrance to Woolwich or Sandhurst in itself destroys the wider development of intelligence that is known as common sense?"

As I read the report and evidence the upshot is quite the opposite of this. It would be possible, no doubt, to make out a strong case against paper examinations from the incidents of the late war; to contrast the wily but unlettered Boer with the product turned out by Army coaches and military colleges. But the evidence on which the Committee lay stress, and which has so startled the public, is not at all to this effect. Lord Roberts, for instance, has no fault to find with the young officers physically or morally; but their education should be higher. Many of them cannot make satisfactory reports from lack of the power of expression. Colonel Henderson brings out the military importance of this point: "An officer who cannot express himself clearly cannot write clear orders or clear reports, and a great deal depends on the character of orders and reports." When it comes to technical training there is a want of keenness among them. Their idea is, according to Sir Ian Hamilton, to do as little as they possibly can. I feel quite

certain," says Sir Evelyn Wood: "that you must have an examination to make my brethren work; I am very sorry to admit it, but it is the fact that the greater number of boys will not work unless you put a fence in front of them that they have got to get over."

It is true that some people are inclined to argue that this want of keenness is the reaction from over-strain, but it is least perceptible in those corps where the strain has been most severe. "Do you consider that that word 'stale' is rather a catchword without much meaning?" asked Mr. Walker; and the answer of the Commandant at Chatham was: "I think staleness is the loss of stimulus." What seems to be wanted, then, is that we should go forward rather than go back, raise our standards, and find inducements to more sustained efforts. There is nothing to show that we have been working on the wrong lines, but we have been too half-hearted about the lines we have worked on.

Take the case of Sandhurst. A Committee has usually some particular *raison d'être*, and it looks rather as if the *raison d'être* of this one was to give the *coup de grâce* to Sandhurst. Fourteen years ago Lord Harris's Committee reported in favour of the retention of Woolwich and Sandhurst, on the ground that State-aided military colleges furnished the best means of training young men to be officers, and that the benefit to the service was sufficient to justify the expenditure. Since then the demand for officers has been steadily increasing, but it has not been met by the enlargement of Sandhurst. The course has been reduced from eighteen months to one year, to the detriment of the finished product, but the extra supply has been mainly drawn from other sources.

A back door into the Army was hit upon, by way of the Militia, which circumvented the examiner and was much appreciated by rich and influential people who had backward boys. In time there came to be such a run upon this back door that even here there was something of a competitive examination to be faced. But this method had another merit—it helped to solve the difficult problem of finding subalterns for the Militia. True, they are "birds of passage," but one flight succeeds another. Hence we find colonels of Militia, men like the Duke of Bedford, Lord Selborne, and Lord Raglan, strong advocates of this mode of entering the Army.

The demand for officers was more than trebled by the war, and every possible source of supply had to be tapped. Excellent men have been obtained on emergencies by nomination from the Universities. Military idealists feel that it would be a good thing to secure a permanent infusion of University culture among officers of the Army, and they are quite right if they can get the genuine article—the man who has taken his degree, and not the man who has merely read for twelve months at Oxford or Cambridge with an Army coach. The Universities, for their part—English, Scotch, and Irish—welcome the prospect of fresh rewards to offer to their students, and are ready to do what they can to meet military demands.

All these different interests are more or less adverse to Sandhurst, and they are reinforced by the Treasury, which would like to shift the whole cost of education from the public to the parents. They are also supported by the crammers, who have a fruitful field with Militia candidates. And they have lately had another ally. Till 1899 there was a Director-General of Military Education, whose business it was to consider the subject as a whole, and to make himself familiar with its problems and its fallacies. Four years ago this office was abolished, and the supervision of military education was entrusted to the Military Secretary—a most unsuitable arrangement, as Lord Roberts remarks. The late Military Secretary, Sir Coleridge Grove, was strongly in favour of University candidates for the Army; he was very doubtful, "or more than doubtful, whether it is desirable to retain Sandhurst at all."

It is not surprising, then, that the Committee started on their inquiry with a distinct bias against Sandhurst. They put leading questions dwelling upon its cost, and underrating (owing to some mistake) the extent to which it could meet the requirements of the Army. But the balance of evidence proved to be so distinctly in favour of the Sandhurst training that, instead of recommending the abolition of the College, the Committee has recommended its enlargement and the extension of the course to two years. In this, as in most other points, they have shown sound judgment; but what I want to em-

phasize is that their report is not a sweeping condemnation of the methods by which young men have hitherto been educated for the Army, but rather an endorsement of these methods, if thoroughly carried out.

I should like to add a few words with reference to the speech made by Lord Lansdowne in the House of Lords on July 17. It was he who abolished the office of Director-General of Military Education, and he gives singular grounds for his action. He says the Director-General was not under the military side of the War Office, but was an official subordinate to the Secretary of State. Surely, if a change was advisable in that respect, it could have been made without abolishing the office. He dwells upon the very large number of officers that have been needed for the war, and says: "I maintain that, if at that time of stress you had two different officials, the one responsible for testing the fitness of candidates, and the other for appointing and selecting them, it would have been impossible to bring in that great number of young officers into the Army as rapidly and as smoothly as we did." This can only mean that a Director-General would have been more exacting than the Military Secretary who took over the duties; but why should it be supposed that he would have been more exacting than circumstances warranted and the good of the service required? Young officers, like remounts, may be passed too rapidly and smoothly.

Lord Lansdowne says it was not always possible to find an incumbent for the office possessing any special aptitude for dealing with educational problems. Is that a good reason for assigning the duties to an officer selected for quite other aptitudes, and who could devote to those problems only a fraction of his time, instead of the whole? He lays stress on the great ability of Sir Coleridge Grove, which no one would question; but General Grove himself told the Committee that circumstances had prevented his taking hold of military education as he would have wished. His time was absolutely occupied with his other duties owing to the war, and it was not the moment for any important alterations.

Lord Lansdowne urges that, if Sandhurst has got into a bad way, and military education is deficient in other respects, that at any rate shows that the existence of the office of Director-General afforded no guarantee against deterioration. As regards Sandhurst, he says that long before the recent disturbances Mr. Brodrick had made up his mind that radical changes, both in the *personnel* and in the system of Sandhurst, were inevitable.

But it is now more than four years since the office was vacated, the last Director-General being retired on account of age on March 14, 1898. The present Governor of Sandhurst was appointed several months afterwards, and the length of the Sandhurst course was reduced on account of the war. This has happened under the *régime* of a Military Secretary who was a disbeliever in Sandhurst, and who (as Lord Lansdowne mentioned) originated this Committee, which was to consider whether it should be maintained. That the present state of things there is unsatisfactory is due, no doubt, to a combination of causes, especially to the unprecedented stress of the war. But it is preposterous to say that it shows the valuelessness of the office which Lord Lansdowne thought fit to abolish.

As regards the training of the young officer after he has received his commission, I will not trespass on your patience. It is a large subject, bound up with Army organization, and was apt to carry the Committee out of their depth. It is almost grotesque to see Dr. Warre expounding to Lord Roberts an improved method of supplying drafts to regiments serving abroad. There is no question that the training of the young officer depends above all things upon the competence of those over him, and the experience of the South African war will do more for it than the report of any Committee.—I am, Sir, Yours faithfully,

E. M. LLOYD, Lt.-Col.

Sutton, July 18, 1902.

INSPECTION OF SECONDARY SCHOOLS.

To the Editor of The Journal of Education.

SIR,—Mr. Humberstone's article on the "Inspection of Secondary Schools" is an evidence of the growing interest of the profession in the administrative changes which the Board of Education have already introduced into some schools, and to which many eyes at the present moment are turned with anxiety. Much that he has written will commend itself unreservedly to the general reader, but it is doubtful whether he

has not exaggerated the tendency to "petty fault finding" which his acquaintance with the inspectorate has revealed to him.

It may not be unwelcome to members of the profession contemplating with mixed feelings inspection in the near future to know that in the experience of several years of inspection the writer has invariably been visited by men of culture and tact keenly alive to appreciate efforts to improve the condition of the work in the schools they inspect. I write efforts advisedly, because in many secondary schools seeking support from public schools, the *results* are, from a multiplicity of causes (not in most cases the fault of the staff), below the standard that responsible teachers themselves wish to produce.

Much has been said and written lately about the poor prospects attending entry on the teaching profession, and the alleged dismal outlook has been thrust forward as some excuse for neglect of professional training on the part of would-be teachers. If the latter will take the trouble to make themselves efficient in the business of the class-room, they will find that there will be little room for fault finding by men conscientiously administering the rules of a public office. The list of public appointments in the papers shows that the teaching profession contains as fair a proportion of prizes as any other vocation needing little initial capital.

Perhaps the compilers of the Board of Education Directory are to blame for not having stated adequately the academical qualifications of the inspectorate. The public, who are paying for the machinery of education, have at least the right to know the qualifications of the men selected to serve them, and a full statement of the academical or other equipment of the inspectorate would inspire confidence, which in some quarters evidently does not exist.—I am, Sir, yours faithfully,

A. E. SHAW.

Lord Williams's Grammar School, Thame, Oxon.

DIVINITY COURSE FOR LADY STUDENTS.

To the Editor of The Journal of Education.

DEAR SIR,—A course of divinity lectures for lady students has been most successfully carried on at Westfield College, Hampstead, under the superintendence of the mistress, Miss Maynard, during the session that is just over. We, who have attended the course, feel that these lectures have been of the greatest possible help to us, and we wish to make them more widely known through the medium of your *Journal* in order that others may have a similar privilege next session.

We have felt the extreme difficulty of bringing into one consistent whole the various areas of knowledge, and have feared the effects of scientific methods when applied to religious thought. These lectures have supplied just what we needed. We know that many have the same difficulty, and these lectures are intended for those who are, or expect to be, engaged in educational, literary, or missionary work—more particularly students who have had some collegiate training. The course of lectures comprises most of the subjects where difficulties arise:—(1) Criticism of the Old and New Testaments; (2) The Creed and I.-V. of the Articles of Religion of the Church of England; (3) Church History—specially the Reformation; (4) The first two chapters of Genesis in relation to Modern Science; (5) The Inspiration of the Bible; (6) The Problem of Evil, &c.

The lectures are given by Miss Maynard herself, and the Revs. G. A. Schneider (Cambridge), J. M. Willoughby, and C. Anderson Scott. The whole course occupies a session, but a student may take up work for any one term.

We feel that at this juncture Christians of *all* denominations need help in meeting (1) the indifference of the world to the great questions of religion, (2) the attacks made on Holy Scripture itself from various quarters, (3) difficulties arising in our own minds by the apparent irreconcilability of modern thought with the Christian position.

The next term begins in October. Detailed particulars can be obtained from the Secretary, Westfield College, Hampstead, N.W.—We are, yours faithfully,

MARY MORLEY, President London Y.W.C.A.

ELLEN STONES, formerly of the Missionary Settlement for University Women, Bombay.

MARGARET E. BUCHANAN, Gordon Hall, Gordon Square, W.C.

June 28, 1902.

THE MANNERS OF HEAD MASTERS.

To the Editor of The Journal of Education.

SIR,—Nothing is more indicative of the contempt felt for assistant masters than the way in which head masters treat applications for appointments. I have written many applications, and find that they are very rarely acknowledged, and hardly ever returned. The return of the application itself, of course, does not matter. But there are

printed testimonials which it would be easy and not costly to return. Occasionally, too, a candidate may send a copy of some pamphlet or review article he has written. It all goes into the waste-paper basket.

Some time ago, having been offered a post, I wrote to another head master to ask whether I had any chance of getting a more important appointment for which I had previously applied. I have had no reply whatever, and have asked in vain for a return of my papers.

Clerks and secretaries of governing bodies are, as a rule, more courteous. Some head masters, too, at any rate take the trouble to inform unsuccessful candidates of the fact that the post is filled up. But, as a rule, unless one gets into the rank of a "selected" candidate, one might as well drop one's application into the sea as into the letter-box. It would have a nearly equal chance of coming back.

The fact that assistant masters have to pay the whole of the agent's commission is an injustice of such long standing that no one appears to take any notice of it.

There was a tradition once that head masters were gentlemen as well as scholars.—Yours faithfully, _____ A SCIENCE MASTER.

UNIVERSITY OF LONDON INTERNAL EXAMINATIONS.

To the Editor of The Journal of Education.

SIR,—The process of destroying the unique character of the degrees of the University of London proceeds apace. Not content with allowing a student to matriculate in English, Mathematics, Elementary Mechanics, Portuguese, and Geometrical Drawing, the Senate have now made inroads into the Intermediate Examinations. A case has recently been brought to my notice which shows how the new system works. A student at the Royal College of Science enrolled himself recently as an internal student of the University. For a year he prepared himself in the four subjects that he intended to offer for the Intermediate Examination in Science—Chemistry, Physics, Mechanics, and mathematics. As Mechanics are not taught on present examination lines by Prof. Perry, at the college, and as a very low standard of Mathematics is required, this student had spent some time and money in extra preparation of these subjects. *Three days before* the examination commenced, he received an official letter, informing him that, as he had passed the College examinations in Mechanics and Geology, he would be required to offer only two subjects at the Intermediate Science, instead of four. Naturally he was overjoyed at escaping examination in his two weak subjects; but is the University upholding its traditions by accepting lower examinations in lieu of its own? I acknowledge that the difficulties attendant on the co-ordination of higher education in London are huge; but the University should see that it accepts only examinations that are of an equal or higher grade than its own. Even Oxford and Cambridge do this.—Yours, &c., _____ B. B.

THE REGISTER.

To the Editor of The Journal of Education.

DEAR SIR,—In your note in the July number, on a *Schoolmasters' Year Book*, you state that I am misinformed in saying that it has not yet been decided whether the Government Register is to be published. Will you allow me to say that I had this statement on very good authority? By "published" my informant, no doubt, meant printed and sold, and I still think it is doubtful whether the Government Register will be printed and sold for some time yet. There is no immediate need for publishing the names of those who are to appear in Column A of the Register, and it is quite possible there will not be sufficient names in Column B to make it worth while to print the Register for some time yet; although, no doubt, it will in the end be printed and sold. You also say: "We may safely assume that Column A and Column B will appear in separate volumes." You may be interested to know that I have been told by one who is entitled to speak with authority upon the subject that there is no likelihood that Column A and B will be published separately. I thank you for your kind treatment to the *Schoolmasters' Year Book*, and trust you will allow me to make this explanation.—Yours faithfully,

THE EDITOR OF THE "SCHOOLMASTERS' YEAR BOOK."

ARCHDEACON SANDFORD gives two interesting personal reminiscences to illustrate the educational advance that has taken place in the last fifty years. "I well remember when I was a boy at the commencement of the Crimean War hearing the frank admission of an old dame-mistress 'that she would rather face an army of Rooshans than one of them inspectors.'" He also recalls a friendly visit of surprise to another kindly old dame "keeping school" in a by-street of Exeter—"She bore the gentle inquisition for a few minutes and then broke forth: 'The children can't go beyond 8 times 7, for I can't go no further myself.'"

REVIEWS AND MINOR NOTICES.

The Life of Napoleon I. 2 vols. By J. H. ROSE.
(Price 18s. net. Bell.)

Mr. Rose has amply justified his undertaking. Vast as is the bulk of Napoleonic literature, there was no English life of the great Emperor which could be described as full, fair, and up to date, except that of Prof. Sloane. That, with all its merits, cannot be said to defy competition: a history cannot be built up of magazine articles without some sacrifices. Mr. Rose has wisely chosen to keep in the background the personal details about which so much has been written of late years. He takes as his text Napoleon's saying: "Je suis tout à fait un être politique," and focusses attention upon the part he played as soldier and statesman. He is thoroughly familiar, not only with the man, but with the period; has turned to account all the best literature on the subject; and has himself made important additions to the common stock of materials by his researches in the English Record Office.

At the same time he is not encumbered by his learning. He moves lightly, his narrative is clear and spirited, and he has a due sense of proportion. Now and then there is a misplaced figure of speech, as where he says of Barras that he was "privileged to hold the stirrup for the great captain who vaulted lightly into the saddle"; but these are few and far between.

Like Seeley and Vandal, Mr. Rose finds the keynote of Napoleon's policy in his wish to found a great colonial empire, and his antagonism to England as the obstacle in his way. This was what led him to reject Talleyrand's advice to make a firm friend of Austria after Austerlitz. He wished to build up his Continental system against English commerce, and for that purpose Austria was of less value to him than Russia and Prussia. In illustration of this point of view, Mr. Rose describes the expedition sent to Australia in 1800, nominally in the interests of geography and science, but really with political aims; and he reproduces a map from the atlas which accompanied the official report of it, published in 1807, the year of the Tilsit Treaty. In this map what is now known as Victoria and South Australia bears the name of Terre Napoléon, and Spencer Gulf is Golfe Bonaparte.

This clue may be traced throughout the whole course of Napoleon's history, and substitutes a rational method for mere lust of domination as the explanation even of the disastrous blunders of Spain and Moscow. None the less, in pursuing this object the impatient and overbearing temper of the man defeated itself. Mr. Rose is probably right in believing that the rupture of the Peace of Amiens came sooner than Napoleon wished. He would have preferred to wait till his navy was ready; but he had relied upon bluff, and "it was not in him to give way." Such miscalculation was repeated again and again, down to the conferences at Chatillon. "La première qualité d'un général en chef," he once said, "est d'avoir une tête froide, qui reçoive des impressions justes des objets, qui ne s'échauffe jamais, ne se laisse pas éblouir, éni vrer par les bonnes ou mauvaises nouvelles"; but in this foremost quality he was often lacking.

In dealing with the most questionable passages of Napoleon's career, Mr. Rose is apt to go too far as an apologist. Few will agree with him that Napoleon's "reluctant assent" to the massacre of prisoners at Jaffa "contrasts favourably with the unhesitating conduct of Cromwell at Drogheda." As regards his relations with the Robespierres, it may be questioned whether "it is impossible to conceive him clinging to the skirts of the terrorists from a mean hope of prospective favours." Napoleon habitually held that he was not to be judged by the ordinary rules of humanity: as Madame de Staël put it, he was more and less than a man.

On the other hand, Mr. Rose is too much inclined to find fault with successive British Ministries, whether in their dealings with Napoleon or with their Continental allies. If the latter had in some cases grounds of complaint, the balance of the debtor and creditor account as a whole was heavily against them. But the most serious charge is that of complicity in the royalist plot to assassinate the First Consul: "When all is said, the British Government must stand accused of one of the most heinous of crimes." No such admission as this should be made without strong evidence; yet the proofs presented are such as to

lead Mr. Rose himself to say that "the royalist plans, as revealed to our officials, mainly concerned a rising in Normandy and Brittany.

In a general biography of Napoleon on the scale of this one it is difficult to give clear descriptions of his battles, but there is the more need for care and accuracy in the few lines admissible. The following is not a good account of the crisis at Borodino, the storming of the great redoubt :—

Of a sudden, a mass of cuirassiers rushed forth from the invaders' ranks, flung itself uphill, and girdled the grim earthwork with a stream of flashing steel. There, for a brief space, it was stayed by the tough Muscovite lines, until another billow of horsemen, marshalled by Grouchy and Chastel, swept all before it, took the redoubt on its weak reverse, and overwhelmed its devoted defenders.

The writer of this is certainly not entitled to speak slightly of the frothy narrative of the melodramatic Ségur.

A few mistakes of no great importance may be pointed out. It is unfair to Harris and Baird to speak of Arthur Wellesley's capture of Seringapatam (Vol. I., page 373). Of Quatre Bras it is said (Vol. II., page 475): "Twilight set in before an adequate force of British cavalry and artillery approached the field where their comrades on foot had for five hours held up in unequal contest against cannon, sabre, and lance. The victory was due to the strange power of the British soldier to save the situation when it seems past hope." Owing to D'Erlon's absence, Wellington had actually more men at his disposal than Ney, after about 3 p.m. Dörnberg was not one of Blücher's officers (Vol. II., page 459); he commanded a cavalry brigade under Wellington. Sir Henry Bunbury was not Secretary to the Admiralty (Vol. II., page 523), but Under-Secretary of State for War. Lord Howick is spoken of as Earl Howick (Vol. II., page 116).

The last chapter of the book gives an admirable account of Napoleon at St. Helena, and should serve as a good antidote to the sentimentalism of "The Last Phase." How hollow and factitious were the complaints of ill-usage is shown by the evidence of Las Cases and Montholon. The former wrote in his journal (November 30, 1815): "It was necessary to reduce into a system our demeanour, our words, our sentiments, even our privations, in order that we might thereby excite a lively interest in a large portion of the population of Europe, and that the opposition in England might not fail to attack the Ministry on the violence of their conduct towards us." Montholon wrote to his wife the day after Napoleon's death: "C'est dans notre malheur une grande consolation pour nous d'avoir acquis la preuve que sa mort n'est, et n'a pu être, en aucune manière le résultat de sa captivité." Yet he afterwards maintained that the death had been due to a liver complaint endemic to St. Helena. A word of praise should be given to the reproductions of well chosen engravings and medals with which the volumes are liberally illustrated.

Philosophy: its Scope and Relations. By the late HENRY SIDGWICK. (Price 6s. 6d. net. Macmillan.)

This volume forms a valuable supplement to the works of its much regretted author on ethics and politics. It has not had the advantage of his revision, but it has been put together, in accordance with his wish, from separate courses of lectures which to some extent overlapped. The editor, Prof. James Ward, has been assisted by Mrs. Sidgwick, and has done his work so skilfully that the twelve lectures into which the material has been digested form a whole.

Philosophy, as here defined, is *scientia scientiarum*, the study which takes all knowledge for its province. It deals, "not with the whole matter of any science, but with the most important of its special notions, its fundamental principles, its distinctive method, its main conclusions. Philosophy examines these with the view of co-ordinating them with the fundamental notions and principles, methods and conclusions, of other sciences." So far the author is in agreement with Mr. Herbert Spencer; but he is careful to point out where they part company, and his attitude to Mr. Spencer throughout the book is mainly dissentient.

He goes on to consider the relation of philosophy to special fields of knowledge—psychology, metaphysics, epistemology, history, and sociology. This leads him back to the distinction, drawn at the outset, between theoretical and practical philosophy. Theoretical philosophy deals with what is, practical

philosophy deals with what ought to be; in other words, they are concerned respectively with the actual and the ideal. The one aims at systematization of sciences, the other at systematization of arts, including ethics and politics. The author allows that the distinction between art and science must not be made too profound—that it is a difference in point of view rather than in basis; but, nevertheless, the distinction is one on which he lays great stress, and his tendency is to exalt and enlarge the field of practical philosophy.

Prof. Sidgwick was essentially tolerant and broad-minded, and his aim was to arrive at comprehensive definitions suitable for all schools, but it may be questioned whether the differences are not too fundamental for his formulæ. The intuitionist would perhaps be ready to say: "Leave me the province of practical philosophy and you may do as you please with theoretical"; but the evolutionist will hardly admit that any such province exists. He sees that there is a practical side to all knowledge, that laws of science may be restated as rules, and that imagination builds up ideals from the actual; but it is another thing to erect separate tabernacles, one for what is, another for what ought to be. The latter term includes two different ideas—duty and preference—and our systems of ethics are divided as to the relation of these ideas. Our preferences, at all events, are much too intimately bound up with our physical constitution to be taken out of the field of theoretical philosophy.

In dealing with the relation of philosophy to history, the author is chiefly concerned with the so-called "historical method," which, according to some enthusiastic admirers, has "invaded and transformed all departments of thought." He regards progressivism as the most plausible form of this method, and takes Comte's law of the three stages as a conspicuous example of it. With much that he has to say in abatement of its pretensions we are quite ready to agree. Comte's generalization in particular does not seem to deserve the notoriety it has obtained. Strictly speaking, the stages are two, not three—the anthropomorphic and the physical. In the first, men reason from man to nature, and explain everything by will; in the second, they reason back from nature to man, and explain everything (man's own actions included) by law; or, in other words, uniformities of sequence. But the historical, or comparative, method is surely something different from such generalization; it is a protest against rash deduction from scanty induction.

But, whether we agree with Prof. Sidgwick or not, it need hardly be said that he is always readable, always suggestive.

The Education of the American Citizen. By ARTHUR TWINING HADLEY. (8 $\frac{3}{4}$ × 5 $\frac{3}{4}$ in., pp. x., 231; price 8s. 6d. net. Edward Arnold.)

This handsome volume is one of the Yale bicentennial publications, and its author is President of Yale University. It is not a book on pedagogy, but a collection of fourteen addresses and magazine articles, with, for their connecting theme, the preparation of young Americans best fitted to enable them to play their parts effectively as citizens of a free State. The main plea in each case is that too much stress has been laid on the mechanism of government and industry, and far too little on the formation of personal character. The problem has been that of preparing men and women to take their several places in a social machine rather than that of developing the power and spirit, the public sentiment, upon which the perpetuation of the whole social order depends. Political needs and the difficult questions of human society require for their proper treatment, not axioms of metaphysics nor machinery of legislation merely, but character—men and women strong in purpose, enlightened, and filled to the full with an earnest and honourable desire to devote the best that lies in them to the welfare of the whole State. The book is very ably and interestingly written, and deserves a much longer and fuller notice than we can give it here. It is evident that President Hadley "the faith and morals holds that Milton held." He has the same proud belief in public duty which Milton had, and much of the same strength in making his points, but without harshness and mere rhetorical ornament.

If we may be allowed to make any choice out of so much that is good, we would name as the chapters that have appealed to us most "Government by Public Opinion," "Socialism and Social Reform," "The Relations between Economics and Politics," "Economic Theory and Political Morality," "Ethics

as a Political Science," and "Political Education," and of these the second and the last seem to us the strongest and wisest. Where the arguments are so closely knit, and purple patches conspicuous by their absence, it is not easy to make quotations. But in the case of the former paper we would call attention to the clearness and fairness with which the *pros* and *cons* of the individualist and the socialist are stated, the contrast between the men of emotion and the men of reason in matters of government and social reform, and the reference to the danger in this connexion "that so many good people make very little distinction between what is emotional and what is moral. They think that calculated conduct is selfish conduct, and that unselfishness can exist only in the emotional as opposed to the intellectual sphere. Many a man gives charity to a pauper upon impulse, and thinks he is doing a good deed, when he is really shutting his eyes to the consequences of an evil one. 'Virtue,' says a French writer, 'is more dangerous than vice, because its excesses are not subject to the restraints of conscience.'" After which follow some more arguments on both sides, with, as a final result: "A nation must let intellect rule over emotion, whether it likes intellect or not. The alternative is political and industrial suicide."

In the case of the address on "Political Education," we are led to consider what colleges and Universities can do in the matter; in the course of which we are incidentally given an admirable view of some of the most important functions of a University; and some severe, but perfectly just, criticisms are passed on the teaching of politics, civics, and finance as constituting a necessary and valuable training for citizenship. "As ordinarily taught, they tend to fix the attention of the pupil on the mechanism of free government rather than on its underlying principles. They exaggerate the tendency, which is too strong at best, towards laying stress on institutions, rather than on character, as a means of social salvation. They tend to prepare the minds of the next generation to look to superficial remedies for political evils, instead of seeing that the only true remedy lies in the creation of a sound public sentiment. 'The value of political fact is great, but that of political ideals is greater. The three things emphasized in the course of study at a University are: it must mainly, if not entirely, deal with subjects which are non-professional; it must deal with things which are permanent and not ephemeral, which have stood the test of more than one generation, and may serve as a permanent basis of thought, and are not merely of temporary use; and it must deal with principles and large affairs rather than small ones. Original research is very valuable in its right place; but the main business of a University is to put to educational use what we already know—to provide, in short, a really liberal education, rather than specialization along any particular line of business. But we will not attempt to summarize further, or to quote more fully. We might preserve the letter, but the spirit would inevitably escape. The book itself is its own best explanation, and it requires and deserves a careful reading. We wish it every success."

"The Works of Shakespeare."—(1) *The Tragedy of Julius Caesar*. Edited by MICHAEL MACMILLAN. (8¾ x 5¾ in., pp. xciii., 179; price 3s. 6d. Methuen.) (2) *The Tempest*. Edited by MORTON LUCE. (Same size, pp. lxx., 184. Same price and publisher.)

We have already noticed more than one volume of this beautiful and scholarly edition of Shakespeare's plays. The two volumes before us are perhaps slightly more fully annotated than their predecessors, but in no sense too fully annotated; and the same scholarly and conservative care is shown with regard to the text. The printing and binding are both excellent.

(1) Mr. Macmillan tells us that he has not had the temerity to suggest many new readings. We quite approve of the dash at the end of IV. iii. 5, and are somewhat sorry that the reading suggested in the note to III. i. 171 was not adopted by Mr. Macmillan, for it makes very good sense and has the authority of all the Folios. Though the generally accepted emendation is undoubtedly neater, still it is an emendation, and is not really necessary. We agree with the editor in his other decisions as to doubtful readings, though some are very tempting, except perhaps in the case of III. ii. 118, where we would adopt his proposal to insert "that" before "has he," and drop the note of interrogation. Mr. Macmillan refers us also to the interpretation which he suggests for III. i. 174, 175, without introducing

any emendation. We cannot say that it seems to us very plausible. The reading adopted in the text is that of all the Folios, viz.:

Our arms, in strength of malice, and our hearts,
Of brothers' temper, do receive you in.

The editor suggests as the interpretation "our arms and hearts of brothers' temper in strength of malice"; and adds, Brutus means that towards him they had no more malice than brothers have towards one another; the disarrangement being probably due to "and our hearts" having been added as an afterthought. This is ingenious, but unconvincing. We cannot call to mind any other similar disarrangement. On the other hand, we agree with Mr. Verity and the present editor that not one of the proposed emendations seems to give us what Shakespeare really wrote. So we are forced to content ourselves with Grant White's interpretation: "our arms, even in the intensity of their hatred to Caesar's tyranny, and our hearts in their brotherly love to all Romans, receive you in." There are other points which we should like to discuss had we space; but, as we agree with the editor's decisions, we must pass them by. The introduction is a sound and interesting piece of work, especially in its treatment of Shakespeare's modifications or omissions of points in Plutarch and its explanation of his presentment of Julius Caesar's character. The edition is a valuable one.

(2) Difficulties as to text are few in the case of "The Tempest." It first appeared in the First Folio of 1623; and, with the exception of perhaps "The Two Gentlemen of Verona," it is the most carefully printed play in the volume. The text of the First Folio, confirmed or corrected by the three later Folios, is therefore the one used; and Mr. Luce restricts himself to giving in the notes a few of the most interesting of the emendations that have been proposed. The introduction deals in an interesting way with the sources, the date, and the chief characteristics of the play; and on the first two—which are closely interrelated—fresh light is thrown by Mr. Luce's researches. He finds rather more of the author's own personality in "The Tempest" than we are quite prepared to accept; but we have no space to argue the matter here. We agree however, with the view that the epilogue is Shakespeare's own work, and that he probably had his own retirement from the stage in his mind when he wrote "The Tempest." In an appendix we are given certain illustrations of the play; and after reading the parallel passages from Jourdain's "Discovery," the "True Declaration" and Strachey's "Letter"—all belonging to 1610, and all relating to the wreck of Sir George Somers in the Bermudas in 1609—it is impossible to doubt that Shakespeare had all three by him when, or before, he wrote his description of the wreck, and of the enchanted island, and things therein. Even the still vexed "scamel" has some light shed upon it, and would seem to have been called a "sea-owl" by Strachey, though probably Shakespeare called it a "scamel" of set purpose. The likenesses of detail, and often of wording, are too numerous and too close to have been due to mere chance. From this and from other evidence we are led to agree with Mr. Luce that the play was most probably written early in 1611. We like this edition, and are grateful to Mr. Luce for the care which he has devoted to its production.

A Text-Book of Physics. By R. A. LEHFELDT. (Price 6s. Edward Arnold.)

Prof. Lehfeltd intends this book to be read principally by students of medicine, and has succeeded in introducing many illustrations of a physiological nature, for instance, errors introduced into observations of muscular and other movements made by means of levers, owing to the inertia of the latter.

"Power" is discussed in connexion with the work done per minute by the heart, and this is compared with the power of a man working continuously, which is given as 40 to 50 watts (a result rather low perhaps—a man rowing moderately easily can give out 150–200 watts). The pulse wave is described. Osmosis and diffusion are treated in connexion with animal and plant life. The mechanism of the ear and eye is better treated than in most text-books, albeit briefly.

The work is quite improperly styled a text-book, and is really nothing more nor less than well arranged lecture notes, clearly assuming that the student is getting his knowledge and drill in physics from some other source. Looked at from this point of

view the book is admirable. Small type indicates parts that may be omitted by the less advanced student. The treatment can only be suggested by a few examples. Article 1 states the principle of the conservation of energy. The parallelogram laws follow from the method of vector addition and the fact that the quantities (displacements, velocities, accelerations, forces) are vectors. The amount of mathematics assumed is too small to admit of anything but a statement of the period of oscillation of a simple pendulum, although simple harmonic motion is defined as usual and partly discussed. In hydrostatics, the principles are stated without illustration by the usual toys, but real air-pumps (Fleurs, Töpler, and Sprengel) are described. Thermometry and the mechanical equivalent of heat and conduction of heat give opportunities for introducing matter not likely to be met with in the usual elementary textbook.

Reflection and refraction of sound are beautifully illustrated by R. T. Wood's photographs of a single wave (in air) undergoing reflection and refraction at an air-carbonic-acid surface.

Electricity and magnetism are noticed very shortly. Ohm's law is excellently discussed. We are told that galvanometers can be made so sensitive that they can indicate a current which "would have to flow for three centuries to . . . suffice to liberate about a tenth of a cubic centimetre of hydrogen."

The notes on light are also very brief. A novelty in the way of definition is that of *refractive index* as "velocity of light in *vacuo*," followed by the deduction of the usual definition—"velocity in the medium considered." Emission and absorption, and elementary notions of optical instruments, are well described.

The whole book is stimulating and interesting, and will, perhaps, be of more use to teachers than to students. There is perhaps a tendency in it to treat physics as an exact science in the sense that astronomy is exact; but that may be well for a medical student, whose notions of physics are usually all too vague, or for a candidate for the Intermediate Science Examination, to whom the author addressed his lectures. The book is printed on thick paper and abominably bound, so that the reader is only content when he has thoroughly broken its back.

Intermediate French Grammar, with Outlines of Historical Accidence. By G. H. CLARKE and L. R. TANQUEREY. (Price 3s. 6d. Murray.)

"A *répertoire* of current forms, a *résumé* of Old French forms, and a brief explanation of the chief difficulties of French syntax"—such is the aim of this latest French grammar as stated by the authors in their preface, which is wisely couched in French, not only in order to prevent pupils from reading it when they should be studying their irregular verbs, but also to demonstrate the superiority of the French language as shown by our mongrel version. On the face of it, the book is the work of teachers who know their business, know what points must be insisted on and what must be ignored or just touched upon. In particular we admire the skill with which just enough philology has been introduced to throw light on existing forms and usages without any attempt at a systematic or scientific treatment of what, we venture to say, can never be a school subject.

The type is clear and the general appearance of the grammar attractive. We could have wished for distinctive type to show what is of less importance—the plurals of foreign nouns, the difference between *ciels* and *cieux*, and all the anomalies which are rarely found, save in examination papers.

The syntax we could have wished a little fuller—some explanation and more illustration of the rules. French syntax is as logical and precise as Latin, and, we are convinced, affords, or might afford, just as good a mental gymnastic as Latin. We will give one or two examples of *desiderata*. Page 185: "When the principal clause follows the noun clause the verb of the latter is in the subjunctive." True, as a general rule, though by no means universal; but why not add the reason—that the dependent clause is regarded as a conception, that the reader's mind is kept in suspense till he is finally told that the conception is a fact. Page 205: An exact parallel to the Latin *sustuleret* for *sustulisset* is classed without remark under the ordinary construction of imperfect in protasis and conditional in apodosis. On page 191 *Part d'espérer* is not an instance of the infinitive as a complement, nor is *à force de forger* an adverbial use of the infinitive. On page

191 *couler* and *valoir* go on all fours, and there is no reason why the past participle of one should be variable and of the other invariable. On page 195 it is hardly correct to say that in *Cela est facile à apprendre* the infinitive has a passive meaning, any more than in "A house to let" or "Nunc est bibendum." The index might, with advantage, be fuller.

- (6) *English History Note-book*. By M. A. ROLLESTON. (Price 3s. Birmingham: Davis & Moughton.)

Of a group of school histories and historical readers in English history that lies before us each has some claim to approval. The distinctions between them are mainly in matters of type, the selection of illustrations, and the selection of omissions. If a history book is to be put into the hands of the pupil—and, we take it, the exclusively oral method of teaching history is less in favour with teachers than it used to be some years ago—it is, perhaps, of the most importance that the page should strike as attractive at first sight.

(1) From this point of view, "Chambers's New Scheme Readers" ("Preparatory History of England" and "History of England") have much to commend them. The language suitable for the more elementary and the more advanced of the two is very skillfully discriminated; while nothing has to be undone by the advanced book that has been incorrectly told in the first. The pictures are well chosen, the chapters short, and printing clear. Each Reader ranges over the whole of English history—a plan which is, on the whole, more satisfactory for beginners than a full treatment of one period.

(2) Less competent, though on a somewhat similar plan, is McDougall's "Junior Historical Reader," Book II. This is intended for very young readers, and includes stories of Macbeth and of Bruce and the Spider, while omitting, e.g., all mention of Richard I. The local colour is, perhaps, suitable for Scotch children, but it strikes us as a little overdone. The illustrations are a particularly good feature of "The Waverley Historical Reader," Seventh Book (McDougall), which begins with the reign of James I. These include a certain number of *Punch* cartoons—a good idea, new, as far as we know.

(3) Gill's "Oxford and Cambridge History" is a mere cram book, as the title (taken in vain) suggests. This kind dies hard, and, for "those that like the sort of thing, that is the sort of thing they do like!"

(4) Prof. Meiklejohn's "School History of England" is handicapped by some slipshod English:—"Henry's Charter is very important as being the *first time* [*sic*] that a Norman king condescended to limit his own power"; "The last reign had *discovered* [*sic*] that iron could be smelted with coal," &c. The best feature is a glossary of historical terms, which is useful as far as it goes.

(5) On quite a different and more scholarly plan is Miss C. Linklater Thomson's "First History of England," Part I.; an admirable piece of work. It is based, as far as possible, on the original authorities; the very words of the chronicles or of the old poems being frequently given in a modern form. The illustrations are also, for the most part, from old manuscripts and other originals. They are plentiful and well reproduced. Miss Thomson reckons this Part (330 B.C. to 1066 A.D.) as one term's work, and hopes to complete her book in six parts. Schools which can afford to give a good deal of time to history could do no better than adopt this as a first-form book. Miss Thomson's own style is clear and simple, and she has the enthusiasm which should carry the pupils along with her.

(6) Scholarly also, though from the opposite pole as regards method, is Miss M. A. Rolleston's "English History Note-book." This is exactly what it professes to be—a complete syllabus of every possible event of importance that would be treated in the largest histories. It could well be used by the higher forms or by students at Extension or other lectures as an alternative to the feverish and inaccurate scribbling that often employs so much of the time of the "lectured-to." The only objection to it is the somewhat high price, 3s.

La France au milieu du XVII^e siècle, d'après la correspondance de Gui Patin. Edited by ARMAND BRETTE, with an Introduction by EDMÉ CHAMPION. (Price 4f. Paris: Armand Colin.)

We can strongly recommend this book to those who feel the necessity of complementing impressions drawn from formal histories by occasional sidelights from contemporary human documents. Patin's letters, imperfect enough in themselves, are nevertheless of great value for the light they throw upon many important undercurrents in the reigns of Louis XIII. and Louis XIV. Among other things, they agree with d'Avenel's "*La Noblesse française sous Richelieu*," published not long ago by the same firm, in showing a state of morals and religion far more medieval than we might otherwise have been inclined to suspect, and

thus in helping us better to comprehend the causes of the Revolution. Not only was the law even more barbarous in its punishments than in contemporary England (men, for instance, being broken on the wheel for ordinary thefts), but we see in Patin, even more plainly than in St.-Simon, how rapidly religion was losing ground among the cultivated classes. Our author's despair of the world in which he lives is again thoroughly medieval: "Jamais le monde ne fut si misérable de mémoire d'homme." "Où est la justice de Dieu? . . . les gens de bien n'ont qu'à se cacher, tout se fait pour de l'argent. . . . J'ai peur qu'à la fin Dieu ne se lasse d'être chrétien!"

Patin, it is true, is a thorough scandalmonger, and especially pitiless to monks and Jesuits. Of the latter he repeatedly writes, in his joy at the successes of the Jansenists: "Ils seront bientôt pis que les cordeliers." His notices of his professional practice (for he was a distinguished physician of the Diafoirus school), are most amusing; as are also his family revelations. At the same time, one might wish he had a little more of the Pepysian love of detail; his generalities are disappointing, often arousing more curiosity than they satisfy. This is especially the case with the frequent notices, from 1656 onwards, of the "Lettres Provinciales" and the counter-manceuvres of the Jesuits. Again, he has a queer story in 1658 of "les Augustiniens du grand convent, au tout du Pont-Neuf," among whom a quarrel of years between seniors and juniors over the pickings from the offertories led first to imprisonments and counter-imprisonments in the Bastille, and then to a regular siege of the convent, in which two monks and two archers were slain outright. One feels that here are all the materials for a first-rate tragic-comedy; yet the author shows but little power of description, in spite of his wish to ridicule the good monks. Here and there, however, he rises to really pointed, if unjust, epigrams, as when he calls Richelieu "un Jupiter massacreur qui faisait périr ses ennemis par le fer et ses amis par le poison." The author is partial, and, what is worse, very often ill-natured; yet the book is of real value for any student of seventeenth-century civilization in France.

Last Days of the French Monarchy. By SOPHIA H. MACLEHOSE. (Price 6s. net. Glasgow: Maclehoose & Sons.)

Miss Maclehoose is to be congratulated on her venture, which she describes in the preface as follows:—"I have attempted to give such a sketch of the events preceding the French Revolution as shall enable the reader to approach the more important histories with interest and intelligence. The great prose poem of Carlyle takes much for granted, and to the proper understanding of such works as that of Mr. Morse Stephens some familiarity with the older court and political life of France is desirable. There is abundant material from which to gather this information, but no simple, yet detailed, account, and it is with the hope of supplying the want that I venture to publish this volume." Many readers of "the great prose drama" will have experienced that deficiency, and to these, as well as to all who are interested in one of the most extraordinary periods of history, this careful little account will be of service. Epochs such as the Revolution cannot fail to impress and overwhelm, but there is a danger of not seeing the wood for the trees. In view of this the present volume is a dispassionate, though readable, account of the early portion of the reign of Louis XVI., tracing, step by step, the chain of events, social, political, and personal, which led up to the summoning of the States-General in August, 1788. No pains have been spared in the consultation of authorities, and the author is evidently much at home in the literature and correspondence of the time. The British Museum pamphlets, in particular, which describe the financial measures of the period, have been consulted to some purpose, and the letters of the Comte de Mercy to his royal master in Austria throw light on the character and the difficulties of Marie Antoinette. The very scarcity of comment adds pathos to the narrative, which culminates in the elucidation of the Diamond Necklace scandal, so often a riddle on account of the mesh of intrigue of which it was the outcome. The author is careful throughout to make clear the old political constitution and the terms which belonged to it. There are numerous illustrations. The perusal of the book will certainly awaken a desire to read the great works on the period, and we shall await with interest the promised sequel to this volume—namely, the history of events from August, 1788, down to the declaration of the Republic in 1792.

A History of England from the Earliest Times to the Death of Queen Victoria. By BENJAMIN TERRY, Ph.D., Professor in the University of Chicago. (Chicago: Scott, Foresman, & Co.)

This is an eminently readable and generally accurate history suited for students who have passed the school age. It presents its readers with the results of a careful assimilation of the work of the best modern historians, and will probably be found a useful text-book. It would be presumptuous, and no doubt unfair, to suggest that the author has not a sufficient acquaintance with the sources of history, but the value of his work depends more on his reproduction in an appropriate form of what others have already set forth than on any signs of independent study. This must, perhaps, almost necessarily be the case in a book of this kind which deals with the whole course of English history. The chapters are divided, as in Green's famous book, according to topics,

not reigns. Some will no doubt think this an advantage. The influence of Green's work extends further than this; Mr. Terry's work is occasionally marred by a lack of sobriety in expression and by somewhat forced attempts at picturesque writing. Now and again there is a certain vagueness in what he says which suggests that he is not always quite sure of his ground. For example, on page 542 he says: "The 'Utopia,' a sort of sixteenth-century 'Looking Backward,' . . . entitled More to a fair place in literature." More and Bellamy, as who should say Shakespeare and Stephen Phillips. "He also won quite a reputation as a lawyer." Yes, quite. Wolsey, however, was scarcely "in the heyday of his power" when More made his great attack upon him in November, 1529. The latter part of the book is scarcely so good as the earlier, and in one or two instances we have observed some want of familiarity with the subject in hand. Weymouth's "bloody scroll" did not contain "directions to troops"; it was a letter to the Chairman of the Quarter Sessions at Lambeth. Whether Wilkes's comments on it may properly be called "scathing" is perhaps a matter of opinion; Parliament would have done better if it left the matter alone, but Mr. Terry should not imply that Wilkes's letter was not a seditious libel; it would be held libellous now in any court in Great Britain or the United States. The publication, if noticed at all, should, as Massey observes, "have been the subject of an information by the Attorney-General."

The Harmony of the Empire. By NEMO. (Manchester: Heywood.)

This book consists of a series of sketches of the British possessions and spheres of influence, with the important exception of South Africa. The object, as explained in the preface, is "to stimulate the cultivation of the delightful study of geography," and it is meant to be supplementary to the ordinary text-books, not a substitute for them. It betrays some want of faith in the attractiveness of the subject to think that so much jam must be given with the powder. *A propos* of the trade winds, two pages are devoted to the legend of the Flying Dutchman and to an article in *Blackwood* based upon it. St. Helena calls up the story of Napoleon and *l'homme rouge*, as told by Lever in "Tom Burke." Unmistakable legend does less harm, however, than such inaccurate history as is to be met with in the account of the Suez Canal and the British intervention in Egypt in 1882. We are told, not as a matter of surmise, but as undoubted fact, that France withdrew from co-operation with us because Bismarck threatened her with war if she persisted, and M. de Freycinet was frightened. Again, Mercator's Projection has its uses, but it is misleading to say of it that "all the relative positions are accurately preserved." No allusion is made to its inevitable distortion. The subject is left with the casual remark: "There are now many other map projections by various clever men—quite a long list of them—of all nationalities; but there is not one so simple and intelligible as this old Dutchman's." On the whole, we cannot recommend the book either for schools or for private reading. If a teacher wants a supplement to the ordinary geographies, he will find a much better one in the Colonial Office List.

The Oxford Point of View. Nos. I. and II. (Each 1s. net. Simpkin, Marshall.)

To set afloat yet another periodical on an already overcrowded sea is a bold venture. But, if *The Oxford Point of View*, in the hands of undergraduates yet unborn, fulfils the promise of its start, it should meet with success. There is a refreshing breeziness about its pages, the self-confidence of youth that ventures much, having no past and an endless vista. The second number (on the whole an improvement on the first) contains amongst other items an article, which is very pleasant reading, on Anthony Woods, "An Oxford Pepsy," "an antiquary and an old woman," who helped to arrange Selden's books at the Bodleian, "finding in some several pairs of spectacles which Mr. Selden had put in and forgotten to take out." There is verse in the light and the serious vein. Mr. St. John Lucas has made his long memorial poem somewhat difficult reading by his careful avoidance of the coincidence of sense and verse pause; and in "A Fragment" we cannot escape from a certain feeling of discomfort at the hero who looked forward to feeling "the rattle of the chain within his throat," though to him it seems to suggest none but pleasant thoughts. Mr. de Selincourt, who gave us a foretaste of Thoreau in his article on Rossetti, contributes a paper devoted to an interpretation of the former in this second number. He finds the explanation of the weak spot in Thoreau's philosophy of life, his lack of human sympathy, in revulsion from the conditions of his times, times especially illustrative of the fact that man's rational intellect can work with pernicious success to produce a mechanism of life in advance of his faculty for living; leading him inevitably to turn the paraphernalia of civilization, innocent only when used as means not ends, into a god more deadly than the stocks and stones of pagans "suckled in a creed outworn." The paper is a sympathetic vindication of Thoreau against his belittlers. "In his books," says Mr. de Selincourt, "Thoreau stands revealed: on the one hand, a man of staunch unwavering purpose, doing what he did perfectly—brave to his ideal—aloof; on the other, a poet minutely observant and delicately appreciative of every beauty of Nature, loving and knowing all the animals, with a fund of fine humour"; and he very happily characterizes the

style of "A Week on the Concord and Merrimac Rivers." "His thoughts turn on the great questions of life, and he reviews the religions of the world; showing the same power, yet modesty of treatment, as he did in dealing with the fish. He writes as he thought, moving down the river in a boat." Mr. de Selincourt, though introducing some of his own philosophy of life in his comments on Thoreau, has also shown modesty as well as power in his treatment. It is a pity that there is so much variation in his style, awkwardly inverted sentences and bald colloquialism occurring side by side with passages of considerable literary merit; but all criticism must be disarmed by his obvious wish (admitting Thoreau as that "certain soul") to identify himself with the worm with wings as yet unfurled.

Rudimentos de la Historia de America. By D. H. MONTGOMERY. (Price 3s. Ginn & Co.)

The story of the growth of a mighty nation should always prove attractive reading; but, owing to the manner in which the subject is often treated by writers, many young people dislike reading history "because it is so dry." No charge of "dryness" can be brought against this book. The author traces the history of the United States by means of a series of thirty biographical sketches, which includes all the chief actors concerned from Columbus to Abraham Lincoln. The events narrated cover a period of more than four hundred years (from the birth of Columbus to the close of the recent war with Spain), and yet there is not a single "dry" paragraph on any of the 237 pages of which the book consists. Before the pupils begin to read the book, the teacher would do well to let them compare the map on page 155 with that on page 204. This would create a wish to know how such marvellous changes have been brought about, and the pupils will take a keen interest in learning how large tracts of land were gained: some by purchase, others as the result of wars, and others again by the simple act of "taking possession." The book is divided into sections for purposes of reference, &c.; there are recapitulatory paragraphs and examination questions, twelve good maps, eight full-page engravings, and a very useful index. An excellent historical reading book for Spanish-speaking children. For English students a vocabulary would be a useful, time-saving addition.

- (1) *Elementary Mechanics of Solids.* By W. T. A. EMTAGE, M.A. (Price 2s. 6d. Macmillan.) (2) "The Organized Science Series."—*First Stage Mechanics of Solids.* By F. ROSENBERG, M.A., B.Sc. Third Edition. (Price 2s. Clive.) (3) *The Student's Dynamics.* By G. M. MINCHIN, M.A., F.R.S. (Price 3s. 6d. Bell.) (4) *Theoretical Mechanics.* By A. E. H. LOVE, M.A., F.R.S. (Price 12s. Cambridge University Press.) (5) *A Treatise on Dynamics of a Particle.* By E. J. ROUTH, Sc.D., F.R.S. (Cambridge University Press.) (6) *The Principles of Mechanics.* By H. HERTZ. Translated by D. E. JONES, B.Sc., and J. T. WALLEY, M.A. (Price 10s. Macmillan.)

(1) The works included in the above list differ much in character and importance. The first and simplest is written for beginners, and requires but little mathematical knowledge, except the solution of easy quadratics and the properties of similar triangles. The appeal to the test of simple experiments and the illustration by means of worked examples are useful; and in clearness and fullness of explanation the text can hardly be surpassed.

(2) We noticed favourably the first edition of this book in January, 1896. The third edition differs only in the appendix of Elementary Stage papers set by the Science and Art Department for 1895 to 1899.

(3) In his "Student's Dynamics," Prof. Minchin has made a very valuable contribution to the literature of elementary mathematics; and, without underrating the merits of its predecessors, we feel that the introduction of this book into our schools would have a most beneficial effect on the teaching of dynamics. The author requires the ordinary schoolboy knowledge of geometry and algebra and the rudiments of trigonometry, and in passing expresses his opinion (which is also that of many teachers) that the University of London has made a most unfortunate mistake in not insisting on this slender trigonometrical foundation. The chief characteristic of the book in principle is the adoption at the outset of the same notion of force (derived from Newton's second law) in kinetics and statics, so that both are treated concurrently as branches of one subject. The chief characteristic in detail is the incessant and most useful resort to arithmetical illustration and calculation; for, as the author remarks, "Arithmetic is the reality of every science, and the principles of every science are far more readily and tenaciously grasped when they are applied to definite, concrete, arithmetical examples than when they are presented to the learner in the shape of algebraical symbols." The only point on which we are not in agreement with the author is on the subject of what Mr. Hayward calls "rectilinear dynamics." Prof. Minchin stated in 1883 that "he had found that some of those pupils who had begun with the notion of constant acceleration in a right line were very much disposed to think that they knew all about motion." Our own experience is different, and leads us to see a distinct advantage in the separation of dynamical and geometrical difficulties at the outset, and in the discussion of the particular case before the general. The whole book, however, is

admirably done, the chapter on collision especially being a very fine piece of work.

(4-6) The last three books on our list are all works of a very high order, but at the same time hardly within the limits of secondary education; though the first two may occasionally be read by advanced pupils, and should certainly be placed in school libraries.

Elementary Treatise on Physics. By GANOT, ATKINSON, and REINOLD. (Price 15s. Longmans.)

As editor of the sixteenth edition of this classic treatise, Prof. A. W. Reinold has brought it thoroughly up to date. Except to remind our readers to distinguish this book from the more elementary "Popular Natural Philosophy," also written by Ganot and translated by E. Atkinson, nothing need be said about the general character of the work, which is already universally appreciated. While considerable additions have been made in the present edition, some part has been rewritten, and space found by the most commendable omission of "descriptions of apparatus and machines which have ceased to be of interest," while some mathematical disquisitions have also been removed. The greatest changes are naturally to be found in the part relating to electricity and magnetism. Ewing's illustration by a series of compass needles of the theory of magnetization is referred to, while space is found for the study of the new forms of radiation. Marconi's experiment on communication between Cornwall and Newfoundland is introduced. In fact, the twentieth-century character of the edition is indicated (page 68) in a description of a "machine invented by Attwood at the end of the nineteenth [sic] century" (which was, indeed, used before 1784). Reference is made to the use of captive balloons and of the heliograph in the South African war. Interesting descriptions are given of the half-tone and three-colour processes of photographic reproduction, although these are necessarily brief. Much more might be said about new matter; but we hope that we have already indicated the care that has been bestowed on the new edition of an "experimental and applied" treatise, and shown that it has gained much from Prof. Reinold's revision.

"Rivingtons' Modern French Series."—*Premières Lectures Française* Prepared and adapted by R. J. MORICH. (Price 7d.)

This consists of thirty short stories, averaging some eighty words. The appendix on irregular verbs and on pronouns seems to be a superfluity. The notes, on the other hand, might with advantage be fuller. *Vin ordinaire* is not "ordinary wine," as the vocabulary suggests; *battre* and *se battre* need distinguishing; and so forth.

BOOKS OF THE MONTH.

Classics.

Cicero, Select Orations and Letters of. Allen and Greenough's edition, revised, with a special vocabulary, by J. B. Greenough. Ginn, 6s.

Harvard Studies in Classical Philology, Vol. XIII., 1902. Longmans, 6s. 6d. net.

Virgil's *Aeneid*, Book III. Edited by M. T. Tatham. E. Arnold, 1s. 6d.

Xenophon's *Cyropædia*, Book I. With Vocabulary by E. S. Shuckburgh. Cambridge University Press.

"Classical Library." M. T. Ciceronis *Epistulae* III. Oxford Press, 3s. cloth, 2s. 6d. paper.

Dent's "Temple Series." *Cæsar's Gallic War*, Book I. Edited by A. S. Wilkins.

Commercial.

Modern Book-keeping and Accounts, Part II., Intermediate. By W. Adgie. Macmillan, 2s.

Key to Easy Exercises in Book-keeping. By J. Thornton. Macmillan, 10s.

Introduction to Physical Science. By A. Payson Gage. Revised edition. Ginn, 4s. 6d.
Life and Health : a Text-book of Physiology. By Albert F. Blaisdell, M.D. Ginn, 4s. 6d.
Injurious and Useful Insects : an Introduction to Economic Entomology. By Prof. L. C. Miall. G. Bell, 3s. 6d.

* * The publishers of the "Popular Library of Art" are Messrs. Duckworth, not Messrs. Grant, Richards, as stated last month. The volumes are issued at 2s. net bound in cloth, and 2s. 6d. net in leather.

CALENDAR FOR AUGUST.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—Army Commission Competitive Exam. for Militia. Return forms.
- 6.—Return forms for College of Preceptors Professional Preliminary Exam., September.
- 6-12.—*The Offices of THE JOURNAL OF EDUCATION will be CLOSED on these days.*
- 8.—London University Intermediate Arts and Intermediate Science Pass Lists published.
- 11.—Return forms for Durham College Medical Preliminary Arts Exam. (M.B.).
- 15.—Cambridge Local Exams. Return forms (between this and September 30).
- 15.—Post Translations, &c., for *The Journal of Education* Prize Competitions.
- 18.—Return forms for Durham Certificate of Proficiency.
- 20.—Return forms for Royal University of Ireland Matriculation Exam. (Pass only).
- 22.—Post School News, items for this Calendar, &c., and Advertisements for the September issue of *The Journal of Education*.
- 26 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the September issue of *The Journal of Education*.
- 31.—Institution of Civil Engineers. Return forms for Admission of Students; also for Election of Associate Members in December.

The September issue of *The Journal of Education* will be published on Saturday, August 30, 1902.

HOLIDAY COURSES.

ABERDEEN (University of).—August and September. Special Courses in French and German for Teachers. Apply to Lecturers in Modern Languages, Marischal College, Aberdeen.
ABERYSTWYTH.—During August. Sloyd. Under direction of Miss Andrén. Address—31 Blenheim Road, Bradford, Yorks, or apply to Mr. Cooke (see under Naäs).
AMBLESIDE.—During August. Sloyd. Under direction of Mr. J. Vaughan. Apply to Mr. J. Cooke (see under Naäs).
ÁVILA (Spain).—August 4-25. Spanish. Apply to the Director of Technical Instruction, County Technical Offices, Stafford.

CAEN.—August 1-30. French. "Alliance Française" Courses. Apply to Mr. Walter Robins, B.Sc., 9 Northbrook Road, Lee, S.E.
CAMBRIDGE.—University Extension Summer Meeting, August 1-13, August 14-26. History, Literature, Science, Economics, Music and Fine Arts, Education, Theology. Programme, 7d. post free, from R. D. Roberts, M.A., Syndicate Buildings, Cambridge.
DOVER.—August, September. Short Courses in the Oxford Shorthand and Phonetics, by Percy Kingsford. Apply—Excelsior, Dover.
GENEVA.—Ends August 28. French. Apply to Monsieur Charles Seitz, à l'Université, Geneva.
GREIFSWALD.—July 14-August 4. German. Apply to Prof. Dr. Siebs, Ferienkurse, Greifswald.
GRENOBLE.—August 1-October 31. French. Apply to Monsieur Marcel-Reymond, 4 Place de la Constitution, Grenoble.
JENA.—August 4-24. German. Apply to Frau Dr. Schnetger, Gartenstrasse 2, Jena.
LAUSANNE.—Ends August 30. French. Apply to Monsieur J. Bonnard, Avenue Davel 4, Lausanne.
LEIPZIG.—August and September. Sloyd. Apply to Dr. Pabst, 19 Scharnhorst Strasse, Leipzig, or to Mr. Cooke (see under Naäs).
HONFLEUR.—August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, London.
MARBURG.—August 4-24. Modern Languages. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
NAÄS.—August 1-September 9, November 5-December 16. Sloyd. [The courses at Naäs, Leipzig, Aberystwyth, Ambleside, and Penarth have been arranged by the Sloyd Association.] Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.
NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.
NEUCHÂTEL.—August 12-September 7. French. Apply to Monsieur P. Dessoulavy, Académie de Neuchâtel.
OXFORD.—August 1-28. English Language and Literature for Women Students. Apply to Mrs. Burch, 20 Museum Road, Oxford.
PARIS.—August 1-31. French. Apply to Monsieur le Secrétaire, l'Alliance Française, rue de Grenelle 45, Paris.
PARIS.—Christmas and Easter Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
PENARTH.—During August. Sloyd. Under direction of Glamorgan-shire County Council. Apply to Mr. W. Hogg, Technical Instruction Committee, Glamorgan, or to Mr. Cooke (see under Naäs).
SANTANDER (North Coast of Spain).—August 5-25. Spanish. Apply to General Secretary, Teachers' Guild, 74 Gower Street, W.C.
TOURS.—August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, W.C.
VILLERVILLE-SUR-MER, TROUVILLE.—August 5-26. French, preparation for exams., "Alliance Française." Apply to Prof. L. Bascan, rue Caponière 49, Caen.

Programmes of most of these courses can be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W., where a Table of Foreign Modern Language Holiday Courses, prepared by the Special Inquiries Branch of the Board of Education, can be obtained.

Information as to lodgings for students at Honfleur, Tours, and Santander (Teachers' Guild Courses) will be found in the Handbook, 6½d., post free, from the Teachers' Guild, 74 Gower Street, London, W.C.

A list of addresses in several other Holiday Course centres will be found in "Holiday Resorts," 1s. 1d., post free from same address.

The advertisement columns of *The Journal of Education* ("Continental Schools and Pensions") may also be consulted with advantage.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

REGISTRATION is still the burning question. Those who are not qualified for a place in Column B (blessed words!) are eager to secure qualification, but those who are qualified display no eagerness to occupy the position already secured. Those behind cry "Forward!" and those before cry "Back!" The inwardness of this situation is perhaps a mystery to authorities and officials, and to any man in the street who cares for these things. They would have been enlightened had they attended the conference held on the 21st inst. between the Executive Committee of the Association and "Assistant Masters in Secondary Private or Public Schools who are unable to register in Column B of the New Register of Teachers." Who and what manner

of men are these? They are men who, many of them for many years, have taught in secondary schools with various success; their work has been owned of parents and principals and examiners; but of the many doors, big and little, that admit to the Register of the new profession none is as yet big enough for them. Who will make it? There was the man who had qualified himself as a teacher of modern languages by residence in all the capitals of Europe; but he has not passed the Inter. Arts Examination, he is not an L.C.P., and he sees himself in the near future a pariah and an outcast. Colomays we know, and Columbees we —; but who are ye?

The chair was taken by Dr. F. S. Macaulay, of St. Paul's School, who partially unravelled the tangles of the Order in Council. A resolution was then proposed claiming admission to the Register for those teachers above thirty years of age who should have had seven years' experience in teaching, and who for the three years next preceding the application for registration should have been engaged as teachers at a recognized school or schools. This was duly seconded. Then came the pause, natural when fifty men meet who have never met before, to discuss a burning question, but none ready with the words that burn to voice the feeling of all. The dullness was soon relieved by one who had come a hundred miles to represent the demands of men in the Midlands. This he did mainly by means of autobiography. He began his career as a teacher in elementary schools, and prospered in an elementary way. Then in a "misguided moment" he transferred his services to a secondary school. In "another misguided moment" he took Holy Orders, and so cut off his retreat to the elementary school. Then came the Order in Council to drive him from the secondary school; for he is one of the proud race which declines to pass vulgar examinations. He felt like the Irishman who disobeyed his political and priestly guides. "He ought to be driven from his country, and no other country ought to receive him." Then a strange thing happened. He wrote to the Lords in Council, and received an answer. He was informed that, although he was not entitled to teach in elementary schools, as not being a lay person, nevertheless in virtue of his certificates he was entitled to be registered in Column A. He is, therefore, by the decision of "my Lords" a living exception to the logical principle of contradiction, being at once entitled and not entitled to teach in an elementary school. His lucid narrative did much to enliven and enlighten the meeting; and after further discussion the resolution was amended, and it was agreed that teachers now above thirty years of age who have already had five years' experience of teaching ought to be registered in Column B. But resolutions are of little value in themselves. If, however, the Executive take the matter in hand earnestly, if timely representations and memorials are made in the proper quarter, something may be done to mitigate a genuine grievance.

The *Monthly Circular*, which has hitherto been edited by the Honorary Secretary, will in future be produced by the Press Sub-Committee. This Committee has lately had much time for quiet reflection and peaceful discussion. It has, for instance, been concerned about spelling. Shall it be Headmaster, Head Master, headmaster, head master, Head-Master, head-master, or Head-master? Many principles are involved in this question. Discipline forbids one to send a sixth-form boy with a report addressed "to the head master." Reverence forbids "Assistant Masters" to write lightly of "the head-masters in conference assembled." Then for the six other ways of writing "Headmaster," there are corresponding ways of writing "Assistant-master." In writing about the two classes together we may have, so the mathematician would tell us, forty-nine combinations. Some combinations must be at once rejected. For instance, the "Headmaster" is a king, and the "assistant master" a pawn; and this is intolerable. After looking at the question in all its aspects, linguistic and social, the Committee decided in favour of "Head Master" and "Assistant Master." They then decided to undertake the editorship of the *Monthly Circular* in compliance with the request of the Executive Committee.

UNIVERSITIES AND SCHOOLS.

LONDON.

Coronation honours were bestowed on eleven distinguished men connected with the University, the following having been knighted:—Sir A. Rücker (Principal), Sir William J. Collins, Prof. Sir William Ramsay, Sir Victor Horsley, Sir H. G. Howse, Sir Isambard Owen, and Sir C. Villiers Stanford, Mus.Doc.

Dr. Robertson, Principal of King's College, has been unanimously elected by the Senate to the office of Vice-Chancellor for the year 1902-3, in the room of Sir Henry Roscoe, to whom a cordial resolution of thanks was accorded on his retirement.

A Board of Advisors to select a candidate for the Chair of Education has been appointed, composed of three women and three men.

Full detailed regulations have been issued as to approved courses of study (under Section 125 of Statutes), specifying the number of hours

of study or practical work required, &c. Westfield College has been admitted as a school of the University in the Faculty of Arts. Schemes of examination for degrees in Engineering for external students have been drawn up; also regulations for degrees in Economics for external students, the same being approved as the basis of regulations for internal students.

Among the special examiners appointed for the Matriculation of September, 1902, and June, 1903, are: Latin, Dr. Gow and W. C. Summers; Greek, T. W. Allen and E. S. Thompson; English, Prof. J. Lawrence, D.Lit., and A. Reynolds; French, Prof. Brandin and E. Janau; German, Prof. Schüddekopf and F. Storr; Modern History, A. F. Pollard and Prof. Laughton; Mathematics, W. D. Eggar and G. B. Mathews; Physics, Dr. Fison and D. Rintoul; Chemistry, H. B. Baker and Dr. Turpin; Geography, G. Chisholm and Prof. Watts. Many of these are well known as experienced schoolmasters and examiners.

Apart from the question of standard, it is evident that the new examination for Matriculation in September is a godsend to many science and other students who wish to go in at once for a London degree, but have been deterred hitherto by the Latin and difficult historical English; while many non-scientific students are availing themselves of the opportunity given by the removal of compulsory science. The privilege of a second or subsequent entry for examinations at half-fee has been abolished for new students. This has struck veritable dismay into the large company of students who have been wont to come up at each "Matric.," even up to the seventh time, until at last a favourable set of papers let them through. Three "shots" has always been a favourite number with many candidates for "Inter." All this will now be greatly curtailed.

The Honours list of the recent Matriculation Examination (June) consists of fifteen names, none of them of women, and no candidate is disqualified by age for any exhibition or prize, or, in other words, the older students seem to have been less successful than usual. The exhibitions and prizes go, in order of merit, to Cardiff Higher Grade School, Bancroft's School, William Ellis Endowed School, Hounder's Institute, Leeds and Yorkshire College, Wrexham County School, and Croydon High School for Boys. "Private Study" is credited with one place only this time, the next after the prizes. The First Division is roughly nearly twice as long as the Second, a return to the old condition of things.

The regulations for the academic costume for the new degrees of B.D. and D.D. have been approved by the Senate. They are: D.D., a black silk or stuff gown of the same shape as for the M.A. Doctors of Divinity who are members of Convocation shall also be entitled to wear a gown of scarlet cloth faced with silk of Sarum red. The hood shall be of scarlet cloth, with a lining of silk of Sarum red. B.D., a black stuff gown of the same shape as for the B.A. The hood shall be of black silk or stuff, edged on the inside with silk of Sarum red. Bachelors of Divinity who are members of Convocation shall be entitled to wear a black silk gown of the same shape as above. They shall also be entitled to wear a black silk or stuff hood, with a lining of white silk edged with silk of Sarum red. Many inquiries were made as to the Divinity costume, and the matter received prompt attention from the Standing Committee of Convocation and the Senate.

The curriculum of study and scheme for examination in Agriculture for internal students for the Inter. B.Sc. Examination have been approved. Obligatory subjects are: Chemistry, botany, zoology, and, in addition, one of the following:—Mathematics, physics, geology. All subjects need not be offered at the same time.

Further negotiations are in progress between the University and University College with respect to certain details of the scheme for the incorporation of the college in the University, and it is hoped that by the date specified (February 28, 1903) a complete scheme may be agreed upon by both parties. The realization of the scheme will depend upon whether it is possible to raise the necessary funds.

A Latin address has been received from Owens College, Manchester, expressing the gratification of the authorities of the college at the appointment by the University of a deputation to attend their jubilee last March. It is signed "Devonshire, *Præses*; Joseph Thompson, *Thesaurarius*; Alfred Hopkinson, *Præpositus*." We are sending a similar learned address to the University of Sydney, on the occasion of their jubilee in September. It contains the words "Nos manet oceanus circumvagus" and "Multi transibunt et augebitur scientia," and a reference to "Ulixes" (amongst others).

The Principal has received a notice of the offer of the Barcelona Prize of 20,000 pesetas for Spanish archaeology.

At the recent M.B. Examination there were only two names (both of men) in the First Division, and there were thirty-three in the Second (four or five being women). At the recent Master of Arts Examination sixteen candidates passed in Classics, five in English (R. W. Chambers with distinction), one in German, one in History, and four in Mental and Moral Science. Two candidates took their D.Sc. in Zoology and two in Physiology.

Medical students who offer the London Matriculation as a qualification for registration were, in a footnote to the revised Matriculation Regulations, informed that they must pass in Latin, Greek or a modern

foreign language, and mechanics. It appears that the inclusion of mechanics was an error, and that mechanics are not needed.

BEDFORD COLLEGE FOR WOMEN.

The following have been elected members of the Council:—Walter Leaf, Esq., Litt.D.; and the Hon. Mrs. Bertrand Russell (Technical Education Board representatives); Sidney Lee, Esq., Litt.D.; Sydney Lupton, Esq., M.A.; the Rev. H. G. Woods, D.D., formerly President of Trinity College, Oxford. The Council have appointed W. H. Willcox, Esq., M.D., D.P.H., to be Lecturer in Hygiene, and Miss A. S. Perry, B.A., to be Librarian.

The following appointments have been obtained by former students of the college:—Miss C. E. Ainslie, B.A., to be Head Mistress of the George Watson School for Girls, Edinburgh. The Headship of this important school is for the first time given to a woman. Miss H. Martindale to be Woman Inspector to the Factory Department of the Home Office. Miss F. N. Lovibond to be Sanitary Inspector to the Rochdale District.

The following distinctions have been gained by present students:—M.A. University of London, Miss R. R. Reid; Reid Research Studentship of Bedford College, Miss C. H. Gibson, B.Sc.; Hygiene Diploma, Miss J. W. S. Meiklejohn, M.A. The Pfeiffer Scholarship in Science has been awarded to Miss E. A. Bridger, and the Courtauld Scholarship in Arts to Miss E. M. Green.

Six open Pfeiffer Scholarships of the value of 15 guineas will be awarded to the best candidates holding a degree, or equivalent, in Arts or Science wishing to train as secondary teachers. Application should be made to Miss H. Robertson, the Head of the Training Department, not later than December 13, 1902.

The Michaelmas Term will begin on Thursday, October 2. Students are expected to attend on Wednesday, October 1, to meet the Principal and lecturers.

UNIVERSITY COLLEGE, LONDON.

The following appointments have been made:—The Rev. Hermann Gollancz, M.A., D.Lit., has been elected to the Goldsmid Chair of Hebrew; Mr. R. A. Nicholson, M.A., has been elected to the Chair of Persian. Mr. Alfred Denys Cowper, of St. Paul's School, and Mr. Foster Sproton, of the Foundation School, Whitechapel, have been awarded Andrews Entrance Scholarships in Science. Mr. Henry Basset has been awarded the University College School Research Medal in Science. Dr. Angel Money has been appointed to represent the College at the Jubilee of the University of Sydney.

In view of the new regulations for internal students arrangements have been completed for the institution of a composition fee of £63 for a complete three years' course in the Faculty of Arts.

The new Library for Students of Modern Philology and Literature is now open. It is in the first instance to have three sections: (1) English Philology and Literature, (2) Romance Philology and Literature, (3) Germanic Philology and Literature. In connexion with this Library a School of Modern Philology and Literature will be organized and will be opened next session. The school will have in the first instance three departments corresponding to the three departments of the Library. It will be restricted to advanced students, of whom a limited number only may be admitted upon the recommendation of the respective professors.

WALES.

Dr. Isambard Owen, the Senior Deputy Chancellor of the University of Wales, and Mr. Alfred Thomas, M.P., President of the University College of South Wales and Monmouthshire, have both received the honour of knighthood. The Council of the University College, Cardiff, at its last meeting resolved to found a Research Laboratory for Physics in memory of the late Principal Viriamu Jones. It has accepted the valuable apparatus of Principal Griffiths.

Sir Alfred Jones has founded in connexion with the three University colleges of Wales a number of scholarships for the encouragement of technical work.

One of the scholars of the Cardiff Higher-Grade School was placed first in the Honours List at the recent Matriculation Examination of the University of London. A former scholar of this school, Mr. Christopher Thomas Preece, B.A. (Wales and Cambridge), who in 1897 was placed in the First Class in Mathematical Honours at B.A. in the University of Wales, and in 1901 was eleventh Wrangler, has this year been placed in the First Division of the First Class in Part II. of the Mathematical Tripos. Mr. David Phillips, a former free student of the county of Glamorgan, obtained a First Class in the Second Part of the Mental and Moral Science Tripos in Cambridge, having the previous year been placed in the First Class in Part I. of the Mental and Moral Science Tripos. Mr. Phillips also was a Board-school boy.

In connexion with the Cardiff and District Educational Society a meeting was recently held, which was largely attended by commercial men, to hear an address by Prof. Chapman, of Owens College, Man-

chester, on "Commercial Education," and to obtain the views of local business men on the subject.

IRELAND.

The announcement that an equivalent grant would be made to Ireland to balance the additional grant to be given in aid of public education in England, which appeared early in July, gave much satisfaction to those interested in education in Ireland. At the time of writing, however, it seems doubtful if any such grant to Ireland will be made at all. Replying to Mr. Clancy recently in Parliament, the Chancellor of the Exchequer said that, "because a grant for any given purpose was considered advisable for one of the three kingdoms, it did not follow that a similar grant should be given to the others. It was decided in 1897 that the expenditure on education should depend on the educational requirements, and not on the system of equivalent grants. If the Irish Government had any proposals to make for further expenditure in Ireland, of course the Government would be disposed to act justly by Ireland." This is by no means "of course" to Irish people, who have experience of the treatment Ireland has always received from Government in regard to education. The total endowment for secondary education in Ireland is about £80,000 a year in the hands of the Board of Intermediate Education, and this has been spent in producing the mischievous type of education evolved by competitive examinations and results fees. This money, it is also to be observed, is derived partly from the Customs and Excise, partly from the Irish Church money—that is, from Irish land, not from Government at all. There is in Ireland almost a total absence of private educational endowments, the very few there are, such as the Erasmus Smith and the Royal Schools endowments, being little over £15,000 a year. The result is that there are not sufficient intermediate schools, and that those that exist it is impossible to raise to an adequate level in regard to buildings, equipment, and excellence in teaching.

In a letter to the Chief Secretary concerning this proposed grant to Ireland, Father Humphreys (who has taken so active a part in trying to get the Erasmus Smith endowment differently distributed) points out the need for additional intermediate schools for the poorer classes in Ireland. Scotland, with a population nearly the same as Ireland, has £300,000 a year for intermediate education, while Ireland has (except for the few endowments above mentioned) only £80,000. The consequence is that there are only about 450 secondary schools altogether in Ireland, none of which are adequately provided for, all finding it difficult even to continue to exist, while, except in those held by some of the religious orders, school-fees prohibitive to the poor have to be charged. Nearly all the schools are situated in towns, so that the rural districts are shut out from secondary education completely, only parents who can afford to send their children to boarding schools being able to give them any kind of higher education. Father Humphreys shows that by the census of 1891 there were about 800 parishes, or nearly four-fifths of the whole number, without any intermediate school. He proceeds to advise that the grant, so urgently needed, should be spent in establishing 200 intermediate schools in those localities which most need them.

While Father Humphreys pleads for more numerous schools for the poor, it may be added that the absence of finely equipped schools in Ireland for the upper classes is almost as disastrous a state of things. Parents who can afford to send their children to English public or other schools, for the struggling upper-class schools in Ireland cannot give the same advantages. Such children naturally pass on to English colleges and Universities, and lose much of their interest in and sympathy with their native country. It is difficult to estimate how much of the political and social evils in Ireland is due to the want of good education. The contrast between the activity, prosperity, and intelligence of the people in America—a country having a good system of general education—and the languor and backwardness of Ireland, with a race equally intelligent, but miserable education, may be some indication of it. If "requirements" are to determine the giving of a grant to Ireland as an equivalent to that to be given to England, there should be no doubt of our receiving it. Unfortunately, those requirements, and the fruitful evils of their neglect, have always existed, without receiving attention from the English Government. Up to twenty-two years ago there was absolutely no provision whatever made for Irish secondary education.

So far, no answer has been received on the subject of withdrawing the right of Ireland to share in the "equivalent grant" for technical instruction. The Treasury is still debating the matter. How it can be considered debatable at all by any Government which professes to wish to advance technical instruction in Ireland it is impossible to conceive. The withdrawal of the grant will paralyze the efforts now being made over the whole country, and reduce the good the new Department of Technical Instruction can effect to the smallest dimensions.

It is proposed to take advantage of the meeting of the British Association this year in Belfast to hold a conference of scientific men and teachers in Dublin, in September. The movement has been

SELECTION FROM CASSELL'S EDUCATIONAL WORKS.

N A T U R E	CASSELL'S "EYES AND NO EYES" SERIES.	S T U D Y
	By ARABELLA B. BUCKLEY (Mrs. FISHER).	
	WITH 48 FULL-PAGE COLOURED PLATES, And other Illustrations expressly executed for this work by Mr. A. FAIRFAX MUCKLEY.	
	Handsomely bound, cloth gilt, with gilt edges, 3s. 6d.	

A History of England. By H. O. ARNOLD-FORSTER, M.A.
Fourth and Revised Edition. From the Landing of Julius Cæsar
to the Present Day. 852 pages, copiously Illustrated, cloth, 5s.;
or, superior binding with gilt edges, 6s. 6d.

CASSELL'S FRENCH DICTIONARY. (French-English
and English-French.) 615th Thousand.
1,150 pages, cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S GERMAN DICTIONARY. (German -
English and English - German.) 277th
Thousand. 1,120 pages. Demy 8vo. Cheap
Edition, cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S LATIN DICTIONARY. (Latin-English
and English-Latin.) 132nd Thousand.
Cheap Edition, 3s. 6d.; half-morocco, 5s.

**CASSELL'S
UNRIVALLED
DICTIONARIES.**

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & CO., Ltd., La Belle Sauvage, London, E.C.

Tutorial Preparations in Natural History

LANTERN AND MICROSCOPICAL SLIDES

In every branch of Natural Science, from 6s. per dozen.

Stem Structure, Leaf and Floral Structure, Ovaries, Fruits, Seeds, &c.
Cotton, Flax, Hemp, Jute, China Grass, Silk, Wool, &c.

THE

Student's Series of "Microscopical Studies"

In "ELEMENTARY" and "ADVANCED BOTANY,"

Comprising 48 Preparations. £1. 1s. net.

BOOK OF ILLUSTRATIVE DIAGRAMS, 1s.

The Type Preparations in this Series can only be supplied at the prices indicated.

ANIMAL PHYSIOLOGY.

48 Preparations to illustrate the "Histology of the Rabbit."
£1. 1s. net.

The Type Preparations in this Series can only be supplied at the prices indicated.

460 Lantern Slides to illustrate Human Physiology and Histology.

Plain Slides, 6s. per doz.; Coloured Slides from 12s. per doz.

3,000 Lantern Slides to illustrate the "Animal Kingdom."

2,000 " " " " "Vegetable Kingdom."

**1,500 Lantern Slides to illustrate Geology, Physical
Geography, Astronomy, &c.**

20,000 Microscopical Preparations in Zoology, Botany, Geology, &c.

PREPARERS OF LANTERN AND MICROSCOPICAL SLIDES ONLY.

CATALOGUES for Session 1901-1902 now Ready. Post free.

FLATTERS & GARNETT, Ltd.,
48 Deansgate, MANCHESTER.

J. & J. PATON,

143 Cannon Street,

LONDON, E.C.,

Beg respectfully to inform Head Masters that they insert
SCHOLARSHIP EXAMINATION NOTICES and other
Advertisements promptly and accurately in all LONDON
and PROVINCIAL NEWSPAPERS and PERIODICALS
throughout the United Kingdom, also in all Indian, Colonial,
and Foreign papers.

The charges are at lowest office rates. Estimates and
scheme of insertions forwarded free, on receipt of particulars
of proposed expenditure, over given period.

PATON'S LIST OF SCHOOLS AND TUTORS, 1902.

720 pages, red cloth, post free, 1s. 6d.

ARE YOU SATISFIED

WITH YOUR

PRESENT

PROSPECTUS?

It has to travel many miles—all over England, Scotland,
Ireland, and Wales, and probably to India, the Colonies,
and the Continent—and speak to parents on your behalf.

Does it do justice to your School?

Are the claims of your School amply set forth? Is it finely
printed on good paper—and are your blocks the best that
can be made? If not, and you will favour us with an
enquiry, we shall be pleased to send you suggestions for a
new one, and specimens of the Prospectuses we have
printed—with estimate of cost—free of charge.

J. & J. PATON,

EDUCATIONAL AGENTS,

143 Cannon Street, London, E.C.

initiated by Alexandra College, where the Conference will be held. It will commence Thursday, September 18 (the B.A. meeting concludes September 17), and continue for three days, *i.e.*, 18th, 19th, and 20th. An influential committee of scientific men and educationists has been formed in Dublin, and many of those interested in science teaching who are attending the B.A. meeting have accepted the invitation to take part in the Conference. The first day, Prof. Armstrong in the Chair, will be given to "The Teaching of Experimental Science (Chemistry and Physics) in Schools"; the second, Prof. Howes in the Chair, to "The Teaching of Natural History in Schools"; and the third, Mr. Horace Plunkett, Vice-President of the Department of Agriculture and Technical Instruction, in the Chair, to "The Present Condition of Science Teaching in Irish Schools." The Department are actively helping the committee and Alexandra College in the matter, and will publish a report of the Conference as a supplement to their journal. A somewhat similar conference will be held in Cork, just before the meeting of the British Association.

The Pass Lists of the examinations of the Royal University have just been published. One hundred and nine students obtained the Pass B.A. degree, 88 men and 21 women. The Honour degrees are conferred in the autumn.

The memorial addressed to the Intermediate Board and the Department of Technical Instruction by the various educational associations, asking them to form a Consultative Committee of teachers with whom they might confer in regard to new rules and programme before publication, has been refused by the former body and accepted by the latter. The Intermediate Board, while stating that they did not wish to form such a Consultative Committee, said that they would always be glad to consider recommendations from the associations, and suggested that they should be sent to them before November 1. The Department cordially agreed to form the Committee, consisting of one representative from each association. The representatives have been elected, and the Consultative Committee will probably meet the heads of the Department about the end of August.

Profound interest has been excited by the appearance of Mr. Frank Hugh O'Donnell's book, "The Ruin of Education in Ireland," a passionate plea against the establishment of a Roman Catholic University under the direction of the Church. Mr. O'Donnell is a Catholic ex-M.P., a highly educated and thoroughly sincere man, but of a difficult temperament. His book is an exceedingly powerful exposure of the wiles of the complete dominance of ecclesiastics in education which obtains in Ireland. It, however, contains exaggerations and inaccuracies which, to those conversant with the facts, weaken his argument. Thus, he asserts that, while absorbing all the funds available for education, the Roman Catholic schools teach nothing; but, as far as the examination test goes, the Jesuit and other religious schools have completely outstripped the secular secondary schools, and in actively studying methods of teaching and supplying scientific equipment many of them are far ahead of the Protestant schools. Again, he points, justly enough, to the enormous sums collected by the Church for churches, residences for the clergy, and other religious objects, and asserts that it does not raise, or give, anything to education. This is not true. Although the Church has not, since the period when it collected £250,000 to establish a Catholic University—all spent without any account rendered—given money towards University education, yet it raises and spends in convent and monastic schools and colleges large sums on education. Much of the money brought by the members of the various orders to these institutions is spent on education.

Nevertheless, the book is on many points unanswerable. The evidence of Bishop Dwyer before the Royal Commission gave a deplorable picture of the ignorance of the priesthood educated in Maynooth, which is highly endowed. This is no encouragement to entrust secular education to the bishops. This same illiterate priesthood also controls every Catholic school, primary and secondary, in Ireland. No account whatever is given by the Church of the immense sums received, and no control is exercised over the Church by the English Government, such as is exercised by the authorities in Catholic countries. A very strong point also is his contention that a cultured laity is an impossibility in a country where every teaching post—fellowship, professorship, &c.—is filled by ecclesiastics, for the lay scholar has no means of livelihood left. Mr. O'Donnell's book fails, however, to provide a sound scheme as a substitute for a Bishops' University. It is to be noted, that the Royal Commission practically refused to hear his evidence; his book is ignored by the Roman Catholic authorities; the Roman Catholic press is absolutely silent on it; but it is read and discussed everywhere, and approval and confirmation of it are general among the educated Catholic laity.

The Northern Women Graduates' Association, whose formation was mentioned in the June number of this journal, have sent in a memorial to the Royal Commission asking the Commissioners to give consideration to certain matters of importance to women, in the event of the reconstruction of the Royal University of Ireland or its replacement by a new national University. The memorialists urge that in either case all degrees, honours, and emoluments may still be open to women as to men, by the same examinations and according to the same standards; and that women may also be eligible as Senior Fellows and members of

Convocation. They point out that in the existing Royal University 216 women graduated from women's colleges between the years 1891 and 1900, while only a little more than one-sixth of that number graduated from the endowed colleges which are open to women as well as men; and in the matter of Honours the proportion awarded to graduates from women's colleges has been very large. These facts show that such colleges in which education is given mainly, if not almost entirely, by women lecturers are well attended and highly appreciated by women students. The memorialists consider that these colleges should continue to exist, both because a very large proportion of women students evidently prefer them, and because the opening they give for women lecturers tends to maintain a high standard in the teaching profession for women. They ask therefore that, if there is to be a reconstructed Royal University or a new University with affiliated colleges, some of these colleges should be for women, and receive an endowment, and, in view of the large number of women candidates entering yearly for degrees from Ulster, one or more of these women's colleges should be instituted in that province.

SCHOOLS.

BRIGHTON COLLEGE.—The scholarships are awarded as follows:—F. C. Thompson, George Long Scholar, Classics (Brighton College), £70; J. Case, Joseph Newton Scholar, Mathematics (Brighton College), £50; L. Gaisford, Gill Memorial Scholar (Mr. Grenfell, Parkgate), £32; V. A. H. Taylor, Honorary Scholar (Brighton College); G. M. Reeve, Exhibition (Monoux School, Walthamstow), £10; A. Carr, Exhibition (Brighton Grammar School), £10. Mentioned for Classics: J. R. Griffith; Mentioned for Latin: W. B. Blatch and W. M. Malleon.

BRISTOL GRAMMAR SCHOOL.—S. H. Slade and E. W. Wilton have been elected to Junior Pelouquin Scholarships. F. Daniell and H. L. White, Second Class Natural Science Tripos, Part I., Cambridge; J. H. Sleeman, First Class, Classical Tripos, Part II., Cambridge; F. S. Sutton, First Class, Final Honours School of Mathematics, Oxford; E. H. Maish, John Stewart Chemistry Scholarship, University College, Bristol.

BROMSGROVE SCHOOL.—The following open scholarships and exhibitions have been awarded:—Scholarships: A. C. Longland (Messrs. Knowles & Daugleish, Cothill, Abingdon), £80 for Classics; G. C. Marris (Mr. Ridgway's, Edgbaston), £45 for Mathematics; J. M. Collier (Miss Robson's, Tredennyke, Worcester), £30; F. N. D. Preston (Mr. G. R. Burnett's, Seaseale), £30. House Exhibitions, £20: F. T. G. Whittall; W. G. Wise (Mr. T. A. Wise, Oakfield, Rugby); N. Forde (Mr. Wallich, Inholmes, Cheltenham).

CANTERBURY, KING'S SCHOOL.—The following elections have been made:—To Entrance Scholarships: G. H. S. Pinsent (Mr. Lloyd, Winchfield), I. R. Madge (Mr. Robinson, Godalming), H. H. E. Gossett (Mr. Allen, East Sheen), A. R. Bellars (Junior King's School), A. G. M. Rope (Messrs. Atkinson & Farrar, Church Stretton), E. P. Shelbourn (Mr. Owen, Melton Mowbray). To a House Scholarship: V. L. Armitage (Mr. Lynam, Oxford). To Junior Foundation Scholarships: A. G. Roper, A. de B. Hamilton, R. Watson (all from King's School). To Probationer Scholarships: A. R. Bellars (Junior King's School), J. D. Abrahams (Junior King's School), H. H. E. Gossett (Mr. Allen, East Sheen), I. R. Madge (Mr. Robinson, Godalming), E. K. Barber (Junior King's School), A. G. M. Rope (Messrs. Atkinson & Farrar, Church Stretton), C. B. Simeon (Junior King's School).

CHELLENHAM LADIES' COLLEGE.—The following pupils of the Cheltenham Ladies' College have been placed in the First Division in the recent Matriculation Examination of the University of London:—Ethel G. Barker, Mary E. Browne, Maud Burt, Ursula Edmonds, Ella F. Gilbert, Eleanor Greig-Smith, Margaret Lapsley, Dorothy Lloyd, Margaret Richard, Mabel Shovelton, Dorothea Stock.

CITY OF LONDON SCHOOL FOR GIRLS.—Recent successes in outside examinations: L. M. Elligott, a Holloway College scholarship of £50 a year for three years; E. M. L. Griffiths, a scholarship of £50 for two years, for Westfield College; E. Jasper, two bursaries of £30 a year, each for two years, for Holloway and Westfield Colleges respectively. London Matriculation Examination, First Division: C. Carwood, J. Martin, E. Smith, E. Stroude, and H. Wallingford. The annual distribution of prizes by the Lady Mayoress is fixed for October 8 next.

CORK HIGH SCHOOL FOR GIRLS.—Miss M. Porter, B.A., has been appointed science mistress; and Miss E. MacGiffen, B.A., language mistress. The High School term begins on September 1.

HAILEYBURY COLLEGE.—The following were the principal prize-winners announced on Speech Day:—A. R. Gidney, Latin Prose and Greek Prose Translation and English Essay; C. H. Dinham, Greek Iambics; H. C. Gordon, Translation into English, Shakespeare Prize, Study of Art, History of VI. Form, and English Verse; L. A. Speakman, Latin, French, and Second German, Modern Side; G. E. F. Torrey, Recitation, French, and Second German, Classical Side; C. V. Troughton, English Literature, History, and Physical Geography, Modern Side. At Oxford, C. A. Henderson and J. T. Scott, Second

THE MOST UP-TO-DATE
ENCYCLOPÆDIA.

BY THE EDITOR OF

THE IMPERIAL DICTIONARY.

The POPULAR ENCYCLOPÆDIA is the leading reference book for people with modest purses. It is now being brought up to date by Dr. Charles Annandale, with the assistance of an army of experts.

The POPULAR ENCYCLOPÆDIA will consist of fourteen handsome Volumes, profusely illustrated, and bound in cloth with leather backs; the price of the whole being £8. 15s. Eight Volumes are ready for delivery, and the remainder will appear at intervals of two months.

By an arrangement with the Proprietors, the "Saturday Review" is enabled to offer the work on the instalment plan.

The POPULAR ENCYCLOPÆDIA is a Universal Gazetteer, an Atlas of the World, a Universal History, a Biographical Dictionary, a Commercial Dictionary, a Political Dictionary, a Dictionary of the Sciences, of Philosophy, of Theology and Religion, of the Fine Arts, of Handicrafts; in a word it is

A DICTIONARY OF GENERAL INFORMATION.

Dr. Annandale's name is a guarantee of the value of the new Edition.

ORDER FORM.

To the Proprietors of the "SATURDAY REVIEW," 38 Southampton Street, Strand, London, W.C.

Please supply me (carriage paid) with the eight volumes of the New POPULAR ENCYCLOPÆDIA, and the remaining six as published, on account of which I enclose initial payment of 5s., and agree to pay 10s. per month for seventeen months. I undertake not to part with the work until the payments are complete.

Class Moderations. At Cambridge, L. F. Brady (St. Catharine's), Second Class Classical Tripos, Part I.; A. J. Nicholson (Trinity), Second Class Natural Science Tripos, Part I.; G. S. Oddie, Rustat and Jew Scholarships at Jesus; M. Davis, a Mathematical Scholarship at Sidney Sussex. The following have passed for the Royal Military College:—D. F. Cunliffe (7th), M. C. Gribbon, E. H. Bowes-Lyon, A. B. Smyth, D. G. Sandeman, H. C. Fox-Boxer, P. W. Elliott, W. D. Hepburn, C. H. G. Collins passed out of the Royal Military College with Honours. A. H. Fraser passed into the Royal Military Academy, Woolwich, and S. C. Lyttelton into the "Britannia." The Speech Day, with a rather curtailed programme, was held on Wednesday, July 9. The guests were numerous, but, for once, the weather was not propitious. Refreshments, a display in the Gymnasium, and an organ recital filled up the time after the distribution of prizes. The "Boer War Memorial" is to take the form of a fine obelisk in the avenue before the college gates, and a "Roll of Honour" in the cloisters on the south of the quadrangle. We are now studying the effect of the obelisk from a dummy erected on the proposed site within view of the Lodge and the public road. The school breaks up on Thursday, July 31.

HULL GIRLS' HIGH SCHOOL.—Six successes have been gained in the London Matriculation of last January and June: M. England, G. Bolton, and T. Paterson have been placed in Division I.; E. Milner, A. Williams, and E. Young in Division II. T. Paterson has just gained a County Council Scholarship of £60 a year for two years, and Margaret England has been awarded a bursary of £30 a year for three years at the Royal Holloway College. Miss Tinkler, B.A., at present second mistress in this school, has been appointed Head Mistress of the Girls' High School, Leicester (Church Schools' Co.). Her place will be filled by a former mistress, Miss Louis (Oxford Honour Schools).

NEWPORT INTERMEDIATE SCHOOL FOR BOYS.—J. J. Cater, P. J. Leonard, L. G. Taylor, F. E. Tilley, and W. H. Whitehouse have passed the London University Matriculation in the First Division.

NORTH LONDON COLLEGIATE SCHOOL FOR GIRLS.—On Friday, July 4, the Bishop of London presided at the annual prize-giving of the above school. The girls first sang a hymn "O God, our help in ages past!" After a short prayer offered by the Rev. A. J. Buss, they sang again, this time a song, "The Fairy Godmother." Then followed the Head Mistress's report. After this another song was sung; "As it fell upon a day," and then came the distribution of prizes by the Countess Grosvenor. The girls having again sung, the Bishop rose to say a few words. The honoured name of Buss, known to him already in East London, he now found to be no less honoured in North London. This was one reason of the great pleasure it gave him to come to the school; another was that it was a pioneer school—common as high schools are to-day, it was this school that began the whole movement. He then spoke of the influence for good such a great school possessed—an influence affecting the home life of wives, mothers, and sisters, as well as that more public life now open to women in so many capacities. Mr. Latham proposed a vote of thanks to the Countess and the Bishop, and the proceedings terminated with the hearty singing of the National Anthem. There were on the platform, beside the Countess and the Bishop, Lady Florence Bridgman, Mr. Latham, the Master of the Clothworkers' Company, Miss Ridley, Miss Paget, Mr. Horne, Mrs. Hill, the Rev. A. J. Buss, the Rev. Septimus Buss, the Rev. H. L. Paget, Rev. G. Tiley, Rev. H. Cart, Dr. Garnett, Mr. Garrod, Mr. Willock, Dr. Mott, Miss Chessar, Miss Newton, Dr. and Mrs. Willis, Miss Lawford.

RADLEY COLLEGE.—The following have been elected to scholarships:—Longland, With, Byatt, Reade, Kempe, and Bigg-Withen.

RICHMOND HIGH SCHOOL, SURREY.—In April K. Seaton gained a Clothworkers' Silver Star at the Royal Drawing Society Exhibition; highly commended, D. Seaton; commended, K. Seaton and W. Sharpe. In the Royal Drawing Society Examination, out of 82 entries, 26 honours and 32 pass certificates have been obtained; K. Seaton obtains her full certificate. W. Knight has passed the Associated Board of the Royal Academy of Music and Royal College of Music Local Centre Senior Grade Examination in Piano. Miss Meek and Miss Wharton are leaving, and will be replaced by Miss A. Lloyd, B.A. London, late of Kendal High School, and Miss O. Murray Browne. A school magazine has been started this year.

ROSSALL SCHOOL.—Entrance Scholarships:—Senior: R. D. Anderson, T. H. Cleworth, H. D. Littler, C. J. H. Bolton, C. Caddick, A. Pym, T. Harston, C. T. Hobson (E. Owen, Esq., Tower House, Melton Mowbray), E. W. Hasell (W. M. Smith, Esq., The Tower, Portinscale). Foundation: W. St. J. Pym. Junior: C. A. Storey (Rev. E. B. H. Berwick, Rossall Preparatory), H. L. Hughes Jones (B. Thompson, Esq., Sandy Knoll, St. Anne's), G. L. B. Stones, F. B. Reece (R. W. Hugh-Jones, Esq., Coleb House, Rhyll), E. Powell (Foster Knowles, Esq., Cothill House, near Abingdon), H. B. Edwards (R. S. Lea, Esq., Lindley Lodge, Nuneaton). Principal prizes and distinctions gained in the School:—History and Latin Lyrics: J. N. G. Johnson. Translation: S. F. Peshall. Moss Christian Evidence: S. F. Peshall. General Paper: (1) T. H. Mayes, (2) S. F. S. Johnston, (3) N. C. Hollins. Bishop Richardson, late of

Zanzibar, and now assisting the Bishop of Brechin, has just undertaken the Wardenship of the Community of St. Thomas-the-Martyr, Oxford. The Rev. J. E. Meran, our first Rossall Missioner at Newton Heath, Manchester, has been nominated Bishop of Tasmania. At Oxford F. R. G. Duckworth gained a first in Honour Moderations; P. G. C. Campbell, the Chancellor's Prize for English Essay. At Cambridge, F. B. Roberts played in the Freshmen's Match, W. H. Sell in the Seniors' and for the Next Sixteen. At Sandhurst, G. H. W. Mortimer represented the Royal Military College against Woolwich in the high jump and hurdles. F. B. Newett has won the Amateur Golf Championship of Ireland.

UNIVERSITY COLLEGE SCHOOL, LONDON.—Speech Day was held on July 25, when the prizes were distributed by Mr. John Hawksley, President of the Institution of Civil Engineers. The most marked feature was the success of the new Commercial Side. Twenty-one diplomas were awarded by the examiners of the London County Council, and one pupil—A. Harris—obtained distinctions in eight subjects. The Head Master, in his address, dwelt on coming changes. As soon as University College is incorporated in the University of London, the school will have to seek a new home under new auspices. For new buildings some £80,000 will be needed, and an appeal was made to the generosity of old *alumni*.

ERRATUM.—In the Scottish notes of last month (page 460, col. 2, line 12) an unfortunate "not" crept in. The words should read "in all cases the qualifying course should extend over three terms."

PRIZE COMPETITIONS.

The winner of the Translation Prize for June is F. C. Webb, Esq., Oakover Girls' School, Eurnham, Somerset.

Elle se mesloit d'estre poëte, et composoit des vers, dont j'en ay veu aucuns de beaux et tres-bien faictez, et nullement ressemblans à ceux qu'on luy a mis sus à avoir faictez sur l'amour du comte de Bothwell: ils sont trop grossiers et mal polis pour estre sortis de sa belle boutique. M. de Ronsard estoit bien de mon opinion, en cela, ainsi que nous en discourions un jour, et que nous les lisions. Elle en composoit bien de plus beaux et de plus gentils, et promptement, comme je l'ay veue souvent qu'elle se retiroit en son cabinet, et sortoit aussy tost pour nous en monstrier à aucuns honnestes gens que nous estions là. De plus, elle escrivoit fort bien en prose, surtout en lettres, que j'ay veues très-belles et tres-eloquentes et hautes. Toutesfois, quand elle devoit avecques aucuns, elle usoit de fort doux, mignard et fort agréable parler, et avecques une bonne majesté, mesme pourtant avecques une fort discrete et modeste privauté, et surtout avecques une fort belle grace: mesme que sa langue naturelle, qui de soi est fort rurale, barbare, mal sonnante et scéante, elle la parloit de si bonne grace, et la açonnoit de telle sorte, qu'elle la faisoit trouver très-belle et très-agrable en elle, mais non en autres.

Voyez quelle vertu avoit une telle beauté et telle grace, de faire tourner un barbarisme grossier en une douce civilité et gracieuse mondanité! Et ne s'en faut esbahir de cela, qu'estant habillée à la sauvage (comme je l'ay veue) et à la barbareque mode des sauvages de son pays, elle paroisoit, en un corps mortel et habit barbare et grossier, une vraye déesse.

By "VICTA."

She was fain to be a poetess, and wrote verses (some of which I have seen) that were admirable and very well composed, and in no wise resembled those on Earl Bothwell's love, which have been ascribed to her: these are too rough and unpolished to be of her scanty workmanship. M. de Ronsard was assuredly of my opinion of this matter one day that we read and discussed them together. She wrote far better and more graceful verses than these, and with great facility, for I have often seen her withdraw into her study and presently re-appear and show them to any of us courtiers who happened to be present. Moreover, she wrote prose excellently well, particularly in the form of letters (some of which I have seen), very charming, elegant, and noble in expression. Whenever she conversed with any one her voice was very soft, gentle, and agreeable, her manner suitably dignified, yet infused with a becoming and decorous geniality, and so full of charm that her native idiom, which is naturally very rude, uncouth, inharmonious, and unpleasing, was spoken by her with such charming modulations that it acquired on her lips a beauty and a fascination not its own.

See the irresistible power of such beauty and grace in turning a barbarism into an expression of politeness and gracious urbanity. And it need not be marvelled at that, clad as I have seen her in provincial garb, and in the outlandish fashion of the barbarians of her country, in mortal body and in uncouth and barbarous dress she yet appeared a very goddess.

(Continued on page 538.)

These School and Teachers' Advertisements are continued from page 501.

Third Class.—Pen and Ink, Senga, Isobel, France d'abord, Hitchhurst, E. Ormond, Sandra, Interprète, Finis, Mais, A Minor, Tremartha, Duns Scotus, Joe, Day Dawn, A.W.I., Markham Bambly, X?, M.T.R., K.B., Scotch Thistle, Hareim, Marigold, Bernardine, Tête Blanche, A.C., E.B.H., Fernia, Barak, Corbucet, Madcap, Toujours continuez, Tyro, Mab, Caversham, Sigma, Sauvage, Wilts.

Fourth Class.—Sorosis, Lahnstein, A.J., Ringelblume, Jacko, Stella, Czillag, Motor, La Pierre Noire, F.M.R., E.A.M., Rock Castle, E.G.P., Guenna Nervitta, L.G.R., La Souris, Sydney, Patna, E.A., Marwenne, Nemesis, B.M.W., Fossil, D.H.W., Helen, Saint Blaise, M.C.N., Nairn, Claire.

Fifth Class.—Neith, U.Y.Z., Hela, E.H. de R.B., Violet, E.R.F., M.J.H.

An ideal translation of the passage from Brantome would undoubtedly be couched in Elizabethan English, but this is a bow that many essayed, but none was able to bend. The next best course was to avoid glaring modernisms. Thus "society manners," "love affair" are jarring discords; and "trifled with poetry," though it exactly renders the French, should be rejected in favour of "affected." To pass to actual blunders, "Count Bothwell," "Moorish garb," and "her country Barbary" were not infrequent. The sentence *Comme je l'ay vuee* was often an anacoluthon. *Honnestes gens* in seventeenth-century French is "men of breeding." *Privaute* is not "reserve," but "familiarity." In *elle en composoit bien de plus beaux*, *bien* is not "many," but "certainly," "for that matter." "We need not marvel" was perverted by many into "Is it not astonishing?" In *Victa's* version, "rough" should be "coarse"; and for "provincial garb" substitute Spenser's "salvage weeds," or, if this is too archaic, "uncouth."

EXTRA PRIZE.

The Extra Prize for an epigram on the postponed Coronation is awarded to "Kingston":

Fate had decreed it all too soon
To crown an *august* King in June.

"G. E. D." sends us:

"God save the King!" glad millions thronged to peal:
"God save the King!" we falter as we kneel.

And "M. J. H.": "Nullum tempus occurrit regi."

Olouva's hendecasyllables are commended, but we question *gaudii* and use of *præ*.

HOLIDAY PRIZE COMPETITIONS.

Prizes to the amount of Five Guineas as a minimum are offered for the following competitions in photography:—

1. One figure study, illustrating some scene in history or fiction.
2. A set of three landscapes.
3. Three architectural studies, exterior or interior.

Photographs will be returned if stamped covers are sent.

Prizes to the amount of Three Guineas as a minimum are offered for the following literary competitions:—

1. A triplet of anecdotes illustrating the humours of the class-room or the playground.
2. Three instances of infant precociousness.
3. Three pedagogic sentences or maxims selected from classical novelists.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by September 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 7 Broadway, Ludgate Hill, E.C.

REYNOLDS & BRANSON, LTD.

Laboratory Outfitters, Manufacturing Chemists, and Opticians.

New Pattern SCIENCE

LANTERNS,

Stroud & Rendall's, for the Vertical and Horizontal Projection of Slides, Apparatus, Drawings, &c. These Lanterns can be fitted with either the Electric or Lime Light.

1902 MODEL, with open stage and adjustable table for tall apparatus, in case measuring 21 x 8 x 12 in., with two Prisms and Lime Light Jet. Price, complete, £9 9 0.

1901 MODEL, with Folding Base-board, complete in case, with one Prism and Lime Light Jet, £8 0 0.

N.B.—All kinds of Scientific Apparatus made at short notice in our own workshop.

CHEMICAL AND PHYSICAL LABORATORY BENCHES

Of best manufacture, fitted complete with Apparatus. PRICES ON APPLICATION.

BENCH AS SUPPLIED TO THE NATIONAL PHYSICAL LABORATORIES.

Having had considerable experience in the Internal Fitting of Science and Art Schools, Technical Laboratories, &c., we shall be glad to receive inquiries for Estimates; and, if requested, we can send diagrammatic plans for new buildings or extensions, and complete plans of many institutions we have equipped.

The following Catalogues on application:—Illustrated and Priced Catalogue of **Chemical and Physical Apparatus, &c.** Tenth Edition, greatly Enlarged, pp. 350. Pure Chemicals and Re-Agents. **Handy Guide to Photographic Requisites**, being a Complete Price List of Photographic Apparatus, Materials, and Pure Chemicals. Twenty-fourth Edition, pp. 96. POST FREE.

14 COMMERCIAL STREET, LEEDS.

SITUATIONS VACANT.

ABERAYRON INTERMEDIATE SCHOOL.—

Wanted, by the 15th September next, **SCIENCE TEACHER** (Male or Female). Graduate. Essential subjects: Mathematics, Chemistry (Practical and Theoretical), Physics, and Drill. Salary £110 non-resident.

Also, a **MISTRESS**. Graduate. Subjects required: French (Conversational and Grammatical); must be qualified to teach Mathematics under the Board of Education, South Kensington (Elementary Stage); general English subjects and Drill. Salary £90 for the first year, and, if efficient, an increase of £5 per annum in each of the second and third years.

Candidates for both the above appointments are to state subsidiary subjects that they can teach. Applications, stating age, experience, and height, to be accompanied by three recent testimonials, should be sent to me on or before the 14th August next.

Aberayron, 29th July, 1902.

B. C. JONES, Clerk to the Governors.

HEAD MISTRESS.—The Governing Body of the **WYGGESTON GIRLS' HIGH SCHOOL, LEICESTER**, invite applications for the position of **HEAD MISTRESS**, which will become vacant at Christmas next. The salary will be £100 and a capitation fee of £1. 5s. for each girl up to one hundred, and £1 for all above that number. There is accommodation in the School for about 350 girls, and at present there are 315 in attendance. No residence is provided, and boarders are not taken. Applications, with not more than four original testimonials, must be received on or before September 10th, together with twenty-five printed or type-written copies of the application and testimonials. Each applicant must state her (1) Professional Training, (2) University Degree, if any, (3) Experience, (4) Age, and (5) Present Appointment.

Candidates are requested not to canvass. For further information apply to 1 Berridge Street, Leicester. A. H. BURGESS, Clerk to the Governors.

29th July, 1902.

ENGLISH MISTRESS, qualified to teach Latin, Mathematics, and Botany, required in good School. Firm disciplinarian. —SCHOLASTICA, Hargreaves' Library, Ramshill Road, Scarborough.

OCCASIONAL NOTES.

"THE line which the *Pilot* has taken in reference to the Education Bill has not approved itself to the majority of Churchmen."—This beginning of a leading article in the

The "Pilot" and the "Journal": Extremes meet.

Pilot we may, *mutatis mutandis*, apply to ourselves, and the arguments that the *Pilot* adduces against the Bill may explain to our Liberal friends why we have, with many reservations, on the whole supported it. "It leaves the one serious grievance of the Nonconformists [full representation on the managing boards] unremedied. The almost certain result of a victory of the Liberal Party will be an apparently slight, but really vital, change in the relative proportion of foundation and representative managers." That is our hope and expectation; and, in this hope, we are content for the present to accept the half loaf, or even the third, of Section 7. The second objection of the *Pilot* is that, though in good Church schools, that is, schools which maintain strict dogmatic teaching, the Bill will be harmless, yet in bad schools the majority, we are glad to learn, which are lax in their insistence on dogma, the representative minority will prevail and persuade their colleagues "not to emphasize denominational shibboleths." We, too, believe that this happy consummation will gradually be brought about. The last, and most weighty, objection of the *Pilot* to the Bill is that it will stay the spread of Church schools. Even at present "the Board schools are everywhere overtaking the Church schools," and Churchmen who were not prepared in the 'seventies to run a Church school in opposition to every Board school that was established will be still less inclined to do so in opposition to the Local Authority schools of the future. We hope it may prove so; but on this point we must confess that we are less sanguine than the *Pilot* is despondent.

THE resignation of Sir John Gorst, though sudden, was not unexpected. It was well known that he was not a *persona grata* to a Cabinet whose indifference to education

was, in his eyes, hardly atoned for by a death-bed repentance, and for whose ignorance and incapacity as shown in educational legislation he barely concealed his contempt. It was known also that with some of the permanent officials of the Board of Education he was not on speaking terms. That the Leader of the House of Commons should himself have taken charge of this year's Education Bill may have seemed to some only a sign of the importance that the Government attached to the measure; but this would not account for the Vice-President's silence in the debates. Lastly, those behind the scenes know that more than one offer had been made to Sir John to induce him to resign. The announcement was not unexpected; yet to many teachers it came as a shock, followed by a feeling of regret as at the death of a great general or statesman. In this feeling we fully share; and, though we have nothing to retract of the censures that from time to time we have felt bound to pass on his conduct, we gladly seize this opportunity of testifying to his many countervailing qualities. First and foremost, Sir John Gorst knew his business, with a knowledge born of long study and personal experience—experience gained in the colonies, at Toynbee Hall, and by constant visiting of schools. He had not, like the Prime Minister, to be coached in his brief and prompted at every turn. Secondly, he had a true zeal for democratic education and an abhorrence of the obscurantism of the Lords and landlords with whom his lot was thrown. Sir John Gorst's Bill of 1896 was a statesmanlike measure, wrecked only by the timidity and the ineptitude of Sir John's superiors. Let us recall the *symbolum* of educational reformers enounced at Liverpool in 1899: "I hope to see the day when there will be in every district one sole Authority responsible to the people and possessing its confidence, which will arrange the whole of its education, elementary and secondary." Thanks greatly to Sir John, that goal is now in sight. Lastly, he was fearless in his utterances, and herein lay both his strength and his weakness. He entered office with the tacit understanding that he would be Her Majesty's most obedient, humble servant, a mere paid official of the Government, provided he might speak what he thought; and he used to the full, and sometimes abused, this chartered liberty. Whether he was right or wrong in this view of the now abolished office we will not pretend to decide. This much is certain, that his brilliant talents were devoted to education, and that what influence he had was all thrown on the democratic side. The Ministry may be more consolidated by his retirement, but it has lost its ablest member, and the country is the poorer by the loss.

"LE roi est mort: vive le roi!" The Vice-President is dead, and we have in his stead to represent the Board of Education in the House of Commons the Warden of All Souls. Sir William Anson is a good lawyer and a good business man. He knows thoroughly the machinery of a great University and something of the work of a County Council. He has in a wonderfully short time gained the ear of the House, and, what is equally important, he has shown that, though in general a supporter of the Government, he has his own opinions and the courage of his opinions. With teachers and teaching other than academic he has not been brought into contact; but we may be confident that their claims will receive from him a just, if not a sympathetic, hearing. The shuffling of the Ministerial cards has given us as President

of the Board Lord Londonderry in place of the Duke of Devonshire. Lord Londonderry, as all the papers have reminded us, was for a brief period Chairman of the London School Board. As a perfervid partisan puts it, "he weighed the London School Board in the balance, and, having found it wanting in business capacity, he left it," which will suggest to some Mrs. Partington and her mop, and to others rats and the sinking ship. This, as far as we are aware, is Lord Londonderry's only claim to the office, and we profoundly regret the survival, or revival, of old bad precedents. "I am the Minister of Education," said a former Duke of Richmond, pilloried by Matthew Arnold; but he made no impression on the figure-head theory.

AS manager of an Education Bill, Mr. Balfour has in part retrieved the character he lost in 1896. Thanks to his conviction of the seriousness of the situation and to the excellent coaching he received from the officials, or possibly an official, of the Board of Education, he has displayed his best powers of tact and persuasion. In response to his appeal the House, before rising to shoot grouse, passed Section 7, in which is now incorporated the gist of Section 8. In a small house of 318 members Mr. Balfour secured a majority of 122 votes. The clauses now passed contain the main principles that offend, or appear to offend, the Opposition. And yet we find the newspapers talking, with joy or sorrow, according to their politics, of the scanty prospect the Bill has of being placed upon the Statute-book. The Leeds and the Sevenoaks by-elections are significant warnings, but the end is not yet. Nor would educationists, apart from politics, desire a general election. The Liberal Party has as yet no alternative scheme. To go to the country on an Education Bill would be a real calamity, for at present the elector does not distinguish between education and the bitter jealousies of rival religious bodies.

IT is difficult to grasp the real idea that prompts the opposition of the nonconforming bodies. The Free Church minister writes to his local paper declaring that he will never pay the education rate, and enclosing a subscription of £5 towards a defence fund. Under the existing Education Acts the State pays 10d. out of every shilling—we take the figures from the *Schoolmaster*—spent on maintenance by the managers of voluntary schools. Under the new Bill elevenpence out of every shilling will be contributed from public funds. Under existing Acts the voluntary school is free from any control except that of the Board of Education; under the new Bill all secular education will to the same extent be controlled by the Local Authority. The Church accepts an additional penny in the shilling as the price of giving up its control, and yet the Bill is often described as a scheme for endowing the denominational schools. Is it that the Free Churchman makes so great a difference between rates and taxes? He seemed content to pay his tenpence in taxes, but refuses to pay his elevenpence partly in rates and partly in taxes, though by so doing he may get the school controlled by the Local Authority—the very object which he appears to have at heart.

AFTER the lengthy discussions and varied amendments to Section 7, the actual scheme proposed seems comparatively simple. In all public elementary schools provided by the County Authority—and transferred Board schools are held to be so provided—the County Authority will nominate not more than four managers, and the minor Local

Authority not more than two. In a borough or urban district which becomes an Education Authority, power is given to appoint any number of managers that Authority shall desire. Existing voluntary schools are to have a number of foundation managers or trustees not exceeding four, and a number not exceeding two appointed by the Local Authority. We may be content, as a first instalment, that the managers who hold and are responsible for the fabric of a voluntary school must be in the majority. These managers will naturally be ratepayers, and, although not necessarily elected by the locality, will be, in most cases, those men and women who are approved by the public opinion of the neighbourhood. The two managers who officially represent the ratepayer will be able to see that there is fair play. In the event of improper action by the trust managers the Local Authority can step in.

THE one argument of Mr. Balfour and the Church party against admitting public control of schools maintained at the public cost is the interference with private property, and the millions that have been spent by Voluntary Subscriptions in the Four per Cents. Voluntaryists on the erection of buildings are quoted in every debate. *Valeat quantum.* All we propose here to show is that the figures cannot be accepted without a large discount. First, we must in fairness deduct what has been paid in school rates in all those parishes where a voluntary school has prevented the formation of a School Board. Next, there are the cases of which Eastbourne is a type. There, in 1897, the Eastbourne Voluntary Schools Building Company, Limited, was formed, with a capital of £10,000. The object of the Company, as stated in one of its prospectuses, was "to provide capital for the building or enlarging of elementary schools in Eastbourne, so as to avoid a School Board with its heavy rates, and to do this in such a way as to provide a fair interest on the capital supplied." The Company has fulfilled its promises and paid a dividend of 4 per cent., besides a rent charge to the Duke of Devonshire, who is the principal shareholder. Can the Duke claim that he and his fellow-speculators shall, through his clerical lessees, manage in perpetuity the schools that they have thus built?

THE latest protest against the Education Bill comes from Wales. The Carnarvonshire County Council has resolved that "This County Council desires to intimate to the Government in the House of Commons [why only the Commons?] that until . . . they will not carry out the Bill in and for the county of Carnarvonshire." Doubtless other Welsh County Councils will follow suit if, as Dr. Clifford boasts, they are Nonconformists first and educationists afterwards, and, he might have added, law-abiding citizens. The *Westminster Gazette* considers this a facer for the Government, and cannot conceive what will happen in such cases. The contingency, however, was anticipated, and Section 11 meets it. The machinery for dealing with recalcitrant School Boards is still available. The Intermediate Committees, who are anxious to take over the elementary work, will simply be constituted the Authority under the Bill, or else a *mandamus* will be issued to compel the County Council to act. But the Government have a stronger weapon in reserve: they can exempt Wales from the operation of the Act. This will mean the loss of the new 7s. grant, the continuance of the special aid grant, the refusal of the extra secondary rating power, and the continuance for Wales of all the anomalies consequent on the Cockerton judgment. The Welsh nation are shrewd enough to see that a "won't play" policy will not pay, and the next County Council election will bring Wales into line.

MR. BALFOUR would have nothing to say to the compromise suggested by the Bishop of Hereford, who is, unfortunately, regarded by his episcopal brethren as a wolf in lawn. It is, briefly, that in the eight thousand "one Church school" parishes the Church managers shall have

*Dr. Percival's
Compromise.*

the right of requiring that the head teacher shall be a member of the Church of England, other posts being open to all denominations; that the clergy shall have free access to the schools at suitable times for the purpose of denominational instruction; and that the Church, the Local Authority, and the Parish Council shall appoint each one-third of the managers. This seems to us an equitable arrangement, and one that, unlike the Government's, might be final. So long as the appointment of the teachers rests with the managers it is monstrous to pretend that the control of the secular education rests wholly with the rate-payers.

MR. H. LEE WARNER puts excellently in a letter to the *Spectator* the grievance of Nonconformists with regard to training colleges:—"Only yesterday a young schoolmaster, a Churchman, told me how deeply he felt the case of those young sons of Nonconformists who had passed above himself and, being unable to get places in an undenominational college, were reluctantly confirmed so as to qualify for a Church college." If tests were abolished at the Universities in spite of trust deeds and the pious founder, the case is infinitely stronger for abolishing them in training colleges, where the foundation is a *bagatelle* compared with the contribution of the State.

LORD MEATH, by his persistent advocacy, has obtained from the War Office a grant of free ammunition for cadet corps under certain conditions, and, to judge by his correspondence with Mr. Brodrick, which he sends to the *Times* of August 22, he is not likely to obtain much more. Mr. Brodrick will receive a deputation in the autumn—a deputation of the Lads' Drill Association—but "cannot hold out any hopes of our undertaking large financial responsibility for the training of cadets." This decision we cannot pretend to regret. Straight shooting has an educational no less than a patriotic value, as the Persians taught us long ago, and we are glad to note the growing competition for the Elcho Shield at Bisley; but to military drill, unless it be genuine volunteering, we are opposed as the latest and most specious form of premature specialization. The bulk of the evidence so far taken before the Royal Commission on Physical Training (Scotland) decidedly inclines this way, though the reasons given are various and, to some extent, contradictory. Sir T. Lauder Brunton seems to us to go to the root of the matter. "Children," he says, "take an enormous amount of pleasure in simply shouting and yelling. It is very disagreeable for their neighbours; but it is awfully good for the child."

HISTORY would show that all progressive innovations are rediscovered at variously recurring intervals. We have with us now Nature Study and the Nature Study Exhibition. Our educational politicians talk as if a new way of life had been found, as if the bright future will no longer be as the dull past. "Lead your child out into Nature, teach him on the hill-tops and in the valleys," was one of the messages that Pestalozzi had for the world. Mrs. Humphry Ward has brought to a successful issue the experiment we

announced last month. Thanks to her name and to the all-pervading powers of the Press, it is likely that no School Board member or school manager, no Government official or inspector, will remain in ignorance of the magnificent pioneer work that has been done in the first summer vacation school to be opened in England. It is almost a pity that some other word than school could not be found. For many generations the word has to the child borne a connotation of ill omen. Mrs. Ward's school is organized play for children who otherwise have but the street as playground.

THE child of well-to-do parents is not idle in his summer holidays. He has his games and sports out of doors; in wet weather he has his paint-box, his charades, and countless other amusements. For the child in crowded London who has none of these pleasures the holiday school will come as a revelation. But this is not all. It is a commonplace to say of the British schoolboy that he learns as much from his play as from his work. The moral rightly drawn from the curriculum now carried on at the Passmore Edwards settlement is that much of the "play" could be incorporated in the time-table of "work" with gain to both teacher and taught. The Manchester boys who spent a week walking in the Peak district of Derbyshire probably learnt more than they had learnt in any other single week of their school life. Yet we venture to say that they enjoyed the trip and did not call it work. The children in the vacation school who are painting, drawing, singing, dressing dolls, modelling in clay, dancing, cooking, listening to fairy stories and acting simple plays are, we can testify, enjoying themselves hugely. And just as a result of this enjoyment their faculties are undergoing a sound educational process.

THE London County Council is not yet prepared with a detailed scheme for the training of secondary teachers. One announcement is, however, made that we welcome with considerable satisfaction. "It has been decided," so runs the official statement, "that the course for these students [those who intend to become secondary teachers] will be entirely post-graduate, and no student will be admitted who has not obtained a degree or passed an examination qualifying for a degree." From earlier and incomplete announcements, we greatly feared lest the new training college would attempt to train and prepare for the degree simultaneously. For primary teachers this drawback does indeed remain; but it would be impossible at present, and perhaps not altogether necessary, that a student intending to prepare for primary teaching should obtain a University degree as a preliminary for professional training. The condition of entrance to the primary side of the college is that the student must have passed the Matriculation Examination of the London University.

IT does, indeed, seem futile that His Majesty's judges, whose salaries come from the nation, and learned barristers, whose fees, some at least, will come from the London ratepayer, should spend their time and their acumen in considering a point which the present Education Bill is intended to settle. The "aggrieved" ratepayer sets the ball rolling, Mr. Cockerton gives it a push, and four Lords Justices have sped it on its way to become the sport of a higher court of appeal. It is illegal, so at the present moment stands the law, for the London School Board to spend money in building "centres" for the instruction of pupil-teachers. It is truly farcical. Pupil-teachers must

*Cockerton's
Progress.*

*The
New Teaching.*

be trained. The new Bill gives specific powers for this purpose to the new Education Authority. But legally the School Board has no right to do what every large Board is doing and doing wisely after the pressure of public opinion. In the meantime the Cockerton's Relief Renewal Act has passed through the House of Lords, and for another twelve months Parliament gives permission for a continuance of acts which are declared not to be legal. The inquiring foreigner might be pardoned for suspecting a conspiracy to find employment for our judges, had he not learnt that they were already overworked.

WITH all our faults, we in England do not close a number of schools without making provision for the children ejected. Mr. Cockerton may try to bar the door, but work continues. Neither—fortunately

In France. for ourselves—is the divergence between the Church of England and others so complete as the opposition of the French socialists to the clerical party. We hear of school buildings besieged and protected in regular form, of an officer who refuses to obey orders, of groups of peasants maddened by a rough attack upon the *seurs* they have learned to know and love. So far, the Vatican has not spoken, and rumour has it that the schools of the congregationists are not popular with the French bishops. Otherwise we should be surprised at the want of tact shown by the clericalists, who had only to ask for authorization and to submit to conditions not more stringent than the English Church welcomes in order to be allowed to continue their schools. Inflammatory speeches are made, appealing on the one hand to religious convictions, on the other to liberty of conscience; but there is one point which the speakers omit to note—where these religious schools are closed the locality will be called upon to provide others. This fact may account for much of the opposition to the action of the French Government.

AMONG the many schemes propounded to bridge the chasm between the supporters and opponents of the present educational measures, none is more attractive and none is more impossible than that of Mr. Auberon Herbert. If a ratepayer is satisfied with the Local Authority school, let him pay towards it. If a group of ratepayers are dissatisfied, let them build a school, and rate themselves accordingly. We know that anything done under compulsion is apt to have a bad effect. Perhaps of nothing is this more true than of games. Compulsory games are often and rightly unpopular, and yet in how many schools can a healthy life be maintained without this illogical aid? If every ratepayer were wise, honest, and just, Mr. Herbert's plan might succeed. If rates were voluntary, many parents would claim to be excused when their children were not of school age. And it is only by forcing every one to continue to contribute, whether he uses the school or not, that the rate can be kept down to a reasonable sum. It is everybody's interest that all children should be well educated. In theory compulsion is hideous; in practice it is necessary.

“THE astounding thing is that in the class of society from which officers are drawn it should be possible for young men to reach the military age without any instruction at all.” This does not refer to Sandhurst cadets, but is a remark made by the *Morning Post* on a circular issued by the Adjutant-General of the Indian Army in reference to the education of officers. We take it that the word “instruction” is used of set purpose to

denote those specific subjects which it is the schoolmaster's duty to teach in the class-room. Education has a wider significance. But we have always maintained that education must include definite instruction given by men skilled in imparting knowledge. Ten years ago the small country grammar school was the object of a general attack—probably not undeservedly. Now, with the revelations of the Army Education Committee, attention is focussed on the public schools. The small grammar schools, almost without exception, have become efficient, owing to increased funds from the County Councils and to inspection by the Board of Education. In the big public schools able to command a first-rate staff good work is done, at any rate for those boys who desire, or are compelled by examinations, to work. But what of the smaller public schools—not important enough to be greatly in the light of public opinion, too flourishing to seek State grants, too proud to call in H.M.'s inspector? We are afraid that in many cases inquiry would show that, while the boys get a sort of education which is not without value, the definite teaching and instruction is appallingly behind the times.

DR. MACNAMARA is always so ready to instruct every one, from the *late* Lord President and Vice-President downwards, as to the true facts about education that one might demand common accuracy in his own comments; yet, in the *Schoolmaster* of August 23, we find it stated that “the Marquis of Londonderry is Lord President of the Committee of Council.” Now there never was a Minister with such a title. The Duke of Devonshire was Lord President of the Council; while Sir J. Gorst was Vice-President only of the “Committee of Council.” But the Board of Education Act, 1899, altered all this. The Marquis is simply “President of the Board of Education,” and it is expressly provided that the holder of this office need not be a peer. Again, apparently, our Mentor does not know the difference between the Head Masters' Conference and the Incorporated Association of Head Masters; for, in an attack on Sandhurst as shown up by the Army Education Committee, we find caustic references to the “impotence of the Board of Education” and the “assumptions of the Head Masters' Association.” Not one in a hundred of the Association schools sends its boys into the Army; scarcely one of the Army-feeding schools earns grants from the Board of Education. By all means let us hold up inefficiency to contempt; but let it be done with knowledge. Grievances about Column B of the Teachers' Register are not germane to a discussion on military education, and to mix the two shows animus as well as ignorance.

TECHNICAL EDUCATION.

A CORRESPONDENT sends the following statement of prospective income and expenditure for elementary education in a county area under the provisions of the Education Bill. Estimating the present Government grants (including fee grant) at £1. 11s. a scholar, he says: “The supplementary grant, announced by Mr. Balfour on June 23, will represent an addition of 7s. 4d. per scholar, made up as follows:—(a) Fixed grant of 4s. per head; (b) One penny per scholar for every twopence by which the product of a penny rate falls short of 10s. per child.” Thus, £6,765 (product of penny rate) ÷ 41,000 (children) = 3s. 3½d. per child. The penny rate in this county falls short of 10s. per child by about 6s. 8d. But the Parliamentary grants in respect of elementary education “shall not in any year exceed three-fourths of the total expenses.”

INCOME.		EXPENDITURE.	
Government Grants:		Maintenance of Schools established by School Boards	
Annual and Fee, 41,000 at £1. 11s. ...	£63,550	Voluntary Schools, 28,000 scholars at £2. 7s. 6d. ...	£32,620
Supplementary, 41,000 at 7s. 4d. ...	15,033		66,500
	£78,583		
Less amount in excess of three-fourths of total expenses ...	3,583		
	£75,000		
Contribution under Agricultural Rates Act ...	1,080		
Balance to be met out of County Rates (3½d. in the £) ...	23,920		
	£100,000	Say, £100,000	

IN the county to which these figures refer there are about thirty School Board districts, in which the rates vary from under 1d. to 36d. in the £, the average being 8d. Under the Education Bill, expenses incurred to meet the liabilities for capital expenditure of any School Board are to be raised exclusively within the area which formed the school district in which the liability was incurred. The estimated rate required for repayment of loans in the School Board districts in this county average about 3d., and in the majority of cases the rate-payers in such districts would find their responsibilities for elementary education considerably lessened if their schools came to be maintained out of a county rate.

THE return just issued by the Board of Education showing the application of funds by Local Authorities to the purposes of technical education is a record of substantial progress. During 1900-1 in England alone over a million of money was so expended, and of this total over £100,000 was raised by rate under the Technical Instruction Acts. While the general disposition to apply the "residue" to education is satisfactory, the "local rate" is obviously the most important measure of activity and progress. Here are the figures for 1900-1 in comparison with 1892-3:—

	Out of Rates raised under the Technical Instruction Acts.	
	1892-3.	1900-1.
Counties	—	313
County Boroughs	12,762	50,846
Boroughs	—	26,776
Urban Districts	—	19,272
	£12,762	£106,207

As might be expected, the county boroughs are responsible for the major part of the sum now raised by rate for technical education, but, while the amount raised by the Councils of administrative counties as such is very small, it is to be remembered that to the influence of these bodies is due the action of the borough and urban districts.

IN 1892-93 the total amount expended on technical education in England was £485,322; in 1900-1, as already stated, the sum was £1,006,630. It is difficult—from the official figures—to indicate with any degree of intelligibility the real destination of this fund, but we may quote the general headings, for what they are worth, in comparison with 1892-3:—

	1892-3.	1900-1.
Grants to Town Councils, &c.	£36,054	£56,099
Directly supplying Education	232,179	369,543
Grants to Endowed Schools	22,031	83,855
Grants to Schools and Classes in receipt of aid from the Board of Education	72,604	165,692
Evening Continuation Schools	—	29,590
Other Schools and Institutions	37,057	66,419
Scholarships and Exhibitions	31,740	117,073
Administration	33,938	63,037
Grants to endowed schools and expenditure on scholarships and exhibitions, it will be seen, have increased, relatively, in much larger proportion than other departments of appropriation.		

IN Wales (excluding expenditure under the Welsh Intermediate Education Act) progress has been as follows:—

	Out of Residue Grant.	Local Rate under Technical Instruction Acts.	Total.
1892-3	£7,543	£10,118	£17,661
1900-1	20,798	23,973	44,771

Of the total of £44,771, about two-thirds is expended in the direct supply of instruction, the remaining third being absorbed by grants to schools, classes, and scholarships.

THESE figures represent a substantial contribution to the progress of education other than elementary. And if, here and there, the purposes which have enlisted support are open to criticism, it must be admitted by any impartial observer that, during ten years, a reassuring degree of local interest and activity has been stimulated which must have important national results. The freedom which Local Authorities have enjoyed in the administration of the funds at their disposal has led to a healthy variety of educational experiment of the greatest value. Moreover, there is an increasing tendency among Local Authorities to discourage the occasional class and the casual student. With few exceptions, each County and County Borough Education Committee has evolved a policy suitable to the requirements of the particular area it represents. And the Committees will be well advised to pursue their respective policies without devoting very special attention to the forms and regulations of the Board of Education.

SCHOOL BOARDS AND SECONDARY EDUCATION: A PERSONAL EXPERIENCE.

SCHOOL BOARDS are ambitious to control secondary education. Are they competent to do so? Some years ago I thought that there was just the possibility that a national system of education could be built up on a School Board basis. Higher-grade schools were being erected. What might not the future bring forth? Accordingly, I clung to elementary and higher-grade education with a fidelity which seemed unaccountable to many people. The School Board which I had to deal with was above the average in many respects. It has praised my work; I have received its compliments. Yet it is this very School Board which has convinced me that School Boards in general are utterly incompetent to undertake any work outside the elementary groove. In that groove they can do good work; outside they flounder helplessly. And yet I do not believe that the School Board in question has the faintest knowledge of the absurdities it committed; ignorance or woodenness, no baser cause, was at work. But my experiences have had one effect—they have disillusioned me. School Boards know nothing about University qualifications, nothing about the special nature of secondary teaching; they are in a groove and they cannot get out of it.

There are a few men who have had such a peculiar experience as myself. I have been in the midst of the School Board system just at the time when several transitions were taking place. The results have not left a favourable impression on my mind.

Listen to my history. I will begin with 1887. As a pupil-teacher I had, of course, in those days, to teach for the full number of school hours—about thirty per week. All pupil-teachers did the same; so I cannot complain. But, towards the end of my apprenticeship, the "centre" system came into operation—not on the present "day" plan, but in the form of evening and Saturday morning classes. I had still to give my thirty hours of teaching per week, and, in addition, to attend for two whole evenings and the whole of Saturday morning at the "centre," listening to teachers who, with two exceptions, were of the usual mechanical and idealess type common to elementary circles. I was ambitious, and had resolved on "matriculating." The "centre classes" knocked that plan on the head. "Private study" and recreation were virtually impossible under the above exquisitely stupid arrangement. Every spare moment was occupied by the writing out of dictated notes on the geography of Europe, &c. In short, I wasted my time in the most approved fashion.

At last this pupil-teacher slavery was over, and I was able to carry out my postponed plan. I matriculated in the Honours Division. Whether the pupil-teachers' centre take the credit for this I know not. The fact is that a moment's thought would have shown the Board that their pupil-teacher scheme was merely a scheme of white slavery, and that no culture could possibly be conferred by means of it.

I went to the local University College, and, in the course of five years, took my B.A. and B.Sc. degrees. Halfway through

that course, when I was a B.A. and Inter. B.Sc., I applied for the post of science demonstrator under the School Board. However, my application was not looked at; I was "not twenty-five." No age limit had, by the way, been mentioned on the advertisement.

After I had completed my college course, I was appointed a science teacher in a suburban School Board. The mode of appointment was interesting. A minister of religion upon that Board had long been friendly towards me, and, when the vacancy in question occurred, he suggested to his colleagues that I should be appointed there and then, and the expense of advertisement be thus avoided. The salary intended was £120-150; but one member of the Board proposed (as I was afterwards told by my friend) that I should be offered £110-150. Being a "local man," and "living at home," I should probably, he sagaciously thought, be willing to accept the lower sum. My friend explained to me the situation, but hinted that, if I "stood out," I should get the higher, yet by no means munificent, salary. But I did not like to "haggle." I still had some belief in the existence of human generosity, and I could scarcely conceive that £120 per annum would be denied to a B.A., B.Sc.; so I accepted the post, but, in the letter of acceptance, requested that the higher salary should be given. However, this "liberal" Board took the mean advantage of the situation. I had "accepted"; that was enough. Accordingly, I began work at £110—just £20 a year less than the salary of a female assistant in the same school, younger than myself and devoid of any degree. But she happened to be the sister of the head master; so, instead of receiving £100 a year less than myself, she received £20 a year more.

But good times were coming. An extension of the boundaries was imminent, and the small suburban School Boards were soon to be absorbed into the large city School Board. Then all would be well—patience!

Yes, all was well for some people—those people who happened to be few in number and could thus be dealt with individually. The head master received instantaneously a £50 rise; the clerks received instantaneously rises of greater or less amount. But assistants had to wait a good many months, until inquiries could be made among other School Boards. At last I found myself, an M.A. and B.Sc. of London, receiving actually the same salary (£140) as the charming young lady above mentioned!

Evening classes were now being established by the School Board, some of them science classes. Now observe this. The School Board paid its teachers "by the night." It did not matter whether the amount of teaching lasted one hour or two and a-half hours, the same salary was given. Why was this? Sheer ignorance was the reason. The School Board was reckoning everything on the evening continuation basis, and knew nothing of any other basis. One science master, who had in the previous year taught chemistry for two and a-half hours a night (one hour theoretical and one and a-half hours practical) pointed out the injustice of such long hours (at least three-quarters of an hour had to be added for preparation of apparatus). In vain! Payment was "by the night." Mr. X. refused the work. In an evil hour I accepted it.

In a few weeks' time arrangements for science evening classes were also made at another Board school. But here "practical" lessons were impossible. Mr. X. was appointed, and the very terms refused in the one school were granted in the other. You see, payment was "by the night." Accordingly, I had the privilege of teaching for two and a-half hours for the same salary as Mr. X., who taught one hour. Three nights' work were given to me; each night embraced over three hours' work.

A few weeks found me half dead. On one occasion I fainted while lecturing. I asked for relief. Soon after, the School Board discovered that the head master was not teaching a class, and requested him to do so. However, he resigned about the same time, and the School Board was so good as to offer me the post of head master in his place.

Should I accept? If I did, I should be adding to the already enormous task which had been imposed on me. On each of three nights a week I was actively teaching for two and a-half hours; thus all details of registration, &c.—which the previous head master could easily accomplish as he had no class of his own—would have to be done in "spare moments." But should I refuse? I had long been desiring a head mastership; here

it was offered. "If I accept it now, I shall surely be kept in office next session and under more reasonable conditions."

So ambition made me accept. I became head master, receiving the same salary as my predecessor, *but teaching three nights a week in addition*. But then, you see, "payment is by the night." It does not matter whether you teach one hour, two hours, three hours, or not at all; so long as you are *there* you are paid "by the night." So I struggled on, teaching my classes, using up my "spare time," including my Easter holiday, in registration work. It was a cheap arrangement, certainly; it meant that one man's office and salary were immediately got rid of.

But, again, changes were coming. The School Board was entering on a "coordination scheme" with the local Secondary Authority. "Of course the Board will safeguard the positions of its own teachers, especially a certain teacher who had already saved it many pounds by undertaking four men's work."

Not at all. Arrangements are made for "classes" to be held, but not "schools." No "head masters" will be required. And as soon as the numbers of a "class" fall below ten it must be suppressed altogether and the teacher be turned adrift.

Of course, if the teacher had not been a teacher, but had been a type-writing clerk in the School Board offices, his tenure would have been secure, whatever "co-ordination schemes" were made; but a teacher is a mere teacher, an *x*, an abstraction; he is not clothed in the flesh and blood of an office clerk. In short, after doing, as an assistant, two men's work for one man's pay, and, as head master, four men's work for one man's pay, I found myself handed over to the tender mercies of a scheme which had no need of head masters at all, and only of such assistants as were willing to work under impossible conditions and to see themselves snuffed out at a fortnight's notice. And yet all the time the School Board was quite unconscious of anything wrong!

My inference is this: School Boards know nothing about University qualifications; they know nothing about the special conditions of secondary (*e.g.*, science) teaching; their ideas are based on the Elementary Education Code, and all their proposals take that Code as a kind of starting-point. They can be "gulled"; they can be ruled by officials—able officials often, but familiar only with the lower grades of education. Of course, the School Boards *might* learn; but the time required would be enormous.

CANTAB.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

With the assistance of Mr. Carnegie, and under the influence of the new zeal for education, we are multiplying public libraries. Are we doing anything to teach the inexperienced how to use them? The National Educational Association of the United States has for some time had a Library Department to promote closer and more helpful relations between schools and libraries. And a librarian describes a plan for co-ordinating the institutions that in Michigan City, Indiana, has proved to be successful. In the public library at the centre of the town a room on the second floor has been furnished with tables and provided with chairs enough to seat fifty pupils and their teacher. Each of the higher classes in the schools has the use of the room for one afternoon a month. The teachers in council decide on a subject to be taken up at the next visit to the library, and notify it to the librarian a week in advance. Books on that subject sufficient in number to supply each pupil in the class, and suited to the age of the children, are sent up to the room. To each little student is assigned a subject for a short composition; and when in preparing his matter he has exhausted his own books he exchanges with another. The subjects chosen are such as are connected with the current work of the school. "To vary the programme of the afternoon," writes the librarian, "and to prevent restlessness on the part of the pupils, there may be occasional intermissions with a few moments of light gymnastics; or some of the pupils may be called upon for a brief oral account of the reading they have been doing; or the teacher may read a chapter from some interesting book. Mounted pictures illustrating the topic of the afternoon may be used to lend additional interest. A specially valuable feature of the plan is the opportunity it gives the librarian for short talks to the pupils on the use of the library, the reference books, and card catalogue, accompanied by practical object lessons and tests."

The teachers of New York are exercised over certain new regulations imposing age limits to their activity. Under these a woman more than

forty-five, or a man more than fifty, is not entitled to apply for a principal's licence; nor may any elementary teacher more than forty years of age obtain permission to teach in high schools. Remonstrances are being made to the competent authorities. The teachers of New York would deem their grievances trivial had they ever lived in a land where secondary teachers may be dismissed for a caprice or superannuated at five-and-thirty, and then refused all further employment as being sufferers from senile decay.

HOLLAND.

Since to-day the demand is everywhere so loud for technical, and in particular agricultural, education, and Holland is famous for the rare skill with which its soil is cultivated, we may call attention to the agricultural continuation schools that have proved so successful there. Instruction is given in these schools by the local schoolmasters. These get their knowledge from summer courses in agricultural subjects, the training being spread over three years and resting on observation as well as books. Teachers receive no compensation for following the courses; but anyone thus qualified may present himself for examination at the National School of Agriculture at Wageningen. If he passes, he receives 100 guilders to remunerate him for his labour and loss of time. He is now entitled to teach agriculture and to establish for that purpose his own school of agriculture in the place where he is stationed. In this way the country is studded with such schools, all taught by trained teachers and conducted on a uniform plan. The cost is met by the local communities, assisted, so far as is necessary, by a grant from the State. The teaching in these "evening schools"—for that is their official name—is carried on chiefly in the winter, ten lessons a week being given for nineteen weeks; but fourteen additional lessons fall in the summer. An annual inspection promotes the efficiency of the schools, and the fields of every province attest it.

AUSTRALIA.

A note on the subject of education in the Commonwealth of Australia will enable us to touch on the several colonies in respect of their educational progress. First, as to religious instruction in the schools: since these have often been styled "godless," it may be well to set forth the actual position of affairs. The Education Act of every State recognizes that the chief object of the public schools is to provide secular teaching for all comers. With this view it is enacted that the main part of the school-day shall be devoted exclusively to secular instruction. No test of fitness to teach religion or Scripture history is applied to teachers, except in Tasmania, where the pupil-teachers and teachers of the lowest grade are examined in Biblical knowledge. Nor would minute inquiries into their qualifications in this sort be appropriate, seeing that they have little occasion to display them. In Victoria and in Queensland—first to establish free, unsectarian, and compulsory education—no teacher is permitted to give other than secular instruction in any State school building. In New South Wales and Western Australia the teaching is required to be non-sectarian and secular; but secular is defined so as to include religious teaching of a colourless, undogmatic kind, and a basis for such teaching is found in the Scripture lessons issued by the Commissioners for National Education in Ireland. No child is required to attend the religious teaching if his parents object. In Tasmania the teachers must impart the rudiments of Scripture history. The South Australian rule is remarkable: *If the parents desire it*, the minister may call on the teacher to read to the children every morning a portion of Scripture "without note or comment." What would happen if the teacher refused is of small consequence, as, virtually, says the valuable "Year-Book of Australia," our principal authority in this note, *no Scripture reading has been demanded*. Everywhere there is a readiness to open the school buildings for religious purposes on Sundays or after the ordinary school hours; and in New South Wales and Tasmania one hour a day may be set apart, if it be required, for the use of visiting teachers of religion. Great variety of local usage obtains, and is likely to continue, the States being jealous of their religious independence. The Constitution Act lays down that "the Commonwealth shall not make any law for establishing any religion, or imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth."

Wherever population is spread thinly over a wide area the provision of schools is attended with peculiar difficulty. Many parts of Australia illustrate the fact, and the different ways of dealing with it. In some places half-time schools are established, all the children within a radius of ten miles being collected in two groups of not less than ten each and taught for half the normal school-day. A house-to-house school is the quaint term for an arrangement under which three or more such groups are committed to one itinerant teacher. When a family is entirely isolated the children must be instructed by a parent, an elder sister, or a learned neighbour, whilst from time to time an inspector calls with books, slates, and experienced counsel. In Queensland the opinion grows that the best solution of the educational problem in sparsely populated districts is to board the pupils with the teachers; thus at Yelvertoft, in the Gulf

district, more than half the children from a circle of eighty or a hundred miles in radius are boarded for a fee of twenty pounds a year, a sum that the fathers, chiefly working men, can well afford to pay. Elsewhere it is deemed more convenient to facilitate the children's attendance at some central school. In New South Wales and Tasmania they are carried by railway without charge; and in Victoria the State in some cases pays the parents for the conveyance of the little ones to school, or grants a reduction of fares.

Victoria, Queensland, South and Western Australia have made elementary education free; in New South Wales a fee of threepence a week is charged for each child, but not more than a shilling a week can be claimed from any family. Tasmania hopes to abolish school dues; but at present ninepence a week is payable for one child, fourpence for two, eightpence for three, and fourpence for each additional child. In spite of the concessions to prolificness, these charges impose a considerable burden on the poorer classes, and Tasmania will do well to bestir itself in realizing its hope. Some of the inspectors complain that they have not succeeded in developing an "educational conscience" in the parent; but every State should strive to keep its own educational conscience as tender as may be.

The subjects taught in the primary schools are approximately the same as in English schools of the same grade. Increasing attention is being paid to manual training; but the farm-bred young Australian asks less of this kind from the school than do children of the city. A Queensland inspector observes: "The ordinary Queensland boy outside our large towns is a good horseman, is able to handle gun, saw, axe, and hammer, and is frequently master of the adze and mortising axe as well." One school is famous for its skill in tree-felling, the trunks being conveyed to a saw-pit in the school yard, and there sawn into planks. Girls are taught to cook as well as to sew, and in the projected Domestic Economy College the Victorian Government will find a place for laundry work.

A constant supply of suitable teachers is yielded by the pupil-teacher system, preparation being supplemented in most cases by attendance at a training college. We commend the new method prescribed in South Australia for the training of teachers as almost ideal. A six years' course has to be followed: two years must be given to study and practice in a special school for pupil-teachers, two years more to teaching in other schools, and finally two years to reading and lectures at the University of Adelaide. Having his vocation fixed, his knowledge ordered, and his character already in some sort fashioned by the discipline of life, the teacher-student gets more out of a University than the boy fresh from school. As a rule, in all the colonies examinations testing both attainments and practical experience have to be passed by candidates for the office of teacher; and appointments at first are usually on probation. Visits by inspectors, summer schools, and bonuses furnish inducements to energy and the means of deepening culture. Salaries, however, are small, and liable to reduction whenever economy is deemed needful for the State. The policy is as shortsighted as that of killing the hens when eggs are scarce. New South Wales has been the chief exponent of this mode of retrenchment, but we observe that there and elsewhere a recovery has taken place since the great financial depression eight years ago.

VICTORIA.—CONDITION OF MELBOURNE UNIVERSITY. REVIVAL OF RELIGIOUS DIFFICULTY.

Soon after the discovery of the extensive frauds perpetrated by the accountant of Melbourne University (Victoria) the State Government appointed a Parliamentary Committee, presided over by Mr. Fink, M.L.A.—who was chairman of the successful Technical Education Commission last year—to report upon the financial condition of the University and the administration and general system of management that obtained in connexion with the institution. The Committee has just presented a remarkable progress report on University finances and the disgraceful conduct of the Government auditors, whom it justly blames for the numerous opportunities which fell in the way of the accountant to continue his extensive frauds. The report shows that the total shortage of the University on December 31, 1901, was approximately £35,000, of which £23,839. 6s. was lost through the frauds of Dickson, the accountant, and the balance, over £11,000, was caused by the accumulated annual excess of expenditure over revenue for a series of years. "Of the £23,839. 6s. above referred to," says the Committee, "£15,494. 8s. 1d. must be regarded as purely trust funds, which should, in our opinion, be replaced, in order to keep faith with the grantors and the beneficiaries." The Committee deals very drastically with the Government auditors, and has some very hard things to say concerning the University Council and the ex-Registrar, Mr. A. Beckett, whose loose control of the business side of the University rendered the drift into deficiency and crime possible.

The Committee admits that the University Council has tried its best to economize, and declares that "the suggestion that, by reason of the diminution of students in certain courses, some economy by amalgamation or reduction of the teaching staff could be made, we do not think immediately practicable or desirable. Although we have not examined the work of the University in detail, we are satisfied that

(Continued on page 572.)

NEW BOOKS AND NEW EDITIONS FROM

MR. MURRAY'S EDUCATIONAL LIST

FOR

SECONDARY AND TECHNICAL SCHOOLS.

COMMERCIAL KNOWLEDGE. A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handelswissenschaft* is designed for the use of students who intend to enter the higher branches of commercial life. It includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Tariffs; Employers' Liability; Commercial Travellers; Consuls, &c. . . . contains concise and accurate descriptions of all kinds of commercial routine, from the functions of the Board of Trade, to a facsimile of a bill of lading, and should be in the possession of every one who intends to embrace a commercial career."—*Scotsman*.

COMMERCIAL FRENCH. In Two Parts. By W. MANSFIELD POOLE, M.A., Magdalen College, Oxford, formerly Assistant Master at Merchant Taylors' School, and MICHEL BECKER, Professor at the Ecole Alsacienne, Paris. Author of "L'Allemand Commercial," and "Lectures Pratiques d'Allemand Moderne." With a Map in each volume.

PART I. Consisting of Simple Sentences and Passages in French, with occasional Business Letters, and containing in an Appendix a clear system of French Grammar, with special reference to the Verb. Crown 8vo, 2s. 6d.

PART II. An Advanced Commercial Reader. Crown 8vo, 2s. 6d.

COMMERCIAL GERMAN. In Two Parts. By GUSTAV HEIN, University of Berlin, and Lecturer in German (Honours) to the University of Aberdeen, and MICHEL BECKER, Professor of Modern Languages in the Ecole Alsacienne, Paris.

PART I., with a Map, will be published shortly.

This manual is uniform with the first part of "Commercial French" by Poole and Becker, and is specially adapted for the use of students in commercial classes and continuation schools.

FRENCH COMMERCIAL CORRESPONDENCE. By Prof. CHARLES GLAUSER, and W. MANSFIELD POOLE, M.A., Magdalen College, Oxford, Secretary to the Modern Language Association and Assistant Master at Merchant Taylors' School. Crown 8vo, 2s. 6d.

INTERMEDIATE FRENCH GRAMMAR AND OUTLINES OF SYNTAX. With Historical Notes. By G. H. CLARKE, M.A., of Hymers College, Hull, and L. R. TANQUEVEY, B.Sc.-L. Crown 8vo, 3s. 6d.

PRACTICAL SPANISH. With Exercises, Vocabularies, and Materials for Conversation.

PART I.: Nouns, Adjectives, Pronouns, &c.

PART II.: Verbs, &c., with Copious Vocabularies.

By Don FERNANDO DE ARTEAGA, Taylorian Teacher of Spanish in the University of Oxford. Crown 8vo, 7s. 6d.

This book has in the main been formed on the plan of Sir William Smith's well known and deservedly popular "Principia Latina, Part I." It possesses, however, one new feature which is as novel as it is likely to prove valuable to the student who uses the book. English people, for the most part, who set themselves to learn Spanish are not children, but either would-be travellers in the country, students of its literature, or persons engaged in commerce with Spain or Spanish-speaking countries. It has therefore been the aim of the editor throughout to avoid the old-fashioned Ollendorff sentences in illustration of the grammar, instead to make use of phrases and expressions which are likely to prove of practical use to the traveller and the man of business.

ALGEBRA. Part I. By E. M. LANGLEY, M.A., Senior Mathematical Master, Modern School, Bedford, and S. R. N. BRADLY, M.A., Mathematical Master, Modern School, Bedford. Fcap. 8vo, 1s. 6d.

This volume is specially adapted to the requirements of the First Stage of the Directory of the Board of Education, South Kensington. Answers, for teachers only, can be obtained separately.

Prof. JOHN PERRY, of the Royal College of Science, South Kensington, writes:—"I never do praise a book unless I believe it to be good. Your Algebra (regarded as a book for beginners) pleases me very much indeed. I cannot imagine an Algebra prepared for schools in general, and especially for use by teachers in general, which would come nearer to my notion of what an Algebra ought to be than yours."

A FIRST COURSE OF PRACTICAL SCIENCE, with full directions for Experiments and numerous Exercises. By J. H. LEONARD, B.Sc. Lond. With a Preface by Dr. GLADSTONE, F.R.S. Fcap. 8vo, 1s. 6d.

These lessons are taught on the heuristic method, with a view to stimulating the learner's powers of observation and experiment.

"The exercises described are suitable for quite young beginners, and they will serve the double purpose of applying the pupil's knowledge of arithmetic and developing a scientific frame of mind. . . . The experiments are described concisely and are well arranged."—*Nature*.

A FIRST COURSE OF CHEMISTRY. By J. H. LEONARD, B.Sc. Lond. Fcap. 8vo, 1s. 6d.

BRITAIN OVER THE SEA. A Reader for Schools. Compiled and Edited by ELIZABETH LEE, Author of "A School History of English Literature," &c.; Editor of "Cowper's Task and Minor Poems," &c. With Four Maps of the British Empire at different periods. Crown 8vo, 2s. 6d.

This School Reader is conceived on novel lines. The extracts are arranged in sections, comprising "The English Colonies up to 1900," "Australia," "India," "South Africa," &c.; and the selections range from the works of Sir Walter Raleigh to the speeches of Lord Beaconsfield. It contains a literary introduction, and the name of the author, who is a contributor to the "Dictionary of National Biography," carries assurance that the editorial work is well done.

Mr. P. A. BARNETT (H.M. Inspector of Training Colleges):—"I congratulate you on the production of a very excellent piece of work. I hope the schools will use it, but it is almost too good for them."

An Historical Review of the Development of Greater Britain.

THE GROWTH OF THE EMPIRE. By A. W. JOSE. With many Coloured and other Maps and Diagrams. Crown 8vo, 6s.

"... an eminently useful book . . . as serviceable as it is readable. It is systematic in method and accurate in statement."—*Globe*.

"... this excellent manual is written by an Australian Briton. . . . That the colonial history of Great Britain should be worthily told was a crying need, and we congratulate Australia upon producing the historian, and the historian upon the production of an admirable book."—*Daily Chronicle*.

A GENERAL HISTORY OF EUROPE, 350-1900. By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and Adapted to the requirements of English Colleges and Schools by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each Section. With Maps, Genealogical Tables. Crown 8vo, 9s.

The Medieval Period. The Empire, the Church, and the Invasion of the Germans—the Franks—the Dismemberment of the Empire—England and the Norsemen—Germany and France—Feudalism—Growth of the Papacy—Monasticism—Mohammed and the Crusades—Italy to 1494, &c.

The Modern Period. The Reformation and Counter Reformation—Spain under Charles I. and Philip II.—England under the Tudors—The Revolt of the Netherlands—The Reformation in France to the Edict of Nantes—The Thirty Years' War—England in the XVIIth Century—Ascendency of France under Louis XIV.—Rise of Prussia—The French Revolution—The Holy Alliance—The Revolutions of 1830 and 1848—France under Napoleon III.—The Unification of Italy—and of Germany—Great Britain and Russia.

"... a model of condensation, omitting no essential facts. . . . The volume is greatly enhanced by a wealth of maps and chronological and genealogical tables. Among general histories this will take a leading place."—*Dundee Advertiser*.

TELEGRAPHS AND TELEPHONES. By Sir W. H. PREECE, K.C.B., &c., sometime President of the Institute of Civil Engineers. 2s.

ELECTRIC WIRING. By W. C. CLINTON, B.Sc. Lond., Demonstrator in the Pender Laboratory, University College, London. Fcap. 8vo, 1s. 6d.

The above two volumes are written with particular reference to the requirements of the Examination of the City and Guilds of London Institute.

THE FACE OF NATURE. Popular Readings in Elementary Science. By the Rev. C. T. OVENDEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Fcap. 8vo, 2s.

MURRAY'S HANDY CLASSICAL MAPS.

Edited by G. B. GRUNDY, M.A., Brasenose College, Oxford.

GRÆCIA (Northern Greece, South and Peloponnesus). Two sheets in one case. 3s., cloth; 1s. 6d. net, paper. [Now ready.]

GALLIA. One sheet. 2s., cloth; 1s. net, paper. [Now ready.]

BRITANNIA. One sheet. 2s., cloth; 1s. net, paper. [Now ready.]

HISPANIA. One sheet. 2s., cloth; 1s. net, paper. [Now ready.]

ITALIA (Northern Italy, South and Sicily). Two sheets in one case. 3s., cloth; 1s. 6d. net, paper. [Now ready.]

GERMANIA, RHÆTIA, ILLYRIA, MOESIA, &c. One sheet. 2s., cloth; 1s. net, paper. [Now ready.]

PALESTINE, SYRIA and part of MESOPOTAMIA, and a Map showing St. Paul's Voyages. Three Maps on one sheet. 2s., cloth; 1s. net, paper. [Now ready.]

ASIA MINOR and MARE AEGÆUM. Two Maps on one sheet. 2s., cloth; 1s. net, paper.

THE ROMAN EMPIRE (at different epochs). Two Maps on one sheet. 2s., cloth; 1s. net, paper.

EGYPT and the EASTERN EMPIRES. Two Maps on one sheet. 2s., cloth; 1s. net, paper.

An Index is bound in each case.

* Mr. Murray's Illustrated Educational List can be obtained, post free, on application.

JOHN MURRAY, ALBEMARLE STREET, W.

UNIVERSITY OF LONDON.

Faculty of Economics and Political Science, including Commerce and Industry.

Mr. Murray begs to call the attention of Students to the following Works suited to the Examinations in the Faculty.

WORKS BY SIR HENRY S. MAINE, K.C.S.I.
ANCIENT LAW; its Connections with the Early History of Society and its Relations to Modern Ideas. Sixteenth Edition. 8vo, 9s.

POPULAR GOVERNMENT. Four Essays. I. Prospects of Popular Government—II. Nature of Democracy—III. Age of Progress—IV. Constitution of the United States. Fifth Edition, 8vo, 7s. 6d.

INTERNATIONAL LAW. The Whewell Lectures delivered at Cambridge in 1887. 8vo, 7s. 6d.

CHINA: Her History, Diplomacy, and Commerce, from the Earliest Times to the Present Day. By E. H. PARKER, Professor of Chinese at the Owens College; Acting Consul-General in Korea, Nov., 1886–Jan., 1887; Consul in Hainan, 1891–2, 1893–4; and in 1892–3 Adviser in Chinese Affairs to the Burma Government. With 19 Maps, &c. Large crown 8vo, 8s. net.

"Mr. E. H. Parker brings to bear upon his subject an experience, an amount of personal insight, and a capacity for criticism so unusual, as to endow his pages with an intrinsic merit practically unequalled. . . . Mr. Parker has produced a book which will be of value both on account of its wealth of information and independent criticism and for the additional light it sheds on Chinese topics treated of in other standard works."—*Pall Mall Gazette*.

ENGLISH COLONIZATION AND EMPIRE. By A. CALDECOTT, M.A. (Camb. and Lond.), sometime Fellow and Dean of St. John's College, Cambridge; University Extension Lecturer under the Cambridge Syndicate; Professor of Logic and Philosophy at King's College, London. With Maps and Plans. Crown, 8vo, 3s. 6d. New Edition. With a new chapter, bringing the work entirely up to date, by F. A. KIRKPATRICK, M.A., University Extension Lecturer.

AN HISTORICAL REVIEW of the DEVELOPMENT OF GREATER BRITAIN. THE GROWTH OF THE EMPIRE. By A. W. JOSE. With many Coloured and other Maps and Diagrams. Crown 8vo, 6s.

"... an eminently useful book ... as serviceable as it is readable. It is systematic in method and accurate in statement."—*Globe*.
 "... this excellent manual ... That the colonial history of Great Britain should be worthily told was a crying need, and we congratulate Australia upon producing the historian, and the historian upon the production of an admirable book."—*Daily Chronicle*.

COMMERCIAL KNOWLEDGE. A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handelswissenschaft* is designed for the use of students who intend to enter the higher branches of commercial life. It includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Employers' Liability; Commercial Travellers; Consuls; &c.

"The book should be used in every senior class both of our Board and private schools, and as an introduction to business life it should prove of great value."—*Statist*.

THE USE AND ABUSE OF MONEY. By W. CUNNINGHAM, D.D., Fellow of Trinity College, Cambridge; Professor of Economic Science, King's College, London. Crown 8vo, 3s.

CONTENTS: Part I., Social Problems; Part II., Practical Questions; Part III., Personal Duty.

"To bring political economy down from the region of abstraction as Dr. Cunningham does, and to make it applicable to individual conduct, is not only perfectly legitimate, but a most fruitful and useful form of study. The whole book is worth reading, but especially the last chapters."—*British Weekly*.

* Mr. Murray's Educational Catalogue, containing—

SIR WM. SMITH'S FAMOUS SERIES OF PRINCIPALS,
 SMALLER MANUALS, and DICTIONARIES;
 THE STUDENT'S MANUALS;

A SHORT HISTORY OF COINS AND CURRENCY.
 By Lord AVEBURY, F.R.S., &c. With many Illustrations
 Fcap. 8vo, 2s.

"... a treatise as fascinating as a romance."—*Outlook*.

"... a valuable and charmingly instructive member of Mr. Murray's excellent library."—*Glasgow Herald*.

A GENERAL HISTORY OF EUROPE, 850-1900.
 By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each section. With Maps and Genealogical Tables. Crown 8vo, 9s.

"... a model of condensation, omitting no essential facts ... the volume is greatly enhanced by a wealth of maps and chronological and genealogical tables. Among general histories this will take a leading place."—*Dundee Advertiser*.

STUDENT'S HISTORY OF MODERN EUROPE.
 From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition, thoroughly Revised. Crown 8vo, 7s. 6d.

"This is a work of sterling merit. It is an exhaustive compendium of the facts of the last four centuries, and at the same time an *histoire raisonnée* of the development of the modern European State system. It is characterized throughout by great clearness and masculine common sense."—*Oxford Magazine*.

STUDENT'S CONSTITUTIONAL HISTORY OF ENGLAND. From the Accession of Henry VII. to the Death of George II. By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

HALLAM'S CONSTITUTIONAL HISTORY OF ENGLAND. Chapters I. to IX. Bound together in One Volume for the special use of Candidates for the LONDON UNIVERSITY EXAMINATIONS. Crown 8vo, 5s.

NATIONAL EDUCATION. Essays towards a Constructive Policy. Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford. 8vo, 7s. 6d. net.

1.—**Aims and Methods.** By the EDITOR.

2.—**Church Schools and Religious Education.** By the Rev. BERNARD REYNOLDS, M.A.

3.—**Registration and Training of Teachers.** By FRANCIS STORR, B.A.

4.—**The Inspection of Secondary Schools.** By Sir JOSHUA G. FITCH.

5.—**Science in Education.—The Need of Practical Studies.** By Prof. H. E. ARMSTRONG, LL.D., Ph.D., F.R.S.

6.—**Industrial Needs.** By A. D. PROVAND, formerly M.P. for Glasgow.

7.—**Commercial Education.—(a) Secondary.** By T. A. ORGAN, B.A. (b) **University.** By Prof. W. A. S. HEWINS.

8.—**Agricultural Education.** By JOHN C. MEDD, M.A.

9.—**The Teaching of Modern Languages.** By H. W. EVE.

"Some of the leading experts of the day describe the need of reform and the lines it should take. . . . Professor Armstrong writes vigorously on the need for drastic reform in the schools in which our governing classes are educated, as the most important feature in the re-organization of a national educational programme. Messrs. Provand and Organ and Professor Hewins deal with the application of education to practical life in regard to industrial needs and commercial education."—*Times*.

THEORIES OF TAXATION. By G. ARMITAGE-SMITH, Principal of the Birkbeck Institute. Crown 8vo. [Shortly.]

will be sent post free on application.

JOHN MURRAY, ALBEMARLE STREET, W.

certain departments are inadequately equipped, and, owing to this and the great delay in their being organized, the University has not proved attractive to students in the departments to which we allude."

Finally, the Committee promises a further report on many questions still left untouched, and makes the following amongst other recommendations:—(1) That the responsibility of making good the £23,839. 6s., the amount of the Dickson frauds, be undertaken by the Government. (2) That for this year, pending the final report of the Commission, the Government make good the estimated excess of expenditure over revenue (£1,908. 5s. 4d.) less any amount that may be received from the graduates' subscription, estimated at £600, and that the Government, as part of this contribution to the estimated deficit, pay the University interest at 3¼ per cent. for 1902 on £23,839. 6s. (3) That the Government should empower two public accountants of high standing to investigate the working of the audit department."

CANADA.

The two most important and largest cities of Canada are having a great deal of trouble at present in raising enough money to supply the ever growing demands of the schools. In Toronto the municipality burdened itself with an immense City Hall, which occupied some six years in building and cost a couple of millions of dollars. This, in hard times, raised the tax-rate so high that the Council tried to retrench by cutting off what is termed "controllable expenditure." It was claimed that the Municipal Council had the right to control the expenditure of the School Board, inasmuch as the former collected the taxes. The struggle has been going on for some months; but I think the Legislature will back up the School Board in its contention that it is supreme in the matter of appropriations, being responsible only to the people. Toronto is growing rapidly, and the problem of school housing is very pressing. Notwithstanding the great increase in the number of private schools and the establishment of the new voluntary school, the situation seems but little relieved. The advocates of the voluntary school, nearly all of whom belong to the Anglican Church, made a desperate effort at the recent meeting of the Synod to have their school system unanimously endorsed, and quoted, in its defence, the present Bill before the English House of Commons. The school has certainly been fairly successful; but it is only an isolated instance, and cannot make any impression. If its advocates, who are so "strong on religion," would turn their attention to the reformation and reconstruction of the Sunday schools, they would find enough work to fully occupy their time and a work which really needs special attention.

In Montreal there is a different problem, though in it is involved the lack of money. The Protestant schools are overcrowded, and the Commissioners, having reached the limit of their resources, have threatened to exclude from the schools all children who might not, under the school law, be entitled to the benefit of these schools. The enrolment showed that of 8,921 pupils only 6,776 were children of resident Protestants, the balance being non-resident Protestants 386, Jews 1,526, and Roman Catholics 233. But just here, perhaps, a word is necessary as to this division between Protestants and Roman Catholics. An assessment of 1-4 per cent. is levied on real estate, and handed over by the city to the two Boards (Protestant and Roman Catholic) in proportion to the respective religion of those who pay. It happens, however, that Protestants are wealthy, and their school-children few in comparison with the Roman Catholics. Last year the Protestant Board, for 8,000 pupils, received 154,919 dols. from the city school tax, and other amounts from the Government, &c., to make up a total ordinary revenue of 219,173 dols.; whereas the Roman Catholic Board, for 16,000 pupils, received 177,863 dols. from the city school tax, and other amounts, to make a total ordinary revenue of 233,210 dols. So the Protestant Board received nearly as much for about one-half the number of pupils. If the taxes are to be divided on a religious basis, and Roman Catholics insist on having their schools distinctly Roman Catholic, it is difficult to see how this inequality can be avoided. The Protestants derive a great benefit from the present system of division of the taxes; for, were it based on school population, they would greatly suffer.

Some years ago a tax was levied on incorporated companies, and devoted to school purposes, to be divided in proportion to the school population. For the Roman Catholics, it was urged that a corporation had no soul and therefore could not be considered from a religious aspect. The Protestants replied that the great majority of the shareholders of such companies were Protestants and that the money collected for school purposes should be divided according to the religion of the shareholders. But this plan presented many difficulties, and, as there were at that time but few companies, the compromise was adopted. But now there is uneasiness because the companies have increased in number, and last year the taxes amounted to 46,612 dols., of which the Protestants received only 12,387 dols.; these figures would have been reversed if the amount had been divided according to the religion of the shareholders paid up. But when one states that the

(Continued on page 574.)

HORACE MARSHALL & SON'S LIST.

NEW AND USEFUL READERS.

THE ROMANCE READERS. *Now ready.*

Edited by C. L. THOMSON, late of the Somerville College, Oxford, and the Cambridge Training College; Examiner in English Literature to the Central Welsh Board.

1. TALES FROM THE GREEK.

Consisting of Greek Myths and Stories from the Iliad and Odyssey very simply told. With 20 Illustrations by HELEN and JANET STRATTON. 168 pages. Cloth, 1s.

2. THE CELTIC WONDER WORLD.

Fairy Legends and Hero Tales from the Irish, Welsh, and Armorican, most of which have never before been made accessible to School children. With many Illustrations. 156 pp. Cloth, 1s.

The above are also issued in specially designed covers, gilt, suitable for gift-books, at 1s. 6d. each.

SELECTIONS FROM MALORY'S MORTE D'ARTHUR. *Now Ready.*

Edited for the use of Schools by C. L. THOMSON. Fully Illustrated by HELEN STRATTON. 156 pages. Cloth, 2s.; in specially designed cover, gilt, suitable for Price, 2s. 6d.

This collection is an abridgement, but not a paraphrase, of certain books of the "Morte d'Arthur." Malory's language is very slightly modernized, and only in such passages as might present difficulties to young readers. An endeavour has been made to bring into prominence the episodes of greatest ethical and literary beauty, while those less valuable in these respects have been omitted or abridged.

WALL PICTURES FOR HISTORY LESSONS.

Printed in Colours.

FIRST SERIES. (Old English Series.) [Ready early in September.]

1. OLD ENGLISH BYRNIE AND SHIELD.
2. OLD ENGLISH DRINKING HORN. KING ALFRED'S JEWEL.
3. VIKING SHIP (adapted from Montelius' "Die Kultur Schwedens in Vorchristlicher Zeit," and from photographs of the Gokstad boat).
4. HARVESTING (from an Old English Calendar of the Eleventh Century).
5. WILLIAM CROSSING THE CHANNEL (from the Bayeux Tapestry).
6. THE DEATH OF HAROLD (from the Bayeux Tapestry).

Each Picture measures 23 by 18 inches, is on stout paper, varnished, with metal rims at top and bottom.

These pictures have already been ordered by ONE HUNDRED OF THE LEADING SCHOOLS AND TRAINING COLLEGES.

Price 9s. net the Set of Six; or, separately, 2s. net each. Carriage free, 9s. 6d.

A FIRST HISTORY OF ENGLAND.

By C. L. THOMSON, late of Somerville College, Oxford, and the Cambridge Training College.

PART I. (B.C. 330-A.D. 1066).

Price 1s. 6d.

PART II. (1066-1272).

1s. 6d.

PART III. (1272-1485).

2s. 6d.

Literature.—"This is the most rational attempt to improve the teaching of history we have met with. It is an admirable little book."

SUITABLE FOR SCHOOL ENTERTAINMENTS, &c.

LES DEUX FÉES, AND OTHER FRENCH PLAYS FOR CHILDREN. *Now ready.*

By VIOLET PARTINGTON, French Mistress at the Queen's College School, &c. In decorated paper cover, price 9d.

THE POPULAR "TEMPLE READERS."

THE TEMPLE READER.

Edited by E. E. SPEIGHT, B.A. Fully Illustrated. Cloth, 1s. 6d. net.

The Schoolmaster says:—"It is altogether a charming book, and marks a very decided advance in the character of school readers."

THE MIDDLE TEMPLE READER.

Edited by E. E. SPEIGHT, B.A. Fully Illustrated. Cloth, 1s. 6d. net.

The Educational Review says:—"A rich fund of fresh reading matter for middle forms or classes. . . . Teachers should see this book before replenishing stock."

THE JUNIOR TEMPLE READER.

Edited by CLARA L. THOMSON and E. E. SPEIGHT, B.A. 400 pages with over 50 full-page illustrations. 1s. 6d. net.

The late Prof. J. M. D. Meiklejohn wrote:—"The prettiest school book I ever saw, and thrice happy are the children who get it to read."

. Specimen copies of any of the above books will be sent to Teachers on receipt of half the published price.

Full EDUCATIONAL CATALOGUE sent post free on application.

SCIENCE BOOKS.

Practical Chemistry. By W. FRENCH, M.A., Principal, Storey Institute, Lancaster. Part I. With numerous Diagrams, Crown 8vo, 1s. 6d.

Suitable for Oxford and Cambridge Preliminary and Junior Locals. The teaching throughout is INDUCTIVE.

In use at Sherborne School; Grammar Schools at Barnet, Bury, Darlington, Monmouth, St. Helen's, Wimborne; County School, Goverton; Salisbury School; Downhill Academy, Glasgow; Blairridge School, Polmont; Technical Schools at Belfast, Bolton, Cambridge, Stockport.

Practical Mechanics. By SIDNEY H. WELLS. With 75 Illustrations and Diagrams. Second Edition. Crown 8vo, 3s. 6d.

In use at the Technical Schools at Bradford, Brighouse, Derby, Devonport, Dublin, Dunfermline, Liverpool, West Ham; University College, Nottingham; Royal College of Science, Dublin.

Practical Physics. By H. STROUD, D.Sc., M.A. With 115 Diagrams. Crown 8vo, 3s. 6d.

In use at Epsom College; University Extension College, Colchester; Hutton Grammar School, Preston; Bury Grammar School; Merchant Venturers' College, Bristol; Durham College of Science, Newcastle-on-Tyne; St. Colman's College, Newry; Technical Schools at Bath, Bolton, Everton, Lincoln, &c.

General Elementary Science. By J. T. DUNN, D.Sc., and V. A. MUNDELLA, M.A. With 114 Illustrations. Crown 8vo, 3s. 6d.

In use at Fauconberg School, Beccles; Dover College, Reading School, Northern Polytechnic, Kensington Coaching College, Wolverhampton School.

Carpentry and Joinery. By F. C. WEBBER. Illustrations. Second Edition. Crown 8vo, 3s. 6d.

Recommended by City and Guilds of London Institute. In use at the Technical Schools at Bolton, Brighouse, Bristol, Derby, Huddersfield, Leicester, St. Albans, &c.

The Principles of Magnetism and Electricity: An Elementary Text-Book. By P. L. GRAY, B.Sc., formerly Lecturer on Physics in Mason University College, Birmingham. With 181 Diagrams. Crown 8vo, 3s. 6d.

NEW EDUCATIONAL BOOKS

For the Autumn Term

NOW READY.

Easy Dictation and Spelling. By W. WILLIAMSON, B.A. Fcap. 8vo, 1s.

Ninety-nine Graduated Passages for Dictation, suitable for Pupils of from eight to twelve years of age. With Appendices, containing over fifteen hundred Spelling Words.

The Makers of Europe. By E. M. WILMOT-BUXTON. With 12 Maps and Plans. Crown 8vo, 3s. 6d.

At present, while many most excellent books treat of each period or country separately or in detail, there are none suitable to put into the pupils' hands for their own study and private reading, a want which this book will, it is hoped, supply.

French Prose Composition. By R. R. N. BARON, M.A. With Vocabulary and Notes. Crown 8vo, 2s. 6d. KEY, 3s. net.

Suitable for Higher Forms and for Candidates for Army Examinations. Now in use at Edinburgh Academy; Victoria College, Jersey; Leeds Institute; Marlborough College; Maritzburg College; &c.

The Rose Reader. By EDWARD ROSE. With numerous Illustrations. Crown 8vo, 2s. 6d. And in Four Parts: Parts I. and II., 6d. each; Part III., 8d.; Part IV., 10d.

A new method of teaching children to read, which gets over the great difficulty of the irregularity of English spelling by employing only regularly-spelt words till the learner has a firm grasp of the principles of reading, and of its practice.

A Commercial Geography of Foreign Nations. By F. C. BOON, B.A. Crown 8vo, 2s.

A Text-Book of Agricultural Botany. By M. C. POTTER, M.A., F.L.S. Second Edition. Rewritten, and with Additional Illustrations. Crown 8vo, 4s. 6d.

Outlines of Biology. By P. CHALMERS MITCHELL, M.A. Illustrated. Second Edition. Crown 8vo, 6s.

A Primer of Tennyson. By W. M. DIXON, M.A., Professor of English Literature at Birmingham University. Second Edition, Revised. Crown 8vo, 2s. 6d.

METHUEN'S JUNIOR SCHOOL BOOKS.

Edited by OLIVER D. INSKIP, M.A., LL.D., Head Master of Framlingham College, and W. WILLIAMSON, B.A., F.R.S.L., Head Master of the West Kent Grammar School, Brockley.

Messrs. METHUEN are issuing under the above title a Series of School Class Books. These are adapted to the needs of the Lower and Middle Forms of Public Schools, and are suitable for the use of candidates preparing for the Oxford and Cambridge Junior Local Examinations.

A Class Book of Dictation Passages. By W. WILLIAMSON, B.A. Fifth Edition. Crown 8vo, 1s. 6d.

In use at over two hundred and forty large Secondary Schools, including Bath College, Blackheath School, Bradfield College, Cheltenham College, Edinburgh Academy, Merchant Taylors' School, Mill Hill School, Nottingham High School, St. Olave's School, Southwark; St. Paul's School.

The Gospel according to St. Mark. Edited by A. E. RUBIE, M.A., Head Master of the Royal Naval School, Eltham. With Three Maps. Crown 8vo, 1s. 6d.

Adopted at Harrow; St. Paul's School; Bath College; Mill Hill School; Owen's School, Islington; King's College, Canterbury; Aravon School, Bray; Grammar School, Kirkby Ravensworth; Morside School, Okehampton; Wellington College (Salop); Dronfield Grammar School, &c.

A Junior English Grammar. By W. WILLIAMSON, B.A. With numerous Passages for Parsing and Analysis, and a Chapter on Essay Writing. Crown 8vo, 240 pp., 2s.

"It is obviously the work of a practical teacher. Altogether this neat little work seems excellently suited to the requirements of those for whom it is intended."—*Educational Times*.

A Junior Chemistry. By E. A. TYLER, B.A., F.C.S., Science Master at Framlingham College. With Seventy-three Illustrations.

METHUEN & CO., 36 ESSEX STREET, STRAND, W.C.

Roman Catholic schools, with double the number of pupils, have an ordinary income very little larger than the Protestant schools it should also be added that the two systems of schools are conducted in a totally different manner. The Roman Catholic Commissioners have directly under their control only eight schools, with about 3,700 pupils. The remaining schools are called "subsidized schools," and are conducted by religious Orders, who pay extremely small salaries and whose expenses are also light. In fact, it is becoming a great source of complaint in Montreal that the religious communities are driving the Roman Catholic lay teachers out of the profession. It is, however, the only way in which, under the present law, the Roman Catholic Board can possibly attend to the education of their children. Again, the Protestant Board is embarrassed by the increasing number of Jews in the city. The majority of them attend the Protestant schools, either because they are superior to the Roman Catholic or less objectionable to their religion. Last year there were 1,526 in the Protestant schools—an increase of 419—and this is largely increased this year. By the law, the Jew may pay his tax to either Board, and the practical working of this gives rise to much confusion. It may happen that the few Jews who are real-estate owners contribute to the Roman Catholic Board, while the great majority (who contribute no taxes at all) send their children to the Protestant schools.

These are some of the difficulties met in Montreal by the mixture of religious with educational matters, and they have reached such a pitch that the Protestant Commissioners feel that they must rigorously exclude all pupils except resident Protestants, or apply to the Legislature for a larger school tax than 1-4 per cent. on real estate.

CORRESPONDENCE.

MASTERS AND MANNERS.

To the Editor of The Journal of Education.

SIR,—We must all sympathize with the hard case of the "Science Master" from whom you print a letter in the August issue. Do all applicants for a post sufficiently consider their own qualifications before applying? It seems to me that this is the cause for much of the bitterness of unanswered applications. During the past three weeks I have been receiving applications for a vacant post. About sixty have applied in all; but more than half of these could not offer both the *essential* subjects which were so named on the notices sent to the agencies, some of whom I know faithfully reproduced my notice. Surely the heads of schools cannot be expected to write notes and provide postage for such cases. During the time of my correspondence, for instance, I have received for the post of mathematical and science mistress several applications from classical specialists, who had never touched the essential subjects since matriculating three or four years ago. I have often thought a short article at intervals in your journal on "How to Apply for a Post" might lessen the friction on both sides.—Yours truly,

A HEAD MISTRESS.

To the Editor of The Journal of Education.

SIR,—In the matter of applications for appointments, head masters are more sinned against than sinning. When, on occasion, I have advertised for an assistant I have been inundated with communications from agents and their clients, and have received reams of testimonials from men whose qualifications have not at all corresponded with the requirements stated in my advertisement. If men will apply for appointments for which they are not qualified, they can hardly expect to be answered. The usual practice, I believe, is to send back testimonials to the agent. Does your correspondent complain of this? If so, I think he is a little unreasonable. Head masters have not much time to spare.—I am, Sir, yours faithfully,

EX-HEAD MASTER.

A VOLAPÜK FOR NEOLOGISMS.

To the Editor of The Journal of Education.

SIR,—Permit me to suggest that something might be done at least to prevent the international babel getting yearly worse, by reason of unnecessary additions to the peculiar vocabularies of civilized nations.

Might not representatives from national academies in international congresses arrange universal names for new substances, inventions, discoveries, institutions, and ideas?

All races could not pronounce the words alike, but care might be taken that they could be spelt the same, and yet regularly, according to the rules of each language, or with the smallest variation, especially as regards the initial letter.—I am, Sir, your obedient servant,

CHARLES G. STUART-MENETEAU.

23 Upper Bedford Place, W.C.

August 23.

SHORTHAND

20th Century Editions.

The unanimity with which teachers pronounced a favourable verdict on the Twentieth Century Edition of PITMAN'S "Shorthand Instructor," issued last Autumn, exceeded our most sanguine expectations. This success has left us no alternative but to extend the improvements to "The Teacher," "The Manual," and "The Reporter." These New Editions are now ready.

INSTRUCTION BOOKS.

The Phonographic Teacher	Price	6d.
The Manual	"	1s. 6d.
The Reporter	"	2s. 6d.
Complete Instructor	"	3s. 6d.

Shorthand Books for Reading Practice.

Shorthand Exercises (for use with "The Teacher")	Price	1d.
Shorthand Gradus (for use with "The Manual" or "Instructor")	"	2d.
Reporting Exercises	"	6d.
Progressive Studies in Phonography	"	1s. 0d.

And many others.

These works are commended to Teachers not merely because they are the most modern and perfect exposition of the system, but because by their use the pupil is advanced in his studies with greater ease and greater speed, as the success of the new "Instructor" last session was a sufficient testimony.

Another important aid to the study of Shorthand will be found in the columns of "The Phonetic Journal" (price One Penny, weekly).

On October 4th a Series of Practical Lessons beginning with the very rudiments of the System will appear in "The Phonetic Journal," and Teachers are recommended to bring it to the notice of the members of their Beginners' Classes.

Complete Catalogue of Shorthand and Commercial Books sent post free on application.

---	---	--

The Associated Board holds Examinations throughout the United Kingdom, and in the Colonies, in both Theoretical and Practical Music.

The Examinations are as follows:—

- (1) **Local Centre Examinations**, including Senior and Junior Grades, conducted by two Examiners. These are held annually, in March and April, at all Centres, and in London and a few Suburban Centres, a second time each year in November and December.

Full particulars will be found in Syllabus A, which will be sent on application to the Secretary.

- (2) **School Examinations**, including Higher, Lower, and Elementary Grades. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a school.

The School Examinations are held at three periods—(a) March–April, (b) June–July, (c) October–November. They are conducted by one Examiner.

Entries for the October–November period will be received not later than October 8th, 1902.

Full particulars of the School Examinations, including the **General School Examination** and the **Class-Singing Examination**, will be found in Syllabus B, which will be sent on application to the Secretary.

These Examinations are of graduated difficulty, so as to provide a complete series of tests from the Elementary Grade School to the Senior Grade Local Centre Examination, suited to Candidates of all degrees of proficiency. The subjects for Examination are as follows:—

RUDIMENTS OF MUSICO.	VIOLIN.
HARMONY AND GRAMMAR OF MUSICO.	VIOLA.
COUNTERPOINT.	VOLONCELLO.
PIANOFORTE.	DOUBLE BASS.
ORGAN.	HARP.
	WIND INSTRUMENTS.
	SINGING.

The Board gives annually Six Exhibitions, tenable for two years. These Exhibitions are limited to Candidates in the Local Centre Examinations who are under twenty years of age, and who fulfil certain conditions set forth in each Syllabus.

Syllabuses, Forms of Entry, Papers set in previous years, and all information, can be obtained from the Central Office, 14 Hanover Square, London, W.

Syllabuses A and B for 1903 are now ready, and can be obtained on application to the Central Office.

PROFESSOR MEIKLEJOHN'S SERIES.

The Principles and Practice of Teaching and Class Management. By JOSEPH LANDON, F.G.S., Vice-Principal and late Master of Method in the Saltley Training College. FIFTH EDITION. Crown 8vo, 532 pp., 5s. With Appendices, including: A Brief Sketch on Mental Science; The Kindergarten System; Suggestions respecting the Criticism of Lessons.

"It is primarily intended for training college students, and Mr. Landon's experience of nearly a quarter of a century as a master of method has given him rare opportunities of studying their needs, and how they may be best supplied; but it appeals to teachers generally, and the larger portion of the book is no less applicable to secondary than to primary, or would-be primary, schools. . . . The book is, in the best sense of the word, an independent study—that is, it makes free use of the labours of previous theorists and investigators—but these, in each case, are discussed and tested; the ground plan and general conception of the work are the writer's own."—*The Journal of Education*.

"We have no hesitation in saying that this is one of the best treatises on this subject which has appeared for some time, and we cannot too strongly recommend it to the attention of all interested in the practical work of education."—*The Educational News*.

"Sound as to its principles, and thoroughly practical in its suggestions for carrying them out, this book is a valuable addition to pedagogics. Primarily intended for students in training, it will be found helpful and stimulating to all teachers, while pupil-teachers perusing it will be led to form a grand ideal of their profession and its possibilities."—*The Board Teacher*.

A Manual of Expressive Reading. By Professor J. M. D. MEIKLEJOHN, M.A. Third Edition. Crown 8vo, 284 pp., 2s. 6d.

"A marked improvement in the reading of his pupils must follow its careful perusal by a class teacher, and many a clergyman would earn the gratitude of his congregation by humbly submitting himself to Professor Meiklejohn's training."—*The Schoolmaster*.

"I like the design and execution of your 'Manual of Expressive Reading'; and, if it were well worked through, our school reading would be very much more refined and intellectual than now it is."—*The Rev. J. P. Fauntorpe*, Principal of the Whitelands College, Chelsea.

"I have read parts of it with much pleasure, and feel sure it will supply a long-felt want for pupil-teachers, and students in training colleges."—*Miss B. Tucker*, Principal of Pupil-Teachers' College, Liverpool.

The New Freehand Drawing Cards. By FRANK G. JACKSON, of the Birmingham Municipal School of Art; Author of "Lessons in Decorative Art" and "Theory and Practice of Design."

STANDARDS III., IV., and V., 2s. each.

STANDARDS VI. and VII., 2s. 6d. each.

In strong Cloth Cases.

The whole Series comprise Exercises in—

- I. Outlining with the Pencil from lined examples—ruled and Free-hand.
- II. Outlining from copies drawn in mass.
- III. Outlining with the Pen from examples of written and floral forms.
- IV. Outlining of forms with the Pencil, to be afterwards filled in with Tones, in lines, water-colour, or with coloured chalks.
- V. Outlining with the Brush.
- VI. Direct Drawing with the Brush in mass.
- VII. Geometry, Stencilling, and Freehand combined.

"Nothing so good has yet been offered to teachers of drawing as this excellent series of cards."—*The Schoolmaster*.

"These cards are excellent. . . . There should be a large demand for these cards."—*The Head-Teacher*.

"It far surpasses anything we have seen."—*The Girls' Mistress*.

"These new copies are, in short, the only freehand copies worth buying, for they will teach the teachers as well as the students."—*Science and Art*.

D. C. HEATH & CO.'S LIST.

The Irish and Welsh Exams., 1903.

Milton's Minor Poems.

Edited, with General Introduction, special Introductions to the separate Poems, Notes, and Questions on the Literary Art of the Compositions, &c., by A. P. WALKER, M.A. Small crown 8vo, 1s. 3d. [Contains the Poems set for these Examinations.]

Mérimée's "Colomba."

New Edition, with Vocabulary. Edited, with Introduction and Notes, by J. A. FONTAINE, Ph.D. Small crown 8vo, 1s. 6d. Also, **Exercises in French Composition based on "Colomba."** Sewed, 4d.

By the new Professor of Education at London University.

The Herbartian Psychology applied to Education.

By JOHN ADAMS, M.A., B.Sc. Crown 8vo, 3s. 6d.

[Send for List of other volumes in *Heath's Pedagogical Library*.]

What is Nature Study?

"The Nature Study Exhibition affords a practical object-lesson as to the hazy views that are held and the very wide and loose interpretation that is placed on the term 'Nature Study' by English teachers."—R. HEDGER WALLACE.

Mr. Scott's Nature Study and the Child

(6s.) is the most comprehensive and the most stimulating and the most practical work upon the subject which has yet appeared.

TWO NOTABLE NEW BOOKS FOR THE PRIMARY AND KINDERGARTEN SCHOOLS.

Lessons in the use of English.

By MARY F. HYDE. First Three Years' Work. In Three Parts. Crown 8vo, 9d. each. Complete, 2s.

Absolutely the best, clearest, most logical, most economical, and most effective course in elementary language.

A Primer of Work and Play.

By EDITH G. ALGER. With Coloured Illustrations. 7¼ by 5½. 1s. 6d.

Worth every penny of its price. Every infant teacher should see it.

"An admirable book for very little children."—*The Queen*.

"This dainty little volume is designed for the very little child who delights in imitation and mimicry. It is eminently suggestive."—*Teachers' Aid*.

A NEW FRENCH GRAMMAR.

Heath's Practical French Grammar.

By W. H. FRASER, B.A., and J. SQUAIR, B.A., Professors in the Romance Department, Toronto University. With an Introduction by WILLIAM ROBERTSON, M.A., Examiner in Modern Languages for the University of Aberdeen. Crown 8vo. Section I., 2s. Section II., 2s. 6d. Complete, 3s. 6d.

"Extremely good. I intend to introduce it throughout the school."—J. E. MANSION, B.A., Royal Academical Institution, Belfast.

"I am charmed with it."—Miss L. F. TODD, Woodside School, Glasgow.

"I am delighted with the book."—W. BROWN, M.A., Public School, Broxburn, N.B.

"I know no French Grammar that at all approaches it as a working school-book."

—J. A. PORTER, M.A., Mountjoy School, Dublin.

Lehrbuch der Deutschen Sprache.

A Practical Course in German for Beginners. By ARNOLD WERNER-SPANHOFF. Crown 8vo, 2s. 6d.

Teachers who used this book last year are most pleased with the results obtained. Many new introductions are promised for the ensuing term, and the Publishers have received many such testimonials as the following:—

"I am especially struck with the excellence of your 'Lehrbuch.' I have studied it very carefully, and have put aside the idea (which I once had) of providing such a book myself—so exactly does yours represent my ideal of what such a book should be."—ALEX. K. DALLAS, M.A., George Watson's College, Edinburgh.

HEATH'S MODERN LANGUAGE SERIES.

The University Tutorial Series.

NEW & FORTHCOMING BOOKS

Designed to cover the requirements of the

REVISED MATRICULATION SYLLABUS.

(LONDON UNIVERSITY.)

Matriculation English Course. By W. H. Low, M.A. Lond., and JOHN BRIGGS, M.A. Camb., F.Z.S. **8s. 6d.**

This book contains grammar, analysis, composition, précis-writing, and paraphrase.

Matriculation Latin Passages. Being a selection of Prose and Verse from the best Latin Writers. Edited by B. J. HAYES, M.A. Lond. and Camb. **8s. 6d.** Kev. **8s. 6d.** net. *[In preparation.]*

Matriculation Latin Unseens. Being the Passages set for Translation from Unprescribed Books, 1875-1902. **1s.**

Tutorial Greek Course. *[In preparation.]*

Matriculation Modern History. Being the History of England 1485-1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. Oxon. **8s. 6d.**

Matriculation Geography, Physical and General.

The New Matriculation Algebra. Being the Tutorial Algebra, Elementary Course, adapted to the London Matriculation Revised Syllabus and containing a Chapter on Graphs. By RUPERT DEAKIN, M.A. **8s. 6d.**

Matriculation Advanced Algebra and Geometry. Edited by W. M. BRIGGS, LL.D., M.A. **4s. 6d.**

The New Matriculation Chemistry. Being the Tutorial Chemistry, Part I., with Matriculation Supplements on Metals and their Compounds and the Chemistry of Daily Life. By G. H. BAILEY, D.Sc. Lond. **4s. 6d.**

Matriculation Physics: Heat, Light, and Sound. By R. W. STEWART, D.Sc. Lond., and JOHN DON, M.A., B.Sc. Lond. **4s. 6d.** *[Ready.]*

The New Matriculation Botany. By A. J. EWART, D.Sc. **8s. 6d.**

LONDON UNIVERSITY MATRICULATION, 1903.

(OLD REGULATIONS.)

JANUARY 1903.

Ovid.—Tristia, Book I. By A. H. ALLCROFT, M.A. Oxon., and F. P. SHIPHAM, M.A. Lond., F.C.P. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

Ovid.—Tristia, Book III. By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Lond. and Camb. (Uniform with Book I.)

Euripides.—Alcestis. By J. H. HAYDON, M.A. Lond. and Camb. **8s. 6d.**

JUNE 1903.

Livy.—Book XXI. By A. H. ALLCROFT, M.A. Oxon. Text and Notes. **2s. 6d.** Vocabulary, **1s. 6d.**

OXFORD LOCAL EXAMINATIONS, 1903.

Caesar.—Gallie War. By A. H. ALLCROFT, M.A. Oxon., in collaboration with F. G. PLAISTOWE, M.A., and others. **Books IV., V., VI.** Text and Notes. **1s. 6d.** each Book. Vocabulary, **1s.** each Book.

Euripides.—Medea. By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon. Text and Notes. **8s. 6d.**

Homer.—Odyssey, Books IX., X. By J. H. HAYDON, M.A. Lond. and Camb., and A. H. ALLCROFT, M.A. Oxon. Text and Notes. **2s. 6d.**

Horace.—Odes, Books III., IV. By A. H. ALLCROFT, M.A. Oxon., and others. Text and Notes. **1s. 6d.** each. Vocabulary, **1s.** each.

Vergil.—Aeneid, Book VI. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

COLLEGE OF PRECEPTORS' EXAMINATIONS, 1903.

Caesar.—Gallie War, Book IV. By A. H. ALLCROFT, M.A. Oxon., and T. R. MILLS, M.A. Oxon. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

Euripides.—Medea. By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon. Text and Notes. **8s. 6d.**

Horace.—Odes, Book III. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

Livy.—Book XXI. By A. H. ALLCROFT, M.A. Oxon. Text and Notes. **2s. 6d.** Vocabulary, **1s. 6d.**

Vergil.—Aeneid, Book VI. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

Date of publication of next issue will be found at top left-hand corner of front page.
[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

HOW TO WORK THE EDUCATION BILL.

By H. MACAN.

PART I.—THE CENTRAL COUNTY MACHINERY.

NOW that the main lines of the Bill are definitely settled, as far, at any rate, as the machinery to be employed by the County Councils is concerned, it is important that these bodies should lose no time in making up their minds as to the line of action to be adopted in starting the Act, and should, at the same time, familiarize themselves with their new duties. The Bill cannot now be passed much before Christmas, which means that the initial action of the County Councils in forming the Authorities cannot be taken before January 1, 1903, which leaves only three months of preparation before the financial duties must be taken over on March 31. Many County Councils, however, do not meet in January, and it is plain that the time between a February Council and the appointed day is all too short for launching any scheme which has not been fully thought out beforehand.

The first question every County Council must consider is whether or no it will do all in its power to establish one Authority for all educational purposes in the county. No one can doubt that this is the ideal state of affairs, and the Bill, without establishing this one Authority, makes its establishment possible. There are three factors in the creation of such an Authority, and the County Council as such must be prepared to make sacrifices in each direction. These are (a) representation, (b) delegation, and (c) finance.

(a) Let it be granted that the Council decides, even if the Act in final form does not make it clear or imperative, that the Authority shall consist of two-thirds representative members elected by and from the ratepaying bodies and one-third co-optative members who are educational experts. Let x = the total number of members of the Authority, and let it be some odd number divisible by 3 between 15 and 45. Then the County Council, as concession No. 1, must be prepared to restrict its own members to the numbers $\frac{1}{3}x+1$ (or $+3$ or $+5$ in the larger bodies), leaving a number $\frac{1}{3}x-\frac{1}{3}x-1$ to be directly appointed by the Councils of those minor Local Authorities to which the Bill gives autonomy in elementary matters. Thus, if there were, say, six non-county boroughs or urban bodies with the

higher population limit, $[(\frac{1}{10}x-1) + 6]$ members might be offered to each of those which agreed to join in a common County Authority. As this number will not affect that of the other two components, it is plain that any minor body standing out need only reduce the total number of the members of the Authority, giving the county a relatively greater majority.

Two very strong arguments are available to induce the minor bodies thus to join in. First, the County Council can say: "You are given by the Bill no technical or secondary powers (for the concurrent penny is a drop in the ocean and already pledged pretty generally), hence can correlate nothing in your own area or the surrounding district; while the county can rate you as it likes, without your direct consent, even for the benefit of the district around you. Once you get members on the County Committee you have a say in the whole education in all grades of the whole county."

Secondly, the County Council can point out that even the County Councillors representing these minor areas will scarcely be able to sit on the County Education Authority—certainly while it is discussing elementary education; hence, unless they consent to an "in-and-out" arrangement like that proposed for Irish members by the Home Rule Bill, any area asserting its autonomy for elementary education will lose all touch with the higher education of the county as well. Of course, there is the possibility of a county appointing separate Authorities for the different grades; but of this more must be said later.

(b) Now, so far as the Bill has gone, it is not quite plain whether the County Council must or may delegate all powers (except raising a rate or borrowing money) to the Authority. It is true that the borough representatives are struggling for the "confirmation-of-the-minutes" business which now prevails (and is such a scandal) on Town Councils. What is settled in private and after sober argument on details in committee comes up again in public in the Council, and thus allows any mouthing demagogue who lives only for the cheers of the gallery to put the Committee to the trouble of defending every trifling technicality which the ordinary member of the Council has not the knowledge even to understand. It may be taken for granted, however, that the larger and more important counties will not stand any compulsion in this direction, and that the "may" now almost invariably acted on in technical instruction matters will continue to control the delegation. Mr. Hobhouse, at any rate, may be trusted to see to this in Committee in October.

Presuming this is so, the County Councils must obviously make the further concession of giving full powers to the Authority and let it be a separate entity, subject to reports which require no confirmation and an annual estimate and budget, which may give rise to a full-dress debate. In any case, it would be most unfair to the co-opted expert members if a decision in committee arrived at by the aid of their advice, if not by their votes, could be reversed in Council, where they could not defend their action; much more so if the minor Local Authorities join in, and their Councils (as they must) renounce their powers. Otherwise there might arise the farce of referring everything done to all the constituent and contributory Councils, who would in all probability disagree among themselves. It may also be mentioned that many decisions in committee are arrived at on the advice (often containing much confidential matter) of expert officials; and it is not etiquette for them to speak at Council meetings in counties, though they do so in boroughs.

(c) Now, as regards finance: there is no reason why, from the data to hand, every Council should not at once be in a position to tackle this question. What is wanted is, first, to work out the average cost per head per scholar in the county as a whole—I say "average" advisedly, for I do not believe that at first, at any rate, it will be necessary or desirable to attempt to "jump" up the voluntary to the Board cost—then to compute how much of this can come from the Parliamentary grant, the fee grant, the Agricultural Rating Act, and the new 7s. Treasury grant (a small sum also comes from sale of books, fees, &c., and in some counties may be important). The difference between this and the total cost for all the scholars in the county gives the amount to be raised by a general county rate if equalized over the whole county. Next, similar computations should be made for the county, presuming that the autonomous elementary areas stand out, and for each of these areas separately, taking in for

each the necessitous School Board grants, if any. It is very important in the latter cases to see how much each area loses by the abolition of the special aid grant, as it is quite on the cards that to a certain class of towns this produced more than the new grant will give. Take a suburb with a very high ratable value like Wimbledon, where all the schools are voluntary: the distribution of the special aid grant on the urban basis has produced more per head than will the new grant with its restrictions as regards the product of a 1d. rate. Thus tables can be compiled showing how much each autonomous urban district will have to raise by rate and by how many pence in the £ this is above or below the county average rate. Now, as regards those towns with a rate required higher than the county average, there will be little fear of these standing out if the County Council will concede to them the average rate: in many counties this will mean from $\frac{1}{4}$ d. to 1d.—not a very high price for unity.

As regards the other towns whose rate would be lower if separate, the County Council will have to compensate them either by allowing them to keep their differential rate, though otherwise joined, or, better, by offering them on the secondary or higher education side special privileges, involving probably the product of, say, a $\frac{1}{2}$ d. or $\frac{1}{4}$ d. rate, levied over the whole area served by the town, for the benefit of their local institutions: it is obvious that, as the area served is often three or four times that of the central town, the gain in rate will be very considerable.

Such are my proposals to secure even from the imperfections of the Bill a single Local Authority for each county. *Mutatis mutandis*, they apply to union between a county and one or more county boroughs; but I think that it is very improbable that many such unions will take place, the counties proper having a much greater hold already over the elementary schools and a more perfect machinery for dealing with the whole question.

It is obvious, however, that much of the purpose in view will be defeated if all grades of education are not under the control of the same Committee. The discussions on the Bill have not reached this point yet, but it is hoped that it will not be optional—at any rate, in counties—to establish a separate machinery for elementary education. I say "in counties," for those boroughs with School Boards which have been foolish enough to tie their hands with "concordats," instead of dealing with the School Boards faithfully by means of Clause VII. of the "Directory" and the Cockerton judgments, will, I fear, feel bound to take over the School Board and its machinery as a separate organization for elementary education. There are interesting developments going on even now in some towns as to whether the town clerk (or organizing secretary, as the case may be) or the School Board clerk is to perform the function of the lion to the other's lamb. It is not generally known that, although only "a" Committee is mentioned in the Technical Instruction Acts, it has been ruled that this allows of any number of co-ordinate Committees. *A fortiori*, the wording of Section 12 of the Bill even suggests such a deplorable state of affairs. To allow separate bodies to spend their separate rates without consultation or mutual knowledge would be disastrous. On the other hand, one Committee whose right hand knoweth what its left is doing *ipso facto* makes all the Cockerton decisions null and void.

Just a word, before finishing this section of the article, on the selection of the co-optative or expert members. The excision of the "option" makes it important that some of these should have special knowledge of the elementary schools. Hence lifelong chairmen of existing School Boards will be peculiarly eligible. Secretaries (who are generally laymen and honorary) of diocesan associations possess also a fund of useful knowledge. Retired H.M.I.'s will also, where available, be eligible; while acting, of course, they will not be so. Teachers in schools receiving grants from the Authority will naturally be excluded, but the head masters (or even assistants) of first-grade non-rate-grant-earning schools will always be available. The same applies to mistresses of women's colleges, &c. Principals and professors of University colleges, where not rate-aided, will also be most useful; and all over the country there are numerous retired experts both in secondary and in tertiary education. The example of the London County Council in putting on "representatives" of scholastic or other trades unions should be strenuously avoided. In the same way, no clerical person should be co-opted. If a "squarson" is, as often, a member of the County Council, he may thus get on, but to put on any of the truculent

fighting parsons of any of the denominations would be fatal to efficiency. Besides, where is one to stop if this principle is adopted? Curiously enough, the most useful clerics of any would probably be a bishop and a Salvation Army captain.

In my next article I propose to deal with office organization, grouping of schools, and managers.

EDUCATIONAL TENDENCIES.

(Continued from page 510.)

WHAT are called "recitations" may be mentioned as another general agent in the promotion of individuality. These are "lessons" in any school subjects conducted in a conversational question-and-answer fashion. Among the little ones they are used as a direct means of imparting information; in the higher grades and in college courses the previously assigned subject is prepared by the class, and the information is elicited in several ways, free criticism being permitted. The teacher may give a brief *résumé* of the topic, and then call upon one and another student to enlarge upon a given point; or a packet of cards with the names of the scholars inscribed on them may be handed to the professor, who draws at random, and calls upon the individual to take up some part of the subject: or—and this seems a very stimulative method in grade schools—one child is selected to give a part of the *résumé*, being subsequently required to substantiate to his questioning companions, either verbally or on the blackboard, his selection of points, employment of words, omission of matter, &c. The teacher takes little apparent part in such a lesson, though actually controlling, guiding, checking, encouraging, as the need arises. The pleasant recollections of such spirited recitations in the Brookline (Mass.) schools are still vivid. The play for individuality, command of language, broadening of conception, and self-control, so offered and acquired, appear to be assisted by the custom of co-education; no distinction being made between the sexes in such exercises.

In reply to the inquiry, By what means is self-respect aroused in schools? the most frequently assigned method has been summarized by President Eliot, of Harvard, as that which permits of the "joy of self-achievement." It consists in setting children to do what they can do well, what is within their powers, though effort is rightly required and some degree of resourcefulness demanded. This method combines the pleasure of doing with the stimulus of well earned success, and brings new happiness and interest to the teacher equally with the child. It presupposes a free hand for the teacher and a liberal inclusion of possibilities for manual work in the kindergarten and lower grades (for all doing to the little child is concrete). Nevertheless, the same spirit of pleasurable interest is apparent among the student members present at a successful University conference or *Seminar*, where the more developed intellects bring their contributions of careful mental "doing" in research work to the touchstone of experienced criticism.

Until there is a reduction in the size of classes in this country, little opportunity offers for making the most of this valuable agency. The cause for this criticism obtains to some extent also across the water. At the same time even the modified introduction of this method in the United States is, I think, largely responsible for the good understanding between pupils and professors evident throughout school life—the children seem so confident of being understood, of being recognized as living entities, of not being confounded with machine-made stencil patterns. A very happy, homelike atmosphere usually prevails in the schools of all grades.

The third method, which is considered by some to foster the development of individual powers, is found in the high schools and colleges, where it is still the source of heated controversy. I refer to the system of "elective" studies previously mentioned. The President of Harvard University (Prof. Charles W. Eliot) has described the introduction of freedom of choice of subjects, first in Universities and colleges, and later in schools, as "the first great movement of reform," and points out that, "like most other large educational movements, this change proceeded from new conditions entirely outside the proper realm of education. It proceeded from the wonderful development of new knowledge which took place during the first half of the nineteenth century,

accompanied by the discovery of new principles and methods of scientific investigation. Freedom in choice of study for the student and opportunity to specialize for the professor were the inevitable outcome of this great extension of philosophical, intellectual, and scientific interests; but, incidentally, the compulsory, though long resisted, introduction of the elective system has widened the field for opportunities for self-development." In a recent number of the *Educational Review*, November, 1901, Superintendent G. A. Stuart, of New Britain, Conn., deals with this same point; he writes:

If God intended all to become the same, we should have been equally endowed. . . . We believe that all men have an equal right to life, liberty, and the pursuit of happiness, and we are fast changing our courses, so as to give the opportunity for all to have the happiness acquired in studying branches adapted to their capacity and their individual needs. . . . The departmental plan of teaching . . . gives opportunity to develop independence.

The same writer also emphasizes the fact that generally the high-school attendance bears a direct ratio to the liberality of the instruction.

Many persons have still an inadequate conception of the real meaning of this election of studies. They think of it chiefly as a questionable liberty for a thoughtless student, but, as has been pointed out, "there are such natural limitations to the elective plan that there is no danger of elective chaos." As a fact, the election appears to be carefully safeguarded by judicious supervision and restrictions. Even where the high-school student has from the first a nominal choice of one-third of his work, he is guided in this selection by the advice of his professors. Elsewhere, the work of the first one or two out of the four years is usually the same through most of the courses, differentiating only in the last two. Most high schools provide six or seven alternative courses: one described as "general," *i.e.*, a good, all-round course of study for those who have no special end in view; classical, Latin, and Latin-scientific courses are open to those whose goal is one or other University; while the modern language, English, and commercial courses differentiate only in the last two years, to permit the student of sixteen or seventeen to equip himself for the selected occupation after graduation at eighteen or nineteen. In manual training high schools opportunities for the study and practice of mechanics, electricity, &c., are provided for boys, with corresponding courses in the domestic sciences and arts for girls; for both sexes a sound general education in chemistry, physics, biology, drawing, design, literature, and English forms the required accompaniment to the manual work. The "elective" system is here safeguarded by the persistent efforts made to bear in mind Dr. Munger's pungent aphorism: "Education is to teach us how to live, not how to make a living." The promoters of this movement believe that by permitting each pupil to take what he and his parents wish, each according to his ability, "and graduating on so many credits" rather than doing so on the results of a stereotyped examination, framed for the average, and consequently a greater or less misfit for all, individual capacity is developed, to the mutual advantage of personality and nation. The people look to the schools to lay the foundation for intelligent citizenship. As a natural corollary, a constant process of modification must be at work on the courses of study to adapt them to the new conditions consequent upon the advance of civilization, and to acquaint young people with their environment—this the "elective" system is considered by its supporters to facilitate.

This word "environment" occurs so frequently in modern pedagogical literature, and the problem how best to adapt young people to their environment is so constantly propounded, that it will not be amiss to introduce its definition in the words of one of the most prominent educationalists of the day.

The word "environment" [he writes] means two things: first, man's physical surroundings; and, second, that vast accretion of knowledge and its results, in habit and in conduct, which we call civilization. Natural forces play no small part in adapting human beings to both elements of environment, but the process of education is especially potent as regards adaptation to the second element, civilization. Civilization—man's spiritual environment, all his surroundings which are not directly physical—this it is which has to be conquered, in its elements at least, before one can attain a true education. It is of the highest importance that we make sure that we see clearly all the elements of the knowledge which is at the basis of civilization, and that we give each element its proper place in our educational scheme.

The last century revealed more forcibly than hitherto

the formative influences of environment and habit upon the human race. A recognition of this fact seems responsible for the great prominence now given in the United States to the sociological aspects of education. It assumes many forms to which only brief reference can be made. Very noticeable, for instance, is the skilful handling of such subjects as history, geography, literature, civics, economics, hygiene, and manual training, with the immediate object of so training the pupil that the great busy life of which he is soon to form a part be not entirely strange to him when he enters it. For this purpose also, *i.e.*, to familiarize the child with his environment, the practical culture of the powers of observation and judgment and of the executive faculties is accentuated. Consistent regard, in the interests of civic and national life, is also given to physical development in schools and colleges based upon an intelligent realization by the students of the reason why posture, diet, exercise, and clothing affect health and must be wisely regulated.

Dissatisfied as are many of the superintendents with the Nature work carried on in the city schools for which they are responsible, yet most European observers agree that the methods and standard of instruction may prove suggestive to us in our present efforts to obtain for the subject the recognition and treatment to which it is entitled. The study of familiar plants and animals, if possible in their natural surroundings, succeeded by more formal, but still practical, lessons in elementary biology, is the almost invariable privilege of every child in the States I visited. Ample laboratory provision, not extravagant, but sufficient for the purpose, is general in high schools, while to field trips an annually increasing value is attached—these usually introduce the pupils also to the elements of geology and meteorology. An acquaintance with the elements of hygiene and physiology, with special reference to the formation of good habits and the development of self-respect and self-restraint, is the portion, too, of every child who attends the common schools. The study of man's surroundings seems to follow obviously upon the study of the lower animal world, and, being undertaken at an age when personal responsibility must inevitably be assumed, imparts valuable information relating to the conditions of life under which the modern citizen is placed. The attention of young people is "turned more and more to the attainment of a high degree of daily efficiency." To be well, to be able to do a day's good work, is the ideal presented to them for attainment as a social as well as personal duty. Interest of an intelligent nature is thus aroused in the social, political, and industrial problems interwoven with modern life, which experience shows that the average boy or girl of sixteen or seventeen enters into with zeal.

The singleness of purpose and continuity of method and object aimed at throughout school life in the U.S.A., gives promise, if successfully attained, of producing a self-respecting race of people, interested in the promotion of physical well being, keen in their appreciation of the advantages offered for intellectual development and culture, endowed with firm wills, with powers of self-control, with resourcefulness and adaptability, and fired with a spirit of ardent patriotism. This last quality receives assiduous cultivation. I have written elsewhere of the honourable prominence given to the national flag in all schools; the sound of a thousand young voices giving their weekly pledge to the "Stars and Stripes" in a New York City school still rings in my ears. An examination of school programmes or log-books reveals what consideration is devoted to the history of the great men and women of the past or present, through the number of dates and names recorded for special celebration. At the daily morning exercises a few minutes are spent in recalling the reasons for the notoriety attained by the celebrity to whom honour is that day specially due; the strong traits of character, the perseverance, candour, honour, judgment, which led to success, are all discussed; the leading events of the life are recalled; probably the portrait is exhibited. In every case youthful admiration is aroused for, and familiarity acquired with, the makers of history, national and international, social or industrial; all of which most evidently bears on the child's interest in his civic environment and upon his future participation in public life.

This early sociological training also throws palpable weight into the scale of instinctive compliance with rules. It is true that the United States children are said to be habitually very docile in school; but boys are boys all the world over, and high

spirits coupled with humour are not European monopolies. A quite extraordinary influence on boys at the most unruly stage of their career is observable in high schools where elementary civics is practised as well as preached; order in class-room and corridor, deference for authority, consideration for the property of others, respect for themselves, augur well for the future of these lads. The custom of co-education conduces in all cases to a pleasing courtesy towards, yet frank comradeship with, girls, which might be transplanted over seas with advantage. The question of discipline is rarely raised in schools, the relations of teachers and scholars appear harmonious and happy—one reason is, I learnt, that to which I have just alluded; another may be found in the scholar's own eagerness to learn; a third in the increasing dignity and respect which are attached to the profession of teaching in its many grades; a fourth may be found in the growing friendliness between parents and teachers which has already borne some fruit in a satisfactory co-operation on the part of some parents in the school education of their children; a fifth perhaps exists in the general attention devoted to psychology, especially to that department which concerns itself with childhood.

The existence, and yet more the activity, of these agencies affords food for reflection to those who have at heart the welfare of the children of our own country. The warp of our school studies needs to be more intimately combined with the woof of our home and civic life. Young people need constant reminders that quick memorizing capacity is but an insignificant part of education. The influence of learning, mental or manual, on life; the progress in nobility of character, which no examination can gauge; the respect for all honest craftsmanship; the capacity to appreciate good under its thousand protean forms—should not these be also England's tests for the quality of her school product? There are thousands of teachers who are working to this standard in both countries, but those in the States have certain resources upon which to draw for encouragement and support which are not yet developed over here. Greater facilities are afforded to American teachers for the interchange of experiences; for obtaining the stimulus derived from mutual consideration of difficulties; for observation of new methods; for hearing the views of the giants of the educational world. More attention is devoted each year to their adequate preparation for their duties. In the best schools of the States of the East and Middle West, the possession of mere acquirements *minus* special preparation constitutes a by no means accepted qualification. Isolation in normal schools is recognized by many as undesirable, especially if continued throughout the training period—it tends to narrow those who, of all members of society, should possess the most open minds. The existing normal-school curricula are being revised in some States and the number of subjects curtailed, with the object of affording time for a more thorough, broad, reflective study of those retained. Pedagogical courses are now included in most college and technical institute schedules, with the desired and desirable results that a growing number of embryo teachers obtain their special training in the midst of young people of both sexes, absorbed in a wide diversity of studies and animated by a wider diversity of motives. The personal equation of the aspirant to the teaching profession is closely observed by some authorities and taken into significant account when the question of certificates comes up for consideration. Good health and carriage, sympathetic knowledge of young people, general "poise," as they say, outweigh in the eyes of certain superintendents the highest scholastic attainments. The scale of remuneration in some cities, too, permits young teachers or professors to save money for, and to spare time to attend, highly advantageous courses of post-graduate studies in Europe or in their own country.

Then there is such a refreshing absence of "caste" spirit and jealousy. Professors and teachers of both sexes, and employed in all grades, meet on the one plane of unity of aim and sacredness of calling. The humblest teacher in an ungraded rural school can approach the leading men and women of his country with confidence of a sympathetic reception. It is startling, almost overwhelming, to an English mind to note the simplicity, the approachableness, of the notable educationalists; to observe, for instance, at the huge meeting of the National Educational Association the familiarity which exists between them and those comrades whose feet as yet are on the lowest rungs of the teaching ladder. The welfare of the whole, which each has at heart,

appears to absorb the official dignity of the individual. It is not that unanimity of opinion prevails; quite the contrary, there are full-fledged factions and hot party feelings. Plain speaking scarcely expresses the hail-storm of strong language which rains on the devoted head of the plucky exponent of some new or unpopular theory at a large convention; the discussion permitted is nothing if not free; but it seems no malice is borne; good intentions are recognized, and the men are presently at lunch together who, an hour earlier, were the one red and the other white with rage over a debatable proposition.

Teachers work, too, under the control and with the sympathy of experts. In the majority of States and cities, to which there are, however, some prominent exceptions, education is in the hands of duly elected representatives of the people—they hold the purse strings; but it is the highly trained, long experienced superintendents who call the tune to which teachers and children shall dance in the public schools. To these men are entrusted enormous autocratic powers; it is good to learn how relatively rarely they are abused; among their ranks have been numbered those enlightened spirits who have "called upon the teacher to leave off being a merchant in information, and to prepare himself to become a builder of human souls." On occasion the prevalent municipal corruption extends its cancerous growth into school politics, but mercifully to a diminishing extent. The atmosphere, at once bracing and calm, with which this system at its best surrounds the earnest teacher must conduce to a high standard of work. The encouragement and confidence which result from being understood, the sense of intelligent comprehension of difficulties by the superior officer, the elasticity and freedom enjoyed by individual teachers, whose "results" are not to be tested every few months by centralized examinations, but whose work of seed sowing is permitted time to germinate and mature before a visible fruitage is demanded, are some of its best points. Most members of the Board of Education, the trustees and governors of colleges and Universities, have grasped the fact that it is impossible for the average person not engaged in school work to understand all the principles underlying the complex process of education. The majority are therefore wisely content to trust the management of these institutions to competent expert authorities. These authorities have all been through the school mill, have proved their efficiency by practical experience, as well as by high professional attainments. The co-operation of parents with superintendents and teachers to co-ordinate home and school interests, to unify the character-forming influences on their young people, gives promise of the development of a force whose power for good would be incalculable. Another germ of good omen, if preserved from the influence of faddists, exists in the attention mutually devoted by parents and teachers to a study of child nature, at summer schools and elsewhere. This takes into account the removal of circumstances obstructive to development; the better adaptation of his work to the child at his different age periods; it includes a comprehension of the effect upon child life of home and school conditions; it clears up some of the misunderstandings which have arrested growth and depressed what should be the happiest time in life; it opens up hitherto unrecognized sources of moral and physical danger, and suggests means of further control. Dr. Stuart H. Rowe's lectures to his normal-school students "On the Physical Nature of the Child and how to study it" embody the simple, practical, helpful suggestions which, it seemed to me, many teachers have now so really absorbed and adopted that the influence is perceptible in their class-rooms. Indeed, their eyes have been so widely opened to the dignity, the influence, the importance of their work that they are now engaged in efforts to awaken the people themselves to the true meaning of education by endeavouring to arouse taxpayers to a realization of their responsibility for the character and standards of the schools to which they entrust the nation's most precious possessions.

The most fitting conclusion to this necessarily imperfect and somewhat disjointed presentation of impressions suggests itself in a *résumé* of the tests to which one leader, at least, desires to submit the methods of education prevalent at present in the United States. Six months ago, in the course of a college address, Prof. Murray Butler set himself to define the "five evidences of an education" which should manifest themselves in the traits of intellect and of character, in the habits of life and speech, of those subjected to its influence.

"Towards these traits and habits, not towards external and

substantial acquisition or accomplishment," must we turn, he says, "to find the true and sure evidences of an education as it is conceived to-day." With a simplicity and eloquence all his own, the five evidences are then detailed—

1. Correctness and precision in the use of the mother tongue, rightly described as a "comparatively new thing in education."

2. Those refined and gentle manners which are the expression of fixed habits of thought and action. "Manners have a moral significance, and find their basis in that true and deepest self-respect which is built upon respect for others."

3. The power of habit and reflection. "For an unexamined life is not worth living; the standards of truth, of human experience, and of wisdom by which new proposals are judged can only be gained through reflection; . . . liberty for the mind means freedom from the control of the unreasonable."

4. The power of growth: the impulse to continuous self-education, the possession of a many-sided interest, broad views, wide sympathies, deep insight, the flower and fruit of intellectual and moral seed early sown by intelligent efforts to educate.

5. The efficiency—the power to do; brain, tongue, or hand able to do something and able to do it well, a protest against that "sham form of education recognized as well informed incapacity."

These searching tests assume a high standard and a soaring ideal, to neither of which would the most ambitious educationalist profess the national system and practice to have attained. Rather may they not have been put forward to turn attention to the weak points and to emphasize the shortcomings which still hamper progress? The exuberance of youthful energies, so characteristic of American life, and so manifest throughout its school world at the present time, are accompanied by risks: shadow may be mistaken for substance; conclusions based upon insufficient observation may be acted upon with undue haste; verbal eloquence may obscure pitfalls from the impressionable. A note of warning, a word of caution, are by no means superfluous.

Because these "impressions" deal with some of the best tendencies in the school world of the United States they have been selected with no undue optimism, with no oblivion of the fact that good intentions do not always find fulfilment. There are two sides to this as to every other shield; but is not more stimulus gained from a record of brave deeds and laudable ambitions than from a chronicle of misdirected energies and possible error? Is there not more occasion to use the spur than the curb to those responsible to-day for the education of our people, when a sluggish apathy and indifference are evident even among those whom the subject most intimately concerns? In the affirmative answers to these questions I find my support and my apology for reflecting in these pages only the bright lights of suggestion and promise from the burnished surface of our great neighbour's educational shield.

ALICE RAVENHILL.

THE CAMBRIDGE SUMMER EXTENSION MEETING.

By AN EXTENSIONIST.

DR. ROBERTS, in his little manual on "University Extension," gives an interesting account of how these Summer Meetings, now so widely known and popular, first originated. In the summer of 1884 two miners, students from centres in the North, were paying a three days' visit to one of the lecturers. As they passed through the beautiful library of Trinity College, Cambridge, one of them, under the silent witchery of those venerable walls, exclaimed enthusiastically: "O that it were possible for some of our students to come up for a short time to work in Cambridge, and see all this for themselves!" The matter was mentioned again as they sat at tea in Prof. Stuart's rooms, and shortly afterwards a letter was received from Miss Gladstone, who had been present, offering £10, on her father's behalf, to enable a student from the mining districts to spend a month at Cambridge. Three other sums were subscribed as scholarships; so that in all four students, two men and two women, were sent to Cambridge. Two years later the experiment was repeated, and in 1890 the University incorporated the Summer Class at Cambridge as part of the

regular Extension scheme. These earlier students, however, were of a very different type from the motley crew who now make up the Summer Meeting. Cambridge, at that time, only received those more earnest workers who, having obtained a certificate at an "Extension Course" during the winter, were now anxious to supplement their theoretical training by practical work in the class-rooms and laboratories of the University. Oxford already, in 1888, had shown her desire to extend the influence of her University by opening her arms to the "many-headed multitude," quite irrespective of educational qualifications, and had arranged for their behoof short courses of lectures and other delights of a somewhat less serious kind. Cambridge for some years kept to her original plan, but at length she too yielded to the more frivolous example of her elder sister, and now her Summer Meeting is no longer dignified by that air of deep studiousness and learning which seems to have hung over it at first.

Nowadays any one and every one may join the Summer Meeting, and have the privilege of attending as many, or as few, lectures as he or she may choose, together with certain other advantages which soon enough become patent to the eyes of the "University *Excursionists*"—as the Master of Trinity irreverently called us the other day, with surely something of malice prepense in the slip. Our kindly hosts have resolved that this Summer Meeting shall indeed be, as is stated in the prospectus, "A gathering . . . for the purpose of study and recreation," and that this last shall play no mean part in the programme. Organ recitals, garden parties, receptions, conversations, not to mention visits to colleges and "personally conducted" excursions to various places of interest, very successfully prevent a too great devotion to study, and provide for our social as well as for our intellectual life. This provision for social intercourse seems indeed one of the great features of the Summer Meeting scheme, the objects of which, put briefly, are these:—

(1) To deepen interest in the University Extension movement, and to give students a sense of their connexion with the University. (2) To promote intercourse between students of different nationalities, and of different occupations in life, on the common ground of intellectual interests. (3) To enable teachers from different countries to compare and discuss matters of educational importance. (4) To promote intercourse between lecturers and students. (5) To present a wide view of the larger aspects of some one particular branch of study.

Incidentally it may be mentioned that the especial study for the 1902 Meeting is "The Contribution which the chief States have made to the History of the Nineteenth Century." We have, as far as may be, native lecturers, who are, of course, able to expound the subject, not as it appears to English eyes, but as it appears to the eyes of those most interested in it. Sectional meetings are arranged for discussion, in which both foreign and English students take part.

Now, I think it must be apparent to any one who is acquainted with the objects of the scheme, and will take the trouble to look through our Syllabus of Lectures, which includes subjects so many and various as History, Literature, Science, Economics, Music and the Fine Arts, Education, and Theology, that the keynote of the scheme, if it had to be expressed in one word, would be "breadth." The ordinary Extension Courses, with their concentration of thought and study upon a single subject, or a single epoch, tend towards depth; this Summer Meeting, on the contrary, is rather to give us breadth—breadth of knowledge, breadth of view, breadth of sympathy. In the attainment of that end, particularly such of it as is expressed in clauses (1), (2), (3) of the summary given above, our social life generally, irrelevant as at first sight it may seem, is a most important factor. The lectures alone, delightful as they are, would not in themselves prove sufficiently powerful to cultivate in us this ability to view a subject from several standpoints—this readiness to see with others' eyes, this faculty of perceiving points of union where others see only elements of discord, which is best summed up in the word "breadth." It is the informal discussions afterwards, when we are wandering through the quaint old-world college gardens or when we meet to enjoy the kind hospitality of one or other of our friendly entertainers, which help us—gradually and insensibly—to attain it.

The Summer Meeting is very cosmopolitan in its character—fair-haired Danes and Norwegians, hearty good-natured Germans, chatty Frenchmen, and swarthy Italians, all, or nearly all, speaking the foreign tongue with a fluency and confidence

which our countrymen in similar circumstances could hardly emulate, walk through our streets. Most of them are ready and eager to talk over with us any points we care to bring forward; and, if we add to these the number of our own countrymen and of English-speaking men and women from beyond the seas who gather together during August for the purpose of attending this Meeting, it will be seen that, quite apart from the lectures, those students who care to avail themselves of it have a grand opportunity for enriching their experiences and enjoying "the proper study of mankind." The lectures, it may be said, help us to see things as they appear from the hills; the social life at these gatherings shows us often the same things as they appear from different positions on the plain. To many of those who attend these Meetings this widening of views and extension of sympathies is just the very thing of whose need they are deeply conscious. Many of us are teachers, and passing, as we do, many hours a day, "like Gulliver," as Charles Lamb hath it, "among his little people," entangled sometimes in a mesh of duties which leaves us little time for social intercourse, the very necessities of our existence have a tendency, as we often bemoan in private, to narrow our ideals and to make our growth one-sided, by forcing us to attach too great an importance to details. Some of us, who are not connected with the teaching profession, yet come from remote towns or country villages, where too often the fire of intellectual life burns dully and those who possess it have a tendency to keep the glow of their enthusiasm to themselves, ignorant or careless, perhaps, how that same glow would warm and cheer many another, toiling along, somewhat joylessly, on a solitary road. To both these classes the mere contact with others, the mere free interchange of thought and experience, have a value and a helpfulness which it would be difficult to estimate too highly.

As for the last two objects I have enumerated, they also seem to be attained in some measure. The lecturers for the most part seem courteous and kind, ready and able to give help and assistance to those who summon courage to ask for it. Even the timid, I believe, in the momentary glow of understanding and sympathy between the lecturer and his audience, which is the almost infallible effect of a stirring speech, are sometimes able to throw aside their shyness and self-consciousness and ask for the guidance necessary to overcome their difficulties.

The last object is, I may say, almost certainly fulfilled. These historical lectures, taken as a whole, do certainly give us glimpses of the *larger* aspects of the subject; and the tendency which, perhaps, every lecturer has to treat his country as *part* of the whole indeed, but as the most important part of the whole, is happily counteracted by the number and variety of the lecturers, and by the debates afterwards at the sectional meetings.

As a whole, putting aside the broadening of our views and sympathies, I think the great thing we students get from this Summer Meeting is stimulus. Knowledge we—the greater part of us at least—do not get, or, rather, we get it in such small quantities, upon such a variety of subjects, that it can hardly be counted as a factor in the case. As some one put it, "The chief thing these lectures teach us is how many things we *don't know*." These "snippets of an hour each," as Prof. Knight called them, pleasantly and agreeably as they tickle our mental palate, are not conducive to the sound knowledge of any one subject, particularly when we attend, as several do, two or three, or even more, lectures in the course of the day, and so have hardly any time left to read up the subjects either after or before. The actual study, if there is any, must have been done before, or must be done after, the Meeting; it cannot be done *at* the Meeting.

Still, this very hurrying from lecture to lecture, this very trying to grasp more than we can possibly hold, harmful as it undoubtedly would be if it continued for any length of time, has during these two or three short weeks merely a distinctly stimulating effect. It is true that at first we are crushed beneath the weight of the accumulated knowledge with which the lecturers, one after another, take turns in deluging us. It has for the first few days somewhat the same effect which very bracing air is apt to have upon new-comers. We soon, however, derive some slight comfort from the thought that we need not compare our own ignorance with the heaped-up knowledge of *all* the lecturers, but only of each individual one; and this, though humbling enough, does not weigh us down quite so heavily. The personality of the lecturers, and the "seed-

thoughts" which they from time to time throw out, inspire us ; so that, though we perceive more clearly than before how vast and how beautiful are those Elysian fields of knowledge upon which we can hardly hope to set our foot, yet we feel within ourselves new energies arising, new powers expanding, and take heart of grace. The very place, with its vast libraries, its stately chapels, its river flowing calmly and silently past the peaceful walls and gardens of the beautiful old colleges, is an inspiration. The memories of saints and poets, statesmen and divines, are in the very air ; nor can we forget those others of lesser fame who yet truly loved knowledge and wisdom for their own sake, and in this quiet old city were content to lead lives of loving toil and unremitting labour, into whose inheritance we in these later ages have come.

Few there are, I fancy, who will leave this Summer Meeting without a deeper longing for more knowledge, more wisdom (unhappily, they are by no means always the same thing), without a humbling sense of the height of their ideals and the littleness of their progress towards those ideals, without a true consciousness of the greatness of the work and a more vivid realization of the littleness of the worker. Yet these things will, I believe, only make us more eager in pressing onwards up those mountain heights in whose clear air alone our ideal breathes. We have seen during these brief weeks how much higher many who have left us, many who are still with us, have attained, and we have lost the sense of loneliness. Others are with us, before us, behind us, beside us, and the sound of their footsteps gives us heart and courage, and their cry seems to echo in our ears, "Follow on ! Follow on !"

THE CONFERENCE ON NATURE STUDY AT CAMBRIDGE.

PROF. PATRICK GEDDES presided over the Conference on "Nature Study" held on August 23 at the Training College, Cambridge, in connexion with the University Extension Meeting. After some brief remarks as to the importance of the matter in hand, the chairman called upon Mr. Wilfred Mark Webb, as one who had played an active part in the organization of the Nature Study Exhibition in London, to open the discussion by giving his "Impressions of Nature Study."

Mr. Webb set himself to consider a few definite points of special interest, the first of which was "What Nature study is, and is to be, (a) in a broad, and (b) in a restricted, sense." He saw no reason in the first connexion to depart from the position he had taken up earlier in the year,* when he had subdivided Nature study into (1) science teaching, (2) unsystematized Nature knowledge acquired in school as part of general education and correlated with (3) Nature lore studied out of doors. This last might be taken as Nature study in a restricted sense, and was advocated by Prof. Geddes, Prof. Thomson, and Mr. Hedger Wallace, among other authorities. Although the practical difficulties in the way of introducing such work had to be taken into consideration, and such a view of Nature study might be too narrow, still it was necessary to emphasize out-door teaching, as there had been a tendency to overlook its value. After all, the interpretation of Nature study must be dependent upon the aims which educationists had in view. The four non-utilitarian ones chosen by Mr. Webb from those recently put forward were (1) to add to the mere joy of existence, (2) to cultivate habits of investigation by directing natural curiosity into rational channels, (3) to produce an appreciation of the country and its pursuits, and (4) to provide a definite hobby or interest in life.

Nature lore may be looked to to attain the first three ends, while Nature knowledge, in Mr. Webb's opinion, is well calculated to assist in accomplishing the second object, and leads on to scientific work from which the fourth may be easily reached.

The second point taken up was "Methods of Teaching," and a system was advocated of educational recapitulation, whereby the individual child was carried briefly through the stages which mankind has traversed in becoming civilized. Prof. Hodge's book, "Nature Study and Life," carried this out to a considerable extent, and several authorities have touched upon it. Man's first great step was the domestication of animals ; therefore at starting interest children in pets. Another stage was reached when crops were grown ; let the pupils germinate plants, and, feeling the sweets of ownership, learn to respect the property of others and become better citizens. Man, however, owes his supremacy to the experience of others which is conveyed to him by language and by books. Hence, although his inquiring turn of mind is still of great service, and it may be very advisable in the early stages of education to

make children satisfy their curiosity themselves, yet the heuristic method must not be carried beyond its natural limits.

As regards the utilitarian aspects of Nature study, Prof. Lloyd Morgan's statement was quoted that "the good of it, and not the use of it," was to be considered. The stimulus of £ s. d. upon those who did not appreciate education for its own sake was mentioned, and Prof. Hodge's special consideration of economic organisms, which, when once interest had been aroused, need not alone be studied, was alluded to.

A third subject brought forward was "The Training of Teachers," and Mr. Webb set down four ways of preparing them for Nature study teaching. They might be given (1) a proper basis, (2) a makeshift basis, (3) hints as to actual teaching after the basis had been acquired, (4) hints alone. One of the advantages of informal outdoor work was the fact that with a few hints it might be at once pursued, the teacher becoming a learner with the children.

One of the best suggestions made at the Nature Study Exhibition was that by Mr. Macan, who brought forward the idea that groups of County Councils should inaugurate special training colleges where teachers could be thoroughly well prepared for Nature study teaching, which would be a much better thing than their spending a year at an agricultural college, the duty of which was to train students for a particular industry.

Lastly, Mr. Webb had a word to say about inspectors, and maintained that it was necessary not only for them to have an interest in "Nature study," which some still lacked, but also for them to understand it and its intentions, which many had not mastered.

An interesting and well sustained discussion followed. Mr. Newport showed that he had usefully made Nature study pervade a number of school subjects, and that the interest taken in the rambles he had inaugurated was very great. Not the least noteworthy of his remarks was his statement that when he was asked a question by his pupils which he could not answer he admitted it. This is the frame of mind for which educationists have long been asking. Miss Ravenhill held that Nature study work need not be started with an elaborated scheme, and favoured the idea that the knowledge of the teacher should grow up with that of the children. The æsthetic side had a value, she said, and she looked to Nature study to lead to the necessary consideration of man in his environment.

A most graphic account of two Hungarian brothers almost in a state of nature, who said that they were "followers of Nature," was given by the Rev. A. N. Grimley. He met them near Lake Maggiore, and learned that they looked upon an Englishman, to wit, John Ruskin, as their teacher.

Miss Ainslie asked what kind of training should be given to secondary teachers ; and, in this connexion, Prof. Haddon mentioned that when he wished to find a naturalist to accompany him on one of his expeditions, Sir Michael Foster recommended one who had failed in his trips. Mr. Webb took this as meaning that the individual was so much interested in his subject that he had overlooked the requirements of his examiners. Most secondary teachers of Nature study who were successful, Mr. Webb continued, were enthusiasts, and prospective ones should have a scientific training, which, if properly carried out, should make them enthusiasts.

Mr. Henry Oldham, Lecturer on Geography in the University, pointed out how much would be lost if Nature study were confined to animate objects as urged by a correspondent in the *Times*, and with this Mr. Webb agreed.

Miss Von Wyss gave a concise account of the scientific training given at the college where the conference was held. For two terms physical science was introduced, she said, and then they "burst out into the biological side." No one is compelled to do this work, and it speaks for the interest aroused that all students have taken it up. They are enabled to complete outdoor observations upon animals by keeping them alive and watching them in their rooms.

THE CONFERENCE ON THE TRAINING OF TEACHERS.

A CONFERENCE on the Training of Teachers in Secondary Schools for Boys will be held at Cambridge on November 14 and 15, by invitation of the Senate of the University, and under the presidency of the Vice-Chancellor. It originated with a resolution of the Joint Committee on Training, which authorized its Chairman (the Rev. R. D. Swallow) and the Master of Marlborough (the Rev. Canon Bell) to take steps to bring about some such conference. The details have been arranged by a Committee of the Council of the Senate, consisting of the Master of Peterhouse (Dr. A. W. Ward) ; Sir Richard Jebb, M.P. ; Drs. Keynes and MacAlister ; and Messrs. Oscar Browning and Mollison, in consultation with a London Committee consisting of Canons Bell and Lyttelton, Dr. Gow, Prof. Withers, and Mr. Swallow. Invitations have been issued to representatives of all Universities in England and Wales, of associations of teachers, of

* See "Nature Knowledge : its Progress and Interpretation," in the *Record of Technical and Secondary Education*, April, 1902, page 194.

County Councils, and others. It is proposed to limit the Conference to about fifty members, and it is hoped that this limitation will conduce to its practical efficiency.

The principal subject of discussion will be the alternative systems of professional training recognized by the Order in Council, namely, (a) a course of training at a University or training college, (b) a period of probation as a teacher at a recognized secondary school. The question of (c) the possibility of combining these two systems will also be raised. Other subjects of discussion will be financial and other economic questions connected with the training of teachers as affecting Local Education Authorities, governing bodies and head masters of schools, and candidates for masterships.

Invitations to take part in the proceedings, or to open discussion upon the various subjects of debate, have been already accepted by Sir Richard Jebb; Mr. Hobhouse, M.P.; the Archdeacon of Halifax; the Master of Peterhouse; Mr. P. E. Matheson; Canons Bell and Lyttelton; Dr. Gow; Prof. Withers; and Messrs. Easterbrook and Holland.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.]

THE month of August is "a time of storage—storage of health and vigour and interest, and all the things on which there is a heavy drain in the school-time." So one may read in "The Schoolmaster"—not the organ of the Union which hopes to be fifty thousand strong before the close of the year, whose editor in the last number exposes the inefficiency of secondary schools and of secondary schoolmasters, "cultivated gentlemen many of them, but not many of them teachers." The reference is to a less aggressive, but not less stimulating, publication. Mr. Benson pictures us by the mountains or the sea, at home or abroad, making up large arrears of sleep, avoiding the society of our colleagues, putting our "cramped minds in easier positions," and setting ourselves "in line with the outer world"; if married, "picking up the threads of our broken domestic life"; if wise, filling our minds, drinking afresh at the old fountains or at new; the mathematician flying to theology, the classical man to Darwin and Tyndall, the science master to Meredith and Browning. Such is the vision. Such is the bright reality for some. For others less bright—a brief sojourn at the nearest seaside town, and then for many days the familiar suburb or dull provincial town, plain living, and ———? I have heard of a successful "crammer," who paid very small salaries to his assistants, and then cut down the holidays on the plea that "holidays are no use unless one has £50 to spend." Not many assistant masters have £50 to spend on holiday-making. Hence, to some, the cry for security of tenure is inexplicable. Why secure what is not worth getting? A poor thing, but I would have it mine own. Or a stroke of strategy, a cunningly selected battle-field, which, stricken and won, much else follows? This way or that, tenure still haunts the minds; "tenure" will be on the lips of Assistant Masters at the next General Meeting.

The Autumn General Meeting is to be held in the Great Hall of Mercers' School, Holborn, on Friday, September 12. Papers are to be read on "The Teaching of Geometry" (by Mr. W. J. Dobbs) and on "The Teaching of English," and there is to be a debate on "The New Register of Teachers." The registration question will be previously discussed at the meeting of the Council in the morning. The Council will also consider the following recommendations of the Education Sub-Committee with reference to the Order in Council for the Registration of Teachers:—

Schedule, § 3 (2) (i.).—“(1) That training be post-graduate. (2) That no institution should be recognized for the training of secondary teachers unless it possesses special organization for the purpose. (3) That the staff of a secondary training department should include a reasonable proportion of persons who have had experience as teachers in secondary schools.”

§ 3 (2) (ii.).—“(4) That supervision, as far as it affects the school, shall be exercised by one or more members of the regular school staff, who shall be required to give evidence of having made a scientific study of education, and of possessing considerable experience as teachers in schools. (5) That masters responsible for the training be remunerated for that work. (6) That supervision shall include, *inter alia*, guidance, criticism, and tuition. (7) That not more than one student-teacher should be sanctioned for every forty boys and every six masters in a school, with a maximum of five for any one school. (8) That student-teachers be not remunerated for their services. (9) That student-teachers shall pay fees which, under ordinary circumstances, shall not be less than than the maximum fees paid by pupils of the school. (10) That the certificate of an inspector recognized by the Board of

Education be required as part at least of the evidence of ability to teach.”

§ 5 (1).—“11. That, where a teacher is admitted to the Register under § 5 (1), in no case shall both § 3 (2) and § 3 (3) be dispensed with.”

The Council will next consider the tenure question. The following resolution, drafted by the Parliamentary Sub-Committee, has been submitted to the Branches by order of the Executive Committee:—“That the appointment of assistant masters should be by the governing authority from candidates selected by the head master, and the governing body should have the sole power of dismissal; but the head master should have the power of temporarily suspending an assistant, such suspension to be immediately reported to the governing authority.” Several important Branches have agreed to this resolution as it stands, whilst others are in favour of modifications. It remains for the Council in its collective wisdom to make the final decision, and prepare the outlines of that practicable scheme for which the last of the Vice-Presidents promised favourable consideration.

CALENDAR FOR SEPTEMBER.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—Cambridge Higher Local. Forms of entry ready.
- 1.—Return forms for Oxford and Cambridge Preliminary Exam. for Holy Orders.
- 1.—Return forms for the University Colleges of Aberystwyth and Cardiff Entrance Scholarship Exams.
- 1.—Return forms for Birmingham University Matriculation Exam.
- 1.—Ireland, Intermediate Education Board. Send in applications for Examinerships (up to October 15).
- 1.—Scotch Education Department. Admission to Training Colleges. Application to be made.
- 2-4.—College of Preceptors Professional Preliminary Exam.
- 7.—Return forms for Victoria University Arts, Science, Medical, &c., Preliminary and Entrance Exams.
- 7.—Owens College, Manchester. Return forms with fees for Entrance Exam.
- 7.—Bangor University College. Latest day for returning forms for Entrance Scholarships.
- 8.—Glasgow University. Send in names for Preliminary Exams. in Arts, Science, &c.; also for Bursaries.
- 10 18.—British Association at Belfast.
- 11.—City and Guilds Central Institute and Technical College. Return forms for Entrance and Exams.
- 11.—Oxford Exams. for Women. Responses. Return forms.
- 13.—College of Preceptors Council Meeting.
- 15.—Pharmaceutical Society Exams. Return forms.
- 15.—Birmingham University Matriculation Exam. begins.
- 15.—London University Matriculation Exam. begins.
- 15.—Cardiff University College. Entrance Scholarship Exams. begin.
- 15.—University College, London. Last day for entrance for West Scholarship.
- 15.—Post Holiday Prize Competitions for *The Journal of Education*.
- 16.—Durham Preliminary Arts Exams. for Medicine and Science begin.
- 16.—Edinburgh University. Send in names for Preliminary Exams. and University Bursaries and Faculties.
- 16.—Aberystwyth and Bangor University Colleges. Entrance Scholarship Exams. begin.
- 17.—Durham Certificate of Proficiency Exam. begins.
- 17-20.—City and Guilds Institute, London. Scholarship Exams., Central Technical College and Finsbury Technical College.
- 18.—College of Preceptors Lectures to Teachers, Second Course, begins.
- 18.—Return forms for Durham Certificate of Proficiency.
- 19.—Durham College of Science. Matriculation Exam. Return forms.
- 20.—St. Andrews University. Send forms for Bursaries, &c.
- 20.—University College, London. Last day for entrance for Bucknill Scholarship and Medical Entrance Exhibitions.
- 22.—Victoria University, Manchester. Preliminary and Entrance Exams. (Arts, Science, Medicine, Music, and Law) begin.
- 22.—St. David's College, Lampeter. Return forms for Scholarship Exam.
- 22.—London University Intermediate and LL.B. Return forms for January Exams.
- 22.—Post School News, items for this Calendar, &c., and Advertisements for the October issue of *The Journal of Education*.
- 22-23.—University College, London. Exam. for Bucknill Scholarship and Medical Entrance Exhibitions.

(Continued on page 586.)

OXFORD UNIVERSITY PRESS.

Some Books for 1903 Examinations.

Manuals of the New Testament. By the Rev. T. H. STOKOE, D.D.

Vol. I. "The Four Gospels," 3s. 6d.; or separately, Part I, "The Gospel History"; Part II, "The Gospel Teaching," 2s. each.
Vol. II. "Life and Letters of St. Paul," 3s. 6d.; or separately, Part I, "Life of St. Paul"; Part II, "Letters of St. Paul," 2s. each.

Old Testament History for Schools. By the same Author. Third Edition. Part I. From the Creation to the Settlement in Palestine. Part II. From the Settlement to the Disruption of the Kingdom. Part III. From the Disruption to the Return from Captivity. 2s. 6d. each, with Maps.

Graduated Lessons on the Old Testament. By the Rev. U. Z. RULE; edited by the Rev. LL. J. M. BEBB. In 3 Vols., with Maps. In paper boards, with cloth back, 1s. 6d. each Volume; in cloth, 1s. 9d.

Helps to the Study of the Book of Common Prayer. Being a Companion to Church Worship. By W. R. W. STEPHENS, B.D., Dean of Winchester. 2s.

ENGLISH.

Chaucer.—Prologue to the Canterbury Tales. Edited by W. W. SKEAT, Litt.D. 1s.

—The Complete Works of Geoffrey Chaucer. Edited, from numerous Manuscripts, by the same Editor. With Glossarial Index and Portrait. 3s. 6d. Printed on Oxford India Paper, 8s.

Shakespeare.—Macbeth. Edited by W. G. CLARK, M.A., and W. ALDIS WRIGHT, D.C.L. 1s. 6d.

—Midsummer Night's Dream. Edited by W. ALDIS WRIGHT, D.C.L. 1s. 6d.

Milton.—The Poetical Works of John Milton. Edited, after the Original Texts, by H. C. BEECHING, M.A. With Portrait and Facsimile Title-pages. 3s. 6d. Printed on India Paper, cloth extra, 8s.; and in leather bindings.

—Comus. Edited by R. C. BROWNE, M.A. 6d.

Addison.—Selections from Papers in the "Spectator." Edited by T. ARNOLD, M.A. 4s. 6d.

Scott.—Lady of the Lake. Edited by W. MINTO, M.A. 3s. 6d.

—Talisman. Edited by H. B. GEORGE, M.A. 2s.

A Primer of Historical English Grammar. By HENRY SWEET, M.A., Ph.D. 2s.

A Primer of English Etymology. Second and Revised Edition. By W. W. SKEAT, Litt.D. 1s. 6d.

Poems of English Country Life. Selected with Introduction and Notes, by H. B. GEORGE, M.A., and W. H. HADOW, M.A. 2s.

LATIN.

Cornelius Nepos.—Selected Lives. With Notes, Maps, Vocabularies, and English Exercises. By J. B. ALLEN, M.A. 1s. 6d.

Caesar.—De Bello Gallico. Edited by C. E. Moberly, M.A. Second Edition. Books III-V, 2s. 6d.; VI-VIII, 3s. 6d.

Cicero.—Select Orations. In Verrem Actio Prima, Philippica IX, &c. Edited by J. R. KING, M.A. Second Edition. 2s. 6d.

LATIN—continued.

Cicero.—Pro Milone. Edited by A. B. POYNTON, M.A. New and Revised Edition. 2s. 6d.

Horace.—The Odes, Carmen Seculare, and Epodes. Edited by E. C. WICKHAM, D.D. Second Edition. 6s.

Livy.—Book XXI. Edited by M. T. TATHAM. 2s. 6d.

Ovid.—Tristia. Book I. Edited by S. G. OWEN, M.A. Second Edition, Revised. 3s. 6d.

—Tristia. Book III. By the Same Editor. 2s.

Phaedrus.—The Fables. Edited by ROBINSON ELLIS. 1s. net.

Virgil.—Aeneid. Books IV-VI. Edited by T. L. PAPILLON, M.A., and A. E. HAIGH, M.A. 2s.

GREEK.

Euripides.—Medea. Edited by C. B. HEBERDEN, M.A. Second Edition. 2s.

—Alcestitis. Edited by C. S. JERRAM, M.A. 2s. 6d.

Homer.—Iliad. With Introduction, brief Homeric Grammar, and Notes, by D. B. MONRO, M.A. Books I-XII. 6s.

—Odyssey. Books VII-XII. Edited by W. W. MERRY, D.D. 3s.

Lucian.—Vera Historia. Edited by C. S. JERRAM, M.A. Second Edition. 1s. 6d.

Thucydides.—Book III. Edited by H. F. FOX, M.A. 3s. 6d.

Xenophon.—Vocabulary to the Anabasis. By J. MARSHALL, M.A. 1s. 6d.

—Anabasis. Book I. With Map. By the same Editor. 2s. 6d.

—Memorabilia. By the same Editor. 4s. 6d.

FRENCH AND GERMAN.

A Concise French Grammar, including Phonology, Accidence, and Syntax, with Historical Notes. For use in Upper and Middle Forms. By ARTHUR H. WALL, M.A. 4s. 6d.

Molière.—Le Misanthrope. Edited by H. W. GEGG MARKHEIM, M.A. 3s. 6d.

Hoffmann.—Heute mir, Morgen dir. Edited by J. H. MAUDE, M.A. 2s.

Schiller.—Maria Stuart. Edited by C. A. BUCHHEIM, Phil.Doc. 3s. 6d.

HISTORY.

A School History of England. Down to the death of Queen Victoria. With Maps, Plans, and Bibliographies. By various writers. 3s. 6d.

Relations of Geography and History. By H. B. GEORGE, M.A. With two Maps. 4s. 6d.

MATHEMATICS.

Arithmetic. By R. HARGREAVES, M.A. 4s. 6d.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

- 23.—Edinburgh Royal Colleges of Surgeons and Physicians. Return forms for Preliminary Exams.
- 23.—Durham University Certificate Exam. begins.
- 24.—Oxford University Exams. for Women. Responses begin.
- 25.—London University B.A. and B.Sc. Exams. Return forms.
- 25.—Oxford Exams. for Women. Send forms and fees for First Public Exam. in Holy Scripture.
- 25.—University College, London. Exam. for West Scholarship.
- 25.—Froebel Society Lecture at Dr. Williams's Library, Gordon Square, 8 p.m., "Symmetrical Paper-folding, &c., a Waste of Time."
- 25 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the October issue of *The Journal of Education*.
- 26.—Glasgow University Exams. in General Education for Medical Students, Preliminary for Degrees in Science, &c., begin; also Bursaries Exams.

- 28.—St. John's College, Cambridge, Sizarships Exam.
- 28-29.—Edinburgh Royal College of Physicians and Surgeons Preliminary Exams. begin.
- 29.—Durham College of Science Matriculation Exam.
- 30.—Durham University Admission Exam. Return forms.
- 30.—University College, London. Introductory Lecture (Faculties of Arts and Laws and of Science) by Prof. J. D. Cormack, at 3 p.m.
- October 1.—University College, London. Introductory Lecture (Faculty of Medicine) by Mr. Percy Flemming, at 4 p.m.

The October issue of *The Journal of Education* will be published on Tuesday, September 30, 1902.

HOLIDAY COURSES.

- ABERDEEN (University of).—September. Special Courses in French and German for Teachers. Apply to Lecturers in Modern Languages, Marischal College, Aberdeen.
- DOVER.—September. Short Courses in the Oxford Shorthand and Phonetics, by Percy Kingsford. Apply—Excelsior, Dover.
- GRENOBLE.—Up to October 31. French. Apply to Monsieur Marcel-Reymond, 4 Place de la Constitution, Grenoble.
- LEIPZIG.—September. Sloyd. Apply to Dr. Pabst, 19 Scharnhorst Strasse, Leipzig, or to Mr. Cooke (see under NÄÄS).
- NÄÄS.—November 5-December 16. Sloyd. [The courses at Nääs, Leipzig, Aberystwyth, Ambleside, and Penarth have been arranged by the Sloyd Association.] Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.
- NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.
- PARIS.—Christmas and Easter Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.

JOTTINGS.

THE REV. HENRY LATHAM, late Master of Trinity Hall, has left the bulk of his large personal estate to the college, which benefits at once to the amount of £13,000. After various legacies have been paid, the balance is held in trust to apply the income in occasional or annual assistance of members engaged in University or college work, or their widows and children.

THE "colossal flogging" seems in a fair way to develop into an historical puzzle. Mr. R. Durnford adduces the best evidence possible, next to that of Dr. Keate himself—the diary of Dr. Keate's sister-in-law, who was resident in the Head Master's house at the time. According to this lady, the number of ill-behaved boys who cut "absence" was about 150, the lower remove of the lower division and the whole of the middle division. Of these we read: "Dr. Keate has flogged 70 of the number (104, I believe)." How the 150 original offenders were reduced to 104, and how the selection of 70 was made, does not appear.

BUT the discrepancy does not end here. The diary states distinctly that the offence was cutting "absence," and, further, that this was intended by the boys as a protest against the threatened expulsion of a

(Continued on page 588.)

New York Life Insurance Company.

THE GREAT INTERNATIONAL COMPANY.

(FOUNDED 1841.)

Chief Office for Great Britain and Ireland—Trafalgar Square, W.C.

INVESTED FUNDS ... £59,743,837.
LAST YEAR'S INCOME ... £14,548,968.

SAFE INVESTMENT on remunerative terms.
LIFE INSURANCE at the lowest rates consistent with absolute safety.
LIFE PENSIONS at rates not surpassed by any other office.

A TYPICAL CASE.

A Policy of £1000 at age 30, at an annual premium of £27. 6s. 10d. the cash profits on which are accumulated for twenty years.

Should insured die in 5th year the family would receive	£1136 14s. 2d.
" 10th " "	£1273 8s. 4d.
" 15th " "	£1410 2s. 6d.
" 20th " "	£1546 16s. 8d.

(Intermediate years in proportion.)

After twenty years, the cash profits would become payable to the policy-holder, the policy thereafter reverting to its original amount at the reduced premium of £24 7s. 7d., should it be continued.

Any person desiring to invest, insure, or to provide a pension for life, can obtain full particulars from either:—

Tottenham Chambers,
Tottenham Court Road, W.
or C. D. CRISP, Agency Superintendent, (Southern District),
71 and 72 Piccadilly, W.

N.B.—Good men, seeking salaried appointments, can obtain full particulars from either of the above-named.

EDUCATIONAL BOOKS

PUBLISHED BY

B. H. BLACKWELL, OXFORD.

A STUDENT'S MANUAL OF ENGLISH CONSTITUTIONAL HISTORY. By D. J. MEDLEY, M.A., Professor of History in the University of Glasgow. Third Revised Edition, pp. xxviii. and 644. Large crown 8vo, 10s. 6d. net.

Some Press Notices of the First and Second Editions.

"The book is at once admirable in arrangement, full of facts, and sober in judgment. . . . Everything is extremely orderly and extremely compact. . . . The author deserves recognition for having produced a very full and a very intelligent volume."—*Times*.

"Not often does one find a book packed so full of facts and judicious deductions therefrom. Not a line, scarcely a word, is wasted. Every page is filled with well classified material."—*Political Science Quarterly*.

"The work is not only careful and conscientious, but it is probably the most complete and thorough handbook of English constitutional history now available."—*Law Quarterly Review*.

"Far more useful than any text-book that has yet come into our hands."—*Spraker Magazine*.

A SHORT CONSTITUTIONAL HISTORY OF ENGLAND. By H. ST. CLAIR FEILDEN. Revised by W. GRAY ETHERIDGE, M.A., Keble College. Third Edition, pp. xx. and 358. Crown 8vo, cloth, 6s.

"The well known and excellent work of the late Mr. Feilden."—*Educational Review*.

"Mr. Etheridge has added to the value of the work by expanding it here and there, and by bringing it into relation with the latest investigations and conclusions of the more original historians of the Constitution."—*Scotsman*.

"Only those who are well acquainted with the earlier editions will appreciate to the full the labour bestowed upon this revision."—*Manchester Guardian*.

A PRIMER OF GREEK CONSTITUTIONAL HISTORY. By A. H. WALKER, M.A., formerly Scholar of Hertford College, Oxford. Pp. viii. and 178. Fcap. 8vo, cloth, 3s. 6d. net.

"This is based on Mr. Greenidge's larger and more advanced 'Outlines of Greek Constitutional History.' It is for high forms at public schools and University students, and fills a vacant place in their bookshelves by providing a sound and concise exposition both of the theory and of the history; with references to Aristotle and the historians."—*Times*.

OXFORD QUESTIONS IN ARITHMETIC AND ALGEBRA. Papers set in Responses from Hilary Term, 1896, to September, 1901, with the Answers. New Series edited by the Rev. C. A. MARCON, M.A., St. Mary Hall, Oxford. Crown 8vo, cloth, 3s. 6d. net.

ELEMENTARY EXAMPLES in Arithmetic, Algebra, and Geometry (with Answers), for the use of Preparatory Schools. By a Mathematical Master. Crown 8vo, cloth, 3s. 6d.

GUIDE OR DIRECTORY.****BEST MEDIUM FOR OBTAINING PUPILS.****SIXTH ANNUAL EDITION NOW PREPARING.**

Every British Consul abroad, and every Foreign Consul in England, will receive a copy of this edition.

The large sum we expend each year in advertising "List of Schools" in the best newspapers ensures the largest circulation of any such work, and brings applications from parents all over the United Kingdom, India, the Colonies, and the Continent. Copies are also placed in the best Clubs, Libraries, Hotels, Boarding Houses, &c., in London and the Provinces. Hundreds of Pupils have been obtained through the medium of Paton's "List of Schools."

Specimen Copy sent free on receipt of application with copy of Prospectus.

J. & J. PATON,
EDUCATIONAL AGENTS,
143 Cannon Street, London, E.C.

popular boy named Monroe. In the same number of the *Spectator* which quotes the diary "One of the Switched" writes that the punishment was inflicted for playing a trick upon Keate. Boys resented the prohibition of boating before Easter, and conspired to send a long-boat up the river manned by boatmen dressed in the Eton jersey. Keate rode to the Brocas and hailed the supposed offenders, to the delight of the conspirators who were in waiting to enjoy the fun.

MR. P. A. BARNETT, H.M.I.S., has accepted the post of Superintendent of Public Education in Natal, and sails for South Africa at the end of this month. Mr. Barnett wishes us to state that he was not a candidate for the London Chair of Pedagogy.

HENRY GEORGE MADAN, whose death we recorded last month, was for twenty years head of the science department at Eton. He was educated at Marlborough, took a first in the Science Schools, and was in 1862 elected a Fellow of Queen's College, Oxford. On resigning his mastership he returned for a short time to Oxford and resumed the office of Junior Bursar of his college, which he had held twenty years before.

ON October 1 the London Society for the Extension of University Teaching will be dissolved. This announcement, which sounds like a calamity, considering the vast amount of good that has been by their means accomplished during the last twenty years, only means that the work of the Society will be transferred to the Board to promote the Extension of University Teaching of the University of London, and the fact that Dr. Roberts, the first energetic secretary of the society, is the Registrar for External Students is a guarantee that there will be no break in the continuity.

THE Registration Council has moved to its temporary offices at 49 and 50 Parliament Street, two rooms on the third floor, rented from the Board of Education. Forms for admission under Column B have been distributed broadcast, but up to this date (August 26) only 260 applications have been received. The Board of Education has decided to recognize, for the purposes of Section 4 of the Schedule to the Order in Council, *en bloc* all the schools represented by the Head Masters' Conference and all the schools maintained by the Girls' Public Day School Company; but, as a rule, no application for the recognition of a school will be entertained except in connexion with the registration of one or more of the staff. We believe that we are correct in stating that, so far, no member of our great public schools, either head or assistant, has applied to be registered.

AT the Oxford Union a resolution expressing warm approval of the Education Bill was supported by Mr. Winston Churchill, M.P., and carried by 106 votes to 62.

DR. BROWN, discussing at Bedford the religious aspects of the Education Bill, made a point by quoting Canon Evans, one of the governors of the Bedford Grammar School. Another governor, the Mayor of the town, had denounced undenominational education as absolutely worthless, and was answered by Canon Evans that the school where he had been educated, King Edward's School, Birmingham, was absolutely undenominational, but he could not call the education there worthless, seeing that it had produced, to name only his own contemporaries, Dr. Lightfoot, Dr. Westcott, and Dr. Benson.

MR. JAMES CLARK, M.A. of Aberdeen University, and B.A. of Oxford University, Rector of Dumfries Academy, has, on the nomination of the Lords of the Committee of Privy Council on Education in Scotland, been appointed to the post of His Majesty's Inspector of Schools.

MISS S. L. P. WRIGHT, late student of Newnham College and the Cambridge Training College, has been appointed Professor of English at the Women's College, Tokio University, Japan.

THE President of the Board of Education has appointed James Walker Hartley, M.A. of Trinity College, Cambridge; Benjamin Beck Skirrow, M.A. of University College, Oxford; and Frederic William Westaway, B.A. of London University, to be inspectors under the Board of Education.

MR. D. H. S. CRANAGE, of King's College, has been elected Secretary to the Cambridge Local Examinations and Lectures Syndicate, in succession to Dr. R. D. Roberts, who will begin his duties as Registrar to the University of London next October.

MISS LOUISE CORBETT, recently Head Mistress of the Church High School, Surbiton, has been appointed house mistress of the boarding house, St. Alban's, Edgbaston.

(Continued on page 590.)

EDWARD STANFORD'S Class Books and Maps.

GEOGRAPHY.—Stanford's Compendium of Geography and Travel. Re-issue, revised, and in great part rewritten, with new Illustrations and Maps. 12 Volumes, crown 8vo, cloth, 15s. each.

EUROPE.—Vol. I. The Countries of the Mainland (excluding the North-West). By GEO. G. CHISHOLM, M.A., B.Sc.

EUROPE.—Vol. II. The British Isles, Scandinavia, Denmark, and the Low Countries. By GEO. G. CHISHOLM, M.A., B.Sc. *[Ready shortly.]*

ASIA.—Vol. I. Northern and Eastern Asia, Caucasus, Russian Turkestan, Siberia, Chinese Empire, and Japan. By A. H. KEANE, F.R.G.S.

ASIA.—Vol. II. Southern and Western Asia, Afghanistan, India, Indo-China, Malay Peninsula, Turkey in Asia, Arabia, and Persia. By A. H. KEANE, F.R.G.S.

AFRICA.—Vol. I. North Africa. By A. H. KEANE, F.R.G.S.

AFRICA.—Vol. II. South Africa. By A. H. KEANE, F.R.G.S.

NORTH AMERICA.—Vol. I. Canada and Newfoundland. By SAMUEL EDWARD DAWSON, Litt.D. (Laval), F.R.S.C.

NORTH AMERICA.—Vol. II. The United States. By HENRY GANNETT, Chief Geographer of the United States Geological Survey.

CENTRAL AND SOUTH AMERICA.—Vol. I. South America. By A. H. KEANE, F.R.G.S. Edited by Sir CLEMENTS R. MARKHAM, F.R.S.

CENTRAL AND SOUTH AMERICA.—Vol. II. Central America and West Indies. By A. H. KEANE, F.R.G.S. Edited by Sir CLEMENTS R. MARKHAM, F.R.S.

AUSTRALASIA.—Vol. I. Australia and New Zealand. By ALFRED RUSSEL WALLACE, LL.D., D.C.L., F.R.S.

AUSTRALASIA.—Vol. II. Malaysia and the Pacific Archipelagoes. By F. H. H. GUILLEMAUD, M.D.

GEOGRAPHY.—Physical, Historical, Political, and Descriptive Geography. By KEITH JOHNSTON, F.R.G.S., late Leader of the Royal Geographical Society's East African Expedition. Fifth Edition. Revised by A. H. KEANE, F.R.G.S. Large post 8vo, cloth, with Illustrations and 21 Maps, 12s.

GEOGRAPHY.—A School Physical and Descriptive Geography. By KEITH JOHNSTON, F.R.G.S. Sixth Edition. Revised by A. H. KEANE, F.R.G.S. With Maps and Illustrations. Crown 8vo, cloth, 6s.

HOUSEHOLD SCIENCE. Readings in Necessary Knowledge for Girls and Young Women. Edited by Rev. J. P. FAUNTHORPE, M.A., Principal of Whitelands College. Fifth Edition. Crown 8vo, cloth, 3s. 6d.

NEEDLEWORK AND CUTTING-OUT. Being Hints, Suggestions, and Notes for the use of Teachers in dealing with the difficulties in the Needlework Schedule. By KATE STANLEY, F.R.B.S., Head Governess and Teacher of Needlework at Whitelands College, Chelsea. With numerous Illustrations. Fifth Edition, enlarged and re-written. Crown 8vo, cloth, 4s. 6d.

CHEMISTRY.—Chemistry for Schools. An Introduction to the Practical Study of Chemistry. By C. HAUGHTON GILL, late Teacher of Chemistry and Experimental Physics in University College School. With 100 Illustrations. Tenth Edition. Revised and enlarged to meet the requirements of the new 1899 Regulations for the London University Matriculation Examination, by D. HAMILTON JACKSON, M.A., B.Sc., Ph.D. (Heid.), Demonstrator of Chemistry, University College, Bristol. Crown 8vo, cloth, 4s. 6d.

BOTANY FOR BEGINNERS. A Short Course of Elementary Instruction in Practical Botany for Junior Classes and Children. By the Rev. Professor G. HENSLOW, M.A., F.L.S., F.G.S., Author of "Floral Dissections." Lecturer on Botany at St. Bartholomew's Hospital Medical School, Examiner in Natural Science for the College of Preceptors. Fifth and Cheaper Edition. With 30 Plates. Crown 8vo, cloth, 2s. 6d.

A CENTURY OF CONTINENTAL HISTORY, 1780-1880. By J. H. ROSE, M.A., formerly Classical Scholar of Christ's College, Cambridge. Crown 8vo, 420 pages. Fourth Edition, revised. With 3 Maps and 5 Plans of Battles in the text. Cloth, price 6s.

STANFORD'S WALL MAPS FOR SCHOOLS. STANFORD'S "LARGE" SERIES.

A Coloured Specimen of the Work on these Maps sent free on application.

Size, 50 x 58 ins. Price, mounted on rollers and varnished, 13s. each.

The World. Mercator.
Eastern Hemisphere.
Western Hemisphere.
Europe.
British Isles.
England and Wales.
London.
Scotland.
Ireland.
Asia.
Holy Land.

India.
Africa.
North America.
United States.
South America.
Australasia.
Victoria (Australia).
New South Wales.
New Zealand.
British Possessions (on a uniform scale).

The clearness and boldness of the Maps of this Series render them admirably adapted for School Teaching, and they have been adopted by all the leading Educational Establishments in the British Isles and the Colonies.

London: EDWARD STANFORD, 12, 13, & 14, Long Acre, W.C.
(Geographer to His Majesty the King.)

MACMILLAN & CO.'S

Text-Books for the Oxford and Cambridge Local Examinations, the Oxford and Cambridge Schools Examination, London University, and College of Preceptors' Examinations.

LATIN.

- Macmillan's Latin Course.** By A. M. COOK, M.A., and W. E. P. PANTIN, M.A. First Part, 3s. 6d. Second Part, 4s. 6d. Third Part, 3s. 6d. KEY, 4s. 6d. net.
- Shorter Latin Course.** By the Same. Part I., 1s. 6d. KEY, 4s. 6d. net. Part II., 2s. KEY, 4s. 6d. net.

- Shakespeare.—Coriolanus.** With Introduction and Notes. By K. DEIGHTON. 2s. 6d.; sewed, 2s.
- Spenser.—The Faerie Queene.—Book I.** With Introduction and Notes. By H. M. PERCIVAL, M.A. 3s.

FRENCH AND GERMAN.

- French Course.** By A. C. POIRÉ. FIRST YEAR, 1s. SECOND YEAR, 1s. 6d.
- Macmillan's Progressive French Course.** By G. E. FASNACHT. FIRST YEAR, 1s. Supplementary Exercises to First Year, 1s. SECOND YEAR, 2s. THIRD YEAR, 2s. 6d. KEYS, 4s. 6d. net each.
- Macmillan's Progressive French Readers.** By the Same. FIRST YEAR, 2s. 6d. SECOND YEAR, 2s. 6d.
- Macmillan's French Composition.** By the Same. Part I., 2s. 6d. KEY, 4s. 6d. net. Part II., 5s. KEY, 5s. net.
- Abridged French Grammar.** By G. E. FASNACHT. 2s. 6d.
- An Elementary French Grammar.** By G. E. FASNACHT. 1s. 6d.
- A Compendious Dictionary of the French Language.** By Prof. ALFRED ELWALL and GUSTAVE MASSON. 3s. 6d.
- Molière.—Le Misanthrope.** Edited by G. E. FASNACHT. 1s.
- A German Primer.** By OTTO SIEMMANN. 3s. 6d. KEY, 3s. 6d. net.
- Macmillan's Progressive German Course.** By G. E. FASNACHT. FIRST YEAR, 1s. 6d. SECOND YEAR, 3s. 6d. KEYS, 4s. 6d. each.
- Macmillan's Progressive German Readers.** By the Same. FIRST YEAR, 2s. 6d.
- Macmillan's German Composition.** By the Same. Part I., 2s. 6d. KEY, 4s. 6d. net.
- A Compendious German and English Dictionary.** By Prof. WHITNEY and A. H. EDGREN. 5s.
- German-English.** 3s. 6d.
- Goethe.—Egmont.** Edited by S. PRIMER, Ph.D. 3s. 6d.
- Hauff.—Die Karavane** (containing "Kalif Storch" and "Das Gespensterschiff"). With Notes and Vocabulary. By H. HAGER, Ph.D. 3s.
- Schiller.—Maria Stuart.** Edited by C. SHELTON, Litt.D. 2s. 6d.
- Schiller.—Maria Stuart.** Edited by H. SCHOENFELD. 3s. 6d.

SCIENCE.

- Introduction to Chemistry and Physics.** By Prof. W. H. PERKIN, Jr., Ph.D., F.R.S., and BEVAN LEAN, D.Sc., B.A. (Lond.). In 2 Vols. 2s. each.
- Exercises in Practical Physics.** By R. A. GREGORY and A. T. SIMMONS. In Two Parts, 2s. each.
- Elementary General Science.** By A. T. SIMMONS and L. M. JONES. 3s. 6d.
- An Introduction to Practical Physics.** By D. RINTOUL, M.A. 2s. 6d.
- Heat, Light, and Sound.** By D. E. JONES. 2s. 6d.
- Magnetism and Electricity for Beginners.** By H. E. HADLEY. 2s. 6d.
- Chemistry for Organized Schools of Science.** By S. PARRISH. 2s. 6d.
- Inorganic Chemistry for Beginners.** By Sir H. E. ROSCOE and J. LUNT. 2s. 6d.
- Elementary Mechanics of Solids.** By W. T. A. ENTAGE, M.A. 2s. 6d.
- Mechanics for Beginners.** By W. GALLATLY, M.A. 2s. 6d.
- Physiology for Beginners.** By Sir M. FOSTER, K.C.B., and L. E. SHORE. 2s. 6d.
- Botany for Beginners.** By E. EVANS. Second Edition. 2s. 6d.
- Practical Botany for Beginners.** By Professor F. O. BOWER, Sc.D., F.R.S., and D. T. GWYNNE VAUGHAN, M.A. Second Edition. 3s. 6d.
- Physiography for Beginners.** By A. T. SIMMONS, B.Sc. 2s. 6d.
- Geology for Beginners.** By W. W. WATTS, M.A. 2s. 6d.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

SHOULD not compensation marks ("Examiner" asks us) be awarded for ingenuity—at least, in an unseen? I confess I had not the heart to award nothing to a rendering so brilliant as this, however erratic:—

"Si Dieu nous consultait aujourd'hui
Pour réformer ce bas monde,
Convenons-en à la ronde,
Nous ne le ferions pas mieux que Lui."

"If Providence asked our advice as to remoulding this mis-shapen world, though we all agreed that it should be perfectly round, we could not improve on His design." Dear girl! what a deep impression that first geography lesson and the orange make on a plastic brain!

ANOTHER lady has passed the examination for the degree of Doctor of Philosophy at the University of Berlin. This brings the number of Berlin lady graduates up to four, three of whom are Americans.

THE meeting of the British Association at Belfast begins on Wednesday, the 10th. Prof. H. E. Armstrong, who presides over the newly formed Section L (Education), will treat in his address of a reformed curriculum and the training of teachers. The first two days will be devoted mainly to Irish questions. The Resident Commissioner of National Education will introduce the discussion on "The Co-ordination of Primary and Secondary Education"; Mr. R. M. Jones that on "Intermediate Education." In the discussion on "Technical Instruction in relation to Native Industries" the Rt. Hon. Horace Plunkett will take part. For the following days the most interesting items in the programme are (1) "The Training of Teachers" (Prof. Withers and Miss Walter), (2) "Subjects and Order of Subjects in Science Teaching" (Dr. Kimmins), (3) "The Teaching of English," Mr. P. T. Hartog and Canon Lyttelton.

VOLUMES X. and XI. of "Special Reports on Educational Subjects," dealing with Education in the United States of America, have reached us too late in the month to do aught but note their appearance. We may, however, cull one pertinent observation from Sir Joshua Fitch's Introduction. That no public money ought to be applied in aid of any religious body or sectarian institution is, he tells us, practically universal throughout the Union. This is far from implying national indifference to religion. On the contrary, "the exclusion of sectarian and clerical influence from the common school has had the incidental effect of quickening the zeal of the churches and making them more sensible of their responsibility to the children of their flocks and encouraging efforts by means of Sunday schools to supplement the secular teaching of the day schools."

UNIVERSITIES AND SCHOOLS.

UNIVERSITY COLLEGE, LONDON.

After consultation with Mr. Astor, and in accordance with his wish, the Council have resolved to endow the Chairs of Pure Mathematics and History, and to name them the "Astor Chairs." In consequence of this endowment the Department of History will be reorganized, and a Lecturer in Ancient History will be appointed.

The Council has received the sum of £1,000 from the Rev. Thompson Yates for the permanent endowment of the Department of Economics, and other smaller sums have been received for the same purpose. That department has been reorganized as follows:—

Prof. Foxwell will give a general course of Economics and Economic History. Mr. C. P. Sanger, Fellow of Trinity College, Cambridge, has been appointed to lecture on "Public Finance"; Mr. G. Udny Yule has been appointed to the Newmarch Lectureship in Statistics; Mr. A. C. Pigou, Fellow of King's College, Cambridge, to the Jevons Memorial Lectureship, in connexion with which he will give a course of lectures on "The Association of Employers and Employed, Arbitration and Conciliation." Prof. Montague will give a course in the Department of Economics on "The Existing British Constitution and its Relation to the Constitution of other Countries." Prof. Macdonell will give a course on "International Law"; Prof. Whittaker on "Industrial and Commercial Law."

Mr. W. G. Hartog has been appointed Assistant to the Professor of French, and, as a consequence of his appointment, the work of the Department of French in the advanced stages will be considerably extended.

Prof. Brandin has been appointed to hold the Chair of Romance Philology in conjunction with that of French, and Prof. Priebisch to hold the Chair of Germanic Philology in conjunction with that of German.

The Council have approved the scheme of the Senate of the University for the organization of University teaching in German throughout London, and Prof. Priebisch has been appointed to the University Professorship of German.

OXFORD LOCAL EXAMINATIONS, 1903

RELIGIOUS KNOWLEDGE.

SCRIPTURE MANUALS. By GEORGE CARTER, M.A.

Kings I. [In preparation.] Each containing Introduction, Notes, and Comments on the Authorised and Revised Versions.
St. Luke's Gospel.
Acts of the Apostles.

Crown 8vo, cloth, 1s. 6d. each.

† **PUBLIC EXAMINATION SCRIPTURE MANUALS.**

By A. RICHES, F.R.G.S.

St. Luke. 1s. 6d. **Acts of the Apostles.** 1s. 6d.

† **THE CHURCH CATECHISM.** By A. RICHES, F.R.G.S. 9d.

† Specially prepared for Teachers' use, or private instruction.

FRENCH (Preliminary).

PIERRE ET CAMILLE. By A. DE MUSSET. With Full Notes, Vocabulary, and Table of Irregular Verbs, by the Rev. J. HEWETSON, M.A. Cloth, 9d.

ENGLISH (Preliminary).

LONGFELLOW'S HIAWATHA AND EVANGELINE. With Notes by R. G. McKINLAY. Cloth, 1s.

ENGLISH HISTORY.

(FOR PRELIMINARY STUDENTS.)

▲ **A SHORT SYNOPSIS OF ENGLISH HISTORY.** By J. C. WRIGHT. Specially for Third Class College of Preceptors and Oxford and Cambridge Preliminary. Cloth back, 6d.

SUMMARY OF ENGLISH HISTORY. By ARTHUR WOOD. A most complete book. Contains a large number of Questions set at various Public Examinations. Crown 8vo, 1s.

JUNIOR AND SENIOR STUDENTS.

OUTLINES OF ENGLISH HISTORY. From B.C. 55 to A.D. 1801. Containing Genealogical Tables, Short Biographical Sketches, and Index. Compiled and arranged by GEORGE CARTER, M.A. Thirteenth Edition. Crown 8vo, cloth, 1s. 6d.

CARTER'S HISTORY. Part II., 1485-1689. Part III., 1689-1897. Compiled for use with "Outlines." A most comprehensive work in simple language, and arranged in an attractive form. Crown 8vo, cloth, 2s. each.

ARITHMETIC AND ALGEBRA.

▲ **FIRST ARITHMETIC.** By Dr. W. T. KNIGHT, Author of "Algebraic Factors," &c. Contains copious and carefully Graded Examples on the different Rules up to and including Simple Proportion. The Exercises on each Rule are followed by Questions and Problems from Examination Papers. Crown 8vo, cloth, 8d. Answers separately, 6d.

▲ **SECOND ARITHMETIC.** Containing Examples on all the Higher Rules, with special attention to Commercial Arithmetic. Crown 8vo, cloth, 9d. Answers, separately, 6d.

BOWICK'S EXERCISES IN ARITHMETIC. Part I. (to Compound Proportion). Part II. (Percentages, Stocks, Square and Cube Root, &c.). Part II. also contains Papers set at various Local Examinations. 9d. each. Answers, 6d. net.

RELFE BROTHERS' EASY INTERMEDIATE TESTS IN ARITHMETIC. Suitable for Third Class College of Preceptors and the Oxford and Cambridge Preliminary. 4d. Answers, 6d.

ELEMENTARY ALGEBRA FOR CLASS USE. By R. P. SCOTT, M.A., LL.D., and J. MONTGOMERY. Cloth, 1s.; or with Answers, 1s. 3d.

▲ **FIRST ALGEBRA.** Containing copious and varied Original Exercises and Miscellaneous Examples. By Dr. KNIGHT, Author of "Algebraic Factors," &c. Second Edition. Cloth, 6d.

GEOGRAPHY.

RELFE BROTHERS' CHARTERHOUSE ATLAS. 32 Maps. New Edition. Thoroughly up to date. Cloth, 1s.

RELFE BROTHERS' NEW PREPARATORY ATLAS. Very clear and up to date. 6d.

RELFE BROTHERS' ALDERSGATE ATLAS. Containing 72 4to coloured Maps (Political, Physical, and Classical, Commercial Chart, showing the Steamer Routes, &c.). With Index. Second Edition. Thoroughly up to date. Cloth, 3s.

RELFE BROTHERS' SCHOOL GEOGRAPHY AND ATLAS. By G. CARTER, M.A., Author of "The Outlines of History," &c. The main features of this book are the clear and not overcrowded Maps on one side, and the Geography necessary to learn facing the Map. The Book will be found a complete Geography and Atlas, and is highly recommended for pupils preparing for the Local Examinations. Crown 4to. 32 Maps (mostly coloured). Sixth Edition. 2s. 6d.

GRAMMAR.

RICHES' PUBLIC EXAMINATION GRAMMAR. 2s. 6d.

BROOKINGTON'S LOCAL EXAMINATION GRAMMAR. 1s.

CHARTERHOUSE ANALYSIS EXERCISE BOOK. 3s. doz. net.

CHARTERHOUSE PARSING EXERCISE BOOK. 3s. doz. net.

Specially drawn up to meet the requirements of this Examination.

RELFE BROTHERS, Limited,

EDUCATIONAL PUBLISHERS, BOOKSELLERS, AND GENERAL SCHOOL STATIONERS,

6 CHARTERHOUSE BUILDINGS, ALDERSGATE, LONDON, E.C.

Telegraphic Address—"RELFE BROTHERS, LONDON."

Telephone—4673 HOLBORN.

The staff of the reorganized Department of Chemistry will be as follows:—General and Inorganic Chemistry: Professor—Sir William Ramsay; Assistant Professors—Dr. F. G. Donnan, Dr. Morris Travers, and Mr. E. C. C. Baly. Organic Chemistry: Professor—J. Norman Collie; Assistant Professor—Dr. S. Smiles.

Session 1902-1903 of the Faculties of Arts and of Science will be opened on Tuesday, September 30. Introductory lecture at 3 p.m., by Prof. J. D. Cormack.

NEWHAM COLLEGE, CAMBRIDGE.

In the Cambridge Higher Local Examination the scholarships tenable at Newnham College have been assigned as follows:—The scholarship given by the Goldsmiths' Company to Miss M. A. Earl, of Woodford House School, Croydon; the scholarship given by the Clothworkers' Company to Miss A. Homer, of King Edward's High School, Birmingham; scholarships of £50 a year to Miss E. M. Newbold, of the Tunbridge Wells High School, and Miss I. B. Sachs, of the Croydon High School; scholarships of £35 to Miss L. M. Elligott, of the City of London School for Girls, and Miss P. M. Fullord, of the Perse School for Girls, Cambridge. The Gilchrist Scholarship has been awarded to Miss E. C. Wordsworth, of the Bedford High School, who elects to hold it at Newnham College. The Newnham College Classical Scholarship has this year been awarded equally to Miss M. E. Hirst and Miss H. W. de G. Verrall.

SCOTLAND.

The Carnegie Trust has announced the grants which it proposes to make to the Universities during the next five years, under Clause A of the Trust Deed. A report by Lord Elgin and Sir Henry Roscoe and a letter from Mr. McCormick explain the general principles of the allocation and the reasons for the special forms which it has taken in the different Universities. The total amount of the grants is £200,000, or £40,000 annually for five years. This is very much less than the amount contemplated in the Trust Deed; but a considerable margin had to be left as a provision for post-graduate research and for the needs of the extra-mural colleges and similar institutions which have claims on the Trust. These latter claims are too indefinite to be dealt with at present; but it is proposed ultimately to spend about £5,000 a year on post-graduate research, for which there has not yet been time to draw up a careful scheme.

The grants are to be payable from January 1, 1903, and certain

general conditions are attached to the payment of them. In the case of grants for building, the building scheme must be laid before the Executive Committee "in complete form, with plans and estimates, and with a full statement embodying, among other details, the amount of financial support promised or expected." Grants for endowment are to be payable either by instalments or on the institution of a specific chair or lectureship. In the case of library grants not less than one-half is to be spent on books and periodicals, in the purchase of which "care should be taken to prevent any undue competition or overlapping between Universities deriving benefit from the same source," and "all students of Scottish Universities should have free access to each University library." Grants in aid of current income are to be provisional only, and to run for a limited and definite period. They should, if possible, be given for specific objects; but, in the event of grants being given to the general fund of any University, "the University Court must be taken bound to incur no liability which could, directly or indirectly, involve any obligation on the Committee to continue the grant beyond the period specified." Finally, the Universities must, at the end of each year, "forward to the secretary a report showing all monies received from the Trust during the year, and the manner of their expenditure." These conditions appear to be perfectly reasonable; but they will quicken the fears of those who anticipate that the Trust intends to use its vast resources in controlling from outside the development and work of the Universities. They must, of course, take what they get, and hope that the Trust will act sympathetically and wisely. But in the constitution of the Trust the working members of the Universities are most inadequately represented, and there is a real danger that the Trust's control may develop into a tyranny. The Universities are already sufficiently hampered by the red tape of Government Commissions and the caprice of private donors, and a new controlling body, if it acts on imperfect knowledge or is led away by abstract fads, may bring ruin with its gifts.

In allocating its grants, the Trust has wisely refrained from making the amounts proportional to the size and resources of the Universities. The grants for Aberdeen and St. Andrews are thus not much less than those for Edinburgh and Glasgow. Edinburgh gets £11,500 annually, Glasgow £11,000, Aberdeen £9,000, and St. Andrews £8,500. In each University £1,000 a year is given for the library. The remainder of the grant is in each case allocated under the heads of (a) buildings and permanent equipment; (b) teaching and endowment. In Edinburgh and Glasgow the building grants are very much larger

(Continued on page 594.)

All Enquiries to be addressed to—

E. J. ARNOLD & SON, LTD., BUTTERLEY STREET, HUNSLET LANE, LEEDS.

SELECTIONS FROM THE BEST ENGLISH AUTHORS.

EDITED BY

Prof. A. F. MURISON, M.A., LL.D.

This Volume aims at exhibiting, in chronological order, representative specimens of representative authors, throughout the whole course of English Literature, from Beowulf down to the present day.

The Notes deal with a wide range of points: allusions, history, geography, mythology, meanings, derivations and general philological relations, grammar, rhetoric, composition, &c. While these do for the pupils what many or most of them might not be able to do for themselves, care has been taken to suggest inquiries and exercises that will give scope to all their knowledge and energies.

The object of the book is to create or stimulate a desire on the part of the pupils to pursue the further study of English literature in the only excellent way—namely, by making acquaintance with the authors' complete works, read in historical connexion.

COMPLETE.

"This is, in many respects, the best school Euclid in existence."—**FREDERICK SPENCER, M.A.** Cambridge.

W. & R. CHAMBERS, Ltd., 47 Paternoster Row, London, E.C.; and Edinburgh.

than those for teaching and endowment. To Edinburgh a grant of £8,000 a year is made for buildings, mainly in connexion with physics and engineering, and a grant of £2,500 a year for the endowment of modern languages or some other purpose approved by the Committee. In Glasgow £8,000 a year are to be spent on buildings for physics, physiology, materia medica, forensic medicine, &c., and on equipment for chemistry or geology if there is any surplus; while £2,000 a year are to be devoted to the endowment of a Chair of Geology and to some other endowment approved by the Committee. Aberdeen, which requires nothing for buildings, gets £1,000 a year for apparatus and £7,000 a year for teaching, of which £2,000 go to the endowment of modern languages and £4,000 to the Chair of History and to some other endowment, the remaining £1,000 being devoted to "provisional assistance" for modern languages and other subjects. Exactly the same provision is made for the endowment and assistance of modern languages at St. Andrews, and, in addition, £1,600 a year go to other endowments (materia medica and pathology at Dundee being suggested as suitable), while £400 a year are given for "provisional assistance." The grant for teaching and endowment at St. Andrews is thus £4,500 a year, while that for building is £3,000 a year, to be divided between chemistry and physics at St. Andrews and the general extension at Dundee.

There is sure to be some difference of opinion regarding one of the chief features of this allocation, viz., its tendency towards capitalizing. Almost the whole of the money is devoted either to building or to endowment. In other words, the benefits of Mr. Carnegie's gift have been to a great extent postponed. For instance, instead of instituting immediately five or six new lectureships tenable for five years at St. Andrews or Aberdeen and paying the salaries out of the income of the Trust, the Committee has decreed the accumulation of the money which might have been spent on these salaries, so that, five years hence, each of these two Universities will have one new lectureship, endowed so as to yield an income less than would have been given to any one of the five or six lecturers who might have been appointed at once. At this rate it will take a generation to make any considerable addition to the teaching power of the Universities. New chairs must, of course, be founded by the capitalizing of the income of the Trust. But there seems to be no adequate reason for endowing lectureships at present, still less for endowing assistantships, as Mr. McCormick suggests in his letter. University lecturers in Scotland are appointed for periods not exceeding five years, while the appointment of assistants is for one year. They are, of course, eligible for re-appointment; but the posts

are not necessarily permanent. The Carnegie Trust might, therefore, have instituted a number of lectureships experimentally and afterwards selected such as it thought desirable gradually to endow or raise into chairs, while the others might have been dropped. No doubt permanent endowed lectureships may attract better teachers; but to endow all the existing University lectureships would be a most tedious process, and to endow a few only would be practically to introduce a new sort of lecturer without a new office or designation. This would inevitably increase academic friction and jealousies. The Executive Committee seems to have been influenced in its action by a fear lest there should be "any extensive permanent devolution of the income of the Trust." But surely the income of the Trust as a whole was intended to be permanently devolved, and it is difficult to conceive a better way of securing freedom and variety (if necessary) in its devolution than the instituting of terminable lectureships.

Another important step has been taken by the Trust. The Trust Deed has been amended, so that in future students who desire to have their fees paid must have passed the Leaving Certificate, Preliminary, or other recognized equivalent examination "in such subjects and grades, and under such conditions, as the Executive Committee may from time to time determine." During Session 1902-3 the present tests are to be maintained, but thereafter it is intended to apply to all beneficiaries "an approximately uniform test of preliminary education." The difficulty arising from the lower standard of the Medical Preliminary will thus be overcome.

Two new professors have been appointed by the Crown. Mr. James Black Baillie, B.A. Cantab., D.Phil. Edin., has been appointed Professor of Moral Philosophy at Aberdeen, in succession to Prof. Latta, of Glasgow. Mr. Baillie has had a very distinguished career as a student of philosophy at Edinburgh and Cambridge. He at present holds the Shaw Fellowship, the chief philosophical prize open to Scottish students, and he has done most successful work both as an author and as teacher at St. Andrews and Dundee, where he has for some years been Lecturer on Philosophy. In succession to Prof. Young, who has retired, Mr. J. Graham Kerr, M.A. of Christ's College, Cambridge, has been appointed Professor of Natural History at Glasgow. He also has distinguished himself very highly at Edinburgh and Cambridge, and he has conducted successful zoological inquiries in little known regions of South America. Both of these appointments meet with general approbation, and the new professors are expected to add strength to the teaching staff in their respective Universities.

104 CHARING CROSS ROAD, LONDON, W.C.

(Late of 39 Holywell Street, Strand.)

ON AN ENTIRELY NEW PRINCIPLE.

THE GRAPHIC MARK BOOK AND REDUCING SCALE.

Invented and Designed by C. MARSH, M.A., and
H. W. ORD, M.A., Assistant Masters at Blackheath
School.

Every Mark Book is complete in itself and contains a
reducing scale. Printed on good paper, bound in stiff
boards with cloth sides.

Published price, **1s. 4d.** each.

All masters in charge of the marks will find their
labour simplified and reduced, as the periodical laborious
addition of the daily marks is obviated and the relative
position of each pupil shown automatically.

A Simple mechanical Process dispenses with the proportion
sums usually employed to reduce the marks to a given
standard.

To Pass the Examinations.

TEXT-BOOKS for HIGHER SCHOOLS.

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

These Books are specially prepared for the Oxford and Cambridge
Preliminary and Junior Local Examinations, and Candidates for Minor
Scholarships, &c.

The Series consists of the following Books:—

ARITHMETIC.

Small amount of Theory, large amount of Practice. Worked-out
Examples for each step. Prominence given to the Metric System.
Laboratory Exercises in a special Section.

GEOGRAPHY.

Physical facts made the basis of Political. Commercial aspects kept
constantly in view. British Empire fully treated.
Many Coloured Maps and Diagrams.

ENGLISH GRAMMAR.

Examples made the basis of instruction. Analysis introduced
early. Aids to Correct Speaking a prominent feature. Plenty of
scope given for Practice.

ENGLISH HISTORY.

Contains landmarks of our national history. More than usual
attention given to last three centuries.
The Growth and Greatness of the Empire specially considered.

PUBLISHED AT ONE SHILLING.

The Schoolmaster says:—"We can speak well of all. Each book will be found
just the kind to place in the hands of pupils beginning a systematic course of study
in these subjects. The Arithmetic strikes us as being especially good; in fact, the
writer of this review has decided to introduce it into his own school. We feel com-
pelled to add a word of commendation to the publishers, who have produced the
books in a most pleasant and serviceable form."

For Specimens and Full Particulars apply to

ENGINEERING PUBLICATIONS.

THOMAS JONES, M.I.Mech.E.,
Gold Medallist,
4 Manley Road, MANCHESTER.

Amy Kemp, Elizabeth S. Park, Sophia J. Tulls (all of whom passed in the First Class for Practical Efficiency); Margaret W. Cameron, M.A., Catharine Griffith. The following appointments, amongst others, have been made:—Miss Cameron, assistant mistress, Havergal College, Toronto; Miss Kemp, assistant mistress, The Mount School, York. Miss Gertrude Craufurd, who was not a candidate for examination, has been appointed assistant mistress in the Preparatory Department of the Edinburgh Academy. Miss Findlay already holds an appointment on the staff of Trinity Hall, Southport.

HIGHGATE, THE GROVE SCHOOL.—Miss Wood, a pupil of this school, has obtained a mathematical scholarship at Girton College. Miss Morris Smith, an old pupil, who won a classical scholarship at Somerville College, has been placed in the First Class in *Literæ Humaniores*, and another, Miss Noakes, also at Somerville College, has been placed in the Second Class in the Honour School of Modern History.

PADDINGTON AND MAIDA VALE HIGH SCHOOL.—A former pupil, Maud Hattersley, Newnham College, has passed Part I. of the Historical Tripos. Three candidates were sent in for the London Matriculation Examination in June. All were successful: Ethel Adeane and Mabel Bailey in the First Division, Dorothy Holmes in the Second Division. Ethel Adeane has had an extension of her Intermediate Scholarship from the London County Council Technical Education Board. Mildred Trehearne has passed the higher examination in violin of the Associated Board of the Royal Academy and the Royal College of Music.

ROCHESTER, KING'S SCHOOL.—Wednesday, July 30, was Prize Day. The Dean of Rochester presided, and gave away the prizes. The whole of the Chapter (Archdeacon Cheetham, Canons Jelf, Cheyne, and Pollock) were present, also the Bishop of Rochester and the Mayor. The examiner (Canon Spurling, of Keble College, Oxford) under the Oxford and Cambridge Board spoke very favourably of the general work of the school, and both the Bishop and the Dean addressed the parents and boys. The Head Master (Rev. T. F. Hobson, M.A.) reviewed the events of the year, and mentioned among other successes the gaining of higher and lower certificates (Boxall obtaining a higher certificate with "Distinction" in Divinity) by members of the school, the degree of LL.D. conferred on W. L. Fletcher, by Toronto University, in recognition of his services to learning in general and the State in particular, and the D.S.O. bestowed on the two Captains Jelfcoat, on service in South Africa. The principal prizes were awarded as follows:—King's Scholarship, F. C. R. Brown; Governors' Leaving Exhibition, C. E. Sullivan; Scott Prizes for Classics, T. E. Osmond, K.S., and C. E. Sullivan; the Dean's Prize for Divinity, C. E. Sullivan; Canon Burrows Memorial Divinity Prize, T. E. Osmond, K.S.; the Archdeacon's Prize for Natural Science, T. E. Osmond, K.S., and H. F. L. Inigo, K.S. (equal); the Mayor's Prize for Mathematics, H. Wallis, K.S.; the Whiston French Prize, T. E. Osmond; Lord Cranborne's German Prize, P. F. Mackay, K.S. Athletic sports on the school playing fields followed, the prizes for which were given away by Lady Cranborne. Next term begins September 17.

ROSSALL SCHOOL.—Principal prizes and distinctions gained in the school:—Chapel Reading Prizes, S. F. Peshall, E. C. Jubb (*proxime accessit* F. A. Simpson); Church History, S. F. Peshall; English Essay, S. F. S. Johnston. College scholarships and other distinctions outside the school:—H. Fyson, First Class, Classical Tripos, Cambridge; R. Drew, Ewelme Exhibition at Oxford; F. A. S. Cotton, Patterson Missionary Studentship, Selwyn, Cambridge; Isambard Owen, Senior Deputy Chancellor of the University of Wales, has been knighted; H. J. Gibson has been made a Commander of the Bath; P. G. C. Campbell has been appointed Professor of Modern Languages, Kingston, Canada; W. W. Field has won the Oxford University Challenge Sculls. Prize Day was on June 20, when, to the neglect of all ordered tradition, the weather was tempestuous. The prizes were distributed by the Bishop of Burnley, who, in an admirable and forceful speech, encouraged us to be keen, unselfish, and hard-working. No condensed report can give any adequate idea of the vigour and effectiveness of his address. The usual luncheon followed, but the garden party was impossible. An excellent concert was given the night before. The memorial scheme has now received over £1,000. In cricket we have done wonderfully well, defeating Loretto by 91 runs, and Shrewsbury by an innings and 14 runs. F. H. Mugliston has proved a better bowler than fame had made him, and in batting there is practically no tail. Corder's are certain of the House Cricket Cup, and are at present first in the Senior Inter-House League games; Furneaux in the Junior. As for shooting, we have been doing some very steady work, beating Wellington, Glenalmond, Repton, Bedford, St. Paul's, Harrow, and Rugby. The Inter-House Cup has fallen to White's. With deep regret we must record the death of Canon Mason, formerly the Chairman of our Council. His tact, courtesy, and clear-headedness made his services invaluable, until declining years compelled him to resign the post; though to the end he continued to manifest his keen interest in things Rossallian.

SOUTHWARK, ST. OLAVE'S GRAMMAR SCHOOL.—Speech Day was July 31. First there was the commemoration service at St. Saviour's

(Continued on page 600.)

SEELEY'S CHEAP SCHOOL SERIES.

Conducted by the Rev. A. J. CHURCH, M.A., sometime Professor of Latin at University College, London.

Each Volume contains sufficient matter for the work of one term, with notes by a competent Editor of practical experience in tuition; and is well printed and strongly bound in cloth.

Ovid. *Elegiac Verse.* With Vocabulary. By Prof. CHURCH. 8d.

Ovid. *"Metamorphoses."* With Vocabulary. By Rev. NORTH PINDEK. 8d.

Horace. *Select Odes.* By Rev. W. J. BRODRIBB. 8d.

Cæsar. *Selections from the Fourth and Fifth Books.* By Rev. F. B. BUTLER. 8d.

Cicero. *Select Passages.* By Rev. W. J. BRODRIBB. 10d.

Livy. *Select Passages.* By Rev. J. H. MERRIOTT. 8d.

Phædrus. *Select Fables.* With Vocabulary. By E. WOLFORD. 8d.

Cornelius Nepos. *Select Lives.* With Vocabulary. By E. WOLFORD. 8d.

A Latin Delectus. By C. OAKLEY. 8d.

A Latin Exercise Book. Part I. By Prof. CHURCH. 8d.

A Latin Exercise Book. Part II. By Prof. CHURCH. 8d.

Latin Prose through English Idiom. By Rev. E. A. ABBOTT, D.D. 2s. 6d.

First Latin Grammar. By Dr. WHITE. 1s.

A Latin Exercise Book. Part III. By Prof. CHURCH. 8d.

Latin Vocabularies. Arranged according to subject. By A. W. READY. 8d.

* These two volumes may also be had, bound together in cloth, 1s.

DR. ABBOTT'S SCHOOL BOOKS.

VIA LATINA. A First Latin Book. 146th Thousand. 3s. 6d.

HOW TO WRITE CLEARLY. Rules and Exercises on English Composition. 66th Thousand. 1s. 6d. cloth.

HOW TO TELL THE PARTS OF SPEECH: or, Easy Lessons in English Grammar. 36th Thousand. 2s. cloth.

HOW TO PARSÉ. An Attempt to Apply the Principles of Scholarship to English Grammar. 33rd Thousand. 3s. 6d. cloth.

ENGLISH LESSONS FOR ENGLISH PEOPLE. By the Rev. EDWIN A. ABBOTT, D.D., and Prof. J. R. SEELEY. 17th Thousand. 4s. 6d.

LONDON: SEELEY & CO., LIMITED, 38 GREAT RUSSELL STREET.

WILLIAMS & NORGATE'S LIST.

THE FRENCH LANGUAGE.

Delbos.—The Student's Graduated French Reader. For the use of Public Schools. I. First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., of H.M.S. "Britannia." Twelfth Edition. 166 pages. Crown 8vo, cloth, 2s. II. Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., of H.M.S. "Britannia," late of King's College, London. Sixth Edition. 180 pages. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

Delbos.—Little Eugène's French Reader. For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Fourth Edition. Crown 8vo, cloth, 1s. 6d.

This Reader is intended for young children who have mastered the most elementary rules of French accent, and who know their regular verbs.

Victor Hugo.—Les Misérables. Les Principaux Épisodes. Edited, with Life and Notes, by J. BOIELLE, Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.

"May be pronounced a success. The selection has been made with judgment, and the notes are good."—*Athenæum*.

"A worthy addition to our stock of French reading-books which will be welcomed by numberless masters. . . . M. Boielle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

"Has done extremely well in putting forth his selection of the most striking episodes of Victor Hugo's masterpiece, and has done it well."—*Educational Times*.

"Has produced a manual which has the merit of presenting the style of the greatest French writer of the century."—*Scotsman*.

Victor Hugo.—Notre-Dame de Paris. Adapted for the use of Schools and Colleges. By J. BOIELLE, B.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.

"His notes abound in good renderings of sentences and phrases, opportune remarks on the proper meanings of words, and historical information necessary to elucidate the text."—*Athenæum*.

"His famous work, adapted with commendable taste and judgment. . . . presents every fact which could be put together to make a perfect school-book."—*Spectator*.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school-book."—*Scotsman*.

GRAMMARS AND EXERCISES.

FOR PUBLIC SCHOOLS, WHERE LATIN IS TAUGHT.

Eugène's The Student's Comparative Grammar of the French Language. With an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By G. EUGÈNE FASNACHT, late French Master, Westminster School. Twenty-first Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . The rules and observations are all scientifically classified and explained. . . . Mr. Eugène's book is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

Eugène's French Method. Elementary French Lessons. Easy Rules and Exercises preparatory to "The Student's Comparative French Grammar." By the same Author. Seventeenth Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

"To those who begin to study French, I may recommend as the best book of the kind with which I am acquainted, 'Eugène's Elementary Lessons in French.' It is only after having fully mastered this small manual and exercise-book that they ought to begin the more systematic study of French."—Dr. BREYMAN, Lecturer on the French Language and Literature, Owens College, Manchester (Preface to "Philological French Grammar").

Eugène's Comparative French English Studies, Grammatical and Idiomatic. Being an entirely Rewritten Edition of the "French Exercises for Middle and Upper Forms." Sixteenth Edition. Cloth, 2s. 6d.

Boielle (James).—French Composition through Lord Macaulay's English. Edited, with Notes, Hints, and Introduction, by JAMES BOIELLE, B.A. Univ. Gall., Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth, 3s. per volume.

Vol. I. Frederick the Great. Vol. II. Warren Hastings.
Vol. III. Lord Clive.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

"This volume is obviously the work of a practical teacher, produced, or rather begotten, not in the closet, but in the class-room, and—what is rarer—of a teacher equally conversant with both languages. In reviewing the two previous volumes we explained and expressed our approval of M. Boielle's method of teaching French composition, and it is sufficient to say that the present essay is as fully and judiciously annotated as the two previous ones."—*Journal of Education*.

Delbos (L.).—The Student's French Composition, on an entirely New Plan. With Introduction and Notes. (In use at Harrow, Eton, &c.) Crown 8vo, cloth, 3s. 6d.

In the first part of this work is given an almost word-for-word imitation of the English as it should appear when turned into French, and as that imitation is on the same page as the correct English text, the student will have something more than notes to guide his faltering steps. All the pieces contained in Part I. are the result of actual class work, and that most of those contained in Part II. have also been used with the advanced pupils.

"The passages are carefully chosen and have been proved by use in class. . . . Will be found most useful."—*Journal of Education*.

Roget (F. F.).—First Steps in French History, Literature, and Philology. For Candidates for the Scottish Leaving-Certificate Examinations, the various Universities' Local Examinations, and the Army Examinations. Crown 8vo, cloth, 5s.

"This manual will be a boon to many who have neither time nor inclination to work through a large volume on the history of French literature, but who yet desire to obtain a knowledge sufficient to enable them to pigeon-hole their reading of French prose and poetry."—*Educational Times*.

"He has displayed qualities which are rarer and more trustworthy than mere erudition."—*Saturday Review*.

Roget (F. F.).—An Introduction to Old French. By F. F. ROGET, of Geneva University, late Tutor for Comparative Philology, Edinburgh. History, Grammar, Chrestomathy, and Glossary. Second Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.

The work is not intended to be an exhaustive Grammar, but an introduction to the larger works by Bartsch, Clédet, Darmstetter, &c. It is eminently suitable for use with classes of advanced students.

THE GERMAN LANGUAGE.

Weisse's Complete Practical Grammar of the German Language.

With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Rewritten. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education*.

Weisse's Short Guide to German Idioms. Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

This book of German Idioms will be found to be a fairly complete collection of such phrases as come under this designation, being commonly used both by good writers and in ordinary conversation; while the arrangement in alphabetical order of the characteristic or cue-words will make it easy for the student to refer to any particular expression.

Möller (A.).—A German Reading Book. A Companion to Schlüter's "German Class Book." New Edition. Corrected to the Official German Spelling. With a complete Vocabulary. 12mo, cloth, 2s.

The anecdotes and tales forming the Reader have been carefully selected, and are arranged so that the pieces are shortest at the beginning and gradually become more difficult.

Hein's German Examination Papers. Comprising a complete set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.

A Short Sketch of German Literature. Prepared for the Scottish Leaving-Certificate Examinations. By VIVIAN PHILLIPS, B.A., Fettes College. Thoroughly Revised. Second Edition. Pott 8vo, 1s.

Apel's Short and Practical German Grammar for Beginners, with copious Examples and Exercises. Third Edition. 12mo, cloth, 2s. 6d.

Intended for students who cannot command a sufficient amount of time for a full acquisition of that difficult tongue, but who nevertheless wish to obtain a fair knowledge of it within a brief period, and in the least laborious manner possible.

Apel (M.).—German Prose Stories for Beginners (including Lessing's Prose Fables), with an Interlinear Translation in the natural order of Construction. Second Edition. 12mo, cloth, 2s. 6d.

SCHOOL DICTIONARIES.

Uniform in Binding. Price 3s. 6d.

James (William) and C. Stoffel.—German-English and English-German Dictionary.—Complete Grammatical Dictionary of the German and English Languages. 1,000 pages. 8vo. Thirty-fourth Edition. Special cloth binding.

James (William) and A. Molé.—French-English and English-French Dictionary.—With Tables of Irregular Verbs. 1,000 pages. Fifteenth Edition. Crown 8vo, special cloth binding.

Larson (A.).—Danish, Norwegian, and English Dictionary. Third Revised and Enlarged Edition. 688 pages. Large 8vo, strongly bound, half roan, 12s. 6d.

Rosing (S.).—English and Danish Dictionary. Seventh Edition. 540 pages. Large 8vo, strongly bound, half roan, 11s. 6d.

Now ready. Third Hundred Thousand.

Kiepert's Atlas Antiquus. Twelve Maps of the Ancient World. For Schools and Colleges. By Dr. HENRY KIEPERT. Eleventh Edition, Improved, Corrected, and Enlarged, with List of Names. Folio, boards, 6s.; cloth, 7s. 6d.

Recently published, demy 8vo, 3s. net, with large Plate and numerous Illustrations in the Text.

Medical Indoor Gymnastics; or, a System of Hygienic Exercises for Home Use. To be practised anywhere without Apparatus or Assistance for Young and Old of either Sex for the Preservation of Health and General Activity. By Dr. G. M. SCHREIBER, M.D., late Director of the Orthopaedic and Medicinal-Gymnastics Institution in Leipzig. Revised and Supplemented by RUDOLF GRAEFE, M.D. Translated from the Twenty-sixth German Edition. Invaluable to both Teachers and Scholars.

WILLIAMS & NORGATE, 14 HENRIETTA STREET, COVENT GARDEN, LONDON; and 7 BROAD STREET, OXFORD.
EDINBURGH AGENCY: 20 SOUTH FREDERICK STREET.

Collegiate Church, with the Bishop of Ripon for preacher. His theme was "Solomon's Division of Labour in Building the Temple," as instanced by the workmen who were one month cutting wood on Lebanon, and two months at their homes performing their daily duties. The sermon was an eloquent plea for a Lebanon period in the life of every man. The prize-giving took place at the school. The Warden, Mr. Hugh Colin Smith, presided. Scenes were acted from "Macbeth" and "King John," from Moliere's "L'Avare" and "The Knights" of Aristophanes. The Head Master, Mr. W. G. Rushbrooke, noticed the work of the year, called attention to points in the honour list and in the report of the examiner, Mr. W. H. D. Rouse, and paid a tribute to the memory of Mr. Joseph Pearce, who died last April after twenty-nine years of devoted service. He was master of the first form; and, over and above the work of teaching, he had to mould new-comers to the traditions of the school, a task which he achieved with rare insight and success. A tablet to his memory has been placed by the door of his class-room. We were fortunate this year in having Mr. Asquith to give away the prizes. In his address he entered fully into the character of the school as a typical English institution, founded under Queen Elizabeth and remodelled to meet modern needs; he reviewed its programme and its recent achievements, and he touched upon current problems of secondary education, the need of a well graded system, the waste of talent and character due to imperfect facilities, and the imperative necessity of reforming the present confusion. The special prizes this year were:—Warden's Prize for English Literature, A. J. Dedman; Mr. W. H. O. Smith's Reading Prize, F. Lambert; Mr. C. G. Hoare's Divinity Prize, D. J. Owen; Nutt Prize for Classics, A. J. Dedman and F. Lambert; Warden's Prize for Mathematics, F. G. Forder; Declamation Prizes, A. E. Baker and A. Hughes; Mr. C. O. Gridley's Ruskin Prize, J. C. Gravestock; English Verse, H. F. Brett-Smith; Latin Verse, A. J. Dedman; Greek Verse, W. Burton; Mr. H. Lafone's Prize for Chemistry and Physics, A. E. Baker; Dr. Perry's Prize for Biology, A. E. Pratt; Lafone Arithmetic Medal, W. J. Ward; Lafone Gold Pen for Writing, T. E. J. Denbeigh; French, J. C. Gravestock; Articles in the Magazine, (Prose) A. E. Pratt, (Verse) K. S. Dale-James; Navy League Prizes, E. H. Grout and A. E. Baker; Plant Collecting, W. F. Collins. [The brilliant list of distinctions gained by former pupils is too long for us to insert.]

WAKEFIELD GRAMMAR SCHOOL.—Speech Day was held on the 1st ult., and the prizes were distributed by Sir Thomas Brooke, Bart. Amongst the honours announced by the Head Master were six University scholarships, including the coveted Akroyd Scholarship,

open to all Yorkshire schools, which we have now gained five times in the last thirteen years. Four other scholarships also appeared in the list of distinctions, as well as a First Class in Classical Moderations at Oxford, and another in the Mathematical Tripos, Part II., at Cambridge. Mr. P. Meadows having resigned his mastership, the Head Master has appointed Mr. C. F. Tyrrell, Drapers' Scholar of St. John's College, Cambridge, and Cambridge Day Training College, as his successor. The school has suffered a most severe loss in the death of Mr. Stollard, mathematical master for the past twenty-six years, who has trained a Senior Wrangler and two Third Wranglers in his classes at this school. As his successor the Head Master has appointed Mr. C. F. Sandberg, M.A., F.R.A.S., late scholar of Hertford College, Oxford.

PRIZE COMPETITIONS.

HOLIDAY PRIZE COMPETITIONS.

Prizes to the amount of Five Guineas as a minimum are offered for the following competitions in photography:—

1. One figure study, illustrating some scene in history or fiction.
2. A set of three landscapes.
3. Three architectural studies, exterior or interior.

Photographs will be returned if stamped covers are sent.

Prizes to the amount of Three Guineas as a minimum are offered for the following literary competitions:—

1. A triplet of anecdotes illustrating the humours of the class-room or the playground.
2. Three instances of infant precociousness.
3. Three pedagogic sentences or maxims selected from classical novelists.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by September 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

BACON'S SPECIAL WALL-ATLASES

MADE UP TO ORDER FOR SECONDARY SCHOOLS.

The attention of the Principals of Secondary Schools is invited to this opportunity of obtaining excellent Wall Maps and Charts at a cheap rate, in **Wall-Atlas form and arrangeable in sets**, as desired, to suit the requirements of the following Examinations:—

Civil Service, College of Preceptors, City and Guilds of London Institute, Oxford and Cambridge Locals, Society of Arts, &c., &c.

Size of Sheets, 30 by 40 inches, each Sheet **mounted on Cloth**, securely riveted in ornamental covers, fitted with **Patent Simplex Suspender** for Blackboard, and with **Metal Binding** at the bottom of each Sheet to prevent curling up. Specially convenient in Schools where wall space is limited.

Any desired selection of not less than four of the following Series (comprising Fifty Maps, Charts, or Diagrams) will be bound up as a **WALL-ATLAS** at a uniform price of **3s. 6d. per sheet**:—

BACON'S EXCELSIOR REDUCED SCHOOL MAPS.—

Hemispheres.
Western Hemisphere.
Europe.
Asia.
Western Asia.

Africa.
North America.
South America.
British Isles.
Africa, South.

England and Wales.
Wales.
Scotland.
Ireland.
Egypt and Nile Basin.

Canaan.
Palestine.
Australia.
United States.
China.

BACON'S "BOLD FEATURE" MAPS.—

England, Scotland.
Ireland.
Europe.

Europe, Western.
France.
Spain.
Italy.

Germany.
Russia.
United States.
United States, E.

Africa.
Africa.
Central and South.
United States, W.

North America.
South America.
Canada, West Indies, &c.

India.
Australia.
New Zealand.

BACON'S "SPECIAL" SCHOOL MAPS.—

England, Physical.
England, Industrial.

England, Railways.
Journeys of St. Paul.
Wanderings of the Israelites.

Scotland, Physical.
Scotland, Industrial.

Scotland, Railways.
Ireland, Industrial.

BACON'S CHARTS AND DIAGRAMS.—

The World in Space. (Shape and Size of the Earth.)
Geographical Terms. (Bird's-Eye View.)
Astronomical Chart.

The Cardinal Points. (Sun in the South, Mariner's Compass, Weathercock, &c)
Picture and Plan of School.
Picture and Map.

Note.—The following Charts being half the size of the above Maps, any two of them may be included in a Wall-Atlas as one Sheet:—

Latitude and Longitude. **The Solar System.** **Day and Night.** **Phases of the Moon.** **The Seasons.** **Ocean Currents.** **The Tides.** **Principal Ocean Routes.**

All these Maps, &c., are also published separately, on Cloth, Rollers, and Varnished. Price 6s. each.

By W. BRYANT. Fcap. 8vo, cloth, 1s. 4d.

Chiefly intended for the Junior Classes of Higher and Secondary Schools, and
Preparatory Schools in connexion with them; but the Exercises in Parsing and
Analysis will be found very useful for older scholars and pupil-teachers. *From
beginning to end the chief aim has been to make the pupil think.*

DENT'S MODERN LANGUAGE SERIES.

Based on the Principles of the German Reform Movement.

General Editor—WALTER RIPPMMANN, M.A.

Just Published.
EIGHTH EDITION, completing 82,000 copies.
(With the Addition of Five Simple Songs and Music.)

Dent's First FRENCH Book.

Based on the Hölzel Pictures of the Seasons.

By S. ALGE and W. RIPPMMANN. 1s. 6d. net.

Prof. FREDERIC SPENCER, of the University of North Wales, Bangor,
expresses the following opinion:—"In the case of most new elementary
French class books neither the treatment of the subject nor the traditional
apologies of the Preface afford any sufficient justification for their production.
'Dent's First French Book' is a conspicuous exception. . . . It appears
most opportunely, supplying as it does, on the lines of the 'reform' method
a course which is both rational and eminently practicable."

AN UNLUCKY SENIOR WRANGLER.

By J. P. OWEN.

IN the seventh series of the "Johns Hopkins University Studies" there are two interesting papers by Prof. Trent on "English Culture in America." The writer deals with F. W. Gilmer's mission to England in 1824 to procure professors for the new University of Charlottesville, Virginia. One of Gilmer's letters, dated "Cambridge, 7th July, 1824," contains the following passage:—"As yet I have learned but of one whom I should probably choose: that is a Mr. Atkinson, formerly 'Wrangler' in Trinity College, Cambridge, now teaching a school in Scotland. He is spoken of as a first-rate mathematician, and I shall endeavour to see him in my visit to Scotland." In a foot-note, Mr. Trent adds: "Henry Atkinson (1781-1829) of Newcastle-on-Tyne, is the only Atkinson of mathematical celebrity that I can discover. He did teach in Scotland, but does not appear to have ever been at Cambridge; for at the age of thirteen he was principal of a school." Obviously it was not Henry Atkinson, but Solomon Atkinson, of Trinity College, Senior Wrangler in 1821, whose name was submitted to Gilmer. So far as I am aware there is no published account of this unfortunate man (unfortunate at any rate in the earlier part of his career), nor is he noticed even incidentally in the "Dictionary of National Biography." I have, however, in my possession his own annotated copy of an anonymously published paper which is neither more nor less than an unvarnished autobiography. Believing that an abstract of this paper will prove not only interesting in itself, but a valuable contribution to the history of University education on both sides of the Atlantic, I now proceed to extract the pith of it.

Solomon Atkinson was born at Ainstable, in Cumberland. His father was a day-labourer who, himself the son of a curate and village schoolmaster, had resisted the paternal pressure to enter the Church, had married early in life a woman of some property, and had expended their joint means in undertaking and mismanaging a small farm. Solomon was their second son, and the grandfather and mother were determined that he at all events should be a parson. During the first eighteen years of his life the little learning that he was able to scrape together at the village school had to be acquired amid the constant calls of farm-work, which grew heavier as he advanced in years and strength. He saw and envied the happier fortune of his wealthier schoolfellows, who passed off one after another to the fashionable grammar schools of the North—Carlisle, St. Bees, Appleby, or even Richmond in Yorkshire—to finish their education, or fit themselves for the University. However, where there's a will there's a way; and he somehow or other found means to get "boarding at a cheap rate at the village of Bampton, in Westmoreland; and at the Free Grammar School in that place he fitted himself for the University," as he adds in manuscript to the printed account at this point.

The golden key that unlocked the coveted entrance to the University was obtained from his maternal grandfather, who lived at Burneside, near Kendal, and who, by dint of great industry and economy, had during a long life accumulated a small property. About the end of January, 1817, in the depth of what happened to be a severe winter, young Atkinson started off on foot on a journey of some sixty miles to visit this old gentleman. His personal appeal for help was successful; he was given a hundred pounds and a blessing. But he was not yet out of the wood—or perhaps out of the fell would be a more appropriate figure. He wanted advice, and he knew no one capable of giving it him. Even in his remote and secluded home, however, he had heard the fame of Dr. Isaac Milner, Dean of Carlisle and President of Queens', Cambridge. To Milner, accordingly, he determined to apply, and walked twenty miles through rain and hail and snow with that end in view. But here I must quote *verbatim* :—

I was speedily ushered into the presence of this venerable personage. To those who have ever seen him I need not say that he was one of the noblest examples of the human form that Nature ever moulded. At this time he was in a very indifferent state of health. His head was wrapped up in a kind of turban cap; he was sitting on an elevated sofa, and his books and writing materials were extended over a large desk, whose elevation corresponded with the position in which he sat, or rather reposed. "Well, young man," he inquired with a frankness and kindness of manner which I shall ever bear in grateful remembrance, "and what is your business with me?" I briefly told my

errand. Where had I been educated? "At our village school," was my reply. What could I read? I had read Virgil, Horace, the Greek Testament, and the "Cyropædia." Horace and the Greek Testament were instantly produced. I read a few lines of the former and a few verses of the latter. "Very well, young man." Did I know anything of mathematics, for, if I was looking forward to Cambridge, this was important? I was an expert arithmetician, and knew something of algebra and geometry. "Can you demonstrate me the common rule in books of arithmetic for pointing off decimals in multiplication?" This was a novel kind of question, and I was rather posed. "Do you know the short rule for reducing the decimal of a pound sterling to shillings and pence?" I explained the operation. "Now can you tell me the reason?" I could not, and he again helped me out. We went through a variety of other arithmetic and algebraic conundrums. I performed the operations rapidly, but was not so skilful in demonstrating. We passed on to geometry. "Can you demonstrate the forty-seventh proposition?" I was lost. I had read Euclid; I knew it thoroughly, but had never considered it expedient to know the propositions by number. He immediately recollected himself. "I should have given you the enunciation. I mean the proposition about the square of the hypotenuse." I forthwith scrawled the diagram on a slip of paper, and went through the proposition. This was "very satisfactory, very good—very good, indeed." And so we went on for a considerable length of time. He then opened the question of my finances, went into a variety of details respecting his own affairs when he went to college, and discussed with me my particular condition with as much kindness and consideration as if he had known me for twenty years.

Although Atkinson had already formed a strong desire to be admitted of Trinity—and, that failing, of St. John's—he was overruled, for, in spite of the fact, which Milner took care to point out to him, that there were no prospects of getting a Fellowship at Queens', he was advised that it would be better for him to be admitted a sizar of that society. So it was settled, and the Dean wrote to Barnes, the senior tutor, to that effect. The intervening period passed rapidly away. October arrived, and Atkinson started, with a heart full of glee and joyous anticipation, for the great seat of learning and science. The last sixty miles of the journey he made on foot, having travelled from Leeds to Woburn by coach; but when he reached the latter village it was only to find that the Oxford and Cambridge coach had just passed. Daylight had not quite gone when the tired pedestrian stood before the entrance of Queens' College. "Can you tell me where I shall find Mr. Barnes?" he inquired of a tall, portly personage just then passing. "I am Mr. Barnes," was the reply. Mr. Barnes took him across the court to a set of apartments—a wealthy pensioner's—in the New Buildings, where, he was told, he was to remain that night. The tutor, after telling him that he must breakfast with him at ten the next morning, and that he would send his servant to attend to his wants, departed. After applying himself pretty stoutly to the good things set before him by Barnes's man, he felt his strength restored and so little disposed to sleep that he sat up till three or four o'clock in the morning. He now felt himself at leisure to survey, in detail, the fairyland into which he had been so suddenly transported—the rich Brussels carpeting on which he trod, the brilliant chintz hangings which displayed their folds in all the taste and elegance of Grecian drapery; desks, tables, chairs of the choicest materials and finest workmanship; the whole room actually covered with pictures, which fascinated his untutored taste—among them a variety of portraits, and, in particular, one of the President, very conspicuously placed. A large and costly pier-glass was suspended over the fireplace, and directly opposite, on the other side of the room, stood another of corresponding magnitude and beauty. Several large concave and convex mirrors were scattered about. He examined all these and a variety of other objects, as novel to him as they were curious in themselves. At length he rested on the handsome mahogany book-cases, and envied the stores of learning which their owner must possess, for he had not then found out that there was a material difference between having a good library and possessing the knowledge which it contained.

After breakfast the next morning Barnes showed him the rooms which were to be his future habitation, and made some remark about the badness of their condition. A tattered carpet which covered half the floor, half a dozen chairs tumbling to pieces, a looking-glass that might have seen a hundred years, two or three boards that were meant for a book-case, filled the sitting-room; the bedroom, a small, narrow place, into which he could with difficulty squeeze himself, containing something that had once been a tent-bed and bed-clothes; the gyp-room

being about three feet square or so, and serving as larder, buttery, and kitchen, a place the very smell of which was enough to sicken a Hottentot—a poor abode, but it was to be *his own*, and that sufficed.

Passing by some other details and explanations, which, however interesting to a student of old Cambridge life, are too familiar to the reader to warrant repetition, I pick out from this part of the narrative a few criticisms of prominent Cantabs of the time:—

Herbert Marsh, the Margaret Professor of Divinity, is altogether the first man in Cambridge at the present time. He is an ornament to this University, and he would be an ornament to any society that ever existed. But he was not formed at Cambridge. He went to the Continent very shortly after he graduated—studied theology under Michaelis, ransacked the stores of German literature, wrote one of the ablest periodicals of the day, called "British Politics Defended," which did this country incalculable service on the Continent, and which finally became so odious to Buonaparte that he proscribed Marsh. . . . He is an intolerant bigot; but he supports his opinions like a man, and is the very best pamphleteer of the day. At an immense distance below Marsh, but undoubtedly the second in the University, is Smyth, the Professor of Modern History. He is in private life a most amiable man; thoroughly acquainted with his business; a Whig in politics, but his lectures, admirable alike for their eloquence and various information and profound research, contain not a breath of party spirit. . . . The publication of these lectures would be an invaluable treasure to the youth of the country, but he permits no one to take notes.

Woodhouse, the Plumian Professor of Astronomy, has added little or nothing to the stock of science. . . . He has written a multitude of elementary treatises on mathematics, most of them very excellent, and laid the foundation for introducing the Continental methods in Cambridge, which was completed by a bold measure of Mr. Peacock, of Trinity. Mr. Whewell, one of the tutors of Trinity, I hold to be by far the nearest approximation to the celebrated trio I have already named. His mind is framed on the same model—bold, vigorous, and extensive; but circumstances have circumscribed, or rather directed, his career into a channel in which he will never descend to posterity. Elementary treatises on science—and he has written the very best that Cambridge ever produced—are temporary in their existence and partial in their circulation. The "Apology for the Bible" will be read over three quarters of the globe when every name now in Cambridge shall be forgotten.

Mr. King, tutor of Queens' College, was Senior Wrangler, and took that degree with higher distinction than perhaps any other man ever did. He might have been one of the first mathematicians of Europe; he *is* the tutor of a college. His extraordinary powers of acquisition, the energy of his mind, and the vigour of his temperament are wholly employed in making up college bills, arranging college squabbles, and looking after the morals of Freshmen. His knowledge of mathematical science was most extensive, and his mastery over it complete. At present the game of whist is his favourite study, and probably he will end his career much more familiar with Hoyle than Laplace. The man that might have rescued the name of English science from contempt is fast approaching the honours of a three-bottle man in a tippling college and of the best whist player in a gambling University. The resident Fellow who in his youth spends the afternoons over bad port and his nights in card-playing in the decline of life becomes, as a matter of course, a silly and besotted old woman in a doctor's gown.

Mr. Peacock is mathematical lecturer in Trinity, one of the translators of Lacroix, and one of the compilers of the supplement of examples. He has a clear head and a prodigious industry, has read more mathematics probably than any three men of his age now living; but he does not possess a single particle of invention.

Mr. Gwatkin, a lecturer in St. John's, the neatest and most clear-headed mathematician in Cambridge, the best private tutor, and the best mathematical lecturer in the University, is an excellent moderator, and his examination papers are models of clearness and judgment. Of any other knowledge, whether of the most ordinary affairs of life, or of questions which occupy the public mind or are likely to influence the public happiness, he is as ignorant as an Esquimaux.

The total amount of Atkinson's ways and means when he first went up was "perhaps a little short of £150." He adds that, if he had remained at Queens' during the whole of his course, with that sum and due economy he could have met all demands. His college bills, including the £15 caution money and the furnishing of his rooms, came to about £90; but he had got the appointment of Chapel Clerk, worth about £20 a year; his tutor had given him the benefit of some half-a-dozen small scholarships equivalent to about the same amount; and he had a pupil

* I am afraid that it is necessary to inform the younger reader that Bishop Watson's once famous book, which gave rise to a still more famous epigram, is here referred to.

from whom he was to receive forty guineas for the three terms. The first term he paid his tutor's bill; in the second he fell into arrears; and the third term found him still further behind—in fact, his indebtedness to his tutor when he graduated amounted to upwards of £200. By migrating to Trinity early in his second year he lost the advantages already within his grasp, and, being obliged to lodge in the town during his first year at Trinity, he made nothing by his pupil. A scholarship of £40 at Trinity only became available to him as a sizar in his third year, "too late to be of any effectual service." Running into debt *pari passu* to his bookseller and tailor and other tradesmen to a large amount, he became extravagant, and "lost all idea of economy."

Passing from this "painful subject," he proceeds to give an account of his examinations. At the annual examination of Freshmen he was first, completely distancing his competitors, who were not men without talents, and who had had the very best means of instruction.

One of them in particular, the son of a Lancashire clergyman, showed wonderful play. It did not satisfy his craving desire for knowledge to read from eight or nine o'clock in the morning till twelve or two the next morning; but he regularly sat through the whole night once or twice a week, keeping himself awake by strong doses of tea or coffee. I was content to let seven or eight hours a day serve my purpose. I soon discovered that a vigorous mind may get through a great deal of work in two or three hours, and I found that these close-sitters were men of little physical activity, and that their plan soon led them into habits of mental indolence. I read hard for two or three hours in the morning, and the like again in the evening, and the rest of the day I ranged about the town, or rambled three or four miles into the country, alternately conning over some proposition mentally or picking upon adventure, as accident or inclination served.

The second year wore away amid sad difficulties, discouragement, and despondency; the examination of Junior Sophs came, and Atkinson was in the First Class. As the names were arranged alphabetically, kind friends whispered to him that he was not the first, "which was enough to humiliate him deeply." When the third year, however, closed, it found him well seasoned for the combat. He was in the First Class again—"first in that class, first beyond all comparison." There was a very strong impression that Trinity was not to have the Senior Wrangler in 1821. For the ordeal, while the Johnians, "the men who stood in the way," had retired during the Long together into Wales, with their famous tutor Gwatkin, Atkinson stayed up solitary in his garret, and spent not only the Vacation, but the whole six months previous to the examination, in alternate fits of hard reading, despondency, and flute-playing (which he practised several hours each day). Three or four times every week the Johnians were examined in succession by every tutor and lecturer in the college; they daily received private instruction, and were initiated into all the mysteries of the Senate House. It was boldly asserted that there had not been such a strong year in St. John's for the last twenty; the first five Wranglers were theirs beyond doubt or question.

In Trinity the very reverse of all this is pursued; the men of Trinity are left to fight for themselves, to trust in their natural strength rather than in those aids and skill which training and discipline bestow. Under these circumstances, the hope which I had long and fondly cherished gave way. To add to my difficulties, my finances were getting more and more embarrassed, and I found myself in my very last term under the necessity of taking pupils. On these pupils and my flute I expended daily five or six hours up to the very week of the examination. I fell into despair and became reckless and indifferent as to the event of the approaching struggle.

The final trial was at hand; the indifference which he had felt for some months was suddenly changed into the most intense anxiety. The ambition which he thought dead was only slumbering—he made a desperate effort, and carried off "the single diadem of the Senior Wrangler," and, he might have added, but does not, the second Smith's Prize. Thus far we have met with nothing that would justify the epithet applied to our Senior Wrangler at the head of this paper. The obstacles besetting the path, and surmounted by the indomitable resolution, of humble impecunious genius are the commonplace of biography. Now, however, the tale takes a gloomier tinge, relieved by no successes. Forced, no doubt, by the burden of his debts to depart from his *alma mater* at the very moment when she might be expected to prove herself so in reality, Atkinson at once came to town, expended nearly his last farthing in paying the admission fees to Lincoln's Inn; and, with one hundred pounds

advanced him by a friend, was enabled to attend the chambers of a very distinguished special pleader for one year. This gentleman was in possession of a multitude of ponderous folios of precedents, many of which had formerly belonged to Tidd, whose pupil he had been; and the residue he had himself accumulated during a practice of upwards of twenty years. Never were one hundred pounds sterling more completely thrown away. To copy the aforesaid precedents was the way in which the pupils were employed; the most elementary of them was a volume of "Precedents of Declarations on Bills of Exchange and Promissory Notes." The copying of this work was varied once or twice in a term by the pupil having to draw a "declaration on a bill of exchange by the endorsee against the acceptor, a plea of the general issue or a joinder in demurrer, or suchlike matters that any attorney's clerk in London would do." But Atkinson admits that he did gain some advantage from his £100. He learnt how to fold and endorse a draft of pleading—which was "something."

In the meantime he had married a lady his attachment to whom had been one of the earliest dreams of his life. Her connexions are described as "not opulent, though sufficiently independent," and he cherished a "latent but delusive hope" that, if fortune should run him hard, they would not allow him to sink before the storm. The young couple's joint property amounted to less than £80. Scarcely eight months married, the young wife was attacked by consumption, and within a few weeks was on the very brink of the grave. Her friends undertook the charge of her, and took her away into the country; "but not before they had involved the husband in an engagement which in its consequences finally led him to leave his native land." The narrator hurries away with somewhat suspicious haste from this topic, and we hear no more of the young wife. During the two years that he stayed at this time in town Atkinson tried hard to attach himself to "that great leviathan," the public press, and eke out the means of support from the reviews, magazines, and newspapers; nor did he disdain hack-work for the law booksellers. But ill-luck pursued him.

What else could be expected? I had suddenly emerged from a country village to a mathematical University, where I had devoted myself exclusively to abstract science. From the University I had passed directly to the study of the law, a science scarcely less abstract and destructive of the powers of invention, imagination, and taste. I lived in obscurity—I mingled not with society—I saw nothing but my law-books—I thought of nothing but the decisions and the arguments of lawyers.

The pressure of creditors and the fears of a debtors' prison now forced him to leave London after converting the remnants of his property into cash—which, however, only amounted to a few sovereigns. He determined to leave his native country under an assumed name, and, with a view of making a last appeal to his friends, journeyed through Yorkshire and Cumberland on the road for Glasgow. Before reaching Scotland he had discovered that he had not a friend left in the world. On arriving at Glasgow he found that the first vessel for New York would be sailing from Greenock on August 1 (1823). He took a steerage passage, for which he paid six guineas, and discovered, but unluckily too late, that for three guineas more he might have been provisioned with the ship's crew. He had laid in provisions for thirty days, including "a gallon and a half of the best Highland whisky," but the captain soon informed him that the voyage would very probably take sixty days or even longer. "As if fate had determined to wreak her utmost malice on him," they had scarcely lost sight of the Irish coast, when one evening the ship gave a heavy lurch, threw the bottle, "wherewith he had intended to console himself across the Atlantic," on its side, and the cork not being water-tight, the whole of its contents leaked out. After a tedious, though not unpleasant, voyage, on the seventh Sunday out, Long Island greeted his eyes. I pass over details of quarantine, and his avoidance of it by jumping into the steamboat that plied between New York and Staten Island, and will only quote, for the benefit of the "New English Dictionary," the steamboat captain's remark: "Plenty of room among our forests and swamps, plenty of employment for stout and healthy young men. Have you ever been in New York? Then [scarcely giving time for the expected negative]—then you have a *ripper* of a city to see!"

Atkinson's stay in America was a short one, confined to New

York, with an occasional excursion to Philadelphia, Albany, or the towns situated on the banks of the Hudson. He, however, came into some sort of contact with the professors of Columbia College, New York, and I extract part of the "slight sketch of his friend Adrain," Professor of Mathematics at that institution, which may supplement the necessarily meagre notice of Adrain contributed by Miss Clerke to the "Dictionary of National Biography":

Adrain had been an active partisan in the Irish Rebellion of 1798, had a command in the disastrous battle of Vinegar Hill, and was obliged to flee to America to escape the reward of his treason (as some would call it). He had possessed some property, which he lost. He arrived at New York when the plague was raging with great virulence, slung his small luggage over his shoulder, and went on to Philadelphia, where he laboured a considerable period as hodman to a bricklayer. Attracting the attention of his employer by telling him on one occasion offhand how many bricks were wanting to complete a gable-end at which they were working, he was thought to be above his employment, and a school was provided for him, and he finally succeeded in making himself so well known as to be invited to accept the Professorship of Mathematics at Columbia College, with a salary of 2,500 dollars a year. Superior, certainly, in his own branch to any man I ever knew (and I have known some pretty fair hands, the late and present Professors of Mathematics, for instance, in Cambridge), he possesses a vast store of general knowledge. He had a hearty detestation of this nation, which even his general politeness and his habitual self-control could not always disguise. I have heard him describe, with truly Irish eloquence, how on one occasion during the late war he shouldered his musket and belted on his sword when an English frigate had the unparalleled audacity to pass through Hell Gate and sail through the East River almost to the very docks and quays of New York. You could see from his agitated features that there was something beyond the mere hostility of war that lurked within his bosom.

Little did Atkinson dream while listening to Adrain's account of trials undergone and obstacles successfully surmounted that at that very moment arrangements were making for sending an envoy to England to secure English professors for an American University, and that the very first name submitted to the envoy at Cambridge would be his own discarded one! He returned quickly to England as poor (except for an appreciable addition to his stock of patriotism) as when he had left it. "I had a single half-crown when we weighed anchor at Greenock; I had three or four American coins when I sprang from the pilot boat at Dover."

He had expected to find a friend at Dover, but, with his customary luck, he found that this gentleman had recently removed to the neighbourhood of Canterbury. Thither Atkinson trudged, and reached his goal just as "mine host of the Hop-pole was closing his doors for the night." As the result of a "short but cordial" interview with his friend, he borrowed a sovereign to enable him to get to London. It was not, however, to London, nor, unfortunately for him, to Cambridge, that he made his way, but to his native Cumberland. He thinks it needless to tell how he was kicked and elbowed in his wanderings, how at one time the hand of benevolence was opened to relieve him and help him on his way; how at others he was ordered off with the gruff and savage ferocity of a bull-dog; how on some occasions he was mistaken for a police-officer, on others for a highwayman, on others for a Scotch cotton-weaver; how cunningly the hostess of some mean pot-house would query him when he turned in for the night; how he was exposed to the drenching rain by day and the keen and biting winds of March by night; how at last he arrived on the edge of Stanmore in Yorkshire, worn out, exhausted in mind and body, his clothes in tatters, his shoes falling to pieces, his feet torn and bleeding; and how he was generously conveyed four or five stages and brought within a few miles of his destination.

But he does enlarge, and that to the extent of three pages, on one of these incidents, when he came, in the vagrant character just described, into collision with the Rector of Catterick, who threatened to send him to Northallerton treadmill for a month. I am bound to confess that both appearances and demeanour were against "the begging vagabond who had the insolence to speak with his hat on, and without rising from his chair," to a couple of benefited, pompous, and perhaps peppery parsons.

However, he was allowed to depart without making acquaintance with the treadmill, or even the lock-up, and, marching through rain, sleet, and snow, he reached at last the home of his birth, which had by this time become "the abode of comparative wealth," through the death of the grandfather who, as

we have seen, had, some six short years before, furnished him with the wherewithal to go to Cambridge. But here again it was insult and mockery rather than the fatted calf that awaited the wanderer. Fortunately a young Cantab in the neighbourhood required the help of a tutor, and with him Atkinson retired to the "romantic village" of Canobie, in Eskdale. But this was a pursuit "irksome to his nature and alien from all his habits." In less than two months he had grown thoroughly sick of it. What for a few weeks had seemed a paradise became wearisome and tedious, and he left this "scene of rural bliss" to try his fortune once more in the metropolis.

And now we are nearing the end of this curious autobiography; but the climax of misfortune must be told in our Senior Wrangler's own words:—

I left Canobie about the beginning of July. A few days after my departure a note came addressed to me; but nobody had my address. It travelled about, however, for upwards of three months, and at last reached me in an obscure lodging in an obscure part of London. The writer began by apologizing for a stranger's addressing me by stating that he had a proposal to make which would be beneficial to me. He stated that he had been sent out to this country to procure professors for certain branches in the new University of Charlottesville, in America, and that, in consequence of the representations which had been made of me in Cambridge, he offered me the Mathematical Professorship, with a salary of £1,000 a year. The letter was signed "Gilmer." "Surely," I exclaimed, in the first moment of surprise, "surely I am the most unfortunate being in existence!" But a moment's reflection convinced me of the folly and ingratitude of murmuring, and I put by the letter, satisfied that Providence had destined me for some other purpose. An answer was requested in a few days. No answer was, of course, received; and the professorship was offered to a contemporary of mine. This proposal was a God-send to him, as it would have been to me, and was accepted; and before I got the letter he, with his young bride, whom he had married on the ground of his promotion, had embarked, and was quietly passing down the Channel on his way to the New Continent.

That fortunate contemporary was Thomas Hewitt Key. He and his friend George Long were the only Englishmen of the four European teachers secured by Gilmer. Prof. Trent, by the way, tells a good story of the Modern Languages Professor engaged. Gilmer, in one of his letters, says that this gentleman and his young wife were a most devoted couple; but Mr. Trent adds the unkind tradition that he used to beat his wife, while in the case of his successor the tables were turned, and the lady it was who trounced her professor!

As to our Senior Wrangler's luck in London, the final glimpse the narrative gives us shows that the tide of misfortune was still running strong:

I entered London without confident expectations; I was gradually driven from post to post; every article of property, every slight but valued memorial of friendship disappeared one after another. I was driven to solicit acquaintance with pawnbrokers, and Jews, and usurers; I was compelled finally to occupy a miserable garret, in an obscure and discreditable part of the town; I was compelled to associate with the lowest and the vilest of mankind; nay, I was compelled to humble myself to them, and by my submissiveness and respect compensate for my rags and poverty. It was a hard task to bear up against all this; it required the last exertion of buoyant spirits and enduring patience. But a stream of light would still break on me at intervals; and when the last promises of hope had seemed to be gone, and I appeared to be abandoned, something would still interpose and save me from the hand that was raised against its own life, or the hunger that would destroy me by the most wretched and lingering of deaths. . . . That I resisted the temptations to which such complicated wretchedness exposed me I ascribe not to my own firmness, but to the guidance of that great Power in whose hands "are the issues of life and death," which, as it saw fit to hedge me in, has also been pleased in some degree to release me from my bondage. . . . What may be my future destiny I know not, . . . but . . . should my life be spared other twelve years, and should my labours leave me at the end of that period as far advanced even above my present condition as my present is above that from which I started originally, I should assuredly have very little reason to regret my fortunes in life.

The aspiration thus humbly and modestly expressed was to a considerable extent fulfilled, as the following hasty and incomplete details will show. The published Admissions Register of Lincoln's Inn gives under 1821: "Nov. 12. Solomon Atkinson Esq. of Trin. Coll. Cambr. A.B. (aged 24) I. s. John A., Esq. of Anistable [sic], Cumberland." The British Museum Catalogue shows that between 1830 and 1850 Atkinson published four or five law-books, and in the work dated 1850 he described himself as "Deputy Judge of the County Courts of the Home Circuit."

In addition there are two tracts in the form of letters to the President of the Board of Trade (Huskisson) in 1827, on the "Effects of the New System of Free Trade upon our Shipping, Colonies, and Commerce," from the first of which I extract the following :—

I do not know whether you be aware of the fact, but I can tell you, that in all the northern and middle States of the American Union shows are periodically held for exhibiting the best specimens of national manufactures, and these specimens of national ingenuity and skill are rewarded, not always by a prize, but by selling these productions to some patriotic citizen at a price which abundantly gratifies both the pride and the cupidity of the manufacturer. I have been present on these occasions, and have been utterly astonished at the skill and variety which have been displayed. Finer or more substantial fabrics of woollen or cotton goods I have never seen even in England; and nothing can be more ingenious than their various specimens of cutlery and glass work. Then, again, there were models, and plans, and specimens of all kinds of farming implements and household utensils, many of them admirable for facilitating the operations for which they were designed. Then, again, we all know that many of the most curious inventions connected with our staple manufactures have originated in the United States.

"LIVING GREEN."

IT may be only cheap paradox to insist that the most enchanting things are the commonest; but, on the other hand, we cannot too often note the obvious truth that common things are amazingly beautiful, and that only the common-minded, the common-hearted, or the common-souled can miss their loveliness. Physical defect does not always maim the essential man. The blind and the deaf have often the poet's vision and the artist's rapture. But a vulgar sentimentalism, a mean or narrow self-regard, a hardness, supercilious or cruel, may be enough to make a prison of the world—a prison in which the colours are all dulled or the lights distorted. Yet no jailor, not even the warder that we make for ourselves of our own limitations, can at all moments wholly shut out the omnipresent grace and glory. The glow and splendour of the sunlight, so common, so vital—discriminating, rebuking, illuminating—the tender and magnificent harmonies of sunset, the mystic reawakening of the dawn, the azure depths of the measureless encircling universe with all its countless constellations, and, looming large and silvery in the foreground of the sky, the little moon—our moon—so insignificant amid the mighty host, yet to all earth-born eyes so wondrous fair and calm, a symbol of conquered sorrow and ineffable longing—thousands of men and women there are who cannot speak of these things, but none perhaps who have not felt them. More homely in its exquisite and radiant comfort, more forgotten in its perennial accustomedness, is the cool, sweet restful greenness of the trees and the meadows, the hedges and the little blades of grass by the wayside.

Recollections of choral melody, among simple-hearted congregations, bring back a hymn which brimmed with elemental human feeling, and which has given us for ever a perfect phrasing for that peaceful tranquillity of renewed youth and vigour, that tender, yet boundless, fellowship, to which in this distracted world the eyes of the hurried and the fevered turn sometimes, in their heavenward dreaming, for solace and for hope. Like Bunyan in his vision of the fields beyond the river, the old hymn-writer has used that familiar and undying imagery of our sacred books, and he has left us those two childlike, yet immortal, lines :—

Sweet fields beyond the swelling flood
Stand drest in living green.

Many dauntless spirits there are, pure and upright and noble, who, in their utter veracity, bounded by that defect of nature or education which can best be expressed as a lack of the religious sense, determinedly forego the vision as but a self-deluding mirage. What matter? Except, perhaps, that their lot is the more heroic, God having, maybe, laid His hand across their eyes for a little while, that, through that very blindness, they may do some special work for Him, and enter with the fellowship of sons into His own sacrificial life. But for them, as for all of us, there are the fields of this life to sow or reap or garner, the daily little pleasures of intercourse that are the lot of the common herd in the midst of the heart-break and the sorrow, the chance of adding to that never-ending joy of sympathy which depends on the untiring love and labour of this old

homely earth, even as the shimmering verdure of one blade of grass may add to the greenness of a meadow.

Mere human fellowship—not even friendship or love—the sense of friendly kinship and good will, how eternally reviving and peaceable it is! "They sat down by companies on the green grass," says the old Book—"the green grass," not a single blade, but millions, a whole field of light and rest and growth.

The dusky greenness of the inmost woodland, with its fragrant pines and dewy odours—that indeed has its own solemn charm. But a whole meadow, open to the sun and wind, green with that delicious greenness which is translucent and tranquillizing—that surely is what the old man saw when "a babbled o' green fields." Where is there fitter symbol of the multitudinous unobtrusive common life, that which, all unconsciously, gives the renewed courage and well being which steal into our sordid hearts or frayed minds when, as we tramp the daily round, the well met courtesy of strangers, the careful kindness of those on whom we have no recognized claim, the winning smile of a child, the glow of disciplined enthusiasm or noble thought upon some unknown face, awaken the sense of human kindred and undying brotherhood?

Roses and lilies are of the children of Eden and must not be demanded every day; but what would the world be without its green leaves and blades of grass? It is often hard to be gay, courageous, smiling, tender, in the midst of the coldness and noise of a bitter and a naughty world—to keep, like the common grasses, that delicate smoothness of surface that holds or reflects the light; yet there are those who achieve it manfully and womanfully, which, after all, is better for the rest of us than if it were merely angelically, God bless them! And, in the midst of all the special suffering which so often and so necessarily falls to the lot of the most beautiful and enduring natures, it is only the more significant that there is no sweetness like the sweetness of strength, no fortitude diviner than that of a self-vanquishing care for others.

The old Jewish teaching about the godliness of cheerfulness was profoundly true, and no Christianity is Christian that does not include and intensify it. Joy and beauty were of the Master's gifts to men (though, rejoicing often in the midst of grief and privation and ugliness, His disciples also may be men of sorrows), and He who renounced the desire of the eyes and the kingdoms of the world, and laid down His earthly life in supreme agony, yet taught that a glory passing that of Solomon was to be the gift of God to man, for, "if God so clothe the grass of the field, which to-day is, and to-morrow is cast into the oven, shall He not much more clothe you, O ye of little faith?"

ANNIE MATHESON.

THE SUBTLE EXAMINEE.

SCENE I.—*Before the Examination, in the Lavatory, Burlington House.*

"MOST fellows," said the Science Candidate, "seem to think they can get through an exam. by swotting up the compulsory subjects. I thought so, too, for a while. To tell you the truth, I tried it."

The nearest man was drying his face on a revolving towel.

"No go?" he grunted, blowing loudly.

"Not a bit. But I've got the tip now. Took me some time to find it, though."

"The true Christian shares his loaf with a brother in distress," said the Sarcastic Youth. "Cut us our slices."

"When I come across a new idea I rummage it, and apply it to my own circumstances."

"Things must be looking up with you."

"Don't be impertinent. This time I'll do more—I'll apply it to yours."

"Benefactor—human race," spluttered the Man of the Towel.

The Science Candidate pitched his voice high, the approved note of triumph: "Have any of you noticed there's a periodicity in exam. questions?"

The splashing and rubbing ceased for a moment. Wet soapy faces stared at the speaker.

"Yes," said the Science Candidate, enjoying the effect; "it isn't the elements only that have periodic functions. Exam. questions have. I've studied 'em for years, and never found it out till a few weeks ago. That's the way with all great dis-

coveries. They lie under your nose day after day and you don't see them."

"The nasal organ not having the capacity of vision," the Sarcastic Youth managed to get in, before the lavatory shook with liquid and saponaceous laughter, of ironic ring.

"Shout away. It's the last smile outweighs the rest."

Even the Sarcastic Youth dared not interfere with this blend of metaphor.

"I found it this way. Grinding up a subject is no use——"

"True," said the Middle-aged Man, beginning to listen.

"Crammers can't do anything, either. I've tried 'em."

"So have others," said the Middle-aged Man, drawing nearer.

"Very well, then; *they're* no good. There must be a way, though. Question is, What?"

"Crib," suggested the Youth with the Cigar.

"Curious thing," said the Melancholy Man; "knew a chap who was turned out for cribbing. *He* smoked cigars, too."

"There's one thing plumb certain about exams," said the Man of the Towel—your neighbours know less than you do. I got pilled once for taking a man's written statement on trust."

"Dead Sea fruit!" resumed the Science Candidate rhetorically, feeling the others were talking too much. "Rot! No; it struck me in a flash. I'd spring a mine on the questions, and examine *them*."

"The enemy is among us," shivered the Flippant Youngster.

"I did. And the grand discovery came. Take chemistry, for example. In '74, '81, '88, and '95 there was the same kind of question on copper salts. Now, how do you account for that?"

"Septennial revolution of dons' ideas around fixed axis of students' ignorance." The Sarcastic Youth was enjoying himself, in a chastened sort of way.

"Must be some explanation, I told myself. So I tried silver."

"Answer the test?" queried the Flippant Youngster.

"Gold would have been better," said the Middle-aged Man, with the wan suspicion of a smile.

"Identical result. Same for everything else. Then I saw it. Periodic Law! I fairly danced for joy."

"Rummy thing," said the Melancholy Man; "people always dance for joy. I only knew one man who didn't. He howled with delight."

"Once I had the idea the rest was soon done——"

The Sarcastic Youth descended to parody: "'Once I had the key,' said the burglar, 'the safe was soon open.'"

"I tabulated all the questions according to the year and element or theory. It didn't take long, I tell you. From that I deduced the questions for 1902. Here they are."

They crowded round him as he unrolled a sheet of foolscap, and read his compilation in silence.

"I hope your theory is incorrect," said the Middle-aged Man, with effort.

"Do you doubt the Periodic Law? No? Then why doubt this obvious deduction?"

But the men were filing out. Their interest had lapsed.

SCENE II.—*After the Examination, in the Corridor.*

"Laws are the devil," said the Sarcastic Youth; "cram exceptions."

"Come, come," reproved the Flippant Youngster. "Three questions out of twelve—or parts of them. What more do you want?"

"I am sorry that your theory was not right," said the Middle-aged Man, hopelessly.

"It *is* right," cried the Science Candidate. "I must have worked it out badly—mixed the years, or something. I never was good at figures. But the theory's right enough. I'll prove it yet."

"Remarkable thing," said the Melancholy Man. "Met an inventor once. His discovery was all moonshine, people said; but he was still working at it. He had leisure for it, too."

"Lucky beggar," said the Youth with the Cigar, enviously.

"Yes," replied the Melancholy Man, with a sigh; "he was in an asylum."

The Science Candidate emerged, beaming, from profound reflection. "Here we are," he cried, "all puzzled. And the solution lies plain before us."

"Beneath our noses, in fact," said the Flippant Youngster.

"He *will* include us," murmured the Sarcastic Youth. "Not puzzled, brother victim—saddened."

"Let me ask you a question," began the Science Candidate.

The Middle-aged Man edged away.

"Do the elements, in all cases, perform the functions prescribed them by the Periodic Law?"

"Chemically, no," said the Flippant Youngster; "medicinally, we have no data."

"Very good. So it is with exam. questions. We have lit upon a year which diverges saliently from the path a consideration of the Law would lead one to map out. The hitch merely reveals an interesting case to be thought out, not given up. That is all."

He went off, radiant.

"Funny thing," began the Melancholy Man, and stopped. He was alone. G. E. S. C.

AN EDUCATIONAL ADVERTISEMENT.

THE REAL EXPERIENCES OF AN APPLICANT.

IN the last week of January there appeared in a London paper an educational advertisement of a somewhat stereotyped character. It called for the services of a governess to teach two young children, aged about seven and eight, for two or three hours in the mornings of alternate days, and added that applicants were requested to call upon Mrs. — at No. — Square, Mayfair, between the hours of ten and twelve on a given day. As I had a few hours disengaged and I was anxious to fill them, I determined to apply for the post, giving (in my inexperience) no thought to the many others to whom the advertisement would equally appeal. I dressed myself carefully, and started off early on my omnibus ride to the nearest point to the appointed rendezvous, which, though not exactly known to me, was sufficiently familiar.

When I arrived at the corner of — Square I became conscious of a curious phenomenon. Long lines of black things (all women) were hurrying round the square, and it soon became plain to me that they were all on the same errand—and trying *not to race*. In a moment it flashed across my mind—they also were applicants for the piece of work I was going after. No need to ask where No. — was. In spite of our endeavours to preserve decency, we *did* race, and at the door itself the *queue* became like that at the pit door of a theatre. We entered in a stream; butler and footman were at their wits' end to know what to do with us. Soon the spacious dining-room overflowed into the morning-room, the library, the hall. We sat two (and, in places, three) deep, waiting our turn for interview.

At first conversation of a mild description was carried on in subdued tones; afterwards it ceased, as we realized the smallness of an individual chance and became anxious to preserve our proper position in the order of going in to see our prospective employer. This anxiety increased as the earlier arrivals vacated their places and proceeded upstairs to the hall of audience; for the bewildered menials before mentioned placed later comers in these more favoured places of vantage near the door, being quite unable to manage the rising tide of visitors. Polite conversation gave way to expostulation, to altercation, and culminated in something approaching a *fracas* in the hall between two ladies, each asserting a right to priority of interview. I now realized that my chance was infinitesimal, and that my hope of filling my vacant hours was vain; but I determined to see the matter through, as an experience—to be avoided in the future, if possible. When my turn came I mounted the staircase to the drawing-room, where I found a lady with troubled looks, worried by—and obviously inexperienced in—her task of deciding among so many claims. Inexperienced, I have said; I think, however, she had gained some in her morning's work, for she asked me: "Do you teach drawing?" and, on my replying "No," "—Ah!" said she, "so many of those ladies who have come before you can do so that I think I need not trouble you further. Good morning." So came to an end my chances, and I was left to take the omnibus home again—a sadder and a wiser woman.

A little later in the morning, I expect, the lady's experience led her to add "gymnastics" to her "drawing" inquiry, and by this double-barrelled shot to clear off applicants even more rapidly than when she saw me. I have said I did not get the post: I wonder who did, and if the lady had much appetite left

for luncheon or for her day's pleasure. The morning made a great impression upon me, and I gained a glimpse of a very sad, but real, struggle which before I had not thoroughly realized.

S. W.

TEACHERS' GUILD NOTES.

A TEACHER'S holidays are especially sacred. They are the means of keeping him or her young, and of thus maintaining the full strength of the link of sympathy, which is all-important, between teacher and taught. We hope that our members are now receiving impulses from woods which have been vernal, and "the lore which Nature brings"; that they have gone "forth into the light of things" to let Nature be their teacher. Nevertheless, there are two subjects which will force themselves to the front of many of their minds—the Registration of Teachers and the Education Bill. Registration is of pressing interest and importance, and a large number of existing teachers must be hoping that the Registration Council, when they are brought into living contact with the actualities of the case, will devise some means of admitting to the Register all teachers who have done, and are doing, good work in education. We do not envy the Council their task in the sorting of the many forms of application when they are returned, especially if they find that a large number of teachers cannot satisfy the requirements involved in a satisfactory filling-in of the forms. There is one great source of consolation possible, viz., that the conditions of registration laid down in the Order in Council will exclude so many that the outsiders will each have plenty of good company. How the financial needs of the Registration Council will be met if the Register is limited, during the years of grace, to teachers with rather high academical qualifications is a mystery; but Sir John Gorst thinks that all will be well in this respect, which looks as if not too many guineas will be returned.

THE long and warm controversy over Section 7 of the Education Bill came to an end before the adjournment of Parliament, and there is therefore a reasonable prospect of the Bill becoming law before next winter. The religious struggle, so-called, was the price which had to be paid for the wise decision to deal with elementary and secondary education in one and the same measure. The Guild, as a Guild, has nothing to do with the religious controversy. Its interest in the Management Clause is exhausted so soon as adequate guarantees for the control of secular education in national schools by the community are obtained. Religion, is not to be fitted into the compartments of any time-table, whatever may be done with Scripture teaching. We feel that the sweet reasonableness of the Prime Minister will not allow the Bill to leave the Commons without the removal of as much as possible of what tastes acid in the mouths of the Free Churches. Its strictly educational provisions, as we have already pointed out, meet the chief wishes of the educational associations better than we could have dared to hope, if we had not remembered that, as a leopard cannot change his spots, so a Liberal cannot destroy his Liberalism altogether by calling himself a Unionist. Some day we may learn how much good the Unionists have done within the Government fold—perhaps more, under the Imperial conditions of the last ten years, than if they had held aloof.

ONE more step forward in educational progress is announced. Education at last has its own Minister, all to itself, in the Cabinet, in the person of the Marquis of Londonderry, President of the Board of Education, which will be represented in the Commons by Sir W. Anson, *vice* Sir John Gorst. It is not profitable to prophesy, but it is of good augury that new men should have the responsibility of administering new systems.

REVIEWS AND MINOR NOTICES.

English Men of Letters.—*Matthew Arnold*. By HERBERT W. PAUL. (Price 2s. net. Macmillan.)

"Letters to Dead Authors" was a hit. What a delightful companion volume "Letters from Dead Authors" would make—

to call up, for instance, the shade of Matthew Arnold, and bid him discourse on his biographers, monographists, and critics! We throw out the idea in the hope that some one of the rising generation of humourists—on none, so far, has Traill's mantle fallen—may adopt it, and will confine ourselves to the humbler task of discussing how far Mr. Paul has grasped the informing spirit and portrayed the lineaments of his sitter.

The introductory chapter dismisses, in two mordant epigrams, Arnold's excursion into politics and philosophy, but leaves it doubtful whether his claim to rank among men of letters rests chiefly on his prose writings or his poetry. For ourselves we have little hesitation in prophesying that "Myrcerinus" will outlive "Essays in Criticism," and still less that "Obermann" and "Memorial Lines" will be quoted when none but Civil Service examiners, and possibly examinees, will know who wrote "Literature and Dogma" or "St. Paul and Protestantism."

Our main complaint against Mr. Paul is that he gives us no estimate, whether partial or impartial, of Matthew Arnold as a poet. "Next to Milton he was the most learned of English poets" is the nearest approach we have to a generalization. Not only is this a gross exaggeration—Ben Jonson, Gray, Tennyson were all more learned than Arnold—but no one would maintain that learning is the characteristic note of Arnold's poetry. All Mr. Paul attempts is to take each poem separately, describe its subject-matter and quality, point out the good and bad lines, and mark it as *optime*, *bene*, *mediocriter*, or sometimes as *pessime*, in true pedagogic fashion; and, what is worse, these fragmentary criticisms are rarely illuminative and often pedantic in the extreme. We will give an instance.

The greatest poem in the volume, some think the greatest he ever wrote, is "Thyrsis," a monody, or elegy, on his friend Arthur Clough. [Here follows a disquisition on Clough and English hexameters.] Clough is not likely ever to become a name like the Reverend Mr. King. That "Thyrsis" is inferior to "Lycidas" hardly requires stating. All English dirges, except the dirge in "Cymbeline," are. But, in truth, the comparison is fruitless; for there is no resemblance. Mr. Arnold's model was not Milton, but Theocritus, and "Thyrsis" is thoroughly Theocritean in sentiment. [Follows a quotation of the first stanza.] "Thyrsis" is avowedly a sequel to "The Scholar Gipsy," with which it should always be read. I do not feel able to decide between their relative merits.

This seems to us book-making, and not very good of its kind. Why suggest a comparison if there is nothing to compare? And, if models are discussed, surely Bion and Moschus are as much concerned as Theocritus with the paternity. That the two poems reduce Mr. Paul to the state of Buridan's ass is a matter only of subjective interest.

"The Reverend Mr. King" is characteristic of another prevailing defect in the volume, the inaccuracy that is bred of daily journalism. Edward King was not in Holy Orders; but Mr. Paul had not the patience to look out his Christian name when a periphrasis (so it seemed) would serve. Matthew Arnold himself is once and again misquoted—sometimes with ludicrous effects. Thus, two stanzas of the "Song of Callicles" are given, and both pronounced "lovely," though "the question why the second is inferior to the first lies at the root of poetry and involves the true value of poetic style." A truly Delphic utterance, and we cannot but mistrust the prophet new inspired when he misquotes and utterly mars one line of the oracle:

The night in *its* silence.

All Oxford men, we read on page 2, know, or used to know, the exquisite sentence about the beautiful city with her dreaming towers breathing the last enchantment of the middle ages. There is virtue in the "used to know." Such a *contaminatio* of the line from "Thyrsis,"

And that sweet city with her dreaming spires,

and the no less familiar passage from the "Essays" beginning "Home of lost causes," is enough to make Arnold turn in his grave.

The opening lines (we read again) of "Memorial Verses" are familiar. They certainly are not familiar to Mr. Paul, who parodies the last couplet thus:

The last poetic verse is dumb.

What shall be said o'er Wordsworth's tomb?

A critic who can thus "murder to dissect" puts himself out of court, and when he proceeds to complain of Arnold's faulty ear and to commend the eulogy of Goethe as fine and classic

"being indeed, little more than a paraphrase of the great Virgilian hexameters" (similarly misquoted), we resent such criticisms, even if partly true, as impertinences.

Far the best part of the book is the chapter on Arnold's Politics. Here Mr. Paul writes with knowledge, and the Irish question is treated temperately and with insight. Our readers will wonder that we have said nothing of the chapter on Education; but the simple fact is there is nothing to be said, save that in six pages he has fairly summarized Sir Joshua Fitch's excellent monograph, though, here, too, the variations from his original are for the worse. In the prefatory note Mr. Paul is liberal in his acknowledgment to his precursors in the field—Dr. Richard Garnett, Sir Joshua Fitch, and Prof. Saintsbury, whose "lively and learned study" did not commend itself to us. The one serious criticism of Matthew Arnold as a poet and a *prosauteur* with which we are acquainted—Mr. Watts-Dunton's in the "New Encyclopædia Britannica"—is apparently unknown to Mr. Paul. Had he known it, he would have written differently or not written at all.

The New Volumes of the Encyclopædia Britannica. Vols. I., II., III. (A. & C. Black and the *Times*.)

We have purposely refrained from noticing what is undoubtedly the most important literary undertaking of the year till our own subject was reached. By this delay we are spared the necessity of attempting a general estimate of the work. The scheme has been expounded in all the daily papers, and excellent notices of the three volumes (well worth turning up) will be found in the Literary Supplements of the *Times*. To one feature only we would call our readers' attention. These supplementary volumes constitute a library of reference by themselves, and are well worth having by those who are not the happy possessors of the existing volumes of the ninth edition. More particularly in applied science and natural history the advance of the last half century has been so rapid that articles written in the seventies are already out of date, and this portion of the work is virtually a new edition. The same, in a less degree, applies to political geography. Thus the new article on Africa by Mr. Scott Keltie occupies thirty-seven pages, and would form a respectable volume.

The only general defect we have observed is the illustrations. They may be plentiful (we are told that 2,500 separate drawings have been made), but they are not good. Sir L. Alma Tadema's "Roses of Heliogabalus"—not a picture that we greatly admire—is a blur, and the portrait of Matthew Arnold is a caricature. It may be an *eidolon fori*, but we count it likewise a defect, that in the list of contributors only one English educationist appears. It is true that Sir Joshua Fitch is a host in himself, but we should like to have seen as departmental editor Mr. Michael Sadler, with Mrs. Bryant, Mr. O. Browning, Mr. James Bryce, Mr. P. A. Barnett, Prof. Earl Barnes (to take only the first two letters of the alphabet) announced as contributors.

It is quite possible that we may have overlooked it, but we have searched in vain for a single supplementary article on Education till we come to the word itself. Under "Apperception" there should be at least a cross reference to Herbart (Lange's famous monograph is not named in the bibliography). We looked out "Bowen," hoping to find a passing tribute to the unique writer of school songs: we find a whole page—none too much—on his more famous brother, the judge. We turned to "Child," expecting an article on child-study, the most fruitful branch of pedagogic psychology: we are given a stone, "Cruelty to Children."

There is no blenching the plain fact that education is not yet taken seriously by the average Englishman, and the editors are catering for a public which cares more for one living statesman than for a dozen educational reformers, and would sooner read about the last illness of the King than about a new theory of teaching which may influence all future generations.

Having had our grumble, we can pass with pleasure to Sir Joshua Fitch's article and the supplementary one on "Education in the United States," by Dr. Murray Butler. The names are sufficient guarantee for ripe knowledge, judiciousness, and clear exposition. The second of these qualities is most conspicuous in Sir Joshua's article. We had hoped, indeed, to find a judicial summing up of the present crisis and some prognostic of the issue; but, unlike the author of "Edward VII.," Sir Joshua breaks off before the present Education Bill, or even its

ill-starred precursors, appears upon the scene, and the narrative ends with a veiled allusion to the Cockerton case. The only prophecy Sir Joshua permits himself is this: "In the near future the contributions of parents and of voluntary subscribers may reasonably be expected to bear a yet smaller proportion to the total expenditure [the present proportion is roughly one million to twelve], and public control will in corresponding measure supersede private management." *Prosit omen!*

That the establishment of a Registration Council and a Register of Teachers is not mentioned must be a mere oversight which none will regret more than the author. "The Training of Teachers" has a whole page allotted to it, and we heartily endorse the three *desiderata*: (1) that the function of teacher be recognized as one of the learned professions; (2) that in every University a chair of pedagogy be established; (3) and likewise a school of pedagogy with a final examination for a degree or diploma. Where we differ, however, is that Sir Joshua looks solely to the Universities for a solution of the problem of training, while our hope is more in County Councils and provincial colleges.

There is a new and interesting paragraph on voluntary associations of teachers, and our readers will be keen to know what Sir Joshua has to say of the Teachers' Guild:

The Teachers' Guild, founded in the year 1885, has a broader and more comprehensive design. It has held from time to time many influential public meetings and discussions on questions of educational principles and policy, and it already numbers 4,300 members. It has sought from the first to associate in one strong society teachers of all classes; it has concerned itself rather with those problems and discussions which are common to all enlightened teachers alike than with the narrower professional or pecuniary interests of particular classes of teachers or of schools. The combined effect of all their efforts will probably be to raise the profession in public repute and influence. It would be a misfortune, however, if it tended to create a close profession, or to exclude from the ranks of teachers persons distinguished by originality, enthusiasm, and natural aptitude, though unqualified by formal membership.

This is a generous and at the same time a just appreciation, though the parting note of warning seems to us a *coup d'épée dans l'eau*. Sir Joshua wishes teaching to "take honourable rank with law and medicine," and *ex vi termini* to be a close profession like these; and we are sure that Mr. Garrod in his wildest dreams has never imagined a time when membership of the Guild should be insisted on as an entrance qualification.

The Schoolmaster. By ARTHUR CHRISTOPHER BENSON, of Eton College. (Price 5s. net. Murray.)

Mr. Arthur Benson is "an unconquered Canaanite," which is not synonymous with "a Philistine." He does not believe in training. The most he will concede is that a week or two at a training college, after a teacher has had a year or two of school-mastering, would (as the cautious candidate for Ordination said of good works) possibly do a man no harm. Let not our readers be alarmed. If Mr. Benson boasts that he possesses the first qualification of a teacher—that of being "rapidly and easily bored"—we, too, can be silent even when King Charles's head is obtruded on us.

"Fas est et ab hoste doceri," and any orthodox prejudices that we may have harboured at starting have been quite overcome by Mr. Benson's *abnormis sapientia*, and the urbanity of his style. Mr. Coulton in his "Public Schools and Public Needs" showed us the seamy side of our great public schools—the antiquated methods pursued, the neglect of modern subjects, the tyranny of athleticism, the contemptible output as tested by Civil Service and Army examinations. Mr. Benson, though by no means blind to these defects, presents to us the obverse of the medal. He frankly admits that the intellectual standard maintained at the English public schools is low, and he fails to see any sign of its rising higher; but, on the other hand, in the relations of masters and boys, in the almost extinction of bullying, in the higher religious tone of schools, and more particularly in what is known by a euphemism as school morality, he has seen a vast improvement at Eton; and he believes this reformation to be general.

As we read we cannot help wishing ourselves boys again, if so be we might be in Mr. Benson's division, and still more in Mr. Benson's house. Even now Eton, as Mr. Benson pictures it, is still an ochlocracy tempered by epigrams. A master, so we read between the lines, exists only on sufferance. The first

duty of a form master is to interest, not in the Herbartian sense of the word, but as *Tit-Bits* (the illustration is Mr. Benson's) interests the man on the omnibus. If he is a dull dog, he will be waxed to his chair or have dormice put down his back; and "Serve him jolly well right" will be the verdict of his colleagues. Few of us, indeed, can aspire to be Eton masters, and rules for the conduct of an Eton form have in some respects as restricted an application as the time-table of the special class of girls in a ladies' college who, if report says true, are being educated to be the wives of ambassadors. Yet the "simple dodges" which have proved useful and effective in Mr. Benson's own case are worth attending to, even by the less exalted teacher who has been painfully trained for a mastership in a county school. For instance, what sound common sense there is in these remarks!—

Personal impressiveness smooths the way, of course [to obedience]. A man must know exactly what he wants and must go on till he gets it. It is not enough to be merely strict; a man must be good humoured. A turn for ready repartee is a useful thing, because a boy above all things dislikes being made to feel a fool before others. A certain quiet irony, as long as it is not cruel, is a very effective weapon; but not to be used except by indubitably good-natured men. Another very useful quality is the power of losing one's temper with dignity; almost all people, whether men or boys, dislike being confronted with anger. But it must be kept in the background.

But, while highly commending the volume for its matter, and still more for its manner, we cannot help pointing out that Mr. Benson has the defects of his qualities, and is weak in those very points where Mr. Findlay (whose book on "Class Teaching" is reviewed in another column) is strong. On organization, time-tables, the correlation of subjects, there is not a word from title-page to colophon. Repetition, lecturing *versus* questioning, note-taking are all discussed; but what is the subject or what the stage of the pupils we can only sometimes infer from the context. Mr. Benson is a literary man, and a very distinguished one; but even at Eton literature is not the only subject taught, and the same method is not applicable to a sixth form and a first form, to a lesson on the irony of Sophocles and one on the common buttercup.

"Periods of European History."—*The Close of the Middle Ages, 1273-1494.* By R. LODGE, M.A., Professor of History at the University of Edinburgh. Period III. (Rivingtons.)

No period of European history presents so many wholly diverse aspects as that which Prof. Lodge has sketched in this one fairly small volume. To speak of political history only, which, save for a few pages, is the only kind of history attempted here, the tendency of some nationalities was towards disruption, of others towards consolidation; in some States a monarchical system prevailed, in others a republican. And, though quite at the end of the middle ages events were gradually tending towards the establishment of a States-system of Europe, throughout this period its various States had no reciprocal connexion of a permanent kind. The old bonds were loosed, the Empire and the Papacy no longer had an international character, and from the beginning of the fourteenth century European history ceases to have any unity. Mr. Lodge has, therefore, been forced to write his book in divisions which have comparatively few points of connexion. His arrangement is good. He has been forced by the political character of the times on which he writes to treat the history of each State separately; yet, instead of giving it in one single piece, he has in the case of each State which played an important part in the affairs of Western Europe given it in fairly short and well defined periods, breaking off at the end of each of them and taking up the history of some other State. By this means he proceeds in chronological order, and enables his readers to mark such points of connexion as did exist between the affairs of most of the various countries of which he writes. Certain portions of his work, however, could not well be treated in this way, and he accordingly devotes some chapters towards the end of his volume to the Hanseatic League, the Teutonic Order, the Christian States of Spain, and the struggles of the Greek Empire with the Ottoman Turks.

A somewhat disproportionate amount of space is, we think, allotted to the States of Italy, for their affairs had very little influence on the course of European politics during the period under review. It is true that their history is picturesque, interesting, and most instructive to the student of political science, but to make it so it must needs be written at far greater

length than was possible in this volume. Mr. Lodge, it is almost needless to say, does his work in a masterly fashion. He gives enough facts to support and illustrate his general views, and neither overcrowds his canvas nor leaves his pictures in bare outline. Everywhere the reader will find that each recorded event has its proper place, and that it is recorded, not merely because it happened, but because it has some bearing on the special phase of history which the author is presenting, and that this bearing is forcibly indicated. Among the parts of Mr. Lodge's work which have peculiar value is his vindication of the policy of the Emperor Charles IV. as a German sovereign. Charles, as he remarks, is most unfairly represented as merely legalizing the anarchy of Germany; he really provided a check upon growing disunion. Nor did he intend that the state of things recognized in his Golden Bull should be permanent, for he sought to secure to his successors a practically hereditary claim to the Imperial office. Each of the three remarkable developments of German life, the Hanse towns, the conquests of the Teutonic knights, and the rise and growth of the Swiss Confederation, is admirably set forth; indeed the chapters devoted to these matters would alone be sufficient to invest the book with distinction and importance. Its excellence, however, is not to be discerned only in its treatment of German affairs; the critical account of the rule of Philip IV. of France is one of several passages on French history which mark the writer's ability and firmness of grasp. The volume is completed by a useful series of genealogical tables, some folding maps, and a bibliographical note suggesting the books which a student should consult if he wishes to go more deeply into any special part of the period.

The Varieties of Religious Experience: a Study in Human Nature. Being the Gifford Lectures on Natural Religion delivered at Edinburgh in 1901-2 by WILLIAM JAMES, LL.D., &c., Corresponding Member of the Institute of France and of the Royal Prussian Academy of Sciences, Professor of Philosophy at Harvard University. (Longmans.)

"It might be well for us," said a notable preacher lately, "to rise above the petty provincialisms of this little planet!" Al-literation is always suspect as a convenient mask for paucity or confusion of thought, but in this alliterative ejaculation there is a note of reality which strikes home. Our bondage is generally a blind, unwilling bondage. The planetary conventions are interwoven with our very flesh and blood; they are not only in our language, but in that custom-moulded traditional thought which underlies language.

We know well enough nowadays that our tiny world is but a speck among the countless millions of constellations, but there are many moods in which we still regard the heavenly host of luminous fellow-stars as though they were mere lamps to light our own nightly path. To the end of life we treat the sun as our clerk of the weather, and unconsciously measure many things by the length of our own shadow. Until recently the recurrent sequences within the limits of earth's brief history have been regarded by the intellectually supercilious as the boundaries of the possible, and the man of self-satisfied mental routine continues to go a step further in his narrow and comfortable arrogance: he assumes daily that even well attested records must be compact of legend whenever they happen to include any of those multitudinous evidences of the influence of essential mind upon outward and evident body which are daily becoming more and more the commonplaces of advanced therapeutics and a part of the recognized raw material of an enlightened psychology.

Prof. James, in his lucid and powerful volume on "The Varieties of Religious Experience," in which his charm of style equals that of his brother the novelist, devotes a singularly able chapter, entitled "Religion and Neurology," to the analysis of what he fitly names "medical materialism," and shows how the classification of those outward phenomena which often seem to condition spiritual facts does not invalidate the intrinsic significance of the latter, and that to label Saint Francis of Assisi as an "hereditary degenerate" does not in any way decrease the value of his beautiful life of self-denial and divinely inspired brotherhood. "Saint Theresa," again, "might have had the nervous system of the placidest cow, and it would not now save her theology if the trial of the theology by these other tests should show it to be contemptible. And, conversely, if her

theology can stand these tests, it will make no difference how hysterical or nervously off her balance Saint Theresa may have been when she was with us here below."

"The nature of genius has been illuminated," it is true, "by the attempts . . . to class it with psychopathical phenomena"; but a glance—even a cursory glance—at this chapter of enlightened common sense must deepen, in any impartial and reflective mind, the conviction that no amount of learned "slang," whether of biology or of "pedagogics," can necessarily resolve the riddle of the universe or formulate the secret of existence under obfuscating epigrams. A brilliant superficial reading of those external generalizations which are classed as "natural laws" may, in the evolution of the æons, prove to have less staying power than a humbler and more cosmic interpretation. In dealing with the psychopathic temperament, Prof. James remarks that "no one organism can possibly yield to its owner the whole body of truth," and adds a little later on: "What, then, is more natural than that this temperament should introduce one to regions of religious truth, to corners of the universe, which your robust Philistine type of nervous system, forever offering its biceps to be felt, thumping its breast, and thanking Heaven that it hasn't a single morbid fibre in its composition, would be sure to hide forever from its self-satisfied possessors?"

Harvard Studies in Classical Philology. Edited by a Committee of the Classical Instructors of Harvard University. Volume XIII., 1902. (Price 6s. 6d. net. Longmans.)

The three essays which fill this volume are all good, and two of them at least touch new ground. The first, by Mr. G. C. Fiske, is an attempt to find a family policy amongst the Claudians ("The Politics of the Patrician Claudii"). As they are described in legend and history, there is a good deal of apparent inconsistency amongst the Claudii, who seem now to favour their own class, now the plebeians; and it is most marked in the career of the great *decemvir* Appius Claudius. Mr. Fiske begins by a criticism of Livy, who, he holds, has confused the earliest public character of the *gens*, Appius Claudius, with its founder, Attus Clausus. He reconciles the dates by supposing that Attus Clausus was the founder of a *gens* of Sabine origin, which settled in Rome at an early date, and that later, when the *gens* was made into a tribe, he who then was the head was received into the Senate. It is the *decemvir* who gives the first clue to a policy; and Mr. Fiske sees in his apparent change of front an attempt to support the family clients, who, as it happened, were mainly city folk, and consequently had to do with trade. So Appius Claudius the *ensor*, the most remarkable of the whole family, admits the commercial classes to the tribes; C. Claudius Pulcher, by his *Lex Claudia de Sociis*, wished to prevent the influx of Latins into Rome in the interests of the city commercial classes. Mr. Fiske certainly makes out a case; if a good deal depends on conjecture, at least his explanation is possible generally, and often more than probable. (There is a misprint on page 35, *Pinarii* for *Pinarii*.) Mr. Fiske does not ignore other family traits: their achievements in the way of public works and their military incapacity.

The second essay, by Mr. G. H. Chase, on the "Shield Devices of the Greeks," is a collection and classification of all the known devices, and a very useful piece of work. Mr. Chase does not start with theories ready made, nor does he profess to explain everything; but he has certainly brought us a long step nearer to the possibility of explaining. He finds that the devices of the Mycenaean and Homeric ages are simple, and fall under one of two heads, those which are meant to terrify and those which are decorative. In the classical age, and chiefly on vase-paintings, a large number of new classes appear, amongst them those with religious references, those intended to indicate country or nationality, family or rank, even personal feats or characteristics, and a number which cannot be reduced to principle at all. A complete catalogue is given of all devices found on monuments. The whole paper is excellent; we would only suggest that a cross-list of characters, with the various devices they bear (Athena has 62), might also have been compiled. Mr. Chase is cautious in his theories; but he is unwise in assuming the sanctity of animals. Because Zeus has an eagle, and so forth, it by no means follows that all eagles refer to Zeus, still less that doubtful animals (dog, cock, &c.) should be held sacred. To suggest further that an *amphora* is a

symbol of Athena, or a *cantharus* of Dionysus, is to guess there is no likelihood in it at all.

The last paper is a study of the Danaid myth, by Mr. C. Bonner. He analyzes the elements of the story, distinguishing the life of Danaus, which he regards as half historical, from the story of the sons of Danaus, which resembles certain goblin and ogre tales. The various explanations given in various traditions were not part of the original tale. Mr. Bonner is not convincing in his explanation of the tradition that the husbands were decapitated and sunk in the Lernaean marsh, nor can we always follow him in his analysis; but the work is carefully done and interesting to the mythologist as another proof of the folk-lore basis of tales of the gods.

Dyce's Glossary to Shakespeare. Edited and revised by HAROLD LITTLEDALE. (Price 7s. 6d. net. Sonnenschein.)

Shakespeare students will hail this new edition of Dyce's standard work. One important improvement has been made. References to passages from plays and poems were given only by number of volume and page of Dyce's edition of Shakespeare. Act, scene, and line are now given (according to the Globe Edition). We share in the reviser's regret as to the necessary "chaos of line-numbering," which arises "merely because the types (of standard editions) happen to vary in size or length of line." Some alterations have been made, chiefly in etymology. Some material from the footnotes of Dyce's edition has been incorporated, and Prof. Littledale has himself added some new short articles. The glossary does not pretend to completeness. Under "number'd beach" we have nothing but the reference, and under "dowle" Prof. Skeat's certain etymology has not supplemented Horne Tooke's wild guess. The book is clearly printed and handy.

Macaulay's Life of Pitt. Edited with Introduction and Notes, by JOHN DOWNIE, M.A. (6¼ × 4½ in., pp. lxiv., 164; price 2s. A. & C. Black.)

Mr. Downie has edited more than one of Macaulay's essays, and has uniformly shown himself well informed and sound in judgment. In the edition before us he is markedly so. Macaulay's "Life of Pitt," contributed to the eighth edition of the "Encyclopædia Britannica," is reckoned by experts as one of the best pieces of work he ever did; and Mr. Downie has striven to rise to the occasion. He has succeeded. His wide reading, good judgment, and sound literary appreciation have been combined to give us a remarkably good edition. His notes are numerous—but not too numerous; and are full—but not too full. Nothing has escaped which needed comment or explanation; and, at the same time, there is no parade of superfluous information. The "Life of Macaulay" which is prefixed is that contributed by Mr. Mark Pattison to the ninth edition of the "Encyclopædia"; an exemplar of condensed biography. The "Introductory Note" is by Mr. Downie himself, and its aim is to draw attention to the more obvious characteristics of Macaulay's style, as well as to test Macaulay's estimate of Pitt by the light of later times, fuller knowledge, and with the advantage of a remoter standpoint. It is clear, sound, helpful, and interesting—especially in its criticism of Macaulay's style; while the *pros* and *cons* of the judgment to be passed on Pitt's administration are very well stated. The little book is supplied with a useful index, and deserves to be a success.

Social Life in England. Vol. I.: *Saxon Times to 1603.* By JOHN FINNEMORE. (6¼ × 4½ in., pp. xi., 258, illustrated; price 1s. 6d. A. & C. Black.)

This capital little book is described on its title-page as "an elementary historical reader." It is intended to serve as a companion to ordinary history books and as a help to the teacher who desires to draw his pupils' special attention to the important and interesting matter of the social habits and manners of our forefathers. It is well illustrated, and gives a satisfactory picture of the life of English people at different periods: how they worked and how they played; how the great man dealt with the small man, and how the latter made a living; how rogues were kept in order and how justice was administered; what the people wore and ate, and how much they paid for clothes and food; what they got for their labour, and what they did with it. The information has been collected with care, and is dealt with in a bright and pleasant manner.

The Globe Poetry Reader for Advanced Classes. (6¼ × 4¾ in., pp. vii., 190; price 1s. 4d. Macmillan.)

Not very long ago we noticed with approval the "Globe Poetry Books." This reader has been prepared for those more advanced classes which require a still wider selection from the best poetry. The selection seems to us well and wisely made, the subject-matter being suitable and the language of a simple character. Short biographies of the writers are appended; but they are, in our opinion, scarcely needed. A few simple explanatory remarks on the poems themselves would have been more to the purpose.

SANDERSON'S HISTORY OF THE BRITISH EMPIRE.

From the Earliest Times to the Year 1901. With numerous Pictorial Illustrations, Genealogical Tables, Maps, and Plans.
By EDGAR SANDERSON, M.A. Sixteenth Edition. Crown 8vo, cloth, 2s. 6d.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C
GLASGOW; DUBLIN; BOMBAY.

Dent's English Grammar. By W. BRYANT. (J. M. Dent.)

"From beginning to end the chief aim has been to make the pupil think. The examples are shown in separate lines, and whatever should strike the mind as most important first strikes the eye in more prominent type." So the preface, and we agree with the author on the importance to the learner of typography; but, after all, clear printing is not the same thing as clear thinking, and when we find the eight parts of speech defined in a page of large print, and "I," "yours," "her" given as examples of the pronoun, defined as "a word used instead of a noun," without a single explanation or comment, we are at a loss to see where the thinking comes in.

A Class Book of Easy Dictation and Spelling. By W. WILLIAMSON. (Price 1s. Methuen.)

Intended for children of seven to twelve, and graduated in three sections. The passages are selected mainly from fairy tales, and so are well within a child's understanding. Excellent in most respects as the book is, we somewhat doubt the suitability of poetry for dictation. Thus, in the nursery rimes at starting (why are they credited to S. Baring Gould?), what will a child make of "ran-a" or "sack" (the wine), and will not the rime of "hose" and "clothes" put him out?

The School Anthology. In two Parts. Edited by J. H. LOBBAN. (6½ x 4½ in.: Part I., pp. xvi., 259; Part II., pp. xi., 294; price 2s. each. Blackwood.)

This is one of the best small anthologies that we have seen for some time. Part I. takes us from Chaucer to Burns; and Part II. from Wordsworth to Newbolt. The selection is made with great good taste and care; and, while but few of the best poems familiar to all of us are omitted, a large number of those not familiar to every one—but still good—are included. This gives a certain freshness to the volumes, which is very pleasant. We do not know that we entirely agree with Mr. Lobban that to be definite and concrete in its conception and rhythmically vigorous in its expression are the first essentials of poetry for the use of schools. Important though these characteristics are, it is even more important that the subject-matter should be suitable and the language readily intelligible to the young. This is not always the case—especially in the earlier portion of Part I.; and throughout it seems to us that the love element is too prominent for boys and girls. This, however, is the only adverse comment we have to make; and this only amounts to saying that the literary judgment shown is better than the educational. From the literary point of view the selection is, as we have indicated, excellent. The volumes are clearly printed and neatly bound, and the price is very moderate.

The Dryden Anthology, 1675-1700. Edited by Prof. EDWARD ARBOUR. (Price 3s. 6d. Henry Frowde.)

The seventh volume of these "Selections from the English Poets" embraces a barren period as far as lyric poetry is concerned, and three-fourths of the volume has no interest save for the student of literature. Dryden himself has nothing worth remembering except "Alexander's Feast," which is, after all, glorified music-hall poetry. The one notable exception is Andrew Marvel, whose portrait shows us a young Apollo in Puritan masquerade, and whose "Garden" "decies repetita placebit." Under "Anonymous," Prof. Arbour has unearthed not a few gems—in particular, "A Farewell to the Vanities of the World," so striking and original that we hope the author may still be identified. A few notes—"Lillibulero," for instance—would be a boon.

An Elementary Treatise on the Calculus. By G. A. GIBSON, M.A. (Price 7s. 6d. Macmillan.)

This book belongs to a useful class, with which we are rapidly becoming familiar. It contains preliminary chapters on curve-tracing and coordinate geometry, and a careful discussion of limits; so that a hundred pages must be read before touching on the subject of the calculus proper. Numerous illustrations are drawn from dynamics, physics, and geometry, and Taylor's theorem is relegated to near the close of the work. In all these respects, Prof. Gibson has followed several of his predecessors; but we cannot call to mind any elementary text-book that is more lucidly and accurately written, or one likely to give its readers a clearer conception or a firmer grasp of the first principles of the subject.

Spherical Trigonometry. By the late I. TODHUNTER, M.A., F.R.S., revised by J. G. LEATHAM, M.A., D.Sc. (Price 7s. 6d. Macmillan.)

In this new edition Todhunter's well known treatise is nearly doubled in length. A few of the original chapters are practically untouched, others are re-written to a greater or less extent, and historical notes and additional examples are inserted in many places; but the chief feature of the edition is the appearance of several entirely new chapters. These deal with such subjects as the duality of theorems relating to great and small circles on a sphere, Hart's circle, the extended definition of the spherical triangle, and applications of determinants to spherical geometry. Todhunter's works differed greatly in value, even at the time when they held the field against most other competitors, and we

PHYSICS.

By A. F. WALDEN, M.A., F.C.S., and J. J. MANLEY.
INTRODUCTION TO THE STUDY OF PHYSICS.
Vol. I. **General Physical Measurements.** With 76 Illustrations. Price 3s. 6d.
Vol. II. **Heat, Light, and Sound.** [In preparation.]

By W. J. DOBBS, M.A.
A TREATISE ON ELEMENTARY STATICS. With 191 Illustrations. Price 7s. 6d.

A. & C. BLACK, SOHO SQUARE, LONDON.

are glad to see one of the best of them brought up to date as it has been so ably done by Dr. Leathem.

Essays in Historical Chemistry. By T. E. THORPE. Second Edition. (Price 12s. Macmillan.)

These essays do not form a general history of chemistry, but are reprints of lectures and writings produced at various times, and under very different circumstances. The consequent variation in style contributes to the pleasure of reading the book. The exhaustion of the first edition is sufficient testimony to the appreciation of the work. The new edition has been enlarged to crown octavo, the paper is unglazed, and the print consequently blacker as well as larger. Five new essays have been added, the subjects being:—"James Watt," "Victor Meyer," "Stanislas Cannizzaro," "The Progress of Chemistry in Great Britain and Ireland during the Nineteenth Century," and, finally, "The Development of the Chemical Arts during the Reign of Queen Victoria." The first of the above formed the "Watt Memorial" lecture of 1898. Dr. Thorpe wisely avoided matter frequently used before, and, as a chemist, discusses Watt's connexion with the discovery of the constitution of water—a matter so controversial that this is perhaps the least attractive of the new essays. "Victor Meyer" must have been a long lecture (some sixteen thousand words) and a technical one, but Dr. Thorpe, speaking as a friend of some thirty years, gives a vivid and truly fascinating picture of this great chemist among his researches, students, and assistants, admired and beloved by all who knew him. "Stanislas Cannizzaro" originally appeared in *Nature* as a "Scientific Worthy"—a man who passed from the quietude of University life to the restless one of a Sicilian politician and patriot, and then became an exile, and who finally reached the summit of his ambition when recalled to Palermo, his native town, as director and professor of his old University. The "Progress of Chemistry" (Part I.) was a Presidential address to the Chemical Society in 1900, while the "Development of Chemical Arts" was delivered to the East London Technical College in 1897. This book leaves us in doubt whether to admire the more the patience with which the author has collected his material, or the excellent manner in which he has expounded it.

Gramática Práctica Castellana. By LUCIO C. SMITH. (Price 2s. 6d. Ginn & Co.)

The author claims for his book (1) that it is specially suitable for beginners; (2) that the method he has employed, although apparently new, is the same as that used by Socrates; (3) that the order in which he has dealt with his subject, whilst it differs from the plan generally followed, is yet the "most natural." There can be no hesitation in conceding the first point. With regard to the second claim—it matters little whether the method is old or new—it has been skilfully employed here. The questions are admirably arranged, bringing out point after point, and are just such as would be put *visa voce* by an experienced teacher. The "models of analysis," numerous and carefully graduated, will be found very useful. It will always be a matter of dispute as to what is, or what is not, the "most natural" order in which to arrange a grammar, and so we leave point 3 just where it is. The work is written in Spanish, presumably for use in Spanish-speaking countries. At all events it is more than probable that an English student who could make an intelligent use of this book would have learned his grammar previously from other sources. The student who goes through this course will learn something beyond his grammar—he will learn to think.

Alexandre Dumas (père): his Life and Works. By ARTHUR F. DAVIDSON. (Price 10s. 6d. net. Constable.)

This English centenary volume, though it runs to 450 pages, is on none too large a scale to do justice to the prince of romancers, and a playwright at the same time, for a counterpart to whose prolificness we must go to Spain. The aim of the author is to chronicle, and it is only incidentally and in passing that he indulges in criticism or "appreciation." A chronicle, however, is the last word one would choose to describe the work. Except in the Bibliographical Appendix, which occupies some thirty pages, there is nothing of the Dryasdust epitomist; the rest is all a pleasant *causerie*, partly biographical and partly literary, and one critic, at least, who came to taste was seduced into reading from cover to cover, as by one of Dumas' own novels. Anecdotes are scattered broadcast. We do not remember having seen before in print the *mot* of Dumas fils: "My father is so vain that he is capable of getting up behind his own carriage to make people think he keeps a black servant." Another story is only half told, and we may fill up the missing half. We have the grandiloquent answer of Dumas to the judge at Rouen: "Si je n'étais pas dans le pays de Corneille, je me nommerais auteur dramatique"; but what is this without the parody of his actress friend who was asked the same question: "Si je n'étais pas dans le pays de Jeanne d'Arc, je me nommerais pucelle"?

Agaricaceae. By GEORGE MASSIE. (Price 6s. net. Duckworth.) An indispensable volume for the mycologist. It includes descriptions of 2,750 European species, of which 1,553 are British. The descriptions rarely exceed three lines, and are quite sufficient for the mature student.

(Continued on page 626.)

ORA MARITIMA.

A Latin Story for Beginners.

By Professor E. A. SONNENSCHN, Litt.D.
(Oxon.), M.A. (Oxon.).

With Grammar, Exercises, Vocabularies, and numerous Illustrations.

Price 2s., cloth extra.

A single Specimen Copy will be sent to Teachers by the Publishers on receipt of 6d. in stamps.

This book is the outcome of an attempt to combine the systematic order of the Grammar with the interest and vitality of the Story-book. The Latin story forms a *continuous narrative* from beginning to end, which, it is hoped, may be read with pleasure by those for whom it is intended. At the same time the successive sections of the narrative are accurately graduated from the grammatical point of view, so that the pupil is led, as on the old-fashioned grammatical method, through a regular course of elementary Accidence and Syntax, and anticipations of future grammatical lessons are carefully excluded.

Latin is here presented to the pupil not as a kind of Chinese puzzle the key to which is to be found by certain mechanical artifices, but as a *living language*. The results of modern experience in the teaching of languages are fully utilized, while the error of attempting to teach a language without grammar is avoided. The book contains all the grammar which the pupil needs at this stage.

Conversations and drill exercises, based upon the text, give plenty of practice in the use of the grammatical forms learnt. The book is thus a Latin Reading Book, a Latin Exercise Book, and an Elementary Latin Grammar in one.

The scene of the story is laid in Kent, and an opportunity is thus presented of describing visits to historical sites, such as that of Caesar's landing place. In connexion with this part of the story, Caesar's invasions of Britain are narrated in simple language based on the vocabulary of the "Bellum Gallicum." The book accordingly forms a convenient bridge to Caesar.

Professor POSTGATE writes:—"I have much pleasure in saying that I have used Professor Sonnenschein's 'Ora Maritima' in actual teaching, and have found it both interesting and instructive to the pupil. I think it is a distinct addition to the stock of good Latin school books."

Professor PURSER writes:—"I only wish that I had been initiated into these mysteries with such a guide."

Mr. A. E. SCOUGAL, H.M.I.S., writes:—"It marks a new departure in the beginnings of the teaching of Latin that ought to be productive of great good. I am in entire sympathy with your views and aims."

SWAN SONNENSCHN & CO., LIMITED, LONDON.

FOR THE STUDY OF GERMAN.

INTERLINEAR GERMAN READING BOOK.

By F. HAHN. Edited and Revised according to the new German Orthography by C. A. THIMM, F.R.G.S. With the literal English Translation on the Hamiltonian System. Containing a selection of Tales by celebrated German Authors, progressively arranged either for use in Classes or for Self-study. Crown 8vo, wrapper, 1s.; cloth, 1s. 6d.

"We recommend to the notice of our readers this really capital selection of interesting stories."—*Practical Teacher*.

OBITUARY.

THE REV. JOHN FOWLER, who died last month at Parkston, Dorset, was not singular in being a Scots Presbyterian whom Oxford turned into a fervent Anglican, nor in actively dividing his long life between the work of a schoolmaster and of a parish priest. His scholastic apprenticeship was served at Marlborough in its *Sturm und Drang* period, whence he proceeded to what he used to call the "provincial throne" of the Lincoln Grammar School. His work there was marked by a thoroughness for which he did not always get credit, as it was the way with his most promising pupils to seek a "top-dressing" at Shrewsbury, Mr. Moss himself being an old Lincoln boy. The younger Moss brothers, well known at Cambridge, passed through Mr. Fowler's hands; so did three of the present staff at one well known public school; and several poor parsons' sons have to thank his generosity as well as his care for opening their way to the Universities. His one literary achievement, we believe, was a biography of the Rev. R. W. Sibthorp, brother of that bearded colonel who made such a butt for *Punch*. The note of this clergyman's career was a see-saw between Rome and Lambeth, which at one turn obliged him to resign to Mr. Fowler the pretty chapel of St. Anne's, founded and endowed by himself, at Lincoln. For long no other preferment came to one who had been a High Church pioneer under a Protestant dispensation of patronage, and who never put his interests before his outspoken convictions. His college presented him with the rectory of Grimston, near King's Lynn, which he characteristically gave up on finding himself disabled by a stroke of paralysis, a few months ago. He married a sister of Mr. Bodley, R.A., and their only son, Dr. Herbert Fowler, is a biologist of note.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, & HISTORY OF EDUCATION.

PRACTICAL CRITICISMS AND SUGGESTIONS
ON TEACHING.

To be delivered by the Rev. Canon EVAN DANIEL, M.A., F.C.P.,
formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) will commence on Friday, September 26th, at 7 p.m.

The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special pains will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

SYLLABUS.

I. *Preparation of Lessons.*—Need of full and fresh Knowledge—Sources of Information—Need of Arrangement—Notes of Lessons—Limits and Aims of Lessons—Divisions of Lessons—Provision of Apparatus, Illustrations, Maps, &c.—Provision for securing Co-operation of Pupils—Provision for testing Success of Lessons.

II. *Method.*—Not to be selected arbitrarily—Regulated by Interdependence of Knowledge and by Laws of Mind—General Principles—From the Simple to the Complex—From the Indefinite to the Definite—From the Concrete to the Abstract—The Genesis of Knowledge in the Race—From the Empirical to the Rational—Independent Discovery of Truth.

III. *Apparatus, Experiments, and Illustrations.*—Things always more impressive than Words—Need of Appeals to the Senses—Specimens for Individual Examination—Graphic Representations—Enlarged Drawings of Parts—Need of some Indication of Scale—Experiments—Need of Judgment in Selecting—Rehearsal of Experiments—Registration of Results as arrived at—Relative Value of Pictures, Drawings, Blackboard Sketches, Models—Function of Teacher in all Lessons appealing to the Mind through the Senses.

IV. *Questions and Answers.*—Uses that may be made of Questions—Introductory—To secure Co-operation—Disciplinary—Resumptive—Questions directing Observation—appealing to Memory—to Imagination—to Conceptive Faculty—to Judgment—to Reason—Common Faults in questioning—Language—Length—Form—Order—Treatment of Children's Errors—Answers Wholly Wrong—Partially Wrong—Examinations—Construction of Papers—Modes of Marking—Teacher's Use of Blunders.

V. *The Kindergarten.*—The Senses our first Teachers—Limits to their Training—The Habit of Observation—Nature's Method—Artificial Education—Froebel's Services to Education—Utilization of Childish Instincts—Gifts and Occupations—Principles of the Kindergarten applicable to the later stages of Education—Transition from Kindergarten to Ordinary School too Abrupt—Object Lessons—Elementary Science—Treatment.

VI. *Reading, Writing, and Drawing.*—Analytic and Synthetic Methods of Teaching—Reading—Spelling—Dictation Lessons—Reading Aloud—Writing—Analysis of Letters—Mulhauser's Method—Locke's—Cowham's—Scientific Criticism of Writing—Drawing—Training of Eye and Hand—Object Drawing—Analysis—Directed Observation—Simultaneous Drawing Lessons.

VII. *Arithmetic and Geometry.*—First Notions of Numbers—Composition and Decomposition of Numbers—Notation—Numeration—Arithmetical Rules to be established by the Method of Discovery—Arithmetical Tables and their Illustration—Rules presenting Special Difficulty—Mental Arithmetic—Paper Work—Excellences to be insisted on—Accuracy and Rapidity—Euclid—Introduction to—Blackboard Work—Deductions.

VIII. *Grammar and Teaching of Languages.*—Grammar contained in Language, and to be sought there—Parts of Speech to be classified and defined by Pupils—Accidence to be collected by Pupils—Syntax to be discovered and formulated by Pupils—Parsing—Analysis of Sentences—Need of Logical Consistency in Grammar—Languages learnt with different Objects in view—for mere Reading—for Speaking and Writing—Methods appropriate to each—Lessons for Young Children—for more Advanced Pupils.

IX. *English Literature.*—Aims of Teacher—Authors and Pieces suitable for different Ages—Method of Teaching English Literature illustrated by Examples—Simple Poems—Romantic Epics—Shakespeare—Milton—Essayists—Preparation by Pupils—Paraphrasing—History of English Literature—Manuals—Examinations in English Literature—Criticism.

X. *Geography.*—Home Surroundings—Maps—Globe—Order of Treatment determined by Interdependence of Physical Facts—Physical Geography—Political Geography—Commercial Geography—Physiography—Sources of Information—Illustrations needed—Models.

XI. *History.*—Starting-point—Order of Time—Regressive Order—Early Lessons—Episodes—General Notions—Detailed Study of Special Periods—Mode of treating Biographies—Illustrations—Pictorial—Literary—Busts—Coins—Facsimiles—Synchronistic Charts—Original Authorities—Use of Text-books at different Stages—Constitutional History—Duties of Citizenship.

XII. *Discipline.*—Attendance—Punctuality—Order—Attention—School-rules—Motives appealed to—The Teacher's Eye—Rewards and Punishments—Emulation—Public Opinion—Characteristics of good Discipline as regard Means and Ends—School Tone—Formation of Habits—Character.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

* * The Lectures will be delivered on FRIDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

OCCASIONAL NOTES.

THE opposition of the Free Churches and of the left wing of the Liberal Party to the Bill is growing in volume, and, we are sorry to add, in uncompromising bitterness. That the Government has no

The Bill.

mandate, that at the last General Election there was no question of education before the country, is a sound and reasonable objection, but the threat not to pay the new rate is worse than revolutionary—it is hysterical. As we have before pointed out, no new principle is involved, and our Pro-Boers might as reasonably refuse to pay the income tax. We have never pretended that the Bill is an ideal one; but, having once put aside as outside practical politics the proposal to form *ad hoc* bodies, we still maintain that the Bill, even as it stands, offers a way of escape from the present administrative muddle, and that even the obnoxious Section 7 offers the fair basis of a compromise, though we hope to see the terms amended. If professional journals are any index of opinion, Mr. Balfour has the support of the vast majority both of teachers and of educational administrators. Should the Government fall, it is not the Bill that will have wrecked it, but its lack of administrative efficiency—witness the Lords whom it chooses to remount our cavalry and our schools.

THAT the fight should rage so bitterly over the number of managers who are to represent the denomination which provided the building is, in our opinion, nothing short of amazing. Once admit the right

Managers.

of representation to the Local Authority and it matters little whether that representation is one-third or two-thirds of the whole body. The Church of England has in the past spent much money on schools, and this gives it a certain claim. In most cases the buildings are not the property of the nation. This point the speakers on the Free Church side seem unable to grasp.

Few Nonconformist bodies have taken trouble to provide primary schools. The Church of England has done so. Short of an absolutely new system of State schools throughout the country, the vested interests of the Church of England are bound to be considered. And the Free Churches will have nothing less than State secular education throughout; though it is absurd to suppose that a Liberal Government would ever bring in a Bill to establish universal School Boards. On the other hand, the Church of England will not voluntarily resign its rights over its school buildings. While this is the temper of the conflicting bodies any proposals of peace are impossible. Mr. Balfour can only disregard the sectarian squabbles and persevere in his honest efforts to remove the existing chaos.

AMONG the many desperate schemes of resistance to the Education Bill, one of the most amusing is that due to Mr. Hutton, M.P. This leading exponent of the virtues of *ad hoc* election actually proposes to use the municipal bodies—capture them, we suppose, first—to create a general protest against the iniquitous Bill. In other words, the Town and County Councils—who, Mr. Hutton has often told us, not being specially elected, are unfit to deal with education—are now to be trusted by him to instruct the Legislature how to deal with that subject properly. Even more Hibernian is the notion that these Authorities are going to cut their own throats in favour of their rivals the School Boards. This experiment would be so interesting if tried on a large scale that we much regret that there is no machinery in existence for the purpose. Mr. Hutton proposes that every Town Council election in November and County Council election in March shall be fought on the Bill. He is apparently unaware that in boroughs only one-third of the councillors retire in November, and that rather less than this proportion of the whole of the boroughs ever have contests on other than local questions. Still further, none of the smaller boroughs have any direct interest in the subject. Hence here Mr. Hutton will only get an insignificant minority of protests, and, possibly, a good many rebuffs. But, still worse, there happen to be no County Council elections till 1904, by which time the Bill will be in full operation, and some other question will occupy the public mind. Besides, as the recent return shows, County Councillors are practically elected for life, the number of persons with money and time, and capable of fulfilling functions in which experience is all-important, being very limited.

WHAT we are much more interested in are the proposals for compromises on the management question which are coming from all quarters. Mr. Lee Warner and some Norfolk County Councillors wish to meet the Nonconformist grievances in all those villages where there is only one school, be it Board or voluntary, by an adoption of what is practically the proposal of the Bill of 1896. The ratepayers are to have the majority of the managers, if possible, but, at any rate, only the head teacher is to be of the denomination in possession; and in all cases there are to be alternative parallel classes in religion, one being denominational and the other of the Cowper-Temple variety. As far as this means the right of entry into Church schools of teachers belonging to other or no denominations this will no doubt be accepted by Nonconformists. The Rev. Guinness Rogers, indeed, is prepared to go further and accept the necessary corollary, the admittance of the parson to the Board schools. But the truculent sectaries will have none of this reciprocity, and, indeed, in 1896

*The Compromise of *Lehrfreiheit* in Religion.*

denounced it as strongly as they are attacking the present Bill. That it works admirably in parts of Germany has been well shown by the recent publications of Mr. Sadler's Department. The real grievance which will not be removed is that of those conscientious persons of all creeds who hold that the religious "atmosphere" which they delight in must be breathed by the children in all their lessons. Roman Catholics, it is well known, insist on subordinating the history, geography, and literature lessons to religious influences, while many persons of other denominations have a constant fear that in science lessons something may be said disrespectful to the Book of Genesis.

ANOTHER proposal is to give the Local Authority a majority of managers, but let the Trust managers have a double vote on religious questions. But who can say what is a religious question? Is the appointment of a head master in this category? The famous "in and out" clause of the Home Rule Bill was found to be unworkable owing to this difficulty of accurately defining functions exercisable by the same persons. Dr. Macnamara's idea of compromise is to give to the Local Authority at least the nomination of all the managers, introduce a brand-new kind of unsectarian religious teaching which will suit (or should suit) every one except Jews and Unitarians, and run alongside of this all kinds of denominational teaching. This, besides being exactly what the Established and Roman Catholic Churches will not have at any price, would introduce chaos into the schools, and perpetuate the worst vice of School-Boardism, that of confusing the functions of managers and Local Authorities. The only equitable and workable proposal is Sir W. Mather's. He would have the voluntary schools bought out, not by a lump sum down, but by a fair rent, and all schools after 10 a.m. run as Board schools by the Local Authorities, leaving the denominations the power in perpetuity of making what arrangements they think fit for religious instruction from 9 to 10 a.m. This, however, would mean very likely that parsons and ministers, and not the regular teachers, would take charge during the first hour, and many teachers are very doubtful if this would not seriously detract from the teacher's influence with his pupils. We have strong reason to believe that something of this kind is likely to be insisted on by the Roman Catholics also, so as to secure to the priest alone, and not to the managers, the control of the religious teaching.

IT would be ludicrous if it were not sad to read all the suggested compromises; because each compromiser seems unable to grasp the point of view of his opponent. Mr. Macnamara comes forward with a scheme that is not without statesmanlike qualities. The organs of the Church of England meet it with an emphatic "never." Dr. Percival's *eirenicon* is just as emphatically refused by Dr. Hirst Hollowell, who denies that the Church of England has any rights to concede. And Sir William Walrond has told his constituents that he is about to lay before Mr. Balfour a simple compromise that all parties ought to accept. His proposals will not, unfortunately, commend themselves to the Church of England. The really pitiable aspect of the controversy is the proof it affords that the party organizers of all the denominations care more for the triumph of their sect than for the education of the child. Religion is absorbed by the child in the atmosphere of home-life. It is not taught in schools. Will any one argue that girls' high schools are irreligious because they give one period a week to religious instruction—which period is dropped in the sixth form because of the pressure of examinations? Whatever may be the form of administra-

tion, the teachers in the school will not have a lower standard of religion than that of the country at large. And for doctrinal teaching the clergy have their Sunday schools.

THE qualifications for Column B loomed large at the recent general meeting of the Assistant Masters. A resolution was passed claiming that academic qualifications should not be demanded from existing teachers of experience. We have much sympathy with this view, and we hope that the Registration Council will interpret generously the phrase "exceptionally qualified." This may fairly be taken to mean qualified by experience and position in a manner that will be exceptional in the near future, now that the Register is formed. But with much of the talk about grievances we have little sympathy. It seems to us often to be fictitious. For some years to come no discredit will attach to the unregistered teacher; and so there is no injustice done. The cry about the Column B guinea paying for Column A is puerile. The Council is not likely to find the guineas flowing in fast enough to pay for the salaries of staff and the expenses of printing. In the end, there is little doubt, the Treasury will have to pay. It is discouraging also to find how little interest is taken in the Register. The earnest efforts of the I.A.A.M. to get an expression of opinion from the "injured ones" in London schools met with little success. At present few teachers, whether qualified or not, seem to care to register. In a few months the tide may turn, and we hope it will.

WHATEVER criticisms schoolmasters may be inclined to give upon the three great addresses touching education that were delivered recently at Belfast, they will at any rate find much to stimulate both thought and action. They will certainly not hesitate to endorse the words of the *Times* newspaper: "That the question of education is handled with a freedom and a width of view that is in striking contrast with the narrow-minded trivialities which too often form the staple of the talk at Head Masters' Conferences and in what are called by courtesy debates on education in Parliament." In spite of the number of individual teachers we could name who are doing good work, young men full of theories and energy, mature teachers whose love of teaching and of boys gives them the Greek gift of perpetual youth, yet is Prof. Perry right in saying that an artificial earthquake is periodically necessary to prevent even the best system of education from becoming a lifeless routine. "The curse of all education," he adds, "is the small amount of money available for the wages of teachers—just enough to attract mediocre men." Our big head masters are comfortable and secure. The influence of their environment forces them to abhor change and to look with suspicion upon new ideas. And, besides, they are, for the most part, more concerned with their spiritual functions and prospects than with the mental development of their pupils. The young men of promise soon leave teaching for work with a wider scope. For the rest the term "mediocre" is fitting.

THE smallness of the wage-fund is closely allied with the want of training. If a man is to pass through an expensive course of preparation for his profession, he needs to see some probable return for the capital invested. Many speakers and writers on this subject would seem to imply that a good man will start with a salary of £300, and end with from £1,000 to £5,000. It is worth while pointing out again that salaries of £70 to £150, with no possible hope

of further promotion, are the rule for the vast majority of assistant teachers in secondary schools, while the life of head masters and head mistresses in a large number of schools is a continual struggle against approaching bankruptcy. It is to be hoped that Prof. Perry's words will be taken to heart by those who hold the purse strings. The same moral is deducible from much of Prof. Dewar's address. "The German nation," he says, "has reached a point of general training and specialized equipment which it will take us two generations of hard and intelligently directed educational work to attain." A schoolmaster may be appointed because he has crammed up for the "first B.A." of London, or because he has gained a "rugger blue," but the man who has sufficient intelligence to see how the developing faculties can be trained and taught has generally sufficient common sense to avoid a profession where the life is wearing and the prospects are *nil*.

It is well that Prof. Perry has emphasized the view that has been stated already in these columns. Technical education is that education which makes unskilled labour skilled. It is the education that separates the doctor from the quack, the cleric from the layman, no less than the education which turns an unskilled labourer into a skilled artisan. The curious contempt that has been shown for technical education by men educated in an atmosphere of University—*i.e.*, literary—culture is partly explained by a misunderstanding of the term, but also is in part significant of a complete failure to grasp the simple fact that a literary or bookish education does not of itself fit a man to play his part worthily in the world of to-day. How far is it true that "the average boy leaves an English school with no power to think for himself, with a hatred for books, with less than none of the knowledge which might help him to understand what he sees, and he has learnt mathematics in such a fashion that he hates the sight of an algebraic expression all his life after"? It must be admitted that, of the average boy, such an indictment is not without foundation. The amazing thing is that the average schoolmaster accepts the position, and makes no attempt to alter or improve it.

BUT, if schoolmasters have received some scathing criticism at the hands of the British Association, they are in no worse a plight than inspectors and administrators. Against these Prof. Armstrong has much to say. Neither do examining bodies escape scot-free. The strictures are not unwarranted; and it is well that they should be spoken frankly. "Some of the South Kensington schemes are full of the gravest faults." "The first necessary step is to reorganize the Board of Education, root and branch." "Experience in teaching has been an absolute disqualification for the inspectorate." These are some of the Professor's remarks. Of course, we do not expect from addresses of this kind to find an alternative given in detail. But Prof. Perry has no doubt as to what the early education of an engineer should be, and Prof. Armstrong gives us but four subjects for the curriculum of any school. He labels them the four R.'s. Reading includes the reading of nature as well as of print; writing covers all expression of thought; arithmetic all calculation and measurement. The fourth subject which is to be taught concurrently with each of the others is Reasoning. Nothing could be sounder. It remains for teachers, inspectors, examiners, and drafters of codes to reduce these general rules to practice.

IT is the function of such men as Prof. Armstrong, who has, somewhat wickedly, been styled the "Kensit of education," to draw public attention to an alleged grievance. Therefore a certain amount of exaggeration is permissible. But on reading him or hearing him one is tempted to exclaim: "You are describing the schools of your boyhood; you allow no credit for recent changes." Mathematical teaching has become of late years less barren of result owing in part to the efforts of Prof. Perry himself. Science teaching, too, has adopted a new spirit. There are many science teachers, some of them his own pupils, who have caught somewhat of Prof. Armstrong's honest love of the truth at first-hand. Indeed, in the newer type of school that is springing up so rapidly in all parts of England there is already a danger lest the pendulum swing too far from humanistic teaching. We hope Prof. Armstrong will be equally vigorous in his denunciations of the newer product, the pupil, who, entirely ignorant of the English language or literature with but a futile smattering of French, spends all his time from the age of sixteen on mathematics and science taught by men similarly trained in the narrow limits of one subject and therefore untrained in "writing" as the art of expression. To the four subjects one is tempted to add a fifth—appreciation of the beautiful in art, literature, and science.

CAN training or any conceivable course of preparation for entrance to the scholastic profession remove the one inherent weakness of the schoolmaster? A schoolmaster has passed examinations. More or less consciously he is proud of the fact. Much of his teaching is necessarily, and again, more or less consciously, directed towards teaching how to pass examinations. But, more than this, the teacher is usually a specialist in some particular subject. He has studied from the point of view of a teacher. Inevitably his tendency is to teach his subject so that his pupils in their turn may also teach it. Most examinations are mainly literary; therefore at heart teachers have a contempt for what is not printed. "No mortal," says Goethe, "but is narrow enough to take delight in educating others into counterparts of himself." If "no mortal," then much more no schoolmaster. This existing weakness is often lost sight of by those who criticize teachers for what is not always their fault. But it can be partly overcome by training teachers in a culture that has a wider basis than that which Matthew Arnold preached, by preventing a too early specialization, by a proper correlation of subjects and above all by imbuing teachers, inspectors, and examiners with the thought that it is the object of school education to fit a boy for the part he will have to play in his future life.

SO many fresh drafts are made of each Education Bill that we do not pay much attention to rumours of supposed contents. The fact often is that the rumour leaks out only when the draft it is founded upon is consigned to the waste-paper basket. Sometimes an outline of a Government proposal is purposely allowed to get about in order that the drafters of the Bill may see how the newspapers will take it. It has been supposed that the new Bill dealing with the administration of education in London would make the municipalities the Authority for their own areas, controlled by a sort of magnified Technical Education Board. This plan has, according to the *Daily News*, been entirely given up owing to difficulties of rating. In its place the Government will propose the establishment of an entirely new body, based upon the municipal bodies.

This authority is to absorb both the School Board and the County Council Board. If this forecast of the *Daily News* is correct, we are to have a new Authority larger than the overgrown School Board. This will lead to the establishment of Borough Committees. It is practically impossible that one body can administer in detail the whole education of London.

PROF. TOUT, in the *Pilot*, pleads well the cause of a Manchester University. The Victoria University was a makeshift, a device to overcome the opposition of Liverpool and Yorkshire to the petition of Owens College for a University charter, justified as the only method of ridding Owens College from its bondage to the University of London and the external examiner. Now it has served its turn, and the sooner the triple alliance is dissolved the better for all parties. Such is Prof. Tout's brief, and we agree with his pleading that a federated University is and must be more or less of a monstrosity. There can be no common University life between students living sixty miles apart; the *genius loci*, the *pietas* that binds them to an *alma mater*, must needs be lacking. But what if one partner, in this case Leeds, declines to dissolve the partnership? There is the hitch, and to meet this difficulty Prof. Tout stretches his argument to a point where we cannot follow him: "If Universities are good things, the more there are of them the better." But even Prof. Tout would allow that in America Universities have been multiplied beyond necessity, and even in England we are near reaching the point when to increase the number is tantamount to lowering the standard of efficiency.

COMMERCE has a word to say on the wider aspects of the Education Bill which have been overshadowed by Section 7. "Among business men the regret is universal that the Government have not presented a strong scheme for secondary education simultaneously with their controversial proposals for primary tuition." The effect of the obligatory rate for the former and the permissive rate for the latter will be "to shelve the treatment of secondary education, to wipe out of existence permanently the evening classes taken from the School Boards and the training colleges for teachers." The last clause is a mere rhetorical flourish, but the article should serve to show the Government that it is not only feeble folk and interested parties like the Teachers' Guild and the College of Preceptors who are clamouring for secondary education—more in quantity, better in quality, and no waste—but hard-headed business men who cannot be ignored or put off with specious promises.

THE Chairman of the School Management Committee of the Birmingham School Board argues in the *Times* that, as regards school management, the Local Education Authority will be supreme, and that the Management Committee will be the fifth wheel on the coach. His argument is that, just as School Boards do now, so in the future the Local Authority will determine the curriculum, the numbers and quality of the teaching staff, and the provision of the school equipment. The first and third points we may allow, but, on the second, Mr. Allen Bell's plea seems to be inconclusive. The staff will *ex vi termini* be denominational, and, as such, inferior to a staff chosen solely on professional merits without respect of creed. Why else were tests abolished at the Universities?

WE did not mince matters in commenting, last month, on Lord Londonderry's appointment, but the *Fortnightly Review* is still more outspoken. His appointment as Postmaster-General (says "Chalcas") would have been made in no other country in the world, and such a selection goes far to explain why the British administrative system has been doomed to inefficiency. But in translating him to the Board of Education Mr. Balfour has gone one better, "and we can only say, in the words of the famous rebuke which Queen Victoria once administered to a tactless *raconteur*, 'We are not amused.'" To make the weakest member of the dull Cabinet "Minister of Education" is an outrage upon national interests and common sense at the present moment, when the educational problem is recognized as perhaps the most urgent of all the problems raised in the question of national efficiency.

THE *Revue des Deux Mondes* (September 15) has a most appreciative, and at the same time discriminative, study of Edward Thring, by Henri Bremond. He commends to the notice of his countrymen an English Puritan, a worthy successor of Bunyan and Wesley, strong where the French are weak—"sudden divinations which spring from a rich and intense moral life"—and weak where the Frenchmen are strong—"wholly lacking in subtlety, *délicatesse*, nimbleness of wit, or the free play of an independent mind which can hold its own and yet understand and relish antagonistic doctrines":—

Between Thring and us—whether it is his fault or ours I will not decide—there is a sort of coldness. We esteem him, we venerate him, we even envy him, but, after all, we resign ourselves very quickly to not having known him. Something warns us that, away from his usual audience, the great master would have lost the best part of his influence. Young and enthusiastic minds, whose perspective of life and thought is dim and confused, may—must, indeed—have been attached to him by a strong sentiment based rather on natural generosity than lively sympathy; but to those who never experienced in their boyhood the magnetism of Uppingham Thring can doubtless furnish noble examples and fruitful lessons, but they can never be expected to feel his charm.

HOW TO WORK THE EDUCATION BILL.

By H. MACAN.

PART II.—THE OFFICE MACHINERY.

ONCE the Local Authority is fully constituted and equipped by the County Council with the necessary powers, its first duty will be to consider what general educational divisions it will adopt and how it will provide for their efficient supervision. Here no doubt a very different line of policy will commend itself to the County Councils proper and to the County Borough Councils. In the counties, speaking generally, there is the nucleus of an organization competent to deal not only with the technical institutes, but with secondary day schools and evening continuation schools. In the boroughs generally the secondary day schools have been left much to their own devices, while the School Board organization has been responsible for the continuation schools; there are also in several county boroughs University Colleges claiming to be over rather than under the borough educational organization.

To deal first with the counties proper. Here no doubt the general lines adopted will be similar to those upon which the Board of Education is organized, though the somewhat over-elaborate subdivision of that body on the secondary side will be unnecessary for the local organizations. Rigid economy as regards offices and the number of officials is essential to success in inspiring public confidence. It must be shown that a great saving in administrative expenses is the result of concentrating functions in the hands of Authorities of wide area. Hence it will not do for the Local Authorities to establish a staff of inspectors. These could not be so efficient as those of the Board

of Education as regards experience at any rate, and duplication of work would be certain to ensue. The better plan will be to come to an agreement with the Board, whereby all reports of its inspectors are communicated at once to the Local Authority, and periodical conferences are held between these inspectors and the office staff, or even the Authority itself. The only inspections which the local body need do for itself relate to administration, sanitation, or questions of building and equipment. The ordinary officials, whether legal or statistical experts, or the county medical officer and surveyor, are quite equal to doing all work of this description without its being necessary either to call in outside advice or to establish in the Education Office itself a separate machinery restricted to dealing with the schools in such matters. On the other hand, as the financial operations of the Authority will be very large and complex, it will be essential that it have a treasurer or accountant clerk of its own, acting under its direction, and free of connexion with the office of the county treasurer; once the Finance Committee of the Council has voted the Budget of the Education Committee and raised the necessary rate, the money should pass automatically into the coffers of the Education Authority. As regards legal questions, some difficulty is likely to arise, especially at first. It is quite possible that the County Authorities may have legal problems presented to them involving even appeals to the law courts. I am not referring to school attendance matters, which must necessarily be dealt with by subordinate officials in the localities, and which will probably never come to the cognizance of the County Committee. But, unless the relations of the Authority with managers as regards their obligation to repair, &c., especially where such managers are also charity trustees, are much more strictly defined in the Act, there may well be work for the lawyers. It is unnecessary to say that the custom which survives in a few counties, and is probably seen at its worst in Devonshire, where the Education Office is simply a sub-department of the general office of the Clerk of the Council, that official being the real Education Secretary, will be quite impossible under the new *régime* to be created by the Bill. But it must be made possible by some arrangement that either the Clerk of the Council, or some one in his department, be at the disposal of the Education Committee when his services are required. No doubt a race of counsel learned in educational law will arise, but the calling in of one of them should be a last resort.

To come, then, to purely educational questions, what departments and officials will be necessary? If the Committee or Authority decide to supervise the whole field of education, it will require a general secretary competent to deal with all branches. I advise that, in the title of such an official, the word "organizing" be dropped, as obsolete, and the title "director" be laid aside, as too pretentious. In all the larger counties it will be necessary to establish three sub-departments, probably each under the immediate supervision of a Sub-Committee. Following the example of South Kensington, all evening class work, whether in technology, science, art, or general "continuation," will be placed in one department; day art schools and school gardens (ex-standard) will naturally fall into the same hands. This will fully occupy the attention of one assistant secretary, who necessarily will be much away from the office in the afternoon and evening. Next, all work relating to secondary day schools of any type, questions of scholarships and exhibitions, dealings with Universities and University Colleges (other than the Examinations Department of the City and Guilds Institute), will fully occupy the attention of another assistant. In many counties this work will be entirely new, and the reorganization of old endowments or the establishment of new secondary schools will present a particularly arduous task for many years to come. In all cases there will fall into this sub-department the reorganization or absorption of the pupil-teacher centres and the establishment of joint training colleges. Thirdly, there will be the elementary education sub-department. All the work at present done *legally* by School Boards under the Act of 1870 and subsequent Acts will be dealt with there. It must be remembered that this involves considerable responsibilities beyond what is generally understood by the compulsory education of children in the seven standards of the elementary day school. Blind and defective children must be seen to, and it will probably be advisable to absorb the work of the existing Reformatory and Industrial Schools Committees. The assistant secretaries in each of these departments should

be able to do their own correspondence without aid from a clerk. One shorthand and typewriting clerk should suffice for the more important correspondence of the whole office, and a boy for stamping letters, &c., would complete the equipment. As mentioned before, however, there should be as ancillary to the whole a finance department in charge of an expert official.

In the larger counties the chief secretary should be required at first to devote himself mainly to reorganizing the elementary work, as it is here that the most drastic changes are required; in boroughs, of course, this is not so. In the smaller counties, where two, or at most three, officials are all that are necessary, the principal secretary should ultimately do all the work in the secondary day department or in this and the evening class section, leaving to an assistant the greater detail of the elementary work.

As regards county boroughs, the ideal state of affairs would be somewhat similar to that in the counties. I fear, however, that it will be very difficult to abolish the whole School Board machinery, or even to subordinate it to that of the Municipal Education Committee. It ought, however, to be made perfectly clear, whether by the co-ordinating influence of the Town Clerk's office or otherwise, that the elementary side is no longer to pull in opposite directions to the secondary side. Possibly the best solution would be for the Town Council to keep intact both the present School Board machinery and that of the present Technical Committee, clothe the latter with such powers over secondary schools as appear desirable or necessary, and then form from the two bodies with a few outside (University College, &c.) experts a Co-ordinating or Consultative Committee, with no financial or executive powers. The technical official or officials should act (*cf.* the position of the Hon. W. N. Bruce at the Board of Education) as the officers of this body; thus emphasizing that the co-ordination comes from above, and not from below.

The question at once arises, Is it desirable that there should be in the counties proper any local analogy to the Consultative Committee of the Board of Education? I am strongly of opinion that such a body, kept in its right place, will be most useful. Naturally it would have no executive power and no finances to administer. It would deal, and deal only, with those questions which would be referred to it by the Authority. The Education Council might well, to a very large extent, be directly elected by the various grades of head and assistant teachers in the county. A few of its members, and certainly its chairman, would come from the "political," "non-expert" element. The ordinary office staff would act for it as well as for the Authority. Two classes of questions would naturally be referred to it for report to the Authority: first, all matters of curricula, schemes of study, and the drawing up of syllabuses naturally are best in the hands of those still actively engaged in teaching; secondly, all purely professional questions, matters of discipline, involving the dismissal, &c., of teachers, are very apt to be treated without due consideration by those immersed in administrative and executive work. The qualifications, again, of teachers for work of various grades is a matter which requires special investigation, and is one on which the Central Authorities give year by year less guidance to the local bodies. Naturally this Council would not appoint or dismiss any teacher itself, but merely advise the Authority thereon. Women should certainly be members of this Committee, and will probably find there a more congenial sphere of activity than when discussing financial and legal questions at the meetings of the Authority itself.

Finally, when possible, the office of the Authority should have attached to it a reference library, a technical museum, and in some cases a laboratory.

CAMBRIDGE LOCAL EXAMINATIONS.—Forms of entry for the Higher, Senior, Junior, and Preliminary Local Examinations, to be held in December next, can now be obtained from the Local Secretaries at the several centres. The examinations will commence on Monday, December 15. The forms of entry for the Senior, Junior, and Preliminary Local Examinations are to be returned to the Local Secretaries on or before October 3; those for the Higher Local Examination on or before October 31. The Regulations for the Examinations may be obtained from the Local Secretaries at the centres of examination, or from Dr. Keynes, Syndicate Buildings, Cambridge.

REVIEWS AND MINOR NOTICES.

Dernière Gerbe. (Paris : Calmann Lévy.)

To the student of modern French, who will have learned from Victor Hugo more of the resources and beauties of that language than from any other writer of the last century, "*Dernière Gerbe*" will appeal with special interest as the last word of the poet to the world. And yet it is but a disappointing legacy that he has bequeathed to us. "*L'onde antique est tarie, où l'on rajeunissait*"—as Hugo wrote long since to Gautier—is the commentary that almost inevitably suggests itself to the reader, as he sifts the wheat from the chaff in these last gleanings from that field whence the bulk of golden grain has long ago been carried away. There is a pathetic interest about this volume, closing the brilliant record of more than three-quarters of a century. Too often the lyre is strangely jangled, and we feel that the player's hand has lost its ancient cunning. Only now and again are we reminded of that "shining, sounding, fascinating verse," as De Banville called it, which was the glory of Victor Hugo's genius in its dazzling maturity.

Yet it is evident, from the dates appended to the divisions of the fragments, that "*Dernière Gerbe*" does not entirely belong to the poet's old age. The "*Billet à Charles Nodier*," indited during the rehearsals of "*Hernani*," in the "*Avant l'Exil*" series, impresses us as an antediluvian relic, when we reflect it was actually written before the deluge of Romanticism submerged French literature. How many tides have risen and receded since then! Even to think of it makes one "feel chilly and grown old." As Hugo himself says, in that grim fragment, "*La Salle Abandonnée*," instinct with his old *macabre* power :—

J'eus peur et je sentis comme une sombre lutte ;
Car ces vieilles splendeurs étonnent dans leur chute,
Les figures de l'ombre ont de sinistres yeux,
La ruine est terrible, et les mornes aïeux
Semblent de jeter cris avec leurs pâles bouches.

The author of "*Odes et Ballades*," of "*Cromwell*" and "*Les Orientales*," seems to become almost a prehistoric figure, as we remember the cataclysms that have convulsed the world since he built "en Castille," that "bien frêle bastille" of his, that was to be the stronghold and rallying point for one of the greatest revolutions the republic of letters has ever known.

It is varied enough, this "*Dernière Gerbe*"—a sheaf of miscellanies dealing with all manner of subjects. Every now and then we catch a glimpse of the old Victor Hugo, the *poseur*, if you will, but the prophet as well ; the lyrist of dainty sentiment, yet withal the leader of men ; the writer who swayed his native tongue in prose and verse alike to such majestic harmonies as it had never known before. Drama, epigram, *pensée*, love-lyric, and monologue—they all contribute to these fragments. If some strike us as oddly *suranné*, others are singularly up-to-date in interest, and afford side-lights on the poet's attitude to questions which since his time have but assumed a more sinister importance. Take, for instance, the lurid little *vignette*, "*Campagne de Westphalie*," which might well be commended to some of our modern advocates of militarism :—

Et les choses qu'on fait dans le sang et les flammes
Sont illustres ; sinon, elles seraient infâmes ;

or the singularly forcible lines entitled, "*Le Droit de l'Animal*," with its telling, if unsportsmanlike, *envoi*—

Dieu, qui fait les oiseaux, ne fait pas le gibier

—a sentiment worthy, surely, of Pierre Loti himself.

In such poems as these the poet, we feel, is on his ancient ground—the ground he held so triumphantly for the humanitarian ideal in his earlier days. We recognize, too, the old patriotic fervour in the lines bearing the Latin title—

Lyrnessi Domus alta, solo Laurente Sepulcrum.

"*Soir d'Avril*" seems as if it had lost its way from a volume of his youthful love-lyrics ; whilst no other poet could have caught the exact note of the little epigram beginning

Oh ! l'amour est pareil aux perles de rosée

in its dainty grace.

Not thus at home is he in the domain of metaphysics, in such poems as "*Les Degrés de l'Echelle*" and "*Dialogue avec l'Esprit*," where he flounders out of his depth in the vexed waters of speculation. Adequately as Victor Hugo expressed

emotion in all its varied phases, he is obviously hampered by reflection. The poet who touched every string of the emotional lyre with unerring mastery and success, from the inimitably dainty little *chanson* of "*Si vous n'avez rien à me dire*" to Torquemada's grim soliloquy, halts, clogged and abashed, before the perplexed problems of evolution and biology. It is refreshing to come upon him in his more familiar rôle in such characteristic verses as :—

Tous les hommes sont l'Homme : et pas plus que les cieux
Le droit n'a de rivages ;
Ma sombre liberté sent le poids monstrueux
De tous les esclavages ;

or, again, to catch an echo of the author of "*Les Contemplations*" in the exquisite little gem commencing

Tout est doux et clément ! astres ou feux de pâtes.

The dramatic excerpts are so slight that they defy criticism, but what there are breathe little of the ancient fire. Neither is the *pensée* his forte. Some of those collected in the series "*Tas de Pierres*" were hardly worth preserving as laboured truisms ; there are one or two good things, however :—

L'homme scande ici-bas le vers qu'il chante au ciel

sounds like a translation from Browning, whilst who but a Frenchman could have written the definition?—

La vie est un torchon orné d'une dentelle.

The delicious little fragment, "*Je racontais un conte*," and "*Jacquot*," remind us that "*l'Art d'être Grandpère*" is not forgotten in this volume. Such poems are a welcome relief to many of the other pieces which are depressingly pessimistic. Poets, as other men, must needs grow old, but we bitterly resent their losing their illusions. Too often in "*Dernière Gerbe*" are we aware of that peevish, querulous note—such as Tennyson struck in "*Sixty Years Afterwards*"—which reveals a poet out of sympathy with his age, or too confused by its problems to interpret it aright. In vain do we look for the strenuous passion and dithyrambic fervour of "*La Légende des Siècles*," or for the stern, epic grandeur of the prose-romances. It is hard to recognize the lyrist of "unlimited and illimitable hope" in the singer who seems to be chanting its very elegy in the melancholy fragment of "*Le Naufragé*," with its sense of frustrated effort and baffled longing. It is because we have so identified Victor Hugo as the poet of lofty ideals, of great enthusiasms and high aspirations, that we deplore so deeply these lapses from his accustomed attitude. As in his own "*Cité Décrépite*"—that wondrously vivid etching in words of old Paris that recalls the magician's ancient spell—

On sent que quelque chose, hélas ! a disparu.

Yet, when all is said, this is but a single sheaf gleaned from the field where Victor Hugo reaped, during his life, such a splendid and enduring harvest for all time, and therefore it is we garner "*Dernière Gerbe*" with gratitude, if also with regret.

Principles of Class Teaching. By J. J. FINDLAY. (Price 3s. 6d. Macmillan.)

The basis of this volume is a course of lectures delivered by Mr. Findlay when he was Principal of the Preceptors' Training College. In the four succeeding years he has had the rare good fortune of being able to apply the principles he then enunciated and to test them in the working of a great intermediate school.

The main outlines of Mr. Findlay's theory have been from time to time set forth by him in the columns of this journal, and some of our readers will also recall one application of them in detail to the elementary study of German. With all the manuals on teaching that crowd our table, there was still room for "*Principles of Class Teaching*." It stands at the opposite pole to Mr. Barnett's "*Teaching and Organization*." Mr. Barnett labels himself as "frankly empirical." He briefed a number of distinguished teachers and bade them plead each his special subject, setting forth its special virtues and imparting, as far as was possible, the secrets of the craft, the particular methods that they had found successful. Mr. Findlay does not, indeed, dub himself a theorist ; on the contrary, he repudiates the title, if it is taken to imply any contrast between theory and practice, but he starts from first principles, determines first what we should teach and with what objects, and then proceeds to indicate in broad outlines how we should teach it, leaving all the details of execution to the common sense of the practitioner,

who must be guided by special aptitudes and special circumstances. There are no short cuts to knowledge, no wrinkles and dodges. Even the concluding chapter, "A Few Hints on Class Management," contains mainly negative advice—do not let your lessons be over long; do not correct written work over much; do not set home lessons beyond a pupil's powers. This defect, if it be one, is compensated by the philosophic treatment of the subject as a whole. The intending teacher is offered a Pisgah sight of the promised land, and when he enters it he will know his bearings, be able not only to till his particular plot, but to see the relations of the part to the whole. The book must be read, not tasted; and all that a reviewer can do after approving its general conception and execution is to select for comment a few of the particular points that have struck him:—

"We are not required to create a new ethic which shall suit the special ends of education, or to make our choice between Hegel or Herbart, Spencer or Kant."—Is this so? Does it not make all the difference in our scheme of education whether we are individualists or collectivists, stoics or utilitarians, aristocrats or democrats? Is a teacher to have no ethics, as a civil servant has no politics?

"The Scriptures, as taught in an English institution for public education, ought to be limited to giving the pupil a proper acquaintance with the main thread of the story of the Old and New Testaments."—They are so taught in the Welsh intermediate schools; but few besides Mr. Findlay are satisfied with the results. It means in practice the teaching, not of the Bible, but of Maclear and Gill, lists of the kings of Judah and Israel, and the miracles peculiar to one Gospel. Even Matthew Arnold desired that the Bible should be taught in all national schools as literature.

"We shall also venture to dismiss a number of social subjects, such as civics and economics."—This on the ground that the pupil has no concrete experience on which to base the science. But the same argument would rule out history. The child in the kindergarten knows the policeman and he knows the tuck-shop. On these two experiences we can base lessons on government and on trade, and in a democracy we hold such lessons to be an essential part of the training of a citizen.

"The inevitable forces of environment at the present day in the primary school which endanger the refinement of mind and heart which is often acquired in hours of leisure."—This is the plea advanced for retaining as they are preparatory schools for the higher classes. "The school," says Mr. Findlay, "has no concern with social changes or social ideals; it must take them as it finds them." We hold, on the contrary, that the school is the natural leveller of social distinctions, and that a true democrat will attempt to establish in England the common schools of America and Scotland. Thus, the Girls' Public Day School Company has given the death-blow to the "ladies' college."

The selection of topics [in natural science] can still be largely governed by correlation with the humanities, since there is an historic order in the progress of scientific need, which corresponds, in part, with the psychological order in which the teacher will desire his pupils to learn the natural sciences. Columbus came before Captain Cook, and Roger Bacon before Newton.

This seems to us a very *ignis fatuus*, and the bearing of the last sentence we fail to see. Astronomy was the first-born of the sciences, if we exclude theology, but a pupil takes it in his last year at college.

A few inaccuracies should be corrected in a second edition. On page 26 Tennyson is misquoted; on page 36 we find *Le Contrat Sociale*; on page 120 "neither of these time-tables are offered"; and not a few split infinitives.

Nature Study and Life. By CLIFTON F. HODGE, Ph.D. (7¼ × 5 in., pp. xvi., 514, illustrated; price 7s. Ginn & Co.)

This is a useful and interesting book, and we cordially recommend it to all those who are meditating the introduction of Nature study into ordinary school work, and also to those who have already done so. It is not so much because the theories and pleas set forth are novel—in the main they are not so—that we think highly of the book, but because the applications of them to the practical work of educating the young are so fresh and clear-sighted and sound. Dr. Hodge is a biologist and an assistant professor in Clark University. He is also—we

had almost written *therefore*—a sound Froebelian; and the theoretical side of what he has to tell us is little more than a fuller and more modern statement of what Froebel urges upon us in "The Education of Man." He is sparing in his use of, though he does not entirely abstain from, arguments drawn from the supposed order of the development of the human race—arguments of which some of us are growing a little tired, and would gladly postpone until we know something more definite about that order, and how far that order was due to successive environments, which in the main have long ceased to exist, and cannot be even artificially re-created. His arguments rest rather on knowledge of child-nature and child life, and on the experience which has been gained from actual use of the methods and materials advocated. It does not so much matter whether *ownership* came early in the history of the human race as a civilizing force as that it is practically found to be of immense value in the ethical training of little children—and of big children too. The same applies to the educative use of the living environment, of the things which *live* close about the child, and the use of these in such a way that a valuable practical result in the present or the near future is evident to the child—and, let us add, to the teacher as well. Whether it tally with the history of the race or not, it is a known fact that the concrete, the real, the practical are of far greater power in arousing, maintaining, and directing the interested attention of children than what is abstract or ideal, or merely passive and theoretical. These are some of the principles on which Prof. Hodge acts or would have us act; and his chapters show us excellently how these or others may, without undue difficulty and undue expense, be put into practice in the education of children.

Naturally we begin with children's pet animals and other living things of which they are fond. From these we pass to insects on which the pets feed or from which they suffer; household insects and how to study them and observe the good and harm they do—how to foster and help the good, and how to prevent the harm. These soon lead us to plants and to garden studies. Here it is, in connexion with children's gardens, that the ethical value of ownership is dwelt upon, as also the value of utilizing what the children produce. And so we turn to consider the care and propagation of plants—garden insects, beneficial and otherwise—and thence to insectivorous animals. Amongst the last named the common toad and its nature and uses receive careful consideration; and the ethical and practical lessons to be learnt from these considerations are excellently set forth. Pausing for a while to consider common frogs and salamanders, we are led by the insects to turn our attention to birds of the garden—how they help and how they harm, how to facilitate and promote their efforts in the one case and how to checkmate them in the other, the practical domestication of wild birds that are useful, the taming and feeding of birds. The English sparrow here comes in for much oburgation, and should feel as unhappy as the Jackdaw of Rheims. Next we are taken to elementary forestry, or the propagation and treatment of common trees. Useful directions are then given as to how to construct and to manage aquaria and vivaria. The book then closes with some remarks on miscellaneous animals, and a couple of chapters on flowerless plants and how and why we may study them. At the end we are given a very full and very useful programme of Nature study for nine school grades, and a full index.

This enumeration of the topics dealt with gives but a very imperfect idea of the value of the book. It brings out the *connectedness* and many-sidedness of the study, but it omits the plans, suggestions, and inferences which are so prominent and so attractive a feature of what Prof. Hodge has to tell us. Our readers must learn these things for themselves. They will repay careful attention; for the keynote of the book is that these things have been tried, and tried successfully. The illustrations are numerous and are very satisfactory, especially the photographs; and the charts of information, book-lists for reference, and the like are all skilfully constructed and likely to be of real help besides being decidedly suggestive.

Everyman: a Morality Play. With an Introduction and Notes. (Price 1s. A. H. Bullen.)

Mr. Bullen has done a good work in publishing, at the easy price of 1s., a modernized version of "Everyman." All who

saw this naive and impressive "morality" while it was being acted in London, first at St. George's Hall and later at the Imperial Theatre, will jump at the opportunity of possessing themselves of the text. But it should be read also by those who did not have the good fortune to witness any of these remarkable productions by the Elizabethan Stage Society. And readers who fear the difficulties of archaic spelling and obsolete grammatical constructions will be glad to learn that Mr. Sidgwick, who edits the play, has modernized the spelling just enough to make the little book quite easy reading—and placed in the margin explanatory notes, wherever an old word or a disused construction presents a difficulty in the original copies. The question of the authorship of "Everyman" and of its relation to the Dutch "Elckerlijck" is discussed in a short, but interesting, introduction. Mr. Sidgwick is of opinion that the Dutch play, not the English one, is the original work, and that a certain Peter of Diest was the author. And he tells us that, "in treating of this question not long ago, Dr. Henri Logeman, of Ghent, put forward the credible theory that this Peter of Diest was Peter Dorland, an historian and theologian of a speculative and mystic turn of mind, who lived at Diest during the latter half of the fifteenth century." The history of the play is interesting; but the play itself is much more so. And we much wish it might be revived, not only for the benefit of London playgoers, but for the instruction of the common people. As has been proved, it may be adequately staged with scenery and machinery easy to transport from village to village in vans. Among those who saw the piece acted in London, some doubted in advance whether they might not be shocked by the presentation in a theatre of matter so solemn and sacred. But the actual representation was so exquisitely reverent and simple that the doubt was forgotten before the performance was well begun. Our space does not allow us to give an analysis of the "morality." A few lines from the prologue will, however, give an idea of its motive.

The story saith : Man, in the beginning
Look well, and take good heed to the ending,
Be you never so gay :
Ye think sin in the beginning full sweet,
Which in the end causeth thy soul to weep,
When the body lieth in clay.
Here shall you see how Fellowship and Jollity,
Both Strength, Pleasure, and Beauty,
Will fade from thee as flower in May ;
For ye shall hear how our Heaven King
Calld Everyman to a general reckoning.

Trite and universal as is the theme, the story is so worked out with perfect simplicity and piquant truth to life that one follows the action of Everyman with the keenest individual interest. The *naïveté* of the language and ideas strike one first; but gradually one realizes that the old "morality" is a very subtle and finished bit of art. The allegory is never confused, nor is the dramatic vitality ever lost; and the moral is enforced with a delicacy and tenderness that cannot be too much praised. The terror of death is there; not, however, as ecclesiastical terrorism, but as the inevitable fact to be faced by every man, with or without religion. The falling away of good fellowship, kindred, goods, and, finally, strength, beauty, discretion, and the five senses, comes in with all the pathos of reality. Everyman is led by Knowledge to Repentance and Reconciliation with the Church. And his Good Deeds, in the beginning bound down by his sins, rise up and stand by him in the hour of death.

Life and Letters of Henri Taine, 1828-1852. Translated from the French by Mrs. R. L. DEVONSHIRE. (Price 7s. 6d. net. Constable.)

A phrase in the preface, "the documents that we are now bringing to light," leads us to hope that this volume is only a first instalment. It takes us only to Taine's twenty-fourth year and his *début* as a man of letters by the publication of his thesis for the Doctorate of Letters, his essay on La Fontaine's Fables. Correspondence occupies nine-tenths of the volume, and the "Life" is restricted to a bare chronicle of events, the facts that are needed to make the letters intelligible. Now and again the English reader would have been grateful for an explanatory note. "The best representative of this country, my dear chap, is the Abbé Gaume, the author of the gnawing worm of which your review speaks. I feel it, and I am beginning to

gather the flowers of my position." We wonder what proportion of Mrs. Devonshire's readers will recognize the allusion to "Le Ver Rongeur," a diatribe against Latin verse making. On the whole the English translator has acquitted herself creditably, and we can pay her the highest compliment possible, that the letters do not read as a translation. There are still a few ugly gallicisms which should be expunged—"vulgarisation," "my universitarian future," "Wakefield minister" (for Vicar of Wakefield), "the universal suffrage," "of the expression"; and it is evident that Mrs. Devonshire is not a classical scholar. We find "Macrobus" for Macrobius; "Minutius, Felix" as two names; besides such obvious misprints as *Dii bonii*, *hai* for *kai*, *barbaro* for *barbara*, which should have been corrected by the printer's reader, and Latin on pages 73 and 227 which we cannot construe or scan. These slight defects will not interfere with the interest of the letters, which reveal a remarkable personality, more admirable perhaps than it is attractive. Taine, by his will, expressly forbade the publication of all intimate and private letters, and it is doubtless in consequence of this restriction that we find here little of the satiric touch and keen observation of character that we look for in the author of "Contemporary France" and "Notes on England." Here Taine reveals himself only as the austere student, a man of few friendships, though these are to him a cult, a religion, the only thing besides philosophy for which life is worth living. Of mankind in general, not only the profane crowd whom Horace hated, but the average educated man, his fellow-students at the Ecole Normale and his fellow-professors at Nevers and Poitiers, he speaks with a contempt which rivals Carlyle: "Stupidity, violence, ignorance, and cowardice are the ingredients which the Creator mixed together when manufacturing the human race." And, while with Carlyle we are conscious that much of his misanthropic declamation is consciously exaggerated—a safety-valve for pent-up feeling, a literary form of swearing—Taine's cynicism is genuine, he means every word that he says, and he acts on his beliefs, eschewing all society, studying ten hours a day in his solitary chamber, his only relaxation his piano and a weekly letter to Prévost Paradol or some other of the three or four kindred spirits he had found at the Ecole Normale. The correspondence of such a man is bound to be somewhat monotonous, and we cannot recommend the volume to readers who have no taste for metaphysics. The study of history was a later stage, but the letters reveal clearly Taine's philosophy of life which underlies his work as an historian. To us the letters have a special interest, as they bring out the contrast between an English schoolmaster and a French *professeur*. Here is Taine, the most brilliant pupil of the Ecole Normale, glad to accept a mastership at £65 a year, non-resident, and hoping for a rise of £20 when he passes his *agrégation*. His English analogue would be complaining of the wretched pittance of a junior Harrow or Rugby mastership—some four or five hundred a year—and looking forward to a house which will bring him in a round thousand. But then Taine has two hours' work for five days a week, and his English counterpart has more like ten hours a day, Sundays included.

Grieb's Dictionary of the English and German Languages.

Tenth Edition. German-English Part. (Frowde.)

Prof. Schröer has now brought to a happy conclusion the laborious work on which he has been engaged for a number of years. He and the publishers have succeeded in recasting the Dictionary of Grieb, so that what was a notable piece of work in its original form has become the best intermediate dictionary of the German and English languages, both in matter and form. The most obvious additions concern the pronunciation and etymology. With regard to the former, we observe with some regret that the practice of letting each word be followed by its pronunciation in transcript, which was observed in the English-German part, has not been carried through in the German-English. It would have been useful for foreign teachers to have each word transcribed in *Bühnendeutsch*; but Prof. Schröer gives his reasons against doing so in his preface, and at the same time supplies a brief, but very useful, comparison of German and English speech sounds. In the dictionary itself we find occasional indications of accent and of vowel length.

The etymologies are also a new feature; but here exigencies of space have apparently rendered it necessary to be very concise. Even the tenpenny *Detter* is more complete in this respect. Often merely the Middle High German equivalent

appears, and there is no suggestion as to the origin of the word—see, for instance, *Armbrust, Arzt, Essig, Kirche, Kirsche, Schurz*, and compare the more satisfactory explanations of *albern, Bursche, Pfau, Pferd, Speise, Tisch*. *Schon* is rightly connected with *schön*, but not *fast* with *fest*. The word *Wonne-monat* is rendered: "(lovely) month of May," which suggests a wrong derivation.

The arrangement of the articles is in the great majority of cases very good, and the renderings are generally idiomatic. The articles on *doch* and *ja*, however, do not distinguish clearly between the accented and the unaccented forms. Only here and there do we meet with stiff or old-fashioned phraseology. It is a mistake to think that every English word which appears in the English-German part ought to reappear here as the translation of a German word. Of renderings which seemed unsatisfactory we have noted: "the belles lettres" for *Wissenschaft*, "telephonic office" (*Fernsprechstelle*), "oppositionist" (*Oppositionsglied*), "anywhere" (*vieler Orten und Enden*), "to imparadise" (*zu einem Paradiese machen*). The colloquial "posty" (for a postman) is unfamiliar to us; on the other hand, the only colloquial forms given for policeman are "bobby, peeler" (*s.v. Polizeidiener*; none at all *s.v. Schutzmann*), of which the former is heard, but the latter is much less common than "copper, slops." The proofs have been read with commendable care, but some slips have remained—e.g., "intelligene office" (*s.v. Auskunft*) "is has done" (*s.v. aufhoren*), "spunge" (page 376), "brillant" (twice, *s.v. brillant*), "Epyrus" (*s.v. Pyrrhus*). The hyphen sometimes occurs where we generally omit it—e.g., "lunatic-asylum," "wedding-day."

There is a convenient list of abbreviations at the end, which is tolerably complete, especially if the reader remembers that there is another list at the beginning. The two should undoubtedly have been combined. We have noted a few small points:—*l.c.* should be given (*q.v.* appears); *Man.* for Manitoba (Kan. for Kansas is given); *O.P.* in the theatrical sense; *N.D.* = no date; *Mdle.* should be *Mlle.*; *Lieut.-Col.* should be *Lt.-Col.* "*Post Grand Master*" is a curious designation (*s.v. P.M.G.*).

These are, however, details of little importance; their enumeration is by no means intended to disparage the work as a whole. It will remain for some time the most convenient and trustworthy dictionary for the upper forms of our schools, as well as for ordinary private reading; and we again thank Prof. Schröder and the publishers for the great care and industry devoted to this work.

"Temple Series of Classical Texts."—*C. Julii Caesaris de Bello Gallico Commentariorum Liber Primus*. Edited by A. S. WILKINS, LL.D., Litt.D. (Dent & Co.)

We opened this little book with high expectations: we close it with combined feelings of amusement and dismay. The binding is neat, the type is clear, many illustrations, one of them richly coloured, allure the eye, and the name of Prof. Wilkins on the title-page gives promise of good matter. It is a pity, we thought, that a scholar of such eminence should be ploughing an exhausted soil, but he will at least guide the ploughshare with consummate skill. To our astonishment he is found to be less dexterous than the common labourer. His work is so slovenly as to be valueless; he has taken no pains to be accurate or consistent with himself. The result is a text-book unfit for use in schools in spite of the care that the publishers have bestowed on the production of it. Let us look first at the inaccuracies, or rather at one or two out of a hundred. Doubtless Prof. Wilkins knows all that can be known about the word *temere*; we are therefore surprised that he should state, without any qualification of the statement, that the final *e* is long. He compensates for this by making the final *e* of *libere* short. Then he asks us to believe that side by side with *mōlimen* was a form *mōlimentum*; which, it is needless to say, there was not. We should have been perplexed at *oculus* and *seditiosus* had we not previously met with *Gallicus* and *dubito*. In short, quantity in the vocabulary—it is in the vocabulary that these markings occur—of this unhappy book has been distributed as if from a pepper-box. That a form so important as *coepus* should have been omitted and that *sustineo* should be said to make *sustini* in the perfect will now excite no wonder in our readers' minds. It might be supposed that we are dallying with chance misprints. The inconsistencies in the book are more striking than these unattended blunders of the vocabulary. If we were to judge Prof. Wilkins by his present performance, he would seem to be remarkable chiefly for a certain duality of mind. He makes his *Rauraci* lie somewhere to the north of Switzerland; in his vocabulary he corrects himself and puts them in Switzerland, between Basel and the Aar; moreover, they are *Rauraci* in his text and *Raurici* in his vocabulary. Of the *Sedusii* in his annotation he declares that nothing

is known; in his vocabulary he describes them as a German tribe living between the Main and Neckar. The uncertain *Noreia* is to him a peculiarly evasive place: in the notes it is "north of the Brenner pass, east of Switzerland"; the vocabulary unhesitatingly identifies it with Neumarkt in Styria, which is as remote from the Brenner pass as can reasonably be wished. In his vocabulary he has inserted *emolumentum, labour, difficulty*, not aware that in his text he had accepted *mōlimento* in the one passage (I. 34, 3) where the word in this sense is ascribed by MSS. to Cæsar. Is the proper form *Triboces* or *Triboci*? The vocabulary permits us to choose; the text will hear nothing of either and prints *Tribocci*. Yet, after all, we cannot think that it is Prof. Wilkins himself that stumbles about thus wildly. There is a mystery connected with the book, of which two solutions are alternatively possible. A vocabulary intended for some other edition was found in uncorrected proofs and accidentally bound up with Prof. Wilkins's (not very valuable) notes; or else the Professor had the vocabulary made to order, and the maker played a trick on the Professor. In any case, it is the editor that is responsible for the hotch-potch about to be sold under his name. His services to education have been so considerable that we cannot believe him capable of allowing such a composition to circulate in schools. Even the humble art of book-making should be maintained at a decent level; and the intelligence of the boy must be respected in his school-books.

"University Tutorial Series."—(1) *Caesar: Civil War, Book I*. Edited by A. H. ALLCROFT, M.A. (2) *Livy, Book XXI*. Edited by A. H. ALLCROFT, M.A., and B. J. HAYES. (1s. 6d. and 2s. 6d. W. B. Clive.)

The method of these books is that of the series to which they belong. Keeping certain examinations sternly in view, the editors give the student just what he is likely to want in preparing himself for them. Textual criticism has no place in the commentaries, and finer points of scholarship are ignored. On the other hand, the historical introductions and the notes, concise and accurate, are adequate to their purpose. The limitations are as acceptable to examinees as the matter contained in the limits; especially do those who read without a teacher find their account in using the series. The end proposed is not very high; but, since we are nowadays told that *Zweckmässigkeit* is itself a virtue, the books, as possessing that quality, must be called good and not bad. They will not woo men or women to love learning, but they will help them to win its titles. The portions of Cæsar and Livy (the whole of Book XXI., not, as in an earlier issue, only chapters 1-30) here edited are set respectively for the Cape of Good Hope University Matriculation in 1903 and the London University Matriculation in June, 1903. Candidates for these examinations will find their labours guided and lightened by the new editions, which have been prepared by experienced men, and in which the scholarship is sound as far as it goes. We wish the books success in the sphere for which they are designed.

Euripides' Alkestis. Adapted and arranged for Amateur Performance in Girls' Schools by ELSIE FOGERTY. (Price 2s. 6d. net. Swan Sonnenschein.)

The educative power of dramatic representation has long been known; Miss Fogerty's object is to assist those who wish to utilize it, especially in schools for girls. Whilst the exercise is not without its drawbacks, the old humanists, notably Sturm, cherished it as an aid to rhetoric; and the young may get from it not merely graces of voice and carriage, but also the refining influence of high sentiment expressed in noble words. But the play is the thing—the play, a moral atmosphere and a wise control. As to the first, Miss Fogerty has made a commendable choice; for, whatever may be the literary merits of the "*Alkestis*," in the heroine we have a tender and lovable woman whose self-devotion will enshrine her in the hearts of girls. The drama, offered mainly in Mr. Way's version, is intended to be performed, as we are told, "under modern conditions"; and, although an Apollo moving in amber "focus" limelight, and the banishment of masks and buskins, may shock the archaeologist, the plan of imitating only the broader features of Greek stage-craft has much to recommend it. Whilst the proscenium as it was at Athens must accommodate itself to new demands, and we should not care to vouch for every detail of the costumes prescribed, yet the innovations have the effect of promoting convenience without offending the canons of taste. The chorus, of course, is kept; but for the aimless wanderings that are commonly believed to represent the movements of the Greek singers a variety of action, picturesque and significant, is suggested by means of marginal notes. This is well; but we trust that Miss Fogerty will reconsider her proposal that when the play is acted in a girls' school a chorus of Phææan maidens should be substituted for the "elders of Phææ." It is true that the commonplaces of a chorus often might issue from any lips; but a great poet must be allowed to determine the relation of background to foreground in his own picture. Girls who can play Admetos and Herakles can play old men; and that Euripides had old men in view is clear, not only from the grammarian's argument, but, as we hold, from the text of the piece. However, the work as a whole is so carefully done that we mention this infelicity with regret. The book leaves nothing untouched. On lighting, dress, properties, the arrangement of the stage, and aptness of gesture the amateur will find in it instructions derived from knowledge,

experience, and a fine sense of dramatic fitness. We heartily commend it to those for whose use it has been planned.

A First Latin Course. By E. H. SCOTT and FRANK JONES. (Blackie.)

We greatly prefer this Latin book for beginners to the comic Latin primer which was the last book of the kind we noticed. This is written by two assistant masters in one of King Edward's Schools, Birmingham, and bears on the face of it the marks of direct experience. A boy who has gone through it, that is at the end of the first year, will be in a position to tackle consecutive Latin prose such as selections from Cæsar or Ovid. First comes the reading, beginning with the simplest sentences; then colloquial practice on the sentences; and lastly the written exercise, founded likewise on the reading. Grammar takes a back seat, and is portioned out according to the pupil's needs. A good and novel feature is the proverbs, lines of poetry, &c., to be learnt by heart from the very first. The plan of the book is thoroughly sound, and it has been well carried out.

"Heath's Modern Language Series."—*German*: (1) *Harold*. Von ERNST VON WILDENBRUCH. Edited by C. A. EGGER, Ph.D. (Price 1s. 6d.) (2) *Zriny*. Von THEODOR KÖRNER. Edited by F. J. HOLZWARTH, Ph.D. (Price 1s. 6d.) (3) *Leberecht Hühnchen*. Von HEINRICH SEIDEL. Edited by ARNOLD WERNER-SPANHOOFD. (Price 1s. 3d.) (4) *Kleider machen Leute*. Von GOTTFRIED KELLER. Edited by M. B. LAMBERT. (Price 1s. 6d.)

These books having their origin in America, the first question, from our point of view, in connexion with them is whether they are suitable for use in English schools. After due consideration, we may answer, yes. It is true that there will be found in them forms that we have come to regard as Americanisms, such as *valor*, *traveler*, *defense*, and so forth; together with occasional exemplifications of the split infinitive. We have no right to meddle with the independence of the American people; but we are entitled to protect our own boys and girls, and we state, for the benefit of those to whom these things are stones of offence, that they lie along the reader's path. Yet the number of deviations from ordinary English usage is small, and the earnest teacher might even utilize them as the basis of a lesson in patriotism. To speak seriously, no grave danger is to be apprehended from the neat, handy, and well printed booklets of which Heath's "Modern Language Series" is composed. It would be cruel to break the little red butterflies on the critical wheel; nor do the books deserve hard censure. They are all edited by competent men. Two of those before us ("*Leberecht Hühnchen*" and "*Kleider machen Leute*") have vocabularies; the other two ("*Harold*" and "*Zriny*") are without. The annotation is of the kind called thin by those of the older school; sufficient by followers of the new teaching, under which the text as a means to "the effective acquisition of the spoken and written language" is the main concern. Mistakes our curious eyes have not been able to discover. If we have a fault to find, it is that vague paraphrase sometimes does duty for a close explanation. Thus, "*auf eigem Zaum und Sold*" ("*Zriny*"), a phrase, by the way, that Körner borrowed from his chief authority, is simply rendered "at their own expense." Again, "*die sogenannte Gründerzeit*" ("*Leberecht Hühnchen*") appears in English as "the so-called time of the stock-companies"—an equivalent that leaves the student in darkness, not dispelled by the vocabulary, as to what a *Gründer* is. The editors, it would seem, rely on the teacher to make good such deficiencies. But loose versions in notes encourage slovenly preparation. A few words may be added in reference to the authors edited. We are all agreed that German should be taught, in the first instance, from modern writers. If the "reform" method is to avoid the opprobrious epithet "commercial," and if literature is included in its scope as well as language, the matter of instruction must have literary form. It is a quality possessed by all the books here under review. But the language of the Swiss Keller is too fanciful and elusive to serve as a model of German style; and Ernst von Wildenbruch is the poet of a decadence. As to Körner, glorious in his death and war-songs, his rank as a dramatist has long been fixed, and fixed in a humble place. His "*Zriny*" is a drama of which some clever woman (was it not Dorothea Schlegel?) said that nothing was clear to the author's mind except the catastrophe, and the catastrophe was an explosion. The play being poorly made, and in a weak imitation of Schiller's manner, it were better to go at once to some strong masterpiece of the master, such as "*Wallenstein's Tod*," than to linger amid the vapourings of the disciple. But, after all, the selection of a text-book rests with the teacher, and nowadays our teachers can vary their labours at will. We cannot but be grateful for the vast widening of the field of choice since the days when all our girls wept with Undine, and all our boys were youthful Tells, or drearily wise with the wisdom of Nathan.

Hygiene: a Manual of Personal and Public Health. By ARTHUR NEWSHOLME, M.D., F.R.C.P. New Edition. (8¼ × 5½ in., pp. viii., 356, illustrated; price 4s. 6d. George Gill & Sons.)

When a book has been before the public for twenty years and enjoys a steady popularity there is little to be said about it beyond chronicling the fact that it is in a new edition, and pointing out what changes

have been introduced. In this case the book has been largely rewritten, much new matter has been introduced, and everything, as far as possible, has been brought up to date. In former editions, Dr. Newsholme tells us, his chief aim was to meet the requirements of science students and general readers. He has now attempted to include the requirements of medical students and of such practitioners as do not need the detailed statements contained in larger text-books. To these, we think, and to candidates for diplomas in public health and in sanitary science, this edition will prove useful, though perhaps a few may find the book too non-technical for their purpose. The new chapters deal with Dietetics, Trade Nuisances, Meteorological Observations, Tuberculosis, Disinfection, and Vital Statistics. Some useful mathematical problems and the modes of solving them are also given in connexion with certain branches of hygiene such as diet, water analysis, exercise, ventilation, vital statistics, &c. This, we think, will give a fairly clear idea of the main features of the new edition. We are not sufficiently experts in medical and scientific matters to venture on criticism from that point of view. But, speaking simply from a schoolmaster's point of view, we may say that the book seems to us a very useful one and should find a place in every schoolmaster's library, for it deals wisely and clearly with many a topic on which school authorities should be well informed.

Life and Health. By ALBERT F. BLAISDELL, M.D. (7¼ × 4¼ in., pp. vi., 346, illustrated; price 5s. Ginn & Co.)

This book is described on the title-page as "a text-book on physiology for High Schools, Academies, and Normal Schools." It is shorter and simpler than the author's "*Practical Physiology*," but follows the same plan, and makes use of much of the same material and many of the same excellent woodcuts. A specially good feature is the introduction into the text of a large number of simple practical experiments which can be performed with inexpensive and easily obtained apparatus. The descriptions are remarkably clear and easily understood; and in dealing with the facts of anatomy and physiology mentioned the author has very wisely taken as his guide their direct bearing upon personal health, so that the young learner may begin to understand some of the great laws of health and apply them to his or her own daily life. Incidentally the nature and effects of alcohol, tobacco, and a few common narcotics are touched upon; and some useful practical advice is given on the prevention and restriction of disease, the care of the sick-room, and first aid to the injured. The book is complete within its limits, is not overburdened with matter, and is likely to prove very useful.

Lessons in the Use of English. By MARY F. HYDE (7¼ × 5 in., pp. xii., 209, illustrated; price 2s. D. C. Heath & Co.)

In this little book the author states her aims to be: "to develop the child's power of thought, to form in him habits of correct expression, and to give him a taste for good literature"—all this, of course, in an initial or rudimentary stage. We have little doubt that in the hands of an intelligent and sympathetic teacher the book is well fitted to aid the fulfilment of these aims. The plan of carefully graded written composition, interspersed at intervals with simple grammar observations and rules; of oral composition, consisting of the reproduction of simple stories just read or listened to, or in short descriptions of what the pictures given tell us; of passages for dictation and poems to be learnt by heart; and of letter writing and the combination of short statements into continuous and connected sentences—all this is in our opinion well planned and thought out. Here and there the grammar seems to us a little old-fashioned and imperfect—e.g., the division of verbs into transitive and intransitive only (which refers to verbs of *action*) and omitting verbs of *state*; the defining of pronouns as words which are used for nouns, which refers only to personal and demonstrative pronouns—but these are very minor affairs, and do not affect the general efficiency of the book. Teachers are constantly asking for advice as to how to teach English composition. Here is a good and sensible plan, and we advise them to give it a trial.

"Black's School Shakespeare."—*Richard III.* Edited by L. W. LYDE, M.A. (7 × 4½ in., pp. xxxvi., 160; price 1s. A. & C. Black.)

Our readers must by this time be well acquainted with the general characteristics of this series. The volumes are well printed on fairly stout paper and strongly bound in cloth. The annotation is as brief as possible, and the introduction, to a large extent, deals with the dramatic and literary sides of the plays. The editors are practical teachers rather than specialists in Shakespeare study. In the case of this particular play the introduction is fairly well written, but, though not unduly long, it might be considerably shortened. We do not quite see the object of telling the story of the play in eleven pages, unless it be to show how much better Shakespeare himself can do it. Nor is there much good in discussing the date of the play when no use is made of it after it has been found. For the rest, the introduction is fairly satisfactory and likely to be useful—though, of course, most of it will not be studied until the play has been carefully read; and so, properly speaking, it does not introduce. The notes deal almost entirely with what is typically Elizabethan in language. In this, however, they are severely

(Continued on page 652.)

MACMILLAN & CO.'S

Text-Books for the Oxford and Cambridge Local Examinations, the Oxford and Cambridge Schools Examination, London University, and College of Preceptors' Examinations.

LATIN.

- Macmillan's Latin Course.** By A. M. COOK, M.A., and W. E. P. PANTIN, M.A. First Part, 3s. 6d. Second Part, 4s. 6d. Third Part, 3s. 6d. KEY, 4s. 6d. net.
- Shorter Latin Course.** By the Same. Part I., 1s. 6d. KEY, 4s. 6d. net. Part II., 2s. KEY, 4s. 6d. net.
- Macmillan's Latin Reader.** By H. J. HARDY, M.A. 2s. 6d.
- Macmillan's Elementary Latin-English Dictionary.** By Rev. G. H. NALL, M.A. 3s. 6d.
- Latin Accidence and Exercises.** Arranged for Beginners. By W. WELCH, M.A., and C. G. DUFFIELD, M.A. 1s. 6d.
- Exercises in Unseen Translation in Latin.** By W. WELCH, M.A., and C. G. DUFFIELD, M.A. 1s. 6d.
- Latin Passages for Translation.** For the use of Higher Forms in Schools, and of Students working for Pass Degrees. Selected by M. ALFORD. 3s.
- Caesar.—The Gallic War.** Edited by Rev. JOHN BOND, M.A., and Rev. A. S. WALPOLE, M.A. 4s. 6d.
- Caesar.—Gallic War.** With Notes and Vocabulary. Book I. By Rev. A. S. WALPOLE, M.A. 1s. 6d. Book IV. By C. BRYANS, M.A. 1s. 6d. Book V. By C. COLBECK, M.A. 1s. 6d. Book VI. By C. COLBECK, M.A. 1s. 6d.
- Cicero.—Pro Milone.** Edited by F. H. COLSON, M.A. 2s. 6d.
- Cicero.—Pro Cluentio.** Edited by W. PETERSON, Litt.D. 3s. 6d.

- Botany for Beginners.** By E. EVANS. Second Edition. 2s. 6d.
- Practical Botany for Beginners.** By Professor F. O. BOWER, Sc.D., F.R.S., and D. T. GWYNNE VAUGHAN, M.A. Second Edition. 3s. 6d.
- Physiography for Beginners.** By A. T. SIMMONS, B.Sc. 2s. 6d.
- Geology for Beginners.** By W. W. WATTS, M.A. 2s. 6d.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

handicapped, for, as the preface states, without giving a reason: "all references are confined to the individual play." At the end there is a useful, classified index to the chief notes.

"Famous Englishmen."—Book II.: *Cromwell to Roberts*. By JOHN FINNEMORE. (7 × 4½ in., pp. xii., 247, illustrated; price 1s. 4d. A. & C. Black.)

Not very long ago we noticed with approval the first volume of this little book. The second volume is quite as well written as the first, well informed, and fairly well illustrated. Adopting Carlyle's view that the history of a nation is the history of its greatest men, the Board of Education recently suggested a scheme of lessons on great Englishmen as a suitable course in history for the middle division of a school. So Messrs. Black entrusted to Mr. G. Townsend Warner, of Harrow, the general editorship of two such volumes forming a complete two years' course. The result is before us, and a very satisfactory result it is. The choice of "great men" is just what it should be. It consists of soldiers, sailors, statesmen, writers, men of science, travellers—twenty in all. The style is simple and attractive, and the key-note is admiration for manliness, ability, self-sacrifice, and love of country. No boy or girl will read the book without being the better for so doing.

A Practical English Grammar. By F. RITCHIE. (Price 2s. 6d. Longmans.)

This grammar attracts us even more by its omissions than by its positive merits. Irregular plurals and feminines, the logical classification of substantives—all that useless *farrago* which usually confronts the beginner—is here omitted or relegated to a note in small type. Further, the arrangement is strictly synthetic, and the sentence is built up step by step from its simplest form. Lastly, practice, from the very first, accompanies precept. We are not so sure that Mr. Ritchie is well advised in excluding entirely all reference to historical grammar, philology, and phonetics. Assuredly it is labour lost to teach children orts and fragments of Early and Middle English; but, on the other hand, it is often impossible to analyze a sentence correctly or even to determine what part of speech a word is without a knowledge of the older forms, and simple derivations, as of *near*, *should*, adverbial-ly, interest children and stick in their memories. We have noted a few points for comment. "Kind hearts are more than coronets [are much]." This is surely a forced explanation; and how would Mr. Ritchie supply the ellipse in "more than enough," or how would he account for "than whom"? "Case" is nowhere defined, and, in consequence, the treatment of the English cases is not quite satisfac-

tory. The same remark applies to "gender," which is not clearly distinguished from sex. On page 199 "quality" must be a misprint for "qualify."

A Spanish Grammar. By M. MONTROSE RAMSEY. (Price 7s. 6d. George Bell & Sons.)

A masterly treatise which deserves to be placed in the very front rank, side by side with the author's "Text-Book of Modern Spanish." The subject-matter is scientifically arranged, the rules are concise and clear, the exercises (fifty-two) are constructed on a definite plan, and there is a full Spanish-English and English-Spanish vocabulary. The "Synopsis of Forms" intended for reference will be found to be of very great service. There is a large amount of what might be termed "outside" information, dealing with points of interest and importance which are often omitted from grammars or, at best, treated too briefly. Take as examples the "Forms of Address" (pages 106-108), the "Explanation of the Complex Spanish Family Name" (pages 108-111), and "Social and Epistolary Usages" (pages 519-525). Where is the student who will not be grateful for these?

A First Course of Practical Science. By J. H. LEONARD. (Price 1s. 6d. Murray.)

There is, perhaps, nothing strikingly new in the subject-matter of this little book or in the mode of treatment adopted; but the author evidently understands the difficulties which assail a young boy who starting on a course of experimental science. The instructions are extremely explicit, and one is inclined to think that rather more might have been left to the teacher; for, although we agree with the author that "the careful following of detailed instructions for a special purpose is in itself a valuable mental discipline," yet a young boy is very apt to lose sight of the object of the experiment he is performing if he has to work through a long list of printed instructions. The usual measurements of lengths, areas, volumes, and densities, with some exercises on centre of gravity and levers, are followed by experiments on air pressure, and the book concludes with simple experiments on heat and exercises in solution, filtration, and distillation. It can certainly be recommended as a good preparatory course in view of more advanced work.

"Literary Hearststones."—*John Knox*. By MARION HARLAND. Illustrated. (Price 5s. G. P. Putnam's Sons.)

The series in which this volume appears bears for its sub-title: "Studies of the Home Life of certain Writers and Thinkers." The (Continued on page 654.)

J. M. DENT & CO.'S NEW SCHOOL BOOKS.

IMPORTANT NOTICE.

The attention of Schoolmasters and Teachers is specially directed to the below-mentioned editions of books set for the Cambridge Local Examinations of 1903, which Messrs. DENT will have ready by the end of November.

SCOTT'S LORD OF THE ISLES. Edited by W. KEITH LEASK, M.A., with full Introduction, Glossary of Obsolete Words, and Notes; also numerous Illustrations in the Notes and Glossary, helpful in elucidating difficult passages.

KINGSLEY'S HEROES. Edited by OLIPHANT SMEATON, M.A., with Introduction and Notes; also numerous Illustrations.

MILTON'S PARADISE LOST, Books V. and VI., in Two Volumes. Edited by Miss FLORA MASSON, with Introduction and Notes.

POPE'S ESSAY ON CRITICISM. Edited by M. WANTILLOVE, M.A., Litt. Doc., with Introduction and Notes.

CAESAR'S GALLIC WAR, Books II. and III., in One Volume. Edited by A. CROOM PATERSON, M.A. Oxon., Classical Master, Royal High School, Edinburgh.

THE TEMPLE SHAKESPEARE FOR SCHOOLS.

Edited, with Introduction, Notes, and Glossaries. Illustrated with Coloured Frontispieces of the Costumes of the Period, with Drawings by Prominent Artists, and with numerous Reproductions from Old Engravings in the Glossaries and Notes.

THE TEMPEST.

Edited by OLIPHANT SMEATON, M.A. With 8 Illustrations by WALTER CRANE. Crown 8vo, cloth, 1s. 4d. [Just Published.]

MACBETH.

Edited by GEORGE SMITH, M.A., LL.D. With Illustrations by T. H. ROBINSON. Crown 8vo, cloth, 1s. 4d. [Just Published.]

JULIUS CAESAR,

Being set for the Cambridge Local Examinations for 1903, will be ready on November 30.

Just Published.

THE TEMPLE SERIES OF ENGLISH TEXTS PREPARED FOR SCHOOLS.—First Volume.

SCOTT'S MARMION.

Edited, with Biographical Introduction, by the Rev. R. P. DAVIDSON, M.A. (Oxon.). With numerous Illustrations from Topographical and Costume Drawings and Portraits. Crown 8vo, cloth, 1s. 4d.

Further Particulars and Lists of Series post free

First Volume of a New Series on the lines of DENT'S MODERN LANGUAGE SERIES. General Editor—WALTER RIPPMAUN, M.A.

DENT'S FIRST LATIN BOOK. By HAROLD W. ATKINSON, of Rossall School, and J. W. E. PEARCE, Head Master of Merton College, Sidcup. With Twelve Coloured Illustrations by M. E. DURHAM. Fcap. 8vo, cloth, 2s. 6d. net. [Just published.]

DENT'S ENGLISH GRAMMAR OF PARSING AND ANALYSIS. By W. BRYANT. Fcap. 8vo, cloth, 1s. 4d. [Just Published]

EIGHTH EDITION, completing 32,000 copies (with the Addition of Five Simple Songs and Music).

DENT'S FIRST FRENCH BOOK. Based on the Hölzel Pictures of the Seasons. By S. ALGE and W. RIPPMAUN. 1s. 6d. net. [Just published.]

SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French.
Price 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.
"The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are especially good."—*Bookman*.
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises; hence our immediate approval of this book."—*School Guardian*.

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

THE PUBLIC SCHOOL SPELLING CARD.

Fortieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

French Essentials and French Conversation Sentences.

Second Edition. Price 2s. cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

[An appendix embodying the final official changes in the simplification of French Grammar rules will be presented with each copy.]

HEATH'S MODERN LANGUAGE SERIES.

AN IMMEDIATE SUCCESS.

INTRODUCED INTO MANY OF THE
FIRST SCHOOLS OF ENGLAND, SCOTLAND, AND IRELAND.

HEATH'S PRACTICAL FRENCH GRAMMAR.

By W. H. FRASER, B.A., and J. SQUAIR, B.A., Professor in the Romance Department, Toronto University. With an Introduction by WILLIAM ROBERTSON, M.A., Examiner in Modern Languages for the University of Aberdeen. Crown 8vo. Section I., 2s.; Section II., 2s. 6d.; Complete, 3s. 6d.

"I have submitted it to a very exhaustive examination, and I am of the opinion that it is the finest and most practical French course yet published. The ingeniously graded nature of the exercises cannot fail to make the pupil unconsciously absorb the new language, while, as they are continuous in character, the interest is sustained throughout. From the very outset it is possible to read and write French prose. The method of indicating pronunciation is excellent, and is a desirable and useful feature. I shall have very great pleasure in adopting the book here. . . . The more widely known its merits, the better for a sound and rapid acquisition of French in this country."—JAMES M'CUBBIN, B.A., F.R.S.E., Burgh Academy, Kilsyth, Glasgow.

"I know no French Grammar that at all approaches it as a working school-book."—J. A. PORTER, M.A., Mountjoy School, Dublin.

"The authors have produced an excellent grammar, which is no mean praise when the wealth of grammars available is considered. . . . We recommend it."—*Schoolmaster*.

**The Best Beginners' Course. Nothing to equal it.
LEHRBUCH DER DEUTSCHEN SPRACHE.**

By ARNOLD WERNER-SPANHOOFD. Crown 8vo, 2s. 6d.

"I like Spanhoofd more and more, and have introduced it in every one of my classes this year where such a book could be used. . . . The pupils learn their grammar unconsciously."—GUSTAV HAIN, Girls' High School, Aberdeen, Lecturer in German at Aberdeen University, &c.

"I am especially struck with the excellence of your 'Lehrbuch.' I have studied it very carefully, and have put aside the idea (which I once had) of providing such a book myself—so exactly does yours represent my ideal of what such a book should be."—ALEX. K. DALLAS, M.A., George Watson's College, Edinburgh.

HEATH'S MODERN LANGUAGE SERIES.

D. C. HEATH & CO., 15 York St., Covent Garden, W.C.

sketch of John Knox is accordingly confined pretty closely to his personal history, and the reader must not expect any large delineation of the controversies of his stormy time, but only so much as is necessary to understand the particular personal situations. Knox's first mother-in-law is as prominent in the story as Mary Queen of Scots. The author is much beholden to McCrie, and does not seem to have hankered after original research. She writes with unpretentious ease and clearness, without distinction; and she succeeds in presenting a very fair sketch of the man and his surroundings. Her chief interest appears to lie in the moral and religious aspects of her subject. There are a number of good and pertinent illustrations. The printer, who has generally done his work to the credit of the Knickerbocker Press, has yet occasionally marred the text: for example, "Burnet's [for "Benet's"] College" (page 10); "Madame Ronald" [for "Roland"] (page 44); "Abbot of Crossraguel" [for "Crossraguel"] (page 185).

"Organized Science Series."—*First Stage Mathematics*. Edited by W. BRIGGS, LL.D., M.A. (Price 2s. Clive.)

This book contains the Euclid and algebra required for the First Stage in the South Kensington examination, and the arithmetical questions set during the last twenty years. For the simple purpose in view it seems to us well adapted. The propositions are given at considerable length and are illustrated by frequent notes. The second part is a slightly abridged edition of the first seventeen chapters of the elementary course of the "Tutorial Algebra," written by Mr. R. Deakin and noticed in this journal for September, 1901.

The Roll-Call of Westminster. By Mrs. A. MURRAY SMITH. With Illustrations and Plans. (Smith, Elder.)

In bulk and scope this volume is a mean between the author's (Miss E. T. Bradley) "Annals of Westminster Abbey" and "The Deanery Guide to Westminster Abbey." The worthies who are buried in the Abbey or commemorated there are skilfully grouped, partly chronologically and partly by rank or profession. Then, as in a votive tablet, there is spread before us the roll-call extending from Edward the Confessor to General Gordon. The plans and full index make the book a perfect guide to the Abbey.

"Athenæum Press Series."—*Selections from De Quincey*. Edited by M. H. TURK. (Price 4s. 6d. Ginn & Co.)

An excellent selection of some five hundred pages, skimming the cream of the collected works in fourteen volumes. We have, of course, the "Confessions" in full, large extracts from the "Suspiria," and the literary reminiscences of Lamb, Coleridge, and Wordsworth. Prof. Turk has done his work of selection, which is the main thing, admirably, and his annotations leave little to be desired. Cambridge scholars will complain that Greek accents are ignored, and we may carp at "Revelations" for the Book of Revelation, and the description of Le Bruyère as a French novelist; but these are pin pricks. We have to thank the Professor for a delightful volume.

A Short History of Rome. By W. S. ROBINSON, M.A. (Price 6d. Rivingtons.)

This is a convenient summary of Roman history for a lower form. It is not suitable, as the compiler supposes, for higher classes.

CAMBRIDGE MATHEMATICAL SERIES.

New Volumes.

Differential Calculus for Beginners. By ALFRED LODGE, M.A., late Fellow of St. John's College, Oxford, Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill. With an Introduction by Sir OLIVER LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham. Crown 8vo, 4s. 6d.

Elementary Geometry. Comprising the substance of Euclid, Book I., 1-48; Book III., 1-34; and Book IV., 1-5. By W. M. BAKER, M.A., Head Master of the Military and Civil Department of Cheltenham College, and A. A. BOURNE, M.A., Senior Mathematical Master at the same College. Crown 8vo, 2s. 6d. Also Book I., separately, 1s.

This volume is written on the lines recommended by a Committee of the Mathematical Association which was formed at the suggestion of the British Association for the purpose of making reforms in the teaching of Elementary Mathematics.

Examples in Algebra. By C. O. TUCKER, B.A., Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge. Crown 8vo, with or without Answers, 3s.

This volume also follows the suggestions of the Committee of the Mathematical Association referred to above.

New Volume of BELL'S SCIENCE SERIES.

Injurious and Useful Insects. An Introduction to the Study of Economic Entomology. By Prof. L. C. MIALI, F.R.S. With 100 Illustrations. 3s. 6d.

"Professor Miall has been happily inspired; he has given us just the book which was wanted, just the book which we might expect from him."—*Pilot*.

"An admirable elementary text-book of its subject."—*Scotsman*.

WORKS BY

C. P. MASON, B.A., F.C.P.

English Grammar. Including Grammatical Analysis. 177th-182nd Thousand. Cloth, 3s. 6d.

A Shorter English Grammar. With copious and carefully graded Exercises, containing the pith of the "English Grammar," with fewer minutiae and more Exercises, 62nd-66th Thousand. Cloth, 3s. 6d.

Outlines of English Grammar. For the use of Junior Classes. 127th-136th Thousand. Cloth, 2s.

First Notions of Grammar. For Young Learners. 135th-144th Thousand. Cloth, 1s.

Practice and Help in the Analysis of Sentences. Cloth, 2s.

Code Standard English Grammar. Adapted to the requirements of the successive standards of the New Code. Five Parts.

Complete List of Mr. C. P. Mason's Works post free on application.

The Fitzroy Pictures. For Schools, Churches, Mission Rooms, and Hospitals. Designed by HEYWOOD SUMNER, SELWYN IMAGE, C. W. WHALL, LOUIS DAVIS, and C. M. GERE. Prices from 6d. to 5s. 6d.

Full Illustrated Prospectus on application to the Publishers.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

The University Tutorial Series. BOOKS FOR SPECIAL EXAMS., 1903.

CAMBRIDGE LOCAL EXAMINATIONS, 1903.

- Aeschylus.—Prometheus Vincetus.** By F. G. PLAISTOWE, M.A. Lond. and Camb., and T. R. MILLS, M.A. Oxon. Text and Notes, 2s. 6d.
- Caesar.—Gallic War, Books II., III.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASON, M.A. Lond. and Camb. Text and Notes, 1s. 6d. each Book. Vocabulary, 1s. each Book.
- Herodotus.—Book VIII.** By J. THOMPSON, M.A. Camb., and R. M. THOMAS, M.A. Lond. Text and Notes, 3s. 6d. Vocabulary, 1s.
- Homer.—Odyssey, Books IX., X.** By J. H. HAYDON, M.A. Lond. and Camb., and A. H. ALLCROFT, M.A. Oxon. Text and Notes, 2s. 6d.
- Horace.—Odes, Book III.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Text and Notes, 1s. 6d. Vocabulary, 1s.
- Livy.—Book V.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASON, M.A. Lond. and Camb. Text and Notes, 2s. 6d. Vocabulary, 1s. 6d.
- Thucydides.—Book VII.** By J. F. STOUT, B.A. Camb., and F. G. PLAISTOWE, M.A. Lond. and Camb. Text and Notes, 3s. 6d.
- Vergil.—Aeneid, Book X.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Lond. and Camb. Text and Notes, 1s. 6d. Vocabulary, Books IX., X., 1s.
- Shakespeare.—Julius Caesar.** Edited, with Introduction and Notes, by Prof. W. J. ROFFE, D.Litt. 2s.
- Roman History, Outlines of, 133-27 B.C.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASON, M.A. Lond. and Camb. 2s.

COLLEGE OF PRECEPTORS' EXAMINATIONS, 1903.

- Caesar.—Gallic War, Book IV.** By A. H. ALLCROFT, M.A. Oxon., and T. R. MILLS, M.A. Oxon. Text and Notes, 1s. 6d. Vocabulary, 1s.
- Euripides.—Medea.** By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon. Text and Notes, 3s. 6d.
- Horace.—Odes, Book III.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Text and Notes, 1s. 6d. Vocabulary, 1s.
- Livy.—Book XXI.** By A. H. ALLCROFT, M.A. Oxon. Text and Notes, 2s. 6d. Vocabulary, 1s. 6d.
- Vergil.—Aeneid, Book VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Text and Notes, 1s. 6d. Vocabulary, 1s.

OXFORD LOCAL EXAMINATIONS, 1903.

- Caesar.—Gallic War, Books IV., V., VI.** By A. H. ALLCROFT, M.A. Oxon., in collaboration with F. G. PLAISTOWE, M.A., and others. Text and Notes, 1s. 6d. each Book. Vocabulary, 1s. each Book.
- Euripides.—Medea.** By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon. Text and Notes, 3s. 6d.
- Homer.—Odyssey, Books IX., X.** By J. H. HAYDON, M.A. Lond. and Camb., and A. H. ALLCROFT, M.A. Oxon. Text and Notes, 2s. 6d.
- Horace.—Odes, Books III., IV.** By A. H. ALLCROFT, M.A. Oxon., and others. Text and Notes, 1s. 6d. each. Vocabulary, 1s. each.
- Vergil.—Aeneid, Book VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. and Lond. Text and Notes, 1s. 6d. Vocabulary, 1s.
- Chaucer.—Prologue to the Canterbury Tales.** By A. J. WYATT, M.A. Lond. and Camb. 1s.

LONDON UNIVERSITY MATRICULATION, 1903. (OLD REGULATIONS.)

JANUARY 1903.

- Euripides.—Alceste.** By J. H. HAYDON, M.A. Lond. and Camb. Text and Notes, 3s. 6d.
- Ovid.—Tristia, Book I.** By A. H. ALLCROFT, M.A. Oxon., and F. P. SHIPHAM, M.A. Lond., F.C.P. Text and Notes, 1s. 6d. Vocabulary, 1s.
- Ovid.—Tristia, Book III.** By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Lond. and Camb. (Uniform with Book I.)

JUNE 1903.

- Livy.—Book XXI.** By A. H. ALLCROFT, M.A. Oxon. Text and Notes, 2s. 6d. Vocabulary, 1s. 6d.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	Half Page ...	£3 0 0
Quarter Page ...	1 15 0	One-Eighth Page ...	0 17 6
Per Inch in Column, 8/-.			

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

- Scholarships, Official Notices, School Transfers, Partnerships, &c.**—6d. per line; minimum charge, 5s.
- Situations Vacant and Engagements Wanted.**—30 words for 2s.; each 10 words after, 6d.
- Lectures, Classes, Non-Resident Engagements, &c.**—48 words for 3s.; each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

PEDAGOGUES, THEIR PILOTS, AND THE UNIVERSITIES.

By P. A. BARNETT.

IS it not high time that some corporation which has a real right to speak about education as a national interest and a skilled craft should give the country an authoritative lead on the problems of practical education which daily grow more complex?

Some of our present "educationists" remind one, *salva reverentia*, of nothing so much as of the small boys who possess themselves of mounds derelict within their spheres of influence and proclaim themselves, to town and universe, as Kings of the Castle. This or that fortuitous eminence is captured by a prophet, anointed or not, and therefrom he pronounces allocutions of varying quality, but almost always with a conviction of his own unquestionable competence, on sociological questions of most serious import. Myself a miserable offender, I am free to denounce the offence. "Et ego in Arcadia." I propose to make a plaint, after my kind; and, after my kind, to add one more negligible proposal to those so liberally presented to the world. One merit of the forthcoming suggestion (a merit in such cases rare) is that it is not only practical, but has been shown to be practicable.

The Universities, which should have helped us, or at least stopped our mouths, have passed us by on their asses when we were in real straits, regarding these as none of their business; the post of benefactor will soon be filled by others, as competent perhaps, but armed with no such prestige as theirs, unless they themselves see to it that the republic takes no further hurt.

Surely it is not a little curious that the bodies which, in the truest sense, stand at the head of organized national education should be so neglectful of their duty as to remain complacently silent when the highest social and intellectual needs of the country call for their help and leading. Indeed, if visions are not about, this help and leading are, of all things in this English world, becoming largely official. Almost every other organized body that has a constitution, chartered or unchartered, has raised its voice to give direction, or, at all events, to protest against any discrimination that may affect its interests; the Universities alone, to whom Trojan and Tyrian alike are dear, whose disinterestedness and credentials could not be questioned, are silent. Yet things are not going to be as they have been hitherto.

For nearly a whole generation Oxford and Cambridge

have determined, though probably without meaning it, the main course of English secondary education. Not only have their own curricula set up the ultimate aim of the most continuous and strenuous school studies, but the school and public examinations which they have organized have given their definite characters to the curricula of thousands of pupils who were never meant to matriculate, and also—a fact no less important—to the conventional methods by which those studies have been conducted. About these facts there can be no doubt at all, as can very easily be seen. Schools of the first rank have long been considered to prosper in proportion to the number of their pupils who gain distinctions at the two older Universities, without regard (Heaven knows!) to the missing tablets of those who have suffered shipwreck on the voyage; schools of a lower rank have toiled behind on the same route, wheezily protesting that they are going in another direction as well as that to which their faces have been apparently turned. Until quite recent days, public schools of the first degree which boldly set before themselves another ideal have mostly dragged on a miserable existence towards painful self-extinction, as was, for instance, the case of the Isleworth International College, built on the prescriptions of Huxley and Tyndall, and blessed by Cobden. But the innovators are now capturing all the public machinery, which has been despised, or at least ignored, by the rightful custodians of education; and the future determination of the main line of public education seems likely to fall into the hands of an earnest minority representing a single side of national intellectual interests. The result is not creditable to Oxford and Cambridge, nor, I think, entirely good for the country.

For some time, through good and evil report, a certain number of enthusiasts have demanded for education a place and name, of its own right, in the annual stock-taking which is the business of the British Association for the Advancement of Science; and it is indeed no insignificant matter that their efforts have at last succeeded. Whether they have had in their minds merely the use of the experimental sciences as the main gymnastic of education, or education as a working system to be devised on a basis of ascertained fact as to the needs of mankind (and England) and the constitution of men (and Englishmen), is quite another thing; the doubting Thomases may perhaps pardonably shrug their shoulders, and wonder what "scientific" conception of education has been reached by some of those who talk so glibly about the "science" of education. Yet the step means much. At the least it would appear that education, so long the victim of unauthorized programmes and imperfect experiments, is to be examined from base to apex in a systematic way. Nature is to be once more pursued into her recesses, and by the official huntsmen, too; we are to discover at last, and at last to place on record, the principles which determine the goodness or badness of our efforts to mould young people. No one man's *obiter dicta* or patent methods are to stand against a radical attack on the problems involved.

Heretofore public education in this country has been regarded mainly as an affair of machinery, of organization. Almost every effort to manipulate it, almost every reform, almost every controversy, has been decided not so much as something in itself of vast importance both to individuals and the whole nation, but rather with reference to the claims and supposed needs of this or that institution, of this or that class—the Church, the School Boards, the County Councils, the farmers, the merchants, the manufacturers, and so forth. Very rarely indeed has any attempt been made to define and examine this most vital expression of social energy as something which concerns man as man, the nation as a nation, society as a living and growing thing rather than a writhing bundle of competing institutions.

And yet its exclusion from the legal hierarchy of "sciences" is perhaps easy to explain. First of all, it is a sort of focus for the application of a large number of sciences: biology and its subsidiaries, sociology and the branches of sociology, the sciences contributing to it, these all concentrate their practical solicitude on education. If they can get at nothing else, they can get at the youth of society. In the next place, every one thinks—and rightly—that he knows a good deal about education: the mischief lies in the fact that he knows only one or a few aspects of it. Just because the area which it covers is so general, its interests so near to men's business and bosoms, men acquire

views about it easily; and fathers and mothers abound, some being at least as well qualified as the many bachelors and spinsters who so readily give instruction in the art of bringing children decently from the cradle to effectual citizenship. Again, in one or another shape, it is already the solicitude of a crowd of conflicting organizations; its aims and practices are inextricably associated with religious, social, and philosophical systems deep-set in tradition; so that, by a kind of paradox, people cannot take note of the common ground just because there is so much of it. Thus, on the very threshold of the subject, we are at a loss for an acceptable definition.

Every institution which really believes in itself sooner or later perceives that in order to survive it must propagate its ideas by influencing the young. To this extent, in its belief in the future and in the significance of the type as against the present adult, the world has always been evolutionary. So, as soon as the British Empire really and truly believes in itself as a live thing, it will not leave education to be swaddled by officials and amateurs; we shall all get our *congé*. When it becomes self-conscious, and not merely noisy and light-headed, it will insist on a responsible, systematic, and scientific examination of the problems involved. The patronage of the British Association is, at least, a sign of the times. The efforts expended by institutions so long independent and suspicious of one another are now, we hope, to be considered together, to be included in one really authoritative definition, to be co-ordinated, to be conceived as a whole, to be a "science" with a quotation on the science stock exchange.

It is not difficult to see that education, if it is a science, has a double and therefore ambiguous character; though the awkward facts are sometimes blinked by our jaunty theorists and instructors. It both tries to find out the ideal standard or aim by which to judge what actually is and seeks to formulate rules by which the ideal may be approached, if not attained. Most of the advice addressed to us ignores the first, while, with great confidence, it deals with the second, part of the task. Yet it seems clear that, if any progress is to be made, there ought to be some sort of general agreement about the ideal end, some accord as to the direction in which we are to look for the port towards which our sails are set.

On the other hand, *il faut vivre*. If we insist pedantically on this, the most scrupulous, way of addressing ourselves to our task, we raise at once the troublesome questions involved in ethics; and yet we cannot wait for the final verdicts of philosophy before acting. We are called upon to educate, and we do educate, in spite of a very vague sense of the ethical issues involved. The practical or positive side of the science is, so far, for all of us, the more important and inevitable, that we must appeal in the first place to common experience. If all schools are to come together and to discuss profitably the vexed questions—every one involving an immediately practical result—we must have some practical agreement. Socrates notwithstanding, the conventional position is a good start. "We say that that which all are agreed on is." The common conventional notion has it that education is a name justly applicable to any systematic efforts by which one person tries to make another better than he is. Something like this is probably the nearest we can get to a generally accepted definition of one of the very commonest social arts, the operation of one of the most primitive social instincts. It is not, of course, philosophically perfect; its usefulness for our present purpose is exactly its unphilosophical character. And, at any rate, any other definition will raise a more importunate crowd of protests. The one, for instance, to which Mr. Spencer's great name lent currency in the last generation, which regarded the process as enabling people to adapt themselves more perfectly to their environment, is not true to fact; we are continually teaching our pupils to alter their environment rather than themselves. Again, if we succeeded to the top of our bent, when perfectly adapted to our environment we should become mere automata. Once more, there are a host of cases, religious and moral, in which there can be no question of adaptation, the whole horizon being shifted from an actual to an ideal environment; that is, a large number of people regard education as primarily endeavouring in essential respects to make man actually independent of his environment—"dulce et decorum est . . . mori."

To be sure, Socrates is on our track after all. What kind of "goodness" are we to cultivate? Goodness for what? Is it to be considered with reference to the man himself, to the world,

to *his* world, to what? Are we to cultivate a mere technical ability, or a hazy cosmopolitanism; or is there a solid something in between, a *national* character?

Points like these must be approached early if only they are to lead to a discovery of abysses that divide us. We cannot smugly pass them by to talk of "methods." As a matter of simple flat fact they are actually the sources of most of the educational schisms that disgrace us. At all events, we should be better able, after tackling them together, to understand one another's language. Perhaps we might even find it possible to approximate or to modify views at present too grossly at variance. Assuredly, until this is done a very large class of questions cannot be discussed with any pretence to finality, particularly those involved in what used to be called the conflict of studies. Mere complacent remarks of either eminent or undistinguished persons will not settle matters for us with any approach to thoroughness; what one great or unknown name may warrant another will discredit. And all people have their psychology; to repudiate the term is not to abandon the thing. The difference between the avowed and the unavowed psychology is that the one, however invalid, is an honest endeavour to see things as they are, and the other is a refusal to look beyond an arbitrarily limited experience and horizon.

Besides, it would undoubtedly be found out that many disputants who had mutually committed themselves to partisanship from having called one another names, such as "humanist" or "naturalist," are really about matters of practice in accord. Even amidst the nebulous controversy that arose last autumn in the newly consecrated section of the British Association, there was, as this journal remarked, a singular unanimity about important middle axioms. Of course no less than this should be expected when so much of the foundation of a science is of necessity to be sought in the details of daily practice derived from secular tradition. People have educated, and educated well, for many generations; just as they built houses and bridges, and built them well, long before the use of squared paper made engineering easier than it was before. Education, too, has its squared paper, perhaps; though squared paper is not the whole of education. We cannot, in the meantime, affect to be surprised when we find that there is a good deal of material in education ready to our hands on which controversy need not, for the present at all events, be pushed to metaphysical bases. And effort organized without prejudice may do a great deal to get some sort of order—that is, science—out of chaos.

Education, both in general and in detail, has all through the ages here and there attracted the attention of great thinkers; and educational theory, like educational practice, has shared the phases and fortunes of other branches of philosophy and politics. Occasionally a prophet has arisen, like Rousseau, who has expounded to his generation theories of politics and education together with momentous effect. Sometimes, as was the case with Comte, the apostles have swallowed their master's general formulas, and followed, in practice, their own prejudices. But the attention given to the subject has tended to become more and more one-sided. It has tended to concern itself with the matter of instruction rather than with the person, the object of education. When the great Greek philosophers brought philosophy from the clouds to the earth, from physical to ethical speculation, they were amply justified by the fact that physical speculation was often visionary, and produced poor results in practice, whereas speculation in ethics and logic was based on solid grounds of experience, and therefore promised real guidance to action. Unfortunately, for a long time their deliverances were regarded not merely as starting points of operation, but as bases for building a whole superstructure of inferred knowledge and discipline. For the limitations of subject-matter imposed on them by the conditions of the knowledge of their time were long accepted as fixed and final, until the growing weight of discovery burst open the closed doors and compelled education to admit the claims of a host of active ideas, fresh systems of facts, new sciences, to be represented in the equipment of men for life. Thus, the physical sciences have conquered places for themselves in curricula. Whatever they were to Plato and his contemporaries, for us they occupy a very large area of human interest. Our conceptions of the world, as well as a thousand circumstances of our lives, have given them a universal import and meaning.

But, unfortunately, the importunity of these claimants, and

the transformations which they have effected and are ever effecting in the conditions of living, have absorbed too exclusive an attention. We are in imminent danger of forgetting that, if they are each to have a proper share with other interests in influencing the development of immature individuals, some order must be preserved amongst them; that they must be brought into rational relation with a finite and complex intelligence; that we cannot all know, much less do, all things. There is both a hierarchy in the sciences and a law in the development of man. To ignore either side of the equation is a gross offence against scientific method, whoever commits it, and can lead to no profitable result. Together with the materials for education, it is our bounden duty to consider the person to be educated as well. What combination is best for him, and for him in manifold? The fallacy of composition is particularly perilous in the practice of education.

To those who watched, without prejudice, the discussions in the new section of the British Association last autumn, few things were so interesting as the frequent ignorance of disputants concerning the cardinal points to be ascertained and the endeavours already made to arrive at them. All sorts of mouldering bones were dug up and rearticulated. The question was sometimes propounded as the case of the naturalists against the humanists; sometimes as science against classics; sometimes as the canons of sacred induction against the poor old battered syllogism; sometimes as the merchant and manufacturer against the don; sometimes as Tom, Dick, and Harry against the arrogant and supercilious schoolmaster; and very generally as the spirits of light against the powers of darkness. And, for at least one well informed speaker, the last word on the subject has been said by Mr. Spencer: "*Causa finita erat.*"

If it is only to clear these irrelevances out of the path of reform, the new section of the British Association may perform a work of enduring value. In truth, most of these and such-like questions—at all events, as they are understood by their propounders—have little purpose except for histories of educational theory. The problem which we have to solve to-day is how we can to-day influence adolescents for their good or (for the things are inseparable) the good of their world. This is the thing that matters. If a really scientific approach is made to the problem, we may expect that the great issue will be recognized as concerning, primarily, the future of the *child*, not of a class, or interest, or even of a science; and, if this is so, then we must not beat about the bush, but satisfy ourselves and other people what we would have, what we really desire the finished product of education to be. As matters stand, it is clear from the proceedings of the new section, if no other evidence were forthcoming, that there is a most marked discord amongst our guides as to the end to which education is to be devised and directed.

The very first discussion laid bare the earnest desire of one class of enthusiasts to devote the chief energies of national education to the production of an ample supply of young persons who could make themselves useful in a merchant's office on (or before) their fifteenth birthday. And this, if you please, was discussed as a prime question of the "science" of education. Even when the interests of the employer or the "consumer" were relegated to a proper place, the dominant idea was the rivalry of studies, rather than the necessity of determining the proper destination of the pupil and his preparation for it. There was a constant tendency for speakers to present themselves as partisans of a particular gymnastic, or at all events, to be so considered by others who were themselves partisans. Even Mr. Price's admirable examination of the claims of economics as a general study still left on the mind a sense of incompleteness and partiality. It is true enough that the study of economics has the vast merit of widening the area of observation and reasoning, and of being at the same time in perpetual contact with "facts"; but, having in view the youth of the new section, it certainly seemed that so special a study as economics could not profitably be considered in relation to a general scheme of education until some such scheme has been constructed, expounded, and discussed.

A nearer approach to reality was made when controversy turned on the methods of teaching a single subject of universal application, such as mathematics. This brings the specialists and the experts together to some profit. For no one disputes the right of mathematics to a large place in a complete or

integral curriculum. If it is not the basis, as Comte would have it, of the pyramid of studies proper, it is, at all events, the necessary cement of all the layers of sciences that build the pyramid; so that the means by which it can best be taught can be discussed without many preliminaries. And this order of preoccupation has the merit that it is taken in the true spirit of the positive philosophy, little regarded by those who forget that Comte deferred study of the subject till *after puberty*.

This suggests the line upon which, it would seem, immediate advance can be made. We must have temporarily ordered curricula, without waiting for vexed questions of psychology to be settled either on traditional lines or by the "genetic" studies that have already given much stimulus and caused some distraction to the practice of education in both England and America.

Why do we not take various schemes of studies as generally accepted in well marked grades of teaching—say the established primary, the traditional secondary, and the intermediate or "scientific" and commercial—and submit them, as "references," to a board representing high expert knowledge and opinion on the practice of organization of education? Let such a board appoint in its turn specialist committees in each generally recognized "subject," to report on the scope and method of each as a part of instruction, and on the school time required for its proper treatment. Then let the board collate the reports of all committees and publish general recommendations thereupon.

Something like this has actually been done in America. The National Education Association of the United States of America is an incorporated body with funds of \$125,000 to \$150,000. It is something between a Teachers' Guild and a National Union of Teachers as we have them—more popular than the one, more disinterested than the other. It holds two conventions a year: one, about February, of the superintendents of education from various States; and the other, in July, for teachers of all grades. The Council comprises, it would appear, two representatives from each State elected for life, who fill up any vacancies which may occur in their body.

In July, 1892, this National Council appointed a Committee of Ten to hold conferences of teachers of each principal subject which entered into the programmes of secondary schools in the United States of America, and into the requirements for admission to college; each conference to consider "the proper limits of its subject, the best methods of instruction, the most desirable allotment of time for the subject, and the best methods of testing the pupils' attainments therein." Each conference was to contain representatives of different parts of the country. A committee was thus appointed to select members and arrange meetings for conferences, nine in number; members were selected, and conferences met and reported to the Committee of Ten, whose general report, in December 1893, contained a summary and appreciation of the work of the conferences and their several recommendations.

The value of these documents it is impossible to exaggerate. There is nothing exactly like them known to me. The basis of the inquiry is democratic in the best sense, for it consists of the testimony of working teachers and experts; it is not merely official, imposed on the rest of the world by superior persons of none but hierarchical qualifications. Nor was it conducted in the interests of any special study or set of studies, nor were the deliverances of the nine several conferences left sprawling in mid-air; they were brought together on solid earth, considered in one general summary by the original Committee of Ten.

A work of like importance, but more specialized, was that of the Committee of Seven appointed in 1896 by the American Historical Association. Of the seven persons composing this Committee one was actually teaching in a school and three had previously been teachers, the minority being "specialists" actively interested for years in the general problems under consideration.

In February, 1893, the National Educational Association set on foot an inquiry relating to primary education similar to that conducted by the Committee of Ten for secondary schools; this new body was the Committee of Fifteen. It subdivided into three smaller committees charged to consider, in detail, the training of teachers, the correlation of studies in elementary education, and the organization of the city school systems.

Again, in 1895, this truly National Association appointed a Committee of Twelve to report on problems of education in rural

districts, and the questions discussed were propounded as school maintenance, supervision, supply of teachers, instruction, and discipline.

At the instance of the same great patriotic and enlightened body, a Committee of Twelve, nominated by the Modern Language Association of America, reported, in December, 1898, on the place and methods of modern language teaching.

If the British Association can do anything for English education in any degree like what has been done by the great society on the other side of the Atlantic, it will, indeed, have deserved well of teachers; but it must be remembered that the interests of the English corporation are not educational, and that it has not the broad base of the American work which has done so much for American educators. Is it too late to ask the Universities to provide, beg, or borrow the comparatively small sums which would be necessary to organize, say, three committees for British guidance? Of course, the American reports, together with the documents, often so valuable, issued from Mr. Sadler's office at the Board of Education, would form a good beginning for work; but we want a national system of our own, consonant with our own traditions, habits, and institutions. And one thing to me seems certain—that it is from our English-speaking and English-thinking cousins that our best help will come; if for no other reason, at least because their plans and practices are not imposed on them from above, but adapted by active teachers themselves to meet conditions of which they themselves have become aware by patient common investigation.

Work like this, resulting from the co-operation of the Universities (new and old), the schools, and associated experts, in questions of general educational interest, would necessarily have an authority far greater than the epigrams of eminent persons or powerful newspapers, who at present possess and obsess the public ear, or even of an unrepresentative council, however strong. It would give us solid ground to go upon, the results of some kind of practical philosophy, without the illness that attends such things—the controversies which they excite. The first work of the British Association has too narrow a basis, and provides for no reference to a moderating authority which we can all respect; it is doomed, therefore, to be ineffectual. A larger scheme would not, indeed, even if completed, make education at once "scientific"; but it would be the first step in the right direction—it would give us the cream of current opinion. The general consensus of sound empirical opinions in such matters as politics, morals, and education is good ground. Let us ascertain it. "Science" will, after all, not do much more in this region than find reasons for what has been done off and on since the making of man.

HINTS ON MODERN LANGUAGE TEACHING.

By A FAHRENDER SCHÜLER.

THE need of a more intense and intelligent study of modern languages has of late been urged so loudly, both in Europe and America, that the subject has finally been taken up by Prime Ministers and head masters, and it seems reasonable to hope that a rift has at last appeared in the clouds of pedantic controversy enveloping the sun of the "right method," and that we are on the way towards the discovery of the proper objects and ideals which should stimulate us.

The war, whilst it lasted, was not without its humorous side. The old school—whose adherents urged that the learning of endless exceptions, the plodding through of innumerable disconnected sentences devoid of meaning, the laborious manufacture of that strange patchwork "school French" and "school German"; who urged that all this was a most excellent "mental training," and who regarded the study of literature merely as a continuous *confirmation* of the rules of grammar and syntax—are gradually passing away. But the victorious opponents are somewhat like the present opposition—full of life and vigour, but without a definite and uniform policy, and without a leader. Thus it happens that, as Mr. Tarver, of Eton, confesses, the place of modern languages in our school curricula is not yet established.

The so-called reformers have a certain difficulty in nomen-

clature. We hear of the "new" method, forgetting that the same principles obtained in Germany more than a hundred and fifty years ago; we hear of "imitative," "direct," and "natural" methods. The name, after all, is of small consequence. We are only seeking that method which appeals to our ideas of common sense. It is good to see the fiery enthusiasm of those who wish to push their own hobby to the front; of M. Gouin, with his opera-bouffe methods; of Viëtor, with the scientific study of phonetics; of Walter, the strenuous advocate of *Realien* or the language of everyday life. It is for us to calmly criticize and take up our own line.

Each teacher must think for himself and teach according to his own lights and convictions. The rash laying down of dogmas is absurdly futile; the great pedagogue Herbart never wrote anything until he had matured it in his mind; and well does John Russell Lowell say:

Words, if you keep 'em, pay their keep,
And gabble's the short cut to ruin.

I hope, therefore, you will understand that the words I have to say are simply put forward in hopes that they may be useful for stimulus and suggestion, and in no wise imagine that I am so arrogantly stupid as to attempt in any way to lay down the law.

I will begin with a few words about the objects or aims we should have before us, then survey as rapidly as possible the methods to be pursued, and finally submit for your discussion a few of the problems which should interest teachers of all faculties; for I take it that we look upon ourselves as hearty co-workers, and not jealous rivals. We have before us an ideal object and a real object; it is our business to see how best they may both be harmoniously combined into one central educational object. The ideal object is to arouse sympathy for the foreign language, people, and country; to combat our insular prejudice—not, mind you, to produce that colourless curse, cosmopolitanism, nor blind imitation or admiration, but rather to open out our pupils' minds to a cordial appreciation of what is excellent abroad. The real object is to cultivate an ability to read, understand, write, and speak the foreign language. Dr. Breul lays principal stress on fluent and intelligent reading, Dr. Wendt on fluent speaking and understanding. Both appear to me equally important. And the one central object is so to stimulate and interest our pupils that, on leaving school, they will not look upon modern languages as pitfalls for the unwary, but will have so acquired a taste for them that they will feel inclined to pursue their studies independently for themselves.

Before reviewing the methods, I will assume that the teacher is a fluent speaker of the language he is teaching; that he has been philologically trained in it, and that he is acquainted with the life, history, and development of the foreign people. I can, for instance, imagine nothing more ludicrous than a master laboriously drilling in pronunciation from a phonetic handbook, or directing a conversation taken bodily from one of the numerous "manuals." And here is at once a problem. It takes some time and not a little money to learn a foreign language conversationally; with the present "attractions" how can we expect to obtain duly qualified teachers?

As regards method, Mr. Siepmann's suggestion at a meeting of the Modern Language Association appears the most rational—namely, for lower forms, conversation; for middle forms, grammar; and for higher forms, literature. There is no difficulty in getting small boys to talk in the foreign language; their organs are pliable, they easily get a fair pronunciation, and they are really keen on speaking—especially in chorus; they have great powers of imitation, and they are very fond of learning by heart. On the other hand, they have but small reasoning powers, and no sense for the abstract. Then why learn abstract grammar? It conveys nothing to them; and why make them do exercises? They only do them mechanically. Why not use the tools to hand; give them plenty of repetition, as Prof. Spiers so excellently advised me, and exact fluency in reading and speaking? We want encouragement, not restraint; freedom, not fetters. Above all, we wish to gain their sympathy; to let them feel at the end of each lesson that they really possess something, "Das die Schüler etwas haben," as Prof. Rein continually emphasized to me. Always speak in French or German; make topical allusions; arouse curiosity and sustain life and activity; make them change places,

dramatize pieces, write on the blackboard, and correct one another. The conversation above all must not be forced, stilted, or mechanical.

In the middle forms the grammar is tightened up and systematized, and more attention is paid to a close analysis of the text. The exercises are based on the Reader—permutations and combinations of the words and phrases occurring in the text to test the application of their grammatical knowledge; but no sentence is devoid of meaning—it is either topical, or amusing, or conveys some thought to the pupil.

In the upper forms an attempt should be made to cultivate an appreciation of style; and therefore free essays are good. A little philology may be taught casually; the text is carefully chosen to illustrate French history and culture, which gives excellent opportunity for essays, prose, and many various exercises.

But, I insist again, the method is not everything: the individuality of the teacher is of far greater importance. The most attractive lesson I have attended was given in Altenburg by a lady teacher to a class of girls between sixteen and seventeen years old. They had only been doing English for two years; yet they were able to read and speak fluently and even elegantly. Afterwards I discovered that the teacher had never studied any method, but simply taught in her own way.

Lastly, I wish to suggest a few words on the following points:—

1. *Scholarships.*—Personally I have a treble dislike to them. There is, first of all, the danger that an intelligent boy will be pounced upon and sent in for a scholarship for mere advertising purposes; secondly, that this boy will be made to specialize prematurely, and thus miss the far greater benefit of a general education; and, lastly, that, having obtained the scholarship, he may find himself drifting into an academical or scholastic career, when he would have done much better had he devoted his energies and talents to practical life. I am much interested in the encouragement of modern languages; but I am more interested in the consideration of the welfare of each individual boy, and I hold it is the duty of a school to give to each boy a chance of developing *all* his faculties, and, further, that a school which turns out one-sided boys, however many distinctions it may attain, is not conducted on sound and liberal lines. Specialization should be left to the University or after-school life. If, therefore, we modern language masters can sustain our keenness and standard without the spur of scholarships, we may feel reason for self-congratulation.

2. *Place in Curriculum.*—I am one of those who hold that every subject, if efficiently taught, is equally valuable as a means of education, looking upon education as a development of the mental and moral powers, rather than a rigid inculcation of certain definite knowledge. After all, it is not what we learn at school that is of paramount importance, but rather *how* we learn; I would, therefore, wish in no wise for modern languages to be raised to pre-eminence more than any other subject, but regard them all as equally valuable instruments in the harmonious development of all the faculties. For this reason they should be correlated as much as possible with the other subjects, so that by supplementing them they may conform to the laws of association. The little boys will be reading about the ancient Britons. Let them hear something of the old Gauls or the folk-lore and legends of the old Teutons. The remote and naive appeals to them especially. Then Phædrus goes well with La Fontaine's fables or Lessing's fables; Wallenstein, the age of Richelieu, and Cromwell might be taken together; Wieland and Spenser, Heine and Byron, Victor Hugo and Sir Walter Scott, and many similar groups to suit the taste of the individual teacher; and, lastly, the Germanic and Romance languages should be grouped respectively together. Prof. Viëtor told me it was unreasonable to expect one man to teach two such utterly different languages as French and German; rather should one master take up Latin and French, another English and German. The comparative studies of these two groups, both as regards word structure and thought development, presents a most entertaining form of instruction.

3. *Realien Question.*—It appears to be becoming the craze now to teach the language of everyday life in our class-rooms. The idea is imported from Frankfurt. I myself saw there a whole hour devoted to the discussion of a game of cricket in much this way: "Who did him out? Charles did him out. With what ball did he him out? He did him with the third

ball out." And so on. These were fifth-form boys. Again, in Jena I heard some sixth-form boys solemnly reading a text about a dinner party at Mrs. Brown's, with a detailed vocabulary of the bill of fare, dresses, tittle-tattle, &c.; then these big fellows recited one after another: "Those Evening Bells, those Evening Bells." Prof. Spencer has imported the same method over here. He has a class of adults; he sets up a map before them: "What is that?" he cries in German. "That is England." "Is that England?" "Yes, that is England." And so on. Surely these trivialities are best learnt casually and naturally in the foreign country itself; even if introduced at all into our schools, then only casually and topically, and grouped round the Reader, as Klinghardt suggests. The lesson in itself should never be trivial, never barren; to quote Dr. Breul: "We must not degrade the study of modern languages to a successful analysis of the various types of business letters or newspaper articles, or an acquisition of a certain amount of everyday prattle; but it is our duty to teach modern languages in schools as one of the most valuable elements in a truly liberal education." Yes, indeed. It were surely far better to devote that time to an intelligent and scholarly study of some literary masterpiece, where the pupil learns to refine his taste and ennoble his thought.

4. *German to Sixth Forms.*—I believe it will soon become customary in most of our secondary schools to drop French in favour of German as the boys enter the sixth form. Here, then, we have to begin teaching a new language with boys who have already been through a good literary training. From the very beginning, then, the lessons must not be dry; they must not be trivial; the boys must at once be introduced to something that will interest them and gain their sympathy and admiration. Holding that pronunciation and fluency must be vigorously attempted from the first, and recognizing that poetry is easier to read and retain than prose, I began at once with Goethe's ballads—allowing no notes or grammars—and explaining everything myself. The poems were read until fluency was produced—above all was emphasis insisted on in order to cultivate *Sprachgefühl*; then the vocabulary and grammar abstracted—at first only the most elementary forms; uncommon words and difficult passages were slurred over. At the end of the first term the whole grammar was systematized out into a skeleton scheme and carefully studied. The boys took the greatest pleasure in studying the contents of these beautiful ballads, and I did my best to bring out the æsthetic and literary beauty. Then the words were written up on the blackboard and compared with the English words—being written of course in syllables—hence were deduced the ordinary phonetic laws. In a short time the meaning could be guessed of many strange words by taking them to pieces. The poems would finally be paraphrased into ordinary colloquial German and dictated. Afterwards the paraphrase would be done in English and translated into German. Numerous questions were of course asked in German on the contents of the poems, which had to be answered in German.

Translation Question.—Translation should be only a means to an end. The ordinary schoolboy translation is a terrible production; and yet it must be exacted as a test that the text is properly understood. Here we have, over again, the champions of mental training advocating the importance of translation. Certainly an elegant and idiomatic translation is an excellent training, which should be cultivated from time to time; but it in no wise helps us to learn the modern language; on the contrary, it is a distinct check, as it diverts our thought from the foreign to the native language. And yet the lessons I heard given by Director Walter, who explained the unknown words and idioms by explanations in the foreign language, and the paraphrases of the boys themselves, did not particularly edify me; it appeared to me a roundabout way of doing things, and rather a waste of time. And I had the feeling as if some obscurity still remained—as if the text was not fully understood. On the other hand, it is interesting and stimulating to be continually comparing the foreign language with the mother tongue, then again to read over the piece and drop the native language altogether.

Free Composition.—I have already said hard words as regards proses. It is difficult enough to translate French or German into elegant and idiomatic English; how supremely absurd, therefore, is it to expect that boys can rise to what is to them an almost impossible task! Instead, therefore, of exacting from them this soul-deadening, mechanical, colourless

wish-wash, free essays on subjects with which they are well acquainted, for preference in connexion with the text, might, with advantage, be demanded. Thus would they be compelled to exert their powers of thought and originality, and give proof of their capabilities of appreciating and assimilating the beauties and elegancies of the texts they had been studying. Thus, too, would proof be obtained of true pedagogical progress in thought, refinement, and cultivation of taste. In France literary criticism is a fine art; no other nation is in any way so fastidious in its choice of words and phrases, both in speaking and writing. Why not, therefore, take every advantage of such excellence, throw ourselves into the genius of the people, and invite from our pupils attempts at the same refinement? By careful reading and free essays I have obtained excellent results from boys who have had no long training in French. They soon became very keen on cultivating their style and noting their progress.

Pronunciation.—The German Emperor has recently demanded that the pupils in secondary schools be taught to *speak* the foreign language, and the like will soon be exacted in this country; so with the little boys the start must be made. I have not made a study of phonetics, so cannot speak with authority; but I saw some interesting and successful lessons given in Frankfurt and Gera. I certainly think the teacher ought to have had a phonetic training; but I can hardly believe in presenting the phonetic tables to the boys—they are abstract, and, therefore, do not appeal to them. Dr. Findlay advised me against their use. In the Frankfurt *Musterschule* liberal hours are allotted to modern languages. With the limited time at the disposal of the majority of us such experiments are as yet scarcely feasible.

Modern Languages at Universities.—It has seriously been urged in *The Journal of Education* by Mr. Oscar Browning that only *modern* languages should be taught at the Universities, and that the mediæval and old texts, as well as the study of philology, should be abandoned. Surely it requires no words from me to point out the hopeless fallacy of such a contention. If we study a language, must we not study it historically? And are we to be deprived of the pleasure of making the acquaintance of the charming old French pastorals, the literary movements of the sixteenth century in France; the grand old German *sagas* and the delightful songs of the *Minnesänger* and *Meister-sänger*? Really the crass materialism of some people knows no bounds. We do not go up to the University to "complete" our studies—we go up to widen our horizon, to develop our power of criticism and comparison. Dr. Breul is never tired of telling his pupils that when they have taken their degree they merely stand on the threshold of the gates of learning. Even Prof. Viëtor, who has brought about the whole Reform movement, says, on this subject: "A philological faculty must be taught in its historical development. The school must give boys an all-round education; the University must bring adults to scientific independence." Surely there is abundance of time when one has left the University to make oneself acquainted with the present-day literature, and how infinitely more interesting does it then become when we have fixed standards by which so to measure it!

Interest and Stimulus.—If our boys, on leaving school, look back with loathing on their studies, and with joy "shut up their beastly books for ever," then, no matter how much exact knowledge we have slogged into them, we may regard ourselves as failures; if, on the other hand, they have taken such a liking to their work that they will pursue it further for themselves, we may feel duly gratified. Let me conclude by the words of Herbart: "To be tedious is the direst sin of instruction. The privilege of a teacher it is to skim over steppes and morasses; if he cannot always wander in pleasant valleys, he gives exercises in mountain climbing and rewards by the beautiful views."

Authorities Consulted.—Klinghardt, "Drei Jahre Erfahrungen mit der imitativen Methode"; Walter, "Die Reform des neu sprachlichen Unterrichts"; Spencer, "Aims and Practice of Teaching"; Breul, "The Teaching of Modern Languages"; Brebner, "The Teaching of Modern Languages in Germany"; Viëtor, "Der Sprachunterricht muss umkehren"; Quiehl, "Französische Aussprache und Sprachfertigkeit"; Barnett, "Common Sense and Education: Linguistic Study"; Russell, "German Higher Schools"; Albalat, "La Formation du Style."

CALENDAR FOR OCTOBER.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—London University Exam. for D.Lit. Return forms.
- 1.—Army Exams., Woolwich and Sandhurst. Latest day for returning forms.
- 1.—Board of Education Scholarships Exam. Apply for permission to sit.
- 1.—Oxford Exams. for Women. First Public Exam. Holy Scripture.
- 3.—Return forms for Cambridge Local and Preliminary Local Exam. Last day.
- 3.—Teachers' Guild Discussion. North London Coll. School, 8 p.m. Curricula and Specialisation.
- 4 (and following Saturdays).—Froebel Society Classes, St. Martin's Schools, Adelaide Place, Charing Cross. Apply to Secretary, Miss Noble.
- 7.—Royal University, Ireland, Scholarship Exams.
- 7-10.—Church Congress at Northampton. Tickets and Guide from Mr. John Hart, Maltravers House, Arundel Street, Strand, W.C.
- 8.—College of Preceptors Evening Meeting.
- 8.—Associated Board Royal Academy of Music School Exam. Return forms.
- 9.—Oxford and Cambridge Preliminary Exam. for Candidates for Holy Orders.
- 9.—St. David's College, Lampeter, Matriculation.
- 9.—Durham University Admission, Entrance Scholarship, and First Year Exams.
- 10.—Oxford Exams. for Women. Return forms for B.Mus. and D.Mus.
- 10-11.—Dundee University College Entrance and Scholarships Exams.
- 11, 18, 25.—King's College, Saturday Morning Lectures to Teachers. October 11, 25: Mr. Adamson's course on "Comenius and the Beginning of Modern Educational Theory," at 11.30 a.m. October 18: Prof. Hudson's course on "The Teaching of Mathematics," at 10 a.m. October 25: Prof. Victor Spiers's course on "The Practical Teaching of French," at 10 a.m.
- 12.—London University Intermediate B.Mus. Exam. Notice of entry and Musical Exercise.
- 15.—Ireland, Intermediate Education Board. Last day for sending claims for fees and applications for Examinerships.
- 15.—Dublin University (Trinity College) Entrance Exams.
- 15.—Post Prize Competitions for *The Journal of Education*.
- 15-16.—Law Society Preliminary Exam.
- 16.—London University Exam. in Teaching. Return forms.
- 17-18.—Private Schools' Association Conference at Victoria and Albert Museum, South Kensington. October 17, 7.30 p.m., Reception and Conversation. October 18, 10.30 a.m., Morning Session; 2.15 p.m., Afternoon Session; 5 p.m., General Meeting; 7 p.m., Dinner.
- 17.—Edinburgh University Entrance Exam.
- 17.—Glasgow University. Send in names for Exams. in Theology.
- 18.—College of Preceptors Council Meeting.
- 19.—London University B.Mus. and D.Mus. Exams. Return forms.
- 20.—London University Intermediate Laws and LL.B. Exams.
- 21.—Southwark Educational Council. Meeting at St. Olave's Grammar School, 7.30 p.m. Address by the Rev. the Hon. Canon Lyttelton.
- 22.—Post School News, items for this Calendar, &c., and Advertisements for the November issue of *The Journal of Education*.
- 23.—Froebel Society Lecture, "Field Excursions with Children," Miss M. Simpson, at Dr. Williams's Library, Gordon Square, at 8 p.m.
- 23.—Return forms for College of Preceptors Pupils' Certificate and Lower Forms Exams.
- 23-24.—Glasgow University Exams. for Bursaries in Theology.
- 27.—London University B.A. and B.Sc. Exams. begin.
- 27.—London University M.B. Exam. begins (Pass and Honours).
- 27 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the November issue of *The Journal of Education*.
- 28-30.—King's College, Women's Department, Special Courses. October 28 and following Tuesdays at 3, "Principles of House Decoration" (Miss Charles); October 28 and following Tuesdays at 12, "The Art of Expression in Everyday Matters" (Miss Faithfull and Miss Kempe); October 29 and following Wednesdays at 3, "Beethoven" (Mr. Gustav Ernest); October 30 and following Thursdays at 2.30, "Astronomy" (Mr. J. B. Dale).
- 29.—Royal College of Physicians, Ireland. Return forms for Licentiate Exam.
- 31.—Royal Academy of Music L.R.A.M. Exam. Return forms.

- 31.—Cambridge Higher Local Exam. Return forms.
- 31.—Surveyors' Institution. Return forms for Professional Associate and Fellowship Exams. for March.

The November issue of *The Journal of Education* will be published on Friday, October 31, 1902.

WINTER SESSION OR MICHAELMAS TERM BEGINS.

- September 29.—University College, London; Birkbeck Institution; Northampton Institute; City of London College, Moorfields; South-Western Polytechnic, Chelsea.
- September 30.—University College, London.
- October 1.—Cambridge University; Sheffield University College; Royal College of Art; Bangor University College; Birmingham University; Medical Schools of Owens College, Manchester, St. Thomas's Hospital, Middlesex Hospital, London School of Medicine for Women, Dental Hospital of London, Charing Cross Hospital, St. Bartholomew's Hospital, University College, London, Guy's Hospital, London School of Tropical Medicine, Yorkshire College, Leeds, University College, Sheffield.
- 2.—University College, Reading; Bedford College for Women, London; Royal Holloway College; St. David's College, Lampeter; Durham College of Science; University College, Liverpool.
- 3.—Medical School of St. Mary's Hospital.
- 7.—Owens College—Arts, Science, and Laws; University College of South Wales, Cardiff; Dundee University College; Yorkshire College, Leeds.
- 8.—University College, Sheffield (Technical).
- 10.—Oxford University.
- 13.—King's College, London, Women's Department.
- 15.—University of St. Andrews.
- 16.—Queen Margaret College, Glasgow.

HOLIDAY COURSES.

- GRENOBLE.—October 1-31. French. Apply to Monsieur Marcel-Reymond, 4 Place de la Constitution, Grenoble.
- NÄÄS.—November 5-December 16. Sloyd. Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.
- NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.
- PARIS.—Christmas and Easter Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.

JOTTINGS.

TEACHERS' REGISTRATION COUNCIL.—A considerable number of applications have been received for admission to Column B of the Register. Delay in notifying the result is inevitable in a great many cases. In some—the majority—which depend upon the recognition of schools at which the service has been rendered under Regulations 3 and 4 of the Schedule to the Order in Council, the decision of the Board of Education as to the recognition of these schools has to be awaited. Other applicants, who have submitted a general standard of education for approval under Regulations 3 (1) and 4 (1), must also wait till the Board has considered their applications. The suspense is, no doubt, trying; but applicants are asked to remember that, the Order in Council being complicated, its interpretation, in very many cases, cannot be easy, and must take time. The Council, on re-assembling, will accelerate the business to the best of its power. Forms of application for Supplemental Registers will not be ready for some time, as the arrangements are not completed.

MR. BODLEY, the distinguished author of "Modern France," contributed lately a voluminous letter to the *Saturday Review* on the modern language question. The letter is a strange medley of sense and silliness. His conclusion that French should be taught as a living language with a minimum of grammatical technicalities is in theory accepted by all schoolmasters—from M. Bétis to Canon Bell. His dissection—or shall we say, vivisection?—of a single question in an Eton Trials paper on the use of conjunctive and disjunctive pronouns is—let us borrow Matthew Arnold's favourite word—*bête*. The terms may not be happy, and in France they are unknown, but they are almost universally employed in England, and the distinction, however named, is rudimentary and essential. The technicalities of syntax may, as Mr. Bodley contends, be useless, but a knowledge of the elements is of some practical utility; it might, for instance, prevent a critic from

such a solecism as "a knowledge of the laws of orthography are obviously necessary."

EXAMINATIONS should test rather what the scholar can do than what he can remember. Here is a good illustration by President De Wett Hyde. "In writing this article [in the *Forum*] on the typewriter I did not miss in a single instance a letter I wished to strike; but, if you should ask me now where *k*, *f*, *n*, or *v* is on the key-board which I have been using for the past ten years, for the life of me I could not tell you. My fingers know unerringly—that is enough."

WE should be curious to see the marble slab lately brought to light in the course of the excavations on Mount Kotilyon bearing the inscription: "Pan, Artemis, and Appolon [*sic*]." Our faith in its genuineness is somewhat shaken by finding in the paragraph of the *St. James's Gazette* which vouches for it the Temple called a Temple of Venus, and the famous ancient antiquary changed to Pausanius.

Is Mr. J. H. Fowler, of Clifton College, correct in his characterization of the newer type of modern side master? "He is not often intellectual, still less is he literary. His reading of poetry does not go beyond Kipling; in prose we must be thankful if he goes back as far as Thackeray." We hope, and think, that his experience must have been unfortunate, and should be inclined to back the modern against the classical common room in a taste paper. On the other hand, we find that Mr. Fowler's complaint as to the general tendency to substitute for the best French and German classics the reading of contemporary ephemeral literature is a true bill. "The cry is for the living language, and therefore it is an advantage to have the latest French slang."

JOKING WITH DIFFICULTY.—"The system [of authority as opposed to individualism] is analogous to the Red Indian plan of squeezing the infant's skull out of its natural shape by means of a board. The Red Indian mother uses a wooden board, and Mr. Balfour and his associates a School Board. A great deal of money is spent in the latter case, and immeasurable harm is done in both instances."—A. W. Gattie, in the *Nineteenth Century* for September.

"AFTER the Lord Mayor's Show ——" Prof. Dewar has diagnosed the decline of England's commercial prosperity, and prescribed for it. In the last *Fortnightly* the Rev. J. Gregory Smith follows suit: "The remedy lies not in the accumulation of scientific paraphernalia in our schools, . . . but sound, sensible teaching," *i.e.*, as previously defined, "the Church Catechism, the foundation of what is upright and noblest in the character of our nation." The thing itself is not rare, but we wonder how it found its way into the *Fortnightly*.

WE have received from Mr. Robert Boyle a mounted diagram, illustrating his system of "air-pump" ventilation, more particularly as applied to schools, which diagram he has generously offered to present to the schools of this country. The ordinary sale price of the diagrams is stated to be two guineas.

"TO my mind the really appalling thing is not that the Germans have seized this or that industry, or even that they may have seized upon a dozen industries; it is that the German population has reached a point of general training and specialized equipment which it will take us two generations of hard and intelligently directed educational work to attain. It is that Germany possesses a national weapon of precision, which must give her an enormous initial advantage in any and every contest depending upon disciplined and methodized intellect."—Prof. Dewar at Belfast.

THE Archdeacon of Carmarthen at the St. David's Diocesan Conference made an interesting estimate of the financial aspect of the new Bill. It gave to the ratepayers of Wales and Monmouthshire, taken as a whole, a Treasury grant sufficient to cover the entire cost of all the Church schools, with £5,711 to spare, and it gave in most counties to rate-payers in School Board areas a substantial reduction in their present rate.

MISS L. BRACKENBURY, a First Class in the Moral Science Tripos, has been appointed Lecturer at the Cambridge Training College, in the place of Miss Ainslie.

SCHOOL OF ART WOOD-CARVING.—The School of Art Wood-carving, South Kensington, which now occupies rooms on the top floor of the new building of the Royal School of Art Needlework in Exhibition Road, has been reopened after the usual summer vacation, and

some of the free studentships are now vacant. The day classes of the School are held from 10 to 1 and 2 to 5 on five days of the week, and from 10 to 1 on Saturdays. The evening class meets on three evenings a week and on Saturday afternoons. Forms of application for the free studentships may be obtained from the manager.

"FOR three years he was a student at the St. John's College, London University, gaining there the teacher's diploma of the first division of the first class, by which he was awarded the honorary degree of the associated Royal College of Preceptors." The clipping is from an article on the head master of a local grammar school which appeared last month in a newspaper published in one of the big Yorkshire towns. Could confusion be worse confounded?—*University Correspondent*.

ANOTHER benefactor is needed. The University of Melbourne is in financial difficulties. Partly owing to frauds practised by its ex-accountant, but partly to the average excess of expenditure over income, a sum of £35,000 must be somehow found.

HERE is another psychological puzzle taken from the *Morning Post*: "The Lollards were so called because they sang so low at funerals." Whence the confusion of thought?

THE baking of bread is a matter of no small importance, and it is satisfactory to note that the success of the National School for Bakers and Confectioners has necessitated large additions to the building. The Technical Education Board bears the greater part of the cost.

MR. H. W. MALCOLM has been appointed Lecturer in Physics at University College, Bristol.

THE governing body of a school recently made a first selection of nine candidates for the head mastership, each of whom was asked to send his photograph. Six of these photographs were promptly returned with a polite intimation that the candidate was not in the final list. Can the Governors have taken a hint from our Holiday Competition?

AT a recent election for nine members of the School Board of Wellington, Salop, only some 15 per cent. of the voters on the list took the trouble to poll. So the *Daily Mail* informs its readers.

THE death is announced of Mr. Croad, the first, and, possibly, the only, Clerk of the School Board for London. Mr. Croad was a Scholar of Trinity, took both the Mathematical and the Classical Tripos in 1853, and spent ten years as a master in secondary schools, including Rossall. He is another example of an administrator drawn from the public-school class.

FROM a series of quaint essays given in *Church Bells* we extract the following as an example of the nonsense a badly taught child will write:—"You can easily tell a drunkard's heart, it is fat all over, but a healthy heart is all nice and lean." One might think the child was accustomed to human vivisection.

IT is stated that the Coronation mugs presented to the school-children at Hastings have the word "Britannia" upon them. Imagine the glee of the children in detecting the error.

SIR A. CONAN DOYLE has presented £1,000 to the University of Edinburgh, being the profits on the sale of his South African War pamphlet.

THE following interesting specimen of English, written with the help of a dictionary, is printed in the *University Correspondent*:—"Most highly respectable and well-begotten Sir,—I was to be about to be to hear that you was to be about to be to deposit a German master in your school. Allow me therefore to be about your kindnesses and benevolences. I am most highly respectable and well-begotten, Sir,—Your humble domestic, ———, Ph.D., M.A., Berlin. P.S.—I can make arithmetic, French, and English language."

MR. J. E. ADAMSON, who for twelve years has been a tutor and master of method in the Carmarthen Training College, has been appointed Principal of the Training College at Pretoria, and sails in October.

THE favourable opinion expressed on the Twentieth Century Edition of Pitman's "Shorthand Instructor" has induced them to issue a

Twentieth Century Edition of their "Phonographic Teacher, Manual, and Reporter." These new editions are, we understand, now ready.

MR. PARKIN, the biographer of Edward Thring, is in New York arranging the conditions of election to a tenure of the Rhodes Scholarships for American students. He has been urging that some American millionaire should found similar scholarships in American Universities, for the benefit of Englishmen. Assuredly young England might profit no less by what he learnt at Columbia or Johns Hopkins than young America by Oxford culture.

MESSRS. E. J. ARNOLD & SON, school outfitters, of Leeds, inform us that they have purchased from Lewis Hardy, Esq., receiver for the debenture holders, the miscellaneous and general stock held by Messrs. Moffatt & Paige, of 28 Warwick Lane, London, E.C., and that any inquiries for these portions of Messrs. Moffatt & Paige's stock should be addressed to them.

THE dictionary is a dangerous guide for modern speech. Here is the notice that a wine merchant in Holland served upon some English customers: "Please return the void pitchers."

A HIGH-SCHOOL mistress who had spoken to her form of "the followers of Herod" was startled to find that one girl had written down "the flowers of heriod."

THE Sunday-school teacher was varying the lesson by telling her children the story of travellers lost in the snow and rescued by dogs—"and they remembered nothing more till they were awakened by feeling something warm and soft and woolly. Now, children, what do you think it was that had found the travellers?"—"Please, Miss, I know, a snake."

THE school journey continues to make progress. At the end of last term some fifty schoolboys from Manchester went with their teachers for a walking tour in the Iligh Peak.

FOLLOWING upon an inspection by the Board of Education, St. Mary's College, Paddington, has been officially recognized as a training college for secondary teachers.

THE governors of the North-Eastern Counties School at Barnard Castle have recently added a large swimming bath to the school. The Urban District Council, the water authority, has claimed that the water supplied for the bath is not for domestic purposes, and that therefore a special rate must be paid. The claim was upheld in the Court of Appeal.

READING COLLEGE has been promoted by the Treasury to the rank of a University College, and will therefore receive a Government grant of £1,000 annually.

A NEW volume of historic phrases is shortly to be added to Messrs. Sonnenschein's quotation series. These pearls and mock pearls of history, to borrow Mr. Hayward's happy phrases, should make an interesting volume, and Mr. E. Latham, who edits it, is a painstaking scholar.

ONE of the best object lesson cards we have ever seen is Messrs. McDougall's, on Printing. We have first actual types, which can be removed and handled; then the *papier maché* mould and the stereo-type; then the half-tone process; and lastly a linotype line—in each case the actual object, not a representative. Paper, wool, cotton, glass, &c., are treated in the same way on the other cards, the price of which varies from 2s. to 3s.

MR. J. GRAHAM KERR has been appointed Professor of Natural History in the University of Glasgow.

THE Chair of Pedagogy at St. Andrews, vacant by the lamented death of Prof. Meiklejohn, has been filled by the appointment of Mr. John Edgar. Mr. Edgar was a Snell Exhibitioner at Balliol College, and has acted as Honorary Secretary of the Secondary Schoolmasters' Association in Scotland. There was a large field of candidates for the post.

THE University of London has inaugurated its teachers' side by the appointment of three professors—one of chemistry and two of German. The German Professors appointed were Dr. Prietsch and Dr. Breul. For the sake of London, we regret that the latter could not be induced to leave Cambridge.

CORRESPONDENCE.

MUSIC TEACHERS AND THE REGISTER.

To the Editor of The Journal of Education.

SIR,—May I crave space for a few words about the requirements of the Supplemental Register? The regulations affecting the school teachers, as set forth in the Schedule, are very clear. They require (a) a knowledge qualification and (b) a teaching or professional qualification. Neither is sufficient without the other, and the conditions of both are given in detail. All teachers will see that registration on such a basis must at once improve their position, and, in fact, make their profession a reality and not merely a name. The regulations affecting the teachers of special subjects are, on the contrary, extremely vague. Their vagueness leads me to suppose that this part of the Schedule is merely an outline, and that the conditions have yet to be fully considered; and this is my excuse for trespassing upon you. I shall only discuss the position of the music teacher.

There seems to be an impression among the musicians that, if they only make a good fight, the music teachers may not be required to qualify for the Register in "Theory and Practice of Teaching." I can hardly believe that the Board of Education would give way on this point; but it is just possible, and, if it should do so, it would be a great calamity, not only for the public, but for the music teachers themselves, if their leaders would but see it. Their ranks are overcrowded. They screw up the examinations; but candidates screw up, too, and pass. Yet those who oppose the idea of training will not see that, while anybody who possesses a certificate of musical knowledge is free to teach, the overcrowding must increase, and that the profession they pride themselves on belonging to is a purely imaginary one.

There could be no better time than the present for pressing upon the musicians the need for a "professional" as well as a "knowledge" qualification for the teacher. Beneath all the brave show of examinations and certificates there is a strong undercurrent of dissatisfaction. The examination system did some good—until it became a craze. It dragged up the standard of performance; it insisted on the theory of music being taught, and imposed a better class of music. But the standard of intelligence—that something which cannot be crammed, but can quite easily be tested—remains obstinately low; and the best of the examiners, who care more for that than for mere executive ability, begin to think that results which do not include musical intelligence are hardly worth the cumbrous machinery. Some of them even say that the examinations are doing more harm than good, and would be glad to have a system of inspection instead of it.

The senior professors at the great music schools would, I think, tell you that their work is hampered and made unnecessarily hard by the inefficient teaching which preceded it. They spend a good deal of time in trying to evolve order out of chaos. They work under a consciousness of a waste of horse-power. The fact that at the Royal Academy of Music and all similar colleges a class for the "elements of music" is a necessity shows how inadequate the previous training of the students has been. It is as if, at Oxford or Cambridge, we should find classes in which the undergraduates were learning the three R's.

The students themselves are not satisfied. They feel that, though the special "Teachers' Certificate"—for which all the musical bodies now have a separate examination—may justify them to the public, it does not justify them to themselves, and they begin to ask, "Why are we not taught to teach?"

The very men who maintain that people cannot be taught to teach are quite ready and willing to inquire into this method and that; a thing that a couple of years ago they would not have dreamt of doing.

Within the past eight months papers have been read here and there on the music teacher's need of psychology, and I know some able men who are actually working at the subject.

All these are hopeful signs. The iron is getting hot, and the Board of Education should have no hesitation in striking. Music teachers will kick at being placed on a register with teachers of cookery and needlework. And rightly so; for, though, in theory,

these teachers need the same kind of preparation, the practical issues are not of equal importance. If food is badly cooked, people will not eat it, nor will they pay for needlework badly done. The public can protect itself against inefficiency. But bad music teaching, like other teaching, is hard to detect, and the public needs protection. Yet I fear this is not the objection of the musicians. They would claim a higher professional level without the higher professional qualification, and this should decidedly be refused. There is no objection to a supplemental register, but I would run a line of cleavage through it. On one side the teachers of music, drawing, and physical training, who need a scientific theory of teaching as much as the school teachers; on the other, the manual instructors and the teachers of cookery and needlework, for whom the "art of teaching" might be enough.

It may be that the word "supplemental" conveys some idea of inferior status. Logically, if the same requirements are imposed on all teachers, they should all be on the same register. But, when such large numbers are concerned, it is necessary, for facility of reference, to have separate divisions for special teachers. That, I take it, is all that is meant.

The qualifications for a place on the Supplemental Register are three (page 8 of Order in Council):—The candidate must produce satisfactory evidence (i.) that he has acquired special knowledge of the subject after a thorough course of training; (ii.) that he is competent to teach the subject; (iii.) that he has taught the subject for a period of not less than two years.

(i.) is easy enough. There are a great many musical certificates that would amply satisfy this requirement.

(ii.) is the difficulty; but I do not think it is the business of the Registration Authority to solve it. The attitude of the Board of Education towards the musicians is simply this: "You have doubts as to whether intending teachers can be taught to teach; we have no doubts at all. If music is not a mere handicraft—if it has an intellectual side—then the teaching of it must come under the same general laws as all other teaching. It is for you to find out how to apply the broad principles of teaching to your special subject. Go to the Cambridge Training College, the Maria Grey, or any other place where teachers are trained, and see if you cannot do something analogous to their work. We will give you time."

(iii.) is not a qualification at all. I would suggest the substitution of requirement (ii.) (2) on previous page (Order in Council): "must have passed an approved examination in the theory of teaching, have spent one year as a student-teacher, . . . and have produced evidence of ability to teach," omitting the words "at a recognized school." There are many schools where the general teaching is good enough for recognition; very few where the music teaching (piano, singing, violin, &c.) has any cohesion, any unity of method or of aim. Teaching under supervision is necessary; but, if the supervisor is only a rule-of-thumb teacher, it is useless as training, for the whole idea of training rests on the supposition that the practice shall be correlated to some kind of theory.

It was suggested to me by a head mistress that the music teachers, while qualifying in music at their own colleges, might attend a day training college for the theory of teaching; but this would not meet the case at all. They might listen to lecture after lecture without hearing a single instance of method taken from the teaching of their own subject; for, though the general principles are the same for all, the entire "thinking material" of music is different from other material, and needs special treatment. It is in the *application* of the general law to the new subject that the student needs so much help. The theory, to be fruitful, must be illustrated by practice. The day training college arrangement would end in discouragement and hopelessness.

When examined before the Royal Commission in 1895 Sir Alex. Mackenzie expressed his conviction that music teachers could not be trained—I believe Sir Hubert Parry shares that opinion; but this proves nothing, except that these gentlemen—brilliant musicians and composers of the first rank—are not also experts in the teaching of children, a different line of work altogether. The problem lies entirely outside their experience, and they should have no more hesitation in saying: "I know nothing of the theory of teaching or the conduct of a practising school" than in saying: "I know nothing of electrical engineering or how to run a trolley-car." Yet, as heads of the chief musical colleges, they will, very properly, be consulted;

and their opinion, though not likely to affect the opinion of the Board of Education, may appear a serious barrier to its action. As a matter of fact, should the problem be solved, I believe no one would more truly rejoice than the Principals of the Royal Academy and the Royal College. But one thing seems clear: if a person cannot train a teacher, he cannot examine a teacher (as teacher) nor certify his ability; and, if an institution says it cannot train, its "teacher's" certificate is valueless. To acknowledge such certificates as sufficient for the Register would give good ground of complaint to the other teachers, who have to fulfil all the conditions of the professional qualification. Would it be logical to say to the B.A.: "Your knowledge certificate is one thing, your professional training quite another; you cannot come on the Register without meeting our requirements in theory and practice of teaching," and to accept the Mus. Bac. in virtue of his degree alone? It would be illogical and unfair, seeing that the Arts graduate has in most cases spent three or four years at a University and had a liberal education, while the musical graduate has got up one subject, and his general culture often leaves much to be desired.

There are, no doubt, difficulties all round, but none of them insuperable; and, as a rule, if a certain kind of article is required, the machinery for producing it is forthcoming. Fifty years ago there was as little provision for the training of the school teacher as there is now for the music teacher. The first trainers were themselves untrained. They had simply that enthusiasm for the work of teaching which compelled them to find out the best ways of doing it. They read of the work of the older educationists; they compared methods and tested principles in their own practice, and what they found out they passed on to others. Ideas were freely exchanged, freely acknowledged. They compared notes; they helped one another. Only in this way can such a work be accomplished. They toiled, not each for himself, but all for education. But their work was slower and more difficult than it need have been because they had actually to coax students to come and be trained. How much more might have been done had their arguments been supplemented by the gentle persuasiveness of a Registration Act!

The work in the field of musical education may be, in some respects, more difficult, and the teachers might be allowed (under Regulation 4) a longer time to qualify, say five years instead of three. They have less literature of a directly helpful kind ready to their hand, fewer methods (with any kind of philosophic basis) to compare and learn from; and they cannot import ideas from abroad, for even in Germany pedagogics and music seem to be still running on parallel lines. In other respects it should be easier. The output of books on the science and art of teaching (in general) is now enormous; the principles they contain are just what the music teachers need in common with all teachers, and these have to be studied in their relation to one subject instead of many. Teachers can also, if they will, get many hints from their fellow labourers on the other side of the hedge; for, though the seed they are sowing is somewhat different, *the soil they are tilling is the same*, and their first necessity is to learn the nature of that. The only real difficulty in the way is the natural aversion of human nature to any change in the existing order of things and its dread of the unknown. A powerful lever will be needed to move that, and nothing is likely to be effectual but a wise and strong Registration Act. If that is applied *now*, to all teachers alike, I venture to say that in five or six years' time the music teachers will be deeply thankful for what they now oppose because they do not fully understand it—thankful that they were treated like other teachers and made into a profession in spite of themselves. If it is not done now, it only means a revival of the whole question a few years hence, with the added obstacle of an existing Act of Parliament.—I am, Sir, yours truly,

NUNC AUT NUNQUAM.

THE REV. U. Z. RULE has prepared "Graduated Lessons on the Old Testament," which will be issued in three small volumes for school use by the Oxford University Press early this month. The work has been edited by the Rev. L. J. M. Bebb, Principal of St. David's College, Lampeter. Mr. Rule has followed the text of the Revised Version, and has called special attention to the moral and religious lessons which may be drawn from the history.

BLACKIE & SON'S BOOKS

WRITE FOR COMPLETE LIST.

FOR OXFORD LOCALS AND PRECEPTORS', 1903

- Macbeth.** Edited by E. K. CHAMBERS, M.A. 1s. [The Warwick Shakespeare.]
Macbeth. Edited with Introduction and Notes, &c. 1s. [The Picture Shakespeare.]
Macbeth. Edited by H. C. NOTCUTT, B.A. 8d. [Junior School Shakespeare.]
Evangeline. Edited with Introduction, Notes, &c. Paper, 3d.; cloth, 4d.
Tellsman. Blackie's School and Home Edition. Cloth, 1s.
Gallo War—Books IV., V., VI. Edited by Professor JOHN BROWN, M.A. Illustrated. Book IV., 1s. 6d.; V. and VI., 2s. each. [Blackie's Illustrated Latin Series.]
Horace—Odes, III., IV. Edited by STEPHEN GWYNN, B.A. 1s. 6d. each. [Blackie's Illustrated Latin Series.]
Virgil—Aeneid, Book VI. Edited by H. B. COTTERILL, M.A. 2s. [Blackie's Illustrated Latin Series.]
Eutropius—Books I. and II. Edited by W. CECIL LAMING, M.A. 1s. 6d. [Blackie's Illustrated Latin Series.]
Livy.—Book XXI. Edited by G. G. LOANE, M.A. 2s. 6d. [Blackie's Illustrated Latin Series.]
Euripides—Medea. Edited by P. B. HALCOMBE, M.A. Illustrated. 1s. 6d.
De Musset—Pierre et Camille. Specially edited, with Notes, &c., for the Oxford Local Examination. With Vocabulary. [To be ready middle of October.]
Sanderson's Outlines of the World's History. Part IV. Modern History specially dealing with European History. 2s. 6d.

NEW FRENCH AND GERMAN BOOKS.

- A SKELETON GERMAN GRAMMAR.** By Professor H. G. ATKINS, of King's College. Printed in red and black. Cloth, 1s. 6d.
 This new book is intended to give the "irreducible minimum" of grammar requisite for reading German texts. It is not intended as a manual for the study of grammar after the old fashion, that is to say, for grammar's sake, but rather as a guide for the beginner who proceeds direct to the translation of a German text, or begins by grappling with the difficulties of *real* German in a similar way by any direct method. A feature of the book is the use of red ink to emphasize points of special importance.
A SKELETON FRENCH GRAMMAR. By Professor H. G. ATKINS, King's College, London. 1s. 6d.
 Similar in scope and arrangement to the "Skeleton German Grammar." [To be ready immediately.]
FIRST STEPS IN GERMAN. By W. SCHOLLE, Ph.D., and GEORGE SMITH, M.A. 1s. 6d.
 This book is based throughout on the New Method. The lessons are conversational, and are intended to be used with Holz's pictures, which are given in the book. An interesting section consists of German songs with music, the authors holding that these facilitate and lend interest to the acquirement of German pronunciation.
A GERMAN GRAMMAR. By W. SCHOLLE, Ph.D., and GEORGE SMITH, M.A. 1s. 6d.
 A systematic companion to "First Steps in German."

READY IMMEDIATELY.

Practical Book-keeping

For Commercial Classes.

With Exercises, Examination Papers, and Answers.
 By WALTER GRIERSON. 1s. 6d.

This new work is thoroughly interesting and practical. An outstanding feature is the clear and effective method by which the fundamental principles of book-keeping are explained at the outset, and emphasized throughout the book.

The exercises are specially adapted for Students preparing for Oxford Local and College of Preceptors' Examinations.

All teachers of the subject should see this new and highly practical work.

READY IMMEDIATELY.

A First Greek Reader

By R. A. A. BERESFORD, M.A., Author of "A First Latin Reader," and R. N. DOUGLAS, M.A., of Uppingham School. 2s.

This Reader (a companion to Mr. Beresford's popular First Latin Reader) consists of two parts: in the first part each lesson consists of one page, containing an illustration explained by eight or nine simple sentences; the second part consists of stories and anecdotes of greater length, carefully graduated, and freely illustrated with full-page plates and photographs of famous statues and busts. The text is set at the Clarendon Press in a large and bold type.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.
 GLASGOW; DUBLIN; BOMBAY.

UNIVERSITIES AND SCHOOLS.

OXFORD.

The Greek controversy has slept during the three months of vacation, but will shortly be awakened, no doubt into active life. A committee has been formed, containing some moderately eminent names, to collect and focus the (doubtless numerous) opinions adverse to any change involving the alternative to compulsory Greek in Responsions. A worse danger which threatens the reformers, if rumour may be trusted, is the intention of some of those who supported the proposed reform to vote against the first resolution (which simply affirms the principle of optional alternative) because the remaining resolutions do not fit in with their particular view of what is desirable. It is well to point out clearly the entire unreasonableness of such action. What is proposed to Congregation is *not* a statute, but a series of resolutions. The first resolution simply states what these persons desire. If this is thrown out, the other resolutions are withdrawn, *i.e.*, all chance of reform is for the time lost. If it is carried, reform becomes possible; but the details are still unspecified until embodied in a statute. The statute will be framed to meet the views of Congregation, as shown by the votes on the other resolutions. Therefore, what these people, if they exist at all, ought obviously to do is to vote *for* the first resolution and *against* any of the others with which they do not agree. If they prefer no reform at all to a reform which does not exactly carry out their views, they can always vote against the statute when it is brought before the House. But to vote against the first resolution at this stage is to stultify themselves at the outset.

The only event of the Long Vacation is the issue of the class lists, which appeared this year on August 6 in the special *Gazette*. In the competition of colleges the honours of 1892 go to New College, with Balliol (for once) a good second. An analysis of all the class lists (Literæ Humaniores, History, Law, Theology, Mathematics, Science, and English) gives the following results, which may interest some of your readers. In the seven schools there were 68 First Classes awarded, which fell to the several colleges in the following proportion:—New College, 11; Balliol, 10; Christ Church, 6; Trinity, 5; Corpus, Magdalen, St. John's, 4; Queen's, University, Worcester, 3; Brasenose, Exeter, Hertford, Pembroke, Wadham, 2; Keble, Lincoln, Merton, Oriel, Pope's Hall, 1. In the School of Literæ Humaniores, which retains its pre-eminence, the 24 First Class Honours were divided among eleven colleges as follows:—New College, 6; Balliol, 4; Trinity, 3; Christ Church, Corpus, University, Wadham, 2; Brasenose, Exeter, Oriel, 1.

It may be added that the women students obtained 6 First Classes—viz., 1 in Literæ Humaniores, 1 in Natural Science, 3 in History, and 1 in English. They also won no less than 21 Second Classes in the School of Modern History, and 1 in the examination for the B.C.L. degree, which is regarded as an especially difficult examination, being of the nature of advanced or post-graduate study of law, compared with the ordinary Honour School of Jurisprudence.

Considering that the total number of women students are about equal to those of Balliol College, and considerably less than Christ Church or New College, the success indicated by the above facts is no inconsiderable achievement.

IRELAND.

The most important event of the last month, the meeting of the British Association in Belfast, is noted elsewhere. The Educational Section was generally considered the most interesting in this year's meeting. Papers on various aspects of Irish education were read by Dr. Starkie, Resident Commissioner of National Education; Mr. Gill, the Secretary of the Department of Technical Instruction; Mr. Jones, of the Belfast Academical Institution; and the Rev. Andrew Murphy, of St. Munehin's College, Limerick. The last two dwelt on the evils of the intermediate system in the past, and expressed considerable dissatisfaction with the present state of things produced by the changes made in the system by the Commissioners. Mr. Gill's paper was mainly an able defence of the teaching of science in secondary schools as part of a good general education, and an elucidation of the ideals of his Department, which is administering this side in Ireland.

Dr. Starkie's address was a passionate philippic against the evils that weigh on Irish education, and, while certainly too pessimistic, contained what is essentially true. He pointed out the need of a Central Authority in education and the co-ordination of its various parts into one system, the utter want of training or adequate remuneration for teachers in secondary schools, the alarming effects of the examination and payment by results system, the want of interest in education among the laity, and the evils produced by the clerical dominance. At the same time he declared he saw no hope of any improvement in these respects. The evils in secondary education which he described are incontrovertible. His denunciation of the absorption of all educational posts by clerics in Catholic education, including the omnipotence of the clerical "managers" in the primary schools, confirms what Mr. O'Donnell in

his recent book has already emphasized. At the same time, the National Board itself is open to much criticism in its dealing with the primary schools. Moreover, the mode in which education is administered in Ireland prevents the laity taking an interest in it, and also the willing raising of local funds to keep the schools in repair and generally support education. Each school is wholly managed by the clerical manager and the Board. The public are not consulted or informed or allowed the slightest participation in the direction of education. Both the National Board and the Intermediate Board meet in profound secrecy, and deliberate and decide on their own responsibility; their proceedings are never reported, they suffer no interference from the public, and the latter are naturally wholly ignorant about, and wholly uninterested in, the schools.

Immediately after the close of the British Association meeting a Conference of Science Teachers, initiated by Miss White, the Principal, was held in Alexandra College, Dublin. It met on the afternoons of Thursday and Friday, September 18 and 19, and in the morning and afternoon of Saturday, the 20th. Prof. Armstrong; Prof. Howes; Dr. Kimmins; Miss Clarke; Mr. Harold Wager; Prof. McClelland, F.R.U.; Mr. Culverwell, F.T.C.D.; Dr. Emerson Reynolds, Professor of Chemistry, T.C.D.; Dr. Joly, Professor of Geology, T.C.D.; Mr. Heller, Organizer of Science Teaching in the National Schools; Mrs. Thompson, M.A., of Alexandra College; Mr. Horace Plunkett; Mr. Gill; Mr. Blair; and Mr. Fletcher, of the new Department, were among the speakers, and there was a very large attendance of teachers and the general public. The programme and methods of the Department, by which science teaching in Irish secondary schools is controlled, were criticized by Dr. Emerson Reynolds, Father Bodkin, and a few others, but both were strongly defended by most of the speakers, and the scientific men present expressed warm approval of the aims of the Department and the syllabus they had issued. Prof. Armstrong expressed disappointment that in the Conference the teachers had not more fully expressed their difficulties, and so received more practical help from the visitors present; and certainly the remarks of the teachers, with some notable exceptions, were insignificant. But undoubtedly science teachers must have derived stimulus and many valuable suggestions from the Conference, though, of course, not the direct benefit to be derived from demonstration lessons or personal intercourse with the scientific authorities brought together by the Conference.

The results of the Intermediate Examinations held last June were announced early in September. They were not published, but each head master was informed as to what his school had done. By this method nothing has been made clear as to the number of exhibitions that were given, or on what principle prizes, honours, and passes have been awarded. Some schools have since announced successes they have achieved. It is known that the number of failures in the Preparatory and Junior Grade is phenomenal, and great dissatisfaction prevails with the state of things.

The Board stated that the Pass Examination would be so easy that any pupil fairly well taught could pass it, but they made it necessary to pass in six subjects, many of them with long and difficult courses, and the papers set were in several subjects far from easy. The method of examining, also, by which one examiner set the questions and a number of assistant examiners corrected and marked them, is not likely to produce good results. No previous revision of the papers set seems to have been made by the Board. After a session in which the overwork in the schools was serious, the results show that on an average less than 50 per cent. of the pupils passed.

The attempts of the Intermediate Board to reform their system perhaps demonstrate more clearly than anything else the necessity of abolishing such amateur, unpaid management in education, and substituting skilled and responsible direction for it—in fact, the Education Department Dr. Starkie pleads for.

Among the most attractive sections in the very successful exhibition being held at Cork at present is that of Education, in which educational exhibits are shown. They chiefly consist of technical and manual work done by pupils. The section is the first of its kind ever shown in Ireland.

The Intermediate Board have published extracts from the reports of the temporary inspectors whom they employed last session to visit the intermediate schools. The inspectors, Messrs. M. A. Bayfield, C. Brereton, W. Cassie, T. M. Roberts, E. S. Shuckburgh, and J. E. A. Steggall, began their inspection in October and concluded it in May. They visited over three hundred schools, reporting, however, on only the intermediate classes, that is, the teaching given to pupils between the ages of twelve and seventeen. Apparently only one visit, varying in length from two days to half a day, was given to each school. As only "extracts" are published, it may be that the Board have chiefly selected those portions in which faults are pointed out, but assuredly the picture given of the state of Irish secondary education is extremely depressing. Comment is made on the discomfort and want of cleanliness in the boys' schools. In regard to such matters the convent schools are highly praised. The state of the buildings and the arrangements in most schools are of a low standard, and the pupils often inert and depressed. Much fault is found with the slowness of the teaching and the faulty

(Continued on page 670.)

ARITHMETICAL CHEMISTRY. PART I.

2s. 6d.

By C. J. WOODWARD, B.Sc.

New Edition, bringing Classified Questions from Science and Art Department, London Matriculation, Oxford and Cambridge Local, and College of Preceptors to Midsummer, 1901.

London: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO.

methods of questioning. Scarcely any praise is given to the teaching (except in mathematics), and a painful record is made of the lowness of the teachers' qualifications. Some indignation is felt among science teachers at the remarks made on them, as this side is exceedingly well inspected by the highly qualified inspectors of the Department, and the six general inspectors of the Board are said to have paid the scantiest attention to the science teaching and then written this disparaging report of it.

There is reason to think that these reports are unduly depreciatory, but the faults are such as would naturally arise under the intermediate system, in which there was a total neglect of inspection of teaching and premises, no provision for training or adequately paying teachers, and the very worst effects of payment by examination results. These reports are the greatest condemnation of the work of the Board for the last twenty years.

SCHOOLS.

BOLTON GIRLS' HIGH SCHOOL.—Three girls gained Higher Certificates, and three gained letters. There were four distinctions in Physiology. The new members of the staff are:—Miss H. F. Church, Honour School of Natural Science, Oxford; Miss J. W. B. Gould, Modern Languages Tripos, Cambridge; Miss E. M. Smith, Modern Languages Tripos, Cambridge.

BROMLEY HIGH SCHOOL.—In the Joint Board Examination for Higher Certificates, Certificates were obtained by Violet Blyth, Beatrice Batham, Dorothy Brock, Dorothy Gedge, Myfanwy Nicholson, and Nellie Rawes. Dorothy Brown gained distinction in mathematics, having obtained her Certificate in the previous year. A Girton Mathematical Scholarship of £50 per annum for three years, given by the Clothworkers' Company, was awarded to Dorothy Brown.

DUBLIN, ALEXANDRA COLLEGE.—The record of Alexandra College at the examination held under the new regulations of the Board of Intermediate Education in Ireland has been a very brilliant one. Of the students who entered 90 per cent. passed, a large proportion of these obtaining honours. In the Senior Grade Miss Marion Beard obtained a modern literary exhibition, value £50, with the medal for first place in French and prize for French composition; and Miss Alice Douglas also won a modern literary exhibition, value £40. Prizes in books, value £3, were awarded to Miss C. Mann and Miss G. Wedgwood, who retained exhibitions value £20 each. Miss E. Moore retained an exhibition won in the Middle Grade, value £30. In the Middle Grade a classical exhibition of £30, and the medal and a prize for English, have been awarded to Miss O. Purser, and modern literary exhibitions, value £30 and £25, to Miss A. Aimers and Miss C. Stack, and a science exhibition to Miss Mary Warren. Miss A. Aimers has also won the medals for first place in French and German, and prizes for composition in these subjects and English. Miss R. Fitzgerald has obtained a composition prize for English. Two exhibitions gained in the Junior Grade have been retained by the students who held them.

MARLING SCHOOL, STROUD.—P. E. King, Inter. Science (London), County Council Scholarship of £60 a year for three years, tenable at the Dyeing Department, Yorkshire College, Leeds; A. M. Beale, Inter. Science (London) in Engineering; H. G. Mayo, Senior Optime, Mathematical Tripos, Science Master at Norwich Grammar School; J. E. Boun, Indian Police.

PORTSMOUTH HIGH SCHOOL.—Madeline Chapman has passed London Matriculation, First Division. Jessie Goodman has obtained a Cambridge Higher Local Certificate in Groups R, C, and A, with Second Class Honours in Class A. Miss Denham and Mlle. Dupont have left the school, Miss E. Marshall and Mlle. Botharowska taking their places.

STREATHAM HILL HIGH SCHOOL.—Two candidates entered for the full Certificate of the Oxford and Cambridge Joint Board Examination, and three for letters; one obtained the full Certificate and four obtained letters. Of nine candidates for the School Examination of the Associated Board of the Royal Academy of Music and Royal College of Music, two obtained Honours and five Pass certificates. In the examination for the Junior Commercial Certificate of the London Chamber of Commerce, E. Hooper, M. Pegler, and D. Mohbs passed. E. Murray passed in Part I. of the Froebel Higher Certificate, with distinction in Zoology. J. Baumann has obtained the degree of Ph.D. at the University of Heidelberg—a distinction gained as yet by very few women. L. Bagster, Girton College, has obtained a First Class in the Natural Science Tripos; L. Way, Holloway College, a Second Class in the Oxford Final Honours School of Modern Languages; D. Haslam and M. Godlouton the Froebel Elementary Certificate.

WALLINGFORD, CALLEVA HOUSE SCHOOL.—An open exhibition under the Ewelme Endowment, of the value of £20 a year for four years, has been gained by Nora Fuller. The exhibitions are open to Berks, Oxon, and Bucks.

WORCESTER HIGH SCHOOL FOR GIRLS.—A new scholarship, called the Victoria Scholarship, open to all daughters of clergymen of

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, & HISTORY OF EDUCATION.

PRACTICAL CRITICISMS AND SUGGESTIONS ON TEACHING.

To be delivered by the Rev. Canon EVAN DANIEL, M.A., F.C.P.,
formerly Principal of the Battersea Training College.

The Second Course of Lectures (Thirtieth Annual Series) commenced on Friday, September 26th, at 7 p.m.

The Course is mainly based on criticism lessons actually given before the Lecturer, and will draw attention to the more serious errors that young teachers commit, and to the ways in which they may be avoided. Special pains will be taken to connect the Art with the Science of Education, and to refer success and failure in teaching to the observance and violation respectively of natural laws.

SYLLABUS.

I. *Preparation of Lessons.*—Need of full and fresh Knowledge—Sources of Information—Need of Arrangement—Notes of Lessons—Limits and Aims of Lessons—Divisions of Lessons—Provision of Apparatus, Illustrations, Maps, &c.—Provision for securing Co-operation of Pupils—Provision for testing Success of Lessons.

II. *Method.*—Not to be selected arbitrarily—Regulated by Interdependence of Knowledge and by Laws of Mind—General Principles—From the Simple to the Complex—From the Indefinite to the Definite—From the Concrete to the Abstract—The Genesis of Knowledge in the Race—From the Empirical to the Rational—Independent Discovery of Truth.

III. *Apparatus, Experiments, and Illustrations.*—Things always more impressive than Words—Need of Appeals to the Senses—Specimens for Individual Examination—Graphic Representations—Enlarged Drawings of Parts—Need of some Indication of Scale—Experiments—Need of Judgment in Selecting—Rehearsal of Experiments—Registration of Results as arrived at—Relative Value of Pictures, Drawings, Blackboard Sketches, Models—Function of Teacher in all Lessons appealing to the Mind through the Senses.

IV. *Questions and Answers.*—Uses that may be made of Questions—Introductory—To secure Co-operation—Disciplinary—Resumptive—Questions directing Observation—appealing to Memory—to Imagination—to Conceptive Faculty—to Judgment—to Reason—Common Faults in questioning—Language—Length—Form—Order—Treatment of Children's Errors—Answers Wholly Wrong—Partially Wrong—Examinations—Construction of Papers—Modes of Marking—Teacher's Use of Blunders.

V. *The Kindergarten.*—The Senses our first Teachers—Limits to their Training—The Habit of Observation—Nature's Method—Artificial Education—Froebel's Services to Education—Utilization of Childish Instincts—Gifts and Occupations—Principles of the Kindergarten applicable to the later stages of Education—Transition from Kindergarten to Ordinary School too Abrupt—Object Lessons—Elementary Science—Treatment.

VI. *Reading, Writing, and Drawing.*—Analytic and Synthetic Methods of Teaching—Reading—Spelling—Dictation Lessons—Reading Aloud—Writing—Analysis of Letters—Mulhauser's Method—Locke's—Cowham's—Scientific Criticism of Writing—Drawing—Training of Eye and Hand—Object Drawing—Analysis—Directed Observation—Simultaneous Drawing Lessons.

VII. *Arithmetic and Geometry.*—First Notions of Numbers—Composition and Decomposition of Numbers—Notation—Numeration—Arithmetical Rules to be established by the Method of Discovery—Arithmetical Tables and their Illustration—Rules presenting Special Difficulty—Mental Arithmetic—Paper Work—Excellences to be insisted on—Accuracy and Rapidity—Euclid—Introduction to—Blackboard Work—Deductions.

VIII. *Grammar and Teaching of Languages.*—Grammar contained in Language, and to be sought there—Parts of Speech to be classified and defined by Pupils—Accidence to be collected by Pupils—Syntax to be discovered and formulated by Pupils—Parsing—Analysis of Sentences—Need of Logical Consistency in Grammar—Languages learnt with different Objects in view—for mere Reading—for Speaking and Writing—Methods appropriate to each—Lessons for Young Children—for more Advanced Pupils.

IX. *English Literature.*—Aims of Teacher—Authors and Pieces suitable for different Ages—Method of Teaching English Literature illustrated by Examples—Simple Poems—Romantic Epics—Shakespeare—Milton—Essayists—Preparation by Pupils—Paraphrasing—History of English Literature—Manuals—Examinations in English Literature—Criticism.

X. *Geography.*—Home Surroundings—Maps—Globe—Order of Treatment determined by Interdependence of Physical Facts—Physical Geography—Political Geography—Commercial Geography—Physiography—Sources of Information—Illustrations needed—Models.

XI. *History.*—Starting-point—Order of Time—Regressive Order—Early Lessons—Episodes—General Notions—Detailed Study of Special Periods—Mode of treating Biographies—Illustrations—Pictorial—Literary—Busts—Coins—Facsimiles—Synchronistic Charts—Original Authorities—Use of Text-books at different Stages—Constitutional History—Duties of Citizenship.

XII. *Discipline.*—Attendance—Punctuality—Order—Attention—School-rules—Motives appealed to—The Teacher's Eye—Rewards and Punishments—Emulation—Public Opinion—Characteristics of good Discipline as regard Means and Ends—School Tone—Formation of Habits—Character.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

* * * The Lectures will be delivered on FRIDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

the Church of England, has been founded, and has this year been gained by Ruth Lawson. Candidates need not be present pupils in the school, but they must be under thirteen years of age. In the Oxford and Cambridge Joint Board Examination, six girls gained Higher Certificates and six Lower Certificates. In the Higher Certificate Examination, two—L. Fildes and T. Vawdrey—gained distinction in English; and, in the Lower Certificate Examination, M. Bartlett gained six First Classes (one being in Latin), and two Seconds; K. Marsh, five First Classes and two Seconds, and H. Campbell five First Classes and three Seconds. M. Bartlett and H. Campbell were the only two girls in England who passed in Latin in the Examination for Lower Certificates. Former pupils of the school have been very successful, M. Morris Smith gaining a First Class in Final Classical Honours at Oxford, and D. Wood and K. Bayliss gaining a First Class with distinction in the Cambridge Higher Local Examination in geography and English respectively.

PRIZE COMPETITIONS.

HOLIDAY PRIZE COMPETITIONS.

FOR the literary competition, prizes of one guinea are awarded to "A.B." and "Growler," and prizes of half-a-guinea to "C.S.J." and A. Warren.

PHOTOGRAPHIC COMPETITION.

Figure Study.

Mrs. R. G. Godwin, 56 Arlingford Road, Tulse Hill. £1. 1s. Scene from "Little Miss Muffet."
Kekragol. 10s. 6d. "Nydia" ("Last Days of Pompeii").

Architecture.

Rev. H. Mudie Draper, 11 Grosvenor Road, Douglas, I. of Man. £1. 1s. Views of Chichester Cathedral.
Archie L. Cranch, Merrick House, Monmouth. £1. 1s. Views of Tintern Abbey.
Stephen Timothy, 186 Ystrad Road, Pentre, Glam. 10s. 6d.
T. E. Carey, 16 College Buildings, Gloucester. 5s. Bits of old Gloucester.

Landscape.

R. W. Copeman, The Union, Wincanton, Somerset. 10s. 6d.
"Gerta," c.o. Mrs. Percy Wallis, Broxton, The Headlands, Kettering. 10s. 6d.

SELECTED ANECDOTES ILLUSTRATING THE HUMOURS OF THE CLASS-ROOM AND PLAYGROUND.

1. In a certain school there was a master who was much irritated by the too frequent dropping of books during construe. At last he made it a rule that whoever offended in this wise should be "put on." The ingenious class at once adapted itself to its environment. Each boy would prepare a fragment of the whole lesson, and would drop his book as the progress of things brought the favoured piece within sight. Nor did the innocent master discover the ingenious economy until one day Jones and Brown dropped their books simultaneously, and each exclaimed: "Please, sir, I dropped mine first!"—A.B.

2. A well known Scotch Professor had the courage of his opinions, and was willing to risk much in the interests of discipline. He noticed that the scum occasionally floated up from the lower benches of his lecture-theatre to the higher seats behind, and one day, for the purpose of restoring the equilibrium, he requested a certain Macdonald to take a seat in the front, at the end of a bench. "May I venture to ask, sir," said Macdonald, with marked politeness, "why you have required me to sit here?" "Surely," said the Professor, with ready courtesy, "I have three reasons. In the first place, you are near me; in the second place, I am near you; in the third place, you are near the door."—A.B.

3. In the early seventies an Inspector friend of mine was pursuing his harmless necessary vocation. There was much noise in the school-room, and the mistress in charge was greatly distressed at this breach of decorum under such solemn circumstances and in such a Presence; whereat my friend, a jocular and genial person—for an Inspector—remarked that it was hard that they shouldn't keep their tongues quiet, but perhaps they would be better if they were gagged. A year elapsed. Next time he entered the school-room he saw ninety-seven children

(Continued on page 674.)

New York Life Insurance Company.

THE GREAT INTERNATIONAL COMPANY.

(FOUNDED 1841.)

Chief Office for Great Britain and Ireland—Trafalgar Square, W.C.

INVESTED FUNDS ... £59,743,837.

LAST YEAR'S INCOME ... £14,548,968.

SAFE INVESTMENT on remunerative terms.
LIFE INSURANCE at the lowest rates consistent with absolute safety.
LIFE PENSIONS at rates not surpassed by any other office.

ANOTHER TYPICAL CASE.

A teacher (man or woman), aged 35 nearest birthday, by investing at the rate of less than 5s. a week, can provide a pension of £1 a week, to commence at age 65. In the event of death before age 65, £350 is paid to the Insured's family. At age 65 the Insured could, on the basis of present settlements, receive £175 in cash AND a yearly income of £52 during the remainder of life. If Pension is not desired, it can be commuted, the Company paying in cash, on the basis of present settlements about £636, or equivalent paid-up insurance payable at death, for £879. If any payment of premium be omitted, the Policy is not cancelled, but is kept in full force for a definite period stated in the Policy.

Any person desiring to invest, insure, or to provide a pension for life, can obtain full particulars from either:—

T. A. ORGAN, District Manager or C. D. CRISP, Agency Superintendent,
(Central and North London), (Southern District),
Tottenham Chambers, 71 and 72 Piccadilly,
Tottenham Court Road, W.

N.B.—Good men, seeking salaried appointments, can obtain full particulars from either of the above-named.

THOMAS MURBY'S EDUCATIONAL LIST.

Coronation Edition. Revised and Enlarged.

Murby's Analysis of English History. With 8 Full-page Maps, 16 pp. double col. Index, 24 pp. of Questions, and 40 pp. of Biographies. Total, 336 pp. Price 1s. 6d.; post free, 1s. 9d. Shilling Edition, 272 pp.; post free, 1s. 3d.

Intending examinees will do well to secure an early copy of this well known textbook. Its clear and copious treatment of *Parliamentary, Church, and Constitutional* questions, its strictly chronological sequence of events, and its numerous cross-references and explanatory notes will save them much time and labour in reading for examinations.

Meldola's Inorganic Chemistry. Metals and Non-Metals. With Chapters on Chemical and Spectrum Analysis, Chemical Laws, Deduction of Formulae, and Modes of Chemical Action. By RAPHAEL MELDOLA, F.C.S. Revised by J. CASTELL-EVANS, F.I.C. (6th Ed.) Cloth, 2s.

Castell-Evans' Experimental Chemistry; including Qualitative and Quantitative Analysis. By JOHN CASTELL-EVANS, F.I.C., Technical College, Finsbury. (4th Ed.) 2s. 6d. With Key, 6s.; Key, 5s. "Far in advance, from an educational point of view, of anything that has appeared as yet in this country."—*Journal of Education*.

Skertchly's Geology. (10th Ed.) Revised by JAMES MONCKMAN, D.Sc. Price 1s. 6d. cloth.

Skertchly's Physical Geography. (31st Ed.) Revised by J. H. HOWELL, B.A., Civil Service Department, King's College. 1s. cloth.

Rutley's Mineralogy. (12th Ed.) Containing a New Section on the recently adopted treatment of Crystal Symmetry, with Table of the 32 Symmetry Groups. 2s. cloth.

Hobbs' Arithmetic of Electrical Measurements. (7th Ed.) With numerous Examples fully worked. 1s. cloth.

Murby's Scripture Manuals. 6d. each. The New Editions of the following are just now in great demand:—KINGS I. AND II., JOSHUA, JUDGES, MATTHEW, MARK, and ACTS.

Murby's "Charming" School Cantatas.

SCIENCE BOOKS.

Practical Chemistry. By W. FRENCH, M.A., Principal, Storey Institute, Lancaster. Part I. With numerous Diagrams, Crown 8vo, 1s. 6d.

Suitable for Oxford and Cambridge Preliminary and Junior Locals. The teaching throughout is INDUCTIVE.

In use at Sherborne School; Grammar Schools at Barnet, Bury, Darlington, Monmouth, St. Helen's, Wimborne; County School, Gowerton; Salisbury School; Downhill Academy, Glasgow; Blairlogie School, Polmont; Technical Schools at Belfast, Bolton, Cambridge, Stockport.

Practical Mechanics. By SIDNEY H. WELLS. With 75 Illustrations and Diagrams. Second Edition. Crown 8vo, 3s. 6d.

In use at the Technical Schools at Bradford, Brighouse, Derby, Devonport, Dublin, Dunfermline, Leeds, Liverpool, Stroud, West Ham; University College, Nottingham; Royal College of Science, Dublin.

Practical Physics. By H. STROUD, D.Sc., M.A. With 115 Diagrams. Crown 8vo, 3s. 6d.

In use at Epsom College; University Extension College, Colchester; Hutton Grammar School, Preston; Bury Grammar School; Merchant Venturers' College, Bristol; Durham College of Science, Newcastle-on-Tyne; St. Colman's College, Newry; Technical Schools at Bath, Bolton, Everton, Lincoln, &c.

General Elementary Science. By J. T. DUNN, D.Sc., and V. A. MUNDELLA, M.A. With 114 Illustrations. Crown 8vo, 3s. 6d.

In use at Dover College, Reading School, Northern Polytechnic, Kensington Coaching College, Wolverhampton School, &c.

Carpentry and Joinery. By F. C. WEBBER. Illustrations. Second Edition. Crown 8vo, 3s. 6d.

Recommended by City and Guilds of London Institute. In use at the Technical Schools at Beckenham, Bolton, Brighouse, Bristol, Derby, Huddersfield, Leicester, St. Albans, &c.

The Principles of Magnetism and Electricity: An Elementary Text-Book. By P. L. GRAY, B.Sc., formerly Lecturer on Physics in Mason University College, Birmingham. With 181 Diagrams. Crown 8vo, 3s. 6d.

NEW EDUCATIONAL BOOKS

For the Autumn Term

NOW READY.

Easy Dictation and Spelling. By W. WILLIAMSON, B.A. Fcap. 8vo, 1s.

Ninety-nine Graduated Passages for Dictation, suitable for Pupils of from eight to twelve years of age. With Appendices, containing over fifteen hundred Spelling Words.

The Makers of Europe. By E. M. WILMOT-BUXTON. With 12 Maps and Plans. Crown 8vo, 3s. 6d.

A Text-Book of European History suitable for the Middle Forms of Schools.

At present, while many most excellent books treat of each period or country separately or in detail, there are none suitable to put into the pupils' hands for their own study and private reading, a want which this book will, it is hoped, supply.

French Prose Composition. By R. R. N. BARON, M.A. With Vocabulary and Notes. Crown 8vo, 2s. 6d. KEY, 3s. net.

Suitable for Higher Forms and for Army Examinations. Now in use at Dulwich College; Edinburgh Academy; Victoria College, Jersey; Leeds Institute; Marlborough College; Maritzburg College; &c.

The Rose Reader. By EDWARD ROSE. A new method of teaching children to read. With numerous Illustrations. Crown 8vo, 2s. 6d. And in Four Parts: Parts I. and II., 6d. each; Part III., 8d.; Part IV., 10d.

JUNIOR EXAMINATION SERIES.

New Volumes now ready. Specimens 6d. each to Heads of Schools.

Junior Latin Examination Papers in Miscellaneous Grammar and Idioms. By C. G. BOTTING, B.A., Assistant Master at St. Paul's School.

Junior Arithmetic Examination Papers. With Answers. By W. S. BEARD, Head Master of the Modern School, Fareham.

Ninety papers of ten questions each.

Please send for Prospectus, with Specimen Pages, and List of Schools using the Series.

METHUEN'S JUNIOR SCHOOL BOOKS.

Edited by OLIVER D. INSKIP, M.A., LL.D., Head Master of Framlingham College, and W. WILLIAMSON, B.A., F.R.S.L., Head Master of the West Kent Grammar School, Brockley.

Messrs. METHUEN are issuing under the above title a Series of School Class Books. These are adapted to the needs of the Lower and Middle Forms of Public Schools, and are suitable for the use of candidates preparing for the Oxford and Cambridge Junior Local Examinations.

A Class Book of Dictation Passages. By W. WILLIAMSON, B.A. Fifth Edition. Crown 8vo, 1s. 6d.

In use at over two hundred and forty large Secondary Schools, including Bath College, Blackheath School, Bradfield College, Cheltenham College, Edinburgh Academy, Merchant Taylors' School, Mill Hill School, Nottingham High School, St. Olave's School, Southwark; St. Paul's School; High School, Glasgow.

The Gospel according to St. Mark. Edited by A. E. RUBIE, M.A., Head Master of the Royal Naval School, Eltham. With Three Maps. Crown 8vo, 1s. 6d.

Adopted at Harrow; St. Paul's School; Bath College; Mill Hill School; Owen's School, Islington; King's College, Canterbury; Aravon School, Bray; Grammar School, Kirkby Ravensworth; Moorside School, Okehampton; Wellington College (Salop); Dronfield Grammar School, &c.

A Junior English Grammar. By W. WILLIAMSON, B.A. With numerous Passages for Parsing and Analysis, and a Chapter on Essay Writing. Crown 8vo, 240 pp., 2s.

Please send for particulars, with opinions of the Head Masters of a number of large Secondary Schools.

A Junior Chemistry. By E. A. TYLER, B.A., F.C.S., Science Master at Framlingham College. With Seventy-three Illustrations. Crown 8vo, 2s. 6d.

METHUEN & CO., 36 ESSEX STREET, STRAND, W.C.

Williams & Norgate's School Books.

VICTOR HUGO.—LES MISÉRABLES. Les Principaux Episodes. Edited, with Life and Notes, by J. BOIELLE, Officier d'Académie. Second Edition. 2 Vols. Crown 8vo, each 3s. 6d.

"A worthy addition to our stock of French reading-books which will be welcomed by numberless masters . . . M. Boielle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

"Has done extremely well in putting forth his selection of the most striking episodes of Victor Hugo's masterpiece, and has done it well."—*Educational Times*.

VICTOR HUGO.—NOTRE DAME DE PARIS. Adapted for the use of Schools and Colleges. By J. BOIELLE. 2 Vols. Crown 8vo, each 3s.

"His notes abound in good renderings of sentences and phrases, opportune remarks on the proper meanings of words, and historical information necessary to elucidate the text."—*Athenæum*.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school-book."—*Scotsman*.

Crown 8vo, paper boards,
9d. each.

Chamisso's *Peter Schlemihl*. By M. FORSTER.

Grimm's *Märchen*. By W. J. HICKIE.

Andersen's *Bilderbuch ohne Bilder*. By ALFONSE BECK.

Schiller's *Neffe als Onkel*. With English Notes by VIVIAN PHILLIPS.

NOW READY. Twenty-Second Edition, Thoroughly Revised.
Crown 8vo, cloth, 3s.

EUGÈNE'S STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE, with an Historical Sketch of the Formation of French. For the Use of Public Schools. By G. EUGÈNE FASNACHT, late French Master in Westminster School.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen. . . . The book is likely to be useful to all who wish either to learn or to teach the French language."—*Athenæum*.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern languages. . . . The rules and observations are all scientifically classified and explained. . . . It is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

Sixteenth Edition. Crown 8vo, cloth, 2s. 6d.

EUGÈNE'S COMPARATIVE FRENCH-ENGLISH STUDIES, GRAMMATICAL AND IDIOMATIC. Being an entirely Rewritten Edition of the "French Exercises for Middle and Upper Forms."

Crown 8vo, cloth, 5s.

EUGÈNE'S STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE AND THE COMPARATIVE FRENCH-ENGLISH STUDIES. Being an entirely Rewritten Edition of the French Exercises, bound up together.

JUST READY. Thirteenth Edition. Crown 8vo, cloth, 2s.

THE STUDENT'S GRADUATED FRENCH READER, for the Use of Public Schools. By LÉON DELBOS, M.A., late of King's College, London. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary.

Sixth Edition. Crown 8vo, cloth, 2s.

THE STUDENT'S GRADUATED FRENCH READER, for the Use of Public Schools. By LÉON DELBOS, M.A., late of King's College, London. II.—Second Year: Historical Pieces and Tales. 180 pages. Sixth Edition. Crown 8vo, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos. The contents, which have been selected with great care and judgment from authors of the highest standing, consist of portions of history, biography, anecdotes, and fiction, full of interest, and written in the purest French. . . . The arrangement of the materials is no less happy than their selection, the shorter extracts being often grouped under general heads, and carefully graduated in difficulty."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

JUST READY. Seventeenth Edition. Crown 8vo, cloth, 1s. 6d.

EUGÈNE'S FRENCH METHOD. Elementary French Lessons. Easy Rules and Exercises preparatory to "The Student's Comparative French Grammar."

"To those who begin to study French, I may recommend, as the best of the kind with which I am acquainted, 'Eugène's Elementary Lessons in French.' It is only after having fully mastered this small manual and exercise-book that they ought to begin the more systematic study of French."—Dr. BREYMANN, Lecturer on the French Language and Literature, Owens College, Manchester (Preface to "Philological French Grammar").

A GERMAN READING BOOK. A Graduated Series of Anecdotes, Tales, Historical Pieces, and Poetry. With a complete Vocabulary. By A. MOLLER. New Edition. Corrected to the Official German Spelling. 150 pages, crown 8vo, cloth, 2s.

Third Hundred Thousand.

KIEPERT'S ATLAS ANTIQUUS. Twelve Maps of the Ancient World. For Schools and Colleges. By Dr. HENRY KIEPERT. Twelfth Edition. Improved, Corrected, and Enlarged, with List of Names. Folio, boards, 6s.; cloth, 7s. 6d.

MEDICAL INDOOR GYMNASTICS; or, A System of Hygienic Exercises for Home Use. To be practised anywhere without Apparatus or Assistance by Young and Old of either Sex for the Preservation of Health and General Activity. By D. G. M. SCHREIBER, M.D., late Director of the Orthopedic and Medicinal Gymnastic Institution in Leipzig. Revised and Supplemented by RUDOLF GRAEPE, M.D., and Translated from the Twenty-sixth German Edition by HERBERT A. DAY. Demy 8vo, cloth, with one Plate and 45 Illustrations in the Text. 3s. net.

WILLIAMS & NORGATE,

14 HENRIETTA STREET, COVENT GARDEN, LONDON; and 7 BROAD STREET, OXFORD.

EDINBURGH AGENCY: 20 SOUTH FREDERICK STREET.

hastily plunge ninety-seven rolled handkerchiefs into as many mouths.—A.B.

4. On the day when the lamented Peace was to be strung up, I noticed a little fat boy (who afterwards took a scholarship at Eton) unusually inattentive. This boy had a habit of holding his Caesar in the left hand and keeping the right hand in his trousers pocket; but on that occasion the right hand fumbled with his watch. In due course my friend stood up to construe, which he did very badly. All of a sudden he pulled out his watch, exclaimed "He's gone!" and collapsed upon the form.—C. S. J.

5. Two fourth form public-school boys out for a Sunday walk came to a bridge which bore this notice: "No unusual weights to pass over this bridge." Said the thin boy to the fat boy: "I'll go on."

6. Mr. Price, of Rugby, the father of Prof. Bonamy Price, bored the boys of his form to death by his jokes. At length it was decided that on a given occasion no one should laugh until joke number five was reached. School proceeded as usual, and the master saw with sorrow and amazement that his jokes fell flat; but at number five forty boys burst into such a roar of laughter that Dr. Arnold, who was teaching in the class-room below, sent up a sixth form boy to ask what was the matter. For a long time nothing could be heard above the uproar. At last a little lad put his hand to his mouth, and shouted, loud enough for the sounds to reach the *preceptor*: "Mr. Price has made a joke!"—C. S. J.

7. Boy: "Please, sir, I've left my book outside. May I go and fetch it?"

Irish Schoolmaster: "No, ye mayn't. Ye should have gone out before ye came in."—A. WARREN.

8. *Teacher of Literature*: "What do you understand by Tennyson's expression, 'cycle of Cathay'?"

Boy: "Chinese bicycle."—Y.D.

9. Girl, having read of the trial and acquittal of the Seven Bishops, continues: "All London was soon filled with shouts and tears of gladness. That night was a blaze of illumination. Rows of seven candles, with a taller [tallow] one in the centre for the Archbishop, lit up every window."—Y.D.

SELECTED INSTANCES OF INFANT PRECOCIOUSNESS.

1. *Little Girl* (aged 2 years and 6 months): "I dreamt there was a lion on my dressing-gown."

Mother: "It was only a dream-lion."

Little Girl: "But I was only a dream-baby!"—A.B.

2. *Father* (quoting): "Let me see if Philip can
Be a little gentleman."

Small Boy (2 years and 2 months): "I *avz* a denteleman."

Father: "I don't see it."

Small Boy: "I've got toes, but you don't see 'em."—A.B.

3. *Boy* (2 years and 8 months), at the Zoological Gardens: "We saw a wild cat, but it wasn't so *very* wild: it was smiling!"—A.B.

4. *Small Boy*: "I don't like Tommy B—. (*Musingly*) I fink I'll invite him to tea, and then we'll fight."—A. WARREN.

5. A kindergarten class had just been reading the story of Noah leaving the ark, ending with the command: "Be fruitful and multiply." The next lesson was arithmetic. *Teacher*: "Multiply—" *Smart Pupil*: "That's what God told Noah to do."—BONES.

6. He was the younger of two brothers aged four and five, and his indignation was great when he discovered that his brother had been helped to a larger portion of cake than himself. "It's not cake I want; it's justice," he exclaimed, only half consoled when the balance was finally restored in his favour.—BLOBS.

7. When he was five years old he heard one day at lunch the evils of juvenile smoking discussed. That afternoon as he walked with his nurse in the Park he espied a very tall man at the end of a cigar. "Nurse," said the young wag, "do let me go and tell that gentleman he won't grow any more if he smokes."—ST. MICHAEL.

8. Two-year-old logic.—"Freddy, you must do as I tell you." "Then you mustn't tell me, if I'm to do it."—LIMOUSINE.

9. *Auntie*: "You see, dear, Jesus was very poor—so poor that He had no house to dwell in."

Alec (aged four): "I think, Auntie, you forget the gold that the Wise Men brought Him when He was a baby."—BERNADINE.

10. A little girl of four, on whom Calvinistic notions of a future life had been inculcated, maintained, to the virtuous horror of her six-year-old brother, that she did not want to go to Heaven—people did nothing

(Continued on page 676.)

J. & J. PATON, 143 Cannon Street, LONDON, E.C.,

Beg respectfully to inform Head Masters that they insert SCHOLARSHIP EXAMINATION NOTICES and other Advertisements promptly and accurately in all LONDON and PROVINCIAL NEWSPAPERS and PERIODICALS throughout the United Kingdom, also in all Indian, Colonial, and Foreign papers.

The charges are at lowest office rates. Estimates and scheme of insertions forwarded free, on receipt of particulars of proposed expenditure, over given period.

PATON'S LIST OF SCHOOLS (BOYS' AND GIRLS') AND TUTORS.

(An Aid to Parents in the Selection of Schools and Tutors.)

720 pages. Crown 8vo. Red Cloth. Gilt Lettered.

PRICE 1s. Post free, 1s. 6d.

LARGEST CIRCULATION OF ANY SCHOLASTIC
GUIDE OR DIRECTORY.

BEST MEDIUM FOR OBTAINING PUPILS.

SIXTH ANNUAL EDITION NOW PREPARING.

The large sum we expend each year in advertising "List of Schools" in the best newspapers ensures the largest circulation of any such work, and brings applications from parents all over the United Kingdom, India, the Colonies, and the Continent. Copies are also placed in the best Clubs, Libraries, Hotels, Boarding Houses, &c., in London and the Provinces. Hundreds of Pupils have been obtained through the medium of Paton's "List of Schools."

MAY WE
send you a specimen copy?

J. & J. PATON,
EDUCATIONAL AGENTS,
143 Cannon Street, London, E.C.

Mr. EDWARD ARNOLD'S New School Books.

An entirely New Text-Book of Arithmetic, based upon the most recent Methods of Instruction.

AN ARITHMETIC FOR SCHOOLS.

By J. P. KIRKMAN, M.A. Cambridge,
and A. E. FIELD, M.A. Oxford,
Assistant Masters at Bedford Grammar School.

500 pages, crown 8vo, with and without ANSWERS, 3s. 6d.

Educational Times.—"An excellent school arithmetic on a good plan well carried out. In addition to its value as a text-book, the work is attractive from the quantity of instructive general information it contains. This is so simply and directly given that a student can scarcely fail to be thoroughly interested and vividly impressed. The theory of the elementary rules is exceptionally clear and convincing."

A New Geometry Book.

ELEMENTARY GEOMETRY. By W. C. FLETCHER, M.A.,
Head Master of the Liverpool Institute, late Fellow of St. John's
College, Cambridge. Small crown 8vo, cloth, 1s. 6d.

This book is meant to contain the irreducible minimum of geometrical knowledge less than the whole of which is not worth considering as knowledge at all. It contains the whole substance of Euclid I.-IV. and VI., with the exception of the unimportant proposition IV. 10.

Price One Shilling each.

A FIRST COURSE IN ENGLISH ANALYSIS AND GRAMMAR. By RICHARD WILSON, B.A. 144 pages.
Cloth, 1s.

This book differs from others of similar scope and aim in the arrangement of the parts of the subject.

The broad division into accidence and syntax, the only logical division for a *synthetical* language, is discarded, and what remains of accidence in English, now an *analytical* language, is taught along with syntax.

School World.—"The definitions of the parts of speech are clear, the arrangement of the lessons is good, there are numerous exercises, and, as far as we have been able to judge, the information given is up to date and accurate—two qualities that are not always present in text-books of grammar."

ARNOLD'S NEW SHILLING GEOGRAPHY. The
World, with special reference to the British Empire. With
Diagrams and Sketch Maps, Statistical Tables, Questions, and
Map Exercises. Suitable for Junior and Lower Middle Forms.
160 pages. Crown 8vo, cloth, 1s.

THE AUSTRALIAN COMMONWEALTH. A Reading
Book for Schools. 144 pages. Crown 8vo, cloth, 1s.

Containing an interesting account of the geography, history, and industries of the Commonwealth. Statistics find a place in the Appendix, which contains geographical and historical summaries. The book is provided with illustrations and a double-page coloured Map of Australia. Strongly bound and clearly printed on good paper.

PHYSIOLOGY FOR BEGINNERS. By LEONARD HILL,
M.B., F.R.S., Author of "A Manual of Human Physiology."
Fully Illustrated. 128 pages. Crown 8vo, cloth, 1s.

Guardian.—"The elements of physiology are set out in this manual accurately, clearly, and in perfectly simple language. As a primer for the first teaching of physiology in schools the book can be thoroughly recommended."

Two New Literary Reading Books.

IN GOLDEN REALMS. An English Reading Book for
Junior Forms. 224 pages. Cloth, 1s. 3d.

Designed to form an introduction to the study of English literature. Containing folk-tales from various sources, stories from Homer, Virgil, the Beowulf poem, Chaucer, Malory, Froissart, Spenser, Shakespeare, Barbour, Scott, Lamb, and Washington Irving, and a large number of extracts from the works of the best poets.

Illustrated with beautiful black-and-white reproductions of famous paintings in the Wallace, Tate, and National Galleries.

IN THE WORLD OF BOOKS. An English Reading Book
for Middle Forms. 256 pages. Cloth, 1s. 6d.

Designed to introduce the pupil to some of the greatest names in English literature. Containing interesting extracts, generally narrative, from the leading writers of prose and poetry from Caedmon and Bede to Thackeray and Tennyson, arranged in chronological order. Illustrated in a manner similar to the above.

ARNOLD'S SCHOOL SHAKESPEARE.

MACBETH. Price 1s. 3d. Edited by R. M. CHOLMELEY, M.A.,
Assistant Master at St. Paul's School.
(Set for Oxford Local and College of Preceptors' Examinations.)

TWELFTH NIGHT. Price 1s. 3d. Edited by R. F.
CHOLMELEY, M.A.
(Set by Oxford and Cambridge School Examination Board.)

A Complete Educational Catalogue will be forwarded post free on application.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

ROBERT BOYLE,

INVENTOR AND SANATARIAN,

(Founder of the Profession of Ventilation Engineering.)

By LAWRENCE SAUNDERS.

New and Enlarged Edition.

Price 10s. 6d.

"ROBERT BOYLE was the author of many brilliant inventions."—*Academy*.

"A little book with much in it to suggest thoughts. It is a biographical sketch of the two BOYLES, father and son, who have made their names famous by their system of ventilation. More enthusiastic, simple-hearted men it would be hard to find. The history of their lives, their genius, and their inventions is most interesting."—*Life*.

"The record of an earnest, energetic and untiring life; a life governed by high principle and devoted to noble ends. Self-culture and help to others were his most marked traits. He was foremost in all social and sanitary movements."—*Sanitary Engineering*.

"ROBERT BOYLE bore a distinguished name in science, and proved himself worthy of it."—*Edinburgh Courier*.

"A man of indubitable inventive genius, and strong philanthropic zeal."—*Scotsman*.

"A sketch—rather too brief—of the lives of ROBERT BOYLE, father and son, who have brought the question of ventilation and sanitation to a science by the discoveries of their inventive genius."—*Christian World*.

"A bright story of true Christian heroism. As we read through these pages of the almost insurmountable difficulties overcome by the BOYLES, father and son; of the good done; the sanitation achieved; the inventions perfected; we see men whose sole aim was to serve God, benefit mankind, and whose example should be held up to all our boys beginning life."—*Christian*.

"An excellently written biography of the eminent inventor and philanthropist, ROBERT BOYLE. . . . The work is practically a biography of the late ROBERT BOYLE and of his son ROBERT, who is still living and carrying on his father's great work as a sanitary engineer. Both are characters such as Samuel Smiles might well apply his genius to describing."—*Hull Express*.

THE

CALENDAR

OR

The College of Preceptors

FOR 1902.

The Diploma Papers of the College of Preceptors (for Fellow, Licentiate, and Associate) are contained only in the Calendar. The Calendar for 1902 contains all Papers set in 1901.

LONDON: FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

but sing, and there was nothing to eat. "But you wouldn't be hungry," argued her small Mentor. "But I like to eat, whether I am hungry or not," retorted Miss Greedy. "Then you'd go to hell, and burn and burn and burn for ever!"—in an awful *crescendo*. "I couldn't burn for ever; [scornfully] I should be a cinder!" "No!" cried the young theologian triumphantly; "you'd burn like asbestos!"—GROWLER.

11. A child of seven, after taking her first voyage from Southampton to Guernsey, was asked if she had been seasick. "Well," she owned reluctantly, "Neptune did have a poke or two at my tummy with his trident."—GROWLER.

12. Mary, aged five, was left alone for several hours, her nurse being busy and her mother out. "Mother," she said reproachfully to her neglectful parent on her return, "you didn't ought to leave your little girl such a long time. I've been all alone with nobody but God—and He isn't much company."—GROWLER.

13. When my father was a small boy of five he was sent out of the dining-room in disgrace for filling his mouth almost to the point of choking. On readmittance he went up to his mother and said: "I beg your pardon, dear Mamma; I had no idea my mouth was so small."—MERRYTHOUGHT.

14. A nurse looks out of the window, sees a two-year-old trampling over a flower bed, and cries: "Baby, baby, you know you shouldn't do that!" "Yes, I shall," answered the precocious babe; "if 'ou were doing 'our work, Nursie, 'ou 'oudn't see me."—A. WARREN.

[The story deserves to be included in "L'Esprit des Autres" as a replica (doubtless unconscious) of Calverley's famous retort to the Master of Christ's College when he was reprovved for jumping over the quad railings.]

15. *Girl of five*: "Auntie has been telling me about the Indian Mutiny and those dreadful Sepoys."

Mother: "Did she explain to you why they mutinied?"

Girl: "Yes, because they were made to bite greased ostriches."

A Prize of Two Guineas is offered for the best translation of the following passage from Cornemini:—

Thiers a un front large et intelligent, des yeux vifs, un sourire fin et

spirituel. Mais à l'aspect, il est trapu, négligé, vulgaire. Il a, dans son habit, quelque chose de la commère, et dans son allure quelque chose du gamin. Sa voix nasillarde déchire l'oreille. Le marbre de la tribune lui va à l'épaule et le dérobe presque à son auditoire. Disgrâce physique, défiance de ses ennemis et de ses amis, il a donc tout contre soi, et cependant, lorsque ce petit homme s'est emparé de la tribune, il s'y établit si à l'aise, il a tant d'esprit, qu'on se laisse aller, malgré qu'on en ait, au plaisir de l'entendre.

Il baisse d'habitude la tête sur son menton, lorsqu'il se dirige vers l'estrade; mais lorsqu'il y est grimpé et qu'il parle, après un peu de silence, il relève si bien la tête, il se redresse si haut sur la pointe des pieds, qu'il domine toute l'assemblée. Il a une sorte de talent à part qui ne ressemble, de près ni de loin, à celui de personne. C'est de la causerie, mais de la causerie vive, brillante, légère, volubile, animée, semée de traits historiques, d'anecdotes et de réflexions fines, et tout cela est dit, coupé, brisé, lié, délié, recousu avec une dextérité de langage incomparable. La pensée naît si vite dans cette tête-là, si vite, qu'elle est enfantée avant d'avoir été conçue. Les vastes poumons d'un géant ne suffiraient pas à l'expectoration des paroles de ce nain spirituel.

Vous ne le trouverez jamais en défaut sur rien; aussi fécond, aussi vif dans la réponse que dans l'attaque, dans la réplique que dans l'exposition. J'ignore si sa réponse est toujours la plus solide, mais je sais qu'elle est toujours la plus spécieuse.

J'aime ce discoureur naturel, vif, à la libre allure. Il converse avec moi et ne déclame point. Il ne psalmodie pas toujours sur le même ton. Il finit bien, à la longue, par m'étourdir de son babil; mais c'est une espèce de gazouillis qui me délasse encore de la monotonie oratoire, cet éternel ennui, le premier des ennuis pour un auditeur.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by October 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

ON AN ENTIRELY NEW PRINCIPLE.

THE GRAPHIC MARK BOOK AND REDUCING SCALE.

Invented and Designed by

C. MARSH, M.A., AND H. W. ORD, M.A.,

Assistant Masters at Blackheath School.

Every MARK BOOK is complete in itself and contains a Reducing Scale.

Printed on good paper, bound in stiff boards, with cloth sides.

Published price, **1s. 4d.** each.

All Masters in charge of the Marks will find their labour simplified and reduced, as the periodical laborious addition of the daily marks is obviated and the relative position of each Pupil shown automatically.

A simple mechanical process dispenses with the proportion sums usually employed to reduce the marks to a given standard.

For Sample Book, sent post free on receipt of 1s. in stamps, apply to—

42 HOLBORN VIADUCT, LONDON, E.C.

INVALUABLE TO SCIENCE SCHOOLS.

LABORATORY NOTE-BOOKS.

Each containing 128 pages of paper ruled in squares, also 4 pages of valuable Memoranda for use in

CHEMICAL AND PHYSICAL LABORATORIES.

Quarto, 8 in. by 6½ in.

Bound in stiff cover, with cloth back and rounded corners

Price **4s. 6d. per dozen.**

These Books are kept in stock in Three Rulings, viz. :—

In Squares of ¼ of an inch. In Squares of ⅓ of an inch.

In Squares of ½ Centimetre.

These Books can also be had in limp marble cover, containing 20 pages of paper ruled in squares, and 4 pages of Memoranda, price **2s. 3d. per dozen.**

LABORATORY RULE.

Specially adapted for the Cambridge Examination.

Great care is taken in the manufacture of these Rules to have the markings exact so that they are absolutely reliable.

Marked in { Inches, Eighths, Tenths, and Twelfths,
Decimetres, Centimetres, Millimetres,
with a Scale of Chords.

Nine inches long, price **3s. 6d. per dozen.**

Specimens free on application to—

MERCHANT OF VENICE,

MIDSUMMER NIGHT'S DREAM, AS YOU LIKE IT.

By **ADA B. STIDOLPH.**

With Preface by the very Rev. CHAS. W. BARNETT-CLARKE, M.A., Dean of Cape Town.

Dedicated to Natalie, daughter of His Excellency Sir Walter Hely-Hutchinson, K.C.M.G., Governor of Cape Colony. Crown 8vo, cloth. Price 2s.

Practical Electricity. By J. HOPE BELCHER, B.A., B.Sc., F.C.S., Principal of the Municipal Technical Institute, Coventry. Crown 8vo, cloth. Price 2s. 6d.

Physical Geography. By Miss M. A. REID, B.Sc., Assistant Mistress at Cheltenham Ladies' College. With Maps and Illustrations by Miss B. REID. Crown 8vo, cloth. Price 2s. 6d.

Preparatory Lessons in Chemistry. By H. W. HILL, Demonstrator and Assistant Lecturer at University Tutorial College, Author of "Chemistry for Examinations." Crown 8vo, cloth. Price 1s.

Macaulay's Lays. Lake Regillus, Horatius, Armada, and Ivry. Edited by W. J. ADDIS, B.A. Crown 8vo, cloth. Price 1s.

Questions on Henry V. By JOHN LEES, B.A. (Eng. Honours). Crown 8vo, cloth. Interleaved. Price 2s. 6d.

Henry the Fifth. (New Shakespeare Series.) Edited, with Annotations, by JOHN LEES, B.A. London (Eng. Honours), Author of "Questions on 'As You Like It,' 'Julius Caesar,' &c." Crown 8vo, cloth. Price 1s.

Macbeth. (Oxford and Cambridge Shakespeare.) Edited, with Introduction and additional Notes, by W. J. ADDIS, B.A., Triple Honourman of London University, Lecturer in English at the Birkbeck Institution, Head Master, Holborn Estate Grammar School; Editor of "Scott's 'Lay of the Last Minstrel,'" with Introduction and Notes. Crown 8vo, cloth. Price 1s.

New Testament History (with Index). Second Edition. By Rev. C. J. HAMER, Vicar of St. Paul's, Newcastle-on-Tyne. Author of the "Old Testament History." With a Preface by the BISHOP OF NEWCASTLE. Crown 8vo, cloth. Price 1s.

Old Testament History. Third Edition. By Rev. C. J. HAMER, Vicar of St. Paul's, Newcastle-on-Tyne. With a Preface by the BISHOP OF RIPON. Crown 8vo, cloth. Price 1s.

Notes on St. Luke. By Rev. C. J. HAMER, Author of "Notes on St. Mark." Cloth. Price 1s. *In the press.*

Easy Excerpts from French Authors. With Vocabulary by T. H. REEVE, M.A., Modern Language Master, Manchester Grammar School. Crown 8vo, cloth. Price 1s.

Botany, A Text-Book of Elementary. Second Edition. By CHARLOTTE L. LAURIE, Assistant Mistress, Cheltenham Ladies' College. With Illustrations by W. L. BOYS-SMITH, late Scholar of Girton College, Cambridge, and Science Lecturer at Cheltenham Ladies' College. Crown 8vo, cloth. 2s. 6d.

Algebra. For Junior Students. Second Edition. By TELFORD VARLEY, M.A., B.Sc. Crown 8vo. Price 1s. 3d.; with Answers, 1s. 6d. Answers only, 6d.

Euclid. Books I. and II. Second Edition. By TELFORD VARLEY, M.A., B.Sc. Crown 8vo. Price 1s.

Practical Physics (Elementary). Series No. I.—Mechanics and Hydrostatics. A Series of Twenty-four Cards. By E. E. BROOKS, B.Sc. (Lond.), Leicester Municipal Technical School. Price 1s. the Packet.

Practical Chemistry (Elementary). Second Edition. Twenty-four Cards. By ARTHUR H. BARTLETT, Senior Science Master, Marlborough School. Price 1s. the Set.

Practical Book-keeping. Part I., Elementary. By W. D. OLDHAM, Chartered Accountant, and W. E. HOLLAND, Incorporated Accountant. Price 2s.

Part II., Advanced. Crown 8vo. Price 3s.

Exercise Books for Part I. Set of Five Books, together with "Illustrative Sheet," with facsimile entries. Price 2s. the Set.

The Metric System. By S. JACKSON, M.A. (Oxon.), formerly Head Master, Victoria College, Congleton. Crown 8vo, cloth. Price 1s.; with Answers, 1s. 6d.; Answers only, 6d.

THE NEW CHRIST'S HOSPITAL.

By A VISITOR.

SO many people imagined that Christ's Hospital had moved into the country before it really had that it is possible that others may be astonished to discover that the old school has actually gone at last and has done about three months' work in its new pastures. About the visitor who writes these words nothing need be said beyond the fact that he had many reasons to love well the old school in the City, none to love the new school on the Sussex Downs; so that he started on his expedition with a prejudice against the new school rather than with a bias in its favour. The only other preliminary remark that need be made is that the day of his pilgrimage happened to be fine and sunny; so that he saw all things at their best. Knowing that visitors during term-time are (with reason) apt to be regarded as a nuisance, he paid his visit in the holidays. A journey from Victoria, lasting little beyond an hour, lands the pious pilgrim at the station of "Christ's Hospital, West Horsham." An omnibus is anxious to take him to the school, but the distance is so short that he may well prefer to walk. On his right lie meadows and a wooded gorge—"the lag"—and on his left the scattered buildings of the school. The compact part he does not realize at first. The huge infirmary, with its seventeen big baths, the laundry, isolation buildings, electric centre, doctor's house, gymnasium, baths—these are some of the buildings that first strike the pilgrim's eye. It cannot be said that they are beautiful, but they are useful, and, if it be objected that they are red and garish, the answer is that they are new, and will tone down in time. Also, it must be borne in mind that Christ's Hospital in these days welcomes many students from the Board schools, and that they could not be expected to put up with sombre stone that did well enough for Lamb and Coleridge and some fairly famous men of later days. Some people will see with satisfaction that the old school in Newgate Street is now in the hands of house-breakers; if work continues as it has begun, there will not in a month or two be left one stone upon another. Other people do not share this satisfaction, but, like some other "incidents" that we "regret," it is not anybody's fault. The Governors of the old Hospital did not wish to leave the City; the Charity Commissioners did not insist upon the demolition of the old Grey Friars' cloister; some societies and individuals raised protests, but were unable to raise capital wherewith to buy the bit they wished to save—but it is possible that men of later days may use harsh words about a generation that allowed such work to be levelled with the ground.

But it is high time to get back to the new Christ's Hospital. The second thing to strike the stranger is the open nature of the school; there is no lodge, no gate, no regular entrance. He can at no one moment say: "Now I am in the grounds." The boys and masters, if not as blameless as the distant Ethiopians, are as "careless" as the Zidonians, living "quiet and secure." (By the way, after recent experiences, it is pleasant to associate the idea of "security" of any sort with assistant masters.) Not only has the new Christ's Hospital got no lodge or gate or bound, but no master's house has any wall or hedge. The masters at the end of May arrived to find their houses surrounded by what might be called ploughed land. It says much for their industry, and for the kindness of the soil, that September finds them with grass-plots round their houses, flowers, and kitchen gardens not far off that have provided them with peas, French beans, potatoes, and promise of green meat for months to come. Their industry strikes the stranger as the more praiseworthy because the garden work they must have done has been carried on in public, so to say, no wall or hedge serving to ward off the passing eye. It is obvious that assistant masters who have been lately put to the expense of moving have not many coins to spend on gardeners.

When the stranger reaches what has been written of as "the compact portion" of the school, he finds himself in a large quadrangle that consists of four main buildings—viz., the Chapel, Hall, Big School, and Science School. The last named was a revelation to a person educated—if such a verb can be applied to him—in the pre-scientific age. He had heard of palaces of art, but he had never seen a science palace; he could realize some of the sensations of the Queen of Sheba when she saw Solomon in all his glory; and he rejoiced to think that in the future boys with other tastes than his should have so fine a chance of improving and developing their powers. Prof. Armstrong must be glad to think that one more school will give

a boy such chances. The various rooms bear names associated with scientific honour, such as Davy, Faraday, and Dalton (just as the boarding houses carry names honoured in Christ's Hospital—Lamb, Coleridge, Maine, and so forth), and in the rooms are Bunsen burners, sinks, and lockers, and mysterious contrivances wherein a boy may work when possibly light is not desired and fumes may be unpopular. Leading from the larger rooms are smaller special rooms for lathe, acid, stores—to say nothing of an absolutely dark room. Near this Science School are the art school and the one room that acts as library and museum; these are all quite adequate, but not remarkable, and the same may be said about the music school. Taking the four big buildings in the reverse order to that in which they were first named, we will move on to the Big School. This building struck one stranger—him who now is writing—as the chief success of the whole school; its proportions are fine, and its roof, with its pendent woodwork (technical terms are avoided because they are not known) is such a thing of beauty as to promise to be a joy for ever; the Chapel not being quite finished, this Big School has served so far as a chapel, and when it is furnished as a big school its beauty may be yet more evident than now; the fittings for the electric light are an improvement to the room instead of a disfigurement, as they often are; and perhaps the colour of the panels is the only thing that might be altered with advantage. The old pictures make a brave show. The dust and dirt of London, to say nothing of an occasional butter-bullet, had tended to obscure their beauty; of some, indeed, the details were quite invisible; but all have been “restored,” and in the bright, clear air of Horsham may long retain their second youth.

Massed round the Big School are many of the class-rooms, and, to facilitate the gathering of the boys in the Big School during school-time, there are bridges of brick leading from the class-rooms on the first floor to the gallery of the Big School. By the way, the staircases leading to the first floor are formed of wood in such a fashion as to deaden the sound of even many boys rushing up or down the staircase. Of the class-rooms generally it may be said that they are rather small, and in most of them there is the incongruity between the brand-new room and the old London desks. Such blends are probably the result of compromise between the old spirit and the new. It must be added that where old bits of statuary or building have been translated to the new school the result is satisfactory. The images of “Blues” and monarchs look quite happy, and the “Grecians’ Cloister” has not suffered by the transplantation, but the same cannot be said about the splendid bit of brickwork that used to surmount the entrance to the Hospital from Christ Church Passage, and now is built into the outside of the Hall.

This naturally brings us to the Dining Hall, which, as has been hinted, is not so striking as Big School. Of the Hall the striking feature is, perhaps, the “full length” window at the upper end, *i.e.*, the window at the side of the high table where the masters eat their luncheon. This narrow window runs almost from floor to roof, and has many coats of arms. Near this Hall are a Common Room, where masters may foregather, another room where they can dine, and yet another which looks as though some one or other might have smoked in it. To go back to the Hall for a moment, its outside proportions suffer somewhat from the long narrow window that is so effective from the inside, and its roof looks “flat” in every sense after the splendid roof of the Big School and the fine one that adorns the Chapel; but no one would expect to have all the roofs alike.

We pass to the Chapel, and to one pair of eyes, at any rate, this seems the least satisfactory of the large buildings. It is fair to bear in mind that it is not yet quite finished. The east end and the west end pleased one visitor, with the exception of the Holy Table, which seemed mean and meagre. The outer door, the ante-chapel, and inner doors of carved open work (this language is painfully untechnical) are excellent, and so is the stone reredos, which, with some other things, is a thank-offering from some “old Blues” and other folk that loved the old Christ's Hospital, and the east window is satisfactory, though possibly the figures of some little “Blues” in it may tempt some boys to spend in wondering “what fellows they are meant for” some time that might be better occupied. But the space between the east and west has not been made the best of. The open space up the centre is broader than it need be, and the seats are far too narrow; a well grown boy would find it hard to kneel; there ought to be more gangways to the seats, and some sort of “stall” in the top row would have been a great improvement. Also, as

things are, there is a big space of unrelieved brick wall between the seats and windows and between the windows: also, there is a gallery at the west end, and, if it is used by fairly careless people, there will be some broken bones, for the stone steps that lead to it are steep and narrow. It must not be forgotten that there is a Court Room for the Governors, which is adorned by the great “Shark” picture; but, good as the room is, it may move tears in the mind of him who bears in memory the grandeur of the old Court Room in the City.

Among the details that may be put in here are the facts that several of the class-rooms can be used as one room or as two by means of screens—or, rather, moving walls—and also that cloisters made of pretty brickwork run all round the large quadrangle, and that on the top of some there is a road where one can walk, whence might be had a splendid view of any spectacle. Many of the old London statues are in niches; but some niches are still empty, into which statues of distinguished Blues might yet be placed. One of the beauties of the Big School that was not mentioned in the proper place is an outer doorway of carved stone that would win admiration anywhere. By way of contrast, you get a fine view from the grounds, which includes a hill just over Worthing; and—here is the contrast—in bad weather you can get about the premises by a subterranean passage, that is appropriately called “The Tube.” Among the things first seen by the visitor are some fives-courts and some glass roofs that suggested forcing-houses for the intellect—but the suggestion had no basis in hard fact.

The boys are not made stupid yet by over-education. The present writer has the luck to have a friend among the Blues (they still wear blue—another compromise!) who can both write and draw. His letters are a joy, and no less to be depended on because not written with a view to publication. Had the present writer visited the school in term-time, he would have felt at home with many of the twenty-four new masters, so vivid are their portraits in the letters and so lifelike the account of their peculiarities; some of the boy's remarks may follow soon. It is pleasant to hear, from one of the translated staff, of “air delightfully bracing and fresh,” of “a charming sitting-room and bedroom,” of boys at the end of July “looking wonderfully ‘fit’ and well, instead of washed out and anæmic, as they used to look in town.” In the natural confusion of the early days his verdict was: “The boys are splendid”; and at the end of term: “The boys are still wonderfully good.” But that good conduct did not begin at Horsham; it is the harvest of an earlier sowing. The architect, at the suggestion of some unknown person, had inserted spyholes through which masters from their rooms might watch the boys; these were, before the beginning of the term, “howled at by the whole staff and blocked up.” This was reported by the master already referred to; and the artist-boy drew a delightful picture of the architect's notion of a master—a creature always in a cap and gown, always round the corner, always spying. His first letter started thus:—“I know you would like me to tell you about this place. It is simply glorious; . . . each house has two night rooms, one large day room with lockers, . . . two studies for the Grecians. They are not more than head monitors now; they have to look after the ward (*i.e.*, dormitory) and have meals with the other fellows—an unheard of thing in C.H., London. . . . We have electric light, basins (in London there were taps), and shower-baths; two masters in each house (a senior and a junior). . . . The big Hall is not half so tall as the old one, or so grand. The big picture is cleaned up, as are all the others; I never knew what it was like before—it had an inch of dust upon it. . . . The masters dine in Hall, at a large table raised upon a platform; two dance round during dinner, giving orders, &c. Opposite the big Hall is Big School, and there we have service, as the Chapel is not finished. On Sunday we are allowed out of bounds. There are lovely walks, fields for cricket, &c., gymnasium, baths, electrical works with a large, tall, and very smoky chimney. I miss the London outings to the picture-galleries, but I think the Sunday walk and the beautiful playing-fields make up for this. On the whole, I think I prefer this life to the old London life, as also do most of the other boys, I fancy. . . . The new Head is awfully nice; he lets us come to tea in our ‘whites’ if we put on our C.H. coats over them.”

So far as any notion of the new Christ's Hospital is to be gathered from the visit of a person who was fond of the old place, and from the words of a master and a boy who have known the old school and now know the new, here such notion is.

SCHOLARSHIPS FOR BOARD-SCHOOL GIRLS.

By FLORENCE B. LOW.

THE London Technical Education Board has done, and is doing, such excellent work in so many directions that it seems ungracious, and almost impertinent, to offer any adverse criticisms of some of its methods. Yet those who have been actually engaged in dealing with the material the Technical Board desires to benefit may reasonably have some useful contribution to make in the hope that defects observed in the working out of their scheme, which have probably escaped the attention of the members of the Board, may be remedied, and now, when a new Board has just been appointed, seems a favourable moment. All new schemes are necessarily only tentative, and criticism based on knowledge, and on a desire to help those for whom the originators of the scheme are so earnestly working, may often be of great value. The members of the London Technical Education Board are as excellent a set of men as could be found anywhere; zealous for education, and enthusiastic to establish that "educational ladder" the idea of which, I am inclined to think, is the cause of many of their blunders. But, in spite of their excellent qualities—or, perhaps *because of them*—they have certain serious defects. Judging from one branch of their work—I speak here only of the scholarships offered to girls under sixteen—they are idealists of the most extreme kind, and not practically acquainted with the needs and capacities of young people. They seem to have in their minds some kind of an Utopia in which all shall crave for the higher education, and, far more idealistic still, where all shall be fitted for it; and, in order to help on this happy condition of affairs, they offer scholarships broadcast to mere infants from Board schools.

In 1900 252 Junior Scholarships were awarded to girls under thirteen attending elementary schools in London. These scholarships covered education for two years at some secondary school, and maintenance during that period. Of that number a very fair proportion were *considerably under* thirteen, some being as young as eleven; as extra marks are given to every child who is under thirteen, it is only natural the teacher should want to send in the candidate as young as possible. Therefore, to take an extreme case, a child of eleven may have been worked for a year or so previously for one of these scholarships—at what expenditure of brain and nerve energy can be imagined, especially when one considers the enormous competition and the physique of the children. The examination is fairly easy, consisting of arithmetic, composition, and dictation—which are obligatory—two subjects from Group A (needlework, obligatory for girls, grammar, domestic economy, history, geography, drawing); two from Group B (which includes some of the above subjects, if not already taken, as well as French, algebra, botany, mechanics, chemistry). The questions are well set, and not, one would imagine, above the standard of an ordinarily intelligent and properly taught girl of twelve or thirteen.

Of the large number who gain scholarships I believe but a *very small* percentage are in any way capable of advanced intellectual work; and by this statement I do not imply that Board-school girls should not have an opportunity of continuing their education beyond the present very low age limit. My contention is that a purely intellectual education such as is given in the ordinary secondary school, involving preparation for written examinations, is to be reserved for the few. Any one who has taught these scholarship children would, I think, agree with me, that the majority of them cannot do severe brain work. Indeed, the wonder has often been on what grounds some of the children ever gained scholarships. Had a certain number of scholarships to be awarded yearly, whether candidates were fit or not? I imagine this to be the case, for on no other supposition could some of the scholars have found their way into secondary schools. The two years' hard work—and I shall try to show later how hard that work is—was not only useless to some of them, but absolutely harmful on account of the terrible brain pressure. Apart from the mental capacity of the children, many of them were of such low physique that it seemed almost cruel to put pressure on underfed, anæmic, rickety-limbed Londoners, who often come long distances to gain this so-called "higher" education. I can recall to mind several children who, I am convinced, were habitually underfed, and,

indeed, many of them existed on buns and the lightest of refreshment during school hours.

I have treated this part of my subject somewhat in detail in order to show how ridiculous it is to expect these children who gain Junior Scholarships to profit by the course of study laid down for them for the next two years. Suppose a child of thirteen—the extreme age-limit—is the happy winner of a Junior Scholarship; with this she proceeds—sometimes a good long way—(I remember the case of a Whitechapel child who "proceeded" to a school many miles away) to a secondary school for two years, and prepares at once for the Intermediate Scholarship, which gives two years' further education and maintenance grant. The amount of knowledge required for this second examination is tremendous when compared with the amount possessed by the child on entering the secondary school. My experience of these children has shown me that they leave the Board school with a good knowledge of arithmetic, grammar, and geography *or* history (only one of the latter subjects appears to be taught in many schools), often of a mechanical kind. I remember one small child who informed me "We've done history, Miss," and, in a sense, she certainly had *done* it, if knowing a great number of dates from 1066 to 1815, and, parrot-wise, a multitude of facts of not much importance, was "doing" history. The same youthful aspirant to learning showed a marked distaste for continuing her studies in history, presumably on the ground that, as she knew it already, it was mere waste of time, and, like the late Master of Balliol, she may have mentally said: "What I don't know isn't knowledge!"

The subjects required for the Intermediate Scholarships for girls under sixteen—and, if the Junior Scholarships have been gained at twelve, the candidate may be just over fourteen—are as follows:—(1) preliminary and obligatory; (2) final, subdivided into (a) obligatory, (b) optional.

The preliminary subjects are arithmetic, composition, geography, history, elementary mathematics; the obligatory subjects in the final examination are English, elementary mathematics, elementary science, elementary knowledge of a modern language; the optional subjects, for which six hundred marks are given—three hundred marks to each subject mentioned in the following list, with the exception of needlework and dressmaking, which are marked at two hundred—are French, German, Latin, Spanish, Italian, pure mathematics, applied mathematics, mechanics, light and heat, electricity and magnetism, chemistry, botany, and drawing. Now, as a child may gain a Minor (or Junior) Scholarship on a knowledge of, say, needlework, grammar, geography, and domestic economy (as well as arithmetic, dictation, and composition), during the next two years she may have to learn three, four, or even five, entirely new subjects, as well as increasing her knowledge of subjects already learnt. Thus a child on entering the secondary school will very likely *begin* French, German, or Latin, history *or* geography, mathematics, special kinds of drawing. German or Latin is generally learnt, because it is distinctly stated in the regulations that "no candidate may offer as an optional subject the language which he or she has offered as an obligatory subject," and, notwithstanding the long list of optional subjects, it is difficult for a girl to make up her marks except on a modern language, Latin, or drawing. The sciences and mathematics are, I believe, rarely attempted by the girls; dressmaking and needlework, which would probably come easy to many of the girls who have received excellent instruction in these subjects in the Board schools, are naturally often neglected, as they only receive two hundred marks, instead of the three hundred given to the other subjects. The amount of knowledge required in each subject is considerable, the standard being higher than that of the Junior Cambridge, I should say; and any one who has had the slightest experience of teaching young children knows how utterly impossible it is to teach *properly* all these new subjects within the space of two short years. Fancy the mental condition of the Board-school child who is introduced to French, German, mathematics, history, and design in drawing all at the same time! Is it to be wondered that she becomes stupid and dazed, and does her work in a hopelessly mechanical fashion? I have taught the history, German, and French required for the Intermediate Examination, and I know that it is only possible to get through the necessary amount by *cram* pure and unalloyed. From the moment the Board-school scholar enters the secondary school to the time when she emerges two years later, her school life

has been one long feverish rush and scramble to pick up "knowledge."

It should be remarked that the secondary school honestly desirous of doing its best by these children constantly gives extra lessons, so that the scholar's preparation time is encroached upon; it must be remembered also that the home surroundings of these children are by no means conducive to quiet study—very often a girl works out her mathematical problems or writes her German composition to the accompaniment of scrubbing, crying, or the noisy conversation of many young brothers and sisters. The hours when she ought to be doing a little healthy domestic work, sleeping, or taking exercise are devoted to mental work in an often tainted and over-heated atmosphere. In these circumstances it is not surprising that the children constantly appear at school looking thoroughly fagged out, and more fit for bed than anything else.

If, however, most of the children who have gone through this two years' course obtained the Intermediate Scholarship, it might be argued with some show of reason—quite wrongly in my opinion—that this "cram" was worth while as leading to two years' further education; but, as a matter of fact, only a very small percentage of the children who gain the Junior Scholarships are successful in winning the later ones. Thus last year, while 252 Junior Scholarships were awarded, only 29 Intermediate ones were given; so it is quite clear that the Board must intend the two years' course to be useful in itself, and not as preparatory to still more advanced work. Assuming the numbers just quoted to be a fair average, it will be seen that about 12 per cent. of the Junior Scholars get Major Scholarships, and it is, therefore, quite fair to judge of the scheme not from the point of view of the 12 per cent. successful ones, but of the 88 per cent. who do not continue their education beyond fifteen or sixteen. Before entering, however, into the question of the 88 per cent., let us consider for a moment the case of the 12 per cent. They have gained their scholarships, and now for the next two years the grind—I can call it by no better name—is continued. In a few instances the girl is found thoroughly capable of advanced intellectual work, gains another scholarship, works for her London degree, and becomes in due course a mistress in a secondary school. She may make a satisfactory teacher, but I do not think that the training she has had is likely to be of much real value to her educationally; the years of "grind," of narrowed interest, of striving for results will have left their inevitable mark on her character, and she is not one into whose hands I would give the shaping of a young child's plastic mind. And, in any case, the market for secondary teachers is full enough already; why should any more women but the most thoroughly equipped seek to enter it?

These remarks, however, only apply to the successful 12 per cent. What of the 88 per cent. who have to earn their livings at the age of fifteen or sixteen? The teacher cannot prevent herself from asking what benefit the Board-school children have derived from their two years' stay in a secondary school. Some advantage there must surely be, but it is difficult to say what it is; the disadvantages, on the other hand, are painfully obvious. Originally, I fancy, there was some idea that a mixture of classes in a school would be good—that the middle-class child would gain from intercourse with one of lower social rank, and *vice versa*. But I do not think this has worked out very satisfactorily. The scholarship children are rather a class apart, and, though I will not say they are looked down upon by the other children, somehow or other they do not mix. Class distinctions are very strong among the *bourgeoisie*, and nowhere more strong than among children. Thus, the Board-school girl gains little social advantage from her stay at a secondary school. This point may not be considered of much importance by many people; but of vital importance, every one will agree, is the question of her future. What is the girl fitted for? She has to earn her living; in what ways is she better prepared for this? Honestly, I must confess that I cannot see that the education she has been given will help her in the least towards a desirable livelihood; in many ways it has hampered her, for it has raised her hopes and desires, and made her feel superior to her former friends, who, on leaving the Board schools at thirteen, went as servants or factory girls. She thinks herself too "educated" to enter domestic service of any kind; and, indeed, her two years' close attention to study, during which time she has been unable to do any work in her

little home, has rendered domestic work distasteful to her, and herself unfitted for it.

In this connexion I may mention the case of a girl—the most miserable specimen in the world—who, after coming up with a Junior Scholarship, failed to get an Intermediate one, and of course left the secondary school. A few months later I visited a friend, and who should open the door but my late pupil, A—S—? She was acting as nursemaid to my friend's children, and when I asked how she was getting on my friend said she was absolutely useless—she was so apathetic and anæmic; she seemed, as, indeed, she was, utterly worn out. A few weeks later she left this place, and of her future career I know nothing. If, then, the girl is not fitted for domestic work, for what is she fitted? The majority, I should say, become clerks in the City, or enter the lowest branches of the Civil Service. At its best, clerical work is not satisfactory for girls; it calls for no originality, demands only the poorest capacity, is monotonous in the extreme, and often carried on under most unhealthy conditions. As far as salary is concerned, it compares unfavourably with domestic service. As the clerical market is at this moment terribly overcrowded, it seems a mistake to prepare young girls for this work while good domestic servants at high wages are utterly to seek. As mere wage-earners, therefore, this higher education has not been of any advantage; but there is, of course, another side of the question. Has the education been of benefit to their character? We hear on many sides cant talk of the effect of education on character; but is it likely that hard-worked teachers, having to get through an undue amount of work within a definite period, can pay much attention to the developing of character? Time that might well have been spent in talking with these children, in finding out their bent of mind, in discussing their difficulties, has to be devoted to cramming in a little extra knowledge. I cannot see that the education of these two years can touch the child's character in any way; though it may possibly have slightly improved her mental equipment.

It cannot truly be said that the children are helped and trained to become better *women*, for that would need far more personal intercourse between teacher and taught than is now possible; nor are they prepared to be good wives and mothers in the future, should they be called upon to play these parts, by having acquired the arts of domestic management, cookery, hygiene, &c.; nor are they fitted to earn suitable livelihoods in the last two years of their school life.

My objections to the present system of granting scholarships to Board-school girls may be briefly stated:—(1) It necessitates terrible overwork for two years. (2) General culture has to be entirely neglected. (3) Very little "technical" education, *i.e.*, cooking and dressmaking, is given. (4) The system tends to over-stock one particular branch of work—clerical work—at the expense of another branch of work which badly needs the service of women—domestic service.

If the facts and inferences brought forward are correct—and they are founded almost entirely on personal experience and on the experience of those engaged with these scholarship children—what should the Technical Education Board do to alter this state of affairs? I venture, in conclusion, to offer a few suggestions most earnestly, because I believe the needs of the Board-school children are so urgent, and the Technical Board has the opportunity for doing noble work, and for influencing not only the education of London, but, to a large extent, of England, and with extreme diffidence, because I feel that others with greater experience are far more qualified to give criticism and help.

First, I would suggest that, instead of wholesale examinations as at present, each head mistress of a Board school should select the girls, if any, whom she thinks capable of higher intellectual work, and submit them to the consideration of an educational committee consisting of, among others, women teachers in secondary schools. This committee would examine the girls orally as well as by written papers, and, as I imagine not more than a couple of dozen girls would be found really suitable for purely intellectual work, such a mode of examination would not be found impracticable. These girls would then enter a secondary school, take the ordinary curriculum, and in no way be distinguished from their companions. This would be quite possible if the subjects and the standard of the Intermediate Examination were reduced. If papers were set in three or four subjects, of which English and French should be obligatory, a

really excellent education, free from cram of any kind, might be given to these girls. As these twenty-four girls would be distinctly above the average, they would probably gain scholarships to one of the Universities, and reap great benefit from the money expended upon them.

The money thus saved—i.e., the difference between the cost of maintaining some 24 and 252—might be profitably spent on giving a large number of girls a really good *technical* education, in such subjects as dressmaking, cookery, sick nursing, &c., combined with some so-called *intellectual* education. Thus a girl might spend a couple of years in a secondary school with a technical department attached; she might give two hours daily to dressmaking and needlework, two hours to cookery, an hour or so daily to lessons on history, on the choice of books, on hygiene and the care of children, on citizenship. She need have but little home work, and excessive study would be unknown. She would learn during these two years something of the great books and great men that have influenced the world's history; her teachers would endeavour to create in her a liking for wholesome novels, so that when she leaves school she will not surfeit her mind on scraps. That taste alone would be worth two years' education. But, besides this, she will learn to respect manual work when she sees that it is no longer relegated to an obscure corner of the time-table. The teachers would endeavour in every possible way to influence her by personal intercourse, by books, by pictures, all of which are quite practicable when neither teacher nor taught is overworked. At the end of the two years she is as healthy as she was at the beginning, and fit to earn a living in many ways—as plain cook in a small family, as help to a dressmaker—and to-day dressmakers are crying out for young girls to assist them when they are willing to pay fair wages; or she may be of immense value at home for the next two or three years if she can cook and look after the younger children. She is prepared to become a good wife to a working man if marriage comes in her way, *because she has never neglected the domestic arts.*

I do not know whether the Technical Education Act allows it, but I would also suggest that residential schools be established for the thorough training of girls for domestic service, say, for four years, from thirteen or fourteen to seventeen or eighteen. I believe, if scholarships were offered, they would be eagerly competed for, and if the work of cooks, housemaids, and nurses was regarded as *skilled*—and all work for which training is necessary is so regarded—many girls who now look upon it with contempt would gladly take it up. Domestic service has fallen into disrepute because of late years any girl has been able to get a place; raise the standard of requirement, offer training, let the Board-school girl know the advantages of domestic work as compared with factory work, give scholarships, make the school of domestic training attractive, and girls who now flock in their thousands to become clerks at 10s. a week will once more accept the most suitable of all occupations for women.

I remarked in the early part of my paper that the members of the Technical Board were idealists. Perhaps they will retort by a "tu quoque." But is it Utopian to believe that before long the problem, "For what we are educating our Board-school children?" will be seriously faced, and that those interested in the future welfare of the race will see that the education of the Board-school child is of more importance than any other subject of national interest

POETRY AS A FACTOR IN EDUCATION.

A MESSAGE FROM NEW ZEALAND.

[FROM AN AUSTRALASIAN CORRESPONDENT.]

A PAPER which attracted a great deal of attention at the Hobart Conference of the Australasian Association for the Advancement of Science, held in January this year, was that on "Poetry as a Factor in Education," by Prof. Arnold Wall, M.A., of Canterbury College, Christchurch, New Zealand, and President of the Conference's Mental Science and Education Section. Prof. Wall is a distinguished and successful educationalist in this part of the Empire, and, on that ground, apart from the merits of his paper, his effort has excited great attention. The following is a summary of his argument:—The Professor takes as his text a quotation from John Stuart Mill's Autobiography, in which Mill describes the discovery of the importance of

poetry and art as instruments of human culture. He claims that, "if education be directed too exclusively towards the cultivation of the intellectual faculties of the mind, so that the emotional faculties are neglected, very disastrous results may follow." Poetry is soul food, and, at a time when "scientific" culture is showing such a strong tendency to oust the "humaner" system of education, he thinks that a rock is ahead if this soul food be neglected. Although English poetry did not have in the old system of education a fair share, yet, "in a random, scrambling way, I believe most Englishmen of brains and culture did gain some knowledge of at least our greater lights." The tendency nowadays, he continues, is to make our educative system "too exclusively rational and intellectual—to appeal to the reasoning faculties rather than to the gentler and more spiritual emotions." All true poetry, to the Professor, must make an appeal to the feelings, must stir or soothe. By feelings he means the higher emotions; for he goes on to add: "Some of the finest work of English poets must be a sealed book to youth, because they appeal to the lower, rather than to the higher, feelings." Proceeding to examine the various kinds of poetry which are open to the teacher to choose from, Prof. Wall begins with the epic: "The influence of the genuine epic, with its appeal to the healthy and natural story-loving instinct of youth and its imaginative presentment of the primitive and basic virtues, is entirely for the good; and, in the absence of any great accessible English epic for the purpose, I should personally like to see a fairly complete series of translations from the pure and noble classics of the Icelandic prose *saga*-literature read in place of it in our schools." He recommends a selection of Scott's ballad-like narrative poems, some of the stirring war poetry of Dobell, Tennyson, and Campbell, Aytoun's "Lays of the Scottish Cavaliers," "Henley's 'Lyra Heroica,' some very carefully selected pieces of Mr. Kipling, and some such modern work as that of Mr. Newbolt. Lyric poetry he warmly commends, excluding, however, the great mass that is amorous and complimentary in tone. He cannot see that any good purpose is fulfilled by the young studying "Drink to me only with thine eyes" or Waller's "On a Girdle." Lyrics such as parts of Tennyson's "In Memoriam" the Professor would—though admitting that the meaning is sometimes not completely comprehensible by the young—have learnt by heart to enrich the soul.

Dramatic poetry he handles carefully. He thinks Shakespeare over-taught and over-annotated, and remarks that the greatest of Shakespeare's plays, especially "Othello," "Lear," and "Hamlet," are very questionable food for youth, dealing, as they do, with mature passions of a very violent nature, and touching upon the deepest and most obdurate secrets of our nature. He feels, however, that an intimate literary acquaintance with a character like that of Falstaff is an excellent preparative for entry into the world of real men and women. Our religious verse, especially the best work of Vaughan, Herrick, Milton, and Donne, he would give a good place to in any curriculum. Amongst the poetry unsuitable for reading in schools the Professor includes (1) satire; (2) pastoral poetry, with exceptions like "Lycidas"; (3) rhetorical verse; (4) didactic poetry, even the descriptive and humorous poetry, though such excellent work as that of Barham and Hood should be read outside. In concluding this portion of his paper, Prof. Wall emphasizes the plea that the heroic virtues, physical and spiritual, are best learned in poetry. He instances Tennyson's "The Idylls of the King" as poetry which makes for true manliness. He urges, too, that poetry study cultivates in the youthful mind "that wisdom which results from a due appreciation of the value of things in relation to one another and in relation to life."

Finally, Prof. Wall applies himself to the question: How should poetry be treated in the schools if we desire that it should produce its fullest effect upon the minds of our pupils? "In the first place," he says, "I am deeply convinced that in this department there must be no driving, no compulsion. . . . When I hear a person say of a poet: 'We read him at school,' I understand him to mean 'and therefore I have not read him since.'" This is due, he points out, to the unattractive way in which poetry is dealt with at school, and in part to the manner in which really attractive poetry is made repulsive.

Prof. Wall warmly protests against over-teaching and the over-annotation of texts—"the too common practice of making the poem a peg upon which to hang historical, philological, and metrical disquisitions." He says: "It has been my lot to review a very large number of school editions, 'edited and annotated' for schools, of the great English classics, principally, of course, of Shakespeare. There are some brilliant exceptions; but, in general, I may say that I can conceive no more efficient method of diverting the attention of the learner from what is essential to what is extraneous and incidental in works of literary art than that supplied by the ordinary annotated edition."

Many illustrations are given in demonstration of this position. Prof. Wall is so convinced as to the evil wrought by annotated texts that he goes so far as to say that in the case of modern authors unannotated editions are by far the best. With pleasure he notes a budding reaction against annotation, and welcomes the issue of the editions of Shakespeare of the class of which Prof. Herford's (Macmillan & Co.) is typical. From a denunciation of annotation Prof. Wall passes to a

protest against English classics being made the subject of school examinations. "I do not believe," he affirms, "it is possible for any child or youth to enjoy or appreciate thoroughly any poem in which he is about to be or has been examined in the ordinary school way." He suggests that "some way might be devised by which the reading of certain books might be encouraged without the possibility of reward or punishment. . . . Many and many an English schoolmaster has made his pupils genuine lovers of English literature, and of English poetry especially, by simply reading to them, out of school hours, the right books in the right way." Pupils are to be encouraged to read solely for their own pleasure and delight.

As a concluding venture Prof. Wall gives a curriculum in outline as a preliminary course of reading for the young in English poetry. The following are the first and fourth years' reading:—

FIRST YEAR (twelfth to fourteenth year):—Blake, "Songs of Innocence." Wordsworth, the simple ballads of 1798 to 1807. Percy's *Reliques*: "Chevy Chase," "Sir Patrick Spence," &c. Coleridge, "Ancient Mariner." Henley, "Lyra Heroica." Scott, the romantic poems. Macaulay, "Lays of Ancient Rome" and "The Armada." Tennyson, *Patriotic Ballads*: "The Revenge," &c.

FOURTH YEAR (sixteenth to seventeenth years):—Tennyson, "In Memoriam," "Maud." Wordsworth, "Ode on Intimations," "Tintern Abbey." Shakespeare, "Macbeth," "Hamlet," "Lear," "Romeo and Juliet." Marlowe, "Dr. Faustus," "Edward II." Chapman's "Iliad." Milton, "Comus." Chaucer, "Prologue" and "Knight's Tale." Sir Henry Taylor, "Philip van Arteveldt." Crabbe, "The Village." Blake's "Songs of Experience." Palgrave's "Golden Treasury" (a good deal of which might be selected from the earlier periods). Keats's Poems. Spenser's "Fairy Queen." Matt. Arnold, "Lyrics"; "The Scholar Gipsy," "Thyrsis," "Empedocles on Etna."

CURRICULUM OF FRENCH LYCÉES.

HOW does the boy in a French *lycée* spend his last year at school? It will be interesting for purposes of comparison, and it will illustrate the working of the new scheme, if we give his time-table. He may be either in the class called "Philosophy" or in that of "Mathematics." In "Philosophy" he is free to take either Section A (Greek + Latin) or Section B (Latin + Modern Languages); whilst in "Mathematics" he may study one modern language in Section A, or two in Section B. His hours per week in school are allotted to the different subjects as follows:—

PHILOSOPHY.

	Section A.	Section B.
Philosophy	8 for one half-year...	8 for one half-year
Philosophy	9 for one half-year...	9 for one half-year
Greek + Latin	4 (optional)	0
Latin	0	2 (optional)
Modern Languages	2 (optional)	1 + 2
History	3	3
Mathematics	2	2
Physics and Chemistry ...	3	3
Natural History	2	2
Practical Science	0	0
Drawing	2 (optional)	2 (optional)
Hygiene (12 informal lectures of 1 hr. each) ...	—	—
Total	18½ + 8 optional.	21½ + 4 optional.

MATHEMATICS.

	Section A.	Section B.
Philosophy	3	3
Philosophy	0	0
Greek + Latin	0	0
Modern Languages	2	1 + 2
History	3	3
Mathematics	8	8
Physics and Chemistry ...	5	5
Natural History	2	2
Practical Science	2	2
Drawing	2 (optional) + 2 geo-metrical drawing	2 (optional) + 2 geo-metrical drawing
Hygiene (12 informal lectures of 1 hr. each) ...	—	—
Total	27 + 2 optional.	28 + 2 optional.

The English schoolmaster will be struck first by the wide range of subjects. His own boys at the same period of their school career would be, for the most part, specializing. Fancy a head master in England compelling those who are reading for classical scholarships to

give five hours a week to various forms of science! But then the French aim at education and not at scholarships. Remarkable too is it that Latin and Greek become, even on the classical side, entirely optional, except in so far as these languages are involved in the authors studied under the rubric of philosophy. As to drawing, it may be explained that, whilst geometrical drawing is obligatory in the mathematical sections, the drawing of ornament, or freehand drawing, is left to be pursued at will by those who have developed taste and capacity for it. Further comments will suggest themselves to the thoughtful reader, for whom alone figures have significance.

Perhaps the most notable sign of the times, in the educational world, is the awakening of Universities abroad to the demands of practical life. It is as if some beautiful statue were to unfold its marble robes, descend from its pedestal, and join in the business of the market place beneath it. Let us indicate one or two practical matters in which academies show a new or quickened interest. First of all, pedagogy, despised in England, has now its school in almost every great University of the Continent, some of these schools being old, some of quite recent foundation. The Germans, in particular, insist that to follow a profession with success you must learn it. We heard lately of a German student, a candidate in pedagogy, who was rejected in examination by his professor because he could not give a satisfactory account of Sturm. The ordinary English schoolmaster, questioned about the Strassburg humanist, would have notions just as clear as those of the distinguished classical scholar who, when asked who Darwin was, replied: "Oh, yes!—you know—the man that found out all about involution"! And yet Sturm is a considerable personage in the history of European culture, and that history is relevant to the business of the teacher. But our young men, looking forward to the school, know that it will pay better to take holy orders than to investigate the progress, methods, and aims of education, the instrument of culture. Hence they are seen to be struggling with their consciences while their German compeers wrestle with Locke, Rousseau, and Herbart. It is said that the German schools are better than the English. But to pass from Germany to France, and from pedagogy to other practical sciences, at Dijon the town has granted to the University 1,920 square metres of land for the erection of an institute of oenology. Clermont has been authorized to grant a certificate of attainment in agricultural chemistry. At Besançon brewing is taught, and the citizens are not poisoned with arsenic; while theoretical and practical lessons in agriculture are now being added to the programme. A *Diplôme d'études coloniales* has been created at Bordeaux, the instruction that it crowns relating to colonial agriculture, colonial products, colonial hygiene, the history of colonization, colonial geography, colonial economy and legislation, and colonial topography; which subjects are to be studied for at least two years. Lille is to give a diploma in electrical engineering. That most progressive of Universities, Lyon, is amending its regulations for the admission of dentists, and it offers a certificate for success in Chinese studies. Competitors for this certificate will attend lectures on the Chinese language, as well as practical courses in English. Their written examination will consist in (1) an essay in English on some topic connected with the manners, institutions, or geography of China; (2) a translation from Chinese into French to be made without a dictionary. Oral questions will deal with Chinese life and history, and candidates must show themselves able to speak English and to write it from dictation. To understand the meaning of this innovation we must imagine the University of Oxford undertaking to teach the languages of the Siamese peninsula, and requiring the exercises to be done in French. To grasp the effect of it we must wait for ten years and read then the articles in the *Contemporary Review* on the decline of our China trade.

Let us not be understood to say that the chief or only function of the University is to serve the practical interests of life. We do our duty, however, in pointing out how those interests are promoted amongst our neighbours; how the Universities of France, unlike some of our own, are in touch with the people. We turn to another phase of educational activity there, namely, to the effort that is being made to supplement the work of the primary school. M. Edouard Petit presents his eighth annual report on the department of public instruction that is entrusted to him, comprising courses for youths and adults, popular lectures, and the various associations for mutual help connected with the school. Last year, when it seemed as if the high-water mark had been reached, we drew attention to the success that was attending the movement. The results obtained in 1901–1902 show further progress. No less than 43,044 courses for adults and young men or women have been held, as against 40,329 in the previous year; and these courses have been followed by 400,000 men or youths and more than 200,000 girls. Popular lectures to the number of 125,000 have been delivered, some with, and some without, lantern illustrations; they have been listened to by more than 3,000,000 persons. Societies for the inculcation of thrift have caused their members to save 3,200,000 francs. Old pupils' clubs, meeting in the school, make it a centre of social life for the young of the community. Acquiring the principals of self-government, these clubs organize *festes*, arrange for themselves classes in drawing, book-keeping, or modern languages, and make excursions in common, even as far as London and the Bernese Oberland. Sometimes they co-operate to cultivate a plot of land, or busy themselves with forestry

The school tends more and more to become the people's house; for the young draw their elders to it, and the fascination of knowledge recalls those who came at first from curiosity. In short, popular education in France, beginning just at the right point, the point where the regular school is put out of office, is justifying the most sanguine hopes of its supporters. The secret of the success, and the keynote of the whole system, is what M. Petit calls "intellectual decentralization by districts, towns, and villages." Local wants being duly weighed, the working classes are won by an appeal to their immediate interests. In this matter we have, perhaps, something to learn. Life has its object-lessons for every toiler, and it is on them that popular education must rest its instruction, giving to each according to his needs.

Sometimes his need is of geometry, and its strange abstractions puzzle him sorely. Twelve pages of the *Revue Pédagogique* (July 15, 1902) are devoted to the praise of a novel method of teaching the subject to old or young. It has already been introduced at the Normal Schools of Dijon and Auxerre, the Higher Primary School of Gannat, and the Higher Primary Professional School of Clermont, with results that are said to be most encouraging. The author is M. Charles Méray, of Dijon, whose scheme has for its salient feature the abandonment of the traditional distinction between the phenomena of the plane and those of three-dimensional space. We guarantee neither the novelty nor the excellence of the "Nouveaux Eléments de Géométrie"; but the testimonials in favour of the method are so strong that some teachers of mathematics may wish to test its merits. The "fusion of the two geometries" is reported to have made considerable progress in Italy as well as in France.

COLONIAL AND FOREIGN NOTES.

FRANCE.

Readers may expect some notice of the great event, or series of events, that has been exciting all France during the past month. The struggle between the Government and the congregations is, like the famous tractate of Spinoza, theologico-political, and in so far outside our sphere; in contemplating it the heart and the head of a man might well take different sides. But, whilst we abstain from discussing it and narrating its incidents, we may throw a little dry pedagogic light on the issue through the medium of an anecdote. Some twelve years ago the girls' public school at Mont-de-Marsan was in charge of *institutrices congréganistes*. When they had brought their pupils to the middle standard they placed them in the workroom of their society. There the poor girls, hardly more than thirteen years old, toiled incessantly from morning to night, straining their eyes with minute needlework, and growing anæmic from lack of exercise. The school was then handed over to lay women teachers. A large number of the girls began to win the *certificat d'études primaires*. Four hours a day were given to general culture, to reading, to writing letters, to moral instruction, to history and geography. Home life was transplanted into the school; by means of a *cours ménager* the girls learned to cut out and make clothes, to wash them, to cook simple dishes, and, in brief, to perform all the household duties that fall to those of their sex and class. It was a magic transformation. Now, are there no nuns in England, noble, self-sacrificing women who, in all good faith, and with the best intentions, commit the same mistake as the Sisters of Marsan—through ignorance of the despised pedagogy?

ITALY.

Commercial Universities are the order of the day. Leipzig has its *Handelshochschule*, modelled on which is the Akademie für Sozial- und Handelswissenschaften at Frankfurt-on-the-Main. There is a *Handelshochschule* at Köln and a *Handelshochschule* at Triest. Now Italy opens at Milan, in this present October, the Università Commerciale Luigi Bocconi, founded by Commendatore Ferdinando Bocconi in memory of his son Luigi, who perished in the hapless fight of Adowa. To maintain the establishment he has set aside a sum of £40,000, of which £16,000 is for a permanent endowment fund, £12,000 for initial expenses, and £12,000 to be spread, on a decreasing scale, over the first ten years in the life of the institution. The ordinary fees for lectures will be £16 a year; but thirteen scholarships of that amount and two of £48 a year have already been provided for poor, deserving students. As in the older Universities, a four years' course is insisted on, and none will be admitted except those who have passed through a classical school (*liceo*) or a higher modern school. These conditions are essential if the Università Commerciale is to fulfil its aim, which is to turn out not clerks and travellers, but men competent to fill the highest posts in commercial life, officials for the Ministry of Trade, consuls, and teachers for local schools of commerce. It starts under auspices that should ensure a prosperous voyage; and the fallen soldier's name is likely to be remembered long at Milan.

It is a matter of deep regret to observe that Italy, the land to which

education in Europe owes so much, forgets the value of her ancient gifts. Although Italian scholars maintain their eminence, the national education, vastly more important than the scholarship of the few, shows signs of neglect. Within the last twenty years there has been a distinct increase in the number of illiterates. In 1881 of the male inhabitants more than fifteen years of age 62·7 per cent., of the female 49·1 per cent., were unable to read and write. Last year the figures were 74·1 per cent. for men, and 64·3 per cent. for women. The chief lack seems to be efficient rural schools. The towns, particularly in Upper Italy, are fairly well provided with primary education. Thus in Turin we find only 6·3 per cent. of illiterates, while Ravenna, Perugia, and other once famous citadels of learning still can boast that few of their citizens are left untaught.

UNITED STATES.

Autumn—or, shall we say, "fall"—in America is what May is in London, the season of meetings. The gathering of the National Educational Association is among the most important in the later months. It took place this year at Minneapolis, and was attended, if the provisional estimate is to be trusted, by no less than 12,000 men and women interested in the school. "Dr. Sadler, of the English Education Office," says an American contemporary, "was the guest of honour at the meeting, and his address will not soon be forgotten by those who heard it. The orator's happy combination of philosopher and poet, man of letters and educational enthusiast, made a deep impression upon his great audience." He laid stress on the comparative study of educational systems: "Each nation is realizing how much it may gain by investigating the educational history and development of other nations." But Dr. Sadler is of ourselves, and this note must deal with America. Instead of analyzing even the more significant of the many excellent addresses delivered by American schoolmen, we will give two extracts by way of examples. They are both from a paper by President Harper, of Chicago University. The first, treating of the progress of higher education in the United States, may serve as an admonition to England:—"Every succeeding year of the past decade [he said] has witnessed a greater interest on the part of the American people at large in the work of higher education. The year just passing has contributed as much, perhaps, as any two or three of the preceding years. This larger interest is manifested by the increased attendance at all institutions giving instruction in higher work, by the greater numbers of men and women preparing themselves for the work of instruction in higher institutions, and by the larger public generosity which is manifesting itself on every possible occasion. In each of these particulars the advance during the past year has been significant. Many of our institutions are actually overcrowded, the numbers being greater than can be adequately cared for. The number of graduate students in our Universities has more than doubled in five years. It is from this source that men and women are being selected to fill the chairs of our colleges and Universities. Every week, and, in some weeks, every day, the public press announces gifts for higher education of 50,000 dols., 100,000 dols., and larger sums. The Federal Government appropriates in one Bill 6,500,000 dols. for the Military Academy at West Point; in another Bill even a larger sum for the Naval Academy at Annapolis. This increase in the numbers of students and in the numbers of those preparing for professional work is not limited to any one section of the country. It reaches from the East to the far West. Nor are the gifts for education limited to the East, to the Central States, or to the West. They are being poured out lavishly in every direction, and are given alike to the smaller institutions and to the large Universities."

In the second passage that we select, the President speaks of the modern action of Universities, and we would beg our readers to compare his words with our remarks above under the heading of France:—"An important feature of higher educational work in most recent times is the attention which is being given to commercial and technical instruction. The time has come when the University is compelled to adjust itself more definitely to its environment. The prevailing characteristic of the modern environment is now included under these words—commercial and technological. In spite of the fact that in Boston there exists the greatest technical school in America (the Massachusetts Institute of Technology), Harvard University is compelled, so says its President, to establish by the side of it another school of technology. This is necessary in part because students who wish to attend school at Harvard desire instruction in technology, and also because a University must serve as the true expression of the sentiment of its period. The State Universities have naturally led the way in the development of technological work. Other Universities must follow if they are to meet the demands of the times. It still remains to be seen whether the steps that have been taken in the direction of commercial education of a college grade will realize the hopes of those who have engaged in it. After all, it is to be remembered that the main purpose of a college course is not the information which the student gains; and yet it is to be conceded that any ordinary subject, well studied, may be used advantageously for the purposes of general education."

As is its custom on these occasions, the Convention formulated a Declaration of Principles. The National Association believes "that

the time has come for the recognition of the great importance of the educational interest of the country in the conduct of State affairs by the organization of the Department of Education as an independent department, taking equal rank with other departments of the administration." It demands "a conservative but efficient compulsory education law, with the proper regulation of child labour." It is prepared to welcome measures for improving the qualifications of teachers. It would plead for unity of effort toward the complete education of the child, urging that the present division of the work of instruction into elementary, secondary, and higher is for administrative purposes only. It holds that "the individuality of the pupil should be carefully considered to the end that he may be instructed in the light of his limitations and capacity." In the concluding paragraphs of the Declaration, it raises its voice for good school-buildings, sanitary inspection, lessons in hygiene, the teaching of morality, and, above all, an earnest and intellectually active body of instructors.

CANADA.

There never was a time in the history of this country when the outlook was as promising. We are harvesting a crop of one hundred millions of bushels of wheat in our North-West, safe from frost and rain; the common stock of the Canadian Pacific Railway has risen from 90 to 143 within the year, and the last report to hand shows a clear surplus of eight millions of dollars on the year's business. The Grand Trunk Railway, of which so much evil has been said in English newspapers, looks as if it were going to earn and disburse dividends, and, indeed, the whole commercial and industrial face of the country is being changed. Immigrants are pouring in from the Western States, men with money, experienced farmers who, having sold out their holdings at a high figure, are buying the cheap but fertile land in the Canadian North-West, and thus providing homes for their sons. The industrial and commercial expansion in the lines of foreign commerce as well as the developments within the country have had a great effect upon the educational facilities. To the average Canadian an education beyond the three R's means that the boy was going to enter a learned profession. In fact there was much the same tradition as in the New England States during the Colonial period. Harvard College and the grammar schools were for the education of those who were to be the clergymen, the lawyers, the doctors, and the teachers. Even so has it been in most of Canada. The English tradition—fear of over-education of the people—dies hard. It might seem to a student of education that we ought to have learned from our American neighbours, who have made such rapid strides in manufacture, and who ascribe it to their rational educational system. And so we might, but we have been too provincial; we do not *venture*, and the conservative element has always been ready to point the finger of scorn at those who "looked towards Washington," and to accuse them of disloyalty. But we are now undergoing a revival. We are introducing manual training (thanks to Sir William Macdonald), we are expanding our courses in political science in the Universities, we are providing technical schools, and are endeavouring to remodel our courses of study so as to provide an education that will not be so exclusively classical in both content and method. Many of our business men have long urged these steps, but they were thwarted by the lethargic University professors, who live in a classical past with plenty of holidays and out-of-date lectures. Our Universities have no visible connexion with a real world except in so far as the recent development in practical science has affected them. *Utility* is a shunned word because, forsooth, it seems to be not *liberal* to the cave dwellers. Our Universities are known abroad by the diligence of the students who go abroad to study, and not by any contributions to literary or scientific progress made by our professors. The examination system is here seen in all its worst features, and college life trains not the character, but the memory. In a former letter I mentioned the fact that it was being felt in Quebec that the French Canadian who was educated at Laval was at a serious disadvantage in comparison with the English youth educated at McGill, inasmuch as the old rigid classical education of Laval seemed not to fit in with the demands of the times, but was suitable for an age that had passed and would never return. The youth educated at McGill is a practical man ready to grapple with the problems of electrical and mechanical engineering, equipped to do something, and so in full accord with his age. Only this week this difference was accentuated when the Hon. J. Israel Tarte, the Minister of Public Works of the Dominion, in a speech in Quebec, said that the people there must wake up if they expected to hold their own. He had been asked why in his department he had so few French Canadian engineers and had seemingly given the preference to the English-speaking and Protestant youths. The answer was simple—because of the former there were almost none. And so it is in the larger manufacturing concerns in the East—all the engineering posts are in the English hands. It is hard for the conservative Universities to reorganize their curricula; they object strongly to being forced to change their methods in response to the demands of the people, and so the only possible way is to bring them up against the hard facts as they have revealed themselves in the careers of recent graduates. And so it is our growing time in Canada. We are breaking down some of the old

traditions, we are beginning to think and act for ourselves, we are raising up a race of young men who inquire not what England thinks we ought to do, but who are able to work out a policy for their country on sound educational principles.

INDIA.

The thirty-seventh annual "Statement exhibiting the Moral and Material Progress and Condition of India" has just been issued as a Blue-Book. It appears (our summary is from the *Indian Educational Review*) that, while during the last decade of years the numbers of the school population have increased by 14 per cent., there was during the year under review a decrease of some fifty thousand in the number of boys and an increase of four thousand in the number of girls attending school, compared with the previous year, the actual figures for 1900-1 being 3,988,663 and 429,645 respectively. Of these nearly 3,000,000 are Hindus, 1,000,000 Mohammedans, and 127,000 native Christians. The falling off occurred mainly in Bengal, and is ascribed to "temporary" causes such as plague, floods, and agricultural depression. Of the girl scholars only 2 or 3 per cent. were beyond the primary stage. Of the whole number only about 608,000, or 14 per cent., are in private institutions. The ratio of the school-going to the whole population was highest in the North-West Provinces and Oudh, where it was 9 per cent.; Burma, Bombay, Madras, Bengal are all between 2 and 3 per cent.; then come Assam, Berar, Panjab, and the Central Provinces, less than 2 per cent. As regards University education, "Oriental" arts colleges show 548 students, as against 16,421 in English arts colleges. Of professional students, 2,562 followed law, 1,301 medicine, 833 engineering, 98 teaching, and 57 agriculture. The direct expenditure on schools and colleges amounted to nearly 297 lakhs of rupees.

PORTO RICO.

The concern of the teacher, *qua* teacher, in politics at the present moment is to know what the conqueror is doing for the education of the conquered. The American schoolmaster looks inquiringly at the English, and the English at the American; for, if the one has his Boers to consider, so has the other his Filipinos, his Cubans, and the dwellers in Porto Rico. It were idle to ignore in this connexion the natural tendency of the new-comer to disparage his predecessor. Does not the head master usually hint that he succeeded to an inheritance of corruption? Yet, making allowance for the cast of the human mind, we must admit that the Americans, and ourselves, have work before us if annexation is to be justified by educational beneficence. As to Porto Rico, the late President of the Insular School Board had his soul unburden in a paper read before the American Social Science Association at Washington. We abridge his account of the old and the new schemes of education in the island.

The population of 951,000 inhabitants is mixed in race, the people in general being mild, docile, honest, and industrious. Mainly engaged in agriculture, they are very poor; and their ignorance is as marked as their poverty, for only 21 per cent. of them can read and write.

Under the old *régime* one child out of ten attended school. If almost every town possessed a theatre, special school houses were unknown, and 426 *barrios* (townships) contained no school of any kind. Such schools as existed were without modern appliances, were ungraded, were taught in part by incompetent teachers, in part by the pupils. Sometimes as many as a hundred and fifty children were attached to one instructor, who gathered ten or a dozen of them about him, while the rest "studied aloud" with competitive clamour. Men teachers frequently smoked as they taught; women drank tea and lunched in school hours. Most of the schools were held "in propriety," that is, for life. A proprietor might have several schools and employ deputies to carry them on. Where municipalities paid the salaries, these were sometimes from five to ten years in arrears, the teachers supporting themselves by means of fees collected from such pupils as were able to pay. Children who paid no fees received a scanty measure of instruction. In examinations both pupils and teachers expected to be informed several days beforehand of the questions, and obliging teachers wrote out the answers for their pupils.

Upon the American occupation such prudence and skill were used that the schools are believed not to have been closed a single day on account of the change of government. Since then a drastic reform has been in progress. The children in the schools have been divided into classes. Teachers have been examined and provided, when found qualified, with certificates. Holders "in propriety" have been expropriated, receiving, however, like other persons having vested rights, a licence to continue their profit-making for four years. Suitable textbooks, in the number of more than 100,000 copies, have been selected, translated, and put in circulation. Teachers have been paid promptly and in cash; not, as of old, in orders on a store. A model school-house, equipped with proper furniture, a training college for teachers, a chemical laboratory, a kindergarten, and a kitchen garden have been established, as well as a pedagogical museum and a pedagogical library. The number of pupils assigned to a teacher has been limited to fifty, and orderly discipline has banished luncheons and "studying

aloud." Corporal punishment has been prohibited in all the schools. We need not blame the new authorities if they have, moreover, offered to the islanders American flags, maps of the United States, and opportunities of celebrating George Washington's birthday. The natives at first, we are told, could not understand an educational system so different from that to which they had been accustomed; perhaps, in particular, George Washington's truthfulness puzzled them.

If we look to the future, the demand, as in the Transvaal and the Orange River State, is for technical education. Instruction must be given in agriculture and horticulture until the island produces its own food, and until every *peon* raises his own pig, goat, and poultry, and has a garden for his own support and pleasure. Again, the people must be taught the rudiments of personal, domestic, and municipal hygiene—a subject of more immediate importance than the knowing how to read and write. At present they can make Panama hats, cigars, and sugar; they have still to learn how to use life and adorn it.

Spain forfeited her heritage owing to her inability to manage it; nor was any part of her failure with her colonies so conspicuous as that in the department of education. The lesson that she has received may serve to impress upon us our obligations to the territories just incorporated in the British Empire.

OBITUARY.

THE REV. BENJAMIN HEATH DRURY, who died at his residence, Heath Court, Torquay, on September 10, was at the time of his death to Harrow men the best known of living Harrovians. The grandson of Byron's Dr. Drury and a son of a Harrow master, he was entered at the school at the age of four in the year 1822. From 1840 to 1863 he was himself a Harrow master—*μετὰ τριτάτου ἀναστήν*—when he returned to residence at Caius College, Cambridge, of which he was then a Fellow and later on President. He was an elegant Latin scholar, and several of his versions will be found in the "Arundines Cami," edited by his brother Harry Drury. His love for Harrow and its traditions was intense, and his stately figure—tall, portly, reverend, double-chinned—was conspicuous on Speech Day, and at every Eton and Harrow match. He was beloved by his own house at Harrow, though that house did not always bear the best of reputations. An old pupil calls him in the *Guardian* the prince of form masters; but the present writer, who likewise sat under him, would hesitate to bestow that title on one of the old school whose teaching was strictly limited to verbal scholarship, construing, and composition. He may more justly claim to have been the most loyal of Harrow's sons and the prince of good fellows.

A SCHOOL OF MODERN LANGUAGES has been established in the University of Birmingham. The course of instruction in the "School" will extend over three years, and will be of an advanced and comprehensive character, including lectures not only on the philology and literature of modern languages, but also on the history and institutions of foreign nations and on the methods of modern language teaching. Only students who have obtained a first class in the Intermediate Examination in French, German, Latin, English, Mathematics, or Logic will be allowed to enter the School with a view to graduation in it. Candidates for the School of Modern Languages may, however, take the Intermediate Examination at entrance to the University in lieu of the Matriculation Examination. A special Intermediate Examination will be held for this purpose in September, 1902. After completing their course of study and passing two examinations (one at the end of the first year and another at the end of the third, this latter being equal in standard to the ordinary M.A. Examination) students of the "School" may be admitted to the degree of "Bachelor of Arts in the School of Modern Languages," and after one year of further study in this or a foreign University they may be admitted to the degree of "Master of Arts in the School of Modern Languages" on presentation of a thesis. The main purpose of the "School" is to train teachers of modern languages for English secondary schools. Several valuable scholarships have been given by Mr. and Mrs. Charles Harding to further the objects of the new School. Four scholarships of the annual value of £50 each, tenable by students of German during three years in the School of Modern Languages, may be awarded—two in 1902 and two in 1903. At the close of the third year travelling scholarships of £100 each, tenable at a German University for one year, may be awarded to these scholars, provided that they have taken the B.A. degree in the Birmingham School of Modern Languages.

THE London Day Training College will be opened early in October. The staff will be as follows:—The Principal is Prof. John Adams, who also receives the appointment of Professor of Education in the University of London. The normal master is Mr. D. R. Harris, from Aberystwyth, and the normal mistress Miss M. Punnett, of the Cambridge Day Training College. Students who wish to be trained as elementary teachers must have matriculated at the University of London. The course for secondary teachers is to be entirely post-graduate.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

QUARTERLY REPORT.

THE Council have met twice since our last Report, viz., on July 1 and on July 19.

The new members elected in July were:—Central Guild, 5; Ipswich Branch, 1; Walsall Branch, 1.

The members present were, on July 1: Mr. H. C. Bowen, Miss H. Busk, Mr. G. F. Daniell, Miss F. Edwards, Miss Gavin, Mr. Langler, Miss Newton, and Prof. Foster Watson; and on July 19: Canon Lyttelton, Mr. E. Blair, Mr. Bowen, Miss H. Busk, Mr. R. F. Charles, Mr. Daniell, Miss Foxley, Miss Gavin, Mr. J. H. Hichens, Mr. Langler, Mr. L. W. Lyde, Miss Newton, Mr. H. Oake, Mr. J. Russell, Miss Smithers, Miss K. Stevens, and Mr. Storr.

Mr. J. Russell's resignation of the post of Hon. Librarian was accepted with much regret, and a hearty vote of thanks was accorded to him.

Arrangements for the appointment of a new Assistant Secretary, in place of Mr. A. J. Flint, resigned, were made. It was decided that the new officer should take the minutes of Committees when required, and that the General Secretary be described in future as "General and Organizing Secretary," the intention being that he should visit the provinces more frequently, and that the second Officer should be able to take his place whenever necessary at Committee Meetings.

Leaflet No. 6, on "Educational Legislation and the Future of the Higher Grade School," was submitted to the Council, in a revised form, by the Political Committee, and finally settled for publication, as altered, in the *Teachers' Guild Quarterly* for October.

The Political and Education Committees were instructed to sit together, and consider and state professional opinion as to the regulations to be laid down for "student-teachers" in reference to the Order in Council (Teachers' Registration).

It was decided to consider at the next sitting the words of limitation "not being an elementary school," in the Order in Council.

The following resolutions of the Annual General Meeting of 1902 were affirmed: (1) "That dismissals as well as appointments in primary schools should be subject to veto by the Local Authority." (2) "That women should be put on the Secondary Education Authorities." A resolution of the Manchester Branch, viz., "That teachers—men and women—be directly represented on the Education Authorities," was also affirmed.

It was agreed to press the British Association to appoint a Committee on Curricula, at their meeting at Belfast.

The following Subjects of Discussion for the General Conference of the Guild at Plymouth in April, 1903, were selected, on the Report of the Education and Library Committee:—

1. The Essentials of a School Curriculum (a) for girls leaving school at sixteen to seventeen years of age, (b) for boys leaving school at sixteen to seventeen years of age.
2. The essential principles of educational handwork.
3. At what stage or stages should Nature Study become (a) Botany, and (b) Physical Science, respectively?
4. On what conditions should a Secondary School become a "Recognized School"? (a) to satisfy Section 3, Sub-section (2) (ii.); (b) to satisfy Sub-section (3) of the Schedule to the Order in Council (Teachers' Registration); and (c) to satisfy the temporary recognition in Section 4 (2) (i.)?

5. English Composition in Schools.

6. The educational value, or non-value, of Fairy-Stories.

A full list of proposed Openers of Discussion, including certain prominent authorities in the United States, who were to be invited to send papers, was settled.

The Council will hold their first meeting after the holidays on the 2nd inst.

The question of the right order and relation of subjects in school teaching will, or should, occupy much of the time of the component units of the Guild during the next few months. In the Central Guild various sub-divisions of the question will be dealt with by the London Sections, and a meeting or meetings of the Central Guild, as a whole, will collate results.

The programmes of the London Sections will be published in the *Teachers' Guild Quarterly* on the 15th inst.

The Teachers' Guild Holiday Courses in Modern Languages were held in August, at Tours, Honfleur, and Santander. The reports of the English representatives at the two French centres are to hand. The Tours Courses had a considerably larger attendance of students than ever before, and the Honfleur Courses were full, the maximum number, 75, being reached.

Mr. A. Wilson-Green, M.A., Blackheath School, representative of the English Committee at Tours, reports:—"As in former years, the Courses were held during the first three weeks of August. The number of students continues to increase, and this year reached 37. The Committee were again fortunate in securing the services of MM. Jamet and Marjault, of the Lycée of Tours, and the students of this year, as of

past years, greatly appreciated the teaching of the two lecturers. M. Jamet in his Course dealt chiefly with Ronsard, Villon, Corneille, Racine, Molière, Voltaire, and Victor Hugo, illustrating his lectures with the recitation of extracts from the writers under discussion. In the Elementary Course M. Marjault took for his subject 'L'Esprit Français,' and explained the origin of many idioms and current phrases which he considered characteristic of French modes of thought. The practical exercises in conversation, reading, phonetics, and dictation followed similar lines to those of past years. The Courses were once more favoured with fine weather, and of the many excursions to neighbouring *châteaux* only one was marred by rain. Visits were made to Langeais, Amboise, Azay-le-Rideau, Ussé, Chenonceaux, Blois, Chaumont, Loches, and Chinon. Picnics and *soirées* were also arranged, and the first *réunion*, when some forty-five persons were present, passed off with more than usual gaiety and enthusiasm."

Mr. Sheldon R. Hart, M.A., Head Master of Handsworth Grammar School, Birmingham, representative of the English Committee at Honfleur, reports:—"The total number attending the Courses was 75. I divided these into three classes of 27, 25, and 23 respectively, each student making choice of the class which he or she preferred. As these classes had to be again subdivided for conversation, I found it necessary to engage the services of Monsieur Toutain, *Professeur* at the College, for each day from 10 a.m. to 3.30 p.m. . . . The majority of the students crossed with me by special steamer direct to Honfleur on Thursday, July 31, and were all settled in their quarters by 9 a.m. on August 1. A preliminary meeting was held on the afternoon of August 1, at the College, at which Monsieur Boudin, the Principal, the two Deputy-Mayors, the British Vice-Consul, Monsieur Godel, the French *pasteur*, and Monsieur A. E. Ullem were present to welcome the students on behalf of the municipality. . . . The whole town received us with great kindness and cordiality. The classes were well attended until the last day of the Courses, and, with the exception of two or three of the students, the regularity of attendance was remarkable. At the end 25 sat for the examination, and all obtained diplomas, the higher or the lower. From my own observation and the reports of the *professeurs* I am convinced that all the students made great progress in the spoken language, both in following the lectures and in speaking. They all seemed to possess a fair knowledge of the language in reading and writing before coming. . . . The Principal of the College did all in his power (and that was much) to promote the undertaking, and gave us a lecture on the Metric System on August 7 (evening). There was a *soirée* on Coronation Day, and at two others, later, a large number of

French guests were present. For all these we were largely indebted to the kind and energetic help of Mr. F. G. Harmer and Mr. F. E. Hannah, of Leeds, and a small committee of ladies. . . . In conclusion, I beg to express my opinion that the Courses were a decided success. The relations between the French and English could not have been more cordial, and the four *professeurs* spared no pains, whether in class or in arranging excursions."

The report of the Santander Course is not yet to hand.

A course of about ten lectures, on "Comenius and the Beginning of Modern Educational Theory," will be given at King's College, Strand, W.C., by Mr. J. W. Adamson, Lecturer on Education in King's College. The lectures, which are free to teachers, will be given on alternate Saturdays, commencing October 11, at 11.30 a.m. Tickets admitting to the course may be obtained on application to the Secretary at King's College. Applicants are asked to name the schools in which they serve.

Some of W. & R. Chambers's Recent Books.

Entirely New Set of Literary Readers.

CHAMBERS'S TWENTIETH CENTURY READERS.

Every Teacher should see this Series before introducing new Readers. The Publishers have given special attention to the black and white and coloured illustrations, their aim being to produce the very best work possible.

FIRST PRIMER Paper, 2d.; cloth, 3d.

In this book only the short vowel sounds and single consonants are employed, except in the case of a few words of two letters.

SECOND PRIMER Paper, 3d.; cloth, 4d.

The simple long vowel sounds and double consonants are here used.

FIRST INFANT READER Cloth, 6d.

In this book the double vowel sounds are introduced.

SECOND INFANT READER Cloth, 6d.

Provides a great variety of interesting lessons of a more general character.

BOOK I. 128 pages Cloth, price 8d.

BOOK II. 144 pages Price 10d.

BOOK III. 208 pages Price 1s.

BOOK IV. 224 pages Price 1s. 3d.

BOOK V. 256 pages Price 1s. 6d.

BOOK VI. In preparation.

CHAMBERS'S TWENTIETH CENTURY READING SHEETS. WITH COLOURED ILLUSTRATIONS.

Sixteen Sheets, 42 inches by 30 inches, being the first 16 pages of the reading matter contained in CHAMBERS'S TWENTIETH CENTURY PRIMER, Part I. Printed in bold type on stout manilla paper; strongly mounted on Roller. 12s. 6d. per Set.

CHAMBERS'S CONCISE GEOGRAPHY OF THE WORLD. WITH SPECIAL REFERENCE TO THE BRITISH EMPIRE.

A Text-Book for Secondary Schools and for the Higher Classes of Elementary Schools. Illustrated by numerous Diagrams and Maps, both Coloured and Uncoloured. 256 pages. Price 1s. 6d.

ARITHMETIC, THEORETICAL & PRACTICAL.

By J. S. MACKAY, M.A., LL.D.,

Author of "Mackay's Euclid."

Price 4s. 6d.

The Educational News says:—"Altogether the work is of outstanding interest, and ought to take its place as a standard text-book on the subject."

THE ELEMENTS OF EUCLID.

Books I. to VI., and Parts of Books XI., XII.

By JOHN S. MACKAY, M.A., LL.D.,

Mathematical Master in the Edinburgh Academy.

Price 3s. 6d., cloth.

Separately: Book I., 1s.; II., 6d.; III., 9d.; XI., XII., 6d.

"This is, in many respects, the best school Euclid in existence."—FREDERICK SPENCER, M.A. Cambridge.

CHAMBERS'S ALGEBRA FOR SCHOOLS.

By WILLIAM THOMSON, M.A., B.Sc.

Price 4s. 6d.

"Among the very best elementary text-books, the work will take a prominent place."—Journal of Education.

CHAMBERS'S ELEMENTARY ALGEBRA.

By WM. THOMSON, M.A., B.Sc., F.R.S.E.

From Simple Rules to Quadratic Equations, and Problems producing such Equations.

280 pages. Price 2s.; or with ANSWERS, 2s. 6d.

BRITISH OFFICIAL EXHIBIT AT ST. LOUIS.—The Foreign Office has recently signified the acceptance by the Government of the invitation of the Government of the United States to take part in the Universal Exposition to be held in St. Louis, 1904. The exhibits to be made by the Government, in its official capacity, will be limited to education and the fine arts. The former will be entrusted to the Board of Education, one of whose representatives, Mr. Michael E. Sadler, Director of Special Inquiries, has recently been in America as a delegate to the National Educational Association, which has just held its annual meeting in the city of Minneapolis. Mr. Sadler was one of the principal speakers, with "The Debt which English Education owes to America" as his subject. During his visit Mr. Sadler held a long conference with Mr. Rogers, chief of the Department of Education for the Exposition. As a result of this, there is reason to believe that the British exhibit will include not only a summary of education in England, but also in Scotland, Ireland, and the Colonies. The last-named will constitute a new phase in expositions, which will be awaited with peculiar interest. France has made a preliminary grant of 24,000 francs for the organization of its exhibit, and Japan has voted a quarter of a million for the erection of a building and the cost of exhibits. The total grant of the United States Government amounts up to date to 6,308,000 dols., or, roughly, a million and a quarter. The plans are in such a forward state of preparation as to justify the expectation that St. Louis will present the unique example of an exhibition really ready on the day of opening. The London offices are at Sanctuary House, Westminster.

The Carton Series.

ILLUSTRATED REPRINTS OF FAMOUS CLASSICS.

Printed in large, clear type, on antique wove paper, with Photogravure Frontispiece, and from ten to fourteen illustrations by the best artists in black and white. Small foolscap 8vo, 6½ by 4½, cloth limp, gilt tops, designed end-papers, 2s. 6d. net; limp lambskin, 3s. net.
 Large Paper Edition, limited to 100 copies, on O. W. Paper, crown 8vo (no published price).

1. **UNDINE AND ASLAUGA'S KNIGHT.** By LA MOTTE FOUQUÉ. With Illustrations by HAROLD NELSON.
 "An exquisite reprint. Never has the fascinating legend appeared in daintier guise."—*Lady*.
2. **THE PILGRIM'S PROGRESS FROM THIS WORLD TO THAT WHICH IS TO COME.** By JOHN BUNYAN. With Illustrations by EDMUND J. SULLIVAN. Two vols.
 "The famous classic has not often appeared in neater form or more fitting and charming attire."—*Scotsman*.
3. **IN MEMORIAM.** By ALFRED, LORD TENNYSON. With Illustrations by A. GARTH JONES.
 "The book is of chaste appearance—one that tempts the lover of this poem to have it keep company with him, which its graceful size will readily permit."—*Dundee Advertiser*.
4. **THE SERIOUS POEMS OF THOMAS HOOD.** With Illustrations by H. GRANVILLE FELL.
 "The volume is executed with great beauty, type, binding, and illustrations being such as to command instant admiration."—*Glasgow Herald*.

OCCASIONAL NOTES.

SINCE the deliverance of the important statements both by Mr. Balfour and Mr. Chamberlain on the eve of the reassembling of Parliament, it has been clear that the Government would put it to the touch to win or lose it all on the Education Bill. That the Bill will pass is now certain, and the only doubtful point is when. That depends largely upon Mr. Balfour's tact and patience, which have hitherto been admirable. Over and over again the same arguments are urged against the Bill, and Mr. Balfour listens when a more autocratic Minister would make an earlier use of the closure. We feel certain that the Bill will become law; our only fear is lest Mr. Balfour in his honest efforts to find a *via media* between opposing claims may accept amendments from one side or the other that are fatal to the fundamental compromise. So far he has been prompt in detecting and firm in resisting amendments of this nature. We cannot pretend the Bill is perfect. But we have to consider what the alternative may be if this Bill is rejected. The rejection means that no attempt to construct an administrative system will be made for many years. Certainly the Unionist party will evince the truth of the adage that the burnt child fears the fire. Mr. Balfour said, and the opinion is fairly obvious, that failure for this, the third, time means postponement for a generation.

AND, if the Unionists fail, can the Liberals hope for success? The question must be answered in the negative. It is curious that Dr. Clifford and his followers do not see this. It has to be admitted that Dr. Clifford's opposition is partly political. He said the other day that, if this Bill is thrown out, the Government would resign, and that this is one of the strongest arguments for voting against

the Bill. But no Liberal Government would willingly touch the education question at present. By bringing in any immediate proposal for the establishment of universal School Boards, or for the compulsory purchase of voluntary schools, it would simply run amok. The present Bill establishes a partial control of voluntary schools by the representatives of a locally elected body. At present there is no such control. The choice lies here. Accept the Bill or retain the *status quo*. Some are cynical enough to advocate the latter alternative, on the ground that voluntary schools will gradually be crushed out. A more cruelly selfish position would be hard to find. The policy implies that for a generation at least half the children of this country are to be put on short commons in order that denominational schools may be starved to death. And the men who urge these proposals speak in the same breath of the right of each child to a sound elementary education.

THE agitation of the recess has had the effect—not by any means that intended by its authors—but foreseen from the first by the *Manchester Guardian*, of ensuring the speedy passing of the Education Bill. The Ministerial majority which was to be shattered or frightened away from the House has returned in full force, and Ministers who were to be intimidated into abandoning the Bill have in common parlance “got their backs up,” and mean to see the Bill through at all costs. We readily forgive Dr. Clifford and the rest all their sound and fury for having put Mr. Balfour once more into fighting trim and for definitely ranging Mr. Chamberlain among the apologists for the Bill. It is, of course, regrettable to us as educationalists that the Bill has to be made the subject of a regular party fight; but nothing definite is ever done in this country on any other lines. The Report of the Royal Commission might have remained for all time a voice crying in the wilderness if the “intolerable strain” on the voluntary schools had not made the bishops indicate that they expected the Government to do something. But we will not wrong Mr. Balfour by refusing to believe that now, at any rate, he has convinced himself that the interests of education—the highest interests—demand this Bill, and that, even at the risk of wrecking his party or majority, it is incumbent on him to settle the question once for all. Every indication of the Autumn Session goes to prove that the Bill will be through by Christmas, the constitution of the Authorities proceeded with early in January, and the passing away of the School Boards, with the transference of their powers and rates, a *fait accompli* on March 31. We have no reason to believe that after the usual nine days from that date the press and the public will not turn their attention to some other topic.

THE visit of Mr. Balfour to Manchester on October 14 and 15 was well described by Sir W. H. Houldsworth, M.P., as an education visit. His first or political speech was entirely devoted to education, to the Education Bill, and mainly to Sections 7 and 8 thereof. By the way, it has sometimes struck us that the fact that the managerial section is numbered 7, recalling the famous School Board disestablishment clauses of the “Science and Art Directory” and Evening School Code, may have something to do with the particular attention paid to it by the opponents of the Bill; in all probability, this numbering was a “Gorstian” joke. However, Mr. Balfour demonstrated conclusively that the pivot of the Bill is Section 8, that of control; not 7, that of management. The unfortunate six who are to “manage” voluntary schools revel in abusive epithets—they are

"creatures," "servants," and "puppets": why not the good old stage-term "minions"? The analogy with the 1870 Act managers which School Boards may (but generally do not) appoint is scarcely a happy one. The managers of a large shop or hotel under a company or non-resident proprietor is more to the point. A man under authority who, however, cannot say to one (teacher), Go, and he goeth, is the proper description of a "Bill" manager. It is quite useless for Mr. Lyulph Stanley to argue, as he does in the *Times*, that these managers have any financial power—they will not be able to spend a farthing of their own volition; their estimates will be passed before they touch a penny; and, if they spend more, they do it out of their own pockets and with liability to the attentions of Mr. Cockerton at audit. Much less can they enforce extraneous tasks on teachers. They can select the *individual* teacher (subject to veto), but what he is paid for, what he is paid, and what he has to do or not to do, are matters for the Authority.

WE therefore venture to insist that popular control consists in strengthening Section 8 as much as possible, and we are glad to see that Mr. Balfour is already taking steps in that direction. "Sole and

Section 8. entire control" are scarcely words to be got over by any quibble, and that this control

is to be "restricted" to secular education is also important. There can be no doubt that, sooner or later, the only logical solution—that of the Birmingham League—will result from the Bill—namely, that the jurisdiction of the Local Authority and the application of its funds (or any public funds) will be restricted to between the hours of 10 a.m. and 4 p.m., the other arrangements being a matter of local management and adjustment, and being paid for entirely out of voluntary funds. It is quite possible that some such provision, which is favoured by the Roman Catholics and by Churchmen like Canon MacColl, may be introduced into the present Bill. Of most of the amendments to the control section we can only say that their ingenuity is more remarkable than their honesty. To try and introduce again the "option" of aid to voluntary schools, not by areas, but by schools, is entirely against the whole principle of the Bill, which is to give the children in voluntary schools the same chance everywhere as those in Board schools, and the extinction of schools of a certain denomination in the areas of the Welsh County Councils would be neither slow nor painless under such an optional aiding provision. We also cannot regard seriously the attempts to remove the arbitration of the Board of Education if "questions arise" between a Local Authority and managers. There must be some court of appeal, and the Board is not at all likely to favour managers against rating authorities.

THERE are faults in the Bill. The fact cannot be blinked. Women are excluded from the Authority. But we are assured that this point is open to amendment. London is excluded, and that is a mistake.

The Faults. The principle of one Authority for one area has been unduly weakened. The chief blot is that in denominational schools the appointment of the teacher is in the hands of the denominational trustees. It is to be feared that other qualifications than efficiency as a teacher may be allowed weight. Mr. Balfour has lacked the courage to face this difficulty. Indeed, a man would need courage to do so. The denominations look upon this power as their last stronghold, from which nothing but compulsion will drive them. On another point Mr. Balfour has erred, either through want of knowledge or from too great a desire to conciliate. He has

spoken of the managers' powers and duties as being insignificant, and has likened them to the managers of London Board schools. There is no parallel. In London the managers do not appoint, but only recommend for appointment. Let the managers of denominational schools recommend a list of three names to the Authority for each appointment, and the parallel would be permissible. An amendment in this direction would remove much existing opposition; but it would rouse the denominations to much uproar. We feel it is this Bill or the present administrative muddle, and we prefer this Bill.

THE second part of Mr. Balfour's duties at Manchester was no less important, though bulking less in the estimation of the public. The opening of the Municipal Technical School was a great event in the history of English technical education—in fact, one can say the greatest since the passing of the Act of 1889. It would be

futile to attempt here to describe this magnificent building and its almost perfect equipment. Industry, science, and art are here linked together on a scale which England cannot equal, and, when one considers the ground covered, the Continent cannot surpass. To Mr. Hoy, now at the opening holding the office of Lord Mayor, and Mr. Reynolds, the Principal, whose thirteen years' labours are thus consummated, the Empire owes a debt of gratitude which only future generations will be able to estimate. It is plain that the problem of the Bill overshadows even this magnificent school. Where are the pupils to come from? As Mr. Balfour asserted, we must lay broad and lay strong our elementary and secondary foundations if this lordly structure is not to be a castle in the air. At present not Manchester, or even Lancashire, can fill it with pupils fitly prepared; it must content itself by becoming national instead of provincial. But there was a further skeleton at the feast constantly intruding itself—the spectre of University disruption. Is there to be a Manchester University formed from the ashes of the Victoria, and, if so, where does the Municipal School come in, and what are to be its relations to Owens College? The man who knows nothing, and seems to think that the ladder is one and undivided, will tell one curtly that it will "prepare for" Owens. This is exactly what it will not do, and should not do. Again, is the Grammar School or the Higher-Grade School to prepare for it? At the risk of shocking Manchester pride, we may reply: Neither. A proper system of second-grade modern schools, as in Birmingham, is the next Manchester necessity.

THE wail of the voluntary teacher against extraneous tasks has been with us for many years; but it is a fresh departure to find a similar lamentation arising from his colleague under a Board. It is the

Compulsion. hated word "compulsory" that does all the mischief. If a man can play the organ,

probably he will enjoy doing so in church on Sunday; but he rightly objects to have this duty thrust upon him as a condition of appointment. Physical training is the latest catchword, and no doubt any teacher would be glad to attend classes or lectures which would show him how to make the most of his opportunities of improving the physique of his scholars. But a man may fairly object, if he misses his class one night, to receive from the clerk to the School Board a peremptory demand, on a post-card, for an explanation of his absence. This has actually happened, so the *Schoolmaster* assures us; and the delinquent is the West Bromwich School Board. Unwilling service is a weak reed, and compulsion produces unwillingness. The London Board is wiser. It says, in effect, to its staff:

"Here are classes and examinations provided for you. You may attend or stay away. But, unless during the early years of your teachership you produce evidence of your ability to teach certain additional subjects, the automatic increase of your salary will stop."

LORD LONDONDERRY has summoned the Chief Inspectors of Whitehall to a conference, and his address has been communicated to the press. His lordship is anxious to know whether there is truth in the allegation that the substitution of inspection of methods for examination in results has brought about a falling off in accuracy and thoroughness of work. The reply of his audience has not been communicated. We will venture to say that the danger referred to can only be obviated by a thorough examination of the pupils by the staff. This is not always possible, nor where possible is it always done. Under the large Boards the head teacher, who has little class-room work, is especially charged with this duty of examination. It can be better done by the head teacher than by the inspector, and it certainly should be done in all the higher standards. With a view, we suppose, to impressing upon the inspectors the importance of their responsibility, Lord Londonderry spoke of the "vast sums" annually spent on education. Surely, in comparison with other items of our national expenditure, it is misleading to call these sums vast. The main points in the rest of the charge are two: the building and playground requirements of the Board must not be urged too literally in country districts, where the children lead a healthy outdoor life; secondly, the President of the Board of Education recognizes that book-learning is not all. He charges his officers to see that the body is cared for, and that a practical education is given suitable to the future position of the child.

TO summon a conference, instead of sleeping through a deputation that has been forced upon him, is a good omen in a new President. But there was one note struck by Lord Londonderry in his address that we confess inspires us with alarm. Education, he admonished his inspectors, does not consist in books and desks and school buildings. The very best education is now being given in village schools which are badly lighted and badly heated, without cloak-rooms or hat-pegs or any of the luxuries of a London Board school. It is, of course, perfectly true that the best teaching the world has ever seen was given in a porch or garden at Athens and on a bare hillside or by a lake in Palestine; but to bid inspectors not insist too much on the physical conditions or internal appliances of a school is, to say the least, dangerous doctrine, especially when we remember that appeals from managers against the Local Authority as regards proper accommodation will be decided, in the last resort, by Lord Londonderry.

THE discussion aroused by the eminently successful vacation schools planned last August by Mrs. Humphry Ward in London and by Dr. Percival in Hereford, has led Canon Barnett to publish a suggestion that is somewhat startling. Why, asks the Canon, should the elementary schools be closed at all except for painting once in three years? As we are speaking to teachers, let us hasten to add that Canon Barnett realizes that his proposal would mean an increased staff, so that each teacher might have "a holiday as long, or even longer, than that at present enjoyed." There are some obvious advantages. The child need never be driven to the courts and alleys of a crowded

city for its recreation. The fortnight in the country can be taken at any time during the summer months. Teachers will not need to take their holiday in the crowded and costly month of August. But there are more than counter-vailing drawbacks. The proposal assumes two things: in the first place, that a child can be withdrawn for a fortnight from school without serious loss; and, secondly, that—again, without serious interruption—one teacher can take on the work of another. Teachers know the contrary. The upshot of such a change would be that during the holiday months little real work would be done. There would always be the feeling that what was being done must be done over again when all the class were together. And the supply-teacher taking the place of the regular class-teacher during the latter's holiday would be at a great disadvantage. No; the plan is not practical.

A SUB-COMMITTEE of the Assistant Masters' Association has issued a suggested syllabus for language examinations. The scheme is printed in the *Circular to Members*, and criticism is invited. In modern languages the set book is abolished so far as the setting of passages for translation is concerned. Where an oral examination is feasible the set book may remain as the subject of conversation between candidate and examiner. A note appended to the scheme urges that, although translation from a set book be abolished as a test of efficiency in the language, yet that the reading of a continuous piece of literature is essential. It is also suggested that in higher examinations a paper of questions on the subject-matter of a prescribed book might be set, to be answered in the language. All examination papers should include unseen passages for translation from and into the language. Free composition, or essay-writing, should be introduced into advanced papers, and the reproduction of a story read aloud by the examiner into junior examinations. There should be writing from dictation and such other oral tests as are possible. It is recommended that, in English, a prescribed book be studied, but that the literary rather than the philological side should be emphasized. In higher examinations an additional paper in philology might be set. In classics translation from prescribed books is allowed, but is to assume a less important place than at present. The examination should include unseen translation from and into the language. A vocabulary should be given in junior examinations. Questions on the subject-matter may be set, and grammar questions, not beyond the standard of the prescribed book. These proposals seem to us reasonable. Certainly, translation from a prepared book is an unsatisfactory test on the whole.

IN the course of his annual statement as Chairman of the London School Board, Lord Reay says: "Too much stress cannot be laid on the serious evil of the tendency of teachers to lecture to the children. . . . Even at the Universities a system of mere lecturing is unsatisfactory; in elementary schools it is absolutely vicious." Whence, then, has come the tendency to this undoubted evil? And how far is the teacher forced by circumstances? In the first place, there can be little doubt that this tendency to lecture is the result—especially in secondary schools—of the reaction from a former condition in which the boys were set certain tasks and the masters heard or corrected the work done. The desire to make the lazy or the dull boy work as well as the clever or industrious boy has caused sometimes an excess of activity on the part of the master. Training colleges and inspectors are responsible

Lute.

The Vice
of Lecturing.

for indirect encouragement of the tendency. The set lesson, on which a student's ability to teach is assessed, is necessarily a lecture skilfully interspersed with questions, and its importance is exaggerated. The teacher likes to be giving such a lesson when the inspector arrives. Inspection is now taken to be of the teaching as opposed to an examination of the results. But children cannot listen for long without fatigue. They need to be working themselves. "In an ideal school the teacher does very little himself, but is the cause of a great deal being done by the boys." If inspectors are not careful, we shall have an increasing tendency in secondary schools to these show lecture-lessons during which the boys are mainly passive.

THE opponents of the Education Bill who threaten to refuse to pay the education rate will, if they carry out their threat, have their antitype in Mr. Albert Tarn, who explained to the Gateshead magistrates that he had conscientious objections to paying the School Board rate because the money was used for injurious purposes.

*The
Conscientious
Rate Objector.*

The magistrates showed scant sympathy, and issued a distress warrant. But Mr. Tarn is not thereby crushed. On the contrary, he has issued a circular to explain his attitude. Mr. Tarn claims the right of private opinion. But, even in these days of liberty, a man has no right to an opinion that results in actions contrary to the law. There are some among us who would urge the spending of more money to equip or provide for technical education. Mr. Tarn considers that commerce is greatly hampered by "the growing burden of rates and taxes for so-called educational purposes." Does Mr. Tarn remember that our little war in South Africa swallowed up in a couple of months the amount of the education grant for the year? But there are stronger reasons: "I regard Government schools," says Mr. Tarn, "as unfit places for any children to be sent to. I regard the wholesale prosecution of parents and the legalized kidnapping of their children to be a disgrace to this country." After this Mr. Balfour and Lord Londonderry will sleep badly.

WE learn from the *Lancet* that Dr. Giuseppe Biller, of Bologna, has been conducting a series of experiments leading towards a more exact knowledge of the pathology of mental fatigue. The test was the correctness of arithmetical sums in division; and the children, boys and girls, were of the average age of eleven and a half years. Examination papers of one hour's duration were set. It is quite natural that the work done in the afternoon should be both less in quantity and worse in point of accuracy than the work done in the morning. Dr. Biller also notes a diminution in accuracy during each successive quarter of an hour. This would seem to imply that for children of the age chosen an hour's continuous work at one sort of sum makes too great a strain upon their interest and power. The third conclusion is that the work done at the end of the school year is more in quantity, but worse in quality, than the work done at the beginning. If the continued working of sums in arithmetic does not produce increasing accuracy, it is time for the teacher to pause for inquiry. The simple explanation would be lack of interest. Division sums may easily be worked *ad nauseam* by small children. There comes a time when the charm of a correct answer ceases to please. So there is a certain danger in drawing conclusions from such investigations as those of Dr. Biller.

IT has been said that we shall never have a thoroughly well organized education in this country until the man

in the street is convinced of the value of education. This assertion may be restated in the form

The Memory.

that the hard-headed man of business will not believe in education until he finds that the finished product of the schools is more useful to him than has hitherto been the case. If the man in the street needs to have this conviction forced upon him, much more the journalist, wielding, as he does, so great an influence. In a recent issue of a contemporary, presumably written by educated men, we find this amazing passage: "In these days, when the universal cry is 'education,' it is somewhat surprising that so little attention is paid to the fundamental principle on which all education is based—the principle of memory. What is the use of even the best education if the knowledge so laboriously acquired is all to vanish from lack of a good memory?" So, in the view of this writer, education is merely the acquisition of knowledge. We could pass over his confusion between education and the administration of education. This is common throughout the daily press. But the writer shows his complete misunderstanding by quoting in support of his views a remark made by Sir Richard Jebb, that "experience has taught us that the education which best prepares for life is that which trains and develops the mental powers." With this we are in entire agreement; but the opinion entirely contradicts the "memory" position.

THE opposition of the Free Churches can only be explained on the ground of disappointment that, when the administration of education is in the melting-pot, a universal system is not to be established.

*The
Free Churches.*

We share the feeling; but, we repeat, it is this or nothing. Granting that there are some four million places in voluntary schools, and that these could be fairly purchased—as property without value to the vendors, who, if they refused to sell, would see a Board school erected across the way—for some twenty millions, who is going to make the proposal? Certainly not the Liberals. Out of office they may be driven by their supporters to make vague promises or to hold out vague hopes; but in office they will not run their heads against the stone wall of sectarian dispute. The Free Churches must be content with the present state of affairs, which is unpalatable to them, and certainly anomalous, or they must accept the Bill, which gives a very real, though not complete, control to the Education Authority. The Bill offers a starting point for administrative unity. In our opinion it does not perpetuate denominational schools. On the contrary, if this Bill becomes law, voluntary schools will gradually die out; but they will be efficient, and not starved, so long as they live. At the time of writing, Section 8 is still under discussion, and the progress made is infinitesimal. But the House will grow weary of interminable repetition, and the steam roller will turn to a motor car.

PROF. PERRY, at the prize distribution of the Royal College of Science, protested against the making of a foreign language compulsory for science students. "With

*Prof. Perry
on Language
Teaching.*

all the translations available, no kind of physicist or engineer needed French, German, or any foreign language." He himself, he added, had given much time to French and German, but he preferred a translation to any version of his own. He hoped some time to have an opportunity of pricking the compulsory foreign language bubble. We shall await with keen interest the pricking, but we fancy it will take a sharper needle than Prof. Perry to explode a superstition, if such it be, that has prevailed for a thousand years in every civilized country.

THE *Spectator* approves without reserve the "in and out" compromise to which Sir William Walrond, in his Tiverton speech, gave a semi-official sanction. "It

*The
"In and Out"
Compromise.*

would not only not infringe liberty of conscience, but it would secure that the children obtained the exact kind of religious instruction desired by the parents."

In theory perhaps it would, but we fancy that in practice it would prove a dead letter. How many persons would be willing to devote an hour a day to giving religious instruction in Board schools, and of these how many are capable of teaching effectively? Suppose the Catechism class proves a bear garden: what is to happen? Let us suggest a parallel. Lord Meath considers that military drill in schools is our one way of national salvation. A Bill is passed giving free entrance to our public schools, at certain stated hours, to any non-commissioned officer whom Lord Meath and his friends designate, and at the same time permitting public-school masters to instruct recruits in cricket and football during the first or last hour of drill. We think that neither Lord Roberts nor Dr. Warre would see it.

MR. G. F. BRADBY, of Rugby, in the *Speaker* (October 11), reveals *ab intra* some of the most glaring defects of our public-school education. Modern

*Mr. G. F. Bradby
on
Public Schools.*

history, he tells us, does not enter, in any real sense, into the curriculum of our secondary schools. It is mostly left to be

picked up in the holidays, and in what a way! Had we not Mr. Bradby's word for it, we could hardly believe that a party pamphlet such as Sir Conan Doyle's "Great Boer War" had been set as a holiday task at one of the most famous of our great public schools. On the classical side, he tells us, the old linguistic methods of the Jesuit schools still prevail: "for every ten boys who enter the promised land [of literature] at least ninety are left in the wilderness [of gerund-grinding]." And the Moderns are not necessarily any better off: "Anything more arid and unlitrary than the training which the requirements of the Army examinations force upon our future officers it would be hard to imagine." Mr. Bradby has one specific remedy to propose:—Let these ninety lost sheep in the wilderness at an early age drop Greek and in part Latin, and then devote the hours thus saved to English literature and history. We wait with interest to hear what Dr. James has to say to his colleague's indictment of Rugby and to his proposal.

DR. PERCIVAL, speaking from his wide experience at Clifton, Rugby, and Oxford, endorses and supplements all Mr. Bradby's charges against the intellectual side of

*Dr. Percival
says ditto.*

public-school education. At the preparatory school from ten to fourteen the boy is taught chiefly the rudiments of Latin and

Greek, with a veneering of English, French, and arithmetic, and taught by young men whose heart is in the cricket field and who "have never themselves been taught how to teach anything." And even the classical teaching carried on for another four years in the public school, except in the case of the happy few who spend a year or two years in the Sixth, comes to little or nothing. The boy who leaves in the Fifth will confound the Civil War with the Gallic War of Cæsar, and not know whether the hero of the Anabasis was "the Cyrus of Daniel or Ezra or some other man." The Bishop sums up with this grave indictment:—

The fact is that, with the growth of wealth among our commercial classes and the social ambitions and craving for amusement which it brings with it, and the tyrannous spread of that athleticism which Euripides deplored in his day as the bane of Greece, the ideals which pervade the life of our great schools and possess the younger masters,

who should be the inspirers of the common life, have tended to fall rather than to rise during the last thirty years.

MR. E. T. WOODHEAD has been testing Mr. Balfour's estimate of £26,000,000 as the price which would have to be paid for disestablishing voluntary schools by investigating the trusts of the endowed voluntary day schools in the Parliamentary division of Holmfirth and the Colne Valley. Of the 12,279 scholars in average attendance, he finds that only 4,736 are in schools entirely built and maintained by private individuals or sects, such as the Church of England or Wesleyans. The rest are in schools endowed under undenominational trusts, though some of them have now become undenominational in administration, or in schools which have received building grants under conditions that secure them for the use of the public. If the district be not exceptional, and it was chosen solely because it is the writer's home, Mr. Balfour's estimate must be reduced from twenty-six to ten millions.

LEST this heading should scare our readers, we may at once say that we have no intention of opening our columns to the threadbare theme of conscription. We

*Conscription
and Education.*

merely wish to call attention to a letter of Sir James Blythe to the *Times*, in which he points out the enormous momentum that the military systems of France and Germany give to secondary education. What are all our prizes and scholarships compared with the prize that a German or French schoolmaster offers to the good boy—a year, or in France two years, of life, or, what is tantamount to life, exemption from barracks and drill? And besides this positive relief, as Sir James points out, a social stigma attaches to the rejected. Speaking from a wide experience of the inner family life of France and Germany, Sir James affirms that "among the upper middle classes of these countries the education of the young men is far more widely spread, more thorough, and more calculated to fit them for the highest industrial positions than it is in the equivalent stratum of society on this side the Channel." Sir James does not advocate conscription *sans phrase*, but insists that "some premium on knowledge or some penalty on ignorance must be devised which will do for us what the abridgment of military service has done and is doing for France and Germany."

SIR ARTHUR RÜCKER, in his opening address to the Birkbeck Institution, summed up excellently the aims of the reformed University of London. To give more

*The Idea of the
new University
of London.*

liberty to the teacher, to test the undergraduate not merely by examination, but by his entire University career, to find out whether the knowledge the student displayed had been acquired under such conditions as to have become an integral part of his mental equipment, to bring the teacher and the examiner *en rapport*—these in brief were the aim of the new teaching side. The problem was to combine the influence of a central co-ordinating power with that of the individual teacher, and yet maintain the independence of each. This problem the Senate had tried to solve by laying down only in broadest outline the courses of study for internal students and the time to be spent on them. The courses for day students in the polytechnics fully satisfied their demands, and it had been decided that in the case of evening students who could produce from their employers certificates that they were engaged for twenty-five hours in the week a substantial reduction should be made in the required hours of attendance at classes.

THE temporary withdrawal of the Children's Employment Bill is to us a source of surprise and regret, though the support accorded to the delayed measure is likely only

*Children's
Employment
Bill.*

to gain in pressure and volume as a consequence of the transient impediment. The very representative Guildhall Conference, at which the Bishop of Stepney, Dr. Macnamara, and Mr. Mundella were among those who spoke with the force and cogency born of experience, has shown quite recently how earnest and practical is the conviction of experts in favour of the Bill. The Conference was summoned on a side issue, since juvenile street trading is only a part—and that a comparatively small part—of the great evils which the Bill seeks to restrain; but Mr. Mundella's speech especially was a concise and powerful bit of pleading in favour of the Bill in its totality—a carefully reasoned, yet fervent, appeal, at once statesmanlike in its guarded perception of inherent difficulties, and tender in its vivid allusion to the temptations and toils of those children whom the Bill is designed to protect. But, indeed, it is only necessary to turn to the report out of which the Bill arose in order to be saddened and convinced, for it states "that in England and Wales a substantial number of children, amounting probably to fifty thousand, are being worked more than twenty hours a week in addition to twenty-seven and a half hours at school; that a considerable proportion of this number are being worked to thirty, or forty, and some even to fifty, hours a week; and that the effect of this work is in many cases detrimental to their health, their morals, and their education, besides being so unremitting as, to deprive them of all reasonable opportunity for recreation."

TECHNICAL EDUCATION

THE Manchester School of Technology, which was opened by the Prime Minister on the 15th ult., is a remarkable example of municipal enterprise; and, if there be those in Lancashire, or out of it, who are disposed to regard the expenditure of £300,000 on this school as tending in the direction of extravagance, they may take comfort from the reflection that, after all, it has cost less than any one of the four asylums for pauper and other lunatics required by the county of Lancashire. The responsibility of public authorities for the care and education of the mentally unfit is recognized, and the patients are, as a rule, accommodated in handsome buildings, adequately equipped. That the mentally fit, the productive section of the community, may also be advantageously cared for by public authorities is an idea gradually claiming recognition, and in this, as in some other matters, the City Council of Manchester is an example to other authorities.

It would be difficult to exaggerate the general impressiveness and particular excellence of the Manchester School of Technology. As Mr. J. H. Reynolds, the Principal and active partner of the Council in this enterprise, has said: "Whether we regard its architectural features, its plan, its scope, its amplitude, or its equipment, it stands singular among the many surprising developments of the day in the means of technical instruction and training." It has no competitors in its own line in this country; but it is ever to be remembered that an educational triumph is not to be found in the erection of buildings, however magnificent, or in the provision of mechanical aids, however complete. It must be demonstrated in the work of the students. Principal Reynolds goes further, and says: "If the school does not make its due impression not only upon the rank and file, but in the management of our great industries, so as to improve the methods employed in them, and enable the ideals in which they are conducted, then it fails utterly to realize the purposes for which it is established."

MR. BALFOUR, in his admirable speech at the inaugural gathering, alluded to two of the essential conditions upon which the success of a school of technology must depend. Firstly, a supply of students qualified to benefit by the opportunities afforded, and, secondly, manufacturers and employers prepared to engage, and pay for, technically trained intelligence. That many employers in this country distrust the product of the technical school is true enough; but it is probably equally true that they know the line of business which pays best. Opportunities of profitable industrial development have, it is said, been

missed in this country, because of the need of "trained men." Even if the fact be admitted, it would not be difficult to explain it in another way. But nevertheless, there may be, as Mr. Carnegie predicted at Aberdeen, "years of painful lessons before the people of Britain," and, if the effect of those years is to give the national temper a bias in the direction of intellectual interests and pursuits, the pain will be profitable.

IN an admirable address to the North-East Coast Institution of Engineers and Shipbuilders on the 24th ult., the President, Mr. Tweedy, gave some excellent advice both to employers and educationists. To the former he said the combination of the cottage and workshop ought to make the apprentice more—not less—useful to his employer, and he recommended the abolition of the "premium" system in favour of the admission of special pupils into works according to their proficiency and merit as students. He also urged, as the basis of all efficient technical work, a good general education—moral, as well as intellectual. "How to live sensibly and rationally," he said, "is a more abstract, a more difficult, problem than how to turn a shaft or plate a ship, and a less skilful workman, but a good man, may be superior, even from the economic point of view of the workshop, to a workman more skilful as a worker, but inferior as a man."

IT is encouraging to find a captain of industry pleading for a system of education which shall aim at something more than the teaching of little boys to get three sums right out of four. No one who reflects upon the result of our primary-school system can be satisfied that the methods hitherto adopted have successfully developed those indispensable qualities of mind and character which must be the foundation of national stability and progress. While time and patience are exhausted on the discussion of the ways and means of educational machinery, the "contents of education," as the late Bishop Creighton termed it, are ignored and forgotten. But, perhaps, when the politicians and theological controversialists have settled the relatively unimportant matters of management, and the merits, or otherwise, of this or that type of school, we may have time to pause and consider what may be the object of school education, and the conditions requisite to attain it.

REFERENCE has been made in this column on several occasions to the unsatisfactory regulations, which have been in operation for some years, under which teachers of domestic economy subjects are trained and certificated. Teachers of domestic subjects are chiefly employed in day and evening schools aided by Government, and it might be thought the simple task of prescribing the conditions under which the teachers should be trained and recognized would not be beyond the powers even of the Board of Education. But the scandal of allowing things to drift has continued year after year, and now the possibility of a better system, suggested by the offer of the Board to conduct examinations and grant diplomas, has just been neutralized by the recognition of a wholly inadequate scheme of the City and Guilds of London Institute. It is not surprising that the bewildered training schools of cookery are vigorously protesting.

UNDER present conditions diplomas qualifying the young person to teach in schools aided by the Board may be obtained in these several ways: The aspirant may (1) be examined by the Board of Education, or (2) by the National Union for the Technical Instruction of Women in Domestic Science, or (3) by the City and Guilds of London Institute, or (4) by the authorities of certain recognized schools. At the same time, until the appearance of the City Guilds' scheme the period of training in cookery and laundry work was more or less identical in different schools, although the diplomas have been awarded on examinations of varying standard. But the City Guilds' scheme, it appears, plays havoc with the existing regulations, and, with the consent of the Board of Education, proposes to encourage courses of training of a very superficial and inadequate character. It is high time for the Board of Education to seriously consider the whole question.

A WELL informed writer in the *County Council Times* has called attention to what he terms the "education muddle" in the Metropolis, for which he holds the Technical Education Board largely responsible. Discussing the future legislative problem, he suggests a scheme for London, requiring that (1) each borough should have absolute control of the education of the district—viz., primary, secondary, technical, technological, and art education; and (2), in consideration of the unique circumstance of twenty-eight boroughs lying side by side, each borough should nominate one or more of its members, *pro rata* of population, to a central Council, which shall have power to deal with certain clearly specified "all London" subjects. There is a good deal to be said in favour of this solution of a difficult problem.

AT the meeting of Directors and Organizing Secretaries for Secondary and Technical Education at Manchester on the 16th ult., Mr. C. Courtenay Hodgson (Cumberland) was elected chairman for the year 1903.

INSPECTION OF SCHOOLS UNDER THE
EDUCATION BILL.

AMONG the many subsidiary questions which will be raised if the Education Bill becomes law there is one of some magnitude, though it is in no need of immediate settlement—that of the relation of the Central to the Local Authority in the inspection of schools, and of elementary schools especially. The promoters of the Bill of 1902 have wisely abstained from including among its provisions any definite regulations concerning inspection; and in this they differ from those who drew up the Bill of 1896, in which inspection was decentralized along with other administrative functions of the Central Office. As one of the forms of control, the power of inspection is, of course, bestowed upon the new Local Authority by the Bill now before Parliament. But no conditions or limitations are laid down, and no obligation to inspect is imposed; while, on the other hand, no provision is made against the overlapping of Government inspection (which is clearly to continue) and local inspection. These are, indeed, matters that may well be left over and, perhaps, ultimately settled by the administration, and not by Parliament. The Local Authorities will have enough to do for the first year or two without undertaking the serious work of inspecting the elementary schools under their care.

Yet the subject is not one of minor importance. The new Authorities for education, many as they are and small as is the area of some of them, will, in most instances, if the Bill passes, acquire the control of a number of elementary schools so large that a tolerably complex official organization will be unavoidable. One of the earliest officers to be needed will be an external officer, whether he be called director, organizer, superintendent, or inspector, who will correspond in dignity with the present clerks of School Boards or education secretaries, but who will be free from the desk routine and the financial work of these functionaries. It will be the external officer's business in the first instance to familiarize himself with the schools, to act as intermediary between the local managers and the Education Authority and as adviser to both, and to superintend the appointment, training, transference, and promotion of teachers. Ultimately, it may be hoped that he will be director of education in a higher sense. In any case, not only the smooth working of the new machinery, but even the possibility of educational advance in quarters where it is needed, will depend in a large measure upon the functions assigned to this officer and upon the establishment of right relations between him and the officials of the Board of Education.

The men who occupy positions most resembling the office in question are the inspectors employed by the larger School Boards. They do not enjoy quite the repute nor take quite the rank that one would hope would belong to the directors of education in a large town. Their influence is determined by different factors in different cases. In some towns one inspector looks after a group of schools so small that by inspection and examination he can acquire a full and complete knowledge of the circumstances and of the efficiency of each school. In London, on the other hand, the schools are very numerous and the inspectors are few. It is physically impossible for them thoroughly to inspect each school within recurring periods that are reasonably short. They must be satisfied with a general familiarity with the schools and a special acquaintance with those that need special attention. They report annually to the School Board, but they cannot supply a detailed account of the educational condition of each school. School Boards also differ in what they require their inspectors to do. For, while the inspectors in Leeds have earned an unenviable notoriety for the minuteness of their examinations and their reports, those of neighbouring boroughs are apparently not instructed so narrowly to superintend and so harassingly to scrutinize the work of the teachers under their control. In some country districts another variety of local inspector exists in the shape of the organizing visitor. Unlike the School Board inspector, he possesses very little recognized power in the direction of curriculum or in the promotion of teachers, and his presence in independent schools is tolerated rather than welcomed. If officers of this type are likely to be appointed in the future, and if the dignity and influence of the existing inspectors are to be enhanced, it is of the utmost importance that they should be

utilized in the best way, so that they may neither fritter away their energies without producing much effect, as in London, nor exercise such a deleteriously minute supervision as they seem to do in Leeds.

Since 1896 the methods by which the Board of Education assures itself and the public of the efficiency of the elementary schools have been considerably modified. The change from annual examination to inspection, then in its initial stages, has been completed, and at the present moment no clearly efficient school is annually or ever examined. Ten years ago the inspectors of the Education Department examined individual children, reported on each school, and often on each subject of instruction in detail, and assessed grants piecemeal. Now they inspect, but may not examine; they are instructed to write a general, and not a detailed, report, and they award a block grant, and not a subject grant. The method of examination that prevailed was not ill-suited, from an administrative point of view, to a state of things in which each school was a separate institution, managed in so many cases parochially, or, at least, by isolated committees of management. Except in large, well organized School Board districts, the teachers and managers in all schools have been responsible directly to the Education Office, and no other bodies have had any concern with the results of the examination. The conditions are fundamentally altered when large numbers of schools are controlled by one Authority, and that a weighty Authority with a wide area under its supervision. Indeed, at the present time the relations between the Board of Education and the schools under School Boards are somewhat anomalous. The old method of treating a Board school as if it were an isolated establishment, wholly unconnected with any other, has persisted seemingly because its neighbour the voluntary school could not well be treated otherwise. When all elementary schools are controlled by one Authority, and when this Authority in most cases also controls other forms of education, when presumably there is co-ordination between schools, the old system by which the Board of Education annually satisfies itself afresh that a school is efficient, modified though the system is by the substitution of inspection for examination, is clearly out of date. So also, it may be added, is the existing arrangement of inspectorial staffs and districts; while the method of appointing and grading inspectors is only saved from the reproach because it has lately been remodelled.

Symptoms of dissatisfaction with the present conditions of inspection have not been wanting. According to their position and predilections, the critics complain that it is dangerous, or at least unwise, to leave the elementary teacher without more searching tests than are now applied; that the scholar should not be deprived of the stimulus that a formal examination may afford; or, again, that the managers have at present no satisfactory guarantee that the work for which the teachers are paid is really done. The Chairman of the School Management Committee of the London School Board, Mr. Graham Wallas, protests that the reports of the inspectors of the Board of Education are so colourless and vague that his Committee derives no information of value from them. School managers do not commonly desire information on the state of their schools in a more detailed form than the annual report supplies; but when they do, and when, as in the case of the London School Board, they represent the ratepayers, it is difficult to say that the demand is unreasonable.

In view of the considerations here advanced, the new conditions under which public elementary schools are likely to be administered, the danger of a needless multiplication of officials and of an overlapping of work, the feeling that the instruction in elementary schools needs somewhat more detailed supervision, it is fair to open the wide question: What should be the principles determining the relation between Local Authority and Board of Education in regard to the inspection of schools?

The Board of Education distributes to the schools so much money from the Imperial Exchequer that it cannot forgo any of its control over the disposition of the money. But, if, as the Bill promises, all grants are to be paid to the Local Authority *en bloc*, instead of to the managers of separate schools, the kind of control to be desired is a general control. If the Board is satisfied that a Local Authority is doing its duty—that a due standard of efficiency in instruction, in buildings and equipment, and in the provision of schools, is being maintained—it can dis-

pense with much of the detailed information concerning the schools which it now laboriously obtains and preserves. A periodical report on the condition of his district may be expected from each of the Board's own inspectors, but the annual report on each school need no longer be deposited in Whitehall. In order to superintend the elementary schools at all, the Local Authority must ascertain particulars and statistics which are now annually furnished to the central office; but there is no necessity that this kind of work should be duplicated. On the same general principle, that details may be left to the Local Authority, which is more interested in them than the Central Authority—other functions of the Board of Education may in time be transferred to the Local Education Authority. Such are the business of giving certificates of proficiency (the labour certificate, so called), that of examining candidates who wish to enter the teaching profession, that of awarding merit and leaving certificates—should these certificates become naturalized in England. Decentralization of the character indicated, if it be checked by vigilant inspection, ought to go towards stimulating a local interest in education, and need not seriously diminish the real control of the Board of Education.

One might then ultimately hope to see harmonious relations between the Central and the Local Authority in reference to inspection established somewhat on the following lines. In each locality or convenient group of localities should be a Government inspector, with or without assistant, as circumstances dictate. He should, no doubt, represent the Board not only for elementary, but also for higher, education. He cannot be freed from all routine, because the Board of Education must frequently refer to him as their local agent for information and advice on particular points arising in the ordinary course of administration. But he should be relieved of much of the desk-work of the present Whitehall inspector, and particularly of the duty of annually reporting on each elementary school, while his principal function should be advisory. He must also be a critic, and to the end that both advice and criticism may be founded on just grounds he must enjoy the fullest discretion to inquire, to inspect or examine alone, or to accompany the local inspectors and observe their methods, whenever he may find it desirable to do so. His criticism ought not to be criticism of details, but of the general administration of education and of the means adopted to maintain a high standard of efficiency.

By the side of the inspector of the Board of Education, there should be local inspectors, appointed by and responsible to the Local Authority. Their main aim should be to keep the schools efficient, and to that end they must become thoroughly familiar with the detailed work of the schools and with the qualities and capacities of the teachers. The Local Authority will naturally expect a periodical account to be rendered by each school, if no annual report is received from Whitehall. But the manner in which the character and success of the instruction are ascertained, whether by inspection alone, or inspection combined with partial or periodical examination, might be left to local determination. As was suggested above, the local inspectors should conduct such examinations as are required for certificates of proficiency and for merit certificates; they should also superintend the whole of the training of pupil-teachers, so long as pupil-teachers remain. They would of course have all the work of the present School Board inspectors in the appointment and promotion of teachers, except in so far as this function is left to local managers.

By some such system as is here outlined, overlapping might be avoided, and friction between local and Government inspectors reduced to a minimum. The Board of Education would be relieved of the detail which it will no longer want, and the Local Authority would possess the detail which it will necessarily require if its control over elementary schools is to be real and if the organization of the whole of education is to be placed on a satisfactory basis.

HERE is an exact copy of the Lord's Prayer as it was written out by a boy in a preparatory form of one of the great public schools:—
 "Ar Father which is in Heaven. Harold will be thy Nam thy kingdom come Girts. Our treaspas as we forget heaven. Por and Glory. For ever and dever—amen."

THE GERMAN SCHOOL IN JOHANNESBURG.

THE idea of founding the German School in Johannesburg was first conceived on March 22, 1888, when the Germans resident in the town called a meeting to do honour to the Emperor William I., who had just passed away. It was then proposed, as the best way of perpetuating in their midst the memory of the founder of the Empire, that children of German nationality far from their Fatherland should be secured the opportunity of acquiring a German education. This plan had the recommendation that the promoters would not only effect their immediate object, but would gain the personal benefit of having their children kept German in spirit at least.

Later on, after the requisite funds had been collected, an application for support was made to the Transvaal Government. The latter presented the German community with a suitable site for a memorial, and, at the same time, assigned them an adjoining plot of ground at a very moderate price for the erection of a church and school.

Finally, in April, 1897, the foundation-stone of the school was laid. The day was, indeed, an exciting one for the members of the German colony. The school coming into existence in a South African town was to undertake a momentous task. It was to nourish, so far from home, first of all German patriotism and then German culture and religious feeling.

Yet, in spite of this national enthusiasm, all the factors which contributed to the result were not unadulteratedly German. It must, indeed, have been felt as a drawback that the erection of the buildings was entrusted to an English contractor.

In a very short time the institution attained an unexpectedly high pitch of prosperity. In June, 1899, it was already attended by 222 children, of whom 159 were of pure German descent. In the lower classes boys and girls were taught together; in the higher grades the children were separated according to sex. The staff was fairly strong, and consisted of 9 teachers, 5 male and 4 female.

The foreign languages taught were English and Dutch; the former because it is the language of commerce in Johannesburg, the latter on even weightier grounds. The reason alleged by the school authorities was that the Transvaal Government attached great importance to the instruction of children in the official language of the country. However, it is permissible to assume that the reason which actually influenced them was the fact that the Boer rulers backed up their views in a very substantial manner by granting a capitation fee varying in amount between £4 and £5 for every child learning Dutch. In the year 1899 the grant was earned on no less than 153 children, which amounts to the very respectable sum of nearly £700. Not many schools with a roll of 200 could afford to neglect such an item in their accounts.

At one time the intention was to develop the school on the lines of a German *Realschule*, and then try to obtain from the Government at home the privilege of one year of voluntary service in the army, instead of the two years of compulsory service usual in Germany. As this privilege, when service could be altogether avoided, is at best an enormous disadvantage, the school in reality hoped to obtain the other privileges which attach to the successful completion of the course of a German *Realschule*, so that the possibility of returning to the Fatherland and entering the Civil Service would have been open to pupils of the school. This would naturally have applied only to children of German parentage, but, in spite of this limitation, the Imperial Government would scarcely have acceded to the request, even had the expansion been successfully effected.

These hopes were shattered, and the prosperity of the school impaired, by the outbreak of the war. The benevolent Boer Government was no longer in a position to give support and funds: its attention was directed to matters more pressing than the propagation of the Dutch language. Serious gaps arose in the ranks of the pupils, whose numbers sank to 100. Yet the school can now make the proud boast that, in face of all difficulties, it alone in Johannesburg did not close in the evil days of the war.

But it held out at a terrible cost. By the end of last year the deficit in its accounts had mounted up to just £2,300, and financial aid had to be urgently sought from all available sources. The English Government declared its readiness to render substantial help, but stipulated that the instruction should be given in English. To this the Germans naturally felt themselves unable to consent in view of the avowed object of the school.

The application to the German Government met with more success, and resulted in a grant of £500, but this still leaves a very considerable balance which must be met by private contributions.

With the object of collecting funds, Dr. Weidner, the Director of the school, has recently made a tour in Germany, and has succeeded in awakening a deep interest in the institution. At the present moment concerts for its benefit are being held in all towns of any size, and subscription lists have been opened all over the country; pupils of the *Gymnasien* and other higher schools bother their schoolfellows with collecting cards, and even the children of city schools have got together amounts that are surprising when it is borne in mind that so many of the pupils belong to the poorer classes.

These strenuous efforts are animated by the desire of maintaining the German character of the school; it is this that appeals so strongly to the sympathies of the nation, and that has gained for the movement the approval of the Universal German School Union, along with a generous contribution from its funds, one of the chief objects aimed at by this organization being the maintenance of German nationality and manners in foreign countries.

With such cordial support, there can no longer be any doubt that the necessary funds will be obtained. Further, not only will the deficit be covered, but a surplus will almost certainly remain over large enough to place the school on a secure footing for the next decade or even longer; but it would be too much to expect a permanent endowment of any magnitude from this source.

For the next couple of years the establishment may possibly still have to be carried on at a loss, which will, of course, be cancelled by the collections at present being made in Germany. But, with the definite restoration of peace, the pressing need of the school will, in all probability, be at an end. The wealthy Germans whom the war has driven from Johannesburg will return and again provide for its maintenance.

The future of the institution seems assured; so that there will ultimately be firmly established in Johannesburg an institution for the express purpose of fostering German sentiment and patriotism.

The danger suggests itself that disloyalty to the English Government may be fostered at the same time. But the risk is slight; the German abroad does not meddle with politics, and will gradually become contented with the new administration once the immediate bitterness caused by the war is past; so that Englishmen need have no hesitation in heartily wishing success to an institution which will form a centre of culture in a colony where culture has been hitherto at a discount.

COUNTY COUNCIL SCHOLARSHIP SCHEMES. MUNICIPAL ACTIVITY IN EDUCATION.

A REMARKABLE testimony to the value of the work of our larger Municipal Authorities in the field of education is rendered in a recent number of the *Record of Technical and Secondary Education*, in the form of a Return which embodies the results of a special inquiry into the operation of the scholarship schemes of all the County and County Borough Councils in England. The inquiry was undertaken by the National Association for the Promotion of Technical and Secondary Education, which has done so much to place the organization of technical training upon a satisfactory basis.

A National Scholarship System.

It is well to recognize that as much may be drawn from a study of the scholarship schemes by implication as by the definite facts presented. The training of the *élite* of students is one of the chief objects of scholarship schemes; but, as with all other municipal plans, the prosecution of a great deal of careful preliminary work preceded the active operation of the schemes. The efficiency of schools and institutions had to be guaranteed in order to comply with the requirements of the law, the Government, and the Local Authorities. And, as the schemes directly affect the great majority of the public institutions above the elementary sphere, and indirectly those within it, they exert an immense influence upon the educational system of the country. This being so, it is clear that the final success of practically

every branch of higher education taken up by the Local Authorities themselves is dependent upon the working of the scholarship schemes. The importance of studying the attainments and conditions in such a wide department of activity will thus be readily admitted.

General Operation of the Schemes.

The value of carrying to a further stage the studies of the best pupils in elementary and intermediate schools and classes is almost universally recognized. As many as 93 out of 110 County and County Borough Councils in England directly provide scholarships of some kind or other; 6 other Councils take no action, chiefly because the local scholarship provision is made by other means. There are thus only 11 such administrative areas in England where a supply of scholarships for higher education is entirely lacking; 3 of these are small rural counties and 8 are county boroughs.

The following statement shows the position of the combined scholarship schemes of 90 of the Councils in England during the year 1899-1900, giving the number of Councils providing, of scholarships in force, and their total value in each grade:—

Scholarships.	Councils.	Scholarships.	
		No.	Value.
1. At Evening Classes	38 ...	6,766 ...	£7,862
2. At Technical, Science, and Art Schools	39 ...	3,426 ...	17,064
3. At Secondary Schools	56 ...	5,593 ...	77,349
4. At Higher Institutions and Universities	50 ...	679 ...	27,097
5. At Agricultural and Horticultural Schools	40 ...	532 ...	9,866
6. At Domestic Science Schools ...	31 ...	1,349 ...	12,199
7. For Elementary Teachers	29 ...	1,626 ...	5,356
		19,971	£156,793

The Rapidity of their Recent Growth.

The magnitude of these figures gives some idea of the power of organization required to maintain this national scholarship system, which is worked with consummate ease. These points are brought out by the fact that *two-fifths* of the system has been built up within a period of five years, as many as 8,302 scholarships of the total value of £62,578 having been added since the year 1894-5.

Fifty-seven (or more than half) of the Councils in England have granted these additional facilities for the training of students, twenty-two of them having started *new* schemes during that period. There has naturally been the most demand for those scholarships which form a direct connecting link between the elementary schools and the Universities. The following are the numbers of Councils who have created scholarships in the different grades since the year 1894-5:—(1) at evening classes, 15; (2) at technical schools, 13; (3) at secondary schools, 26; (4) at higher institutions, 20; (5) at agricultural schools, 12; (6) at domestic science schools, 19; (7) for teachers, 10.

The *increased* number and value of the scholarships thus more recently created are: at technical schools, 2,906, £11,437; at secondary schools, 2,514, £32,141; at higher institutions, 157, £10,033; at agricultural schools, 164, £2,030; at domestic science schools, 1,104, £9,966.

The Extent of Lengthy Periods of Training.

A comparison of the number and value of the *awards and renewals* in the particular year clearly shows the intrinsic worth of scholarships as a means of ensuring lengthy periods of systematic or continuous training. Out of 19,971 scholarships in force during 1899-1900, 7,046 (or 55 per cent.) were held by students in the second, third, and fourth years of training. Greatly increased benefits of a monetary kind alone—to say nothing of the better instruction—are brought to these advanced scholars. This is made vividly apparent by the fact that the scholarships held by them only fell short by £4,500 of the total value (viz., £80,652) of the remaining 12,925 first-year scholarships.

Preparation for Practical Life-Work.

The other practical benefits that those scholars derive who hold on to their scholarships, and especially those who afterwards take up higher scholarships, can only be spoken of in general terms. But they have been clearly demonstrated on all sides. It would indeed be a hard matter to find a scholarship

scheme which has failed to improve the educational prospects of scholars or to prepare them for and pass them into suitable employments. Evidences abound on every hand of the practical advantages of the training received, not the least valuable testimonies coming from the scholars themselves, who are found among all classes of the community, such as University graduates, professional and commercial men, draughtsmen, tradesmen and apprentices, farmers, dairymaids, and domestics. Every effort is also made by the Local Authorities to organize "self-contained" scholarship schemes—that is to say, schemes that form consecutive links between the various types of institutions. A good deal of success has been associated with this effort. For example, taking only five county areas, the scholarship schemes there have been the means of raising fifty-two scholars from the elementary schools, through secondary schools, to the Universities.

The Recognition of Institutions in Other Areas.

There are two methods adopted in the supervision of scholarship schemes that deserve special attention. One of these concerns the tenure of scholarships at institutions situate outside the area of the Authority offering them. It is obvious that every type of institution essential to a comprehensive scheme is not likely to be found in one administrative area. The difficulty was felt almost as soon as County Councils started their educational work, and was quickly and fully met by special legislation in the Technical Instruction Act of 1891. The extent to which County Councils take advantage of the enabling clause (1) (b) of that Act for the award of scholarships in each grade may be set out in brief as follows:—(1 and 2) Evening classes and technical schools, 12 out of 18 Councils providing scholarships thereat; (3) secondary schools, 19 out of 40 Councils; (4) higher institutions, 31 out of 33 Councils; (5) agricultural and dairy schools, 31 out of 40 Councils; (6) domestic science schools, 20 out of 28 Councils; (7) elementary and other teachers, 13 out of 27 Councils.

The Social Status of Students and the "Poverty Test."

Of the conditions qualifying for competition for scholarships, that known as the "poverty test" has not been received with universal favour. But parents who really need assistance to educate their children and students who are really eager for scholarships will not be deterred by what is, after all, a matter of sentiment. The Science and Art Department have, however, expressed the opinion that there is no limitation in the Technical Instruction Acts respecting the social position of students. The "poverty test" has, consequently, only been imposed by an insignificant minority of Local Authorities. Only sixteen Councils definitely limit the income of parents to amounts ranging from £150 to £500 for all or different grades of scholarships. There is thus great variety in the conception of Local Authorities as to what financial maximum of parents' income constitutes a poor student. A number of other Councils, nevertheless, award scholarships upon the general restrictive basis that students must need assistance.

THE SEPTEMBER LONDON MATRICULATION.

THE Matriculation for internal students was a new departure, and the first set of papers will be eagerly scanned by intending candidates, and still more by their masters. The following are the first impressions of a teacher who has for some years watched with interest the papers set under the old scheme. On the whole the English paper was a good one and likely to prove whether a candidate does know anything of his own language. Most candidates, we should think, omitted the third part [*Précis*]; although it was really the easiest. The history and geography questions were not to be seen except in so far as they came into the subjects for Essay. Perhaps there was hardly enough time given to do all the paper properly.

In the Elementary Mathematics there was a great difference from the former Matriculation papers. The influence of Karl Pearson and Perry is seen in the "practical" nature of the questions. Among the weaklings the old complaint against the Matriculation Mathematics was the lack of straightforward questions like those they had worked out in their "Hall and Knight" or of enunciations that they recognized. They will complain all the more now; unless they have had a good deal

of practice in measurement, in approximations, and in graphs. In both the papers there is very little for the "private study" or "correspondence" candidate to catch hold of.

The Latin paper was refreshing with a quantity of common-sense questions that ought to be known and less of the high-and-dry style dear to the heart of the former race of examiners. We presume we may attribute this to the influence of Dr. Gow, whose "Companion to School Classics" should be in every boy's library. We think that there is evidence in the alternative papers, of which Latin is one, of a lack of correspondence between the examiners in alternative subjects as to the standard they should attain. It appears to us that the Latin paper is easier than the French, which itself is easier than the German. For instance, in the German paper, we get a short essay of two hundred words as an alternative to a piece of prose, whereas in French there is no choice. Surely all examiners, however learned and experienced, could not but benefit from a meeting with their colleagues. It is a great pity that it has been found necessary to set two alternative papers in many subjects, as it is almost impossible to make them exactly correspond; but this appears to be unavoidable from the great number of optional subjects.

The Geography paper would best be answered by a candidate who had studied such a book as Herbertson's "Physiography," although common sense and travelling (which is to geography what practical work is to chemistry or oral tests are to modern languages) would have answered: "What are the chief obstacles to railway communication between London and Edinburgh; which of the three main lines has encountered most of these obstacles, and which has avoided most of them?" A choice of eight questions out of twelve was given both in this paper and in the History. This latter showed a great advance on the usual Matriculation standard. "Give the history of the Treaty of Edinburgh" is a question that would be avoided by most candidates.

In the Ancient History paper the examiners asked six Greek and seven Roman history questions. The first section of this paper would startle most candidates. It contained the three following questions:—

1. Sketch the history of the Ethiopian dynasty in Egypt.
2. Trace the history of Phœnician commerce and colonization down to 700 B.C.
3. Give a sketch of Median history under Cyaxares and Astyages.

Candidates were expected to answer at least one of these three questions and seven others from the rest of the paper.

TEACHERS' GUILD NOTES.

THE Council of the Guild have it in contemplation to collect information with a view to supplying members with a pamphlet or brief handbook on the subject of the law as it affects teachers, employers, and assistants in their professional relations to each other, and to parents and governing bodies of schools. The pamphlet will, probably, give plain advice and information with as little technical verbiage as possible, especially to the junior members of the profession, who too often show a bland trustfulness in their fellow-creatures and a want of common precaution which lead to injustice of various kinds. But, apart from the disagreements which spring from the defects of human nature, there is an important class which are derived from ignorance of the law, on one side or on the other, or even on both. In default of a code regulating the contracts of teachers, the common law of the land, supplemented by "the custom of the profession," has to decide most of the disputes which arise. The Legal and Professional Advice Committee of the Guild, which will be responsible, in the first instance, for the pamphlet, purposes to deal with both aspects—that of the law and that of custom. It is likely that the pamphlet will appear first in sections in successive numbers of the *Teachers' Guild Quarterly*, and then be republished separately. The following is an anticipation of some of the main headings under which the subject will probably be treated:—Engagements; Dismissals; Relation of Heads of Schools to Governors; Principals of Schools under Schemes; Recovery of Salaries; Absences through ill-health and Substitutes; Infectious Illness in Schools, as it affects En-

gements; Specimen Forms of Simple Agreements. The case of the form-teacher, the visiting teacher, and the private teacher will be considered separately under each division of the subject which is applicable. Members who will suggest further headings or points of detail upon which information is needed are invited to write to the Offices of the Guild.

The Holiday Courses Committee have been so well satisfied with the reports of their representatives at Tours, Honfleur, and Santander, on the courses held in those centres last August that they are advising the Council to repeat them in each case in 1903. Experience has shown the desirability of extending the time given to conversation classes at the expense of the lectures, also of limiting as much as possible the size of these classes. It is an agreeable fact, in contrast with much that we hear of anti-English feeling abroad, that the French Secretary for the Honfleur Courses reports that, whereas this year the maximum number of students allowed by the English Committee (seventy-five) were as many as could be conveniently housed, without putting more than some three students in one house, the inhabitants will be happy to accommodate fifty more next year, if they come, so excellent was the impression made by our party on every one, besides their domestic hosts. Our students, therefore, may well feel that they are doing good by their presence among our neighbours over the Channel, inasmuch as they establish impressions of our national character which go some way towards counteracting the mischief wrought by malignant press caricature and by spleen which is fed on nothing better than a diseased fancy.

THE Thrift and Benefits Committee are reporting to Council on the Pension Scheme of the Central Welsh Board under the Welsh Intermediate Education Act. The Scheme makes retirement from teaching compulsory at the age of sixty-five. The contributions of teachers range, according to age at date of first contribution and amount of salary at date of each successive contribution, from $2\frac{1}{2}$ per cent. to 6 per cent. on the salary. The contributions of the County Governing Bodies are on a scale 60 per cent. higher than the scale for teachers. Provision is made for the return in full of the teachers' contributions without interest in certain cases and for pensions on permanent incapacitation after paying ten years' contributions.

The English Education Act that is to be will give us, for the first time, the opportunity for the establishment of a national pension scheme on these or similar lines, thus avoiding the grave objection that there is to schemes for individual schools, which militate against the free circulation of teachers and require separate exhibitions of energy and wisdom among many independent bodies of governors to get them started at all. The actuarial figures for teachers' contributions should be the same, we suppose, for England as have already been worked out for Wales. Whether the contributions of the Local Authorities should be on the same scale exactly depends on the financial resources which will be at their disposal under the Act.

THE following notice, which has just issued from the Office of the Teachers' Registration Council, will save many members from the doubts which have rather naturally grown up around the words "registration" and "recognition":—

REGISTRATION OF TEACHERS.

The widespread confusion as to the meaning of "registration" and "recognition" seems to call for an authoritative explanation. The former term applies to *teachers*, and is the function of the Registration Council; the latter applies to *schools*, and is the concern of the Board of Education. But registration is the avenue to recognition; or, rather, an application for registration is the proper method of applying for recognition. In plain words, if a school desires recognition, it must send in to the Registration Council an application for registration from a teacher on the staff, either head or assistant. The name of the school is then forwarded to the Board of Education for recognition, and the matter passes out of the hands of the Registration Council until the reply of the Board of Education is received. It is obvious that in many cases considerable time must elapse before the Board can satisfy itself as to the merits of schools; hence delay—and even delay of some length—is unavoidable. It should be especially noted that it is of no avail to send in to the Registration Council an application for recognition of a school apart from an application from a teacher for registration.

Nor is it of use to forward to the Registration Council prospectuses and information about *schools*. The Council has no power to pass

judgment on schools except for those teachers who apply under Regulation 4 (2) (ii.) of the Registration Order in Council, and (in some cases) under Regulation 5 (2).

As to the results of recognition or non-recognition, they must be fairly obvious. The former will secure for a school the stamp of Government approval as a worthy secondary school.

JOTTINGS.

A TEACHER asked a schoolgirl who was sighing over her lessons what was troubling her, and elicited the information that she had been told to paraphrase a passage in "Macbeth," and could not do it. "And, indeed," she said naively, "I don't see why I should paraphrase it at all; it seems to me pretty good English as it stands!"

THE genuineness of the following translations is vouched for by a public-school master:—

"Nec catulus partu quem reddidit ursa recenti,
Sed male viva caro est." (Ovid, "Met." XV. 379.)

"But the glow-worm whom a she-bear begot by a premature birth—its flesh has a malicious liveliness in it."

"Quæque solent canis frondes intexere filiis
Agrestes tineæ, res observata colonis,
Ferali mutant cum papilione figuram."

(Ovid, "Met." XV. 372-4.)

"The thin hairs of a dog which the rustics are wont to weave into threads change shape with a butterfly: this has been seen by colonists." Another version: "Every rustling tree is wont to mingle with the howls of the dog in the country, a matter noticed by provincials."

THE *Staffs Chronicle* informs us that the *Journal of Horticulture* publishes a large photograph of the Edgbaston *Auricular* Show. We should rather have looked for it in the *Lancet* or, possibly, the *Record*.

THE *Daily Chronicle*, in its report of the Church Congress, informs us that "the Bishop of Salisbury [Dr. Wordsworth] led off with a paper in which he argued powerfully in favour of the Johanne [sic] authorship of the four Gospels." After this we are not surprised to hear that "the different attitudes of leading Churchmen towards the higher exegesis were startlingly brought out."

MR. SADLER's counsel at Cambridge, to make "the scientific and practical study of domestic arts and sciences an important part of the liberal education provided by all schools for girls," has been anticipated by the Governing Body of Queen's College, Harley Street. A two years' domestic science course was started there last autumn for students over sixteen. The course occupies an average of two and a half hours per week for six terms, and includes physics and chemistry, practical cookery, practical laundry work, sick-nursing and first aid in accidents, and domestic economy. We had an opportunity of seeing the practical laundry course. It was arranged on eminently common-sense lines. There was no elaborate apparatus, but all the processes of a well ordered "wash" were clearly described and demonstrated by the teacher, and then done by each student. No large or heavy things were washed, so no large troughs and coppers were needed and no heavy toil was involved; but small samples of every sort of material—woollen, linen, cotton, muslin, and lace, white and coloured—were washed and got up in the proper manner. The teacher's instructions how to apply the same methods to large things were very clear and practical. A table serviette, for example, after having fruit stains removed by an innocuous process, was washed, wrung, folded, mangled, and ironed precisely as though it were a table-cloth, and so on. It is no small tribute to the open-mindedness of the professors who form the Education Committee of the College, and to the enterprise of the governing Council that they should have pioneered this new departure in secondary education for girls.

THE REV. G. F. MACLEAR, D.D., who died on October 19, after a distinguished career at Cambridge, where he took a Second Class in the Classical Tripos of 1855, and won most of the University theological prizes, both as an undergraduate and after taking his degree, was elected Head Master of King's College School, London, a post which he held for fourteen years. In 1880 he succeeded Mr. Watkins as Warden of St. Augustine's College, Canterbury, an office which he held till his death. Canon Maclear will be best remembered by his manuals on the Old and New Testaments, the most popular class books in public schools for nearly forty years.

THE *Spectator* in a leading article wrote: "For years the London School Board has defied the law that created it." Sir Charles Elliott,

replying, proves up to the hilt that in each of the alleged cases of defiance the London School Board was acting according to the spirit of the law of 1870, and in strict accordance with the regulations of the Education Department as laid down in the Code. He shows, moreover, that the objections raised in 1886 to the pupil-teacher centres were overruled by the Local Government Board after consultation with the Education Department. The editor of the *Spectator* rejoins that Sir C. Elliott is attempting to reopen questions finally settled by the Cockerton judgments. Surely he evades the point. A body whose action has been sanctioned till a year ago by the Executive can only by a stretch of language be said to have "for years defied the law."

A CHURCH OF ENGLAND HIGH SCHOOL.—"What was the chief Jewish festival?"—"The Turnover."

FROM the Board of Education Report: The average attendance in primary schools is 4,731,911. Of these, 2,492,536 are in voluntary and 2,239,375 in Board schools. The cost of Board schools is £3. os. 2d. per child in average attendance; in voluntary schools, £2. 6s. 8½d. Under the London Board the cost per child is £4. os. 5½d. Voluntary subscriptions average 6s. 8d. per child. In voluntary schools 5,451 new places have been provided; in Board schools, 95,354.

LICHFIELD GRAMMAR SCHOOL, with head master's house and land adjoining, has, by order of the Charity Commissioners, been sold by auction. The property fetched £1,035.

LADY STUDENT (consulting the lists of the Society of Arts): "Oh, it's all right. I've passed. I've got 37 marks." Second Student: "No, no. That's your age. They don't give your marks."

THE *Schoolmaster* prints a letter written by a school manager to the rector of the parish, who was away from home when it became necessary to appoint a new master and mistress for the village school. The following extracts show a curious sidelight on the reasons that may influence managers in making appointments. "The former [the master] is not very refined in his talk, omitting most of his *h's*. . . . He was very pleasant, however, and quite up to the average of National-school masters, who mostly omit *h's*. . . . A hint from you might tend to cure him. . . . He has not got any particular 'boosey' expressions, or (so far as I could trace) signs of being an excessive drinker." We wonder if the manager is "getting a rise" out of the rector, or whether the *Schoolmaster* has been hoaxed.

A GILCHRIST Scholarship of £40 per annum for two years, open for competition to women who had passed the Intermediate Examination, was awarded to Miss Mary R. Boyd, a student of Westfield College, on the result of an examination held in September last.

MRS. ALICE MEYNELL is editing for Messrs. Blackie & Son a new series of selections from the great poets. Tennyson, the two Brownings, and Wordsworth will be among the earlier volumes of the series, which is to be known as the "Red Letter Library."

THE new Head Master of Christ's Hospital "has already learned to love and value what he must call a beautiful dress." Will he not adopt it himself? There is no accounting for tastes.

SIR OWEN ROBERTS has been selected by the City and Guilds of London Institute as its representative on the Senate, in the place of the late Sir Frederick Abel.

MR. ARTHUR WATSON and Mr. Horace Mann have been appointed Secretaries to the Academic Registrar of the University of London.

BRITISH CHILD-STUDY ASSOCIATION.—The Annual General Meeting of the London Branch was held at the Sesame Club on Friday, October 10, Dr. Fletcher Beach in the chair. Dr. Kimmins was elected President for the new session, Miss K. Stevens Hon. Secretary, and Mr. Mark Judge Hon. Treasurer. Dr. Beach gave his presidential address, in which he referred to the growing influence of the Society, to its increased membership of 226, and the various new departures that had been made this year. He also called attention to the very successful conference and garden party held at Hampton Wick, by kind permission of Dr. and Mrs. Langdon Down. The next meeting will be held on Friday, November 14, at 8 p.m., when Dr. Kimmins will give an address upon "Preparation for Child-Study—a Suggested Course of Reading."

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

Whilst the wisdom of our rulers has decided that sea cadets should be trained on land, fertile-minded America is about to try the experiment of educating young landmen on the sea. Not for a nautical life, but for the University or for business. The plan "will enable the students," observes the prospectus, "to know the world at first hand, to understand national problems and the needs of our rapidly developing foreign markets, the commercial customs and relations of various nations and their bearing upon American industries and commerce." A preparatory school will be, as it were, combined with a training ship, so that travel and observation may supplement the ordinary curriculum of study. The scheme is not merely in the air. Already a four-decked sailing vessel, with auxiliary steam power, is being built. The divisions of the ship will be—"spar deck," where will be music and recreation rooms; the "main" or "school deck," occupied by the school, the mess rooms, the baths, the headquarters of the executive, and by the academic departments; "berth deck," for berths and state rooms of professors and students; and "orlop deck" for store-rooms, bakery, pantry, laundry, &c., and servants' quarters. Perfect artificial ventilation, distilled water, electric lighting, watertight compartments, and constant inspection are among the measures for comfort, health, and safety. An experienced United States naval officer will be in command of the "Young America" (so the vessel is named), and it will start on its first cruise in September, 1903. One or two features of the project excite our wonder. No manual labour is to be done except sail and spar drills by way of exercise; moreover, in the four years' course Latin finds a place throughout, and Greek in the last three years. Greek, then, threatened in Western as in Eastern lands, seeks a refuge on the high seas. Since the promise is that every maritime country of the world shall be visited, we may hope to greet the "Young America" in our harbours, and learn how it has fared with the new Innocents Abroad.

English teachers who claim to know all about the principles and methods of education may like to try their hands on the following questions, which were set at a recent examination in New York to candidates for what is called the "promotion licence":—

"1. 'First, learn; second, repeat; third, reflect; fourth, verify' (Jacotot).—In the light of the Herbartian 'Formal Steps,' discuss this dictum.

"2. 'To tell the child this, and to show it the other, is not to teach it how to observe' (Herbert Spencer).—Describe and illustrate from your speciality the right method of teaching how to observe.

"3. Discuss and illustrate the function and limitations of graphic methods in teaching your speciality.

"4. Mention ways in which the 'collecting impulse' (or 'collecting instinct') in children aged twelve or thirteen can be utilized for educational purposes.

"5. 'Courage in attacking difficulties, patient concentration of the attention, perseverance through failures—these are characteristics which after-life specially requires' (Herbert Spencer).—Describe briefly a kind of school work which tends to produce these characteristics. Give reasons."

Not even the most hardened sceptic as to the value of professional training will contend that the information enabling a candidate to answer these questions successfully can be injurious. The Americans grow more and more convinced that it is profitable. Sixty years ago there was not a teacher in the United States that had been trained for his profession; now the graduates of normal schools are numbered by tens of thousands, and in many States from one-third to one-half of the elementary teachers are duly qualified. The proportion is still too small; but what are we to say, in whose secondary schools a trained teacher is as rare as a phoenix? Nevertheless, we have hopes that sixty years will work a change for us too.

Schoolboys, and indeed schoolmasters, have lost a friend in Edward Eggleston, famous as a story-teller and as an artist in American dialect. The form that he employed was the popular speech of the southern part of Ohio, Indiana, and Illinois, as it was spoken forty years ago. In the "Hoosier Schoolmaster" he traces the fortunes of a teacher in a frontier school so graphically that his book has been translated—in spite of the difficulties that the quaint language offers—into French, German, and Danish. The "Hoosier Schoolboy," less successful, is yet racy of the same soil. Mr. Eggleston's later work was chiefly in connexion with American history, on the origins of which he dwelt with affectionate care. His busy life closed, amid the labour that he loved, in the early days of last September.

SOUTH AFRICA.

The cry of South Africa is for good teachers. Apart from the effort on this side to supply the want, but in co-operation with it, a vigorous attempt is being made in Cape Colony to satisfy the first condition of success in educational work. The British Teachers' Appointments Committee has been formed for the purpose of assisting managers of schools and private employers to obtain the services of competent

teachers from the United Kingdom with the least possible delay and inconvenience. The Committee will work in concert with the Education Sub-Committee of the British Women's Emigration Association, and is arranging to communicate with similar societies. It will keep its correspondents acquainted with the special demands of the colony, act as an agency for procuring employment, and extend courtesy and assistance to teachers on their arrival. With Prof. Freemantle as Chairman and the support of Dr. Muir, it is, on the one hand, worthy of confidence, and, on the other, sure of a full measure of achievement in the labour that it has undertaken for the public good.

INDIA.

Lord Curzon's Universities Commission has now issued its report, which will form one of the most important documents in the history of higher education in India. We may say at once that the proposals of the Commissioners show felicitously that a desire for progress need not be coupled with a fatuous zeal for innovation; nor is the opinion of a daily contemporary sound that the intention is to sacrifice literary culture to technical instruction and to ruin the independent and unaided colleges. The fault of Indian Universities hitherto has been that they have turned out too many graduates ambitious of a public office, and too few skilled labourers for the practical business of common life. If the new suggestions result in legislation that will redress the balance, they will confer an inestimable benefit on the vast dependency for whose welfare we have bound ourselves to care. The report is divided into thirteen sections, viz.: (1) Proceedings of the Commission, (2) History of Universities in British India, (3) Teaching Universities, (4) Local Limits of the Universities, (5) Proposals for New Universities, (6) Constitution of the Universities, (7) University and College Libraries, (8) Graduates of the University, (9) Affiliated Colleges and Institutions, (10) Teaching, (11) Examinations, (12) University Funds, (13) Legislation. The Summary of Recommendations that follows these paragraphs relates to them as an inference to the arguments from which it is drawn, and will supply the matter of this note. Since the Recommendations alone occupy eighteen foolscap pages, we must content ourselves with extracts, and first we give two that are quite general in their scope.

Teaching Universities.—The legal powers of the older Universities should be enlarged so that all the Universities may be recognized as teaching bodies. Undergraduates should be left in the main to the colleges, but the Universities may make better provision for advanced courses of study and may appoint their own lecturers, provide libraries and laboratories, and see that residential quarters are maintained for students from a distance.

Proposals for New Universities.—The question of creating new Universities should be postponed until the changes now proposed in the constitution and working of existing Universities have been tested by experience.

It is not in England that we will condemn a refusal to cover the face of the country with what the Americans call "wild-cat colleges." The Commissioners are wisely cautious, and the same sobriety of judgment marks their next utterance.

Faculties.—(1) It is not necessary to insist on uniformity in the arrangement of Faculties. If Arts and Science be separated, there will be the five Faculties of Arts, Science, Law, Medicine, and Engineering. Teaching may be fitly assigned to the Faculty of Arts, and Agriculture to that of Science. (2) The establishment of a Faculty of Oriental Learning, in which degrees (as distinguished from titles) would be conferred, without English is to be deprecated. Even candidates in the examinations for Oriental titles should be encouraged to add English to their acquirements. (3) Without forming a Faculty of Commerce the Universities might, in co-operation with the Chambers of Commerce, meet the growing demand for good commercial instruction. It is not necessary to raise at present the question of granting a degree in Commerce. (4) It is neither practicable nor expedient to make provision for a Faculty of Theology.

In its remarks on "Boards of Studies" the Commission lapses into something like humour. The second admonition runs:—"No book should be recommended by a Board unless on the written report of some competent person who has read it."

Surely it is not the practice of learned bodies in India to recommend students to use text-books unknown to themselves even at second hand; yet we seem to have heard something of the kind in connexion with institutions at home. Difficulties in this regard may be got over by giving effect to the recommendation that we cite next:—

University and College Libraries.—Good reference libraries should be provided, both for Universities and for colleges, in order that students may have an opportunity of forming the habit of independent and intelligent reading.

The freedom as to residence that Indian students have enjoyed has been in many instances a cause of inconvenience or of something worse. It is now proposed that they should be required to live (a) with parents or guardians, (b) in lodgings approved by the University or by the college to which they belong, or (c) in a hostel. One or more of the members of the college staff should live in or quite near to the hostel, empowered

to exercise authority over the residents. If it is not possible to give each student a room to himself, the sleeping rooms should be large dormitories, these being more easily controlled than cubicles holding two or three students.

A group of paragraphs deals with the question of the payments to be made by the members of Universities and colleges.

Fees.—(1) Two primary considerations should be observed in the settlement of fees: firstly, that they must not be pitched so high as to check the spread of education; and, secondly, that they must not be fixed so low as to tempt a poor student of but ordinary ability to follow a University course which it is not to his real interest to undertake. (2) No poor but really able student should be excluded, by reason of his poverty, from the advantages of the highest education, but these should be secured for him not by charging nominal fees, by the indiscriminate bestowal of free studentships, or by the establishment of free colleges, but by a comprehensive and liberal system of scholarships. Scholarships should be provided by the State, open to general competition as the result of University examinations, and tenable at any affiliated college, as well as by the managers of aided and private institutions for students at their own colleges. If free studentships are permitted, they ought not to exceed 3 per cent. of the total number of students on the roll.

It surpasses belief that any reasonable person should have interpreted this last recommendation as an attempt to "cause the collapse of the independent and unaided colleges." Most clearly the object is to preserve them. We have less praise for a little section in which the commissioners touch, as if at random, on the methods of education.

General Remarks on Teaching.—The use of 'keys' should be in every way discouraged by college authorities." A good crib (the old-fashioned school word may, perhaps, be allowed us) has its legitimate use, and a shrewd examiner can easily detect the abuse of it.

The report on subjects of study is too long and technical to be reproduced, but the last paragraph must be quoted as another testimony to the growing importance attached everywhere to the training of teachers.

Teaching.—The Universities should promote the training of all classes of teachers in the theory and practice of teaching in every way in their power; and, where this has not already been done, arrangements should be made to hold examinations for the grant of licences in teaching. The University should provide suitable courses of lectures for teachers."

THE last and final Report of the London Society for the Extension of University Teaching, now taken over by the University of London, shows under every head an encouraging increase. In the session of 1901–2 there were 195 courses, 15,467 entries of students, and 2,257 certificates awarded. The donations from public bodies since the foundation of the society in 1876 to the present date amount to £18,683.

BOARD OF EDUCATION.

THE Report of the Board of Education for 1901–2 occupies a small volume of 125 pages, price 6d.; last year's Report was in three volumes, costing 5s. 8d. This is mainly a change in form—the matter which appeared in Vols. II. and III. of last year being now relegated to separate publications. We will confine ourselves at present to those portions of the Report which deal with secondary education.

After framing the Register, the Consultative Committee was occupied wholly in considering what bodies should be recognized as inspectional agencies under the Board. The three examining bodies—the Oxford Local Delegacy, the Cambridge Local Syndicate, and the Joint Board—all applied for recognition, but it was wisely determined that the Universities themselves, and not their agencies, should be recognized. As the Victoria University does now, Oxford and Cambridge will in future inspect schools in conjunction with a Board inspector for the administrative side.

The amount expended on the inspection of schools other than elementary was roughly £42,000, against £40,000 of the previous year. In the last half of 1901 (the latest date given) 24 schools were inspected, 13 of them on the application of the County Authorities aiding the schools, 8 were private schools, 2 proprietary, and 1 an endowed school. Special attention has been directed in these inspections to the teaching of modern languages and the encouragement of newer methods. In the smaller schools the Board recommend that Latin be begun later, and then be made an alternative to French or German.

THOUGH it does not properly fall under this column, we may be allowed, if only for the sake of comparison, to notice the Report on Secondary Education (Scotland) for the year 1902. Scotland has solved the problem at which we in England are still painfully labouring; it has a Board of Education in reality as well as in name; it has no religious difficulty; it has correlated primary and secondary education. No wonder that Mr. Balfour, when speaking at Manchester, cast a longing, lingering look behind at his native Whittinghame.

SCOTLAND has no College of Preceptors, no rival Universities, carrying on a cutting trade in local certificates. There is one Government certificate, graduated as Higher, Lower, and Intermediate, and for this every year an increasing number of candidates are presented—18,212 this year, against 17,405 last year. A new departure is the introduction of oral tests. As this is the first year during which the new regulations have been in force, the provision, as Sir Henry Craik tells us, has not been enforced too strictly, but, in the future, no school can hope to win certificates for its pupils in which the pronunciation of French and German is neglected. On the subject of Modern Language teaching there is a separate report by the Assistant Director of Higher Inspection and of the Leaving Certificate Examination, Mr. G. Macdonald. This alone is well worth the 8½d. charged for the Report, let alone the instructive remarks of the various examiners. How soon may we hope for a corresponding report from South Kensington?

A SEPARATE Blue Book shows the amounts of aid grant paid for the financial year ending March 31, 1902, under the Voluntary Schools Act of 1897. The grand total is £618,232. Of this, Church of England schools absorb £462,438, or roughly three-fourths, and Roman Catholic schools £72,094. Unassociated schools are awarded £417, which works out at about 5d. a pupil.

THE Report for 1901 on Museums, Colleges, and Institutions under the Board of Education has no features of special interest. The attendances of readers at the Victoria and Albert Museum Library has declined from 24,000 in 1899 to under 17,000. Under "Metallurgy" the following entry is significant:—"The number of students attending during the first term was 52; during the second term 21.

THE President of the Board of Education has reappointed as members of the Consultative Committee established under the provisions of the Board of Education Act, 1899, the following gentlemen, whose terms of office expired on September 30:—The Right Hon. Sir William Hart Dyke, Bart., M.P.; Ernest Gray, Esq., M.P.; Arthur Charles Humphreys-Owen, Esq., M.P.; the Hon. and Rev. Edward Lyttelton: the Venerable Ernest Grey Sandford, Archdeacon of Exeter; and the Rev. David James Waller, D.D.; and has appointed Thomas Herbert Warren, Esq., President of Magdalen College, Oxford, as a member of the Committee, in place of Sir William Reynell Anson, Bart., M.P., resigned.

THE MARQUIS OF LONDONDERRY, K.G., President of the Board of Education, has appointed Mr. W. R. Davies as his Private Secretary.

SIR WILLIAM R. ANSON, Bart., M.P., Parliamentary Secretary to

(Continued on page 726.)

"The issue of Messrs. Cassell & Co.'s 'Social England' in monthly parts at one shilling each is one of those things which make the middle-aged envy the youth of the present day. Instead of the old-fashioned long and dry historical narrative, this admirable work tells the story of the growth of England in a series of papers on all the important aspects of historical developments by writers specially learned in the subjects of which they treat. The result is to bring a very real and moving picture before the mind, and to convey to the reader true knowledge instead of musty learning on the matters which excite curiosity. All this is aided by a series of illustrations so beautiful and varied that one wonders how the work can be issued at the price."—OUTLOOK.

SOCIAL ENGLAND.

A History of the Progress of the People from the Earliest Times to the Present Day.

WRITTEN BY EMINENT AUTHORITIES AND EDITED BY H. D. TRAILL, D.C.L., AND J. S. MANN, M.A.

With about 2,500 ILLUSTRATIONS from authentic sources, and numerous Coloured Plates and Maps.

A GREAT WORK FOR SCHOOL AND REFERENCE LIBRARIES.

What Principals of Schools think of it:—

"It is a beautiful, interesting, and useful book."—W. H. F., Cheltenham.
 "I was already acquainted with the book in its original form, and had a great admiration for it, but certainly as it is published now it is far more valuable, and indeed I do not know of any book likely to be more instructive and interesting."—E. S. S., Whitchurch (Salop).
 "It is a splendid re-issue of a very fine book."—Rev. J. W., Leicester.
 "In every way excellent, and worthy of a place in every library."—J. C., Leicester.
 "If the rest of the work is up to this sample, it will be a most valuable book."—R. F., Brigg.
 "I am delighted with your illustrated edition of 'Social England.' I think it will be a most valuable addition to our school library."—W. M., Woodbridge.
 "I like it so much that I shall introduce it to the pupils of this school. The book should be read by all who take an interest in the British Empire."—G. S. M., Wallingford.
 "This is the real history of England, and is full of interest in every page."—A. F. G., Caistor.
 "It appears to be a most valuable contribution to English history."—W. A. C., Exeter.
 "In its present form it ought to be an invaluable addition to a school library."—H. B. R., Sandwich.

"An admirable book for schools."—M. A., Mundesley.
 "I am very much pleased with, and greatly appreciate it. I shall order same through my bookseller."—J. B. N., Worcester.
 "Its utility will be enormously increased by the addition of such illustrations as I see in the number sent. I am a thorough believer in such aids to education."—M. H. P., Wakefield.
 "Very interesting, and I intend to get a copy for the school library."—G. D., Attleboro.
 "Very interesting, and an excellent work for reference."—A. H. V., Birmingham.
 "Very interesting, well written and illustrated."—C. S. M., Woodford Green.
 "An admirable book, and fills a void in the history of England which has long been felt."—R. W., Solihull.
 "It looks as if it should be a necessary part of the apparatus of every history teacher."—A. T., Faversham.
 "It seems to me excellent, and I hope we may be able to secure it for our school library."—C. W. B., Wimbledon Common.
 "I have ordered it from my booksellers at once, as I am so much pleased with it."—A. W. T., Bakewell.
 "I am much pleased with it, and shall certainly get the book for my own library, probably for that of the school also. I shall also recommend its purchase for the Public Library."—A. J. N., Liscard.

THE LATEST AND BEST ENCYCLOPÆDIA AND DICTIONARY BROUGHT UP TO THE PRESENT DATE.

In Weekly Parts.

Price 6d. net.

A NEW AND ENLARGED EDITION OF

THE ENCYCLOPÆDIC DICTIONARY.

An Original Work of Reference to the Words in the English Language, with a Full Account of their Origin, Meaning, Pronunciation, and Use.

ILLUSTRATED THROUGHOUT.

have been prepared, and by means of a Supplementary Volume it will contain about

28,000 MORE WORDS

than any previous edition, and the work will be printed on

PAPER OF SUPERIOR QUALITY.

PART I. NOW ON SALE AT ALL BOOKSELLERS.

CASSELL & COMPANY, Limited, La Belle Sauvage, London.

the Board of Education, has appointed Mr. William Loring as his Private Secretary.

THE President of the Board of Education has appointed the following gentlemen to be Junior Inspectors:—Mr. H. E. Boothroyd, demonstrator and tutor at Cambridge University; Mr. C. Boutflower, science and mathematical master at Fettes College, Edinburgh; Mr. E. H. H. Bruce, temporary Inspector under the Board; Mr. E. H. Carter, County Council lecturer; Mr. H. T. Holmes, chemistry master at Merchant Taylors' School; Mr. A. T. Kerslake, chemistry master at Bradford Grammar School; Mr. G. McFarlane, master at Dulwich College.

ASSOCIATION OF THE HEAD MASTERS OF THE ENDOWED SCHOOLS IN THE MIDLAND COUNTIES.

A MEETING of this Association was held at King Edward's High School, Birmingham, on October 4. In the absence of the President, Mr. Hichens (Wolverhampton) was voted to the Chair, and there were also present Messrs. Barford (Tamworth), Cole (Kinver), Gibbins (Kidderminster), Gilbert (Coventry), Fenn (Coleshill), Dawes (Bridgnorth), Hastings (Ludlow), Lloyd (Ashby), Fulford (Atherstone), Moss (Shrewsbury), Mansell (Chesterfield), Hillard (Worcester), Ohm (Wem), Robinson (Burton), Pyne (Warwick), Bompas Smith (Walsall), Tollit (Derby), Waters (Nuneaton), and Deakins (Stourbridge), Hon. Sec. The names of eight new members were announced. The Secretary read letters from (a) the Teachers' Registration Council, stating that the Council "is glad to be informed of any difficulties which have been found to occur in connexion with the practical working of the regulations for registration, but that the Council cannot alter the regulations"; (b) the Board of Education, stating that there is no probability of the regulations for the registration of teachers being altered by the removal of the qualifications obtained from the Royal College of Science and the Central Technical College, London; (c) the Secretary to the Senate of the University of London, referring to the position of Latin in the Matriculation Examination Syllabus; and (d) the Organizing Secretary for Technical Education in Warwickshire, stating that most of the alterations suggested by the Association would probably be adopted. The members then considered the scheme suggested by the Principal and Committee of the University of Birmingham concerning the proposed Joint School Leaving Examination to be accepted in lieu of matriculation. The following resolution was moved by the Rev. Prebendary H. W. Moss, seconded by Mr. Bompas Smith, and carried *nem. con.*:—"That this meeting appreciates the desirability of all Universities and professional bodies recognizing in their examinations the possession of certain certificates given, as the result of school examinations, by a University or other responsible body." Mr. Bompas Smith moved, and the Rev. C. R. Gilbert seconded, a resolution expressing approval of Clause 3 in the scheme, which stated that the examiners should be in close communication with the teachers. This was carried unanimously. With regard to Clause 4, which suggested that the answers of candidates should first be marked by the teachers, several members thought that such marking would not be accepted by professional bodies, even if it were subsequently checked by external examiners. The new regulations of the Board of Education for secondary schools were then considered, and Messrs. D. E. Jones and A. Harris, inspectors for secondary schools, took part in the discussion. Mr. Hillard opened the subject. He welcomed the recent changes in the A scheme, and especially the substitution of inspection for examination. He stated that from £5 to £8 per pupil might well be earned under the A scheme. Mr. Bompas Smith made some remarks about the B scheme. Mr. Jones said that he could not answer questions, because inspectors had no power to interpret the regulations. He, however, suggested the question of promotions as one which some head masters had found troublesome. The Board of Education requires classes to be promoted as a whole each year. The Board has laid it down that a clever boy cannot be promoted before the end of each year, and a boy who at the middle of the year entered a school worked under the B scheme could neither be claimed upon, nor could his attendances be carried forward to the next year, although this could be done under the A scheme. Mr. Jones remarked that, although these regulations were not in accordance with the practice observed in many secondary schools in England, yet in Germany from 90 to 98 per cent. of the pupils in each class were promoted each year, and this custom had really been forced on the German Government by the schools. Mr. Hillard said that he found that, as a result of adopting the A scheme, almost all new boys came in one term. The members were asked whether any of them refused to take pupils except at the beginning of the school year; but no head master answered that he did so. Mr. Jones said that he only knew of one school coming under the A scheme without providing manual instruction, and in that case due provision for manual instruction had been made almost immediately. The Chairman thanked Mr. Jones for his attendance, and the meeting ended.

Mr. Edward Arnold's List.

NOW READY.

ELEMENTARY PLANE AND SOLID MENSURATION.

For use in Schools, Colleges, and Technical Classes.

By W. R. K. EDWARDS.

Lecturer in Mathematics at King's College, University of London.

304 + xviii. pages. Cloth, 3s. 6d.

AN ARITHMETIC FOR SCHOOLS.

By J. P. KIRKMAN, M.A. Cambridge,
and A. E. FIELD, M.A. Oxford,

Assistant Masters at Bedford Grammar School.

500 pages, crown 8vo, with and without ANSWERS, 3s. 6d.

Educational Times.—"An excellent school arithmetic on a good plan well carried out. In addition to its value as a text-book, the work is attractive from the quantity of instructive general information it contains. This is so simply and directly given that a student can scarcely fail to be thoroughly interested and vividly impressed. The theory of the elementary rules is exceptionally clear and convincing."

A New Geometry Book.

ELEMENTARY GEOMETRY. By W. C. FLETCHER, M.A.,
Head Master of the Liverpool Institute, late Fellow of St. John's College, Cambridge. Small crown 8vo, cloth, 1s. 6d.

This book is meant to contain the irreducible minimum of geometrical knowledge less than the whole of which is not worth considering as knowledge at all. It contains the whole substance of Euclid I.-IV. and VI., with the exception of the unimportant proposition IV. 10.

Price One Shilling each.

A FIRST COURSE IN ENGLISH ANALYSIS AND GRAMMAR. By RICHARD WILSON, B.A. 144 pages. Cloth, 1s.

This book differs from others of similar scope and aim in the arrangement of the parts of the subject.

The broad division into accidence and syntax, the only logical division for a *synthetical* language, is discarded, and what remains of accidence in English, now an *analytical* language, is taught along with syntax.

School World.—"The definitions of the parts of speech are clear, the arrangement of the lessons is good, there are numerous exercises, and, as far as we have been able to judge, the information given is up to date and accurate—two qualities that are not always present in text-books of grammar."

ARNOLD'S NEW SHILLING GEOGRAPHY. The World, with special reference to the British Empire. With Diagrams and Sketch Maps, Statistical Tables, Questions, and Map Exercises. Suitable for Junior and Lower Middle Forms. 160 pages. Crown 8vo, cloth, 1s.

Geographical Teacher.—"This little book is to be recommended for its up-to-dateness; in the year of grace it is a 'new' Geography. It openly demands the concomitant of a school atlas, and supplies one or two sketch maps as supplements thereto; it preserves orthodox modern spelling as laid down by the best geographers; it perpetuates no heresies."

Two New Literary Reading Books.

IN GOLDEN REALMS. An English Reading Book for Junior Forms. 224 pages. Cloth, 1s. 3d.

Designed to form an introduction to the study of English literature. Containing folk-tales from various sources, stories from Homer, Virgil, the Beowulf poem, Chaucer, Malory, Froissart, Spenser, Shakespeare, Barbour, Scott, Lamb, and Washington Irving, and a large number of extracts from the works of the best poets.

Illustrated with beautiful black-and-white reproductions of famous paintings in the Wallace, Tate, and National Galleries.

IN THE WORLD OF BOOKS. An English Reading Book for Middle Forms. 256 pages. Cloth, 1s. 6d.

Designed to introduce the pupil to some of the greatest names in English literature. Containing interesting extracts, generally narrative, from the leading writers of prose and poetry from Cædmon and Bede to Thackeray and Tennyson, arranged in chronological order. Illustrated in a manner similar to the above.

ARNOLD'S SCHOOL SHAKESPEARE.

JULIUS CÆSAR. Price 1s. 3d. Edited by E. M. BUTLER, B.A., Assistant Master at Harrow School.

(Set for Cambridge Local Examinations, 1903.)

MACBETH. Price 1s. 3d. Edited by R. M. CHOLMELEY, M.A., Assistant Master at St. Paul's School.

(Set for Oxford Local and College of Preceptors' Examinations.)

TWELFTH NIGHT. Price 1s. 3d. Edited by R. F. CHOLMELEY, M.A.

(Set by Oxford and Cambridge School Examination Board.)

A Complete Educational Catalogue will be forwarded post free on application.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

MESSRS. METHUEN'S NEW BOOKS.

FICTION.

The Branded Prince. By WEATHERBY CHESNEY. Crown 8vo, 6s.

An exciting story of the strange fate which overtook a popular Indian prince in England.

The Fate of Valsec. By J. BLOUNDELLE-BURTON. Crown 8vo, 6s.

"The characters are admirably portrayed. The book not only arrests and sustains the attention, but conveys valuable information in the most pleasant guise."—*Morning Post*.

The Inca's Treasure. By E. GLANVILLE. Crown 8vo, 3s. 6d.

The Puppet Crown. By HAROLD MCGRATH. Crown 8vo, 6s.

A highly entertaining story, in which the rose light of romance is thrown over nineteenth century happenings.

THE LITTLE BLUE BOOKS FOR CHILDREN.

Edited by E. V. LUCAS. Illustrated. Square fcap. 8vo, 2s. 6d.

The following new volumes are now ready. An Illustrated Prospectus of the series will be sent on application.

A School Year. By NETTA SYRETT.

The Peeles at the Capital. By R. ASHTON.

The Treasure of Princegate Priory. By T. COBB.

SIXPENNY BOOKS.

MESSRS. METHUEN are publishing numerous admirable books at sixpence. **THE NOVELIST** is published monthly, and contains a long novel. The most brilliant writers of the day write for it, including ANTHONY HOPE, LUCAS MALET, Sir GILBERT PARKER, Mrs. CROKER, EDEN PHILLPOTTS, S. BARING-GOULD. In **METHUEN'S SIXPENNY LIBRARY** are included novels by H. G. WELLS, W. E. NORRIS, ROBERT BARR, &c., and also the great and popular books of past years, such as GEORGE ELIOT'S "Mill on the Floss," Mrs. GASKELL'S "Cranford," CHARLOTTE BRONTË'S "Shirley," and Major-General BADEN-POWELL'S "Matabele Campaign." These are splendid books for Holiday Reading. Please send a postcard for further particulars.

GENERAL LITERATURE.

Ancient Coffers and Cupboards; their History and Description. With many Illustrations. By FRED ROE. 4to, £3. 3s. net.

The French Revolution. By THOMAS CARLYLE. Edited by C. R. L. FLETCHER, Fellow of Magdalen College, Oxford. 3 vols. crown 8vo, 6s. each. [*Methuen's Standard Library*.]

Critical and Historical Essays. By Lord MACAULAY. Edited by F. C. MONTAGUE, M.A. 3 vols. crown 8vo, 6s. each. [*Methuen's Standard Library*.]

The only edition of this book completely annotated

Sidelights on the Georgian Period. By GEORGE PASTON. With many Illustrations. Demy 8vo, 10s. 6d.

By Allan Water. By KATHERINE STEUART. Crown 8vo, 6s. This charming book, which tells the story of a typical Scotch family, has been already published in Edinburgh, and is now introduced to a wider audience.

Robert Harley, Earl of Oxford. By E. S. ROSCOE. Illustrated. Demy 8vo, 7s. 6d. This is the only Life of Harley in existence.

Old Picture Books. By A. W. POLLARD. With many Illustrations. Demy 8vo, 7s. 6d. net.

Modern Spiritualism. By FRANK PODMORE. 2 vols. 8vo, 21s. net. A History and a Criticism.

A Key to the Time Allusions in the Divine Comedy. By G. PRADEAU. With a Dial. Small quarto, 3s. 6d.

Sir Walter Raleigh. By J. A. TAYLOR. With 12 Illustrations. Cloth, 3s. 6d.; leather, 4s. net. [*Little Biographies*.]

Lord Tennyson. By A. C. BENSON, M.A. With 12 Illustrations. Cloth, 3s. 6d.; leather, 4s. net. [*Little Biographies*.]

Erasmus. By E. F. H. CAPEY. With Illustrations. Cloth, 3s. 6d.; leather, 4s. net. [*Little Biographies*.]

The English Lakes. By F. G. BRABANT, M.A. Illustrated by E. H. NEW. Pott 8vo, cloth, 4s.; leather, 4s. 6d. net. [*The Little Guides*.]

Selections from the Early Poems of Robert Browning. With Introduction and Notes by W. HALL GRIFFIN. Pott 8vo, 1s. 6d. net; leather, 2s. 6d. net. [*Little Library*.]

A Little Book of English Sonnets. Edited by J. B. B. NICHOLS. Pott 8vo, cloth, 1s. 6d. net; leather, 2s. 6d. net. [*Little Library*.]

Second Strings. By A. D. GODLEY, M.A. Fcap. 8vo, 2s. 6d. A New Volume of Humorous Verse uniform with "Lyra Frivola."

The Heart of Japan. By C. L. BROWNELL. Illustrated. Crown 8vo, 6s.

A lively description of Japan and the Japanese.

Paris. By HILAIRE BELLOC. With Maps and Illustrations. Crown 8vo, 6s.

The Inner and Middle Temple. By H. H. L. BELLOT, M.A. With numerous Illustrations. Crown 8vo, 6s. net.

"A vast store of entertaining material."—*Liverpool Mercury*.

"A delightful and excellently illustrated book; a real encyclopædia of Temple history."—*Pilot*.

The Visit to London. Described in Verse by E. V. LUCAS, and in Coloured Pictures by F. D. BEDFORD. Small 4to, 6s.

This charming book describes the introduction of a country child to the delights and sights of London. It is the result of a well-known partnership between author and artist.

The Autobiography of a "Newspaper Girl." By ELIZABETH L. BANKS. With Portrait of the Author and her Dog. Crown 8vo, 6s.

"A very amusing, cheery, good-natured account of a young lady's journalistic struggle in America and London."—*Times*.

"A record of plucky endeavour and enterprise as full of interest as a novel."—*Sunday Special*.

MESSRS. METHUEN'S NEW CATALOGUE and BOOK GAZETTE will be sent to any address.

METHUEN & CO., 36 ESSEX STREET, LONDON, W.C.

ATHENÆUM.—"We cannot refrain from giving a warm welcome to this book. It is a model of what popularization should be. The writer is well informed, though not too much so; she imagines her public, and is able to produce what they will read."

JUST PUBLISHED. Crown 8vo. 6s.

THE PRINCIPLES OF ENGLISH CONSTITUTIONAL HISTORY.

BY

LUCY DALE,

Late Scholar of Somerville College, Oxford.

Prospectus sent on application.

SPECTATOR.—"An extremely careful and well written history of England from the earliest times to the Reform Act of 1832, with special reference to constitutional developments."

THE IRISH SCHOOL MONTHLY.—"The authoress writes in a most attractive manner, and the style is so clear and picturesque that it would be an easy book to take up for an examination."

TEACHERS' AID.—"It fully carries out its purpose, and the admirable way in which the subject has been treated, together with the capital arrangement of the matter, compels our earnest commendation."

SCOTSMAN.—"There was room in our historical literature for just such a book as Mrs. Dale has written. . . . It is a thoroughly scholarly work; but it aims at communicating the ripe and nourishing fruits of scholarship to those not able to garner them for themselves by their own labour."

GLASGOW HERALD.—"Altogether this is a most enjoyable as well as valuable book. It does not claim to supersede larger and more imposing works, nor does it take the place of ordinary historical textbooks. It is a supplement to both, and as an adjunct alike to the private and to the school library can hardly be too highly eulogized."

DAILY NEWS.—"This is at once an achievement and a promise. Few adventurers into the difficult field of constitutional history have made so triumphant a first appearance as Mrs. Dale has done. Her story of the slow evolution of the British Constitution is marked by a masculine grip, a wealth of knowledge, and a lucidity of style that it is rare to find in combination. . . . From every point of view this is a most interesting and valuable book."

LONGMANS, GREEN, & CO.,

39 Paternoster Row, London; New York; and Bombay.

Frederick Warne & Co.'s BOOKS FOR PRIZES.

AT ALL PRICES.

WELL WRITTEN.

WELL ILLUSTRATED.

Small crown 8vo, cloth gilt, gilt top, 2s. 6d.

THE ART OF SUCCESS.

By T. SHARPER KNOWLSON,

Author of "The Art of Thinking."

"The Art of Success" is intended as a guide to action, as "The Art of Thinking" was a guide to thought. Having defined success, the author shows that much depends on the abilities and character of the man, and stress is laid upon moral qualities in particular. Luck, originality, limitations, and the increasing difficulty of success, are all dealt with at length; while practical illustrations of successful action are made to prove that vital interest in one's work is the great secret.

Price 5s. each.

AN ANTARCTIC QUEEN.

By CAPTAIN CHARLES CLARK.

With eight Original Illustrations by J. B. GREENE.

BILLOWS AND BERGS.

By W. C. METCALFE.

With eight Original Illustrations By CHAS. J. DE LACY.

stating full name and address of the sender; and all Foreign Money Orders must
be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE BILL.

DURING the past month the tide of popular opposition to
the Education Bill throughout the length and breadth of
the country has risen to an unexpected height, and at one time
threatened to swamp it; but there are already signs that the
assault from outside has spent its force, and inside Parliament
the Unionist phalanx that backs the Bill through thick and thin
is virtually unshaken.

The Government concessions which Mr. Chamberlain pre-
figured at the Birmingham caucus have not, so far, amounted to
much; but nothing has happened to make us regard them as
eau bénite de cour. All the changes made in Section 7 have been
in the right direction, and Mr. Balfour has given a distinct
pledge to adopt such further amendments as shall place beyond
dispute the supremacy of the Local Authority as regards all
secular instruction.

The *Westminster Gazette* has from the very first condemned
the Bill as vicious in principle, and therefore incapable of being
transformed into a good measure by any amount of tinkering;
but it has urged its objections with such fairness and so moder-
ately that we are anxious to rebut one charge that touches us
nearly. The few Liberals, so we are told, who approve the Bill
on the ground that it may afterwards be converted into a truly
democratic measure, and that the denominationalists are un-
wittingly bartering their birthright for a mess of pottage—such
forestallers of the future are branded as immoral schemers, and
their policy is denounced as Machiavelian. We are well
content to stand in the same pillory as Sir Oliver Lodge, Prin-
cipal Hopkinson, Canon Barnett, and Dr. Waller; but we need
not shelter ourselves behind these distinguished names. There
is no insidious danger against the Church, or even against
dogmatic teaching, in the policy that we advocate. Our con-
tention is that the schools of the nation should be national.
This may seem an empty platitude; but if it be true, as the
Church party contend, that the majority of the ratepayers are
Churchmen, it will inevitably follow that the religious instruction
in schools controlled by representatives of the ratepayers will
be such as the Church desires. If, as we are assured, the
average British parent desires dogma for his children, dogma
he will have; if, as we believe, he prefers the unsectarian
Christian teaching that the Board school now supplies, this, too,
in time he will obtain—though, in a few parishes, where the parson
is an extreme Anglican and at the same time a skilled diplo-
matist (a rare combination), he may have to wait. The principle
of popular control is admitted, and we are not greatly concerned

that at starting the private managers should be in a majority. As Canon Barnett observes, it will be easy in the future to take out what seems rotten in the superstructure now raised by the State. It is the Church that will suffer in the long run by clinging to its prescriptive rights and suggesting that "established" and "national" are no longer synonyms.

The key of the position is the appointment of teachers, and so long as this power is reserved to the managers it is futile to maintain that the control of secondary education is wholly in the hands of the ratepayers. As are the teachers such is the school, and there is no blinking the fact that the imposition of any religious test will limit the choice of candidates, and so far impair the efficiency of the school.

The case is on all fours with that of clerical head masters in our public schools. Hardly ever could a revising board have vetoed such appointments on the ground of professional incapacity; yet again and again it was notorious that far better qualified lay candidates had been passed over, and nothing but some public scandal or the dwindling numbers of the school could drive the incompetent cleric from his post. Let us rather, with Canon Barnett and the Bishop of Hereford, frankly allow that this is a blot on the Bill—a necessary concession it may be—and trust that time will remove it.

In conclusion, we would recall once more the fundamental principle of the Bill, the solid rock that neither the winds of doctrine nor waves of party can shake. This has never been better stated than by Sir John Gorst in his *Nineteenth Century* article:—

Local self-government can never be strong enough and independent enough to resist the encroachments of a central bureaucracy, and can never administer the money of the ratepayers with due regard to efficiency and economy, until there is one single body representing the ratepayers which has the sole control of local finance. Bodies elected for specific purposes, and dipping their hands at will into the local purse, without knowledge of or regard for the general economic interests of their district, whether School Boards or Boards of Guardians, are an anachronism which modern wisdom has condemned as destructive of self-government, and which modern legislation will sooner or later sweep away.

This was in fact the declaration of John Stuart Mill laid down as almost axiomatic in his "Representative Government": "In each local circumscription there should be but one elected body for all local business, not different bodies for different parts of it."

THE TEACHING OF GEOMETRY.*

By W. J. DOBBS, M.A.

I DO not wish to begin by abusing Euclid and all his works. In spite of all adverse criticisms, and although the fundamental Proposition 4 is now said to be a "tissue of nonsense," I must confess to much affection and admiration for that monumental work which has for two thousand years, unchallenged, formed the basis for geometrical teaching. But Euclid is not at the present day suitable, even if it ever was, as an *elementary* course, for many reasons, not the least of which is that Euclid approached arithmetic through geometry, while nowadays, by common consent, arithmetic is invariably taught first.

Until recently efforts to improve geometrical teaching in this country were based on the principle that Euclid's *sequence* should on no account be altered; and I, for one, consider that this explains the small amount of success attained. The chief reason for insisting upon Euclid's sequence seems to have been the expediency of retaining an established *order* for examination purposes; but this advantage has surely been very much over-estimated, since there is no such established order in other branches of mathematical science. At the present time, with the powerful help of the British Association and Prof. Perry, several of the examining bodies have given way, and no longer insist upon any recognized sequence; so we may now feel ourselves free men and look with confidence for some genuine progress.

The Mathematical Association, formerly the Association for the Improvement of Geometrical Teaching, recently appointed

* A paper read before the Incorporated Association of Assistant Masters in Secondary Schools, September 12, 1902.

an influential committee to consider the improvement of mathematical teaching generally, and their preliminary suggestions as regards geometry have already been published, and, I suppose, are tolerably familiar to some of us here to-day. Our own Association has also appointed a small sub-committee, and the suggestions which I have to make are in some degree based upon the recommendations we have drawn up.

Many consider that the teaching of pure geometry should be preceded by a *preliminary course* of experimental work, consisting mainly of careful drawing and measurement. I have much faith in the experimental work, but my own view is that such preparatory course should *accompany* rather than precede the formal demonstrations. Let the subject-matter be arranged beforehand in certain well defined *groups* of geometrical truths. Then let the consideration of *each group* be preceded by the experimental work, so that the pupil is led to discover the geometrical truths for himself, and, before going on to the next group, let him master a formal proof. In this way the inductive and deductive methods go hand in hand, and sufficient interest is aroused to stimulate the pupil to overcome the difficulties of formal demonstration.

It will be seen that these considerations to a great extent determine whether any suggested sequence is *suitable* or not. At any rate, for such a method of treatment, Euclid's sequence is certainly not appropriate; for at many points it is unnatural and does not follow the order of discovery. I would not bind a teacher down to any set order. To a certain extent the sequence may be altered according to the special requirements of the class. It is desirable that it should be correlated with the requirements of science teaching.

The recommendation of the Mathematical Association Committee that "the course of constructions should be regarded as quite distinct from the course of theorems" probably meets with the hearty approval of most teachers. The constructions constitute practical applications and illustrations of the theorems, and should be accompanied by very careful drawing, so as to approach as nearly as possible the ideal figure to which, of course, a drawing can only approximate. The constructions used should always be those best adapted to actual practice, and any geometrical truths with which the pupil is familiar may be made the basis of the construction adopted.

To quote from the preface to Prof. Henrici's "Elementary Geometry, Congruent Figures," a book which should be in the hands of every teacher:

Geometrical drawing ought to be combined systematically with the teaching of geometry. This is scarcely possible in connexion with Euclid, and a student who wishes to make practical use of geometry has to make a separate study of geometrical drawing, whether or not he has already studied and mastered Euclid. Geometrical drawing belongs, in fact, to a branch of geometry of which Euclid knew nothing and where Euclid's propositions are of little use.

With regard to the methods of proof to be adopted, the Mathematical Sub-Committee have drawn up the following recommendations:—

- "1. That the use of hypothetical constructions be allowed.
- "2. That geometrical magnitudes be treated as measurable quantities.
- "3. That logical axioms be not formulated, but that geometrical axioms and definitions be introduced as required.
- "4. That proofs going directly to first principles be preferred to those based on a succession of propositions.
- "5. That methods of superposition, wherever possible, be preferred for proof of congruence."

I propose to sketch, as briefly as possible, a course of elementary plane geometry based on the foregoing suggestions.

I. PRIMARY CONCEPTIONS.

The fundamental ideas of geometry are drawn from experience obtained by inspection of solids in space. Abstract all material from a solid, and we have the notion of a geometrical solid which has shape and size and may occupy different positions. By considering the boundaries of a solid, we introduce the idea of a surface; the boundaries of a surface give us lines; and from the intersections of lines we have points. By considering the motion of a solid we have a point generating a line, a line a surface, and a surface a solid. May I remark here that I think *considerable use should be made throughout of the idea of motion?*

II. THE RAY AND THE PLANE.

We now come to the consideration of the straight line (or ray) and the plane. It would be a distinct advantage to have one generally accepted word to denote a straight line, and I should like to see the term "ray" in general use.

It is difficult, if not impossible, to give satisfactory definitions of the ray and the plane. That property which is made the basis of further investigation is, of course, the important thing, and in the case of the ray Euclid gives this in an axiom. His definition of the plane seems at first sight to be more satisfactory; but on closer examination it is seen to involve an axiom. If we consider a fixed ray and a fixed point, P , outside, and imagine a second point, Q , to travel along the ray, then that movable ray which contains the two points P and Q will generate a surface, and we must assume that every other ray which passes through any two points in this surface lies altogether in it.

Even this is not sufficient to fully define the plane, which is only completely determined when we have introduced Euclid's Axiom 12 or its equivalent. This is necessary in order to separate the plane from other surfaces comprising lines which, though not straight, are such that each is fully determined by two points.

Personally I am inclined to keep practically to Euclid's definitions, illustrating the ray by a stretched cord and the plane by the usual test of contact with a straight edge, and I would adopt the following axioms, which I think will be found simple, easily explained and illustrated, and readily granted:—

1. Two points determine a ray, which is of indefinite extension each way.
2. Three points not situated in the same ray determine a plane, which is also of indefinite extension.
3. One plane may slide upon another without turning, or turn upon another without sliding. In this way any ray in the one plane may be made to take up the position of any ray in the other plane.
4. A plane may be turned about any ray in it until it comes into its original position with sides reversed.

Notice that the first statement involves the proposition that rays are congruent, and suggests the possibility of one ray sliding along another in a plane, while the notion of straightness indicates that such sliding is not accompanied by turning. The second statement involves the proposition that planes are congruent. In the third the motion of translation is obtained by keeping a ray in one plane in contact with a ray in the other, while the motion of rotation is obtained by keeping a point in one plane in contact with a point in the other.

III. ANGLES.

I will use Prof. Henrici's term "half-ray" to denote a ray terminated at one point. The idea of an angle is obtained by considering one plane to turn upon another, keeping one point O fixed; then any half-ray drawn from O in the moving plane generates an angle. We have at once the angle of continuation and the angle of rotation. By superposition we see that all angles of continuation are equal, and, by folding, that an angle of rotation consists of two angles of continuation. The method of folding serves to introduce the bisector of an angle. Half of an angle of continuation gives us a right angle, and a hypothetical division into 90 equal parts gives a degree.

The experimental work at this stage may involve the use of the protractor, and will serve to introduce the notions of acute and obtuse angles, supplementary angles, complementary angles. May I take this opportunity of recommending to teachers the little book entitled "A First Geometry Book," by Messrs. Hamilton and Kettle? It will serve to suggest many excellent exercises and practical experiments for the young student.

There will now be no difficulty in mastering formal proofs of the following propositions:—

1. If two adjacent angles are supplementary, then their extreme limits are in opposite directions along the same ray.
2. One, and only one, ray can be drawn through a given point at right angles to a given ray.
3. Vertically opposite angles are equal.
4. The bisectors of adjacent supplementary angles are at right angles.
5. The external angle of a triangle is equal to the sum of the interior non-adjacent angles, and hence the sum of the interior

angles is 180° . (Proved by rotations about the angular points as three different centres.)

6. The sum of the external angles of a polygon = 360° .

IV. THE SYMMETRICAL TRIANGLE.

It will now be easy to lead up to the following propositions, which should all be formally proved by the method of folding over about the axis of symmetry:—

1. Every point on the perpendicular bisector of a ray-segment is equidistant from the extremities of the segment.
2. If two sides of a triangle are equal, the bisector of the contained angle is an axis of symmetry; so that the base angles are equal and the perpendicular bisector of the base passes through the vertex.
3. If the base angles of a triangle are equal, the perpendicular bisector of the base is an axis of symmetry; so that the two sides are equal.

In this connexion it is easy to prove that—

4. If two right-angled triangles have the hypotenuse and a side of the one equal respectively to the hypotenuse and a side of the other, then they are congruent.

Also—

5. Every point on the bisector of an angle is equidistant from the bounding rays, and conversely.

At the same time we can prove that—

6. The perpendicular bisectors of the sides of a triangle meet in a point which is the only point equidistant from the vertices.
7. The four bisectors of the angles of a triangle meet three by three in four points which are the only points equidistant from the sides.

V. CONGRUENCE OF TRIANGLES.

The propositions under this head are—

1. If two angles of one triangle are respectively equal to two angles of another, then their third angles are equal; and, if, in addition, a side of one is equal to the corresponding side of the other, then (by superposition) the triangles are congruent.
2. If two sides and the included angle of one triangle are respectively equal to two sides and the included angle of another, then (by superposition) the triangles are congruent.
3. If the three sides of one triangle are respectively equal to the three sides of another, then the triangles are congruent. This is proved by placing the two triangles ABC and $A'BC$ in opposition, and noting that B and C are each situated in the perpendicular bisector of AA' . Hence BC is an axis of symmetry.

4. The ambiguous case.

In this group we may introduce the propositions—

5. In every triangle the greater side is opposite the greater angle, and conversely.
6. Any two sides of a triangle are together greater than the third side.
7. Given the lengths of two sides of a triangle, the greater the vertical angle the greater the base, and conversely. (Proof as in Nixon's "Euclid Revised.")

VI. PARALLEL RAYS.

Let us take for our definition—Two rays are said to be parallel when, being in the same plane, one can be brought into coincidence with the other by a motion of sliding without turning.

The practical illustration is obvious, and we have at once for any transversal, treated as a ray along which sliding may take place—

Corresponding angles are equal.

Alternate angles are equal.

Interior or exterior angles on the same side are supplementary.

The converses are equally obvious, and it is easy to prove that parallel rays do not intersect, and that rays which are parallel to the same ray are parallel to one another.

At the same time we require Euclid's Axiom 12, or its equivalent—If corresponding angles are not equal, the rays intersect. In effect it amounts to this—Any ray in the plane of a system of parallels meets all or none, and may be treated as the ray along which sliding takes place.

The properties of parallelograms will now be considered, and among them should be included the properties that diagonals bisect each other at O (say), and that every ray-segment through O terminated by the sides is bisected at O .

In the particular case of the *rhombus*, defined as a parallelogram with two adjacent sides equal, the diagonals are at right angles, and conversely.

In the particular case of a *rectangle*, defined as a parallelogram with one of its angles a right angle, the diagonals are equal, and conversely.

A square is a rectangle and at the same time a rhombus.

VII. THE CIRCLE.

If a ray-segment revolves in a plane about one extremity, the other extremity describes a circle. The geometrical properties of the circle are most readily obtained from the two principles—

1. Every diameter is an axis of symmetry.
2. By rotation about its centre a circle may be made to generate itself.

From the first principle we see that the middle point of a chord lies on the perpendicular diameter, and conversely. By sliding a ray along its perpendicular diameter until the two points of intersection coincide, we introduce the notion of tangency, and see that the tangent is perpendicular to the radius through the point of contact, and that there exists one, and only one, tangent at any point.

In the case of two circles the ray containing the two centres is an axis of symmetry, and therefore bisects at right angles the common chord when such exists. By sliding one of the circles along the centre ray we at once arrive at the contact of two circles.

From the second principle we see that equal arcs subtend equal angles at the centre, and conversely; also, equal arcs are cut off by equal chords. Again, after proving independently that equal chords subtend equal angles at the centre, and that the greater the chord the greater the subtended angle, and conversely, we can use the principle to show that equal chords cut off equal arcs and are equally distant from the centre, and the greater the chord the nearer it is to the centre, and conversely.

The angle properties of the circumference of a circle may be treated somewhat as in Euclid's "Elements," but more briefly, the use of angles greater than 180° being allowed, and the angle between tangent and chord being obtained by making the extremities of one side of a cyclic quadrilateral coincide.

VIII. SIMILAR TRIANGLES.

We now come to the consideration of similar triangles. This should be preceded by practical measurement of lengths of lines, by the construction of scales, by drawing the same figure to different scales, and by an algebraic treatment of ratio and proportion.

In the formal treatment of the subject, let us first prove that: If any number of parallel transversals intercept equal segments along a ray, then the same transversals also intercept equal segments along any other ray in their plane.

This leads to the following principle:—If one side AB of a triangle ABC is produced to B_1 , so that AB_1 is m times its original length, where m is not necessarily integral, and if B_1C_1 , parallel to BC , meets the production of AC in C_1 , then AC_1 is also m times AC .

At the outset special values should be given to the numerical quantity m , at first integral, then mixed. The fractional part may be a vulgar fraction or a decimal; but it is desirable that the student should be especially exercised in decimals. A formal general proof may afterwards be given, and presents no difficulty.

The different cases of similar triangles may now be taken, the method of superposition being preferred wherever possible.

In this connexion we may consider the intersections with the base of a triangle of the bisectors of the vertical angle, and the locus of a point whose distances from two fixed points are in a constant ratio.

At this stage, also, it would be an advantage to define the *sine*, *cosine*, and *tangent* of an acute angle, with practical examples of determining their approximate values by construction and measurement, and the solution of easy questions on heights and distances, using four-figure mathematical tables.

IX. AREAS.

The treatment of areas should be preceded by practical measurement of areas of figures drawn upon squared paper.

The formal treatment of the subject commences by establishing that—

Two rectangles with two adjacent sides of the one respectively equal to two adjacent sides of the other are congruent (by superposition).

Then we prove that—

If we multiply the breadth of a rectangle by any number, not necessarily integral, then its area is multiplied by the same number.

A double application of this principle enables us to compare the areas of any two rectangles, and at the same time furnishes the clearest graphical illustration of the commutative law in algebra.

Defining the unit of area as the area of a square whose side is the unit of length, we have the ordinary measure of a rectangular area. At the same time, observe that the units of length adopted for the two dimensions might be chosen independently, and then the unit of area would not be a square.

May I say here that I would take the subject-matter of Euclid's second book simply as illustrations of the distributive law in algebra and of the fundamental algebraic formulæ, the figures being drawn without using the diagonal?

From the mensuration of a rectangular area we readily proceed to the consideration of the areas, as measurable quantities, of a parallelogram, a triangle, and a trapezium.

Then we can prove that the areas of similar triangles are as the squares of corresponding sides. Thus, if the base of one triangle is m times that of a similar triangle, where m is not necessarily integral, then each side of the first is m times the corresponding side of the second, the altitude of the first is also m times the corresponding altitude of the second, and the area of the first m^2 times the area of the second. The same result may, of course, be obtained from the formula for the area of a triangle in terms of two sides and the sine of the included angle.

In this connexion we may establish the rectangle properties of segments of a chord of a circle and the square on a tangent segment, also Ptolemy's Theorem, &c.

X. THEOREM OF PYTHAGORAS.

Let the small letters a, b, c denote the measures of the sides of the triangle ABC , right-angled at A , and let the perpendicular from A upon BC divide the hypotenuse into two segments of lengths x and y , so that $x+y=a$. Then the fractions $\frac{c}{a}$ and $\frac{x}{c}$ are equal, since each is the cosine of the angle B .

$$\therefore \frac{c}{a} = \frac{x}{c} \quad \therefore c^2 = ax.$$

Similarly, $b^2 = ay$;

$$\therefore b^2 + c^2 = a(x+y) = a^2.$$

$$\therefore \text{sq. on } CA + \text{sq. on } AB = \text{sq. on } BC.$$

The other two theorems, which, in effect, give the cosine of an angle of a triangle in terms of the sides, and at the same time establish the converse of the above, can be readily deduced algebraically.

XI. SIMILAR FIGURES.

Similar figures are best treated by developing one figure from another by means of a centre of similarity. We may then suppose that one is moved away into another position. It will be seen that corresponding angles are equal, and that the ratio of any ray-segment in one figure to the corresponding ray-segment in the other is the same for all such pairs, and may therefore be denoted by a single algebraic symbol, m . The area of any portion of one figure is then seen to be m^2 times that of the corresponding portion of the other by extending a theorem already proved.

From rectilinear figures we proceed to curved figures in the usual way, and it is then seen, by placing two circles concentric, that all circles are similar figures. This proves that the ratio of the circumference to the diameter is constant, and introduces the symbol π . At the same time we see that the areas of circles are proportional to the squares of their radii.

This seems to be a suitable place to consider the radian measure of angles. We may prove that—

1. Angles at the centre of a circle are proportional to the subtending arcs.
2. π radians = 180° degrees.
3. θ radians at the centre of a circle subtends an arc equal to θ times the radius.

XII. REGULAR POLYGONS.

Assuming that the circumference of a circle may be conceived to be divided into any whole number n of equal arcs, the points of division are the angular points of a polygon of n sides. The chords that intercept the equal arcs are all equal, and the angles of the polygon are all equal, since each stands on an arc consisting of $(n-2)$ of the equal arcs. This proves the existence of regular polygons.

If tangents are supposed drawn to the circle at the angular points, the n triangles outside the inscribed polygon are seen to be congruent, and hence the circumscribed polygon is proved to be regular.

Again, assuming the existence of a regular polygon, it is easy to prove the existence of its circumscribed and inscribed circles.

The properties of regular polygons for special values of n may be discussed in detail, but the subject-matter of Euclid's Book IV. should be treated mainly as exercises in geometrical drawing.

The area of a regular polygon of any number of sides described about a circle of radius r is $\frac{1}{2}rp$, where the perimeter of the polygon is of length p . Proceeding to the limit, when the number of sides is indefinitely increased, we have the formula πr^2 for the area of a circle.

This scheme is, of necessity, a mere outline, and I am fully conscious that I have passed over many important details; but I have endeavoured, in the short time at my disposal, to place before you a course which I think would be much better suited to the requirements of secondary education than the usual study of Euclid. It would do away with some of that deplorable waste of time which usually takes place between the ages of ten and sixteen, and I venture to think that, while contributing to the more rapid acquisition of geometrical knowledge, the methods will not be found lacking in exact demonstration.

It will be noticed that I have omitted all consideration of incommensurable quantities. This is in agreement with the views of most teachers. In his experience of practical measurements a pupil readily discovers that it is exceptional for a magnitude to be commensurable with the unit adopted; but this presents no practical difficulty, the magnitudes being replaced by commensurable approximations of sufficient accuracy.

In conclusion, let me quote from the preface of Prof. Holgate's "Elementary Geometry": "Do not be too strenuous at first about a formal demonstration. Emphasize the geometric truth presented. Fix as your ideal an elegant, faultless proof, and gradually work up to it."

MODERN LANGUAGE TEACHING.

By MARGARET TUKE,

Staff Lecturer in Modern Languages at Newnham College.

State super antiquas vias et videte si quid sit melius.

THIS is the age of fads, as of other cheap things: and nowhere does the fad reign with more assured sway than among theorists on the teaching of modern languages. According to some, languages should be taught with pictures, not books; according to others, by mimicry. Yet we are not wholly ape. Some have held that to read rapidly, even without understanding, is the way of perfection; others that to look up, write down, and learn each new word is better. I have often been told that a foreign language can only be learned abroad. I have seen it stated that a modern language may be learned in an incredibly short time by translating extracts from that language into English and retranslating them. Such systems as these have had their day. The "new" or "phonetic" or "reform" method now holds the field—the new method, that is, until some newer invention comes to allure our changeful love.

Far be it from me to deny the virtue of any of these methods. On the contrary, my desire is to assert the virtue of each and all of them. But I do object to see a finger-post set up pointing to one or the other, saying: "This way, and no other, virtue lies." For instance, it is a pleasing thing for a child to see a handsome picture of a leaping dog, and most amusing for him to learn to say when he sees it: "Le chien saute." But for a full-grown man or woman—even for a schoolboy or girl beyond the kindergarten age—it seems to me rather an insult to suppose that pictures—or, if not pictures, signs, gestures, motion to

or from a door or desk—are required to arouse the brain-power needful for the study of a language. Nor does the process which must perforce go on in the mind of a reasoning creature—*le chien saute*—"the dog jumps"; \therefore "the dog jumps" = *le chien saute*—appeal to me as a speedy one.

The fact is that each fad denotes a rebound against some abuse. The object-method owes its vogue to the parrot plan of learning question and answer by rote current some fifty years ago; the anti-grammar rage bespeaks an undue fancy for moods and tenses in the past; the English teacher of modern languages has to thank a too familiar incompetent foreigner. The history of each may be traced; each has its place. The mistake has been that the place secured is often too large.

Before laying down the law as to how modern languages should be taught, it is to the point to inquire to what end are they being learned. If a *plébiscite* could be taken on this point among parents whose children are at school, the answer would, I believe, be, in the majority of cases: "Because they are so useful"—possibly, in the case of girls: "Because all girls do." It may be that in former days, when French was the recognized means of intercourse throughout Europe (as Latin had been at an earlier date), to know French was useful, even necessary. It is obvious that for the scientist or advanced student in any subject it is useful—even necessary—to be able to read German. It is true that there are a certain number of posts in the commercial world which can only be filled by young men or women who can read and write letters in a foreign language; others in which a foreign language must be spoken. It is beyond dispute that to any one wishing to become a teacher of languages it is useful—even necessary—to know those languages. But for the ordinary boy or girl—above all, perhaps, for the ordinary girl—who does not look to any such career, how are they useful? For travel? For talk? When it is remembered that our own language will now take us to and through all parts of the civilized world, and that only the most exceptional foreigner will converse with us in any other, it must, I think, be granted that the idea that modern languages are "useful" falls to the ground.

If, then, this study is not pursued for profit, the end must be sought elsewhere—in practice or in pleasure; that is to say, we teach modern languages in order to train the child's mind or as "accomplishments." Some training must, indeed, result from any study, rightly guided. More might doubtless result from this special study than is now often the case. But for the actual drill of the mind a teacher will rather choose some subject in which the reason is forced into play, or in which rigid application of clearly defined rule is a prime demand. There remains, therefore, pleasure. That is to say, modern languages are learnt in order that the knowledge of them may be a pleasure-giving possession, something which adds to the delight and richness of life. How, then, is this pleasure most surely gained?

If we say we know a modern language, we mean, or ought to mean, that we can read, write, and speak it. The order is chosen with intent, though it would be more in accord with the present-day view to put the first last and give the leading place to speaking. But, once more setting aside that small number of learners who need a language for mercantile purposes, an inquiry into the needs of the majority will show that the prime importance of learning to speak languages cannot be supported. The pleasure of speaking a language comes from being able to talk freely and without effort with the people whose own it is, and thus gaining some knowledge of their life and thought. It is a pleasure, therefore, possible only to the few, or for very short periods of time. For, of English men and women, how many are there who pass more than four weeks in the year abroad—a twelfth part, that is, of their grown-up life? Much greater is the number of those who spend a much less fraction of their time outside the British Isles. Of the time so spent but little will be devoted to talking with foreigners. Nor is it given to all quickly to break down the bar of stiffness and reserve, raised not so much by difference of language as by differences in mode of thought and habit of life, unlike environment.

On the other hand, books are always with us. To be able to read easily a foreign language gives us free access to the greatest thinkers in that language, so that we may become their familiars and gather up the store of their words and thoughts. The literature of a country makes that country known to us, not at one period only of its history, but at all periods; not in one section of its people only, but in all sections; not during short intervals of our lives only, but all our lives through. We may

seek learning or laughter at will. Our understanding cannot fail to be made fuller, nor our horizon to be widened. We find material for comparison or contrast; our island fetters fall away. Surely here is pleasure of no mean sort—and pleasure open to all who have a mind to learn and read.

It may be urged that, if this be true, the need for learning to write a language is even less than the need for speaking it. This fallacy is easily disproved. The value of such a mastery of a language as enables us to write it is threefold. In the first place, our pleasure in reading will not be complete without it, since in order fully to appreciate the style of a writer we must have a knowledge of all that goes to make up that style, of the difficulties overcome, of the process by which it is attained. I do not think this is possible unless we know so much of the grammar, construction, and particularities of a language as to be able to write it ourselves with some correctness. In the second place, this side of the study of a language it is which offers the best chance for the exercise and training of the mind; and, though training, as has been said, may not be the first object in learning, it should never be absent from the teacher's mind. And, in the third place, a good writer can very quickly become a good speaker. The converse does not hold. In passing, I would remark that I do not consider a pupil has learnt to read a language unless he can read it aloud with a correct pronunciation. A French or German poem, for instance, loses three-quarters of its beauty if the sound cannot be realized by the reader.

We must now proceed to inquire how this pleasure may best be bestowed on the pupil. Before the actual study is begun some preparation is needed. The first essential to a good understanding of a foreign language is a good understanding of our own. This is not always realized—at least it appears not. It has been my lot to examine girls from the upper forms of a variety of public schools. Among many varying faults, there is one almost invariable—only less noticeable than the inevitable bad handwriting—and that is the bad English. I might almost say the absence of handwriting and the absence of English. I imagined that this might be a special weakness among girls; but I hear on good authority that the fault is not unknown in the productions of the public-school "man."

The second essential, as it seems to me—though the ground I know is controversial—is a good understanding of Latin. I do not press the matter; but all my experience goes to show that the grasp of a language so precise, so intricate, and so concise as the language, to put it at its lowest terms, of Caesar and Virgil is the best possible preparation for the grasp of any language less precise and intricate. Its importance, at least, in studying the Romance languages can scarcely be gainsaid.

The third essential is a good general understanding. The learner must be trained to habits of observation and deduction. He must be led to observe differences between what he knows and what he is about to know, to notice for himself deviations from rule, to compare things that are like, to contrast those unlike, and to draw conclusions from what he sees. It is in this that so many girls are lamentably deficient. It will be obtained, I take it, not from the study of any one subject, but from the way in which all are studied. It can never be hoped for, if the teacher does all the work—one half of the work even; presenting the pupil with information already digested, like spoonfuls of peptonized food; leaving nothing upon which the young mind may sharpen and exercise itself.

With such an equipment—English, Latin, sense—I see no reason why the study of modern languages should be embarked upon before the age of thirteen or fourteen. Then it should be attended to in good earnest. If before that time the children have had a French or a Swiss nurse with a wholly un-Parisian accent, if they have played with pictures and phrases, if their morals have been undermined by many hours spent over "*Les Malheurs de Sophie*," they have doubtless been amused: from an educational point of view they have profited nothing. But, if they have spent long, toilsome hours in putting so many French verbs to memory which at a more mature age can be mastered in so many minutes; if lesson after lesson of valuable school-time has been spent in writing, with unnumbered faults, "*Der Vater liebt das Kind*" or "*Notre maison est plus grande que la vôtre*," or in laboriously construing extracts from "graduated readers," this, I think, is not a matter of indiffer-

ence, but of deplorable waste of time. It is not that I object to French verbs and exercises—we must work from small to great; but I object to their being begun at an age when an undue amount of time and effort must be spent on them. Lesson-time for young children should be given, I take it, to subjects (1) most needful to know, either in themselves or as a basis for other subjects; (2) most easy to learn, either because they are simple or because they are likely to interest the learner; or (3) best fitted to train the mind. I do not think that French, which is as a rule taught first, answers any of these purposes. This brings us to another question. It seems to be taken for granted—a sort of scholastic axiom—that French should be learned before German. I doubt whether we are right in this point of view. Judged by the above tests, it appears that German should come first. It affords a better training, it is more interesting, and is more needful for the study of other subjects. The argument used on the other side is that French is simpler. Simpler it is in one sense, in that there is less to learn by heart; but I question the simplicity of that little. The term can hardly be applied to French syntax.

I began by abuse of systems, and must not myself propose a system. I will only make one or two suggestions. If Latin is begun at the age of eight, French or German may be started about five years later. After two or three years a third language, in cases where a third language is learned, may be embarked upon.

When a language is first attempted a good deal of time should be set aside to it, divided in fairly equal parts between grammar, reading, and conversation. Grammar, of course, includes composition and all that leads up to composition; reading involves the teaching of literature; conversation would at first take the form of repetition of sentences, then the reproduction of stories, descriptions of well known places, objects, scenes, incidents. When the pupil is fit for real conversation the special lessons may be given up, and the foreign language used in the grammar and reading hours. In reading the teacher should always be on the watch for chances of drawing out the pupil's powers of observation, calling on him to compare constructions, words, and idioms with forms similar or dissimilar in some other known language. Class reading may be slow and careful, but the pupil should be urged to read at home, less carefully, books of which the interest will carry him over the difficulties. I have not assigned a special lesson to recitation. There is an idea prevalent that to learn by heart is old-fashioned and therefore evil. I am not of this opinion. I know of no better aid to the writing of a language than a store of good prose, or, in a less degree, verse, committed to memory. A piece of prose learnt by heart may form the subject of a grammar lesson, each word being thoroughly investigated and explained both as to its own history and in relation to other words. In the reading lesson the pupils may be urged to learn at home the more striking passages; in the talking lesson a prose extract or poem recited will enable the teacher to attend to their pronunciation, intonation, and phrasing.

The work thus begun by a competent English teacher may be completed by a short stay abroad. Six months will suffice when a good start has been made. The value of the stay will depend to a very great extent on the thoroughness of the previous training. Time and money are often wasted because the student goes abroad before he is ready to profit. Failing travel—it is not possible for all—some help from a really competent foreigner will supply the need.

I am well aware that I have said no new thing, invented no ready road to learning. This was to be looked for, since the aim of my remarks, such as they are, is to insist that the latest novelty is not always the sole article of value, and that a short cut sometimes turns out to be the longest way round. We have grown so impatient of the slow laborious processes of Nature, and are ready to snatch at machine ready-made articles, all of one pattern. It is well sometimes to remember that, if art were short, life would seem long indeed.

THE following example of "commercial" English is taken from the letter of a reputable London firm:—"Thanking you for past much esteemed favours, which we much appreciate your extreme kindness. Yours obediently," &c. The writing is neat and careful. Possibly a year or two at the now despised Latin grammar would have ensured a less faulty style.

THE POSITION OF ASSISTANT MISTRESSES IN SECONDARY SCHOOLS.

THE pages of the *Journal* have, from time to time, re-echoed the woes of the long-suffering assistant schoolmaster; they have revealed the murmurings of the Common Room, where the classical and modern sides lay aside their internecine strife and tilt against their common adversaries. I would gladly claim the indulgence of the Editor and strive to awaken the educational world to a further consideration of the position of the secondary-school mistress.

It will be granted, I think, that the position of the average secondary-school mistress is not a good one financially. Why is this? To a great extent, I am persuaded, because of the lack of common foresight and ignorance of economics of the women themselves.

In no good secondary school is a mistress appointed as an assistant on the ordinary staff without some University or professional training, and in most cases both are required. To obtain these, two, and for the better equipment four, years are required. Then the profession of teaching is entered upon, and the young teacher finds, in most cases, that her youth and inexperience are counted against her, and it is several more years before she can claim the salary of the ordinary assistant teacher.

Now let her consider her position. If she is fortunate, she is earning the wages of a skilled mechanic, but the majority of her contemporaries, in all but the big schools, are receiving the wages meted out to the unskilled. Surely there is something radically wrong in a system which can reveal such weakness in its economic aspect. A woman receives the same University education, perhaps, as her brother. *He* is eligible for the Church, the public schools, the Home and India Civil Service—I will not mention other professions; and *she* becomes a high-school mistress at a skilled mechanic's wages. Why is this the case? Many reasons, I think, account for it.

In the first place, the modern woman is the descendant of her foremothers of the dark ages, and the men, who are the ruling element in all communities, retain the traditions—often unconsciously—of the past with regard to a woman's position. It has scarcely yet been recognized that a woman might exist absolutely unsupported by family ties and resources. She is still, in most respects, the member of a family, the daughter of her father notably. Now this affects the financial position; for, acting upon these traditional principles, the teacher's salary has been fixed, not upon the understanding that it was required to support entirely a woman of liberal education and assured position, but rather one who for nine months in the year might be dependent on her own resources, but for the rest of the year would certainly have no need to consider expenses of living. Again, the salary is not calculated to leave any perceptible margin for saving, and this is the more wonderful in that a woman's teaching career is short. Certainly as an assistant she is not wanted after forty (rarely at that), and certainly never at forty-five. So that, supposing she has had a teaching career of twenty years, when she retires she must hope to live not upon her own savings, but upon her family resources. Hard is it then upon the woman who has no such resources to fall back upon.

In all this it seems that the teacher herself is not to blame. Yet I assert and have asserted that by calmly assenting to a condition of things based upon unsound economic principles the woman teacher is very much to blame. If she recognized that she was a member of a learned profession, she would not accept a salary which would serve her for pocket-money for a few years, she would not assume the attitude of one who drops into the ranks of the teaching profession *pour passer le temps* until she resigned it for marriage. Very few young teachers consider the necessities of the future. If they thought about them, they would find that their position necessarily presupposed the speedy expectation of a headship or of marriage. Otherwise an examination of their circumstances would promise penury in the future. Therefore let all private circumstances be left out of account in estimating, in a judicial spirit, the necessities of a secondary teacher, and let her take her stand upon her profession only. To continue the discussion of the financial position, it is undoubted that the secondary education market is over-stocked. Hence another reason for small salaries. It

is equally undoubted that in times past the teaching profession was the refuge of the incapable, and these incapables were a potent factor in lowering the market price of education. Is that the case now? Certainly not so much as it was, and we hope that, with an awakened public interest and an enforcement of the Registration Orders, we shall see a gradual elimination of the inefficient and the generation of a more professional spirit among women.

I cannot emphasize too much the fact that, after spending three or four years of University and professional training in addition to the school career, the secondary-school mistress does not receive back in the shape of salary the cost of a long period of preparation. Lawyers' and doctors' fees are calculated from a professional standpoint; a teacher's salary is generally just the least amount which a woman will accept at the time. It seems as if the woman teacher, or rather her parents who have borne the cost of her education, were presenting to the nation the fruit of her toil and theirs; making a sacrifice in the cause of education without expectation of return. Shall the nation show its gratitude, tardy though it may be, by bestowing old-age pensions? Shall the secondary teacher share the privileges of the Civil servant and the primary teacher? There are many Education Bills ahead.

So far I have been advocating increased salaries for women teachers. There may be many, however, who assert that women receive as much as their work is worth; there may be many more who will say that the ordinary teacher receives as much as she wants. In answer to the first detractors I would say that the teaching profession is not without effect in moulding the fate of nations; and I would add that, where women do exactly the same work as men, their remuneration is almost invariably calculated on a lower scale. Is it the women who are paid too little, or the men too much? Surely not the latter. As to the woman receiving as much as she wants, I have my objections to make. A woman possesses a great capacity as a rule for limiting her expenses to her circumstances, and women more readily adopt a narrow mode of living than men do. But who will say that a woman likes cutting down expenses, likes stopping subscriptions to libraries, clubs, and societies, takes a pleasure in passing the booksellers' with only a glance at the new books, and revels in the varied discomforts of lodgings and landladies? It is this capacity for limiting expenses which has often proved so disastrous to the women's cause. If we wanted more, we might obtain more—on the principle, perhaps, of demand and supply.

These are but random suggestions, mere gropings in the dark, but I address them to all secondary teachers, and to those in authority who, either as heads of schools or as members of school councils and committees, have it in their power to improve the position of assistant mistresses. S. E. M.

BOGUS DEGREES FROM BOGLAND.

THE following letter was forwarded to us for publication by Messrs. Paton. Comment is needless. Pigeons—or rather knaves and fools combined—there will always be, in spite of all warnings; but cannot the State of Illinois take measures to extirpate this University of rooks?

Private.

Trumera, Mountrath, Ireland.
August 23, 1902.

DEAR SIR,—I can procure the following Degrees for suitable persons, Ladies or Gentlemen, from an University, and College, both in the State of Illinois, America:—LL.D., costing £13; Ph.D., £13; D.C.L., £13; D.D., £20; M.A., £8.

These Degrees are not sold in the ordinary sense of the term, but the American authorities, like others, must live.

I can give you a commission of £1 (one Pound) on each Degree, and 2s. 6d. for postage, total £1. 2s. 6d., which you can deduct before forwarding to me.—Yours truly,

RICHD. BRERETON, Ph.D., LL.D.

Messrs. J. & J. Paton.

P.S.—Diplomas are sent direct from America.—R. B.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

THE *raison d'être* of the A.M.A. is constantly proved by the revelation of fresh breaches of law and equity. Two instances have recently come to light in connexion with vacant head masterships. The Governors of "Dasham" hope to attract applicants by the offer of a capitation fee of £1, the minimum allowed by the scheme being £2. "Quis custodiet custodes?" The Head Master of Dashboro', retiring at Christmas, has informed all members of his staff that their appointment necessarily terminates with his retirement. He is possibly ignorant of the connotation of "Grantham," and has never heard of the famous "opinion" of the Commissioners that notice to leave is, under such circumstances, neither expedient nor legal. The "opinion" was set at naught by the powers at Grantham; the Charity Commissioners took no steps to convert the "opinion" into a legal decision; and it is left to the A.M.A. to apply pressure by such means as are open to a society which represents the best elements in the teaching profession.

Mr. F. S. Stevenson, whose name is now well known to assistant masters, has given notice of an important amendment to the Education Bill to this effect: that in any secondary schools hereafter established by the Local Authority the dismissal of the assistant masters shall lie with the Local Authority. On this matter assistant masters are not unanimous, for not a few argue that a corporation has no soul, and that eventually we shall get more justice from the benevolence of the individual head master; but all will be glad that public attention should be directed to the existing insecurity of tenure, and the fatal insecurity of employment. If the proposed clause fails to pass, the discussion may pave the way for some arrangement more equitable than the existing one.

Security of tenure is one of our objects, and every year we come nearer to our goal. Meanwhile it appears that a decreasing number of the rising generation consider assistant masterships worth securing. The fact is that the body of assistant masters has become self-conscious, and learnt the art of self-expression. The prospects of a teaching career are now well known; hitherto they have been unknown, and *omne ignotum pro magnifico*. On this point our hard-worked President, Mr. J. C. Holland, will probably make some effective remarks in the paper which he is to read at the Conference on Training, to be held at Cambridge on the 14th inst. His subject is "The Financial and other Economic Considerations connected with the Training of Teachers as affecting Assistant Masters." The opener of the following discussion is Mr. F. Storr. The supply of capable teachers already falls short of the daily increasing demand, and young men cannot be expected to invest money in purely professional training, if they can look forward to nothing better than the uncertain tenure of a mastership worth, on the average, say £120, and, as a maximum, say £250, with a remote chance of a head mastership.

In connexion with this it is interesting to note some remarks in the Report of the Board of Education for the year 1901-1902 under the section "Inspection of Secondary Schools": "The inspectors have afforded abundant evidence of the difficulty of maintaining small boarding schools, owing to the increased supply of day schools and the improvement in means of transit. Still more striking is the almost universal inadequacy of the school funds for the attainment of a high state of efficiency. This is manifested especially in the lack of qualifications and experience of the assistant staff and in the absence of provision for teachers on retirement or superannuation." By which method are the evils to be removed? Will the community increase the funds in order to attract teachers with better qualifications, or will teachers venture to raise their qualifications in the sure hope of inducing the public to increase the funds? Who is to make the first move?

At the meeting of the British Association in Belfast Mr. Walsh, who with Mr. Tristram represented the A.M.A., made a strong impression by his forcible statement of the case for assistant masters, and the urgent need of higher remuneration and more efficient teachers, if education in England is to make any considerable advance. "Here and there," he said, "you may secure a few enthusiasts, but missionaries are not as a rule to be found in battalions, and great is the company of good teachers that we require." One obstacle, that many overlook, lies in the loftiness of the ideals which teachers set before them. In so far as our aims are commercial, and we offer an education which pays, we may rely on substantial commercial rewards; but in so far as we take up the rôle of prophets we must be prepared to receive the prophet's reward.

Two problems in connexion with registration are engaging our earnest attention. One is that of teachers excluded from the Register through lack of those prescribed academic qualifications which constitute one of the main differences between Column A and Column B.

The Parliamentary Committee is trying to estimate the proportion of those likely to be excluded, by special inquiries in selected typical schools throughout the country. One may reasonably hope that the facts thus ascertained will have due weight with the Registration Council, and that they will be able to admit to Column B under the heading of "exceptionally qualified" those who can produce exceptional evidence of their ability to teach. The other problem arises out of the regulation which stipulates that the three years of teaching in secondary schools must be the three years immediately preceding the application for registration. As a correspondent in the monthly *Circular* for October says, "the primary question to settle in respect of any applicant is not how exactly he has spent the last three years, but whether he is a qualified secondary-school master, and he suggests that to have spent three years out of the preceding five in recognized schools would meet the case. The reasonableness and expediency of some such amendment needs no proof."

NOTES ON THE CHURCH CONGRESS.

AN encouraging feature of the proceedings of this year's Church Congress was the prominence given, at the meeting devoted to "Bible Study," to questions arising out of the "Higher Criticism." The Bishop of Salisbury, who opened the discussion, confined himself to those aspects of the matter which directly affect the devotional use of the Bible, and pointed his arguments by quoting from "Bishop Blougram's Apology" the hope expressed for the literary scribbler and sceptic turned colonist, that—"By this time he has tested his first plough, and studied his last chapter of St. John." We have here "in a nutshell," according to Dr. Wordsworth, all the answer a practical man wants to the difficulties to faith raised by the "Higher Criticism." That is to say, all the Higher Critic really needs is experience of practical life to bring him back to the devout study of the Fourth Gospel. Which is true—just as far as it goes.

How much farther the real questions at issue go in practical life was fully, courageously, and not less reverently recognized in the admirable papers of the speakers who followed—Dr. Kirkpatrick, Prebendary Gibson, and Sir Arthur Hort. Sir Arthur Hort, speaking out of his experience as a Harrow master, argued warmly and cogently in favour of increased honesty in handling these matters in the teaching of boys. "It is undeniable that a large number of able men engaged in teaching, treat Scripture-lessons in a way entirely different from that in which they treat other lessons; and the difference is best expressed by saying that in the former case they adopt an uncandid attitude. It is hard to see how such an attitude argues greater reverence to the God of Light." So thought Bacon: "How shall I render unto the God of Truth the unclean sacrifice of a lie?"

That there are plausible arguments for temporizing Sir Arthur went on to admit; but only that he might deal with them as all arguments that are plausible and nothing more deserve to be dealt with. "If it is contended that a schoolmaster has no time for studying modern interpretations, and that these are in a fluid and unsettled state, it may be replied that a man trained as a schoolmaster is, (or will be when secondary education is organized,) ought, if any one, to be competent to sift and discern." Nor is the objection that the results of criticism are too vague and inconsistent to be admitted. "In this science, as in all others, random guesses are made which cast discredit on the labours of patient and sober research; but it is precisely for that reason that we teachers are bound to show our pupils how to discriminate, even as in teaching natural science or languages we warn them against unsound hypotheses and uncritical criticism."

Other speakers carried the discussion into the field of primary education; and Dr. King fairly took the bull by the horns by waving the syllabus for the diocese of Peterborough in the face of the meeting, and declaring that he supposed it was no better and no worse than the syllabus of any other diocese, but that for his part he could not teach his pupils on that syllabus without having to give explanations that would do more harm than good. "In the present distress it would be a great help to the clergy if some competent scholars would draw up a syllabus of the Old Testament for use in National schools, so that they might know what they were expected to teach."

This point was urged again next day by the Rev. Claude Perez (formerly one of H.M. Inspectors) at the end of the discussion on "The Duty of the Church in regard to Education." He thought—and how many of us must agree with him!—that for the Church at the present moment the most urgent matter was not the polemical question of the rights of the denominations to teach their several tenets in the schools, but the arriving at some settlement of what the Church can honestly teach in regard to the authority and value of the different books of the Bible. "We cannot teach the children the Bible as we taught it some years ago. I, personally, should feel a difficulty in examining in the Bible as I used to examine in it some years ago."

In the bulky reports of the Church papers these pertinent remarks of Dr. King and Mr. Perez occupy an insignificant share of space. From

the brief reports of the daily papers they drop out altogether. But they are good seed, and should bear good fruit. If the question is further developed at the next Church Congress, it might be well for the education of the country that all headmasters should be present. The honesty of the religious teaching given in schools is, without exception, the point that goes most directly to the roots of the morality of education, and it therefore concerns religiously even those who are technically opposed to religious teaching.

CALENDAR FOR NOVEMBER.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1 (and following Saturdays).—Froebel Society Classes, St. Martin's Schools, Adelaide Place, Charing Cross. Apply to Secretary, Miss Noble.
- 1.—Return forms for Cambridge Teachers' Training Syndicate Exam.
- 1, 8, 15, 22, 29.—King's College. Saturday Morning Lectures to Teachers (free). November 1, 15, 29, Prof. Hudson's course on "The Teaching of Mathematics," at 10 a.m. November 1, 8, 22, Mr. Adamson's course on "Comenius and the Beginning of Modern Educational Theory," at 11.30 a.m. November 8, 15, Prof. Spiers's course on "The Practical Teaching of French," at 10 a.m.
- 3.—National Froebel Union. Return forms for Higher Certificate Exam.
- 3.—Return forms for Institute of Chartered Accountants' Preliminary Exam.
- 3-5.—Law Society Intermediate and Final Exams.
- 4-6.—London University LL.D. Exam.
- 5.—Dublin University (Trinity College) Entrance Exam.
- 5.—London University M.D. Exam. Return forms.
- 5.—Oxford Exams. for Women. B.Mus. and D.Mus. Exams. begin.
- 6.—University College, London. "The Rise of Naturalism, or the Romantic Movement in Poetry in the Eighteenth Century." First of a Course by the Rev. Stopford Brooke, at 8 p.m.
- 7.—Oxford Exams. for Women. Second Public Exam. Return forms and fees.
- 7, 14, 21, 28.—Lectures on "Some Problems of Social Science," by A. L. Smith, M.A., at the Westminster Town Hall, Caxton Street, S.W., at 4.30 p.m.
- 10.—Institute of Chartered Accountants. Send in forms for December Intermediate Exam.
- 11.—London School Board. Apply to Clerk, Scholarship Exams., December.
- 12.—College of Preceptors Evening Meeting.
- 13.—Oxford Exams. for Women. Return forms for First Public Exam. Holy Scripture.
- 13.—Oxford Exams. for Women. Return forms for First Public Exam.
- 15.—College of Preceptors Council Meeting.
- 15.—Ireland, Intermediate Education Board. Last day for sending in lists of Students.
- 15.—Post Prize Competitions for *The Journal of Education*.
- 18.—Institute of Chartered Accountants. Send in forms for December Final Exam.
- 18.—Corpus Christi College, Oxford, Mathematical Scholarship Exam. (about this date).
- 22.—Post School News, items for this Calendar, &c., and Advertisements for the December issue of *The Journal of Education*.
- 23.—London University B.A. Pass List published.
- 25.—Last day for sending in forms of application for Cambridge Combined College Scholarships.
- 25 (noon).—Latest time for receiving urgent prepaid school and teachers' advertisements for the December issue of *The Journal of Education*.
- 27.—Birmingham, King Edward's School Entrance Scholarship Exam.
- 27.—Oxford Exams. for Women. Return forms for Responsions.
- 28.—Froebel Society Lecture. "The Correlation of School Subjects," by Miss Emily Last. Dr. Williams's Library at 8 p.m.
- 30.—Surveyors' Institution. Return forms for Preliminary Exams.

The December issue of *The Journal of Education* will be published on Saturday, November 29, 1902.

HOLIDAY COURSES.

- NÄÄS.—November 5-December 16. Sloyd. Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.
- NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.
- PARIS.—Christmas and Easter Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.

UNIVERSITIES AND SCHOOLS.

KING'S COLLEGE, LONDON.

This school of the University of London reopens for the regular courses for both matriculated and non-matriculated students in the Faculties of Theology, Arts, Laws, Science, Engineering, and Medicine, on October 2; the advanced classes for post-graduates began early in September. King's College, which was the pioneer of the evening class movement in London, still retains this special feature, and under the new regulations of the University affords evening-class students the opportunity of preparing for degrees as internal students. In the Theological Faculty some adjustment of the courses has been made, so as to enable students to prepare for the B.D. degree. The following free courses for teachers on Saturdays are advertised:—"The Teaching of Mathematics," "Theory of Education," "The Teaching of French," "Practical Physics," and "The Principles of Practical Physiology."

OXFORD.

The chief event of the Vacation occurred just at the close of it, namely the great gathering to celebrate the Tercentenary of the Bodleian Library. The festival has been such a godsend to the newspapers in the slack season that a belated description three weeks after the event would be a gratuitous superfluity. I may just briefly record that there were three functions: the reception on October 7 in the Ashmolean; the honorary degrees and addresses in the Sheldonian; and the dinner in Christ Church, on October 8. The reception was a brilliant (if rather close packed) assemblage in an interesting and appropriate place: and for once, as a high dignitary remarked, the men outshone the women in the splendour of their robes. "I used to think," said a Canon blazing with the Doctor's scarlet, "that the Doctor's gown was a fine sight; but he's not in the same street with a Professor of the Sorbonne." The honorary degrees (the list will be found below) were conferred, in a theatre hardly less packed than at the Encænna, on visitors from the United States and Canada and nearly every European country. The whole number of visitors was 211, and among them were representatives of 57 Universities, including every English, Scotch, Irish, and Welsh foundation.

At the end of the Long Vacation we have usually some losses to deplore among distinguished Oxford men of former days; but this year Fate has been so far merciful that there is only one such death to record—that of Canon Rawlinson, of Canterbury, who died on October 6, aged eighty-nine. He was Professor of Ancient History at Oxford in the comparatively dark ages of the professoriate, and was less distinguished as a teacher than as editor of Herodotus and a copious writer on other subjects connected with Oriental history.

The question of optional alternative for Greek in the University entrance examination will be raised, and probably settled, in Congregation on November 11. It is understood that the opposition is being actively organized, but so far there has been no public discussion by pamphlets, letters, or fly-sheets, and very little real evidence, apart from rumours, as to how the votes will be cast. Misleading statements, like the phrase "abolition of Greek," are occasionally heard in private discussion, even in quarters which should be better informed—and this, too, in defiance of the fact that among the supporters are several who cannot be charged with indifference either to education or to Greek. But the strength of those opposed to any important change is undoubtedly great; and the power of fears, even if unreasonable, is always considerable in a question of this kind. Time will show.

The only statute at present on the agenda of the University is one which is not likely to be opposed—namely, the measure for transferring the control of the secondary training system from a Committee of the "Local" Delegacy to a special Secondary Training Delegacy. Except the one point of the change in the administering body, there is no other innovation proposed. Under the stimulus of the Draft Order in Council on Registration, the work is rapidly growing; and it is generally recognized that a special Delegacy is the proper body to administer under the changed circumstances.

The elections to Council will be over before this appears, as the day fixed is October 30. The nine retiring members are Dr. Bright, Dr. Merry, Mr. Heberden, for the Heads; Dr. Ince, Prof. Odling, Mr. Macan, for Professors; Mr. Gerrans, Mr. Matheson, Mr. Sidgwick, for Masters. It is still uncertain, at the time of writing, how many of these will be renominated and what new candidates may appear; still less can any one tell what the results will be of any contests. The only burning question that is imminent is that of Greek, and the elections will be over a fortnight before the discussion on Greek begins.

Those who are interested in the training question are looking forward to the Conference to be held at Cambridge on November 14-15, in the hope that some progress may result from the discussion of schemes, and comparison of experience, among training instructors, theorists, administrators, inspectors, and practical head masters or assistant masters who have worked to promote secondary training, or themselves have given time to the study. Training has had a hard

struggle against the prejudice or indifference not only of the Universities, but of the schools—particularly, perhaps, the oldest and most famous of the public schools. It is now beginning to emerge, and be accepted; but it is still hardly beyond the experimental stage. The decisive stimulus has been the recent Order in Council, which practically establishes training, as no aspirant to the profession will be blind enough to wreck his chances by failing to qualify for the Register. It is just at this point that a conference may be helpful, and we hope it may prove so at Cambridge. Oxford has been asked to send four representatives, and has made an excellent selection in appointing Mr. Warren (President of Magdalen), Mr. Matheson (Secretary of the Joint Board), Mr. Wells (member of the Delegacy which administers the training scheme), and Mr. Keatinge (the Lecturer and Tutor in Education), to whom is mainly due the success of the scheme at Oxford.

The appointment of Sir W. Anson to succeed (under another official title) to Sir John Gorst's vacant post has given general satisfaction in Oxford. Before his election as member he had rendered many services to University administration, and there has been for many years no better Vice-Chancellor. As an excellent man of business, a ready, conciliatory, and persuasive speaker, quick in mastering detail, and fertile in expedients, he is likely to make a most efficient representative of the Board in the House of Commons. And, if his acquaintance with the complex and thorny subject of national education may, perhaps, be somewhat recent, his Oxford work will be by no means valueless in this regard, while as member of the Consultative Committee he will have already become familiar with at least a portion of the field.

The following announcements have been made:—

Encenia for 1903 to be on Wednesday, June 24, 1903.

Appointments.—The Warden of All Souls to be Secretary of the Board of Education; the Rev. H. C. Beeching (Balliol) to be Canon of Westminster; Mr. E. Waterhouse, Hon. M.A., to be Auditor to the University. The President of Magdalen, Mr. P. E. Matheson (Fellow of New College), Mr. J. Wells (Fellow and Tutor of Wadham), Mr. M. W. Keatinge, Lecturer and Tutor in Education (Exeter), to be representatives of the University to the Cambridge Conference on the Training of Teachers in Secondary Schools for Boys.

Special Sunday evening preachers for the term: The Bishops of Oxford, Stepney, Wakefield, London, and Zanzibar, and the Head Master of Rugby.

Prof. F. P. Walton (Lincoln), B.A., Dean of the Law Faculty of McGill University, to represent the University of Oxford at the installation of Dr. E. J. James as President of the North-Western University at Evanston, Chicago.

Honorary Degrees at the Bodleian Tercentenary:—To be Hon. D.C.L.: The Hon. Andrew Dickson White, Ambassador of the United States at Berlin, of Yale University; Prof. C. S. Minot, of Harvard University; Right Hon. Lord Strathcona and Mount Royal, G.C.M.G., Chancellor of McGill University, High Commissioner for Canada; Dr. Frederick de Martens, Professor of International Law in the University of St. Petersburg, Privy Councillor, and Member of the Council of the Minister for Foreign Affairs, Member of the Hague Arbitration Tribunal; Prof. Vinogradoff.

To be Hon. D. Litt.: Conte Ugo Balzani, of the Accademia dei Lincei, Rome, and President of the Società Romana di Storia Patria; Dr. J. B. Bury, Regius Professor of Greek at Trinity College, Dublin; Dr. J. H. Canfield, Librarian of Columbia University; Mr. J. W. Clark, M.A., Registrar of the University of Cambridge; Dr. E. J. H. Jenkinson, M.A., University Librarian, Cambridge; Geheimrat Dr. von Laubmann, Director of the Munich Library; M. Omont, of the Bibliothèque Nationale, Paris, Membre de l'Institut de France; Geheim-Regierungsrat Dr. E. Sachau, of the Royal Academy, Berlin; Hofrat Dr. J. Schipper, Rector of Vienna University; Dr. S. G. de Vries, of Leyden University Library; Mr. G. F. Warner, M.A., Assistant Keeper of MSS., British Museum; Prof. A. F. West, of Princeton University.

Elections:—Mr. R. J. E. Tiddy (Scholar of University) to a Classical Fellowship at University College; Mr. W. H. Beveridge (Exhibitioner Balliol) to a Stowell Civil Law Fellowship at University College.

Special Lectures:—The Taylorian Lecture for 1902, by Mr. J. F. Kelly, November 5. Dr. M. A. Stein (Indian Educational Service) to lecture. Mr. C. S. Loch, Secretary of the London Charity Organization Society will give the Dunkin Lectures in Sociology at Manchester College (on Wednesdays at 5) on "Methods of Poor Relief and Social Improvement, in relation to Social Obligation and Economics." The Rev. J. E. Carpenter, M.A., Case Lecturer in Comparative Religion, will lecture at Manchester College (Fridays, 4-30) on "Ideas of a Future Life: Lower Forms."

CAMBRIDGE.

The event of the month has been the gift of Lord Acton's Library to the University by Mr. John Morley. No monument to the memory of the late Regius Professor of Modern History could be more worthy or more welcome; and it has been received with grateful enthusiasm in Cambridge. The great collection of "material for a history of Liberty, the emancipation

of Conscience from Power, and the gradual substitution of Freedom for Force in the government of men," will require a worthy building to contain it. Sites are not wanting, and, maybe, the means to build will also be forthcoming, though the source of these is as yet undiscovered.

The out-going Vice-Chancellor, Dr. Ward, was able to announce that His Majesty had graciously given his patronage to the University Association, whose main purpose is to further the better endowment of the University. He indicated a speedy renewal of the efforts of the Association to meet our many and urgent needs. The provision of an Acton Library building furnishes a new object for these efforts, and one which may appeal to those who are interested in the literary rather than the scientific departments of our activity.

An annual lecture has been founded at Newnham College, in memory of the late Dr. Henry Sidgwick. The first lecturer will be the Right Hon. James Bryce, and the first lecture will be given at the college on November 29, at 5 p.m., on "The Philosophic Life among the Ancients."

A Conference of representatives of the Universities and other educational bodies will be held in the Senate House on November 14 and 15 to consider the question of the training of teachers in secondary schools for boys, as affected by recent legislation. Sir Richard Jebb, Dr. Butler, Dr. Keynes, Mr. O. Browning, Mr. C. A. E. Pollock, and Dr. S. S. F. Fletcher will represent the University of Cambridge.

The Hon. C. A. Parsons, F.R.S., whose improvements in the steam turbine have gained him a high reputation as a scientific engineer, has been elected an Honorary Fellow of St. John's College, of which he was formerly a scholar. Mr. Parsons was 11th Wrangler in 1877, and rowed in the first Lady Margaret boat.

The seven hundredth meeting of the Natural Science Club was celebrated by a festival dinner on October 18 in Downing College. Many old members who now hold eminent positions in the scientific world foregathered for the occasion.

Of the freshmen entered this term, 125 have elected to study medicine. The new Medicine Schools are approaching completion, and form an imposing pile in Downing Street. The Squire Law Library is rising opposite, and the Geological and Botanical Buildings are almost ready for occupation.

The new, or rather restored and augmented, organ in St. John's College Chapel will be opened with a special service and a recital by Sir Walter Parratt, Master of the King's Musick, on November 4.

The following elections and appointments are announced:—Dr. Hobson, Christ's, and Mr. H. C. Comber, Pembroke, to be Proctors; Mr. W. J. Corbett, King's, and Mr. A. G. Peskett, Magdalene, to be Pro-Proctors; Dr. Stanton to be Assessor to the Regius Professor of Divinity, and Dr. D. MacAlister Assessor to the Regius Professor of Physic; Dr. Sweete to be Lady Margaret's Preacher; Mr. J. B. Peace, Emmanuel, to be Demonstrator of Mechanism; Mr. R. C. Punnett, Caius, to be Demonstrator of Comparative Anatomy and to be Fellow of his college; Mr. A. Berry, King's, and Mr. A. S. Ramsey, Magdalene, to be Moderators in the Mathematical Tripos; Prof. Barrett Wendell, of Harvard, to be Clark Lecturer in English Literature at Trinity College; Mr. R. P. Gregory, St. John's, to be a Demonstrator of Botany; Mr. A. E. A. W. Smyth, Mr. P. V. Bevan, Mr. O. W. Richardson, and Mr. F. J. Pollock to be Fellows of Trinity; Mr. R. Appleton, Trinity, and Mr. R. F. Scott, St. John's, to be Almoners of Christ's Hospital; Mr. J. H. Flather, Emmanuel, to be a Governor of Thetford School; Mr. D. H. S. Cranage, King's, to be Secretary for Local Lectures in the place of Dr. R. D. Roberts, now a Registrar of the University of London; the Rev. H. Lowther Clarke, St. John's, to be D.D. *honoris causa*, on his election to the Bishopric of Melbourne; Mr. A. J. Wallis, Corpus, to be a University member of the Borough Council.

WALES.

The Archbishop of Canterbury, together with a distinguished company, including the Bishops of St. David's, Llandaff, Bangor, Exeter, the Suffragan Bishop of Swansea, and the Vice-Chancellors of Oxford and Cambridge, assembled at Lampeter at the beginning of the month to celebrate the seventy-fifth anniversary of St. David's College. St. David's College, Lampeter, was founded by Bishop Burgess—whose portrait now adorns the walls of the College hall with that of Dean Llewellyn, the first Principal—in 1822, to educate and suitably prepare candidates for Holy Orders. It was at first intended to erect the college at Llanddewibrefi, where, according to tradition, St. David, the patron saint of Wales, confuted the Pelegian heresy. King George gave £1,000 to the building funds from his privy purse, the Government made a grant of £6,000, the Universities of Oxford and Cambridge, with which the college is now affiliated, gave £200 each. Through the liberality of Mr. J. S. Harford, of Falcondale, father of the present Mr. Harford, the college was secured for Lampeter instead of Llanddewibrefi, and was opened in March, 1827, though students were not admitted until the following year. In that year King George IV. granted the college its first charter, which states that the object of the institution is to educate and suitably prepare candidates for Holy Orders.

New York Life Insurance Company.

THE GREAT INTERNATIONAL COMPANY.

(FOUNDED 1841.)

Chief Office for Great Britain and Ireland—Trafalgar Square, W.C.

INVESTED FUNDS ... £59,743,837.

LAST YEAR'S INCOME ... £14,548,968.

SAFE INVESTMENT on remunerative terms.

LIFE INSURANCE at the lowest rates consistent with absolute safety.

LIFE PENSIONS at rates not surpassed by any other office.

THE BEST METHOD OF SAVING.

LIFE INSURANCE AND INVESTMENT COMBINED.

A Teacher, age 30, deposits 5s. 11d. per week with the New York Life Insurance Company. The Teacher's family receive £300 if death occurs before age 50 is reached.

At Age 50 several Options of Settlement are open :

I. Receive Cash amounting to £458. 14s., having made a gain of £150. 17s. 4d.

II. Become insured for £825 without further payment of premiums.

III. Receive an Annuity for Life at the rate of 12s. 6d. per week.

IV. Become insured for £360 and receive Annuity for Life at the rate of 7s. per week.

Any person desiring to invest, insure, or to provide a pension for life, can obtain full particulars from either the Head Office for Great Britain and Ireland, or—

C. D. CRISP, Agency Director, or T. A. ORGAN, Agency Superintendent,
Trafalgar Buildings, (Southern District),
Trafalgar Square, W.C. 71 and 72 Piccadilly, W.

N.B.—Good men, seeking salaried appointments, can obtain full particulars from either of the above-named.

Demy 8vo, paper covers, 348 pp., with ruled paper at end for notes, price 2s. 6d.
MOTHERS' SONGS, GAMES, AND STORIES.

BY FRANCES AND EMILY LORD.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

ROBERT BOYLE,

INVENTOR AND SANATARIAN,

(Founder of the Profession of Ventilation Engineering.)

BY LAWRENCE SAUNDERS.

New and Enlarged Edition. Price 10s. 6d.

"ROBERT BOYLE was the author of many brilliant inventions."—*Academy*.

"A little book with much in it to suggest thoughts. It is a biographical sketch of the two BOYLES, father and son, who have made their names famous by their system of ventilation. More enthusiastic, simple-hearted men it would be hard to find. The history of their lives, their genius, and their inventions is most interesting."—*Life*.

"The record of an earnest, energetic and untiring life; a life governed by high principle and devoted to noble ends. Self-culture and help to others were his most marked traits. He was foremost in all social and sanitary movements."—*Sanitary Engineering*.

"ROBERT BOYLE bore a distinguished name in science, and proved himself worthy of it."—*Edinburgh Courant*.

"A man of indubitable inventive genius, and strong philanthropic zeal."—*Scotsman*.

"A sketch—rather too brief—of the lives of ROBERT BOYLE, father and son, who have brought the question of ventilation and sanitation to a science by the discoveries of their inventive genius."—*Christian World*.

"A bright story of true Christian heroism. As we read through these pages of the almost insurmountable difficulties overcome by the BOYLES, father and son; of the good done; the sanitation achieved; the inventions perfected; we see men whose sole aim was to serve God, benefit mankind, and whose example should be held up to all our boys beginning life."—*Christian*.

"An excellently written biography of the eminent inventor and philanthropist, ROBERT BOYLE. The work is practically a biography of the late ROBERT BOYLE and of his son ROBERT, who is still living and carrying on his father's great work as a sanitary engineer. Both are characters such as Samuel Smiles might well apply his genius to describing."—*Hull Express*.

And at GLASGOW, PARIS, BERLIN, and NEW YORK.

MESSRS. BELL'S NEW BOOKS.

Educational Catalogue post free on application.

SECOND EDITION. Crown 8vo, 2s. 6d.

ELEMENTARY GEOMETRY. Comprising the substance of Euclid, Book I., 1-48; Book III., 1-34; and Book IV., 1-5. By W. M. BAKER, M.A., Head Master of the Military and Civil Department of Cheltenham College, and A. A. BOURNE, M.A., Senior Mathematical Master at the same College. Also Book I., separately, 1s.

This volume is written on the lines recommended by a Committee of the Mathematical Association which was formed at the suggestion of the British Association for the purpose of making reforms in the teaching of Elementary Mathematics.

* A volume containing the substance of Euclid, Book II. and the rest of Book III., and Books VI. and XI., is in the press, and will be published shortly.

Crown 8vo, with or without Answers, 3s.

EXAMPLES IN ALGEBRA. By C. O. TUCKER, B.A., Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge.

These Examples are intended to provide a complete course of Elementary Algebra for classes in which the book-work is supplied by the Teacher. In the choice of the subjects included in their arrangement, the recommendations of the Committee on the Teaching of Mathematics appointed by the Mathematical Association have been followed throughout.

Crown 8vo, 4s. 6d.

DIFFERENTIAL CALCULUS FOR BEGINNERS.

By ALFRED LODGE, M.A., late Fereday Fellow of St. John's College, Oxford, Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill. With an Introduction by Sir OLIVER LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham.

SECOND EDITION. Crown 8vo, 2s.

AN INTRODUCTION TO CHEMISTRY. By D. S. MACNAIR, Ph.D. (Würzburg), B.Sc. (London), late Lecturer in Chemistry at the East London Technical College, and the Glasgow and West of Scotland Technical College.

This book is intended to provide a Second Year's Course in Practical Science for pupils who have already gone through a course of Laboratory Work in Elementary Physics. The aim of the author has been to lead the beginner in Chemistry by a series of simple and logically connected experiments, chiefly of a quantitative nature, to an understanding of some of the most important principles of the science and of the methods of investigation by which they have been established. Beginning with a study of the changes which take place in the rusting of iron, the student is led on to the investigation of the composition of air and water, and so to the chemical changes that occur in the burning of a candle, in the conversion of chalk into quicklime, and in the action of common acids upon metals. *The book will be found specially well suited for use in Irish Intermediate Schools, covering as it does the whole of the scheme outlined in the Circulars of the Department of Agriculture and Technical Instruction.*

Great care has been taken to give very full directions for the fitting up of apparatus and the performance of the experiments, while the numerous illustrations, nearly all of which have been specially prepared for this work, are taken from photographs of the actual apparatus, and will therefore be found a reliable guide to the teacher whose experience of this kind of work is limited.

A considerable portion of the experiments are new, and every care has been taken to devise apparatus which shall be at once inexpensive and simple enough to be fitted up by young pupils, and yet capable of giving sufficiently accurate quantitative results.

London: GEORGE BELL & SONS, York Street, Covent Garden.

For many years the work of the college was confined to those branches of study and kindred subjects which were named in the charter of 1828, namely, theology, the Welsh, Hebrew, Latin, and Greek languages, and chemistry. But, in course of time, as the number of students increased, a strong desire was expressed for power to grant a degree as a recognition of merit to successful students. In 1852 a royal charter was granted giving power to grant the degree of B.D.; and the degree of B.A. was added under the charter of 1865. In 1880 the college was the first to be admitted to the privileges of an affiliated college to the University of Oxford, with a view to preparing students for the examinations of Oxford University. The Honours courses at St. David's College have been remodelled on the lines of the corresponding examinations at Oxford. In 1883 the college was affiliated to the University of Cambridge upon conditions analogous to those of affiliation at Oxford. Since the B.A. charter the college steadily progressed both in popularity and efficiency. The remarkable increase in the number of students which took place in the time of Principal Jayne rendered two things necessary—an increase in the teaching staff, and the provision of additional accommodation for the undergraduates. In a few years was seen the erection of the Canterbury Buildings, so called in honour of Archbishop Benson, who laid the foundation stone. In 1884 the College Board founded the College School. The first Head Master was Mr. J. Lloyd Williams, M.A., who was succeeded by the Rev. T. M. Evans, M.A.; the present Head Master being the Rev. W. Ll. Footman, M.A. In 1894 Sir John T. D. Llewelyn gave £5,000 to the college. The interest on this sum is employed in maintaining the W. D. Llewelyn Memorial Scholarship of £50 per annum at St. David's College, and the Dillwyn Llewelyn Memorial Studentships, held by graduates of St. David's College who have availed themselves of the scheme of affiliation with the Universities of Oxford and Cambridge.

The list of Principals and Vice-Principals who have been associated with the college from its foundation until the present day is as follows:—Dean Llewellyn, Principal, 1827–1878; Bishop Ollivant, Vice-Principal, 1827–1843; Bishop Harold Browne, Vice-Principal, 1844–1850; the Rev. Rowland Williams, D.D., Vice-Principal, 1850–1862; Bishop Perowne, Vice-Principal, 1862–1872; Dean Davey, Vice-Principal, 1872–1896; Bishop Jayne, Principal, 1879–1886; Bishop Ryle, Principal, 1886–1888; Archdeacon Edmondson, Principal, 1889–1892; Bishop Owen, Principal, 1892–1897; Principal Gent, and the Rev. Li. T. M. Bebb, M.A., the present Principal.

Dr. Blake Odgers, Recorder of Plymouth, has recently delivered a series of interesting and instructive lectures on subjects in law, in connexion with the Faculty of Law in the University College of Wales, Aberystwyth. At the beginning of the session, he gave the inaugural address on "The Work of the School of Law." He said that, if the school did nothing else than teach the future practitioners of Wales to think and to express themselves clearly and in their proper order, whether in speech or in letters of instruction or recitals of title deeds, that School of Law would have done the State a service, and have saved much public time. It was a matter of regret that the laity neglected the study of law. The law of England was worthy of study. To England the whole world had come for lessons of the law of freedom, and should they pretend that this, their birthright, was of no value? The study of the law was of great value as an educational factor, and he would place it next to mathematics and classics as a training for the mind. The progress and well-being of the nation depended upon its legal system. A school of law should not be a training-ground for future lawyers only, but should open its doors to all future citizens of the State. He advised the women students to study law, for they, too, would find it useful in their after life. The work of research called for more labourers, and they were sadly in need of a good modern text-book upon this subject. It was possible that foreign nations might have found a true solution of some difficulties which still troubled them in England, and he would suggest that they should get up a comparative history of the law of modern nations, and also embark upon a quest of the ancient laws of Wales. Our law-making was at present at a low ebb. It turned out a vast quantity of material, but it was poor stuff. The present condition of our law was a bar to the real study of it. Much could be done by the Law School in giving to law a lucid expression and scientific arrangement.

Sir Alfred Thomas, M.P., presided at the annual meeting of the Welsh University Association for the Furtherance of Social Work (Cardiff Branch). The first annual report, read by the Hon. Secretary (Miss Lilian Howells), stated that the membership of the women's club at the settlement in Portmanmoor Road, Splott, was forty-five, of the girls' club thirty-five, and of the boys' club forty-five, while the men's club is in a transitional stage. Sewing, singing, drill, wood-carving, and the three R's were taught, the idea being to promote the artisan and tradesman spirit rather than to make lads indifferent clerks. A holiday fund is in contemplation. Mr. H. M. Thompson (the Treasurer of the University College), in moving the adoption of the report, touched upon the self-sacrifice of one of the college staff in leaving his home in the country to take up his home near the centre of the Association's work. The reports were adopted. Lord Tredegar was elected President for next year.

The report of the Council of the University College of Wales, Aberystwyth, for the year ended June 30 has been issued, and shows that the number of students at the beginning of the Michaelmas term, 1901, was 476. It also contains extracts from the reports submitted by the heads of the various departments. In October, 1901, the Faculty of Law was inaugurated, and the result of the year's work confirms the opinion entertained that there existed in the Principality an urgent need for a University training in law, chiefly intended for members of the legal profession, but suitable also for all students who desired to study the methods of law and legislation. Twelve lectures on English law relating to commerce were given at Swansea from January to April, and a similar course at Llanelly.

SCOTLAND.

The winter session of the Universities has begun, and, following an old custom, several of the Arts Professors in Edinburgh have given, or attempted to give, special introductory lectures on subjects related to the work of their chairs. These lectures are open to the public, and the Professors have found them a convenient means of speaking about their own studies, or the general work of the University, to a larger audience than that of the class-room. The delivery of them has also had the advantage of increasing the ordinary citizen's interest in the University by enabling him to know something of its teachers and their methods and opinions. Edinburgh and St. Andrews are the only Universities in which the custom has been maintained in recent years, and this year the lectures given in Edinburgh have been so seriously interrupted by the disgraceful rowdiness of a section of the students that the Professors can hardly be expected to continue the practice in future sessions. It is to be hoped, however, that the advantages of the custom may be secured in some other way—for instance, by a series of free lectures once a month, such as, during recent years, has been successfully given in Glasgow.

In his introductory lecture at Edinburgh, Professor Laurie discussed the work of the Commission on Physical Training, which has recently been taking evidence in Scotland, and the English Education Bill. With excellent common sense he pointed out that it was possible to give too much attention to physical training and too little attention to physique. Physical training without a good physical basis would come to nothing. Commenting on the Education Bill, he strongly defended the measure from an educational point of view. Speaking as an educationist, he said deliberately that no Education Bill had ever been laid before the British Parliament so wide-reaching in its probable effects and so likely to promote the highest educational interests of Great Britain as the Bill which is at present before the House of Commons, and he defied any man who looked at the question from a purely educational point of view to hold any other opinion.

At St. Andrews Principal Donaldson discussed the work of the Carnegie Trust, explained the pressing needs of the University, and gave an historical account of its endowments. Prof. Edgar, on his induction to the Chair of Education at St. Andrews, gave an inaugural lecture on "Scottish Education," and similar inaugural lectures were given at Glasgow by Prof. Latta, of the Logic Chair, on "The Old Mysticism and the New Pluralism"; and at Aberdeen by Prof. Baillie, of the Moral Philosophy Chair, on "The Relation of the Individual Thinker to the History of Philosophy." At St. Andrews much interest has been taken in Mr. Haldane's first series of Gifford Lectures, a portion of which has just been delivered to large audiences.

Mr. Carnegie has been installed as Rector of St. Andrews, and has given a characteristic address on "The Industrial Ascendency of the World." At the other three Universities rectorial contests are in progress, with the usual amount of good-natured undergraduate rioting. The candidates at Glasgow are Mr. Morley and Mr. Wyndham, at Aberdeen Mr. Asquith and Mr. Ritchie, the Chancellor of the Exchequer, and at Edinburgh Sir Robert Finlay and Sir Edward Grey.

Mr. Carnegie has given £1,500 to St. Andrews for the foundation of a Union for the women students.

A public meeting of professional and business men who disapprove of the recent regulations of the Scotch Education Department regarding modern languages in the Leaving Certificate Examinations, has been held at Glasgow. At this meeting resolutions were passed condemning the regulations in so far as they enforce Latin on all candidates for the Leaving Certificate who take two foreign modern languages, and in so far as they make it impossible for candidates to obtain the Certificates by taking two modern languages (instead of Latin and one other language) along with English and mathematics. In the opinion of the meeting the present regulations will have the effect either of lowering "the high standard otherwise obtainable" in modern languages, or of causing "over-pressure in the struggle to attain that standard." A committee has been appointed to give effect to the resolutions, and this committee is intended to be "the nucleus of an association whose aim will be to secure for modern languages in all educational tests that equality with ancient languages which is due to their value and importance."

IRELAND.

The Board of Trinity College, Dublin, are about to erect a new laboratory for electrical and mechanical engineering, a building which is necessary if the School of Engineering is to keep pace with the extended scientific requirements of the present day. A new Lecturer in the practice of Electrical Engineering has also been appointed—Mr. Tatlow, B.E.—as practical engineer to supplement the theoretical teaching in electricity given by Mr. Thrift, the Professor of Experimental Physics. The laboratory will have all the necessary equipment. All students of engineering will be required to study, up to a certain stage, electrical engineering, while those devoting themselves specially to this branch will do so in their third year. An optional fourth year's course will enable students to take special diplomas in electrical engineering. The mechanical engineering work will be under the direction of Mr. Tilly, Assistant to the Professor of Engineering.

This step to develop the science teaching of Trinity College is in the right direction. There are likely to be large openings shortly in Ireland for scientific men as science teachers and in manufactures and other commercial enterprises. It would be well if the Board would also endeavour to improve the teaching of natural science. At the recent Science Conference at Alexandra College, Prof. Howes dwelt strongly on the deplorable condition of natural science in Ireland. In Trinity College the biological teaching has been in a deficient state for some time. In the Queen's Colleges one hapless lecturer is expected to teach zoology, botany, geology, palæontology, crystallography, and anything else that may be placed in the category of natural science. In the Royal College of Science, Stephen's Green, an institution which is in a transition state, and is destined to be the centre of scientific research and instruction in connexion with the Department of Agriculture and Industries, the biology at present taught is of a technical kind required in practical applications to agriculture. Students of the Royal University and others find it thus almost impossible to receive any adequate teaching or laboratory facilities in biology. At the same time, teachers of the subject will soon be required in considerable numbers for the science courses in general and agricultural schools.

At the recent celebration of the Tercentenary of the Bodleian Library, Trinity College, Dublin, was represented by Dr. Mahaffy, Prof. Bury, and Prof. L. C. Purser—all on the classical side—and Dr. Abbott as Librarian, while Mr. T. W. Lyster represented the very successful National Library of Ireland, an institution which, with a scandalously poor provision from Government, has been made an immense boon and means of culture to vast numbers of students and other readers, mainly through Mr. Lyster's skill and indefatigable zeal and helpfulness. Mr. Bury, the distinguished scholar, and Professor of Greek in Trinity College, Dublin, was among those who received honorary degrees at Oxford.

All the associations connected with secondary education have in the course of the last eight weeks sent in suggestions and resolutions to the Intermediate Board, that body having said, when declining to form a Consultative Committee of Heads of Schools, that they would be glad to receive recommendations from teachers, and that these should reach them by November 1, shortly after which date they would commence the drawing up of their rules and programme for 1904. The general feeling among the heads of schools is one of great dissatisfaction with the present arrangements, owing to their complexity and the undue amount and difficulty of the work they entail. The six subjects a pass in all of which is necessary for a pass in the examination are, by the system of grouping adopted, all subjects requiring a good deal of work. The greater quantity of original work in mathematics and of translation and composition at sight in languages now required increases the difficulty. In the three higher examinations, also, there are distinct Pass and Honour examinations, and the pupils, after the Preparatory Grade, are compelled to take up some special group of studies. All these regulations (to which may be added the expensive laboratories required in science) are exceedingly difficult, especially for small and poor schools, which abound in Ireland. To other grievances have now been added the numerous failures in the Preparatory and Junior grades at the examinations in June. Only about 50 per cent.—if as much—of those entering passed. The Boards had previously announced that "All the questions on the Pass Examination papers shall be of such a character as to be capable of being answered by a student of average ability, fairly well taught. The Pass papers will be specially revised with this view." No such revision appears to have been made. Some of the papers were quite unsuitable to school pupils. The marking may have been severe, or the difficulty of the courses may have caused the failures, which have had a demoralizing effect on both teachers and pupils everywhere.

The Teachers' Guild, in their memorial, dwell on these results, and especially note the failures in drawing. They also object to the system of only permitting students to take one group, as the average boy or girl usually has no special talent for special subjects, and the system leads to injustice. They hold that the modern literary course is too difficult; that the mathematical course should include at least one foreign language; that in the three higher grades drawing should be separated from science; that the results of the examinations should

be published as heretofore, in pamphlet form, but with only the examination numbers of the pupils given; and that the papers in English composition should be judged by two independent examiners.

The Protestant Schoolmasters' Association agree with most of these recommendations. They also ask that a system allowing greater freedom to individual schools shall be adopted, and object to specialization in groups earlier than the Senior Grade. They ask that teachers should be allowed to present their pupils for pass in any grade they think suitable. They object to the difficulty of the courses, and of certain books.

The Association of Catholic Head Masters dwell on the too great difficulty of the courses, the examinations and the conditions of passing, and on the inconvenience to schools and injustice to pupils arising from the system of grouping. They object to all subjects being assigned equal marks irrespective of their value and importance, and to certain books placed on the course as unsuitable. The Association also adopted the suggestions made by certain convents through their Convent Schools Committee, that separate courses (in some degree) should be set for girls, in which music, needlework, and practical domestic economy should have a place. Were this adopted, it would be likely to lower the standard of girls' education throughout the country. The Protestant Head Mistresses' Associations are also about to send in criticisms and suggestions.

The Science Conference recently held at Alexandra College is to bear permanent fruit. On the invitation of Mr. W. M. Hiller, Organizer of Science Teaching under the National Board, an Association of Teachers is proposed to be founded for the special study of educational methods.

SCHOOLS.

ASHBY-DE-LA-ZOUCH.—The new Grammar School for Girls was opened by the Marquis of Granby, Lord-Lieutenant of the County; Sir Charles McLaren, M.P., and Sir William Abney took part in the ceremony. The school building is designed to accommodate 180 pupils, and the head mistress's house will provide room for the staff and 38 boarders.

CARLISLE HIGH SCHOOL FOR GIRLS.—M. E. Harris and W. E. Waddell have obtained Higher Certificates. M. E. Harris gained distinction in English, and both were distinguished in Botany, M. E. Harris being awarded the Somerville Prize; she has also gained the Westmorland County Council Major Scholarship and a University scholarship at Aberystwyth. Miss Frost has left the school, and Miss Longridge has taken her place.

CITY OF LONDON SCHOOL FOR GIRLS.—The annual distribution of prizes was held on October 8. The Lord Mayor, accompanied by the Lady Mayoress and Sheriffs, attended in full state, and, on their arrival, were received by the School Chairman and Committee. The proceedings opened with the report of the Head Mistress, who stated that, for the first time, open scholarships were gained this year for Newnham, Holloway, and Westfield Colleges, and quoted extracts from the report on the annual examination by the Oxford and Cambridge Joint Board, which gave evidence of the general efficiency of the school. After the report the pupils sang some part songs, and, subsequently, the prizes were distributed by the Lady Mayoress. The successes in public examinations recorded during the year, in addition to the open scholarships above-mentioned, included: five Oxford and Cambridge Joint Board Higher Certificates and three Letters, with two distinctions in English and one in French; twelve Lower Certificates, with twenty-two First Classes in the several subjects. Cambridge Higher Local Examination: L. M. Elligott (Group B, First Class, distinguished in Latin and French; Group C, Second Class, distinguished in Arithmetic; Group H, First Class; gained a prize of the value of £3. 10s.); B. E. Allpress (Group B, First Class, distinguished in German; Group C, Third Class); E. M. L. Griffiths (Group B, Second Class; Group C, Third Class; Group H, Second Class); E. Jasper (Group C, Second Class, distinguished in Arithmetic; Group E, Second Class). Six girls passed the London Matriculation in the First and four in the Second Division, and, on the result, E. Stroude gained a St. Dunstan's Exhibition. E. M. L. Griffiths passed the London Intermediate Arts and E. Jasper the London Intermediate Science Examination. Société Nationale des Professeurs de Français en Angleterre: M. R. Mosbach Amy, Prize for Essay and Honourable Mention for Conversation; B. E. Allpress, Honourable Mention for Reading and Dictation; L. M. Elligott, Honourable Mention for Narration and Essay. The Certificates gained for music included a Special Certificate for pianoforte playing in the Local Centre Examination of the Associated Board R.A.M. and R.C.M.; and, in the Royal Drawing Society's Examination, thirty-three Honours and forty-eight Pass Certificates were gained.

EDGBASTON CHURCH COLLEGE.—An entertainment was given on Saturday afternoon by the girls of the Edgbaston Church School, at their college in Calthorpe Road, before a crowded audience, in aid of the Birmingham Children's Hospital. The first part of the programme consisted of scenes from "Cranford," a short play in which the performers thoroughly entered into the spirit of the piece. Scenes from

(Continued on page 744.)

The Red Letter Library.

Write for
Detailed
Prospectus.

MESSRS. BLACKIE & SON have pleasure in announcing the issue of a new and, in many respects, unique series of selections from the great masters of English Literature. The RED LETTER LIBRARY makes a double claim—literary and artistic. It selects from the vast treasury of our literature the brightest and purest gems, the priceless heirlooms of the language, and these it presents in a setting which it is hoped will be found as worthy as the arts of printing and bookbinding can compass.

The first four volumes consist of poems from the works of—

- (1) TENNYSON.
- (2) ELIZABETH BARRETT BROWNING.
- (3) WORDSWORTH.
- (4) ROBERT BROWNING.

Each of these four volumes is edited by **Mrs. ALICE MEYNELL**, who contributes a vignette introduction, biographical and critical. It is scarcely necessary to add that **Mrs. Meynell** is not only by general consent among the most eminent of our modern poets, but occupies an equally high place as a critic. Other volumes of prose and poetry will shortly be announced.

Size: Length 6 in., width $4\frac{1}{4}$ in., thickness $\frac{3}{8}$ in.

Price: Cloth, gilt top, 1s. 6d. net; Leather, gilt top, 2s. 6d. net.

LONDON: BLACKIE & SON, LTD., 50 OLD BAILEY, E.C.

NEW AND REVISED EDITION.

English History Note Book - -

BY M. A. ROLLESTON

(First Class Historical Tripos, 1886).

WITH INTRODUCTION BY

REV. T. W. SHARPE, C.B.

(Principal of Queen's College, London,
and late H.M. Senior Chief Inspector of Schools).

Throughout the work every effort has been made to simplify and ease the work of the Student.

The connexion between events belonging to the same series, but separated from each other by events of another kind, is shown, and references backwards and forwards are given to other events of the same series when separated by a considerable space of time.

Valuable appendices giving Summaries of the Histories of (1) Ireland, (2) Scotland, (3) Wales, (4) Greater Britain, (5) India, (6) the Army, (7) the Navy, (8) the Church, (9) the Constitution, (10) Relations of England to France, together with a Glossary and Index to the whole work, are included.

PRICE 3s.

Specimen pages forwarded on request.

"We do not know that we could recommend any work more cordially than we can this Note Book of Miss Rolleston's."—*Secondary Education*.

"A *multum in parvo*, at once a chronology and a pocket dictionary of English history, with notes for essays interspersed."—*Journal of Education*.

"An excellent summary of English history."—*School World*.

"Miss Rolleston's work steps at once into the front rank of such books, alongside of the familiar 'Acland and Ransome,' and the less known but meritorious 'Analysis' of Professor Tout. Practically, in fact, it combines the chief features of these two books, with additions and improvements."—*University Correspondent*.

"Alice through the Looking-Glass" followed, the younger members of the school taking the characters.

HELENSBURGH.—The formal opening of the new buildings and the distribution of the prizes of last session took place in the Lecture Hall of the school on the afternoon of Saturday, October 11. There was a large attendance of ladies and gentlemen. Principal Lindsay, D.D., Chairman of the Board of Directors, presided. He acknowledged the encouragement and support which the inhabitants of Helensburgh had given to the Directors in their scheme for developing the school. The Rev. Dugald Butler, Edinburgh, presented the prizes and gave a highly interesting address on the history of Saint Bude. After songs by the singing class, Miss Renton, Head Mistress, made a short speech in which she indicated certain features in the buildings worthy of attention. Thereafter, the buildings were thrown open for inspection. The school, which is splendidly situated and stands in large grounds, has excellent class-rooms, well lighted and well ventilated; studio, music-rooms, mistresses' rooms, dining hall, cloak-rooms, &c. There is a very fine lecture hall with lofty open timber roof; the hall itself will seat three hundred people, and there is besides, a spacious, raised platform at one end of it. Within the grounds is a specially levelled and thoroughly drained hockey field. The architect of the buildings was Mr. A. N. Paterson, A.R.I., B.A., Glasgow, for whose taste in choice of colouring and artistic decoration there was nothing but praise from all present.

JERSEY, VICTORIA COLLEGE.—The King's Gold Medals went this year—for Mathematics to T. W. Dickson; for Modern Languages to H. K. Simonet. The gold medal for French, given by the States of Jersey, was won by C. F. Balleine, and the King's Prize for English History by H. K. Simonet. O. D. Bennett passed into Sandhurst sixth direct from the school at the last Army Entrance Examination. A. B. de Veuille and C. F. Colson both obtained assistant clerkships in the Navy. H. du Parc, Scholar of Exeter College, Oxford (O.V.) has been elected President of the Union. The college celebrated its Jubilee on July 29, having been opened in September, 1852. After the usual distribution of prizes in the big schoolroom, a move was made to the new school-house buildings, which were formally opened, though they have been in occupation for some months, by the Bailiff of Jersey. In the afternoon the usual cricket match—*l'ast v. Present*—was played on the school ground, tea being provided in the school-house. In the evening a large number of Old Victorians assembled at the annual dinner, which was held this year, by special permission of the Governing Body, in the big schoolroom. The weather was all that could be desired, and the proceedings went off with great *débat*.

KENDAL HIGH SCHOOL FOR GIRLS.—The annual speech day and prize distribution was held on October 3 in the Kendal Town Hall. The Rev. Canon Trench, Vicar of the Parish Church, presided, and the audience was large and influential. Very satisfactory reports of the progress of the school during the past year were read by the Head Mistress, Miss Warren, B.A., and by Miss Cropper, Hon. Sec. of the Local Council. A most interesting address was given to the girls by the Rev. Canon Rawnsley and the prizes were distributed by Mrs. Rawnsley. The proceedings were varied by a musical programme, successfully rendered by the pupils.

LONDONDERRY, STRAND HOUSE SCHOOL.—At the Matriculation Examination Emma Moffatt gained the Drapers' Scholarship, £105, and won £12 exhibition with Honours in Latin, French, English; Ada Orr obtained good honours in French at the first University Examination; Hettie Foster retained the Irish Society's University Scholarship, £30; Netta McKay and Emma Porter passed the Second University Examination, and Jane McAult obtained the B.A. degree. We have on the staff this term Miss Costello, M.A., Classics; Miss Neilson, B.A. Honours, Modern Literature; Miss Peacock, B.Sc.; Miss Graham, B.A.; Mr. Barbour, M.A., Mathematics; Miss Montgomery, Miss Porter, Miss Spooner, Miss Fergus, Miss Scott, Miss Nicol, N.F.U.

PENARTH COUNTY GIRLS' SCHOOL.—The following pupils have gained certificates at the summer examination of the Central Welsh Board:—Senior Certificates: Mabel Spence, Gwladys Jenkins, Matilda Evans. Junior Certificates: Ella Lloyd Atkinson, Nora Lloyd Atkinson, Agnes Gullen, Gladys Howe.

QUORN (LOUGHBOROUGH), THE RAWLINS SCHOOL.—The scholarships held by Nellie Saunders, J. Burrows, T. Hack, and T. G. Wesley have been renewed. F. Harriman and Vera D. Turlington have gained scholarships at the examination recently held, and three additional scholarships in commemoration of the Coronation have been awarded to Beatrice Moore, C. V. Newman, and Maud Disney. C. V. Smith has passed the Oxford Junior Local Examination in Third Class Honours; Martha Hack and H. H. Proudfoot have passed the Oxford Preliminary Local Examination; C. V. Smith has also been awarded a Junior County Scholarship. The tenth annual prize distribution took place on Monday, October 27, when the prizes were distributed by Mr. Thomas Cope, J.P., chairman of the Leicestershire Technical Education Committee. It is proposed to place in the large school-room a memorial to commemorate the services of five former pupils during the late Transvaal War; of these one died of enteric, one was dangerously wounded in action and left for dead by the enemy, one was slightly wounded, and one was invalided home. Only

one of the five escaped wounds and disease. An improved form of adjustable wall drawing-boards for free-arm drawing, invented by the Head Master, has been fixed in one of the class-rooms, and gives entire satisfaction.

ROSSALL SCHOOL.—The three Leaving Exhibitions, given on the results of the Summer Examination, fell to Batley, Peshall, and Storror. Mr. Mahir has left us after nearly twenty years' work at Rossall, in which he has enkindled a universal feeling of affection and attachment. We part from him with very great regret. He is succeeded by Mr. G. H. Anthony. The Memorial Scheme has raised all the money required, and the work is to be put in hand immediately. In cricket, we defeated Leatham, but lost to M.C.C., Birkenhead Park, and Old Rossallians. Cordners were again champion house, and first in the Senior League; Furneaux were first in the Junior. Fabel was first in the batting averages, F. H. Mugliston first of the regular bowlers. For our Photographic Exhibition, R. H. Newton, of Loretto, gained the Strangers' Prize. In the Board Examination we gained twenty-four passes, with two Greek distinctions, four Scripture, two History, three Mathematics. S. F. Peshall had three, none of them in the "soft option" of English. Our losses at the end of last term were unusually heavy, but it is gratifying to find that the influx of new boys has compensated for them. The result is a very considerable drop in the average age of the school.

STREATHAM HIGH SCHOOL.—In the Higher Local Examination E. Milner obtained First Class Honours, with one distinction; G. Quilter obtained Second Class Honours, with two distinctions; two other candidates obtained Second Class Honours, with one distinction; and one candidate passed in Physiology and French. In the Oxford Locals all the Senior candidates passed, one in Honours; all candidates passed the Junior, one in Second Class Honours with distinction in Scripture History and Literature; and three Preliminary candidates passed, one with distinction in Scripture. In the Examination of the Royal Drawing Society eleven passed in Honours, and eight sheets out of ten were commended at the Annual Exhibition. In the School Examination of the Associated Board of the Royal Academy and Royal College of Music two girls passed, one in Honours; while in the Examination of the Froebel Institute K. Kemp obtained the Higher Certificate, Part I., and G. Wynne her Elementary Certificate. At the Nature Study Exhibition held in London during July, 1902, thirteen medals were awarded for the exhibits of various educational bodies of Great Britain, America, and the English Colonies, of which one was won by Streatham High School.

TONBRIDGE SCHOOL.—The following distinctions have been gained since the end of last term:—R. J. E. Tiddy, A. M. Morley, Class I., Lit. Hum.; L. F. Begbie, J. C. H. Fowler, Class II., Lit. Hum.; H. J. Wood, Class II., Modern History, Oxford; M. L. C. Taylor, L. F. Begbie, J. C. H. Fowler, Indian Civil Service; R. J. E. Tiddy, a Fellowship at University College, Oxford; J. K. Dawson-Scott, Royal Engineers; A. Lethbridge, Sandhurst Entrance; W. T. Beckett, George Stephenson Gold Medal. Mr. W. Newbold, Demy of Magdalen College, Oxford, has joined the staff this term, in place of Mr. D. A. Macnaughton, who has been appointed one of H.M. Inspectors. The Head Masters' Conference will be held this year at Tonbridge, on December 22 and 23.

UNIVERSITY COLLEGE SCHOOL.—Thirteen boys have passed the London Matriculation in the First Division. J. Pyke has entered the Royal Military Academy, Sandhurst, and E. V. Ellis has been admitted to Coopers Hill, Forestry Department. J. Buller has taken the thirteenth place on the list of successful candidates for the County Council Clerkships. C. F. N. Leahy has matriculated at the Central Technical College. Seven boys have gained the Higher Certificate of the Oxford and Cambridge Joint Board, with seven marks of distinction. Among Coronation Honours for Old Boys, we have one baronetcy, four knightships, one Order of Merit, one C.M.G., one K.C.B., two C.B.'s one lieutenant-colonelcy, one brevet colonelcy. We have to record with regret the loss of three drawing masters from the staff. Mr. F. G. Stephens was a drawing master for forty-eight years, and was chief drawing master since the death of Mr. Fisk. It will be remembered that Mr. Stephens was one of the Pre-Raphaelite Brotherhood. Mr. Louis Walter was a drawing master for thirty-eight years; he frequently exhibited at the Royal Academy. Mr. R. S. James was a drawing master for thirty-nine years, and it is with the greatest regret that we record his recent death. He was Curator of the Life School of the Royal Academy, and since 1863 he was frequently represented at the Royal Academy's Exhibition. There have been these additions to the staff:—Miss J. B. Reynolds, for commercial geography; Dr. E. R. Edwards, of Selwyn College, Cambridge and Paris, for modern languages; Mr. Bertram Jacobs, LL.B., for the British Constitution and commercial law; Mr. F. F. Bush, formerly at Clifton College and the Bristol School of Art, chief drawing master; Mr. F. Elliott and Mr. R. G. Eves, drawing masters. Towards the end of the summer term the Head Master gave a lecture in the Botanical Theatre of the College on "The Bayeux Tapestry," and on October 23 Mr. F. W. Felkin, M.A., assistant master, lectured on "The Origins of Greek Civilization." A memorial to our Old Boys who fell in the war

(Continued on page 746.)

READY IN A FEW DAYS.

CASSELL'S NEW FRENCH DICTIONARY.

FRENCH-ENGLISH. ENGLISH-FRENCH.

Edited by JAMES BOÏELLE, M.A.,

Officier d'Académie; sometime Examiner in the University of London.

1,220 pp., strongly bound in cloth, 7s. 6d.; or in half leather, 10s. 6d.

Whilst this Dictionary is based on the present edition of Cassell's French Dictionary, it is virtually a NEW WORK. For over four years Prof. Boïelle has been engaged in its preparation, and during that time has expended enormous labour in the compilation of a volume which, it is believed, is far in advance of any Dictionary of its size ever published. The following are some of the features which distinguish this great work:—

1. It is set in a new type specially selected for its clearness.
2. It consists of over 1,200 pages, and is beautifully printed on paper of excellent quality.
3. Many thousands of new words and phrases, idioms and idiomatic expressions, and hundreds of proverbs with their English equivalents, have been selected and included after extensive research.
4. The latest classical, general, scientific, commercial, and naval and military terms are incorporated.
5. The pronunciation of words where necessary is carefully indicated.
6. In the English-French part the notation of words has been carefully marked throughout.
7. The different prepositions governing verbs have been printed in bold clarendon type.
8. The list of geographical names of countries and places has been largely added to.

RODNEY & Co., Ltd.

(Associated with the Educational Supply Association),

Offer members of the SCHOLASTIC PROFESSION the means of obtaining *sound, reliable, and artistic* Furniture (whether for Cash or Credit) on exceptionally advantageous terms.

RODNEY & Co. have been established to supply Teachers with Household Furniture, and supply other Requisites at Wholesale Prices, in the same way as the Educational Supply Association supplies them with General School Material. The want of such a firm has been long felt—a firm with whom teachers may do business with every confidence—thus avoiding the excessive charges but too often made, and the unscrupulous methods of business but too often pursued, by many of the advertising Furniture houses.

RODNEY & Co.'s connexion with the Educational Supply Association will, it is thought, be sufficient guarantee of their superior methods of doing business. One price only charged, the Cash purchaser having a liberal allowance made him for immediate payment, and the Credit purchaser being charged only a reasonable rate of interest for the convenience afforded him.

FREE LIFE ASSURANCE To Credit Customers) covering Unpaid Installments in the event of Death.

in South Africa has been put up on a wall of the playground. It consists of a bronze tablet on a marble slab, and was designed, paid for, and put up by Old Boys. The Right Hon. Joseph Chamberlain, M.P. (Old Boy), has promised to unveil the tablet on November 5. A reception of parents and friends was held at the school on July 9, on the occasion of the boys' "hobbies" exhibition. One of the most original features was a series of caricatures by S. Boyd, which had the merit of combining good taste with fertility of invention. A prize was given to the young artist and humourist, for which piece of liberal originality Mr. Owen Seaman, in the pages of *Punch*, addressed his old school-mate, Mr. J. L. Paton, the Head Master, in verses of glowing eulogy. The annual camping-out was at Wallerswick, Suffolk, and was as great a success as ever.

PRIZE COMPETITIONS.

The Translation Prize for October is awarded to "Quidam."

As some of the Holiday Prizes are still unclaimed we reserve the list of winners till next month.

Thiers a un front large et intelligent, des yeux vifs, un sourire fin et spirituel. Mais à l'aspect, il est trapu, négligé, vulgaire. Il a, dans son habit, quelque chose de la commère, et dans son allure quelque chose du gamin. Sa voix nasillarde déchire l'oreille. Le marbre de la tribune lui va à l'épaule et le dérobe presque à son auditoire. Disgrâce physique, défiance de ses ennemis et de ses amis, il a donc tout contre soi, et cependant, lorsque ce petit homme s'est emparé de la tribune, il s'y établit si à l'aise, il a tant d'esprit, qu'on se laisse aller, malgré qu'on en ait, au plaisir de l'entendre.

Il baisse d'habitude la tête sur son menton, lorsqu'il se dirige vers l'estrade; mais lorsqu'il y est grimpé et qu'il parle, après un peu de silence, il relève si bien la tête, il se redresse si haut sur la pointe des pieds, qu'il domine toute l'assemblée. Il a une sorte de talent à part qui ne ressemble, de près ni de loin, à celui de personne. C'est de la causerie, mais de la causerie vive, brillante, légère, volubile, animée, semée de traits historiques, d'anecdotes et de réflexions fines, et tout cela est dit, coupé, brisé, lié, délié, recousu avec une dextérité de langage incomparable. La pensée naît si vite dans cette tête-là, si vite, qu'elle est enfantée avant d'avoir été conçue. Les vastes poumons d'un géant ne suffiraient pas à l'expectoration des paroles de ce nain spirituel.

Vous ne le trouverez jamais en défaut sur rien; aussi fécond, aussi vif dans la réponse que dans l'attaque, dans la réplique que dans l'exposition. J'ignore si sa réponse est toujours la plus solide, mais je sais qu'elle est toujours la plus scieuse.

J'aime ce discoureur naturel, vif, à la libre allure. Il converse avec moi et ne déclame point. Il ne psalmodie pas toujours sur le même ton. Il finit bien, à la longue, par m'étourdir de son babil; mais c'est une espèce de gazouillis qui me délasse encore de la monotonie oratoire, cet éternel ennui, le premier des ennuis pour un auditeur.

By QUIDAM.

Thiers has a broad, intellectual brow, bright eyes, and a shrewd, humorous smile; but in appearance he is squat, untidy, plebeian. His dress reminds one of a gossiping crone, and his movements of a street urchin. His nasal delivery grates upon the ear. The marble tribune reaches to his shoulders and almost conceals him from his audience. Everything, then—physical deformity, distrust of friend and foe, everything is against him. Yet when this *homunculus* is in possession of the tribune he makes himself so at home there, and is so witty, that, do what you will, you give yourself up to the pleasure of listening to him. He habitually sinks his chin on his breast whilst making his way to the rostrum; but, once he has climbed thither, and after a short silence is speaking, he throws back his head to such good purpose, and raises himself so high on the tips of his toes, that he towers over the whole audience. He possesses a kind of exceptional talent that is absolutely and entirely his own—a flow of chatty converse, at once bright, sparkling, sprightly, digressive, and animative, bristling with historical touches, anecdotes, and subtle reflections, delivered, moreover, with many a break, the thread here lost, there resumed, again dropped, again picked up—all with incomparable felicity of expression. Thoughts well up so quickly in that brain of his that they ripen to words before they have taken shape. The huge lungs of a giant would not suffice to give vent to the words of this clever dwarf. Never on any point will you find him at a loss. He is as resourceful and ready in parrying a question as in pressing an attack, in replying to hostile arguments as in marshalling his own. I know not whether his reply be always the sounder, but I do know that it is always the more plausible.

I like this man, with his unaffected, brisk, free and easy discourse. He talks to me, not at me, and he does not drone on ever in the same sing-song tone. In the long run, maybe, he ends by exhausting me with his

prattle; but 'tis a kind of bird chatter, which is still a relief from monotonous speechifying—that everlasting, that prime, bore to the listener.

We classify the 230 versions received as follows:—

First Class.—Grizel, Estudiantina, 100,000, Glenleigh (?), La Reine Margot, F.G.B., Princess Maud, Peter Quince, E.H.O., Chemineau, Jarno, H.J.J.K., Corbar, Quidam, Carnbhren, Lillas, Jill, Peashooter, Tadpole, C.C.C., Polignac, Emilia, L.J.C., Chingleput, Wrangle, Victa, Chota Pagul, Gänseblume.

Second Class.—Calliope, A.H.C.T., Napier, Silverpen, Joe, Impotens, Cwm, Cara, Alastor, Alboni, Crescent, Mère Fossette, Emilia, Ysgol, A.H.O.G., Bee, Fox Beeswax, Fortis et Fidelis, Bon-accord, Bacchus, M.E.R., Nescio quis, Altnacolle, M.M.C.P., Mac, Megan, M.M.M., Hertz, Dahlia, Teinturier, Borealis, Shamrock, Great Western, Primrose, Merrybent, Cos (a + b), H.H.R., Gonéry, H.A.E., Hips and Haws, Imp, Lotus, Fénélon, Crate, Kingstona, P.L.T., Syrtis, Veretz, Isa: Heb:, B.M.D.M., Duplex, Gothicus, Whitehall, Africander, Shekkles, Ursuline, Lancing, V.C., A.P.W., Gallio, Wulfrun, Merrythought, Usurper, A.P.W., A Lover of History, Soupçon, Egea, Tête Blanche, E.M.W., Prestkrage, Eothen, Endirby, J.M.A.L.

Third Class.—Vincio, Vincor, Blanchemin, Nénuphar, Yvonne, Colleague, Voresscott, Bastogne, P.J.E., Monna Lisa, Rayon, Cypher, France, Atir, Whitwarrer, Frig, Blobs, Osceola, Turleum, E.N.D.E., Tribord, Båbord, Dunnabie, Tchichi, E.M.C., Margery, Francesca, Mars, Young April, Gaud, φα, Bernardine, A.L.O.A., Cantabridgia, Gardez bien, H.M.A., Birdie, E.W.H., Noirmont, Radium, Ulysses, E. Chaddock, Donec, Stella Maris, Stedye, C.G.S.M., Pompey, N.D., Erin, Shark, Mossy, Philip, Grierson, X.Y.Z., Musicus, Nectarine, T.F.C., Hopeless, Trop de famille, F.L.C., W.L., Quamquam, Cyclostyle, C.L.M., Monkey Mab, Marie Stuart, J.Q., Aldar, A.S.F., Rispá, Golden Ford, M.T.R., Beauville, Winchester, L.M.A., Postscript, Elaine, Gas, Marigold, E. Ormond, Numéro trois, Myosotis, Constance Meredith, Penbrockiensis, Wilts, A.F., L.A.B., E.C.H., Anon, Nil.

Fourth Class.—Pudeltreue, B.H., B.M.W., R.L., Oubliette, A.M.H., W.B.P., Tyro, Cyprus, Day Dawn, Devonia, Fiereobt, Tulip, L.M.S., Patna, Kate McPherson, Felicia, Brandon, Vieille, Topaz, Alys, Wanderer, P.C.S., Eveline Hepple.

Fifth Class.—Nimmo, Hourang, Churt, L.A., M.E.G., Carry, First Try, Fan, Corn, Lury, Rogue, V.U., Corbin, Owl, A.U.R.

G. P. PUTNAM'S SONS' LIST.

NEW VOLUMES.

Heroes of the Nations Series.

Fully Illustrated, crown 8vo, cloth extra, 5s. each.

- 34.—**HENRY V., the Typical Mediæval Hero.** By CHARLES LETHBRIDGE KINGSFORD, Joint Author of the "Story of the Crusaders."
- 35.—**EDWARD PLANTAGENET (Edward I.), the English Justinian;** or, The Making of the Common Law. By EDWARD JENKS, M.A.
- 36.—**AUGUSTUS CÆSAR and the Organization of the Empire of Rome.** By J. B. FIRTH, M.A.

Full List of Series sent on application.

CONCERNING CHILDREN. By CHARLOTTE PERKINS (STETSON) GILMAN, Author of "Women and Economics," "In this our World: Poem," &c. Crown 8vo, cloth extra, 2s. 6d.

THE YOUTH OF LA GRANDE MADMOISELLE (1627-1652). By ARVÈDE BARINE. Authorized English Version by L. G. MEYER. With Frontispiece and about 25 Illustrations from Contemporary Sources. 8vo, cloth. About 7os.

THE WORKS OF PRESIDENT ROOSEVELT. 14 volumes, 12mo, cloth, 2s. 6d. each.

1-2. **AMERICAN IDEALS.**

3. **THE WILDERNESS HUNTER.**

4. **HUNTING THE GRISLY.**

5. **HUNTING TRIPS OF A RANCHMAN.**

6. **HUNTING TRIPS ON THE PRAIRIE AND IN THE MOUNTAINS.**

7-12. **THE WINNING OF THE WEST.**

13-14. **NAVAL WAR OF 1812.**

A TEXT-BOOK FOR TRAINING SCHOOLS FOR NURSES. Including Physiology and Hygiene and the Principles and Practice of Nursing. By P. M. WISE, M.D. With an Introduction by Dr. EDWARD COWLES. Illustrated. Two volumes. Crown 8vo, cloth, 5s. each.

ARIEL BOOKLETS. A Series of Productions complete in small compass, which have been accepted as Classics of their kind. With Photogravure Frontispiece, 32mo, flexible red leather, gilt tops, each 1s. 6d. net.

THE SCHOOL FOR SCANDAL. By R. B. SHERIDAN.

THE EVE OF ST. AGNES. By JOHN KEATS.

THE LEGEND OF SLEEPY HOLLOW. By WASHINGTON IRVING.

To be followed by other Volumes.

New Announcement List and Catalogue now ready.

24 Bedford St., Strand, London, W.O., and New York.

IRISH INTERMEDIATE EDUCATION.

IRISH intermediate education has of late bulked rather large in the public eye. It was the subject of a full-dress debate at the Education Section of the British Association, at which papers were read by such well known authorities as Dr. Starkie, who is not only a member of the Intermediate Board, but also resident Commissioner of National Education; Mr. R. M. Jones, a prominent Belfast head master; and the Very Rev. Andrew Murphy, the Chairman of the Roman Catholic Head Masters' Association. In addition, the Intermediate Board have recently published selections from the report of the temporary inspectors for 1901-2. Putting these two sources of information together, a comparatively clear idea may be formed of the present state of secondary education in Ireland and of such reforms as those who are best qualified to speak on the subject consider most pressing.

Most of these critics and appraisers of the existing order of things bore testimony to the eminent services rendered by the Intermediate Board to Irish secondary education in the past. Dr. Starkie remarked on the great stimulus that the money grants had given to Catholic schools, though their effect on the Protestant schools had been less fortunate. Mr. Jones described "the stimulus given by the Act as marvellous." The payment-by-results system, whatever its defects might be, had at least eliminated the charlatan of the Dotheboys Hall type. It had set up a standard to which the most inefficient school must attempt to conform or else go to the wall. He deliberately stated that "the services rendered by the Act and its administrators was a great one, and one that we can never forget." He instanced, among other advantages that it had conferred, the immense impetus it had given to the higher education of women. Unfortunately, the system "had never had a fair chance," though he was careful to add that, if it had had, it would soon have "exhausted its mandate" for merely conducting examinations. The temporary inspectors, also, were by no means blind to the good side of the examination. They speak of the advantage of a stringent, graduated form of examination for producing a certain uniform level of attainment, though they too are quite alive to its defects. To put it in a nut-shell, the order that the Intermediate Board introduced may have been of a rigid kind, but it was infinitely preferable to the chaos which preceded it. In fact, the problem at the present time seems to be to render the system more plastic by introducing new improvements. It is well to bear these facts in mind, in consequence of the somewhat sharp criticism to which it was subjected at the British Association. Reformers should always remember their chief problem is to retain as much as is good in the old system and combine it as far as possible with the new. It is always a mistake, as the Germans say, to throw out the child with the bath water.

According to Dr. Starkie, the various grades of Irish education are suffering from having been too much shut off into water-tight compartments. The result to intermediate education has been to reduce it to a sort of thing *en l'air*, a kind of Mahomet's coffin dangling between the nether regions of primary education and the upper air of University education, with no connexion with either one or the other. Dr. Starkie's remedy is a fusion of the two Boards for Elementary and Secondary Education. This may seem to some too big a step to be taken in a single stride, however much its ultimate consummation may be devoutly hoped for. Less ambitious is his suggestion that some sort of rate-aid should be provided by the County Councils; the lack of some such source of local aid is also deplored by Mr. Jones. It has been suggested, however, that the comparatively recent changes made in the constitution of the County Councils renders their dabbling in educational matters undesirable. Still there remains the system of County Council scholarships—which Dr. Starkie advocated, and which, as one speaker in the debate pointed out, need not be given by the counties, but should rather take the form of scholarships for the separate counties provided by the Intermediate Board and awarded on the results of an examination held by the two Boards conjointly. Such a scheme would make for co-ordination and help to reduce the large amount of "prize money" that the Board have yearly to distribute. If, as Dr. Starkie suggests, the Board should also spend some of their income in providing facilities for the training of teachers, the sum for distribution under the unfortunate system of payment

by results would be further reduced, and the evils of scholastic gambling which have been so prevalent under the old system would lose their main incentive. Mr. Jones was quite as emphatic as Dr. Starkie on the need of raising the status and emoluments of the assistant master. There are, of course, serious difficulties in the way. The religious orders have practically driven the lay Catholic teacher out of the field, not so much by boycotting, as Mr. O'Donnell suggests, but by simply underselling him. It might be argued that any such remedial measures must come too late. One might as well extend the benefits of the Wild Birds Protection Act to the dodo. The Catholic lay teacher, however, though comparatively a *rara avis*, is by no means extinct. A more serious difficulty lies in the fact that it is obviously impossible for the Board to frame any scheme for regulating the salaries of members of the religious orders, whose earnings do not in any case belong to them, but, according to the rule of the order, form part and parcel of the funds of the community. What the Board might do would be to ear-mark the money earned by the schools as far as lay teachers, Protestant or Catholic, were concerned; and, if the religious orders chose to employ such persons, they would have to pay the minimum rates fixed by the Board. By the same method the Board could, in the long run, screw up the standard of qualifications for lay teachers in those schools which accepted its subsidies.

The two chief administrative changes introduced last year by the Board met with very divergent treatment from the three critics. While, with certain reservations, the principle of inspection was very sympathetically received, the alterations in the Board's system of examination were very roughly handled. Father Murphy was especially vigorous in his condemnation of the new division between pass and honours papers, the raising of the standard for a pass from 25 to 40 per cent., and the increase in obligatory subjects from four to six. He evidently regarded the new departure as a complete failure. In fact, he described the present position as one of "unstable equilibrium"; either they must return to the simple examination or go forward to unencumbered inspection. Mr. Jones was equally unfavourable. He saw "little good and much evil in clinging to a discredited form of examination." He complained of the "convulsive oscillation" in the standard of the papers set, of the numerous cases of laziness or incompetence among the examiners, resulting in the setting of papers which completely failed to test the quality of the teaching. The most inherent defects of the whole system were the tendency to render the teacher too bookish and to discourage him from trying new methods. Like Father Murphy, he welcomed the new departure in the way of inspection; but, in its present form, it was insufficient. In fact, if continued in the tentative fashion in which it was introduced last year, with no powers assigned to the inspectors to control the grants earned by the schools, it will only prove yet another burden to the sorely vexed Irish teacher. It is clear that examiners and inspectors, as Father Murphy pointed out, will not see eye to eye on many vital points in the teaching. A teacher, therefore, who attempts to please both parties will probably fall between two stools. The remedy lies apparently in Father Murphy's proposal to make the same persons inspectors and examiners, or, better still, to substitute inspection for the present examination system, supplementing it by the establishment of a twofold leaving examination for pupils who leave school at sixteen and eighteen years respectively. The case for inspection was further strengthened by the fact pointed out by Father Murphy that half the children on the intermediate roll escape entirely all control and oversight by the Board, as they are not presented for examination. Inspection, again, would prove a connecting link between the Board and the head masters. Both Mr. Jones and Father Murphy deplored the splendid isolation of the Board, and attributed its numerous failures to the fact that, though composed of men of great ability and integrity, it contained practically no persons who were conversant with the needs and difficulties of intermediate schools. If the Board decide to discontinue inspection, and revert to the old system, they can scarcely refuse to admit representatives of the head masters to their Board or allow of the formation of a consultative Committee.

Coming to the schools themselves, we find from the temporary inspectors' report, from which evidently all official recommendations have been expunged, a faint echo of the evils

emphasized above, a too exclusive preparation for the examination, inexperienced teachers, and overpressure through children being placed in classes above their capacity, owing to the exigencies of the examination. The buildings seem to resemble that young lady in the nursery rhyme who when she was good she was very, very good, and when she was not she was horrid; or, rather, they varied between these two extremes. While the girls' schools and especially the convents were models of cleanliness, the boys' schools appear to have often been anything but clean and well kept. The lack of sufficient classrooms seems to have been a very common defect, as well as the want of proper accommodation for recreation. Too often the class-room apparently served as a school-room, lunch-room, and play-room combined. The evil effect on ventilation is obvious. Methods of heating, again, "were on the whole unsatisfactory," and the ordinary rules of light were disregarded. Desks appear to have been scarcely up to date; "in nearly all schools the supply of blackboards was insufficient, and the value of their employment seems to be imperfectly understood." Slates "are in common use," and the methods of cleaning them appear to be particularly offensive. Sanitation, if primitive, was generally satisfactory, but cloak-rooms were conspicuous by their absence in the boys' schools. The school hours are from 9 or 10 to 3 or 3.30, with often only half an hour's interval or even shorter. "More and more frequent breaks are imperative." In the boarding schools the hours of study are long and overpressure seems general, which is not to be wondered at considering the late age at which the pupils, as a rule, enter the schools. The discipline seems to have erred, if anything, on the side of severity, except in the rare instances where prompting or copying was concerned, in which case it was unduly lenient. Prompting on the part of the teachers "was not uncommon." The inspectors seem to have been struck by the earnestness of the teachers, but their catalogue of defects is a formidable one. Pupils and even teachers were often inaudible, the teaching itself was too discursive, accuracy was not sufficiently insisted on, and the pace at which the lesson was taken was much too slow. An italicized passage states: "We estimate that in the vast majority of schools results would be improved by at least one-third if the lessons were taken at a proper pace, and if the pupils were compelled to speak in such a way as to be audible to one another." The inspectors appear to favour an extension of the marking and place-taking system. Preparation and correction of work are evidently not sufficiently looked into in Irish schools. Those classes below the intermediate grade which were inspected only confirmed the previous impressions of the inspectors. Life in the boarding schools is rather bare and uncomfortable. They appear to be rather a replica of the French *lycée*. In the convents, however, things are managed better. The inspectors recommend an extension of the school library system.

The teaching in English literature seemed, in many cases, to have been successful, at any rate, in arousing interest. History is evidently taught on the battle and sieges principle, with so many dates thrown in to serve as make-weight. This verdict is endorsed by Mr. Jones, who adds that history beyond the Stuart period is practically neglected altogether. Geography seems to be taught in the same unprofitable fashion: the pupils have a certain acquaintance with long strings of names, but the effect of climate on physical features and of physical features on political geography appears to be entirely ignored. The inspectors commend the Board's method of abolishing the set books for composition, but add that still more attention should be paid to the subject. Latin and Greek, except in the larger schools, seem in a bad way, especially in the girls' schools; in fact, the inspectors go so far as to state that "many boys [in the junior grade], considering their intelligence and probable future career, should be receiving not intermediate, but technical, education." This seems to us to be going too far—a good modern education would probably better suit these boys than any direct specialization. In the two upper grades the translation seems to have been very fair: it was at its worst in the juniors, owing in part to the abnormal difficulty of the books set both in Latin and in Greek—a subject on which Father Murphy dilated. It is significant to remark that the inspectors state, as regards the preparatory grade, that in preparing for the examination of this grade more than a single year's study is required. This would imply, as a necessary corollary, that it is folly for the small country schools, whose recruits as a rule come to them only a year before the ex-

amination, to take up Latin at all, and one is inclined to think these numerous pupils would be better employed at modern subjects than at "cramming" Cæsar, to use the inspector's phrase. The inspectors seem to have been struck with the absence of drill in Latin and Greek grammar, and they add a long list of counsels of perfection for getting up accidence and syntax "pat." But have they realized whether what is possible in the way of grammar drill in an English public school, where everything is sacrificed to classics, is capable of realization in an Irish school, where Latin is only one of several competing subjects? In fact, we largely distrust this excessive cult of grammar for grammar's sake, and disagree with the *dictum* that a book like Abbott's "Via Latina" is not sufficient in itself for the teaching of such grammar as the pupil requires. The real weakness of the pupils, to judge by the report, lies not so much in the grammar as in the composition. To say that in a lesson in syntax little or no time should be allowed to the pupil to think seems to us to savour rather of the poll parrot method of teaching languages. The French "shows a certain uniform level of attainment," but is "colloquially disappointing." This, no doubt, is due to the exclusively written nature of the examination, but it is none the less surprising to find no sort of recommendation for the improvement of teachers, such as holiday courses. The defective enunciation of pupils and teachers already alluded to is evidently a great handicap to successful teaching. As the inspectors say, "it may sound a paradox," but enunciation is even more important than accent, because

from the practical point of view it is more useful for a foreigner to speak French with a passable accent and a clear enunciation than with a correct accent and a bad enunciation—if indeed such an accent can be called correct. In the one case he compels attention, and a Frenchman will try to understand what he says; in the other he will meet with equal politeness, but what he says will be persistently ignored.

The translations seems to have been satisfactory on the whole, and the grammar, unlike the Latin and Greek grammar, well known. Is this due to the comparative simplicity of French grammar compared with the prize-puzzles propounded by the gender of *artifex* and *opifex*, and other words of that ilk? The French history is obviously scamped; the subject being got up a bare month or fortnight before the examination. The composition seems, as a rule, to have produced serious results, but the evils of over-correction and insufficient correction were far from uncommon. One is glad to see the inspectors attack that fetish of correction that obtains principally in girls' schools—the insertion of corrections in red ink. German appears to be rather a negligible quantity in Irish schools; but what there is of it is not unsatisfactory. Italian and Irish are discussed and dismissed by the inspectors in a couple of short paragraphs of the *fausses fenêtres* type as far as information is concerned. Mathematics would appear to be a strong subject in Irish schools. The stage directions appended by the inspectors are largely in harmony with those of the Mathematical Committee of the British Association. Experimental science has, to all appearances, made a distinctly promising start.

To sum up. Though the Intermediate Board has done much for secondary education in the past, there appears to be a distinct need of closer co-ordination between primary and intermediate education in Ireland. There is a lack of trained teachers, which threatens to become permanent, owing to the absence of sufficient inducements to lay teachers to enter the profession. The latest modifications of the examination have been a failure, and the best remedy for the present unsatisfactory state of affairs is the establishment of a permanent inspectorate, supplemented by a twofold leaving certificate. The teaching of English shows some important *lacunæ*: classics, while satisfactory in the big schools, seem often in a bad way elsewhere. Modern languages, while not badly taught on the old lines, need largely modernizing. Mathematics—the strong subject—requires to be rendered in its first stages more concrete, and still further connected with elementary science, which has made a promising start. In a word, while the big schools and those destined largely to supply recruits to the priesthood and religious orders will probably do well to follow out in the main the old classical curriculum, the small country schools would be well advised to throw over the classics, which they appear to be unable to teach in a satisfactory fashion, and boldly opt for one or more of the three alternative modern courses lately established by the Board. As Dr. Starkie pointed out, the Board deserve

the utmost credit for this exceedingly useful decentralization of the programme. The rural Irish school of to-day will be able henceforth, if it chooses, to give its pupils an education that will really fit them for their future life, instead of converting them into that most useless and dangerous class, a literary proletariat.

A LITTLE PUPIL OF ST. DENIS.

The extensive building which adjoins the Church was erected by Louis XIV. and Louis XV. on the site of the old Abbey of St. Denis. Since 1815 it has been the seat of the Maison d'Education de la Légion d'Honneur—a school for the free education of the daughters of French officers. The pupils, who number upwards of five hundred, are uniformly dressed in black, and the discipline is of an almost military character. Strangers are not admitted.

THUS the guide-book. I hand it back to my cousin with the promise: But *you* shall be admitted, for I am an old pupil of St. Denis, and can give you a letter of introduction to my friend and classmate, Mme. Benoit. She will take you over the school, explaining everything with a special graciousness for my sake. They have worn well, those child-friendships of mine across the Channel; I am not forgotten there. Yes, you will wander along the old stone corridors, the subdued murmur of hundreds of distant voices in your ears, and, behind all, the steady, continuous hum from the great piano hall, where some sixty instruments stand back to back. You will glance into the dormitories, silent by day, with their far-reaching rows of little white beds; you will visit the Chapel, once the refectory of Benedictine monks; and you will linger for a space in the drawing school, musing on the years that are past, when Charlemagne sat in state there and dictated his laws. By the time you have been round the park you will probably feel both hot and tired, and be glad to seek refuge from the warm summer sunshine in the cool cloisters. At this moment you may, perhaps, hear something of the ghost.

Yet, no! If any one mentions the ghost nowadays they laugh, and say: "What! that silly old tale still lives?" But when Marie Benoit and I were children, clad all in black, with low, turn-down, white linen collars, and broad, violet-coloured strips of braid passed round our waists and over our shoulders, so that all the world might know we belonged to *Classe Violette*, this ghost was a very real and exciting fact.

The details were meagre, but gruesome. An old, old flight of stairs, the "haunted stairs," led up from the *pharmacie* angle of the cloisters to the *lingerie*; and it was said that those who ventured after dark to mount these steps and knock at the door at the top ran the risk of feeling warm drops of blood fall upon their outstretched hand. This was all, but it was enough. The mysterious drops, falling from nowhere without cause assignable, were all the more horrible because they left so much to our imagination. And if, playing in the open *préau*, with the sunlight streaming down upon us, we sometimes laughed at the ghost, yet when we were sent to the *pharmacie* after dusk we took care to go in bands of three or four, and even then we scampered like frightened rabbits past the foot of the haunted stairs. Our mothers little knew what the taking of those tonics cost us!

Marie Benoit was an inquisitive and courageous child. She had soft, ash-coloured hair, and her bright, eager eyes and way of moving were suggestive of a bird. She was the only one in our class bold enough to put the story to the test by climbing the perilous stairs after dark; and, though the ghost lay low and refused to manifest himself, this in no wise shook her faith in his existence. It was not late enough, she told me, and murmured something under her breath about "the very middle of the night." I paid no heed to the words. As far as we pupils were concerned, ghosts could have the cloisters all to themselves in "the very middle of the night," for we were locked into our dormitory at half-past eight, and there we had to stay till morning. There seemed no way of escape feasible short of murdering the watchwoman and capturing the key, without arousing the sleeping teacher or any of our eighty odd companions. So I thought; but Marie, resolute and tenacious, did what any other amongst us would have deemed impossible. Much in it is not clear to me, for she never cared to talk about

it; but I guess what she must have suffered, brave, tender, little heart!

December had set in. Ghosts, our St. Denis ghost included, grew more active as mid-winter approached. Marie used to lie awake at night and think of the coming Christmas time, always impressive to a child and particularly so to us, kept as it was with great solemnity beneath our old, grey walls, with the spell of the past strong upon us. The glamour of it all haunts me still. Often on a London Christmas Eve, I rise hastily from the tea and muffins, pull aside the blind, and gaze out into the fog until the dim cloisters shape themselves before me, and I see the long rows of little figures file slowly across the quadrangle, and hear the bell ringing for Midnight Mass, and feel again Marie's warm, soft hand in mine still tingling with the excitement of unpacking that long-expected, beautiful doll.

Well, Marie used to lie awake and think of Christmas, and the doll, and also of the ghost. And one night, when she had been making tales about the ghost and wondering how far, if at all, they tallied with reality, she caught the watchwoman napping, the dormitory key on the table beside her. Stealthily she slipped out of bed, took her stockings and her little black cape, crept up to the sleeper and grasped the key. One moment, she was gliding past the square of white curtains which screened off the bed of the slumbering *surveillante*; the next, the key turned in the lock noiselessly, and she found herself running down the wide stone staircase to the cloisters.

Through the great glass door opening on to playground and park she could see the quaint, moving shadows cast by the trees on the grass. It was a cold, starry night, with a sharp breeze blowing which swept the dark, rough-edged clouds before it, and cleared luminous spaces round the moon and the constellations. She turned inwards. The plot of ground, open to the sky, round which ran the cloisters, was flooded with moonlight; a chilly air blew in on her through the high arches. She paused at the door, now walled up, which in Benedictine days led into the Abbey, and wished there were some means of passing through, and wondered how the old basilica looked whilst men were sleeping, and if the shades of Pépin and the Abbot Suger walked there in the silent night.

At the foot of the haunted stairs the child halted, frightened, yet resolved to go forward with her adventure. She could almost hear the beating of her heart. Could she hear anything else? What was that?—a slow, steady footfall in the distance. Marie's lips grew white. The ghost was evidently abroad; if she ventured up the staircase, he would come along behind her, and catch her at the top in the dark! Horrible thought! She turned back into the cloister, preferring to meet the enemy in the open. In the angle stood an ancient statue of Our Lady, bearing the inscription: "Monstra te esse Matrem." Marie, in her necessity, caught at the sweet motherly help, repeating the words over and over again: "Monstra te esse Matrem." But the advancing steps were not stayed, and to her left, at the end of the long dim corridor, she perceived a dark veiled figure. She faced round and fled to the right, moving as quickly as she dared, but cautiously, keeping in the shadow. The iron *grille* which barred the cloister this way stood open. Beyond it lay another wide flight of steps, but the moonlight fell full upon them, and, if she attempted to climb them, she would certainly be seen by whoever or whatever was following her. She hesitated a moment, then, like the whisper of a good angel, came a thought of escape. The entrance to the chapel was behind the *grille* in the shadow; she had only to push the heavy swing door, and she was safe. With a sigh of relief, she slid into a bench and rested her head on her arms, realizing for the first time how cold she was; her feet felt frozen.

A ladder of silver light shot down to earth from the high, arched window opposite, and at the far end the Sanctuary lamp glowed red in the blackness, assuring her of a Protection infinitely more efficient than closed door and bolted gate. So convinced was she that no hurtful presence could approach her here that she started with surprise when she heard the door swing to again; some one had entered after her. The little blonde head popped up incautiously into the light to see who it could be, then drew back aghast, recognizing a certain high dignitary before whom she had already been haled thrice that term, and who had punished her childish wilfulness with relentless severity. Mme. Ménard passed on to the front of the chapel, but the glimpse of the stern, unsympathetic face, on which lay mirrored the history of long years of unbending dis-

cipline, had brought Marie to her senses. The ghost faded into insignificance beside her fault and its consequences. Alas! difficult it was to escape from the dormitory; to return undetected was impossible. The watchwoman had to mark the *contrôleur* every hour; she must be awake by now, perhaps had noticed the empty bed and aroused the *surveillante*. The punishment for the escapade she knew too well—expulsion. Why had she not thought of this before? And there was no hope of pardon, no chance of altering the rigid military code of the *Chancellerie*, ever faithful to the rules of the despotic old generals, its founders.

The wings of the vivid child-imagination beat down the Chapel walls and bore the little girl away to a distant provincial town. There was a fire of logs on the hearth of the bare, well known room, and by it sat her mother, fair-haired and delicate-featured, with a face which was very patient in repose. Over the chimney hung an oil portrait of a middle-aged man. He had a grey moustache, but his eyes looked out youthfully, humorously, from their nests of wrinkles. Sometimes the mother would glance up at the picture and sigh; then she would turn again to the exquisite doll upon her knee, and her expression would brighten and her fingers move quickly, skillfully, fashioning the most magnificent robe ever worn by flaxen-headed, rosy-cheeked princess. Into this peaceful scene came the *concierge*, holding out a formidable official letter. Marie watched the gentle face grow paler, and tears fall on the work, as the mother read the ominous word "expelled," and knew her child's future uncertain and the hopes of years vanished. There would now be no assured position as teacher in the school she had learnt to love, with old playfellows for comrades; no sheltered home when death robbed her of her other home; no pension in a destitute old age. But the tears were wiped away, and the blue silk flounce taken up again. This it was which hurt Marie most of all. She gave an audible sob.

A hand on her shoulder forced her to look up. "Benoit!" exclaimed Mme. Ménard. "What does this mean? How did you come here?"

"You know the penalty for this?" There was almost a note of triumph in the tone. Mme. Ménard had never liked Marie Benoit; she considered her a troublesome pupil, and would not allow that frankness and generosity could counter-balance such irritating faults as waywardness and inattention.

"It is useless to cry now."

As well speak to the tempest! She gave the child a little shake to assist her in recovering mastery of herself, and continued: "You must come with me at once, Mademoiselle."

But Marie made no effort to rise. She rocked to and fro, and between the sobs came the words: "Mother, Mother!"

There was magic in the name. The pressure on the heaving shoulder grew lighter, the hand travelled up over the silky hair, the hard voice softened—"Tell me, my child!"

For Mme. Ménard's own mother was very ill, and she had come to the chapel to pray for her.

Marie was not expelled. How it was arranged I do not know, but a *chef de service* can do much. E. W.

REVIEWS AND MINOR NOTICES.

Text-Book of Physics: The Properties of Matter. By J. H. POYNTING and J. J. THOMSON. (Price 10s. 6d. Chas. Griffin & Co.)

The authors of the present book have already issued a volume on Sound (to the second edition of which we called attention in March, 1901), and consider the present volume and that on Sound to be the first two of five volumes, the last three dealing with Heat, Electricity and Magnetism, and Light respectively. As the subjects already dealt with occupy about two-ninths of some text-books, we feel not a little curiosity as to the relative bulk of the remaining volumes.

The "Text-Book" is intended for the "large number of earnest students of physics" who do not possess "a knowledge of advanced mathematical methods." Without a general notion of the ideas of the calculus, a student would find much of the work beyond him; but he is not often called upon to solve a differential equation, and even then it is supposed that he may accept the result on faith. The book being entirely devoted to

pure physics, without any reference to applications, the student must know his way about Deschanel, Ganot, or some similar work. The book is really a discussion of the experimental basis of physics, describing numerous experiments and exhibiting the mathematical reasoning upon which results have been obtained, and even including experiments which, so far, have only yielded negative results.

Turning now to the volume before us, we are struck with the mass of detail contained in relatively small space, and we feel that we are reading a detached series of encyclopedic articles rather than a single book. The subjects treated are Gravitation, Elasticity, Capillarity, Diffusion, and Viscosity.

It is interesting to observe that Mass is defined dynamically (through Newton's Second Law) by assuming that forces can be [statically] measured by springs independently of the motion that such forces produce. The various forms of the Cavendish experiment for determining the constant of gravitation (or mean density of the earth) are interestingly described in some detail. Various speculative points are raised, such as whether forms of matter are more permeable to gravitational forces than others.

Elasticity is treated first from a purely experimental point of view. At the start we are confronted with a very important diagram giving the results of one of Kennedy's experiments on the tensile properties of steel. This is accompanied by one of the few incomprehensible descriptions in the book, which we may hope to see rewritten in another edition. Those weird properties of solids known as viscosity and fatigue are well set forth, and good reproductions of microphotographs of metallic surfaces illustrate the crystalline structure which is responsible for some of these phenomena. Two short chapters on Strains and Stresses lead on to a series of problems on Torsion (including St. Venant's famous results), Bending of Rods, and Spiral Springs. In a few pages on Impact reference is made to Hodgkinson's experiments, showing that Newton's "coefficient of restitution" diminishes as the velocities increase.

Then follow two chapters on Compressibility of Liquids and Gases, with some remarks on the tensile strength of liquids.

Capillarity is most interestingly treated; the experimental part being supplemented with a short account of Laplace's theory. Viscosity and diffusion are considered with respect both to liquids and gases. We notice the frequent appeal to the principle of conservation of energy in the reasoning. Molecular theory and kinetic theory of gases are reserved for the volume on Heat.

The book is excellently illustrated and well printed. It will be appreciated not only by these for whom it is especially prepared, but also by students who, capable of using advanced mathematical methods, feel but too often that they are immersed in a sea of symbols, which ultimately throws them up on an unexpected shore of new facts.

Seven Roman Statesmen of the Later Republic: The Gracchi, Sulla, Crassus, Cato, Pompey, Caesar. By CHARLES OMAN. With Portraits and Illustrations. (Price 6s. Edward Arnold.)

Mr. Oman confessedly holds a brief for biographical *versus* constitutional history; he sides with Plutarch and Carlyle and Froude against Aristotle and Marquardt and Stubbs, and a very effective pleader has he shown himself. The blessed word "evolution" will not account for everything, and "the length of Cleopatra's nose" is still a factor that historians cannot afford to overlook. As a fact, the two schools of historians merge, by subtle gradations, one into the other. The personality of Edward I. and Henry III. looms large in the "Constitutional History" of Stubbs, and underlying the anecdotalage of Suetonius or Saint Simon we may discover an informing philosophy of history.

So, with these seven lives, we shall not be far wrong in supposing that the central idea from which they sprang was a revulsion of feeling against Mommsen's blatant imperialism—a desire to testify against his immoral doctrine of a heaven-sent autocrat. The moral is well summed up in the concluding pages:

Cæsar, in short, put an end to urban sedition and provincial misgovernment; but he and his great-nephew gave the world, instead of its old anarchy, a period of mere soulless, material prosperity. If the Barbarians had never resumed the attack from without, if

Christianity had never arisen to give new ideals from within, the Roman Empire would have gradually sunk into a self-satisfied, stationary civilization of the Chinese type. . . . He had worked out to its logical end the movement which Tiberius Gracchus had begun, which Marius had continued, which Sulla had vainly striven to stem, and which Pompey had unwittingly furthered. The problem of sovereignty had been solved; neither Senate nor people could rule the Empire, and the inevitable autocrat had taken over the powers which they had abused.

To idolize an adventurer as selfish and as unscrupulous as Napoleon is, indeed, the March madness of hero worship, and to attribute *ex post facto* a far-sighted, world-embracing policy to an opportunist who, at every move in the game, was obviously playing for his own hand is a worse anachronism than any in Shakespeare. In these sentiments Mr. Oman carries us wholly with him; but in dealing with the struggle between the Optimates and the Democratic party he hardly seems to us to hold the balance even. According to him Tiberius Gracchus is the model young man cursed with a very superior woman for a mother; while the main motives of Caius were ambition and revenge. Now it is possible to admit with Mr. Oman that no legislation, except, perhaps, protection, could have cured the organic disease from which Italy was suffering—agricultural depression—and yet to admire the Gracchi as genuine, though short-sighted, social reformers. In the same way we may complain that Mr. Oman is unmoved by all Cicero's redeeming qualities, moral as well as literary, and unrepelled by Pompey's stolid Philistinism.

The book is written in a popular vein; there is no reference to authorities, and modern equivalents and analogies are freely introduced. There is nothing donnish or pedantic about the style, which occasionally, as in the description of Clodius, verges on the colloquial. In several of the biographies the same ground is traversed, and there is, perhaps inevitably, a good deal of repetition. "Autolatrous harangues" strikes one the first time as a happy phrase, but *repetita non placet*.

Life of the Baroness von Marenholtz-Bülou. Two Vols.

By her NIECE. (Price 15s. 6d.)

Students of Froebel's personality and work will welcome much that is contained in these handsome volumes, the outcome of the devotion and admiration felt for the authoress of "The Reminiscences of F. Froebel," by her niece.

It was in 1849 that chance threw Frau von Marenholtz-Bülou into Froebel's company at Bad Liebenstein. He was pointed out to her as an old "original" who danced and played with the village children. She greeted him as one who occupied himself with the education of the people, and a close friendship ensued. The disappointment to liberal hopes which followed the general ferment of 1848 was keenly felt, and, as harsh repressive measures were being enforced on all sides, the only course left to patriots was to prepare the people by education for a better social state. Froebel's theory of education was put before the Baroness by him in his constant intercourse with her. Much that is of moment to the student of Froebelian theory will be found in the chapters devoted to Froebel's theory of education and to comments on his methods (i., pages 164-190). It is true that we have a good deal of theorizing which is not necessary to a clear understanding of the simple basis on which Froebel builds. Further, many generalizations are advanced as though they were self-evident truths; the idea that the normal development of the individual does not differ from that of the race must be very carefully handled, if it is to prove a help, and not a hindrance, in primary education. There is a danger in being too strictly logical, especially in dealing with anything so curiously complex as the early stages of human development; while much that is quoted from the "Gedankenbücher" will certainly need explanation and liberal pruning before it can be usefully allied with the teacher's work. Dr. W. T. Harris, in his preface, claims for the volumes before us that they throw valuable light on the social and political life of Germany during the epoch covered. This is true, especially when, after Froebel's death, the definite work of propaganda was undertaken. How eagerly and how unsparingly the disciple worked—how full her sad heart became of hopes for the future of humanity—how she went courageously forth as a sower to sow seed which she herself believed to be essential to any harvest of truth—may all be read in these volumes. They are overcrowded with detail, and put together in such a way as at times to obscure, rather than

to throw into relief, the theories which the Baroness lived to perpetuate; but to ask for a sense of proportion in an enthusiast is, perhaps, unreasonable. The book is undoubtedly a strong testimony to that power of inspiring deep personal devotion which the Baroness possessed, and, we repeat, it is in many ways a useful contribution to the literature of the kindergarten.

"Blackie's Little French Classics."—(1) *Rabelais, Selections*. Edited by E. C. GOLDBERG, M.A. (2) *Molière, Scenes from Le Mâlecin malgré lui*. Edited by W. J. CLARK, M.A. (3) *Lesage, Selections from Gil Blas*. Edited by HAROLD W. ATKINSON, M.A. (4) *Prosper Mérimée, Matéo Falcone and other Stories*. Edited by J. E. MICHELL, M.A. (5) *Madame de Sévigné, Select Letters*. Edited by MABEL VERNON HARCOURT. (6) *Théophile Gautier, Le Pavillon sur l'Eau, etc.* Edited by W. G. HARTOG. (7) *Brucy and Palaprat, L'Avocat Patelin*. Edited by E. B. LE FRANÇOIS. (8) *Bossuet, Oraisons Funèbres*. Selections edited by the Rev. H. J. CHAYTOR, M.A. (9) *Victor Hugo, Waterloo*. Edited by G. H. CLARKE, M.A. (10) *La Fontaine, Longer Fables*. Edited by A. H. WALL, M.A. (11) *Musset, Selections in Verse and Prose*. Edited by F. W. B. SMART, M.A. (12) *Corneille, Scenes from Le Cid*. Edited by LOUIS BARBÉ. (13) *Chateaubriand, Les Martyrs*. Selections edited by E. T. SCHOEDLIN, B.A. (14) *Michelet, L'Insecte*. Selections edited by MAURICE GEROTHWOHL. (15) *Victor Hugo, Poems*. Edited by P. C. YORKE, M.A. (16) *Racine, Les Plaidours*. Edited by D. LOWE TURNBULL, M.A. (17) *Augier and Sandeau, Le Gendreau de M. Poirier*. Edited by R. G. M'KINLAY. (18) *Stendhal, Un Episode de Guerre*. Edited by J. E. MICHELL, M.A. (19) *Erckmann-Chatrian, L'Héritage de l'Oncle Bernard*. Edited by MISS MARGUERITE NINET. (Price 4d. each.)

This series marks a new departure, and is a pleasing variety after the endless editions of popular French works for English schools, monotonous as the poplars along a French high road. Rabelais, Le Sage, Gautier, for instance, represent strata of French literature that have hitherto been unworked by the school editor, who greatly prefers surface digging to exploration or mining. We welcome the series as a reaction against the prevailing craze for second-rate novels and anything of contemporary interest, regardless of literary merit. The booklets are well printed, of thirty-two to forty pages each, and the notes are of the briefest. The weak point of the series, and one that might easily be put right, is that there is no indication of the stage for which the different volumes are adapted. In some cases the author's name is a sufficient indication. Rabelais, for instance, spells Sixth, and Erckmann-Chatrian Fourth Form; but Victor Hugo's poems and scenes from Molière might be anything between the two. Again, we can detect no common method in the annotation. Rabelais has some fifty notes in all, of which three only are linguistic or grammatical. Erckmann-Chatrian has tags of translation in the old style, and elaborate explanations of *eau sucrée, délices de Capoue*. To review these score of volumes would be an impossible task, and we can only record a few casual observations. The selections from "Gil Blas" and from Michelet's "L'Insecte" strike us as particularly happy. We cannot say the same for the "Victor Hugo." "The Toad" is a long-drawn horror that will rightly repel a young mind, which will equally resent the sentimental rhetoric of "The Caged Birds." The twelve fables of La Fontaine are well selected, and the appended remarks of French *littérateurs* are a useful addition. Why has Chateaubriand a circumflex in the advertisement, and why does Mr. Hartog give Gluck, the composer, an *Umlaut*?

"Bohn's Standard Library."—*Letters of Thomas Gray*. Edited by DUNCAN C. TOVEY. Vol. I. (G. Bell.)

"Gray and his Friends" was at once a learned and a delightful book, and we know not who the "adverse and captious" critics can have been who, it appears from the preface, fell foul of Mr. Tovey's work. He has taken the best way of confuting them by continuing his labours in the same field and giving us the first instalment of the standard edition of Gray's correspondence. That Mr. Gosse's edition, the only competitor in the field, as far as we are aware, is not entitled to rank as such, Mr. Tovey proves up to the hilt. In an appendix, indeed, he insinuates not obscurely a charge of *mala fides* against Mr. Gosse, which we should be loth to endorse without first hearing Mr. Gosse's defence, and which, we think, if made at all, had better have been made directly and without circumlocution at the beginning of the volume. Thus, the note on page 281 is in doubtful taste. Mr. Tovey's annotations of the Letters are full and apposite. To hunt up all the obscure references must have been a work of infinite time and trouble. The preface gives a saner view of Gray's genius than that of Matthew Arnold, who, as was his wont in less inspired moments, ran to death a catch-word which was at best only half a truth. We should, however, like Mr. Tovey to tell us less of Gray as a poet and more of Gray as a letter writer. To the *errata* add: "Page 153, line 18, read 'inexorable.'"

El Pájaro verde. By JUAN VALERA. Edited by G. G. BROWNELL. (Price 2s. Ginn & Co.)

This tale reads like a story in "The Arabian Nights." The enchanted palace, the spell-bound prince, the beautiful (and, of course, love-lorn) princess, invisible hands which carry in aldermanic repasts, the mysterious voice reiterating its solemn warning: "Beware! that is for my lord the Prince"—all these are here; but they appear to be mere matter-of-fact details when compared with the wilder flights of the author's imagination. By the time the old hermit is introduced the reader will be prepared to accept him as a matter of course. Not that he is your everyday hermit—not at all; he has been supernaturally preserved for the sole purpose of giving a cunningly vague reading of the cabalistic language used in Babel before the Confusion of Tongues. It is curious to read of presents being sent to the Queen of Saba on page 8, and on page 10 to find a reference to Queen Victoria. Apart from the interest in the story itself, the author's style makes the book specially useful to students of Spanish. The editor has done everything that was necessary to make "El Pájaro verde" a serviceable text-book for English-speaking students. In addition to an accurate and complete vocabulary, there are (1) notes on the few passages which require explanation; (2) a series of sentences, based upon the text, to be turned from English into Spanish, so that the book serves a double purpose. We have noticed from time to time all the Spanish texts yet published in Messrs. Ginn & Co.'s "International Modern Language Series," and we have found them all to be models of what such texts should be, viz.: neat binding, clear type, good paper, reasonable price, and accurate text. Juan Valera's "El Pájaro Verde" belongs to this series.

Practical Spanish. By F. DE ARTEAGA. Two vols. (Price 7s. 6d. John Murray.)

A Spanish course written by the Taylorian Teacher of Spanish at Oxford ought to be good, and very good it is. Its chief fault (many will not consider this a fault) lies in the too great length of the exercises. The grammatical rules are very clearly stated; there is a useful classified list of all the irregular verbs; the exercises treat of such subjects "as naturally present themselves in everyday life"; and there is a double vocabulary of more than a hundred pages. Would not "Practical Spanish" be more useful to the "traveller and the business man" if it were shorter? However, as the two volumes now stand, they form a well printed, well bound, admirably arranged, complete Spanish course. The whole work displays patient care, great skill, and a thoroughness seldom found.

Portuguese Grammar and Commercial Handbook. By Prof. J. C. MASCARENHAS. (Price 5s. net. Hirschfeld Bros.)

For the purpose of ready reference Prof. Mascarenhas has divided his book into six parts. Parts I.-III. contain the grammar, with exercises thereon. Parts IV. and V. deal with commercial correspondence, business terms, &c., whilst the last part consists of examination questions. The author is an experienced teacher, and, no doubt, has some good reason for the omission, but there are no exercises to be turned from Portuguese into English! The insertion of such exercises in future editions would not add much to the bulk of the work, but they would enhance its usefulness very considerably. There is no need to comment on the correctness of the work, for it is published "on the authority of the Portuguese Royal Academy."

Makers of Europe: Outlines of European History for the Middle Forms of Schools. By E. M. WILMOT-BUXTON, Assistant Mistress, Brighton and Hove High School. With Twelve Maps. (Methuen.)

There is much to be said for our author's plea that as soon as children have learned the rudiments of English history they should be given some idea of the course of European history. Only by that means, she urges, can they be enabled to understand the true meaning of events which concerned their own country. It was in order to supply somewhat older students with help of this kind that Freeman wrote his "General Sketch of European History," one of the smallest, though by no means the least satisfactory, of all his works. Miss Wilmot-Buxton writes pleasantly and with the laudable intention of interesting her young readers, and her book shows that she has a fairly sufficient knowledge of her wide subject. Perhaps she has attempted more than her space allowed; her work is rather too scrappy to be interesting, and she would have succeeded better if she had either written on broader lines or left out certain parts of the history. It is a pity that she relates the myths concerning the rise of the Swiss Confederation as though they were historical, and describes Zurich as "the chief residence" of Charlemagne.

The Study of the Prophets. By T. ARMITAGE ROBINSON, D.D. (Price 2s. 6d. net. Longmans.)

An R.A. on his election is required to present to the Academy a picture, which is hung in an upper chamber of Burlington House, rarely visited by the public. By a happy coincidence, Dr. Robinson, almost on the day when his appointment to the Deanery of Westminster was announced, published this volume, embodying lectures delivered at Westminster and Cambridge; but, unlike the Academy pictures, it will, we are certain, be scanned not only by the clerics to whom it is immediately addressed, but by the increasingly large body

of lay students, those who without being specialists take an intelligent interest in the earliest Christian literature. The Dean comes forward not as a controversialist, but as a teacher. His object is to present in plain language such results of his own study as may serve for a guide to the study of others. But, though he does not argue and leaves us often wondering how he would meet some of the arguments of the revived "Supernatural Religion," he impresses us throughout by his transparent open-mindedness—there is no *suppressio veri*. Thus, he allows in the first chapter that the date and authorship of the first Gospel must be left at present as an insoluble problem. Most valuable, too, are the remarks on the non-Marcian Greek document used by St. Matthew and St. Luke and the fallacies that have clustered round the word *logia*. In his treatment of the fourth Gospel, Dr. Robinson follows closely, though not slavishly, in the steps of his late master, Dr. Westcott, but we seem to be passing from a golden haze into the clear light of common day. Yet—we speak as laymen—it seems to us impossible to discuss the authorship of the fourth Gospel without reference to the Revelation.

"Blackie's Illustrated Greek Series."—*The Anabasis of Xenophon, Book II.* Edited by G. H. NALL, M.A. (Price 2s.)

We were not aware that there was any great demand for a new edition of the second book of Xenophon's "Anabasis"; but, since it appears that the demand existed, the publishers did well in inviting Mr. Nall to satisfy it. His little book, which is lucid in expression, marked by accurate scholarship, and as rich in matter as it is desirable for an elementary treatise to be, will enhance the reputation of the series to which it belongs. The text is clearly printed, and broken by short arguments at appropriate points. Not only is the book well illustrated, but the plates are explained. The elucidations, full and clear, will be particularly welcome; for, if the pictures in school-books are to be instructive, they must be studied under competent guidance. Too often they are only gaped at; or, still worse, they receive the crude adornments of an untutored fancy. Occasional slips in English go to establish, according to the ancient theory, a writer's familiarity with Greek. Otherwise Mr. Nall might be blamed for using such language as "the Persian cavalry in which their strength lay" (page 64), where "their" means "of the Persians"; or "he was said not to much wish" (page 85). But when the general result of an editor's labours is so good it were ungracious to dwell on the trivial lapses of a busy pen.

Select Orations and Letters of Cicero. ALLEN and GREENOUGH'S edition, revised by J. B. GREENOUGH and G. L. KITTREDGE. (Ginn & Co.)

Here we have a substantial volume of lxiv. + 630 pages, intended to introduce the user to the speeches and letters of Cicero. The book is well got up, with introduction, maps, plates, and a vocabulary, and is, on the whole, a conscientious piece of workmanship. Otherwise we can give it but faint praise. Too big for young boys, it is too elementary in its information for a high form. On the other hand, the private student might use it with advantage. Unfortunately the grammatical references in it are to American treatises, so that its sphere of usefulness is still further contracted. A feature of the text is that the quantities of the vowels are often marked—on what principle of selection we have failed to discover. The reason assigned for marking them is that some teachers prefer them so; we have other tastes, especially if the ultimate of *temere* is to be marked long, without any note of warning.

English Extracts for Latin Prose. Compiled by A. C. CHAMPNEYS, M.A. (Price 2s. Longmans.)

The prime secret of the lazy schoolmaster or college lecturer is how to waste time by dictation. Mr. Champneys has made his collection of passages for Latin prose in order to deprive laziness of its main resource. The choice of pieces seems well made, and those who have used the elementary books by Mr. Champneys and Mr. Rundall will be glad to have this volume as a continuation of the course. They will find in it a somewhat slight introduction containing hints on the writing of Latin prose; then one hundred and fifty-six extracts suitable for the exercising of a fifth or even a sixth form; lastly, a few idiomatic sentences calculated to drive home particular idioms. There are no notes, no vocabularies, and no references to parallel passages. A special feature of the collection is that it is largely made from new sources, sometimes from works still copyright. So Mr. Chamberlain's speeches do duty for the first time, we believe, in a manual of Latin prose composition.

The Gospel according to St. Mark. The Greek Text edited, with Introduction and Notes, for the use of Schools, by Sir A. F. HORT, Bart. (Cambridge University Press.)

The writer's aim is best set forth in the words of the preface: "The main use of his [a boy in the fourth or fifth form of a public school] reading the Gospel in the original language is that the process of translation forces him to think and to get behind the words of the English version, his very familiarity with which may be an obstacle to thought. It rests with the teacher to see that such a lesson does not degenerate into a discussion of anomalous forms and unclassical syntax." This aim is well carried out in the notes, which are mainly expository. Difficulties are not shirked, but they are touched on lightly, and there

is no attempt to harmonize the Gospels after the manner of Wordsworth and the older school of commentators. The standpoint is that of an orthodox Broad Churchman, half way, we might say, between Bishop Westcott and Dr. Abbott. Thus, on demoniacal possession:—"We can neither wholly accept the ancient view of 'possession,' nor yet fully explain the Evangelists' accounts by those forms of madness with which we are familiar. Our Lord seems to have taken the current belief on the subject, just as he accepted current interpretations of the Old Testament." So, again, with the two feedings of the multitude: whether we have two variants of the same miracle is left an open question, but Dr. Abbott's naturalistic interpretation is not alluded to. Again, in the note on Abiathar the high priest: "Our Lord himself may have made the slip, which is only equivalent to a mistake in a date, and does not affect his argument." Specially excellent are the notes on the meaning of the parables, *e.g.*, the Sower. Such a guide to the Gospels is worth a wilderness of Dr. Smiths and Dr. Maclears.

Homeri Opera, recognoverunt brevique adnotatione critica instruxerunt DAVID B. MONRO et THOMAS W. ALLEN. 2 vols. (Clarendon Press.)

The two volumes before us contain the text of the "Iliad" in an edition that is likely to remain for long the standard one in England. To touch first on its critical aspect, as compared with van Leeuwen and the Dutch school, the Oxford scholars must be described as sternly conservative. True acquaintance with Homer, they urge, is shown by an admission of ignorance as to much that concerns his language. Assuming, as most authorities now do, that he used the ancient dialect of the Achæans and was translated by Ionian rhapsodists, we cannot recover his poems in the original form; we must therefore be content with the vulgate current in Greek in the best ages. Holding these views, the editors aim at, and offer to us, a consistent, but not a primitive, text. To construct it they have used about a hundred and thirty codices; what they have produced is a witness to the sober and well balanced scholarship that survives in England. There is no question as to the place that the book will occupy. Apart from its intrinsic merits, the Oxford edition is put far in advance of Teubner's, its natural competitor, by its type, paper, and binding. In all these respects it is admirable. We have, however, a complaint to make, a complaint that it ought not to be necessary to direct to the Clarendon Press: neither title-page nor preface is dated. The Delegates would satisfy a general demand by issuing at once interleaved copies of the work, and their own consciences by making good the defect to which we have called attention.

Physical Determinations. By W. R. KELSEY. (Price 4s. 6d. Arnold.)

This volume contains an unusually varied and well chosen collection of examples in practical physics. Instructions are given for nearly two hundred determinations in all branches of physics; yet the book is not unwieldy; for it is assumed that the student who uses it will have the assistance of a demonstrator, and therefore minute directions are not provided. Sufficient explanation is given to enable a student who understands the theory of the experiment he is about to perform to make a start in fitting up his apparatus. The subject-matter is well and clearly arranged, and diagrams are both numerous and excellent. Many teachers will find this a most useful store from which to select experiments suited to their more advanced students.

Messrs. Cassell are republishing in fortnightly parts, price 1s. net, their illustrated edition of *Social England*, thus bringing this treasure-house of history and archaeology within reach of the humblest library.

ERRATUM.—The price of Robinson's *History of Rome* is 3s. 6d., not 6d., as was stated by a misprint.

SAFE NOVELS.

Jan van Elselo. By GILBERT and MARION COLERIDGE. (Price 6s. Macmillan.)—Jan van Elselo was a page in the service of William the Silent, entrusted with a secret mission at the moment when Philip II. was meditating the introduction of the Inquisition into the Netherlands. Light-hearted and boyishly reckless at the outset, Jan acquires seriousness as the seriousness of the times impresses itself upon him. We witness in his company a succession of fine historical tableaux—the finest and most horrible being an *auto de fe*—and we become interested in him and his fortunes, and the fortunes of the lady he loves and ultimately marries. Jan is of the reformed faith, Dorotea is a Catholic, and the difference keeps them apart for a time. Adversity, however, brings them too close for any but an official separation to be possible, and the last scruple about their union is removed from the mind of Dorotea by the wise and affectionate words of the Prince of Orange. The title-page tells us that the novel is the joint work of Mr. and Mrs. Coleridge. But the collaboration achieves such complete harmony of effect that we should not suppose the book to be the product of more than a single mind. Possibly, however, the double authorship accounts for a certain externality in the presentment of the hero; which is a fault. Clever, well written, interesting, the book yet fails to take a strong hold on sympathy and imagination. One wants to know the characters

more thoroughly from within: one is not so much concerned about their fate as one ought to be. "Jan van Elselo" is an historical tale of the useful class that help the general student of history to keep historical events in place; but higher than this it does not rank.

The Romany Stone. By J. H. YOXALL, M.P. (Price 6s. Longmans.)—Mr. Yoxall's novel "The Romany Stone" is very stimulating reading. One fears on the first page that the story is going to be told in dialect all through. But this fear is dissipated before the power of attention is exhausted, and the grateful reader is refreshed by continual breaks in the autoptic narrative. Author and hero share the business of narration between them, and so the story gets along comfortably. Not that the novel is exactly a comfortable one. It is a romance of the end of the eighteenth century, in which an honest yeoman, Michael Scargill, is cheated of his sweetheart by an adventurer in whom the blood of gypsies mingles with the blood of popes. At the boarding school at Derby, Dahlia, the wayward, has heard of "journeys and cities, fashion and dress and whirl, exquisite wooings by passionate gallants." And when Aldo Lee, sculptor, gentleman, and foreigner, comes into the quiet of her farmhouse life, she forgets constancy and marries him secretly in the Catholic chapel. But Aldo turns out to be a shifty person, and before long a warrant is out against him, and the King's officers are in pursuit. Then it is that the cast-off lover and trusty cousin is called to the rescue. There is bustle and mystery, pursuit, capture, rescue, and much good comedy by the way, with the introduction of an interesting variety of secondary characters, all vivid, individual, and to the purpose. In short, "The Romany Stone" is far above the average in cleverness and originality.

CHRISTMAS BOOKS.

The Last of the Cliffords. By ELIZA F. POLLARD. (Price 5s. Nelson.)—It requires some courage to embark on a volume of such portentous thickness, but the book is well written, and the times of Charles I. give plenty of opportunity for picturesque scenes and heroic deeds. A good many historical characters are introduced, and the heroine is, as the name shows, Anne Clifford, first Countess of Dorset, and then Countess of Pembroke, and the siege of Skipton Castle is a feature of the story. John of Linton somehow does not turn out such a striking personality as one is led to expect in the beginning, and his vacillating conduct on his return from his attendance on the ex-Queen of Bohemia is scarcely in keeping with what we are told of his character. There are some good illustrations.

The Cruise of the Katherine. By JOHN A. HIGGINSON. (Price 1s. Nelson.)—This is a small book, and contains about as many storms, shipwrecks, and massacres as can conveniently be compressed into it. The story is harmless, but the style does not greatly commend itself to us. "Oh! it was the most awfully shocking piece of fiendish cruelty human mind ever conceived," savours of the "shocker."

Fifine and her Friends. By SHEILA E. BRAINE. (Price 1s. 6d. Nelson.)—A charming little story, well written and natural. There are many touches of humour in the descriptions of the people of St. Jouen—Monsieur de Fontenay's momentary triumph over his bicycle, for instance—but it is all kindly, and the book is very pleasant reading.

The Lost Squire of Ingleswood. By THOMAS JACKSON. (Price 2s. Nelson.)—A story of a recovered treasure and a restored father, in which two runaway schoolboys take part. One cannot quite see why Welland takes the boys with him in his search for Robin Hood's caves, but the author does not stick to anything so commonplace as probabilities, from which, indeed, the book is entirely free; it would, however, serve to while away an idle hour.

Sal's Sharpshooters. By HAROLD AVERY. (Price 3s. 6d. Nelson.)—An amusing story of how some small boys started a volunteer corps, consisting of two officers and a colour-sergeant (the nursing staff being represented by a pretty sister), for the defence of the country in case of need. The boys and Alison are delightfully natural, and their squabbles, scrapes, and performances will entertain all who read of them. The book is nicely illustrated by R. C. Petherick.

At the Point of the Sword. By HERBERT HAYENS. (Price 5s. Nelson.)—The scene opens in Peru at the time of the War of Independence. The hero, Jack Crawford, is half Spanish, half English by birth; his father is on the patriot side and a warm friend to the Indians, who do the son many a good turn in consequence. Jack joins General San Martino's army, and sees plenty of hard service as *aide-de-camp* to Colonel Miller, whose untiring energy gives little rest to his followers. Altogether Jack has an exciting and adventurous career, till the battle of Ayacucho gives victory to the Peruvians. The fighting among the mountains is well described; but some parts of the story seem a little spun out. San Martino appears as the real patriot, sacrificing himself for his country, in contrast to Bolivar's personal ambition.

Stanhope. By E. L. HAVERFIELD. (Price 3s. 6d. Nelson.)—A pleasantly written tale of Cromwell's days. The plot is of the slightest, but one of the girls, Hope, is nicely drawn (we must confess to finding Mara rather a bore), and Myles is likeable, though his sense of duty is rather oppressively strong. It was surely an overstrained sense of

honour which decided him to marry the vulgar hoyden who personated Dorothy Stanhope, simply because he had, as a mere child, talked of Dorothy as "his little wife."

The Boys of Waveney. By ROBERT LEIGHTON. (Price 6s. Grant Richards.)—A school story with plenty of variety of the kind that interests boys—sports and quarrels and misunderstandings, to say nothing of foul play on the part of the black sheep of the fold. There is a little too much sentiment, and the hero is almost impossibly forgiving; but the American boy is a good fellow—a sort of young Sherlock Holmes—so that the reader is willing to pass over the unlikelihood of his possessing a cigarette-case of pure gold with his initials in diamonds, and of his being able to give an hotel dinner in his study and have an hotel waiter to serve it. There are some good illustrations by Gordon Browne.

Ralph Wynward. By H. ELINGTON. (Price 2s. 6d. Nelson.)—A very good story. Ralph runs away from home in a boyish fit of ill-temper because he has been punished, and, as a sequel, passes through many dangers, which culminate in the sack of Youghal by the Earl of Desmond in 1579, of which a vivid picture is given.

(1) *Mistress Dorothy.* By DOROTHEA MOORE. (Price 1s.) (2) *Judith's Mission.* By M. C. S. (Price 1s.) (National Society).—"Mistress Dorothy" is very prettily told, and every one will like the brave little maiden who beards Colonel Kirke in the midst of his "Lambs" to save her brother's life. "Judith" would be very nice if she were not quite so full of her mission and determination to do some deed of kindness every day. Except in a story-book, Mrs. Cresswell's conversion would be less speedy.

Mother Hubbard's Cupboard of Nursery Rhymes. (Price 1s.) *Red Riding Hood's Picture Book; Fur Coats; Beaks and Bills; Pet's Playtime; Sunny Hours.* (Price 6d. each.) *Country Cousins; The House that Jack built; Ride-a-Cock-Horse; Pick-a-back; Red Indians; What's o'Clock?* (Price 3d. each.) (Nelson.)—There has been a wonderful advance of late years in cheap coloured picture-books for children. The pictures in "Mother Hubbard" are nicely drawn, but the colouring is rather crude. It is softer and more pleasantly blended in "Red Riding Hood," "Sunny Hours," "Country Cousins," and "The House that Jack built." Four coloured pictures, not counting the covers and several black-and-white ones illustrating the various bits of poetry, is good measure for 3d.

(1) *The Friend of Little Children.* (Price 3s. 6d.) (2) *Sunday Afternoon.* (Price 2s. 6d.) (Nelson.)—The first of these is a short life of Christ: it is simply written, and suitable for children, and illustrated with large coloured pictures, many of which are distinctly above the average of such publications. It is a pity that the face and colouring of Mary vary in the different pictures. "The Return from Egypt," "The First View of Jerusalem," and "The Calling of John and James to be Disciples," are particularly good. "Sunday Afternoons" contains short Bible stories such as any child could understand, with a coloured picture to each, some of which are effective.

Bo-Peep. (Price, picture-boards, 2s. 6d.; cloth, 3s. 6d. Cassell.)—An attractive volume for little people, with plenty of pictures and short stories; some, indeed, are so short that they seem to end almost before they have well begun. There are verses and comic illustrations, and eight large coloured plates.

Tiny Tots. (Price, picture-boards, 1s. 4d.; cloth, 1s. 6d. Cassell.)—Contains stories and pieces of poetry to suit small children. It has one coloured plate, and a variety of illustrations in black and white. There are also some nursery rhymes set to music.

A Happy Failure. By ETHEL DAWSON. (Price 1s. 6d. Nelson.)—Is it such an original idea for impoverished ladies to turn their hands to keeping a superior boarding-house, or does the originality lie in what seems otherwise a needless deception—that of Mrs. Lenthall's three daughters pretending to be merely "lady-helps"? Surely this plot is already beginning to show signs of wear. There are, of course, three young men who turn up conveniently and carry off the three fair daughters with a promptitude which hardly gives the boarding-house a chance of success. The plucky way in which the girls set to work and make light of their difficulties, however, gives a pleasant tone to the story.

By Dulvercombe Water. By HAROLD VALLINGS. (Price 6s. Macmillan.)—This is a story about the time of the Monmouth Rising; the plot is cleverly constructed, and no one can fail to be interested in the exciting adventures and hairbreadth escapes of Will Estcote and Mistress Bethune, or to rejoice in the defeat of the wicked Sir Hardress. Nor must we fail to mention Parson Champion, who has many a redeeming and loveable point in his character and shows himself a true friend in need, though his ways are not always strictly parsonic.

Three Scottish Heroines. By ELIZABETH C. TRAIK. (Price 1s. 6d. Nelson.)—The stories of these three heroines are told with a good deal of spirit, and have the additional charm of being founded on fact. They should serve to pass a pleasant hour.

Fallen Fortunes. By E. EVERETT-GREEN. (Price 3s. 6d. Nelson.)—Though the fortunes of Grey Dumaresq fall low at times, his star is on the whole a lucky one, and we leave him the writer of a popular romance and the husband of the beautiful and much-sought Geraldine Romaine. The story is well told, and the illustrations by W. H. Margetson are distinctly good.

To Girls. By HELOÏSE EDWINA HERSEY. (Price 4s. 6d. net. Ginn.)—This is written in the form of a series of letters to two girls, one the college girl, and one a girl whose education has stopped short of college. The subjects of the letters are many and varied, such as Choice of Studies, Civic Opportunities of Women, the Observance of Sunday. They do not, perhaps, discuss them very deeply, but sufficiently to be enlightening, and through all there runs a good vein of common sense and experience. The book should be distinctly helpful to girls, and it is written in a pleasant and easy style.

A True Knight. By LADY DUNBOYNE. (Price 1s. 6d. National Society.)—A story with plenty of excitement and interest in it. Rex, the hero, is perhaps rather unnaturally blind to Greta's faults; but, since his devotion leads her back to the paths of virtue, we must not complain.

In Flora's Realm: A Story of Flowers, Fruit, and Leaves. By EDWARD STEPHENSON. (Price 3s. 6d. Nelson.)—This book, which has been written for children in an easy conversational style, purposes to treat of the "practical" side of botany as opposed to the "theoretical." In dealing with various branches, from the forms of leaves and flowers to pollination and the forms and distribution of seeds, very few, and no unexplained, technical words have been used, so that any child could understand it, and the black-and-white drawings in illustration are numerous and admirably done. The coloured plates are less successful, but the reproduction of the natural colours of flowers is most difficult. The book is full of interest, and Uncle Jack does not confine himself to English flowers only, but describes also some rarer foreign kinds, like the giant Rafflesia and Californian pitcher plant. It is suggestive, and would make children eager to see for themselves and make fresh discoveries among the flowers on their own account.

Just So Stories. By RUDYARD KIPLING. (Price 6s. Macmillan.)—With Mr. Rudyard Kipling as Imperial Poet Laureate, his dithyrambs and epistles in the *Times*, we are not concerned. It is only "when the Rudyard ceases from Kipling" that he comes within our purview. "Stalky & Co." was a bad book, and we said so *sans phrase*, the chaff and daff of a second-rate public school. The prodigal has come home again, returned to his native jungle and the days of early innocence. The dailies and the weeklies have vied with one another in slaying the fatted calf: "nos humilem feriemus agnum." "Just So Stories" is a genuine child's book, and will delight the "dearly beloved" to whom it is addressed, who will not be repelled, but rather flattered, by the mysterious glamour of *plusquam*-Homeric compound epithets and Miltonian polysyllables; while their elders who read it aloud to them will relish the sly humour and topical allusions. La Fontaine in the shades will welcome Kipling as a brother fabulist.

Conan the Wonder Worker. By MARY H. DEBENHAM. (Price 3s. 6d. National Society.)—This story of a Norse Viking and his prisoners is well written and interesting. The wonder worker is a pathetic figure, a true missionary in spirit and readiness for self-sacrifice. There is, somehow, a sense not exactly of weakness, but of something wanting of the vigour and force suitable to such a theme. We cannot but think that Miss Debenham is at her best in her stories of home life, in which she shows great capacity for true and delicate insight into character.

The Heart of the Ancient Wood. By CHARLES G. D. ROBERTS. (Methuen.)—Miranda Craig is a sort of female "Mowgli." If she has not been brought up by a wolf, she is on such terms of mutual understanding with a bear that she gains a freemasonry with all the wild dwellers in the woods, so that none dream of harming her, and the fiercest panther forgoes his prey at her bidding. We may not quite accept Miranda's feats as gospel, but the story has great fascination about it. As we read, we feel penetrated with the solemn silence of the lonely woods, and seem to catch the furtive movements of their myriad inhabitants, each in fear of being the prey of something stronger or crueller than itself.

Chums Yearly Volume. (Price 8s. Cassell.)—A glance at the serial stories, and their illustrations, tells us that the new volume is no whit behind its nine companions in wild and daring adventures and wonderful escapes by flood and field. Interviews, sports, pets, and prizes are staple products of a boy's magazine, and this volume contains also some short papers on school fashions and customs, and pictures of barrack life; while Mr. David Ker—a favourite author—contributes some very startling "adventures in out-of-the-way places." Beside the large number of black-and-white illustrations, many of which bear Mr. Paul Hardy's well known initials, there are thirteen coloured plates. "Running the Gauntlet," by G. D. Rowlandson, is among the most successful.

The Romance of Modern Invention. By A. WILLIAMS. (Price 5s. Pearson.)—Modern invention is so wonderfully prolific that it is hard to retain even a superficial grip of the advances which it is making. Mr. Williams not only helps us to do this, but even gives an explanation of the mysteries of the inventor as full as the lay mind is capable of appreciating. His style is bright and interesting, the chapters which deal with the telautograph and with submarines being particularly happy. The volume is illustrated by photographs and a few diagrams, which help to explain the more complicated pieces of machinery.

Stories of Charlemagne. By Prof. A. J. CHURCH. (Price 5s. Seeley.)—The names of the twelve great peers of Charlemagne's Court

are so well known that little else is needed to attract the reader to this book. Roland and Oliver and Oberon are names to conjure with; and Prof. Church's book has no lack of interesting situations or exciting events. If there is anything to blame in the volume, it is the lack of the personal element. The old chronicles have been too freely clipped and shortened, so that in places the reading becomes dry and flags. On the whole, however, the book is a good one for children, and Morrow's illustrations are good in colouring and design.

The Boy's Own Annual, 1902. (Religious Tract Society.)—The *Boy's Own Paper* still maintains its high position among boys' periodicals. The *Annual* offers to its readers serial stories by David Ker, G. Manville Fenn, J. Finnemore, Gordon Stables, W. G. Cole, &c., with innumerable short stories and papers on most subjects under the sun. Dr. Gordon Stables continues his advice as to how to be healthy and wise, and how to treat various feathered and furry pets. Indoor and outdoor sports, cycle rides, instructions "how to make" all kinds of things, help to make up a volume of unfailing interest to any right-minded boy. There are twelve large coloured illustrations, including "The Battle Call," an effective picture by J. T. Nettleship. "On Guard" and "Bronze and Gold" also come out well.

A Lost Leader. By DOROTHEA TOWNSHEND. (S.P.C.K.)—The lost leader is Major-General Thomas Harrison. We have here a somewhat different presentment of him from the one given in "Woodstock." Harrison is a sort of *preux chevalier*, and the memory of his life and teaching inspires a younger Harrison, his nephew, according to the story, to carry out his precepts as far as may be. Dick Harrison is for the most part flying for his life, or in hiding from his enemies, whom the Restoration has brought back to power, and his wooing of Audrey Perriert is carried on under difficulties.

The Pick of the Basket. By PHOEBE ALLEN. (S.P.C.K.)—A story with a moral; it is pleasantly written, and shows in a sufficiently ingenious way how one small deception may lead to serious consequences, insignificant as it may appear to begin with, and how the consciousness of deceit in ourselves gives rise to suspicion and distrust of others.

All Astry. By ASCOTT R. HOPE. (Price 3s. 6d. A. & C. Black.)—The adventures of two small boys who run away from school and come home again after the first term, one in a hamper and the other in a brown paper parcel, afford plenty of scope for Mr. Ascott Hope's special vein of humour. Like the Greeks of Herodotus, he has the gift of perpetual boyhood, and knows, instinctively, what boys feel and how they talk. Public-school boys will turn up their noses at the book as milk for babes, but their small brothers in the preparatory will relish it like tippy cake or Turkish delight.

Foundations. By Mrs. WALTER WARD. (Price 2s. National Society.)—This seems to us somewhat lacking in interest, and throughout we are annoyed by the incessant use of italics. Also the shortness of the chapters seems to cut up the story unnecessarily.

The Girls' Empire. Annual Volume. (Price 5s. Andrew Melrose.)—In these days of competition a monthly magazine for girls has to aim at a high standard if it is to succeed. The volume before us contains much that is of interest, a series of articles on "How to be Strong" and "Cosy Corner Chats," for instance; but the longer stories and the poetry seem to us rather poor, and the illustrations are in many instances very inferior.

A Little Cockney. By S. G. (Price 1s. 6d. Nelson.)—A nice little story about the country as viewed by the eager eyes of a little cockney.

The Girls' Own Annual, 1902. (Price 8s. Religious Tract Society.)—This *annual* should suit the taste of all sorts and conditions of girls. For the thorough-going schoolgirl there is the history of "Pixie O'Shaughnessy," by Mrs. Vaizey; the more sentimental young lady can turn to "Silent Strings," by Sarah Doudney; these seem to us the best of the serial stories. There are several interesting articles on women artists, and among the shorter stories we should particularly call attention to "Barty's Star," by Norman Gale, which is most attractive and is charmingly illustrated by Gordon Browne. Besides the stories, there are articles on cooking, dressmaking, and other subjects, such as "Practical Points of Law." The volume is, as usual, nicely got up, and the illustrations are for the most part good.

The Other Boy. By EVELYN SHARP. (Price 4s. 6d. Macmillan.)—A story of five children, who certainly do not show their most attractive side in the conversations recorded of them, which largely consist in petty squabbles and recriminations. Charlotte—"Charley," as she has been nicknamed, as it is she who fraternizes with Fred, the only boy—is by far the most pleasing of the children, and her childish struggles between loyalty to her chum and her sense of justice and pity for the "other boy," who has received a by no means pleasant reception, are cleverly described. One of the best scenes in the story is the meeting of the children with the new governess—before they have discovered who she really is.

The Nation's Pictures. (Price 12s. Cassell.)—This is one of the most successful examples of the three-colour block process that we have seen. Some of the pictures are admirably reproduced. We should specially mention Watts's "Prayer" as quite excellent, and there are many others of almost equal merit. In a few cases the

colouring, and in others the relative light and shade, seem to suffer in the process of reproduction. The selection of a number of pictures must always be a question of individual taste; but, on the whole, these have been chosen with taste and judgment.

Westminster Abbey. A Series of Picturesque Views in Photogravure, with Descriptive Notes. Approved by the Dean. 10 Plates. By WILLIAM RICE, F.R.P.S. (Price £2. 2s. Allen & Co.)—Among the more costly Christmas books for the year this heads our list. Mr. Rice has been particularly happy in choosing his points of view. Whilst the detail is so perfectly reproduced that even the inscriptions on the monuments are legible, the broad effects of light and shade are in no wise impaired. The two Cloisters and the Chapter House are pictures of which an artist might be proud.

The New Pupil. By RAYMOND JACBERNS. (Price 4s. 6d. Macmillan.)—This is the story of the school-days of a wild little girl called Pollie Quebe. Though the theme may sound hackneyed, the tale is well worth reading, for the author shows a distinct power of character drawing. Miss Hammond's illustrations are, as usual, pretty and finished productions.

The Coronation Book of Edward VII. By W. J. LOFTIE, B.A., F.S.A. (Price 10s. 6d. Cassell.)—This is a most handsome volume, profusely illustrated both in black-and-white and in colours. Those who wish for information on the subject could hardly find a more exhaustive treatise than this, which ranges from the history of the ceremony to the smallest details of the decorations.

Peterkin. By Mrs. MOLESWORTH. (Price 4s. 6d. Macmillan.)—In outward appearance this resembles a long line of Christmas stories which had a special charm of their own, but when we turn the pages we somehow miss the old inspiration. These are not the children of "The Cuckoo Clock," of "Herr Baby," and "Us"—something of the form is there, but much of the spirit is gone. It is a well written, quite readable story, but the others were more than this. Mrs. Molesworth's very popularity may have induced this state of things. She has been urged by it to supply more books than an author can produce and yet keep at her best.

Messrs. J. M. Dent and Co. send us a most dainty little volume of *Fairy Tales from Hans Christian Andersen*, illustrated by T. H. C. and W. H. ROBINSON, bound in blue cloth, price 1s. 6d.; the frontispiece is a very effective and pretty coloured picture of the Little Mermaid, and the selection of stories is good.

REPRINTS AND NEW EDITIONS.

A Child's History of England. By CHARLES DICKENS. Illustrated by PATTEN WILSON. (Price 5s. Dent.)—In his extravagant panegyric of Dickens, this "History" is the one work that Mr. Swinburne excerpts from the bead-roll of immortality, and, as we re-peruse a book that we greatly admired some forty years ago, we must confess that the style is crude and the treatment uncritical. Much water has passed under London Bridge since Dickens summed up the character of Henry VIII. as "a most intolerable ruffian, a disgrace to human nature, and a blot of blood and grease upon the history of England." Still, for children crudity is better than dullness, and the rising generation will, doubtless, treasure this handsome volume with Mr. Wilson's bold illustrations.

Don Quixote, illustrated by W. HEATH ROBINSON (price 5s. net, Dent), is a companion volume, which, speaking in *loco parentis*, we should greatly prefer for our children. The editor, who is anonymous, has done his work of expurgation and abridgment with skill. Some of the illustrations—the Curate and Sancho Panza with Dapple—are excellent.

(1) *Cranford*. By Mrs. GASKELL; illustrated by HUGH THOMSON. (2) *The Vicar of Wakefield*. By OLIVER GOLDSMITH; illustrated by HUGH THOMSON. (Price 2s. each. Macmillan.)—These are new and attractive editions, in good clear type, prettily bound in cloth; the only fault to be found with them is that the margins are somewhat unduly curtailed.

(1) *Little Miss Peggy*; (2) *Tell me a Story*. By Mrs. MOLESWORTH. New Editions. (Price 2s. 6d. each. Macmillan.)—We are glad to see fresh editions of two old favourites, with the illustrations by Walter Crane which add to the many attractions of Mrs. Molesworth's earlier stories.

We have received from Messrs. Macmillan new editions of *Peter Simple* and *Mr. Midshipman Easy*, by Captain MARRYAT, with introductions by DAVID HANNAY, and numerous illustrations. They are nicely bound in cloth, price 2s. 6d. each, and the print, though not large, is clear.

We have received from Messrs. Macmillan & Co. new editions of *The Dove in the Eagle's Nest* and *Unknown to History*, by CHARLOTTE M. YONGE, price 2s. 6d. each. They are nicely bound in cloth, and the print is clear and good. The illustrations are hardly satisfactory. The best is the frontispiece to "The Dove in the Eagle's Nest," a story which is deservedly popular.

We have received from Mr. Elliot Stock a cheap edition (price 2s. 6d.), nicely got up, of *Tom Andrews*, a well written story of Board-school life by the BISHOP OF BLOEMFONTEIN.

CORRESPONDENCE.

THE ISLEWORTH INTERNATIONAL COLLEGE.

To the Editor of The Journal of Education.

SIR,—All interested in education have to thank Mr. P. A. Barnett for his admirable article in the October number of *The Journal of Education* on the necessity of an authoritative lead being given, if possible, by some responsible corporation on the problems of practical education. One sentence, however, must grate rather harshly upon the ears of any former masters, pupils, or friends of the late London International College at Isleworth; and, as one who gave nearly sixteen years of hard work as Head Master of that college, I may, perhaps, be allowed to supply a few details of its history which might at the same time serve as a slight contribution to the problem, even if recording a failure. Mr. Barnett says:

Until quite recent days public schools of the first degree which boldly set before themselves another ideal than that of gaining distinctions at the two older Universities have mostly dragged on a miserable existence towards painful self-extinction, as was, for instance, the case of the Isleworth International College, built on the prescriptions of Huxley and Tyndall, and blessed by Cobden.

The late Prof. Huxley certainly did kindly draw up a scheme for the proposed teaching of natural science, which was, however, far too elaborate to adopt in its entirety for a school course; and Cobden would doubtless have blessed the attempt to teach French and German as living languages had he not died in April, 1865, more than two years before the College was opened by His Majesty (then H.R.H. the Prince of Wales).

The original idea of the International Education Society was to found similar colleges abroad, but this idea had already been abandoned under the rule of my predecessor, the late Dr. Leonard Schmitz, formerly Rector of the High School at Edinburgh, where he had also acted as tutor to the then Prince of Wales and Duke of Edinburgh. Apart from financial considerations, it was considered unwise to send more than two or three English boys to the same institution abroad, and this part of the scheme resolved itself into merely ascertaining where pupils going abroad could be most suitably placed (without any pecuniary advantage to the London college), while at the same time it was found advisable not to break into a boy's English school course, but preferably to recommend holiday courses or a period of residence abroad after leaving the English school. A small percentage of foreign pupils also came to the College, principally through the foreign embassies.

Though essentially a modern school with a small classical side, Latin was taught from the lowest form, together with French and experimental chemistry and physics. There was also a systematic teaching of the mother tongue throughout the school, including literature and composition, the latter being taught in the lower forms through the reproduction of a tale told or read, or of some experimental work performed.

In the Middle School, Greek and German were added to the curriculum as alternative subjects, and the time hitherto devoted to English was curtailed. In the Upper School, one of the English hours was given to the study of social economy, the subject being frequently utilized for English composition. The usual mathematical subjects were, of course, taught, and of the two hours devoted weekly to drawing by every pupil one, at least, was utilized for geometry.

For physical training, each form had one of the school hours on Saturday mornings for instruction in gymnastics and drill under the supervision of the Head of the London German Gymnastic Society, besides the out-door games usually indulged in at public schools (in which the College fully held its own); also at the end of each teaching hour from five to ten minutes were allowed for out-door exercise while the classrooms were being ventilated. In connexion with this, and partly perhaps as a consequence, it may be mentioned that not a single death occurred at the College during its existence, nor was it visited by any epidemic.

Outside school hours, in addition to games, we had a workshop, a printing-room, a library, a debating society, also a natural history society, in connexion with which a fairly representative museum was gradually formed, principally from collections by the pupils themselves on their field-days and during their vacations and from contributions from former

pupils; there was also a small nursery garden in which many of the shrubs and trees planted about the grounds were reared.

Though at first scarcely any pupils proceeded to the older Universities, later on several open scholarships and exhibitions were gained, including more than one major scholarship at Trinity College, Cambridge; one of the last pupils to do so became Senior Wrangler, and had sufficient physical energy left to row in the Cambridge University boat.

In natural science former pupils hold professorships at Cambridge, Owens College, and Liverpool. Among others, several represent constituencies in Parliament; many are respectively barristers, solicitors, doctors, architects, members of the Indian and Home Civil Service, the Diplomatic Service, and of the Woods and Forests Department; also a number are civil, mining, or electrical engineers at home or in the colonies and in foreign countries. It might also here be mentioned that, while the Royal Geographical Society's medals were offered for competition among the public schools, the International College gained its fair share both of medals and of honourable mentions.

More than one former pupil has had his pictures exhibited in the Royal Academy, and, of one or two successful authors, one has gained the prize offered by the *Academy* for the best book of the year, and has been entertained as a guest by the Society of Authors. Several are officers in the Army: one (now holding the rank of general), after doing good work in Egypt and the Soudan under Lord Kitchener, was sent for by him to join him in South Africa, where he has done excellent administrative work.

Perhaps the greater proportion of old pupils have become merchants or manufacturers, or are otherwise connected with commercial or financial pursuits (one of them is a Director of the Bank of Ireland), many of them at the same time being occupants of the magistrates' bench. As some evidence that many of these former pupils look back with a certain amount of affection on their old school, an *Old Boys' Gazette* is still published and circulated amongst them; indeed, much of the above information is obtained from its pages.

Among educationists, other than those referred to below, who were interested in the work of the International College, and who sent their sons there, were the late Dr. Hodgson, the Right Hon. Sir M. E. Grant Duff, and Sir Joseph Hooker.

I venture to think the failure of the College was more financial than educational. Financially, it was scarcely possible for it to have succeeded, given the conditions of its foundation. It had no endowment fund like that of the older public schools; it had also no large proprietary fund like that of the later foundations, where a proprietary body subscribes the necessary funds for the purchase of land and the erection of school buildings, receiving in return a nomination or other equivalent. One educational enthusiast alone advanced £20,000 for this purpose, and, later on, another advanced an additional £10,000 for the purpose of adding a wing to the first building, for fitting up a large laboratory and more class-rooms, and for building a large gymnasium. A small proprietary body, having subscribed a few thousand pounds for furniture and working capital, took a lease of fifty years of the land and buildings, on which they eventually paid over £1,000 per annum as rent or interest besides doing all repairs, &c.

This was a heavy first charge on a school with an average from first to last of about one hundred pupils, and where the highest fee charged was 90 guineas, inclusive of all subjects taught in the curriculum. In good years, however, this rent was not found too heavy, and, besides paying 5 per cent. to the small proprietary body, more than £2,000 of the original loan was paid off. In less prosperous years, however, it was different, but the landlord was generally ready to make concessions during his lifetime. His successors, rightly enough considering their property an asset, tried to sell it, subject of course to the remainder of the lease held by the proprietary body. This lease proved somewhat of a stumbling-block, and eventually it was abandoned on mutual terms, time being given to parents to place their sons elsewhere and the teaching staff to find other appointments, when the proprietary body was voluntarily wound up after an existence of rather more than twenty-two years.

It has since transpired that several wealthy former pupils, had they known of the financial status of their old school, would gladly have advanced the necessary funds to have placed it on a sound proprietary basis; and, had this happened, it is

H. R. LADELL.

THE REGISTER AND SCOTCH SCHOOLS.

To the Editor of the Journal of Education.

SIR,—Having recently applied for registration under Column B, I have received a letter from the Registrar explaining the conditions of registration, but adding that, as the Registration Council is subject to the authority of the Board of Education, whose jurisdiction does not extend beyond England and Wales, it does not propose to recognize schools for the purposes of registration which are not within their jurisdiction, certain exceptions being made in favour of an Irish institution named in Appendices B and C of the Order in Council.

Now this regulation is likely to hit some of us very hard, if interpreted strictly, though I fancy I can see a loophole of escape in the general regulations. When writing I suggested that forms should be sent to various Scotch schools, where I know that many Englishmen are engaged at work, some of whom, at all events, would be willing and desirous to be put on the Register. But service in a Scotch school will not count, apparently, even for those who, like myself, have worked for the greater portion of their time in English schools. The condition laid down, under which presumably most of those who want immediate enfranchisement will apply, states that the applicant "must have been engaged during the three years next preceding his application as a teacher at a recognized school or schools." It is the words "next preceding" which would exclude many, though surely it would be illogical to exclude any who could show that they had served the required three years simply on the ground that later on they had taken posts not in England or Wales. It is true that, in the clause which provides for the admission of those who can produce evidence of theoretical training, the words are simply "experience in teaching . . . extending over a period of not less than three years," but even this will hit hardly the seniors among us. Surely it would be possible for the Registration Council to satisfy themselves without much difficulty of the fitness of schools elsewhere than in England or Wales to give suitable practical experience. Otherwise I fear that when registration becomes a necessity—the sooner the better—no Englishman will ever dare to leave his native land, not even for the friendly borders of the Scotch.—Yours faithfully,

F. H. MATTHEWS.

THE STATE ASSISTANCE OF LAW-BREAKERS AS LAW-MAKERS. — ILLITERATES AS LAW-GIVERS. — THE STATUTORY CONDEMNATION OF ILLITERACY.

To the Editor of The Journal of Education.

SIR,—I should like to point out that it is now high time that those who have neglected to learn to read the language that records their country's laws should no longer be specially assisted in voting for law-makers. Law-breakers in this respect deserve no assistance concerning the selection of law-givers.

After so many years of obligatory but gratuitous education, those who might have availed themselves of the Education Acts should find their illiteracy regarded as an aggravating (not extenuating) circumstance when convicted of crime. This especially applies to offences whereto illiteracy may have conduced. Illiteracy under such circumstances should involve liability to additional detention or limitation of liberty for the purpose of a belated fulfilment of the evaded law of education. To the expenses involved, even in the case of adult offenders, the parents who might have had them educated gratuitously should henceforth be liable to contribute. If possible, also, any educational authority which had failed to enforce the offender's school attendance should be similarly liable. Let there be, at least, a statutory condemnation of illiteracy.—I am, yours truly,

October 23, 1902.

CHARLES G. STUART-MENTEATH.

A PRACTICAL ENGLISH GRAMMAR.

To the Editor of The Journal of Education.

SIR,—Will you permit me to reply to one or two direct questions put to me by the reviewer of "A Practical English Grammar" (*Journal of Education*, October, 1902)?

Your reviewer quotes the example, "Kind hearts are more than coronets [are much]," and remarks: "This is surely a forced explanation; how would Mr. Ritchie supply the ellipse in 'more than enough,' or how would he account for 'than whom'?" My explanation of the ellipse in "Kind hearts," &c., may be forced; but it is, I believe, that usually adopted—and I do not know of any better. It is generally held that, in such a sentence as "A is larger than B," the words "is large" must be supplied; I have simply applied this method to the example in question. If the word "much" is considered awkward, the word "something" might be substituted; but there is an obvious advantage in regularly supplying the ellipse after "than" by the positive degree of the same adjective or adverb that appears in the principal sentence.

The ellipse is easily ascertained by (1) substituting "though" for "than," or (2) by reversing the order of the clauses, thus: "Coronets are much (or something); kind hearts are more." I should explain "more than enough" in the same way, though here the word "much" is certainly awkward. Thus "(much or) such and such a quantity is enough, this is more" = "This is more than (such a quantity) is enough."

I have referred to "than whom" on page 159, but have not attempted to explain it. Mr. Mason says that "no satisfactory syntactical explanation can be given" of this anomalous construction.—I am, Sir, yours truly,

FRANK RITCHIE.

Sevenoaks, October 7, 1902.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN.

To the Editor of The Journal of Education.

DEAR SIR,—The Council of the College would feel much obliged if you would kindly notify to your readers the appointment of Miss Helena L. Powell, now Head Mistress of the Leeds Girls' High School, to the post of Principal of the Cambridge Training College for Women. Miss H. L. Powell (Newnham College, Cambridge) obtained a First Class in the History Tripos of 1884. She was for seven years assistant mistress in the Oxford High School for Girls, under Miss Bishop and Miss Soulsby, and since then Head Mistress of the Leeds Girls' High School. Miss Powell is to begin her work at the college after Christmas.

I may add, as to the college itself:—We have begun the term with thirty-nine students, as compared with twenty-six during the last term, and we trust that there is a good prospect of still higher numbers after Christmas. Meanwhile Miss M. S. Young (of the North London Collegiate School) is ably taking the charge of the college.—Believe me to remain yours very truly,

ALFRED ROSE.

Emmanuel College, Cambridge, October 18.

TEACHERS' SALARIES—A SUGGESTED TRADE UNION.

To the Editor of The Journal of Education.

SIR,—Permit me, through the medium of your columns, to make what I think is a timely suggestion to my fellow-workers—assistant mistresses in secondary schools. With the Registration Bill a golden opportunity presents itself if we will only combine, and combination is the order of the day on both sides of the herring-pond. Here is the opportunity:—Soon no secondary school will be recognized which has not a staff of registered teachers. Therefore, every secondary school of any standing *must* have registered teachers. Then let us all—i.e., those who are registered or about to be so—form a union, and bind ourselves not to accept less than a certain salary—a good living wage, worthy of a body of professionals.

The matter lies entirely in our own hands. If we do not act, and act together and at once, we deserve the worst the Fates may have in store for us.—Yours,

F. W. J. M.

Rochelle, Cork.

CAKES AND COLLECTS.

To the Editor of The Journal of Education.

DEAR SIR,—I was reading the other day a recent number of a magazine coming from a well known public school. Among other matters were some schedules of school accounts, including those of chapel and those of games. In the receipts of the latter appeared "Profits on the grub-shop." Assuming these to be 20 per cent. on the expenditure (10 per cent. would probably be nearer the mark), I arrived at the result that, on an average throughout the school, whereas a boy would spend over 1s. a week on grub, he would give something less than 1d. a week to the various objects for which the chapel collections were offered. There seems something in this conclusion which offers food for thought.—I am, Sir,

ONE WHO WOULD FAIN SEE GRUB-SHOPS ABOLISHED.

WANTED, AN ENGLISH HISTORY.

To the Editor of The Journal of Education.

SIR,—I shall be glad if any of your readers can suggest a suitable text-book of English history, to be used in a girls' high school in Forms III. Upper and Lower, and possibly Form IV. Lower—ages of girls, eleven to fourteen. I want a book more advanced than Gardiner's "Outlines," and more simply written than Morris's "Short History of England."—I am, Sir, yours faithfully,

J. W. BEGGS.

Tottenham High School, September 25.

A CORRECTION.

To the Editor of The Journal of Education.

SIR,—The eighth paragraph of my article "School Boards and Secondary Education" (September) was incorrect in one numerical detail. The sixth paragraph was correct as to all external facts, but the statement of motives might with advantage have been suppressed. Accordingly, I should wish that the sixth paragraph be regarded as non-existent.—Yours faithfully,

THE WRITER OF THE ARTICLE.

OCCASIONAL NOTES.

AFTER the unprecedented number of forty-five sittings, the Education Bill has passed the Committee stage and will, by the time these words reach our hearers, have been sent up to the House of Lords.

At Last! Members of Parliament, newspaper reporters, public speakers, and the general public may, and will, feel a sensation of relief. Many of the points raised in discussion have been of first-rate importance, and have not always received due consideration. And yet so long has this controversy raged that we may be thankful for a temporary respite, even if it means a renewal of the struggle before many months are past. The amendments that may yet be allowed are neither numerous nor important. The Bill as it stands now is practically the Act that will come into operation at the end of next March. During its passage through the Commons it has been improved and licked into shape, though its fairy godmother has given it some shrewd pinches. As we confidently predicted, the option clause has disappeared. Every larger Authority under the Bill will be obliged to deal with elementary education as well as secondary. The remaining weakness of this part of the Bill is that there are too many Authorities. But, it must be remembered, combined action is possible; and it is fairly certain that many smaller Authorities will form themselves into groups under the County Authority.

THE second clause has been very distinctly improved. The Authority has now specific power to deal with the training of teachers. The twopenny rate remains, but the Local Government Board may give permission for a higher rate on the application of any County Council. Clause 4 deals satisfactorily with the religious question in secondary

schools or colleges. On the question of the management of voluntary schools Mr. Balfour has forced his point. The denominationalists are four to the two members of the Local Authority. Still we maintain that, given a Conservative Government supported by the bishops, popular management has gained all it could expect. And, in reality, the Bill gives such complete powers to the Authority that in case of serious dispute the four trustee-managers would have to yield. That they appoint the head teacher is obviously a sop to the Church, and cannot be defended on lines of abstract justice or of educational efficiency. The State pays the salary and the trustees appoint the man. A better plan would have been to give the trustees power to send a list of five or three names to the Authority, who should elect one from the list.

THE sound of the Free Church opposition has grown fainter, but this is in no sense because its demands have been satisfied. In voluntary schools the managers are given permission to appoint assistants and pupil-teachers without reference to their religious opinions. This is, of course, farcical. And the clause giving the Authority power to appoint a pupil-teacher when there is more than one applicant for a post is not much better. Mr. Balfour indignantly rejects the word "bargain" as referring to the relations between himself and the bishops. But "F. C. G.'s" caustic pencil has perhaps portrayed something not far from the truth. "Not only," he represents the Bishop of London as saying, "have we got building grants from the State for our schoolmasters' houses, but we are now going to make the public pay rent for them." And Mr. Balfour replies: "Ha, ha!" It is understood that the implied threat of the Church of England to close its schools if it was pushed too far has been allowed to have weight. In England we hold vested interests in exaggerated respect, and perhaps no Government would venture at the present moment to propose the compulsory purchase of all denominational schools and the compulsory pooling of all educational endowments. Yet even in Siam, as Mr. Morant could tell us, there is a limit to the price that the State will pay for a white elephant—and a white elephant the Church school-buildings would prove if left on the vendor's hands.

BUT the section of the Church of England popularly known as "High" has received a nasty hit over the Kenyon-Slaney amendment. Signs of revolt were even allowed to appear and covert threats were uttered. These did not seem to disturb Mr. Balfour greatly. Indeed, we doubt not that, if the revolt had broken out, many Liberals would have sided with the Government sooner than see the Bill in jeopardy. They, like us, would have seen the Bill improved, but they would not, any more than we would, have the existing chaos continue in its place. But the High-Church alarm is groundless. The new clause states that the religious instruction shall be in accordance with the tenour of the provisions of the trust-deeds and shall be under the control of the managers. Of course the latter half of the clause taken by itself is rank erastianism; but, taken with the first part, it appears to have "little meaning, though the words are strong." The managers, it seems, will be as much under the control of the bishops as the clergy are in cases where an appeal to the bishop is allowed by the trust deeds. As a matter of fact, we suspect that the diocesan syllabuses will be adopted universally, and that, in cases where the managers and the parson disagree, the bishop will be on the side of the managers.

IT is not generally known that the managers of voluntary schools have a number of alternatives left them by the Bill. They can keep the school wholly in their own hands without the Local Authorities having any say in the matter (as is done now in some few cases), and lose the grant, though still counting for attendance purposes. They can come under the provisions of the Bill and become "creatures" for secular instruction while managing religious education; they must pay for this, however, by keeping up the fabric. Again, they can surrender the school wholly to the Local Authority, thereby abolishing themselves and getting rid of all responsibility. This is what is likely to happen, ultimately, in most cases, especially in large towns. Finally, they can surrender the school under an agreement whereby they reserve the use of it during certain hours. In this case the school becomes a "provided" one, and the managers have no jurisdiction over the teachers and no funds to provide. The Local Authorities would give no religious instruction, and this would have to be provided by voluntary effort in the reserved hours, which means that the parson would give it himself. As there would be no marking of registers or grant for this extra time, all indignities connected with using the conscience clause would be done away with. The High Church clergy in poor parishes favour this solution. Of course the Local Authority will prefer not to have schools "surrendered," as the rates will be best saved by the continuance of subscriptions.

THE question also of the allocation of the school fees, over which Dr. Macnamara spent such superfluous energy, is one of the smallest importance. In a budget of £115,000, which shows the income for all schools in an important county, we find "fees, &c.," represent £1,400 only, and much of this is "fee"—i.e., sale of books and material to the scholars. By the Bill the Local Authority is absolutely master of the situation. It can, by a stroke of the pen, make all the schools in its area free, and so deprive managers of their small source of income. In many districts this is exactly what will happen. On the other hand, if the Authority chooses to license the managers to charge fees, then it must allow them to keep such a part as the Board of Education may determine. Now there are two classes of schools which at present charge fees. First, those situated in such very poor districts that they can expect no subscriptions, and so have to make up their local aid in other ways. These schools in the past have also made a large part of their income by letting the schools to slate clubs, choral societies, or for bazaars. Now, by the Bill, for three nights a week they are deprived of this source of income; hence, if they are to maintain the fabric, they are equitably entitled to a part of the fees. The other class of fee-charging schools are certain British and Wesleyan schools frequented by the children of shopkeepers, who desire to keep the school "select," and choose this method of keeping out the child of the working man. No doubt the Local Authority will put an end to this.

THE one part of the Bill which even as we write is definitely settled is that dealing with finance. This cannot be altered on Report in the House of Commons or in the House of Lords. What strikes the educationalist here is that education has made a remarkably fine bargain. The elementary schools get the new special aid grant of £1,300,000 in lieu of the old one of less than half the amount, with the School Board grant of one-fourth this

sum—a balance of about £400,000 to the good. They get also at least a 3d. rate all over the country, which means close on £2,000,000; this is two-thirds of the whole School Board rate at present existing, and, when the balance required in those areas is considered, means at least £4,000,000 more rate money. It must not be assumed that the £800,000 or so voluntary subscriptions will disappear. Certainly half of this will still be required for the upkeep of the fabric. But, further, all this is for purely elementary (as defined by Cockerton) education. The most expensive part of the work of School Boards hitherto—higher-grade schools, pupil-teacher centres, &c.—now goes over to the secondary rate, which must be at once $\frac{1}{2}$ d., or one-third of a million all over the country. Secondary education proper (which must now include the provision and maintenance of training colleges) will certainly, besides its definite allocation of nearly a million beer money, require an extra $\frac{1}{2}$ d. at once, and can everywhere without difficulty demand its 2d. If a very definite improvement in education all round does not result from this, we shall have to blame the local administrators, and not the Government.

NOW that practically the Education Bill is all over except the shouting, it behoves County Councils to prepare to set their houses in order. The time is really very short. The Government intend the Bill, as far as the framing of schemes is concerned, to come into operation at Christmas, and they hope that all favourably disposed County Councils will get their schemes accepted and their Committees sitting in time to take over all the work on March 31, the end of the financial year for all Local Government purposes. But this cannot be done unless the responsible Committee in each county sets to work to make itself, and by full and ample reports its Council, acquainted with all matters educational. Conferences between the Authorities under Part III. and the co-ordinate bodies under Part II. may safely be held at once, and must be held if the highest aim of the Bill—one Authority in each area—is to be carried out. Experts able and willing to serve as the outside members should be sought out and sounded. In many counties this will be a matter of great difficulty, for it must be remembered that County Council Committees meet in the daytime, and the Education Committee will generally have to sit all day once a month. But the worst difficulty of all is that there are in most counties no officials with either time or knowledge for the preliminary work of inquiry and organization. In most cases the organizing secretary has his hands quite full and has not "specialized" in elementary education, and the County Council clerk cares for none of these things. If chaos is not to result on April 1, no time must be lost in getting over the preliminary work.

BUT there are other grave dangers involved in delay. The Bill admits of the putting off the appointed day for any period not exceeding a year and-a-half. The disaffected counties, such as Durham, Isle of Wight, and the West Riding, will, no doubt, have pressure brought to bear to obstruct as long as possible; for do not the County Council elections take place in March, 1904, and a fine political faction fight will be avoided if the Act is in full working order by that time? Everywhere, also, the sectarian fanatic will take advantage of a period of delay to press his grievances and organize his passive resistance. He cannot be fought successfully until the actual benefits of the Act are brought home to the people by practical experience. In county-

Dangers of Delay.

boroughs the period of conflict between the Town Councils and the School Boards should be as short as possible, and in any case should not continue until after the time for making arrangements for next year's evening classes and other "Cockerton" work; otherwise, deprived of all responsible control, this work must collapse. Everywhere also the School Boards now under sentence of death are either marking time by making temporary appointments or withholding apparatus, &c., or are "jumping the claim" by fixing up agreements, salaries, &c., in such a way as to prejudice or tie the hands of the incoming Authorities. Doomed bodies, like dying men, naturally make their wills. Trust deeds also are being vigorously manufactured, and will give much trouble to upset. Hence let the work be done promptly everywhere.

TWO amendments to the Bill are specially welcome. The Bill distinctly states that women are not disqualified, either by sex or marriage, for being on any body of managers or Education Committee. It is a matter of hearty congratulation that the agitation in favour of this definite pronouncement—an agitation in which this journal took part—has been successful. The second subject for congratulation is the additional security of tenure for teachers in voluntary schools. The consent of the Authority is now required for dismissal, as well as for appointment, unless the dismissal is "upon grounds connected with the giving of religious instruction." To sum up: the Bill establishes, for the first time in England, Local Authorities dealing generally with education within their areas. The necessary funds are provided either from Imperial taxation or from local rates. In the latter case the rating powers are entirely in the hands of popularly elected bodies. These bodies have full control over the Committees they appoint. To these bodies are delegated many of the functions of an over-weighted central body. The dual system of State schools and voluntary schools is maintained; but the latter are under severe restrictions. We desire, in the future, amendments on many points, and, in particular, a definition of a County Council's obligations and functions as regards secondary education, a portion of the Bill which, owing to the closure, has been scamped. But, to a limited extent, we have got what we wanted, and no criticisms of ours shall be directed towards putting obstacles in the way of carrying out the provisions of the Bill. Its successful working depends largely upon the good will of the localities, and the amount of discussion that has taken place has fixed the attention of every one on the seriousness of the problems to be solved.

THE vote in Congregation at Oxford rejecting Mr. Matheson's motion that "Candidates shall not be required to offer both Greek and Latin in examinations in stated subjects in Responsions" by the narrow majority of twenty-three may be regarded as a Pyrrhic victory. Were a knowledge of Greek, however rudimentary, really enforced, there would be much to say for its retention; but the ability to construe two set plays and answer a paper in accident no more implies a knowledge of the language than the ability to write out propositions from the first two books of Euclid implies a knowledge of geometry. A concrete instance, for which we can vouch, will show what a farce the whole thing is. A mathematical scholar of Somerville College began studying Greek in January, not knowing the alphabet, and passed Responsions in June. She could not construe at sight a sentence from the *delectus*, and after a year could not write the Greek alphabet. Yet our Oxford pundits still maintain that a

homœopathic tincture of Greek is educationally more efficacious than an allopathic dose of French or German which would enable a pupil to read a French or German author without a dictionary.

THE argument that most prevailed was that set forth by the Head Master of Haileybury in the *Times*. Under a system of free trade Greek would be doomed. Unless the Universities give us protection, we shall have to abandon Greek in schools. Greek will become the pursuit of a few select spirits, and no more. Parents will insist on their boys learning other subjects as a more profitable investment. Even if we allow for the sake of argument that this will be the result, we should still contend that Greek must go. As Dr. Scott reminded the Conference on Training, schools exist not for head masters or for the Universities, but for boys and their parents. It may be that German "holds out a miserably inferior reward in the way of literature," though we cannot avoid the suspicion that the classicists who can thus vilipend German literature are hardly the most competent judges; but, in the first place, Smalls does not come within speaking distance of Greek literature; in the second place, if parents deliberately prefer the inferior article for their sons, they are bound to have it.

A MORE plausible argument for the retention of Greek is adduced by Dr. Warre. He tells us that he has examined for entrance to Eton between twelve and fourteen thousand boys ("quod facit per alium facit per se"), and his experience has been that the boys who have given their whole attention to modern subjects, such as French, history, and geography, without what is called wasting their time on Greek, do not display in these subjects any superior knowledge to those who have been handicapped by a study of Greek. Of course they don't, and Dr. Warre must be well aware of the reason. Greek is still a predominant factor in entrance scholarships, and these scholarships are to a preparatory school what a Newmarket plate is to a racing stable. Its reputation, its very existence, depends on winning scholarships. It is only the weedy, the spavined, the broken-winded colts who are excused Greek and turned out to grass in modern subjects. Again, Dr. Warre "has never yet heard that a superiority in mental training and products can be claimed for the modern sides." We would recommend him to read the Memoir of Edward Bowen. He will find there one instance in which it is claimed, and, what is more, supported by facts. He will find, too, that Bowen resigned the mastership of the Modern Side because a classical head master insisted, contrary to the original scheme, on shunting his rubbish on to the Modern Side, and refusing to announce publicly the change of constitution. If we are not mistaken, Dr. Warre, in 1878, signed a memorial to the University of Cambridge praying that Honour men might be excused Greek. Has he changed his mind, or does he think that what is good enough for Cambridge is not good enough for his own University?

THE "Encyclopædia Britannica," with the addition of the supplementary volumes just completed, is a concrete witness to the enormous field which human knowledge has now covered. So wide is this range that no man can hope to be an authority upon more than a tiny fraction of the whole sum. In consequence, every man of learning becomes a specialist, and, in a sense, a narrow specialist.

This tendency, rendered inevitable by the accumulation of research, is at the bottom of the determined attack made upon compulsory Greek at Oxford. For the moment the reformers are defeated, but, undoubtedly, they will return to the charge, and, in the end, will win. It is difficult for those brought up within the strait sect of humanists to believe that salvation can be found outside the dramatists and philosophers of Greece. They suspect the culture of even the most brilliant scientist. On the other hand, it is difficult to assert that the culture of the "modern side" man at Oxford can be affected by the modest quantity of Greek required for Responsions.

IT seems to us eminently fitting that the carrying out of the complete revolution in educational administration necessitated by the Education Bill should involve the appointment of a new permanent secretary.

Mr. Morant. Sir George Kekewich has been a hard-working official, and many thousands of children have reason to be grateful for his encouragement of the higher work of School Boards—work that we have now discovered to be on wrong lines. He has all but reached the limits of official life, and represents the traditions of the old Education Department, which, we all feel, must now give way to a broader purview of education. Mr. Morant has been in the Education Department, but not of it. He was first known to us in connexion with the Special Reports Branch, and since he left that office has been private secretary to Sir John Gorst. All through the weary period of drafting and redrafting the Bill he has stood in close relationship with Mr. Balfour and the Committee of the Cabinet appointed to deal with education. He knows probably better than any other single official of the Board what it is possible for the Bill to effect when it becomes law. He has, besides, the qualities of an administrator. It is with very strong feelings of satisfaction in the present, and hope for the future, that we welcome Mr. Morant's appointment as permanent Secretary to the Board of Education.

THE Memorandum on Training Colleges, signed in 1843 by J. P. Kay-Shuttleworth and Edward Carleton Tufnell, from which Mr. Macnamara quoted in the House the other day, is indeed quaint reading.

*The Growth of
Luxury.*

We hear complaints even now from pupil-teacher centres that the material is intellectually weak, but in 1843 "Few had received any education; . . . they read and write very imperfectly; are unable to indite a letter correctly; all their conceptions . . . are vague and confused." We read further that the master is to be trained for "a humble and subordinate position." He is to do his own house-work except cooking and scrubbing floors. He is to spend three or four hours in gardening. "A period of recreation employed according to the discretion of the students would be liable to abuse." The Memorandum goes on: "We attach great importance to the students being accustomed to a diet so plain and economical, and to arrangements in their dormitories so simple and devoid of luxury, that in after life they will not in a humble school be visited with a sense of privation." We fear this standard of plain living has not been maintained. Intellectual study demands a different life from that of a plough-boy; but, if the colleges of Oxford and Cambridge had borne in mind some of these admonitions, we might hear less of the misery of assistant masters who exchange the careless luxury of the University for the frugal life of a middle-class school or for the privations of second-rate lodgings.

"MR. PUNCH" has already anticipated the arrival in Oxford of the Rhodes scholar, with his incapacity for being overawed by the solemnity of a professor's gown;

*The Rhodes
Scholars.*

and in fiction we find that Mr. Downy V. Green, a direct descendant of Verdant Green of happy memory, has already spent his first term as a Rhodes scholar in the University, discovering, amongst other things, that the authorities are not quite the children in financial matters that Mr. Rhodes thought them to be. But the actual arrangements are still far from finally settled. Mr G. R. Parkin, who is making inquiries on the part of the trustees, seems to be very busy. He has been in Oxford, and has propounded a series of questions for the consideration of the heads of colleges. He is reported to be exceedingly pleased with the general attitude of Oxford towards the scheme. It seems now certain, in spite of sundry objections urged at the beginning, that the scholars will be heartily welcomed. The scheme of Mr. Rhodes is a grand one, and it would be a thousand pities if anything were to happen to discredit it, such as the selection of unsuitable men or their enforcement upon an unwilling college. Whether Oxford will learn more from the Rhodes scholars than the latter will learn from Oxford is a question we can be content to leave unanswered, because we are very sure that there will be great and lasting influences on both sides.

THE career of an elementary teacher, whether in a well organized voluntary school or under a large and enlightened School Board, has much in it to attract. The

*The Bishop of
Rochester
and High-School
Girls.*

work is in itself of absorbing interest. It is definite, and its very definiteness has a charm. The teacher knows exactly what is expected. The conditions of the work are not exacting. The hours are not excessive, and the salary affords a living wage. There need be no correction of exercises out of school. With these attractions, it may seem strange that an Association has been formed with a bishop at its head to encourage high-school girls to become teachers in elementary schools. And, indeed, at the recent meeting of the Association that we report elsewhere there was commendably little sentiment, and the chief claim urged was that it acted as a bureau of information. There are but two difficulties to be met: in the first place, the high-school girl is not familiar with the working of an elementary school and doubts her power of controlling fifty children or more; and, secondly, she is afraid of losing caste. But to take up the work in a spirit of missionary condescension is to court failure. We learn that sixty-six high-school girls have, through the instrumentality of the Association, become teachers in elementary schools. The idea is no longer in the experimental stage. Interesting work, fair wages, and a position far less irksome than that of many high-school teachers are offered in the elementary schools, and we are sure that an increasing number of intending teachers will be quick to realize these facts.

THE Conference on the Training of Secondary Teachers in Boys' Schools, of which we give a full report, is a landmark in the history of the movement. One *advocatus*

*Cambridge
Training
Conference.*

diaboli appeared by proxy; otherwise no question was raised whether masters should be trained, and the discussion turned wholly on the manner of training and on the parts to be allotted to the schools and the Universities respectively. On the first day apprenticeship was in the ascendant, and there seemed some danger that the Conference would be dazzled by the glamour of Mr. Lyttelton's brilliant experiment at Haileybury, and accept the "soft

option" of student-teachership. But later on the trainers rallied their forces and convinced the delegates that the Universities were even now giving, with limited resources and on a small scale, what no schools have ever offered, and what only a few great schools which laid themselves out for this special work could hope to give in the future. Mr. Keatinge's aposiopesis, when he touched on head masters, was significant as the silence of Dean Maitland; and Mr. Bell, with characteristic frankness, avowed that even the better sort of head masters are rarely competent to give effective training.

IT soon became apparent that finance would be the determining factor of the problem. After March, 1906, no untrained teacher will be registered, and, though the Register

*Salaries
and Training.*

is at present permissive, we may safely assume that in ten years' time no unregistered teacher will count. This revolution—for it is nothing less—was not only accepted, but welcomed, by the Conference. Yet it was abundantly shown that the supply of secondary teachers is rapidly diminishing, and must inevitably dwindle still more, if higher qualifications were exacted or the other conditions remained the same. This was the watershed of the Conference. One side inclined to a shortening of the candidate's general education, to putting training before the degree, to a pedagogic tripos, to payment of the student-teacher. The other side held that the school staff is none too well educated at present, that an attempt to secure efficiency by shortening the University course would be a case of the Irishman's blanket, that at any cost we must keep pupil-teachership out of our secondary schools. Only one solution commended itself to both parties—an increase of salaries. Mr. Holland's statistics show that assistant masters are worse paid in secondary than in elementary schools. But where is the money to come from? This is too big a question to be answered in a Note, and we must reserve it for fuller consideration.

THE emancipation of the teacher" that Sir Oliver Lodge preaches in the *National Review* is emancipation from the unchartered freedom of examinations that tries most of us. There is at present a choice, for head masters at least, between

*Branding of
Herrings.*

several examining bodies, but everywhere the external examiner is insisted on as a guarantee of efficiency and fair play. The teacher must not brand his own herrings. We have long contended that this mistrust of the teacher is unfounded, but we welcome the support of such an unimpeachable authority as Sir Oliver Lodge. We are not pretending that teachers are more virtuous and disinterested than any other profession, but there is no denying that they are the best judges of their pupils' ability and attainments, and any danger of partiality or favouritism is easily guarded against by the appointment of an independent assessor according to the German system.

ONE of His Majesty's Inspectors, Dr. Airy, has been discoursing on the difference between grammar schools and Board schools. From the report in the *West-*

*The Tyranny
of
Examinations.*

minster Gazette we learn that the comparison is entirely in favour of the latter. It is questionable whether an inspector who holds a semi-judicial position should make comparisons of this sort outside the limits of a confidential report. Dr. Airy explains the inferiority of the grammar schools as due to the tyranny of examinations. It is useful to place this opinion in opposition to that of the London Board inspectors, who are clamouring for more examina-

tions. The comparison that Dr. Airy institutes is so frank that we reproduce two passages with some interest. Apparently he asked the same questions in the different schools:—

In the top class of one of the grammar schools there was not one boy who could read aloud in his own or any other language without conferring martyrdom on the listener, not one who knew four lines of poetry by heart, who could sing a note of music, who could do anything but stare stupidly and without comprehension when I spoke of the beauty of a literary passage.

In the school of the Birmingham Board:—

I found that 40 per cent. of the boys had read one or more of the books upon which I questioned them. . . . Every boy could read with intelligence; all of them knew more than one passage of good poetry; they could all draw and design; they could all take up a three-part song in tonic sol-fa notation, and they could all sing at sight.

WE have sometimes in these columns spoken with regret of the disabilities under which a layman is placed in his application for the head mastership of a public school, and we have stated the opinion that teaching is or should be a profession in itself, and no longer an appanage to the clerical profession. But we learn from a contemporary that these disabilities are not all on one side:

*Disabilities of
Clerical
Masters.*

"Masters with the best qualifications are sometimes rejected because of being in Holy Orders. Either the governors have a narrow view of the clerical office, or they fear 'sacerdotalism'; or they mistrust a man who does not devote himself more completely to those priestly functions which a layman cannot perform." It is certainly a shock in these latter days to read such a statement. We have got our Register of Teachers; we have done and are doing all that is possible to make the *status* of a teacher respected, because of the important and responsible work the teacher, *qua* teacher, performs. And we are told that governors who reject, as head master of their schools, a man in Orders have a narrow view of the clerical office. We prefer to think that such governors would select a man who has shown that he is content to be considered a teacher, instead of a man with a second string to his bow, which may be a bishopric or a comfortable "living" when he is wearied of school work.

BOTH King's College and University College are urgently in need of large additional sums of money in order to ensure that their buildings and equipments are worthy of constituent colleges of the University in the richest city in the world.

Tests.

Appeals have been issued, signed by influential men; meetings have been addressed by men no less influential, and men who are convinced of the real need of the course they are advocating. We do not expect our readers to come forward with their millions, or even their thousands. The looked for benefactors put "E.C." on their office paper, and read the *Times* or the *City Press*. They have been appealed to, and we hope the appeal will not be in vain. The abolition of religious tests is now practically complete at King's College. A private Bill is to be promoted in the next Session of Parliament to legalize what is already the practice. Money may therefore be freely given in the belief that it will be devoted to educational purposes generally, and not to the support of any particular party.

A LADY inspector to the Board of Education has been the cause of a quaint ebullition of a feeling that we hoped had long ago died away. A report reached the Board of Education in July of this year of some oversight in marking the registers of the Tilton village school. Sir George Kekewich wrote for an explanation, and the Vicar replied:

*The
Lady Inspector.*

"I understand that a young person (female) . . . presented herself at this school, of which I am the sole manager, and, without asking to see me, or having my permission, was allowed by the Master to inspect the registers. Considering the gross discourtesy of the action, . . . I am not called upon to take any further notice of such unwarrantable intrusion." The Board was not satisfied, and persisted in its demand for an explanation. The correspondence appears to be still continuing. From a Leicestershire paper we quote the following extract from the Vicar's latest letter: "I have derived much social comfort and intellectual help from contact with gentlemen [H.M. Inspectors] of such high position. But things are different now, when the female element takes their place." Let us add our tear in memory of the good old times.

TECHNICAL EDUCATION.

THE Education Bill, under which, if we are to believe the *British Weekly*, "Nonconformists are to be rated for a Church atmosphere and Church teaching," appears to be making its way towards the Statute Book. It is presumably recognized by those who can view the contents of education without political anxiety or religious zeal as a substantial step in the right direction. But it is to be feared, for a time at least, the requirements of technical and secondary education may not receive the adequate measure of attention which they demand. There is also an obvious danger that the residue grant, not available for these branches of education, may be very largely "exploited" for the training of teachers for primary schools. There is a danger, too, that the County Education Authorities, which, during the past eleven years have done so much excellent work, largely because they have not been the subjects of Codes and Directories, but free agents to do the best for their respective areas in their own way, may find themselves in the paralyzing grip of the old stationers with the new name.

THE Technical Instruction Committee of the North Riding of Yorkshire expresses the opinion that the experience gained during the past eleven years will be of the greatest utility in connexion with the larger educational duties about to be entrusted to the County Authorities. The Technical Instruction Act of 1889, and the subsequent financial measure which vitalized it, paved the way for the Education Bill, 1902, and brought the municipalization of public education within the range of practical politics. More than that, the "free hand" exercised by Local Authorities in the administration of the "whisky" money has proved an invaluable means of education not only to County Councils, but to the permanent officials in the Metropolis who are known to fame as the Board of Education. The North Riding Committee, however, insufficiently recognizes the glorious privilege of unfettered action. "In view of the fact," the Committee says, "that when the Technical Instruction Acts were passed Local Authorities were left without any guidance from Government Departments as to what their duties were, and how they should be carried out, some of the schemes set on foot have necessarily been of an experimental nature." The North Riding Committee may take comfort from the reflection that as a rule a Government Department frequently makes schemes of an experimental nature and learns nothing from them; that such experiments have frequently indicated a very conspicuous lack of intelligence, and have involved much waste of time, ability, and money.

BUT it is reassuring to note from the North Riding report that, in spite of this (absence of Government guidance), the failures, if any, in the educational system have been remarkably few. It would have been surprising had it been otherwise. The Technical Education Committee and its officials have not been the unfortunate creatures of a Code or the dull victims of an amazing Directory, but men of common sense dealing with various practical problems in a common-sense way. It is for the Local Education Authorities of the future to retain, to the fullest possible extent, the "free hand" which County Councils have enjoyed, and of which, on the whole, they have made such excellent use during the past eleven years.

THE North Riding Committee sets forth a few of the "sound principles" of the system it has promoted to develop existing educational agencies rather than rush into new channels, or take up "fads" suggested by well meaning enthusiasts—not to let the supply of education outrun the demand; to expend money on genuine educational objects so as to produce a tangible result; the employment of properly

qualified teachers; to assist secondary schools, and to increase the efficiency of elementary-school teachers; and so on. For the modest expenditure of £7,401 during the year a considerable amount of extremely useful work appears to have been accomplished—6,342 persons having been instructed. A sum of £723 was expended on secondary schools, and £2,743 on scholarships and exhibitions.

THE illustrations in the Report of the Education Committee of Warwickshire convey a vivid impression of the variety of excellent purposes to which the "residue" is applied. We have a glimpse of little boys busy with plane and chisel in the woodwork room of Aston Manor Technical School; lads "towards husbandry inclined" gathering abundant crops in school gardens; dairymaids among utensils for cheese and butter making. Passing from applied to fine art, we have views in the Art Schools of Warwick and Stratford-on-Avon, while science is duly represented by authentic photographs of laboratories, chemical and physical, in different grammar schools. A sum of £9,899 was appropriated during the year towards (a) a county scholarship scheme expenses in (b) urban districts, (c) quasi-urban districts, (d) rural districts, and (e) administration. It was, if we remember rightly, a few years ago a defect in the Warwickshire scheme that county scholarships were not awarded. Last year a sum of £749 was expended for this invaluable department. The average attendance in science, art, commercial, agricultural, manual, and industrial classes reached the total of 8,271; 5,331 being in rural and 2,940 in urban districts.

THE "tangible results" of an educational system, as the North Riding Committee would put it, are not easily secured, but it would prove a useful addition to our knowledge if bodies awarding scholarships made a practice of ascertaining the subsequent occupations of recipients. The report of the Education Committee of the Somerset County Council in an interesting tabular statement gives this information as regards county scholars elected during the ten years since the first award was made:—"Nine boys have been enabled to pass from a public elementary school to Universities or other places providing the highest kind of scientific and technical instruction available in this country. It is also noteworthy that many of the holders of county scholarships have afterwards entered the teaching profession, and there can be no doubt that the systematic course of study which they have received in secondary schools during their tenure of the scholarships was found a much better equipment for their subsequent career than the ordinary training of a pupil-teacher."

THIS is unquestionably the case, and, in view of the importance which the early training of the teacher is likely to assume in the near future, it would be interesting to know whether in other counties, as in Somersetshire, a reasonable proportion of pupils who held scholarships in secondary schools have become primary teachers. Those who advocate three or four years in a secondary school as an alternative to the dreary routine of a pupil-teacher in the narrow groove of an elementary school are accustomed to the rejoinder that, if the boy gets out of this groove and has his chance in the secondary school, he will not return to the "drudgery of the dismal standards." There is truth in this idea; but, at the same time, if generally, as in Somersetshire, scholars voluntarily return to the primary school, there is reason to suppose that scholarships awarded for the special purpose of preparation for the teaching profession would not be misapplied.

THE Somerset Education Committee administered a sum of £19,916 during the financial year, of which, in round figures, £2,192 was devoted to agriculture, £2,759 to secondary schools, £2,032 for scholarships to, in, and from secondary schools, £4,847 to evening continuation schools, £1,535 to classes in general arts and handicrafts, £1,125 for female industries; teachers' classes, £781; building grants, £1,360, &c. A total of 467 courses of instruction were given, the total average attendance being 7,959. A work of great value is unquestionably in progress, and the scheme appears to be admirably adapted to the requirements of the county.

THE death of Mr. G. A. Henty may, without exaggeration, be said to have diminished the Christmas gaiety of the boy world. Since his first boys' book—produced in 1868—twin volumes came year after year as regularly as the turkey and plum-pudding, and sometimes a triplet. He had travelled far, followed almost every campaign from the Crimean War to the Ashanti Expedition; he had a keen eye and a retentive memory, and, though late in life, acquired the art of weaving into a romance all the stirring adventures that he had witnessed or heard of. But the real secret of his success was his lively sympathy with boy nature and his love for all that was honest, noble, and of good report. Ballantyne, Kingston, and Henty, our three boyish musketeers—now that the last of the trio has gone, "sadly falls our Christmas Eve."

MR. RAVEN AND THE PRONUNCIATION OF LATIN.

By JOHN SARGEANT.

MR. RAVEN'S amusing article raises once again the question how we are to speak Latin in our schools and Universities. Those who do not agree with him have been too long silent. If we have not let judgment go by default, we may at least have let it be supposed that we have nothing to say for ourselves. Now, failing more eloquent voices, I propose to do my best to make good the defect. Some of the greatest of living scholars are on our side, and there is one who could show far more conclusively than I can hope to do how well it is that the tones of our grandfathers are still to be heard in the Westminster Play. I do not deny that there is some weight in some of the objections made to the traditional pronunciation, but I say that there is less weight than is supposed, and that even more serious objection may be made to the system which claims to supplant it.

It is objected that our pronunciation of Latin would be unintelligible to Ennius, to Cicero, and to Quintilian; that it gives the wrong qualities to many letters, and thereby spoils the full, round sound of the original; that it obscures the quantities of some vowels, and turns others into half-diphthongs; that it gives different sounds to a consonant which had only one sign and one sound, and thereby obscures the connexion between different parts of the same substantive or verb; that it makes it impossible to elide a syllable ending in *m*; that by all these and other like faults it spoils the metre of poetry and the rhythm of prose; and, lastly, that it is peculiar to England.

It is needless to say that we do not claim to speak in the tones of Terence and the *homines nobiles* with whom he lived. Almost as little do Sir Henry Irving and Mr. Tree pronounce a line of "Hamlet" as it was spoken by Raleigh or Essex. Even our opponents cannot so say "Amantium iræ amoris integratio" that Scipio would fail to recognize their foreign birth. So long as a language lives, its sounds must be in a perpetual flux. Cicero did not speak as Ennius, nor Quintilian as Cicero. The son of a Papisius was a Papirius, the son of a Claudius a Clodius. Nor were the changes always thus marked in Latin spellings. Quantities tended to grow shorter under various operations of the law of *breves breviantes*. Who was the last Roman to make the first vowel of *feri* or the latter vowel of *sanguis* long? Are we to say *indignatiō*, with Cicero, or *indignatiō*, with Juvenal? Contemporaries, even educated contemporaries, differ among themselves. Have we not two—nay, three—pronunciations current of *grass* and *path*? Only the other day a Minister in the House of Lords shocked the ears of at least one of his hearers with *applicable*. Do not some men who would not like to be accounted other than gentlemen sound the aspirate in *humour*, and say *Lud-gate* and *benefac-tor* where most of us are content with *Ludgut* and *benefactor*? (Here I must say that I have to write words in a form which is not scientific, but will perhaps convey my meaning.) Each generation sees survivors of the past speech. Charles Fox said *Lunnun* to the last, and fifty years ago Lady Robert Seymour drank her *dish a tay*. I myself say the *ace a clubs*; but I hear *uv clubs* and even *ov clubs*. The changes in Latin were slower, perhaps fewer, but they were there. It is well to know the pronunciation of Latin in all its periods; but, in usage, which will you choose? Do you stand by Varro or by Macrobius, by Horace or by Claudian? And what will you do when you come to read mediæval Latin?

Mihi est propositum in taberna mori;
Vinum sit appositum morientis ori.

Here the writer meant his rime to be exact, and, if you make it so, as we do, what becomes of your boasted consistency? If you wish to be really consistent, you should have pronunciation by strata, and your quotation from the "Æneid" have other sounds for its signs than your quotation from the "Utopia." And what will you do with the scraps of Latin which are in familiar use? Will you say that the *Nisi Prius* Court is so called because its commission used to contain the words *Nissy Preus*? You will hardly issue a *feat* or ask for a *mandahmoos*. This will be called trifling; but it is a fair retort to the equally trifling objections made to the supposed inconsistency of the traditional use. I will not insist on that inconsistency which makes one man in Latin and another in English of Cato or Titus, of Nero or Otho, of Scipio or Euripides. We hold firm to such variations

as Vergilius and Virgil, and Paris here is not Paris at home. I am glad to see that Mr. Raven does not hold with those who in reading a history written in English speak of *Catto* and *Nerro*. Most of those who demand what they call "a scientific pronunciation" mangle the the rhythm of the Psalms with "the princes of Zebulun."

The matter of a vowel's quality is very trivial. I would even say that what we may lose in one place we gain in another. Mr. Raven is shocked by *ameenee*, and, I suppose, calls *Ber-nini* by some more euphonious name. It must pain him to hear an actor say:

Merchant of Syracuse, plead no more.

Does he rise in the stalls and call for Shakespeare's *mar-chant* or *marchaunt*? Is he sure that the poet does not even approve some of our changes?

I have no precious time at all to spend,
Nor services to do till you require.

Does he know that Virgil is not quite content with "Sunt lacrimæ reerum"?

I come to the question of quantity, and, of course, admit that our quantities are not always the same as the original. But this objection to our system is far from counterbalancing the weighty objections to any other; and, indeed, it is often urged from ignorance, rather than from knowledge. Those who make it often forget that the difference between longs and shorts is not absolute and uniform; that syllables are not of two lengths, but of many. The division made for purposes of verse is not, indeed, arbitrary, but to some extent artificial. A standard is set, and all syllables on one side of it, whether they be much or only a little longer, are accounted long, and so with those that are shorter. The late Dr. Munro, a great opponent of the traditional pronunciation, declared that neither his ear nor his reason told him that there was any proportion of quantity in English syllables. Had he lived to see the phonograph, it would have been proved *viro doctissimo* that his ear and his reason were alike at fault. No respect for the memory of the great scholar must prevent us from saying that in this matter his wild statement puts him out of court. In like manner Mr. Andrew Lang, whose view on this matter I do not know, used, in bland ignorance, to quote as a line of Tennyson:

Never did frog coarser croak upon our Helicon.

A like want of ear makes other of our opponents distort and exaggerate. Mr. Raven's man who said "peereunte peerit" may be at once disowned. The traditional and natural use is that a preposition in composition keeps its own sound. Let Mr. Raven contrast *perish* and *regent*. Even *cego*, though I do not disown this pronunciation if properly understood, is probably an exaggeration. I suspect that by his *ee* Mr. Raven means a quantity as long as the Dutchman's *aa* in *Haarlem*. If the vowel were long, we should give it that quantity; as it is, though we do not, of course, sound *lêgo* or *rego* with the vowel of *leg* or *beg*, we sound it as the first vowel in *deity*, not as the first in *deist*, which vowel we do utter in *lêgo*. Some ears cannot hear the difference; they must ask the eyes to see it on the phonograph.

When a word is pronounced by itself, the difference in our speech between *rêgis* and *rêgis*, *vênit* and *vênit*, though real, is, I admit, not great. But words in a sentence or a verse do not stand by themselves, and there the difference is distinct enough. Thus an hexameter may begin "tu quoque" or "tu quoque," "si venit ad terram," or "si venit tandem." In these cases the second syllables have the same kind of difference as is heard between the second vowels in *grandfather* and *great father*, in *stockbroker* and *mock broker*. The syllable *meat*, if spoken by itself, not only has a stress, which it loses in the compound, but also takes longer to pronounce than the same syllable, or, rather, the same word, when it forms part of *catsmeat*. We follow the former word for *rêgis*, and the latter for *rêgis*. Even if the doubtful word begin a sentence, the difference is usually marked. When Micio in the play says: "Venit ad me sæpe clamans," his must be a crass ear that fails to catch the tense. If Micio were speaking trochees, his speech would not be the same. Here is a verse the *ictus* helps. Take the words "Italian fato profugus." We know them in a dactylic hexameter, but they might begin an iambic senarius. But who pronounces them alike in the two cases? We, at least, do not, whatever our opponents' con-

sistency may make them do. And here comes another point. With all our knowledge of hidden quantities, and this has grown of late, there are still a good many vowels of whose quantity we are wholly ignorant, and more in which we cannot go beyond probability. And there are grades of quantity which we cannot recover. The negative *in* and the preposition *in* have each a short vowel, but Roman grammarians tell us that the latter was the shorter of the two. I wonder whether our consistent opponents attempt to express the difference.

I will here remark that Mr. Raven is very unjust to the mathematical Vice-Chancellor who said: "In nōmine Patris et Filii et Spiritūs Sancti." I hold no brief for the mathematicians; but how would Mr. Raven have looked if the Vice-Chancellor had informed—for it would seem that I could not truthfully say "reminded"—him that thus spoke Porson and thus spoke Elmsley? I should prompt the good geometrician to catch Mr. Raven tripping, for I am sure that Mr. Raven himself does not talk of *Sisyphus*, or *Tityrus*, or *Scipio*. For my part, though I do not say *nōmina*, I do not pronounce *patris* as I pronounce *Patrick*, and "malo cum Elmsleio damnari quam . . ."

"Ah! ha!" says Mr. Raven, "and how dare you men of the tradition change your grandfathers' *nōmina*?" Well, the change came before our time, and, if it had not been made, I am not sure that I should make it. Even Mr. Raven must say *drammatis persona*, though years ago I heard one of his side speak of *dramahtis*. Now Mr. Raven must be aware of the English habit of pronunciation in such trisyllables. If the two latter vowels be divided by a consonant, the first vowel, if it be other than *u*, is of the kind we hear in *nominal*, *liberal*, *elegant*; or, to take Latin words in colloquial or legal use, *capita*, *prosequi*, and the like. If the two latter vowels come together, we have such sounds as are heard in *labial*, *genius*, *opiate*, or such legal terms as *habeas* and *capias*. There is an exception where the two former vowels are *i* or its equivalent, as *myriad*, *Libya*, or *Didius*. It is, I think, about eighty years since in reading Latin a long vowel in the antepenultimate took its present pronunciation. It was an artificial, not a natural, change, but it is now well established. Our pronunciation, everybody's pronunciation, of such proper names as *Scipio* still bears witness to another use. May it long do so! The change may, perhaps, be in part justified by the existence of such words as *scenery*; though, in fact, this has borrowed its vowel from its father, *scene*. At any rate, we have no wish to go back now to a more natural use.

On signs and sounds we admit the fact and deny the inference. To the first letter of *capit* we give the sound of *k*, to the first of *cepit* the sound of *s*, just as in English we *capture* a receiver or *chant* a canticle or *carp* at an excerpt. We believe that the boy who cannot see the connexion is a mythical creature. The first vowel of *genus* is not the first vowel of *genera*; but is a botanist therefore to speak of a *jennus* or a *ghennus*? But we are told that to make *kapit* and *seepit* parts of the same word is to destroy in the learner all sense of philology. What, then, of the *a* in *capit* and the *e* in *cepit*? Is his sense destroyed by learning that what was *rekipere* in old Rome is now *receive* in the same streets and *recevoir* on the banks of the Seine? "How can a *k*," I was asked by a "scientific pronouncer," "ever become an *s*?" But it does, and it is just the business of philology to record and explain the fact. I suppose that this good man has ever since endeavoured to conceal from his boys that indecent mutation of *k* into *s*. When I say *seepit*, as when I say *merchant* in Shakespeare, I am but antedating a change which naturally occurred.

And, if philology suffers from *seepit*, surely it must suffer from the two grades of vowels, of which there are many traces in Latin. If the incredulous learner will not believe that *seepi* comes from *capio*, or *gennera* is the plural of *genus*, will he not disown kinship between *fidus* and *perfidus*, *nubo* and *pronuba*, *sonus* and *persona*? The learner must be shut up in the cellar out of sight of these family quarrels. If our "scientific pronouncers" could get at our Indo-European ancestor, they would doubtless flog him for this outrage on a helpless and deluded posterity. But the English boy is no such fool as your theory would like him to be.

On the matter of elision, it must be said that, whatever elision means, it does not mean the complete suppression of the syllable. If it did, the purpose of elision in verse would fail; and it is clear from ancient authorities that it did not. It must not be forgotten that the mind can, in part, ignore what the lips

utter. This is a principle observed by our greatest master of verse:—

So without least impulse or shadow of fate.

The last letter of *shadow* is a digamma—that is to say, quasi-consonantal; and in Milton's line the latter syllable of the word is pronounced in full. None the less, it is metrically elided; it is no part of the metre. So, though we pronounce each vowel and each *m*, we feel that the final syllables are no part of the metre in

Monstrum horrendum, informe, ingens.

Though our way of pronouncing the words is not Virgil's, we get the same effect in a slightly different way. What is more, a boy gets it much more effectively with our sounds than by his travesty of Italian speech.

This point can be illustrated by our pronunciation of Greek. It is neither pretended that our Greek sounds are those of Homer or Sophocles, nor is it proposed to alter them. How could an English boy be taught to sound an acute or a circumflex accent, or to speak without stress; and, if he could, how could he still preserve his sense of quantity? Why, even a modern Greek cannot do it. In English we have little or no accent, and we have a strong stress. Our tongue is thus like modern Greek, which has lost accent and gained stress. The confusion between accent and stress accounts, as I have shown at length in "The Annals of Westminster School," for Dryden's *εὔρεκα*, and for such scansion as may be seen in his

have by this

An universal metempsychosis.

It seems hardly possible to pronounce with accent, stress, and quantity all these at once. The Greeks had only accent and quantity; the Romans, like ourselves, chiefly quantity and stress. We now read Greek without accent, but with quantity and with what I may call Latin stress. Now, the loss of accent and the importation of stress, of course, make a great change in the sound; but will Mr. Raven therefore contend that we lose either the metre or the rhythm of

εἶδον κύματα μακρὰ κυλινδόμενα πρὸς χέρσον

or of

ὁ πᾶσι κλεινὸς Οἰδῖπους καλούμενος?

Nor do we lose it in Latin. A scholar of the traditional speech will extemporize Terentian iambs as rapidly as one who utters with the Italian vowels? Dare Mr. Raven, if he could, challenge the shade of Bentley to the contest?

Now, what has the traditional speech to say for itself on the positive side? Its fiercest opponent cannot deny that it is no artificial product of theory or calculation, but the result of a natural growth. It is not so long since Latin was still a spoken tongue in this country, since Walpole talked it to his German king, since Chesterfield could say that it was a disgrace for a gentleman not to know it. It is still a spoken and a living tongue in the prologues and epilogues of the Westminster Play, in the pulpit at Oxford, in the Congregations of the Universities. The changes in its pronunciation have gone side by side with the corresponding changes in the Romance words of our composite vocabulary. It is more than two centuries since the wag called his cat *Stella*, "because it's *micat*." The most pedantic theorist will hardly propose to alter the common sound of current words or phrases borrowed without change from the Latin. His lips must sound as ours do *genus* and *species*, *bona fide* and *nisi prius*. He no more than we can bear an *onnus*, or receive a *bonnus*, or bid a buyer *cunveat*. True, there was once a pedagogue who called his daughter *Rossa*, and I have heard a monster speak of *Livy*. But we may neglect such men, or class them with a race, now, I hope, extinct, who called *ubi ubby*.

Now, if this traditional pronunciation has come, as it has, by a natural growth, if it is in itself, as it is, natural and easy, if it has been the speech of scholars as great as any that live now, if it is even the speech of some of the greatest scholars of to-day, why is it to be abolished by artificial means, by violence and murder? Oh! because it is not understood outside modern England. Well, if we must speak in Latin to a Frenchman or a German, I venture to say that any man who can speak Latin at all can adapt his tongue to his ears. He can even say *Tsitsero* to the man of Leipsic or Berlin. Mr. Raven says he has lost the power to speak after the tradition; but we who do so speak find little difficulty in going across to the other speech for the occasion.

(To be continued.)

JOTTINGS.

MISS M. E. SHIPLEY, the Hon. Lady Superintendent of St. Barnabas' Home of Rest for Ladies, Southwold, Suffolk, appeals for help. It is proposed to enlarge the Home by the purchase of the adjoining house, but a debt of £100 must first be paid off. The home is specially adapted for poor teachers to whom a holiday is a necessity, and we hope their more fortunate brethren will respond to the appeal.

THE oldest English school which has been humanistic from its origin is St. Paul's, founded by Dean Colet, who in 1512 appointed William Lilly to be the first High Master. Lilly was among the pioneers of Greek study in England, though he is now best remembered by his "Latin Grammar." The statutes of St. Paul's (1518) enjoin that the Master shall be "learned in good and clear Latin, and also in Greek, if such may be gotten." The proviso implies some scarcity; in fact it was not, probably, till about 1560 that Greek was thoroughly established among the regular studies of English schools. The statutes of Harrow School (1590) prescribe the teaching of some Greek orators and historians, and of Hesiod's poems. This seems to be one of the earliest instances in our school statutes where the directions for Greek teaching are precise, and not merely general.—Sir R. Jebb, in "The Cambridge Modern History," Vol. I.

WE are moving fast. The *Times* (October 14) has a leader in which the necessity for the training of teachers, secondary as well as primary, is assumed as axiomatic. It also insists, as we have for years insisted, that, for effectual training, theory and practice must be concurrent. The *modus operandi* is left an open question, with the suggestion that the Universities might arrange with the masters of secondary schools for the practical work of its students in teaching. The *Times*, apparently, is not aware that this is now done, though to a limited extent, both at Oxford and Cambridge.

AT an examination of School Board candidates for scholarships the word "malefactor" occurred in the reading, and was pronounced as a trisyllable; so the examiner asked the meaning. Pupil: "Male, a man, Sir." Examiner: "But what sort of man?" Pupil: "Factor, a married man, Sir."

AMONG the managers of London School Board schools there are at present 348 clergymen and 135 Nonconformist ministers.

MARLBOROUGH COLLEGE.—An examination will be held in December next for fifteen Foundation Scholarships, each of the annual value of £30, confined to the sons of clergymen. Particulars can be obtained from the Bursar.

MESSRS. CASSELL have just published a supplementary volume to their "Encyclopedic Dictionary." The complete work appeared in 1888. In the fourteen years that have since elapsed, on a rough calculation, some twenty-five thousand words have been added to the language; this is after making a liberal allowance of ten thousand for words overlooked in the first issue. In the serial edition each part appears with the corresponding portion of the supplement, and numerous coloured plates have been expressly prepared for it. We find "collapsible" in the supplement (page 329) and only "collapsable" in the body of the work. Which is right?

"A STRONG-KNIT and determined man, who practically bossed the undergraduate forces of the college from a fixed purpose to have his own way in everything. I do not know that he was a great scholar; but when he told the examiners to give him a First Class they did. He certainly was not a great actor; but we engaged him out of policy; otherwise we might not have been allowed to act. Still, in my mind's eye I can see his stalwart figure in a frock-coat and a violent perspiration, stammering out his *jeune premier's* creed: 'Where women are concerned I am inflammable, and I glory in it.' And he is Head Master at Eton now."—From H. Merivale's "Bar, Stage, and Platform."

LORD ROSEBURY, speaking at Edinburgh, put very delicately, but none the less forcibly, his opinion of the recently appointed Minister of Education. Lord Londonderry, he was sure, must have taken the post not from a sense of inclination, but purely from a sense of duty and party discipline, and, being a modest man, would be the last to pretend that he was the ideal or the fittest Minister of Education at a great crisis like the present.

MESSRS. NELSON have sent us a very elegant book-case, designed to hold fifty volumes of their "New Century Library." The case measures fifteen inches square by eleven inches high, will stand conveniently on a study table, and revolves on a pivot. The price is 24s.

net. To fill it with cloth volumes costs 6, with limp leather 8, and with leather boards 9, guineas. There could not be a more fitting form of testimonial to a master or mistress.

MR. L. HANSEN BAY, of Carlisle Grammar School, has been appointed Head Master of Deacon's School, Peterborough.

MR. S. O. ANDREW has been appointed Head Master of the Whitgift Grammar School, Croydon.

THE authorities of the University College, Reading, have appointed as Director of their Agricultural Department Prof. Percival, Vice-Principal of the South-Eastern Agricultural College at Wye.

"OLD. PROF. STOWE—Mrs. H. B. Stowe's husband—sent me this story, which is almost better than 'Topsy.' He heard a schoolmaster asking a little black girl the usual questions about creation—who made the earth, the sea, &c. At last came: 'And who made you?' Some deliberation was necessary, after which she said: 'Nobody; I was so afore.'"—From George Eliot's Correspondence.

Two curious translations have reached us—the first from a small boy who probably did not imagine that the Romans talked sense—"Mulier morbo turpi conficitur": "The woman is consumed by a diseased fowl." The other, from the work of a student in an advanced examination, is a new rendering of the familiar phrase, "Cucullus non facit monachum." He wrote: "A cucumber does not make a monarch." Was he probably thinking of the *apocolocyntosis*, or gourdification, of Nero?

OUR old contributor, Prof. Branford, now Principal of the Sunderland Technical College, has sent us a striking address on "The Value of Uniqueness and the Individual." "The individual lessens and the world is more and more," so we were taught by Tennyson; but Principal Branford teaches that "the trend of civilization is towards the increasing uniqueness, value, and non-replaceability of the human individual in his work," a tendency, as he shows, not inconsistent with increasing quantity, cheapness, and replaceability of objects made by machinery.

COLUMBIA UNIVERSITY, which has already come to the front as a pioneer in education, is starting next year an experiment in international journalism. Next January will appear the first number of the *Journal of Co-operation in Literature*, with Prof. Woodberry as chief editor and M. Jusserand and Prof. Brandl among the co-operators. One or two abortive experiments in polyglot journalism have failed; we wish the new venture, which is conceived on broader lines, every success.

LORD HUGH CECIL out-Ceciled himself when, in opposing the amendment to give parents a representative on boards of managers, he contended that a parent's rights were personal, and no individual had rights over other people's children. According to Lord Hugh, in a parish with a hundred Methodist parents, the parson, the curate, and the two churchwardens should appoint the teachers and wholly regulate the religious teaching, and the hundred dissenting parents, though they paid the piper, or at least nine-tenths of the piper, would have no grievance. A hundred parents may all desire undenominational teaching for their children and the wish of each should be regarded, but units should count for nothing against the collective wisdom of a packed corporation.

THE annual meeting of the Geographical Association will be held in London on Friday, January 9, at 3.30 p.m., in the Hall of the College of Preceptors, Bloomsbury Square, by kind permission of the Council of the College, the President, Mr. Douglas Freshfield, in the Chair. An address will be given by the Hon. Sir John Cockburn, K.C.M.G., M.D. (formerly Minister of Education and Prime Minister of South Australia, and now Chairman of the Australasian Chamber of Commerce, London), on "The Australian Commonwealth." There will also be an exhibition of examples of all scales and styles of Ordnance Survey maps; and Mr. Andrews will give a lantern demonstration in connexion with the exhibition.

SIR ERNEST CASSELL, K.C.M.G., has contributed the sum of £100 towards the Commercial Education Expenses Fund of the London Chamber of Commerce for the promotion of its work as an examining and teaching body of subjects of a higher commercial education. The Drapers' Company have also contributed £100 towards the same object.

MR. M. E. SADLER's account of the negro school at Tuskegee,

Alabama, was interesting not only as an account of the heroic struggles of Mr. Booker Washington to give the coloured race a fair start in life, but as suggesting the right solution of the problem that faces England at every turn—how best to educate the less civilized races with which she is brought in contact. His recipe is a large dose of manual training and industrial and agricultural instruction, combined, of course, with humane studies and those moral and religious influences which are indispensable to the making of character.

SCIENCE and Greek have kissed one another. Sir Philip Magnus throws his weight on the side of the majority of Oxford Congregation. He does not, indeed, think that Greek is the one way of educational salvation for the upper classes, like Mr. Lyttelton; but, like Mr. Lyttelton, he holds that, if compulsory Greek goes at Oxford and Cambridge, it will cease to be studied in our public schools, and he wishes to retain it in order to preserve various types of secondary schools. Sir Philip, unlike Nature, is "so careful of the type" that he would compel our young barbarians, willy-nilly, to be taught Greek at our great public schools by the threat that Greekless boys will be sent to Manchester or Birmingham. It is interesting to learn that on the London Senate Sir Philip proposed as alternative subjects for Matriculation Science and Greek. What becomes of Modern Languages?

THERE is an article on the Cambridge Conference in the *Saturday Review* which contains more blunders than there are sentences. "It was due in the first instance to the energy of a man whose very initials have an almost European publicity." As the Vice-Chancellor stated, it was due to the action of the Joint Training Committee, a body of which Mr. Oscar Browning was not a member. "In support of the principle [of training] the Board of Education has started a register, and a proportion of the head masters of the public schools already intend to select their masters from the list." We do not pretend to know the mind of the head masters, but, as the list so far contains the name of only one man, a retired head master, their choice will be limited. "At Cambridge the arrangements made for training secondary teachers have so far been for women." O. B.'s prophet has not even read his speech at the Conference, or the documents that the Principal circulated. This crop of blunders is culled from the first paragraph of the article.

COLONIAL AND FOREIGN NOTES.

FRANCE.

France, at the invitation of M. Henri Bornecque in the *Revue universitaire*, is asking herself whether there is anything that may fitly be adopted from English secondary education. In the new scheme, which came in force on October 1, German guidance has been followed: the German *Gymnasium* is the sponsor of the Greek and Latin group, the *Realgymnasium* of the Latin and modern languages, and the *Oberrealschule* of the science and modern languages group. Has England nothing worthy of imitation? As regards the education of the mind M. Bornecque can say little in our praise. It is generally agreed, he observes, that intellectual culture in England stands at a lower level than in France. The English know nothing of modern languages, and the same ignorance prevails in all that relates to history and geography. A great Manchester brewer asked M. Max Leclerc whether Brazil was not a French colony and whether Napoleon had not sent Maximilian thither; a distinguished member of Parliament assured a French novelist that the best French governesses came from Hannover—or dare we write Hanover?—to say nothing of Lord Palmerston, one of the most brilliant pupils of "Harrow College," who, when appointed Minister for the Colonies, required to have them shown to him on a map. We are more inclined to admit our national ignorance than to accept the proofs of it. Many such instances are needed to establish a general condemnation in England or in France. We have no wish to retort, however gently, on our neighbours; but M. Bornecque himself puts an irresistible temptation in our way. He tells us presently of the exclamation, ascribed by some to Nelson, by others to Wellington, on the lawn at Eton: "C'est ici que nous avons vaincu Napoléon." Doubtless some French authority makes Nelson declare that the battle of Waterloo was won on the playing fields of Eton; but our rascally text-books represent the Admiral to have fallen on an earlier occasion, at a time when Napoleon could by no means have been said to be conquered. But to leave imperfections of knowledge aside, we discover five points in which the French are recommended to copy our institutions. English games should be introduced instead of the formal gymnastic exercises in which boys find small delight. The principle of trusting to a boy's honour and taking his word might profitably be introduced. The system of monitors or preceptors is preferable to surveillance by ushers. A tutor under whom the pupil remains for the whole course of his studies is a desirable support. Lastly, the extensive powers that an English head master possesses in respect to super-

annuation and expulsion might fitly be conferred on the responsible director of a French school.

Mr. Rhodes has found an imitator, on a small scale, in France. M. Robert Lebaudy has just placed at the disposal of the University of Paris a sum of 8,000 francs to enable it to maintain for a year at the University of Chicago two French exhibitors, who will then be able to teach the French language and literature in the schools of the United States. The idea is a generous and unselfish one. The Germans, we understand, expect their Rhodes scholars to return from Oxford and teach English at home. Nor shall we blame this use of the benefaction. A number of exhibitions in England tenable not at Oxford or Cambridge, but at Bonn or Lyon, would supply us with what we sorely need—a body of modern language teachers trained in the country whose speech they profess.

UNITED STATES.

The *School Review* has been pursuing, by means of the usual question slips, an interesting inquiry into the reading tastes of high-school pupils. The result is in conflict with the received opinion in England that up to a certain age boys and girls delight in the same books; for the answers show clearly that the love of adventure predominates with boys, and of sentiment with girls, although they have a common ground in books rich both in feeling and incident. A summary of the tastes as ascertained may be useful to school librarians:—

Boys and girls both like: Dickens, Hope, Longfellow, Scott, Sienkiewicz, Westcott ("David Harum").

Boys alone like: Blackmore, Cooper ("Mohicans"), Churchill, Dumas, Ford, Henty, Hughes, Kipling, Stevenson.

Girls alone like: Alcott, Barrie, Brontë, Bulwer, Lamb, Shakespeare, Stowe, Tennyson. "Gulliver's Travels," Hawthorne's "Wonder Book," and "The Pilgrim's Progress" are all on the black list, being esteemed books that few boys or girls, having read them, would wish to read again.

The concluding remarks of the investigator are not new, but will bear repetition: "It seems to me that our study has given us certain pretty clearly proven results. First, boys and girls are not men and women; their tastes are, and ought to be, strikingly unlike those of their teachers. They are going through a progressive development, which must not be forced; and they intensely dislike, with reason, any form of literature inconsistent with that development. It is our business as teachers to study the lines of normal growth, and to lead our pupils naturally from one interest to the next higher, putting aside the special delights of our own library until our pupils also shall have reached maturity."

INDIA.

Never since the former Bishop of Calcutta delivered himself of his unhappy suggestion has Indian society been so moved by an educational question as by the recently issued—in outward seeming harmless—Universities Commission Report, of which we made brief mention in our November number. We find before us numerous proofs of articles, essays for review, counter-reports, and statements of dissent; for all of which we express our thanks, although it is as difficult to extract root ideas from the mass as to recover an Alpenstock from under an avalanche. Let us attempt, nevertheless, to give a short account of the case for the opposition.

The natives of India, first of all, complain that they were not adequately represented on the Commission. As originally constituted, it was made up of six members, of whom only one was an Indian, and he an Indian not representative of the educated classes in his country. Yielding to public opinion, the Government added to the six Mr. Justice Gooroo Dass Bannerjee. Whatever weight the Commission gained by this addition is counterbalanced by the fact that he disagrees with many of the most important conclusions arrived at by his colleagues.

Again, the Report declares that in all matters relating to higher education efficiency must be the paramount object, it being "better for India that a small number of young men should receive a sound liberal education than that a large number should be passed through an inadequate course of instruction, leading to a depreciated degree." To which it is replied that efficiency is relative. In the march of progress there is always a higher stage of efficiency than the one found to exist at a particular moment. It would be possible, by raising the standard continually, to make the demand for efficiency an impediment to education, to shut many legitimate applicants out of the gates under a pretence of selecting the *élite* for admission. Moreover, why should the principle of efficiency be applied to higher education only, and not to primary and secondary? About 94 per cent. of the population of India are unable to read and write. Why not direct towards the illiterates some of this newly developed zeal for efficiency, which is, perhaps, intended chiefly to prevent the natives from fitting themselves to participate in the government of their country? As to the alleged superabundance of graduates, official statistics show that in the last five years the Indian Universities have granted degrees to only 6,223 students, a yearly average of about 1,242 graduates, drawn from a

people of 287,250,000; and these graduates, far from being superfluous, are centres of enlightenment amid the as yet unconquered ignorance and superstition of the masses.

The recommendations of the Commissioners in regard to the constitution of the Senate, if carried into effect, would cause it to be composed mainly of Europeans, whether Government officials or private persons, and Christian missionaries. To put control into the hands of a majority so formed would be to divorce the University from the people whom it was established to benefit. The objections in this respect are voiced by the dissentient Commissioner, Mr. Justice Gooroo Dass Bannerjee, who asks that European and Indian interests should be represented in fair and, if possible, equal proportions. "In the management of Indian Universities," he observes, "it should be borne in mind that it is Indian youths who chiefly resort to them. Their requirements and difficulties, their habits and modes of life, and even their sentiments and susceptibilities should receive due consideration; and for that purpose educated Indians should be adequately represented on the Senate."

The Syndicate—the body, consisting of the Vice-Chancellor and a small number of the Fellows, in which the practical government of each University is vested—will be elected by the Senate. It will thus reflect the partisan colour of the electorate. Again, it is to contain a statutory majority of professors or other teachers. Educational officers, not amenable to outside influences, will predominate in the executive authority of the University.

It is recommended by the Commission that the Universities should in future decline to affiliate any second-grade colleges; that in the case of those now affiliated the aim should be to effect their gradual separation; and that those which cannot hope to rise to the first grade should revert to the position of high schools. Native opinion deems these proposals both unjust and prejudicial to the advancement of collegiate education. Some of the existing first-grade colleges were at one time second-grade, and, if the rule now outlined had been in force earlier, would have been extinguished before coming to maturity. The second-grade colleges threatened with destruction are doing useful work, and form a necessary stage in the educational evolution of the country.

Such are the principal objections raised to the vital clauses of the Report. We have been content to set out their scope, finding ourselves unable to discuss them in the limits of this note. But to those who have been rendered uneasy as to the welfare of higher education in India we offer two words of comfort. Firstly, it is a far cry from the recommendations of a Commission to legislative or other action. Secondly, should the cause they have at heart be seriously imperilled, Indian education has friends enough in England to make reactionary measures injurious to the proposer and impossible to carry; as witness the end of the episcopal fiasco. For ourselves, we have confidence in Lord Curzon, who has to be heard—a confidence which some of our correspondents unwisely withhold.

SOUTH AFRICA.

The official *Education Gazette* has been considering the effects of the war on the schools of Cape Colony, and, falling naturally into a military metaphor, finds that the forces that make for educational progress have sustained a severe repulse. In the second quarter of 1899 there were 2,650 schools in operation; in the second quarter of 1902 only 2,438; so that 212 have closed their doors during the struggle. Every one of the seventeen schools in the Calvinia division and of the six in the Hay division has disappeared. On the other hand, the total number of pupils on the register rose in the period indicated from 142,437 to 149,111, an increase of 6,674, or about 4·8 per cent. This is a pretty illustration of statistical caprice, and shows how figures may be two-edged. If you wish to prove that the war has been a drawback to education at the Cape, point to the schools; if the contrary, to the pupils. Closer examination removes the mystery. The schools to suffer most have been the small schools on farms, the extinction of which had little effect on the register. As to the pupils, although the number of white children receiving education shows a considerable decrease, the number of coloured children has steadily increased. But, satisfactory as this increase is, it must be remembered that education has as yet touched only the outskirts of the native races; and, if the harvest gathered from them into the schools has been plenteous, the fields un-reaped are boundless. The white population has obviously suffered educational loss by the war. The excellent comment of the Superintendent-general is:—"It is incumbent on all of us to redouble our efforts, so that the damage may be repaired as speedily as possible."

Under what difficulties the work of repair, or of building, has to be carried on is brought out by an anecdote. A sub-committee of the South African Teachers' Association, having been appointed to collect information on the subject of the Registration of Teachers, addressed itself to various colonies and countries. It appeared, however, when the matter was further considered, that any form of registration, no matter how lenient the conditions, would be impracticable in the Colony, since about half the teachers employed in Government schools are uncertificated, and more schools would be closed than by the war if the humblest qualification in the way of a diploma were insisted on. Registration, then, must wait for a more convenient season.

Teachers in the Transvaal have their special grievance. Not war, but the peace, has hampered their energy; for the Education Department had organized large and well staffed camp schools, which now are dwindling away. Take, for instance, the much talked of camp at Irene. When the teachers returned from their holiday at Johannesburg, out of the eleven hundred children on the roll at the end of June not one hundred appeared on the opening day. Happy children! happy teachers, too, in spite of broken classes and disordered time-tables! For in these camps the Boers have learnt the value of education, and beg the English women to go as governesses to their farms. The Outlanders have caught the general infection, and Johannesburg clamours for its "teaching University" with a strange new-born zeal for self-improvement.

WEST AUSTRALIA.

The Report for the year 1901 of the Education Department is, on the whole, pleasant to read. It is satisfactory to find that 1,991 pupils were added to the registers of the Government schools, which now show a total of 20,548 scholars, with an average attendance of 16,423. The Department had to face great financial difficulties during the year; but, in spite of them, nearly £50,000 has been spent on school buildings, which will compare favourably with those in other countries. As might have been expected, the expenditure for education differs considerably in various parts of the colony, being heavy in the goldfields and outlying rural districts, where it is essential that the public purse should be most freely opened. It is difficult in such places, says the Minister, to obtain duly qualified schoolmasters. "The education of the young requires teachers of high character and cultivated minds. The training of the master himself must be long and thorough. His career must be made as promising and attractive as possible. The State cannot afford the bringing up of its youth to any but the best men. It is gratifying to be able to report that the average salary has been increased for heads and assistants from £131. 18s. 9d. in 1900 to £142. 18s. 3d. in 1901. This remuneration is, however, very low for those entrusted with one of the most important duties in the State." Make it somewhat higher, we allow ourselves to suggest, and an abundant supply of competent teachers could be got from England, where young candidates for the school are told daily that they are seeking to enter an overcrowded profession, and older ones stand vainly on the curbstone for hire. We pass over the statistical part of the report to the details furnished by the local inspectors. Curious it is to find several of them calling attention to a tendency that we had not yet observed in the best loved of our colonists, the tendency to a dialectic change which is of the greatest interest to philologists. We quote from the report of Mr. W. Hope Robertson, M.A., Inspector for the Eastern Goldfields and other districts:—"The 'Australian twang,' as it has been called, is prevalent in many schools, both amongst the teachers and the taught. Where this is the case, it seems almost hopeless to eradicate it, and no doubt it will become accentuated, owing to the climatic influences, which tend to the gradual broadening of the vowel sounds. Taken as a whole, the English language is well pronounced—better, probably, than it is in England, as we have not the different dialects to contend with, nor the various 'cockneyisms' to fight against; but it at times gives one a shock to hear (amongst other words) 'paper' pronounced as 'paiper,' 'face' as 'faice,' and 'cake' as 'caike,' to say nothing of 'town' as 'teown,' or of 'cow' as 'keow.' Everything should be done to put off the evil day when we, like the Americans, shall have an unmistakable accent; but it seems to me as certain as it is that night will follow day that in time to come the prevalence of such an accent will be an accomplished fact."

Mr. Robertson, it will be seen, sets the change down to the effects of climate; he shakes our confidence in his judgment when he describes the twang as a broadening of the vowel sounds. Another inspector speaks of it as a "monotonous drawl," to be conquered by an appeal to the child's sense of what is natural, and by constant imitation of the teacher's mode of speech. His teachers, then, are free of twang. It is the same inspector who states that too much time is devoted to the mnemonic method of teaching letters and their sounds, believing that the value of the letter *w* may be learned without always associating it with "what mother does with the clothes." We agree with him in that, and we end this note by reproducing his paragraph, which also has our approval, on the kindergarten and manual training:—"Kindergarten work is extending rapidly, as many of the women teachers of small schools take much more than a passing interest in it. The pity is that some very willing teachers have no opportunity of coming in contact with those who have had kindergarten training and are proficient in the teaching of it. Modelling in clay is the branch of formative education adopted most generally in the standards. Much useful training of the hand and eye results. Still, it is scarcely in accord with the best practice for all children to continue modelling right through their whole school course. Chip-carving, bookbinding, modelling with cardboard, and iron-work are also taught in a few schools. One school, Moonyonooka, is specially to be complimented upon the excellence of training given in iron-work."

QUEENSLAND.

We observe with regret, indeed with indignation, a paragraph in the Education Report for West Australia in which the Minister remarks that in enforcing compulsion the members of the police force have rendered most valuable assistance to the Department, and that very sincere thanks are due to them. Due by whom? Not by those who love children and think that the school can serve them. Parents may need coercion; but consider the effect of such a means of compulsion on the mind of a child. Nothing can be more mischievous than to represent education not as a boon, but as a punishment, and to confound, in the unripe intelligence, a school with a gaol. In Queensland gentler methods are employed, and an illustration of them may amuse our readers, if it does not establish the success of kindness. A teacher in a northern town, annoyed by the persistency with which one of her scholars absented himself from school, was on the point of reporting the case of the boy to the truant officer when she happened to mention it to a lady superintendent. The superintendent is all goodness, and told the teacher to send him to her the next time he offended. One afternoon there appeared at the lady's house a small boy. The lady superintendent was all smiles and attention, and treated the boy to a royal "spread," a feast the like of which he had never tasted before. He was soon made to feel perfectly at home. "Now," thought the benefactress, "is the time to preach my little sermon." So she put before him the evils of truancy, and besought him to be a model boy in the future. Imagine her surprise when he said to her: "I ain't the boy as runs away from school, ma'am. He giv' me a penny to come here in his place." The rogue had played truant from the admonition and the treat.

CALENDAR FOR DECEMBER.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—College of Preceptors Teachers' Diploma Exam., January. Return forms.

(Continued on page 798.)

THE NORLAND PRESS PUBLICATIONS

Little French Folk

A FIRST BOOK IN FRENCH FOR LITTLE CHILDREN

By CHARLES TALBOT ONIONS, M.A.

With Simple Illustrations in nearly every page instead of Vocabularies

Price TWO SHILLINGS

"Little French Folk" has been adopted by Stirling High School, George Watson's College for Girls, Edinburgh, and by many of the chief Secondary and Elementary Schools in the Kingdom.

IN JANUARY WILL BE PUBLISHED

Little German Folks

By MARGARETA SOHRAMM

Tales from the Faerie Queene

Told by OLARA L. THOMSON,

Examiner in English Literature to the Central Welsh Board

With Portrait of Spenser, Frontispiece after Mantegna, and many Illustrations by

HELEN STRATTON

Price HALF-A-CROWN

THE GUARDIAN says:—"The style of both writer and artist is admirably adapted to the subject, for both have caught just that amount of mediæval quaintness necessary to suggest the spirit of the original. The text is really literature, and the pictures show real artistic inspiration."

The First Book

SONG AND STORY FOR LITTLE CHILDREN

EDITED BY

O. L. THOMSON and E. H. SPWIGHT, B.A.

Containing forty-five full-page Nursery Rhymes and Pictures, forty-two pages of bright Nursery Songs and Music, and one hundred and twenty-five pages of Stories and Poems.

The book is illustrated on nearly every page by able artists, and forms by far the cheapest babies' book issued. Bound in pretty picture-covers and printed in large type.

Price TWO SHILLINGS

THE SCHOOL WORLD says:—"The First Book" will make the task of learning to read the most delightful occupation of the child's day. The selections and illustrations are alike charming. The idea of including the music and words of so many delightful folk-songs is excellent."

THE NORLAND PRESS

298 Regent Street, W., and Shaldon, South Devon.

PRIZE DISTRIBUTION, CHRISTMAS, 1902.

Mr. Edward Arnold's List.

JUST OUT.

ELEMENTARY PLANE AND SOLID MENSURATION. For use in Schools, Colleges, and Technical Classes. By W. R. K. EDWARDS, Lecturer in Mathematics at King's College, University of London. 304 + xviii. pages. Cloth, 3s. 6d.

AN ARITHMETIC FOR SCHOOLS. By J. P. KIRKMAN, M.A., Cambridge, and A. E. FIELD, M.A. Oxford, Assistant Masters at Bedford Grammar School. 500 pages, crown 8vo, with and without ANSWERS, 3s. 6d.

Educational Times.—"An excellent school arithmetic on a good plan well carried out. In addition to its value as a text-book, the work is attractive from the quantity of instructive general information it contains. This is so simply and directly given that a student can scarcely fail to be thoroughly interested and vividly impressed. The theory of the elementary rules is exceptionally clear and convincing."

A New Geometry Book.

ELEMENTARY GEOMETRY. By W. C. FLETCHER, M.A., Head Master of the Liverpool Institute, late Fellow of St. John's College, Cambridge. Small crown 8vo, cloth, 1s. 6d.

This book is meant to contain the irreducible minimum of geometrical knowledge less than the whole of which is not worth considering as knowledge at all. It contains the whole substance of Euclid I-IV. and VI., with the exception of the unimportant proposition IV. 10.

A FIRST GEOMETRY BOOK. A Simple Course of Exercises based on experiment and discovery, introductory to the study of Geometry. By J. G. HAMILTON, B.A., Lecturer on Geometry at the Froebel Educational Institute, and F. KETTLE, B.A., Head Master of Clapham High School for Boys. Crown 8vo, fully illustrated, cloth, 1s. ANSWERS (for Teachers only) 6d.

Price One Shilling each.

A FIRST COURSE IN ENGLISH ANALYSIS AND GRAMMAR. By RICHARD WILSON, B.A. 144 pages. Cloth, 1s.

This book differs from others of similar scope and aim in the arrangement of the parts of the subject.

The broad division into accidence and syntax, the only logical division for a *synthetical* language, is discarded, and what remains of accidence in English, now an *analytical* language, is taught along with syntax.

School Work.—"The definitions of the parts of speech are clear, the arrangement of the lessons is good, there are numerous exercises, and, as far as we have been able to judge, the information given is up to date and accurate—two qualities that are not always present in text-books of grammar."

ARNOLD'S NEW SHILLING GEOGRAPHY. The World, with special reference to the British Empire. With Diagrams and Sketch Maps, Statistical Tables, Questions, and Map Exercises. Suitable for Junior and Lower Middle Forms. 160 pages. Crown 8vo, cloth, 1s.

Geographical Teacher.—"This little book is to be recommended for its up-to-dateness; in the year of grace it is a 'new' Geography. It openly demands the concomitant of a school atlas, and supplies one or two sketch maps as supplements thereto; it preserves orthodox modern spelling as laid down by the best geographers; it perpetuates no heresies."

Two New Literary Reading Books.

IN GOLDEN REALMS. An English Reading Book for Junior Forms. 224 pages. Cloth, 1s. 3d.

Designed to form an introduction to the study of English literature. Containing folk-tales from various sources, stories from Homer, Virgil, the Beowulf poem, Chaucer, Malory, Froissart, Spenser, Shakespeare, Barbour, Scott, Lamb, and Washington Irving, and a large number of extracts from the works of the best poets.

Illustrated with beautiful black-and-white reproductions of famous paintings in the Wallace, Tate, and National Galleries.

IN THE WORLD OF BOOKS. An English Reading Book for Middle Forms. 256 pages. Cloth, 1s. 6d.

Designed to introduce the pupil to some of the greatest names in English literature. Containing interesting extracts, generally narrative, from the leading writers of prose and poetry from Caedmon and Bede to Thackeray and Tennyson, arranged in chronological order. Illustrated in a manner similar to the above.

PROFESSOR OMAN'S LATEST WORK.

SEVEN ROMAN STATESMEN. A Detailed Study of the Gracchi, Cato, Marius, Sulla, Pompey, and Caesar. By C. W. OMAN, M.A., Deputy Professor of Modern History in Oxford University. With Illustrations. Crown 8vo, cloth, 6s.

Athenaeum.—"A most suggestive and therefore most delightful book."

Spectator.—"Every page of his brilliant book is worth reading, and we cannot wish a young student better luck than to come across it before the austerity of the Germans has killed his interest in the history of Rome."

ARNOLD'S SCHOOL SHAKESPEARE.

JULIUS CAESAR. Price 1s. 3d. Edited by E. M. BUTLER, B.A., Assistant Master at Harrow School. (Set for Cambridge Local Examinations, 1903.)

A Complete Educational Catalogue will be forwarded post free on application.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

Student's Edition of SIDNEY LEE'S "LIFE OF SHAKESPEARE."

With a Photogravure Portrait and Four Full-page Illustrations.

Crown 8vo, 2s. 6d.

SHAKESPEARE'S LIFE AND WORK.

Being an Abridgment, chiefly for the use of Students, of

"A Life of William Shakespeare."

By SIDNEY LEE,

Editor of the "Dictionary of National Biography."

* * Also the FOURTH ORDINARY EDITION of "A LIFE OF WILLIAM SHAKESPEARE," with Two Portraits of Shakespeare, a Portrait of the Earl of Southampton, and Facsimiles of Shakespeare's known Signatures, crown 8vo, 7s. 6d.; and the ILLUSTRATED LIBRARY EDITION, in 1 vol. medium 8vo, profusely illustrated with Photogravures, Topographical Views, &c., 16s.

LITERATURE.—"Mr. Lee's work, both for its literary qualities and its scholarship, does credit to English letters, and it will probably be regarded for years to come as the most useful, the most judicious, and the most authoritative of all existing biographies of the poet."

LONDON: SMITH, ELDER, & CO., 15 WATERLOO PLACE, S.W.

Millions of copies of the Educational Works of

Gaspey-Otto-Sauer

Method for the Study of Modern Languages have been sold in all parts of the world. Owing to the fact that it is the best method existing for Schools (Public and Private) and also for self instruction. An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION Office, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

HOW TO WORK THE EDUCATION BILL.

By H. MACAN.

PART III.—LOCAL MANAGEMENT AND FINANCE.

IN whatever form Section 7, and the subsequent sections which have been born from it, emerge from Committee and the Lords, there is now no doubt that the matter of the local management of school details must be one of very little concern to the Education Authority—at any rate, in an administrative county. Just as the county body can, and will, "control," so it cannot, and will not, "manage." The system adopted with such success in the case of the county secondary schools—namely, of framing, on the lines of the Charity Commission, schemes for a semi-independent corporation for each school, amenable to the minor Local Authority in many respects—will probably work best. For the county body to find one member for each managing body in provided schools will be very difficult; to find a majority would be impossible. Just as I have advocated the absorption, as far as possible, of all bodies in a county into one paramount Local Authority in touch with (and the only body in touch with) the Board above, so I am convinced that, once this is done, there must be a handing back from this principal Authority of almost everything in which no principles are involved to every minor body down to the smallest Parish Council which can be induced to co-operate. Naturally this must always be done on the Swiss system, with entire regard to the area to be served. A secondary school of any grade, which certainly, in these days of cheap and rapid locomotion, serves a circle of from three to five miles radius with the school as centre, cannot be entrusted to any extent to the Urban Authority governing, say, one square mile, in whose area it happens to be situated. Elementary education also has like difficulties. Voluntary schools exist within a stone's throw of Board schools; small schools serve contiguous small ecclesiastical parishes; a parish, or town, provides Board schools without reference to other schools just inside its borders. Combination between adjacent small areas with reference to the management of groups of schools is therefore essential. It appears to me that the only way to settle these questions satisfactorily is for the County Authority, immediately it is established, to draft a general scheme of county devolution and then call a conference of all existing Local Authorities, municipal or educational, to thresh out the details.

Now the hierarchy of the Bill as regards Authorities is in effect threefold: (1) The Board of Education, (2) the County

Committee, (3) the managing body. The "appointers" of any of the three need not be taken into consideration in the present connexion. In the larger counties, at any rate, there must also arise a body or bodies intermediate between (2) and (3). This may take the form of an Advisory Council, covering the area of, say, a Poor Law Union, or may be simply the existing Urban and Rural Sanitary Authorities. By means of such a body the County Authority will be able to divest itself of every scrap of work of the nature of "management." It is impossible effectively to manage and at the same time keep the width of view, the general survey of the field, essential to control. The more a County Body interferes in the details of the work of the school, the teacher, and the scholar, the less it will be able to fulfil its ultimate destiny of relieving Whitehall and South Kensington of all but the highest educational direction. All dealings with *persons* are best in the hands of a body with the most intimate knowledge, namely, the nearest; all questions of *principles* are best in the hands of the wider body, free from all consideration of persons. The appointment and payment of all purely local teachers, the provision of apparatus for current use, the letting of school-rooms, the engagement of pupil-teachers (not their education), matters of discipline as regards teachers or pupils, are all best out of the hands of the County Authority. Of course there must be always a veto and an appeal, and also, where money is involved, a sanctioned estimate; but the less the hand of the county appears the better. School-attendance officers will have to go on with their work as heretofore; but over this branch there will have to be a very strict county surveillance, as I have dealt with in detail before. Naturally School Board clerks in all large areas will be continued in office, and small areas will be amalgamated under one clerk.

The very large number of unnecessary school places now existing, and due to the overlapping of the "catchment basin" of the parochial elementary schools, must be done away with; this can only be done by the most skilful and widespread combination of local areas, their Committees of Management and officials. Now as to the appointment of the one county representative on managing bodies of voluntary schools and the four representatives on those of Board schools. I cannot see that the local County Councillor can fairly be asked to be the single one or even one of the four. It is better that this work be delegated to the minor Authorities on the understanding that the representative managers report fully once a year to the minor Authority, and those bodies transmit all such reports, with their own comments, to the County Authority in due course. It should also be part of the bargain that a county official should have the right of being present at any meeting of managers—of course, without a vote. One matter which will require very careful consideration is that of school attendance. The old Committees stand abolished by the Bill, and certainly in the rural districts deserve their fate. It is important that they should not be resuscitated, and that no merely local and parochial bodies take their place. If school attendance is to become a reality in the rural districts, the enforcing Committee must be free from all influence on the part of the farmers, and the officers must be men of position and intelligence whose whole time, and consequently whole interest, is in the work. Therefore, I recommend that the County Authority keep all this work in its own hands, appointing a special sub-committee to sit once a month as the School Attendance Authority. The county would then be organized just as it is for Weights and Measures and Foods and Drugs Act purposes. Inspectors, whose districts would correspond with one or more petty sessional divisions, would be appointed by the Authority, and would attend and give in their reports at its monthly meetings. They should be persons, if possible, with some legal training, and should be capable of conducting prosecutions themselves as well as of acting on their own initiative in taking out summonses or issuing warnings. The local bench will be much more likely to pay attention to the complaints of such county officials than it would or does to the purely local men without much expert knowledge.

Finance.

It is of great importance that Local Authorities should not be led away in the earlier stages of working the Bill into "liberal" finance. Great pressure will be brought to bear on them in quarters which need not be specified, to adopt the line that the voluntary schools are quite inefficient through want of money, that the large School Boards have set the standard of

efficiency, and that there must be a levelling up to this high-water mark at once. There are large opportunities of saving money both in Board and in voluntary schools. What was in the eyes of the Board schools elementary education before the days of Cockerton is so no longer. The new Authority has to provide for pupil-teachers' centres and all the other higher and more expensive work out of its secondary rate. The voluntary and Board schools alike in the rural districts have of necessity wasted money owing to lack of machinery for co-operation: a special teacher for a group of schools at an inclusive salary is much cheaper and better than odd teachers at so much per hour for each individual school. Interchange of specimens, apparatus, and books can now of course be easily arranged by a proper system of grouping schools in districts, and, as Board and voluntary schools can be grouped together, contiguity, which always means saving, need be the only matter of consideration. The travelling library and Nature-study museum will be a feature of each school-teaching circle.

No doubt, also, very great pressure will be brought to bear upon the Local Authority to act as a glorified School Board, and pay all teachers' salaries itself, as well as order from the makers apparatus and books. This, I consider, would be the greatest mistake. It would bring the Authority down from the level of a court of appeal in equity and finance to that of a mere managing body; would so occupy its time that it would be quite impossible for it to attend to the co-ordination of education and other greater matters of the law, and would deprive managers of any real sense of responsibility. The proper line of action, I take it, is for the Local Authority, since the law has evicted the managers and School Boards from being tenants or owners, to reinstate them as caretakers, or rather overseers, and hold them responsible for all local finance. The estimate sent up at the beginning of the year should show (just as in the present aid-grant form) the estimated expenditure under certain heads and the estimated income from Government grants. The Local Authority will carefully consider this, not, I take it, so much in reference to any cut-and-dried rules, scales of salary, &c., but according to the circumstances of each case. They will then allocate to the managing body so much rate-money as will make up the "taxed" deficit, leaving in their own accounts a small margin for contingencies. Outside, however, the sum voted and the margin, if necessary, no managers should be allowed to spend a farthing more, except out of their own pockets, nor should they be allowed to pledge the credit of the Authority in any respect. As the managers appoint the teachers, and are on the spot, they must make themselves responsible for the maximum grant being earned, or be prepared to pay the balance out of their own pockets. Another point which will require careful watching is the, no doubt, inevitable rise in salaries. Whatever salary is paid should be entirely for work done in the school, and, of course, should be a fair wage for this, calculated upon the work to be done, not on the paying capacity of the managers. But experience of the Technical Instruction Acts shows that managing bodies when spending the rates, and not their own money, have a benevolent tendency to take into account other and unpaid extraneous work when assessing what is nominally a salary. The man who acts as parish factotum when it is *not* in his teacher's agreement must not expect to have a higher salary as teacher in return. It is very doubtful whether as soon as teachers are paid a sufficient salary they should be allowed to impair their activity and efficiency in the positions of tax-collectors or gas or insurance agents. The question of paid correspondents will soon arise. In many cases it will probably be economical in the long run to enlarge very materially the area of operations of some of the best clerks of School Boards, and give them some official position as regards the voluntary schools in their area. In any case, adjacent School Board areas should be merged and placed under one clerk; it will cost less to give the work of three or four men to one, and a better man will be obtained for the purpose. Ultimately the county will be divided into School Board districts, few in number, but each served by an efficient local officer.

It is of some importance for managers to maintain (if they have them) the joint banking schemes. The local rate aid will no doubt be paid to them half-yearly, and the Government grants only when they come in. Hence they will often want ready cash. As they must have some central and pooled funds for the purpose of structural repairs and additions, they may just as well keep the whole system going. Otherwise a much

larger rate must be raised at first in order to supply cash and working balances. There is no reason why Board Schools in the same district should not co-operate, and thus swell the bank receipts.

CORRESPONDENCE.

WHAT IS ELEMENTARY EDUCATION IN AN EVENING SCHOOL

To the Editor of The Journal of Education.

DEAR SIR,—According to the amended Clause 18 of the Education Bill:—"Elementary school" shall not include any school carried on as an evening school under the regulations of the Board of Education when any part of the education is *other than elementary*."

Now, as the task of saying what is, and what is not, elementary proved too much for the Board of Education prior to the Cockerton case, and as the Board did not wish in future to be constantly engaged in quibbling disputes with ambitious School Boards and Primary Education Committees as to what part of evening-school work could possibly be called elementary, the original draft of the Bill wisely excluded all night-school work from the elementary-school division.

But the unfortunate amendment I have quoted has altered all that, and we shall now probably at no distant date be having another Cockerton case in order to obtain from the Law Courts a decision as to what is possible as elementary education in a night school under the regulations of the Board of Education.

The following is a sample of subjects taught by the London School Board at its evening schools, where, according to Dr. Macnamara, 75 per cent. of the work is purely elementary:—Latin, French, German, Italian, Spanish, Organic and Inorganic Chemistry, Metallurgy, Anatomy, Drawing from Antique, &c. I will undertake, as I am assured the officials of the London School Board also will, to teach any of the above subjects as "elementary education" in an evening school under the regulations of the Board of Education. It is very easy. All you have to do is to prefix the words "elementary," or "elements of," before any of the above-named subjects in your class time-table and it becomes elementary education at once.

I believe you can also do it another way by calling your subject a "Code subject"—a plan which was evidently in the mind of the London School Board when it quite recently requested that, under the Bill, evening schools should be carried on as elementary education under the Elementary Authority and under a Code which they were careful to ask to have drawn up by the *Whitehall* branch of the Board of Education.

While this can be done co-ordination of education is impossible, and the only resource appears to be a second Cockerton case to get a definition of what is elementary. It is true that the list of subjects that I have named as taught at the London School Board includes reading, writing, and arithmetic, but I do not suppose that even Dr. Macnamara would bind himself to say that his "75 per cent. elementary" was composed entirely of evening students in these three subjects, whatever may be the case in the rural district night schools.

I have no hesitation in saying that, if Mr. Balfour's amended Clause 18 is honestly interpreted as to the words "other than elementary," there is not, in London at any rate, a single evening continuation school which is a "public elementary school." At the same time I feel that the clause will not be honestly interpreted without the intervention of the Law Courts and a second Cockerton case to determine what is "elementary." And because I dread this disagreeable necessity I would urge the Government to render it impossible by simply adhering to the original draft of the Bill, which provided that no evening school should be regarded as a public elementary school.—I am, yours faithfully,
J. S. R.

THE TEACHING OF GEOMETRY.

To the Editor of The Journal of Education.

SIR,—When I was a boy I sometimes wrote, in the Greek tongue, about my astonishment at the wisdom of the geometers of bygone days. But I now feel far greater astonishment at the geometers of the present day—not so much for their learning as for their disregard of the most obvious principles.

The author of the paper on Geometry printed in your November issue says he "would like to see the term 'ray' in general use" in geometrical science. But let us first see in what sense he intends it to be used. Already, in agricultural science, the term "spade" has long been in general use to denote a spade, and I hope it will remain with us. I see no objection to using the term "ray" for anything that has the characteristics of a ray of light. But it is astonishing to me how anybody professing to have the exactness and discernment of a mathematician can seek to apply such a term to a geometrical element which is at variance with a ray of light in its essential features. The very

idea of a ray is that of a thread of light issuing from some particular point, some radiant object. The thread may be prolonged ever so far into the distance; but it always proceeds from a definite starting point. And now these mathematicians want us all to use the word "ray" in geometry as a technical term for a straight line that has no limit in either direction. Also a ray of light flows one particular way, like the stream of a river; whilst an ordinary straight line embodies a duality of direction, this way or the opposite way, indifferently.

I am not myself an assistant master, and so I cannot be blamed for neglecting to be present at the reading of a paper on a subject in which I am so deeply interested. But did not one, I wonder, of those who were present make any protest against such a breach of the principles of nomenclature? Are assistant masters mere slaves or puppets that let other people do their thinking for them?

Any mathematical committee appointed to revise geometrical teaching should have power to add to their number some little boy out of the street. What are called highly qualified men in any subject often draw up systems that are far better adapted for their own delectation than for the enlightenment of a beginner whose ideas are few and whose language is simple. As a memorable instance I may cite the "Public School Primer."

I gather that Prof. Henrici has felt himself driven to adopt the unsatisfactory term "half-ray" to denote what might, with perfect imagery, be called a whole ray—viz., a one-ended straight line of indefinite extension in the other direction. The German mathematicians have long ago employed the term "ray" with perfect correctness in their projective geometry—e.g., in the studies of *Strahlenbüschel*, and I hope that Prof. Henrici will use his influence to annul the original error of nomenclature which begot the "half-ray," so that reason may find itself hand-in-hand with authority; and, if I may offer one word of advice to the geometers of these days, it would be not to multiply technical terms and complex ideas, but to call a spade a spade and a straight line—what? Why, a straight line!—I am, Sir, yours obediently,
E. ALDRED WILLIAMS.

103 Station Road, Finchley, N.

BREVET SUPÉRIEUR.

To the Editor of The Journal of Education.

SIR,—Can you, through your columns, kindly help me to find out what standing the French *brevet supérieur* takes in England when compared with English diplomas? Would the *brevet supérieur* be, in the eyes of an English head mistress, a sufficient proof of capacity to teach French throughout a school to English children, if this diploma were possessed by a trained, certificated English teacher who had prepared for and passed the *brevets* examinations in France at an *école normale*? How far would this French diploma go in qualifying the trained English mistress to register as a "special teacher" of French? I left England before the Register was drafted: I shall therefore be very grateful for any expression of English opinion on the subject. You are, doubtless, aware that the *brevet supérieur* is the qualification which the French Government accepts from teachers in secondary schools that are "recognized" (*autorisées*) in France.—I am, Sir, yours faithfully,
PROFESSEUR D'ANGLAIS.

Institution Fénelon, Tours.

[The value of the *brevet supérieur* is fully recognized by English head masters and mistresses; but it will not qualify for the Register, nor is there any expectation that modern language teachers will be admitted as such to the Supplemental Register.—ED.]

MUTUAL OFFERS FOR STUDENTS OF FRENCH.

To the Editor of The Journal of Education.

DEAR SIR,—I shall feel grateful if you can find space in your valuable journal to announce that the head master of a good *lycée* in the centre of France will receive, free of charge, a young Englishman educated in a Board school, willing to learn French and to speak English to a few of the best boys for two hours a day, in return for board and lodging. He would be considered as one of the resident masters, but there are no supervision duties. He must be a gentleman, with a good pronunciation, age eighteen to twenty-three. Degree no object.

The head mistress of a girls' training school (*école normale primaire*) will receive at the reduced rate of £3 per month, for board, lodging, and tuition, a young English girl (musical) willing to give the other pupil-teachers a little English conversation. She can attend the classes, lectures, &c.

Any intending candidates should write to yours faithfully,
Glenlyon, Harrow-on-the-Hill.

B. MINNSEN, M.A.

MODERN LANGUAGE HOLIDAY COURSE.

To the Editor of The Journal of Education.

DEAR SIR,—During the Christmas holidays we desire to arrange short courses in the modern method of language-teaching in French and German, and to receive lady teachers as paying guests. We have

a thoroughly experienced teacher, an M.A. of London and Dr. Phil. of Bonn, who has resided for a long time in France. We feel that for those who already know the languages grammatically even a fortnight's daily lesson in the language would give a good insight into the method of teaching by the aid of pictures which is now so much practised. We would do all in our power to make a stay in our interesting city pleasant, even if visitors desired rest rather than study, for the language classes would be optional. The hostel is well appointed and in a charming situation, close to the cathedral.

For particulars and terms, which would be very moderate, early application should be made to the Resident Warden, Miss Shorts.—Believe me, faithfully yours, JESSIE DOUGLAS MONTGOMERY,
College Hostel, Exeter. Hon. Warden.

"THAN WHOM."

To the Editor of *The Journal of Education*.

SIR,—Is it not enough to say of the two words at the head of this letter that by usage "than" has been allowed to exercise the functions of a preposition, and so to take an objective case? We may compare the uses in Latin of *pridie* and *postridie*; and of *ante* and *post*, for *antea* and *postea*, followed by *diem* in the records of dates. It seems to me that we get as good an "explanation" here of a vagary in language as nine-tenths of the current "explanations" of correct construction. It will be remembered that Prof. Conington, for one, wrote "than who." —I am, Sir, faithfully yours, J. H. RAVEN.

FIVES COURTS.

To the Editor of *The Journal of Education*.

SIR,—I should be very much obliged if any of your readers could give me particulars of the cost of fives courts which they may have constructed lately. I meditate having two built together, of the plain type without step or buttress. I should prefer them to have four walls and to be covered, but this must depend on the cost. Information regarding measurements, plans, and materials will be welcome.—Yours faithfully,
The School House, Loughborough. B. D. TURNER.
November 20, 1902.

REVIEWS AND MINOR NOTICES.

Tiberius the Tyrant. By J. C. TARVER, author of "Life and Letters of Gustave Flaubert," "Some Observations of a Foster-Parent," &c. (Price 15s. net. Constable.)

Judge Jeffreys has been whitewashed, so has Judas Iscariot; now comes the turn of Tiberius. The aim of this book is to prove that Tiberius has been grossly misjudged, and all owing to the malice and the literary skill of Tacitus. It is a powerful piece of special pleading, and written with a literary taste and humour which honourably distinguish it from the general run of scholastic books; but it will need more than that to convince the world of scholars that Tacitus was so hopelessly in the wrong. And, after all, the case against Tiberius does not wholly rest on Tacitus. It may be that the "Lives" of Suetonius, are all gossip; but, after all, gossip has often some foundation in fact, and we can hardly deny that the current view of Tiberius is not very different from the opinions generally held in Rome at a time when his reign was not ancient history.

Mr. Tarver takes pains to prove that Tiberius was an able general (he compares his great combined movements with those of Napoleon) and as able a diplomatist—"perhaps the ablest of Roman emperors," he quotes from Mommsen with approval. But this no one will deny. It may also be admitted that Tacitus had an intense prejudice against him, and that some at least of his sources (such as the "Memoirs of Agrippina") were tainted. When Tacitus quotes from official records, Mr. Tarver urges, Tiberius always appears in an admirable light, and the dark accusations which lie upon him come from private memoirs and gossip. But no one would expect to find dark accusations in the official records, even if they were true, and high capacity in public life is not incompatible with low personal character, with cruelty and debauchery. Making all due allowances for personal spite, there is still something behind. Mr. Tarver is too high-handed in his mode of disposing of the hostile evidence. He dismisses the soldiers' nickname, "Biberius Caldius Mero," as valueless; whereas it is just the kind of name which would never have been thought of without reason, especially for a general who was always successful.

When Tiberius went to Rhodes, Mr. Tarver holds that he did not choose his retreat for its facilities for licence, but as a University town, where he could prosecute his favourite studies of astronomy and astrology. He would have been very unlikely to choose a public mart, one of the chief centres of commerce in antiquity, if he had meant to indulge his baser passions with freedom. It may well be that Tiberius did not want to be emperor, that he wished to retire from public life, that he wished to study; yet these things are not incompatible with the other aim. It is interesting to note that when Tiberius did choose a lonely island for his retreat, Mr. Tarver will not see any other design here either than study and peace. But let us grant Tiberius his passionate devotion to his first wife, whom he had to divorce for public reasons; let us grant him personal chastity in his youth and manhood and the innocence of his life at Rhodes—that, after all, does not touch the question of his later days. When he comes to the story of Sejanus, Mr. Tarver himself has to admit dissimulation (page 411), although he excuses it as necessary. He will not admit the debauchery, which he calls unexamined after such a record, except in a few rare cases of mental derangement. But this is just the point. It seems probable that Tiberius was mad in his later years, and that the madness developed all sorts of latent vices. At the same time it is probable enough that the vices have been exaggerated, and, if so, this will answer Mr. Tarver's contention that they would be physically impossible in an old man. At the same time we owe gratitude to Mr. Tarver for his defence, because it helps to redress the balance. Tiberius in Tacitus is a monster; in Mr. Tarver an archangel. The truth, doubtless, lies between the two.

Mr. Tarver's predilections bias all his interpretations of the phases of his hero's career; but his book ought to be studied as a commentary on Tacitus, whose infinitely ingenious insinuations Mr. Tarver exposes with great skill. His power of describing ancient life, and of analyzing social and political tendencies, is very great. Further, we should add that he has found a new and very probable explanation of the tortuous intrigues of the day in female intrigue. The women of the imperial families—Livia, Julia, Agrippina, Antonia—become real live figures in this book, and their actions are made intelligible as the outcome of the class spirit or a mother's ambition for her children. Mr. Tarver is very hard on the ladies: every crime and blunder is traced to them, including the death of Germanicus and the career of Sejanus. The beautiful Antonia seems to have won Mr. Tarver's heart; but he is never weary of attacking the others. Yet he is sympathetic with nearly all, even with Julia, regarding them with the whimsical indulgence of a humorist. Only the "tigress Fulvia" and Livia have no mercy shown them. Livia seems to be Mr. Tarver's pet horror. "We may surmise," he says, "that her virtues were of such an obvious type as to constitute a standing provocation to the wicked, and that she was one of those women who are more dangerous to sound morality than a bad example." Poor Livia!

Edward Bowen: a Memoir. By the Rev. the Hon. W. E.

BOWEN. (Price 12s. net. Longmans.)

At the time of Mr. Bowen's death his work and character were dealt with so fully in these pages by colleagues, pupils, and friends that we do not propose to treat at any length this new presentation. His nephew has brought together all the printed matter he could lay his hands on—college and University essays, the U.U. essays that originally appeared in this journal, the evidence given before the Bryce Commission, and, last and best of all, the "Songs and Verses" published in 1886, supplemented by a few *anecdota*, fly sheets, and *vers d'occasion*, which reveal more than anything else in the book Bowen's special vein of humour. Friends and admirers of Bowen, and they are many, will be grateful to him, but the general public might fairly have demanded more, and would have spared much. They would like, for instance, an explanation of those cryptic letters U.U., no less mysterious than the Harvard *φ.β.κ.*, and to have been told something of a society which Bowen helped to found some forty years ago, and which in its way has been no less famous than the "Apostles" of whom recent memoirs have told us so much. They would like to know who are the gods that attended the masters' meeting at Dr. Butler's, a satire that needs a key no less than the "Dunciad"; and without a scholiast the delightful bucolic dialogue on page 88 loses

half its points. Who, for instance, save old Harrovians, will appreciate :

Ecquis
Roundelum audit nisi vera et sana loquentem ?

On the other hand, they could well forego the *prolusiones*, remarkable as specimens of precocious ability, but otherwise of no permanent interest, and still more could they have dispensed with the biographer's comments on these *prolusiones*. "Character is defined by the author as a union of habits all good," so we read in the "Memoir," and the paradox strikes us as so outrageous even for a schoolboy essayist that we turn to the appendix for the original. There we find : "The best character is defined," &c., a platitude in place of a paradox. Lastly, the reader, if he knew, might complain that there are as many pearls in the unfathomed depths of Bowen as those brought to the surface. We recall snatches of paradox and *jeux d'esprit* of which we would fain have had the holographs :

But, if mistrust of *y* your spirits vex
Or total want of confidence in *x* ;
In China, where each word's a root,
And every root a word to boot,
And every Mandarin a brute ;

and a Pickwickian Ode,

There are met four thirsty souls,
There is also met a pewter.

These are mere *suspiria*, hints of the might-have-beens.

One episode in Edward Bowen's many-sided career may be here mentioned as throwing a strong side-light on the present educational Armageddon. Bowen was a member of the first Harrow School Board, and he forced on the appointment of a School Board by withholding, in concert with his friends, his subscription to the voluntary schools. His action is typical, and yet these subscriptions are now all ear-marked by the Government as forming part of the permanent endowment of Church of England schools.

To turn to uncontentious matter, the "School Songs" are the one lasting memorial of Edward Bowen. Here he struck a new and original vein, and, though they were inspired by the *genius loci*, they have, in spite of their local colouring, become national possessions. Bowen was the first to express in verse the normal healthy English public-school boy, one of Matthew Arnold's "young barbarians all at play," an athlete at bottom, but with sentiments and aspirations of which he was half ashamed and which he dared to reveal only under the mask of humour. Here again, the reader is likely to resent the interference of a showman, and to be repelled by superlaudation. To speak of "Forty years on" as a greater lyric than "Tears, idle tears," or "O lyric love!" is simply ridiculous. Even if we limit comparison to schoolmasters' poems in the serious vein, James Rhoades and Edward Young are Bowen's equals, and William Johnson, with his "O earlier shall the rose-buds blow!" and "They told me, Heraclitus," his superiors. Yet in the mixture of schoolboy humour and pathos, in the idealization of cricket and football, in the glorification of the common life, we may pronounce Bowen unique. In the matter of training, of registration, of professionalism, he was our "dearest foe"; yet we would inscribe on his tomb Macaulay's "Epitaph on a Jacobite."

The Poetry of Robert Browning. By STOPFORD A. BROOKE.
(Price 10s. 6d. Isbister.)

Mr. Brooke needs no introduction, still less an apology ; but we must own to an old-fashioned liking for a preface, if it be only the conventional how that the author makes to his readers, the briefest explanation of his appearance on the scene, his object and his method. In the present instance we fancy that the reader would approach the volume in a different temper had he been informed that it is virtually a reproduction of a course of lectures. He would be more inclined to condone what is its chief defect—the frequent repetitions and the rhetorical style, the cumulation of synonyms and the variations on a single phrase, which extend sometimes over half a page. Virtues in a preacher or lecturer become vices, or let us say foibles, when set down in cold print.

The author provokes a complaint ; but, having had our grumble, we hasten to add that what must have been delightful to hear as lectures is at the same time very good reading. Not only are the broad outlines of Browning's genius clearly and truly conceived, but the critic's generalizations are

constantly supported or illustrated by reference to the poems. On some of the longer and more difficult of them, "Sordello" and "Paracelsus" in particular, we have, in fact, a running commentary. To "Sordello" alone more than forty pages are allotted.

The first lecture, an elaborate parallel between Browning and Tennyson after the manner of Plutarch, is a fine prelude, though we must confess that the constant antithesis between the two poets wearies in the end ; and the analysis of Tennyson's dramas to prove that they are one and all undramatic is really an extravagant *excursus*. The two poets move in different planes and meet at too few points to be profitably compared. Tennyson has hit off in a sentence all that needs saying on this head : "A great thinker in verse ; he has plenty of music in him, but cannot beat it out ; he has intellect enough for a dozen of us, but he has not got the glory of words."

In this same first lecture there is an *obiter dictum* on which we would join issue, as, in our judgment, it infects and partly vitiates a great part of the author's criticisms : "He is a wit—with charity—not a humourist." And Mr. Brooke tells us what he means by "humour," the first characteristic of which is "gentle pathos," which is denied to Browning. What, no humour, no gentle pathos, in "Andrea del Sarto" and the cousin's whistle, in "And yet how it was sweet" of the "Confessions," in

I'll hold your hand as long as all may,
Or so very little longer,

in

borage the Aleppo sort
Aboundeth very nitrous : it is strange,

in "Fra Lippo Lippi," and the Prior's niece, in "The Bishop orders his Tomb," and a score of other poems that will occur to every lover of Browning ? Happily, Mr. Brooke is not consistent, and, though he shows small appreciation of humour, he is forced again and again to attribute to individual poems the quality that he denies to the poems as a whole.

There is another challenge we should like, if space permitted, to take up—that, with a few exceptions, there are in Browning no "passionate love-poems," Wordsworth being classed as one degree lower in the scale of passion. To us Browning appears as "passionate" a poet as Sappho or Burns. It is, too, a singular taste that puts Pompilia a little lower than Balaustion and gives to the Greek singing girl the palm and crown of womanhood among Browning's hundred women.

One parting complaint. The index is worthless, and cannot have been even read by the author. Witness "Ned Bralto" with a false reference.

Latin Elegiacs and Prosody Rhymes for Beginners. By C. H. ST. L. RUSSELL. (Price 1s. 6d. Macmillan.)

The book is composed on the sound principle of one thing at a time—in this case, scansion. We have the Latin for a hundred and twenty copies of elegiacs with an English version *en face* ; all the pupil has to do is to arrange the words as he would a Chinese puzzle ; but, to do this, he must know or find out the quantities. The rimes are somewhat enigmatical :—

"Diphthongs are long, but may elide, grow weak ;
They, and long vowels, stay long in words from Greek."

Matriculation English Course. By W. H. LOW and JOHN BRIGGS. (Price 3s. 6d. University Tutorial Press.)

Mr. Briggs has shown commendable promptitude in catering for the Matriculation candidate under the revised syllabus. He has wisely omitted "the salient facts of English history and general geography" ; but, with this exception, gives, as far as any manual can, all that is required of the student in English. The earlier part is founded on the popular manual of the late W. H. Low ; but the philological portion is condensed and curtailed. The new matter treats of composition, including paraphrasing and *præcis*. There are a number of skeleton essays which will prove very useful to the beginner, and examples of *præcis*, which loomed so large in the September papers. Only on one question then set the book affords no aid—the language of poetry ; but this is a wide field to cover, and is better reserved for a separate volume.

"The Unit Library" (Leicester Square) is a new venture intended to bring standard literature within the reach of the million. The unit is 25 pages for ½d. Add 1d. for paper binding, 5d. for cloth, and 1s. 2d. for leather. The format is convenient, roughly 4 ins. by 7 ins., the paper thin, but opaque, the type broad-faced, and the general appearance attractive. As a first instalment we have received *Browning's Poems*, in two vols., 24 and 26 units respectively ; *The Pilgrim's*

Progress, 14 units; and Delitzsch's *Jewish Artisan Life*, 4 units. Our readers can calculate for themselves the prices.

We have received from Messrs. Cassell a selection of *Letts's Diaries* for 1903. For general use we recommend either No. 3 (large post quarto, cloth, week in opening, price 6s.) or No. 11 (large post octavo, ditto, price 4s.).

CORRECTIONS.—The publishers of the "Life of Baroness von Marenholtz-Büllow," reviewed on page 763, are The American School and College Text-Book Agency, London. "Studies of the Gospels," by J. Armitage Robinson (Longmans), appeared, by an unfortunate accident, in the November number as "Studies of the Prophets," by T. Armitage Robinson."

CHRISTMAS BOOKS.

Britain at Work (price 12s., Cassell) is a handsome volume describing our chief national industries, from the building of a man-of-war to the making of a pin. Every page has one or more illustrations, mainly photographic process blocks. For the letterpress experts have been engaged for each section. Thus, H. W. Wilson contributes "The Building of a Battleship"; Mr. G. F. Miller, "Bee Farming"; and Mr. H. G. Archer, "Everyday Life in the Army and Navy." For a boy who is at the parting of the ways and doubting what profession to adopt there could not be a better Christmas present.

School of the Woods: Some Life Studies of Animal Instincts and Animal Training. By WILLIAM J. LONG. (Price 7s. 6d. Ginn.)—Mr. Long is too well known a naturalist to need commendation, and all we need say is that in his latest work he has surpassed himself. These life studies are redolent of the forest; they show not only the patient observation of a Gilbert White, but the passion for woodland ways of a Thoreau and a power of literary expression that reminds us of Jeffreys. Mr. Charles Copeland's illustrations match the text to a nicety, and the marginal black-and-white sketches form a running commentary.

Old St. Paul's. By CANON BENHAM. (Price 7s., net. Seeley.)—Messrs. Seeley are justly famous for the taste and finish of their artistic productions, and in "Old St. Paul's" they have surpassed themselves. Format, paper, print, and binding all harmonize, and we wonder how so beautiful a work of art can be offered at so low a price. The illustrations are mainly from Hollar's well known engravings; but there are likewise numerous reproductions in colours of illuminations from missals, Books of Hours, and other MSS. The frontispiece is a fancy drawing of Old St. Paul's from the riverside, by Walter L. Colls. It makes a striking picture; but the rise from the river seems to us exaggerated. Canon Benham retells a familiar tale with the easy grace of a scholar.

The Life of an Elephant. With sixteen Illustrations. New Edition. (Price 1s. 6d. Seeley.)—We welcome again this capital chapter in natural history, full of subjective touches which give life and pathos to the story.

Coming of the Golden Year: A Tale. By SELINA GAYE. Third Edition. (Price 5s. Seeley.)—We are glad to reperuse this pleasant medley of Swiss life of to-day and fairyland.

Our Village (price 2s. net, Macmillan) is illustrated by HUGH THOMSON—he never had an apter theme—and introduced by Mrs. RITCHIE, whose charming *naïveté* age cannot wither. She tells us of Miss Mitford's friends who were her friends, of the village as it now appears, and of the cottage itself; which now has a kitchen in place of an open range.

A Year with the Birds, by W. WARDE FOWLER (price 2s. 6d., Macmillan), is the third reprint of the third edition. In the fourth we hope he will alter Virgilius to Vergilius. We can find no other speck or flaw.

The Diamond Seekers. By ERNEST GLANVILLE. (Price 6s. Blackie.)—A tale of adventure with a hidden treasure to find is bound to be more or less improbable, and the proceedings of the hero while he is in England are rather provokingly unlikely; but when once he and the queer boy from the Cape get into South Africa, the story becomes much more exciting. The boys make friends for themselves, but enemies are on their track, and the advantage is first on one side and then on the other. The interest is well sustained, and boys will find this book well worth their reading. The author seems to know his ground well, and the manners and customs of wagon-drivers, Kafir boys, and Bushmen are graphically described. The illustrations are unequal, the later ones being the best.

Boys of our Empire. (Price 7s. 6d. Melrose.)—This is the second year of this magazine for boys, which seems to be run on the same lines as its numerous fellows. There are short stories and serials—two of these by well known authors, R. Leighton and Fred Wishaw—sports, competitions, puzzles—a little of everything, from the mildest joke to book-keeping by double entry. "Champions of the Week" head each number—they come from all sorts and conditions of men, and include a favourite writer for boys, Mr. G. A. Henty, whose recent death will cause a great gap in their literature. Judging by the League Club

notes, the B.E.L. is forming branches in all directions. There are a large number of illustrations, many of them not up to a very high level. There is, however, a highly effective frontispiece in colours, and here and there are some old friends in the shape of reproductions of some of Leech's contributions to *Punch*.

Grit will Tell. By R. STEAD. (Price 2s. 6d. Blackie.)—The fortunes of a little waif whom nobody wants in his earlier years, and who has a bad time of it in consequence. The boy is certainly possessed of plenty of pluck, and has brains and perseverance besides; but, his first troubles once over, he is extraordinarily fortunate, and has chances enough given him to set up several boys in life. We do not think the ordinary farmer would be meited to tears by the fact that a little vagrant found sleeping in his haystack had had nothing to eat since the previous day.

For the Red Rose. By ELIZA F. POLLARD. (Price 2s. 6d. Blackie.)—The heroine is the daughter of a Lancastrian noble, who, when her father's castle is destroyed, falls into the hands of the gypsies, who infuse a little of their blood into her veins, and bring her up as one of themselves. Later on, a chance of those stormy times throws her into the company of Margaret of Anjou, who is in hiding while some of her faithful nobles are trying to collect her scattered forces. The girl becomes absolutely devoted to the Queen, from whom she is parted only by Margaret's death, many years later, after which her real parentage is discovered. The story is nicely written, and gives a good idea of the distracted state of England in those days.

Worth While. By ANNETTE LYSTER. (S.P.C.K.)—An orphan boy and girl of the farmer class set to work to earn their own living, he as an ironmonger's clerk, and she as a milliner's assistant. They get on in a quite surprising manner; but, while success makes Will more conscientious and anxious to lead a good life, Lucy lets her religion slip from her, and gives herself up to plans for making her fortune. After much sad experience, she comes to a better mind. We are rather sorry for Matt Ford—it is not much consolation that your sister should be bridesmaid to the girl you wanted to marry.

Torn from its Foundations. (By DAVID KER. Price 3s. 6d. A. Melrose.)—The difficulty of selecting the best of the very numerous boys' story books which appear nowadays must necessarily lead to the rejection of some books which would formerly have passed muster; and, though David Ker has done some good work, the present novel must be pronounced a failure. A mass of incident (however true in detail) is crowded into a few months, with no real connecting link, and conveys no impressions but those of unreality and over-excitement. The book lacks a moral, and is salt which has lost its savour.

My Adventures during the late War, 1804-1814. By DONAT O'BRIEN. (Price 7s. 6d. Ed. Arnold.)—Fact generally outdoes fiction, and O'Brien's autobiography is no exception to this truth. It deals in a simple and unaffected manner with the author's untiring efforts to escape from French prisons and again take part in active service for his country. No hero of fiction ever displayed more ready wit, pluck, and physical endurance. Twice recaptured when on the verge of success, once at Etaples and once by the Lake of Constance, he was brought back to Bitche, the strongest of the French fortresses. But his third attempt was successful, and he passed through wonderful adventures before he and two friends succeeded in covering the whole distance from Bitche to Salzburg. Prof. Oman has added greatly to the interest of the reading by his preface and careful editing, by which he has preserved O'Brien's quaint reflections on men and things, while eliminating all tedious and unnecessary detail.

In the hands of the Cave Dwellers. By G. A. HENTY. (Price 1s. 6d. Blackie.)—This is one of Henty's shorter tales of pure adventure, and, contrary to his usual style, is unhistorical. It describes the adventures of a young American in Mexico, who at the outset rescues a Mexican, Don Juan, with whom he forms a firm friendship, and later the rescue of this same Don Juan's sister, who has been seized by the strange and now extinct race of Indians who dwell in caves and kept aloof from all other races. The friendship is formed with preternatural celerity, and when in the Indian raid Juan's mother is massacred the event is treated by the family as inevitable and with stoical calmness; but the story has both excitement and interest.

(1) *The King's Story Book*; (2) *The Queen's Story Book*; (3) *The Prince's Story Book*; (4) *The Princess's Story Book.* Edited by G. L. GOMME, and illustrated by HARRISON MILLER, W. H. ROBINSON, H. S. BANKS, and HELEN STRATTON. (Price 3s. 6d. each. Constable.)—The sub-title runs: "Historical Stories collected out of English Romantic Literature in illustration of the Reigns of English Monarchs from the Conquest to William IV." Miss Yonge in many volumes gave us cameos of English history, and since her day we have had several attempts to make young students acquainted with the original documents; but, as far as we know, Mr. Gomme's is the first essay towards giving us cameos of English historical fiction. The materials for this, thanks to Mr. H. C. Bowen, and his successor, whom we reviewed last month, are ready to hand. The only difficulty was to pick and choose. Mr. Gomme has performed his work of editor with taste and judgment. In the first volume he has drawn mainly on Walter Scott, and after him on Shakespeare, Lord Lytton, John Galt, Thackeray, and Dickens. Our only criticism is that arrangement of

the volumes between kings and princes, males and females, is artificial, and that a chronological classification would have been better. Among serious books the series ranks high.

Two Little Travellers. By RAY CUNNINGHAM. (Price 2s. 6d. Nelson.)—This is a pleasantly told story of two small children, Darby and Joan. The most attractive figure is perhaps the kind-hearted and honest dwarf Bambo, without whom the tale might have ended sadly.

The Fairclough Family. By Mrs. HENRY CLARKE. Illustrated by G. DEMAIN HAMMOND. (Price 3s. 6d. Blackie.)—The heroine of this story, Kate Fairclough, is a very bright, natural, and loveable girl, and we are glad to find her unselfishness rewarded in the end. The other characters, too, are well drawn, the sentimental school-girl who is ashamed of her father's shop, for instance. Altogether, we can heartily recommend the book.

A Girl's Loyalty.—By FRANCES ARMSTRONG. (Price 3s. 6d. Blackie.)—Helen Grant, though unkindly treated as a child, finds friends soon enough to prevent her becoming embittered; in fact, she proves a good angel to more than one person. Her aunt Isabella is perhaps rather unnaturally disagreeable, but her ill-natured efforts are frustrated in the end; so we can forgive the exaggeration for the sake of the moral. The story is full of incident and interest.

Cassell's Magazine. (Price 8s. Cassell.)—This year's volume should hold its own among similar magazines. The names of such contributors as Crockett, Bret Harte, Max Pemberton, and Levett-Yeats naturally raise the hopes of the reader, nor will he be disappointed. Adventures, serious and comical, are for the most part the order of the day—a tale of the Camorristi, of Cromwell, an absurd adventure in Spain, and so on. Many of the stories are excellently illustrated by Gordon Browne, H. M. Brock, Fred Pegram, and other well known artists. We find articles on sports, modern inventions, famous studios, present-day celebrities; indeed, the subjects are so varied we feel inclined to ask, "What can there be left for next year's volume?"

The Secret of the Everglades. By BESSIE MARCHANT. (Price 2s. 6d. Blackie.)—Somewhat melodramatic and improbable, but to many readers this is no demerit, and the tale is full of excitement and adventure.

In the Day of His Power. By FLORENCE WITTS. (Price 1s. Sunday School Union.)—A suitable little book for a Sunday-school prize.

A Child at the Helm. By WINIFRED GRAHAM. Illustrated by H. M. BROCK. (George Newnes.)—In many ways an attractive book, prettily got up, and charmingly illustrated, but we leave it not altogether satisfied. The study of the child, to our mind, just fails to be convincing, but we cannot all have the pen of a Mrs. Ewing, and the book is pleasant reading, if not quite a mirror of child life.

Robinetta; or, The Light of His Eyes. By L. E. TIDDEMAN. (Price 2s. 6d. Nelson.)—Robinetta cannot fail to attract those who read her history. She has the charm of freshness and simplicity, and the story of her loving care of her blind friend Mr. Hartley makes us readily accept the fact that she was indeed the light of his eyes.

The Ten Travellers, and other Tales in Prose and Verse. By S. H. HAMER. Illustrated by HARRY B. NEILSON. (Price 1s. 6d. Cassell.)—A bright little book full of Mr. Neilson's very humorous pictures.

Games and Gambols. Illustrated by HARRY B. NEILSON. With Verses by JOHN BRYMER. (Price 2s. 6d. Blackie.)—A book that is sure to delight small children. Mr. Neilson has a wonderful faculty for drawing animals with every variety of expression.

Six and Twenty Boys and Girls. Pictured by JOHN HASSELL. With Verses by CLIFTON BINGHAM. (Price 3s. 6d. Blackie.)—The full-page coloured illustrations in this children's book are very successful, bold in outline, pretty, and humorous; each page has simple little verses; and the whole forms a delightful work.

Kids of Many Colours. By GRACE DUFFIE BOYLAN and IKE MORGAN. (Price 6s. C. Arthur Pearson.)—A book full of brightly coloured and well drawn illustrations, with pretty verses about folks of many lands. We think the verses on Kruger might with advantage have been omitted; else we have nothing but praise for the book.

The Captain: a Magazine for Boys and Old Boys, Vol. VII., April to September, 1902 (George Newnes), well sustains its reputation. "Tales of Eliza's," by Fred. Swainson, is a capital school story still running, and the athlete, the cyclist, the stamp-collector, are all well provided with their special diets.

(1) *Milton's Poems*; (2) *Herrick's Hesperides and Noble Numbers*. (Price 3s. net per volume. George Newnes.)—Both reprints are well got up and very prettily bound in limp leather. More especially we commend the Milton, printed on thin paper, the type clear enough to suit old eyes, and yet as portable as a cigar-case.

The Peels at the Capital. (Methuen. Price 2s. 6d.)—This little book is brightly enough written, but we dislike a story for children turning upon the supposed theft of a diamond brooch, worn in the hair of an over-dressed, though good-natured, lady in an hotel. It is quite natural that the two young schoolboy Peels should take a keen pleasure on all occasions in the hotel bill of fare, but the subject is dwelt on at a greater length than is justified by its general interest. The book is prettily got up, but it is a pity that the colouring of the edges of the leaves sometimes goes over into the pages.

The Visit to London. Pictures by FRANCIS BEDFORD; Verses by

EDWARD VERRALL LUCAS. (Price 6s. Methuen.)—This is the story of the visit of two country cousins told in simple verses, which are very pleasant reading, and in pictures, some of which are excellent. By the end of the book we have quite an affectionate feeling for Winifred, her little girl cousin, and Theodore Theophilus, *alias* T. The two pictures of the Hippodrome and the pantomime are rather an ugly blot amongst the others, but the little figure of Winifred before the Caldecott memorial, the picture of Theodore looking out of the train, and many besides these, are quite charming.

(1) *With the British Legion* (price 6s.); (2) *With Kitchener in the Soudan* (price 6s.); (3) *The Treasure of the Incas* (price 5s.). By G. A. HENTY. (Blackie.)—There are few dramatic and picturesque periods of history which have not served as a foundation for one of Mr. Henty's tales, and many must be the boys who have gained knowledge easily by means of his stories. In his earlier works the facts and fiction were perhaps more dexterously interwoven, but he has remained deservedly popular, and his loss will be felt by a very wide circle of readers. "With the British Legion" is a tale of the Carlist War, in which an English boy who has tired out the patience of his guardian, and the various schoolmasters who have tried their hands on him, finds a vocation that suits him well. He soon rises from the ranks of the British Legion under Sir de Lacy Evans, and his wonderful adventures and exploits are most exciting. He succeeds in delivering the Queen Regent and the little Queen Isabella from a most unpleasant position, and riches and honours are showered on him. The book is very well illustrated by Wal. Paget. In "With Kitchener in the Soudan" the hero is the son of a man who joined General Hicks's ill-fated force, and was supposed to have perished with it. A desire to find traces of his father is one of the chief motives which lead him to accept an appointment in the Egyptian army which gives him freedom of movement. He makes himself of great use, and, being able to speak the tongues, ventures into the enemy's camp and overhears their plans. He has his share of failure and is taken prisoner, but escapes by the aid of his native servant. He has an adventurous spirit, and Mr. Henty turns this to the best advantage in the making of a good story. "The Treasure of the Incas" will be quite as welcome as a more strictly historical tale. There is always something fascinating in the idea of hidden treasure, and Peru makes an excellent hunting ground. There are many thrilling scenes—fights with desperadoes, attacks by the Indians, alternate hope and despair of success in their quest—but eventually the brothers who are the treasure seekers meet with the reward of their pluck and hard work, and the account of how they fared is most interesting and attractive. To this book also there are good illustrations by Wal. Paget.

One of the Fighting Scouts. By Captain F. S. BRERETON. (5s. Blackie.)—A spirited story of the South African War. The hero is the son of an English colonist. He wishes to remain neutral, but is forced into action by the treachery and spite of some neighbours. He overhears a plot to blow up the railway line, and collects some men from the nearest blockhouses to drive off the Boers. After this the men are formed into "The Fighting Scouts," and, both with his men and on solitary expeditions, their young leader passes through dangers and difficulties enough to satisfy any one.

The Star-spangled Banner. By Captain F. S. BRERETON. (Price 5s. Blackie.)—A story with plenty of life and movement. The hero, Hal Marchant, whose father dies suddenly, leaving him penniless, decides to go out to America. He has worked in his father's iron foundry, and engages himself as "greaser" on the "Mohican" to earn his passage out. In the disasters which befall the vessel he distinguishes himself greatly, takes the fancy of a wealthy passenger, and gets a post as overseer in Cuba; but it is evident from the beginning that his life is to be a stormy one, and perilous adventures of varied kinds are never lacking. He is at Cuba just before the destruction of the "Maine," and helps to rescue a few of the survivors. Later on, in escaping from some Spanish soldiers, he gets taken on board one of the ships of the American fleet and starts a fresh series of startling experiences. There are illustrations by Paul Hardy.

UNIVERSITIES AND SCHOOLS.

LONDON.

Although the regulations for the new Matriculation in September had been issued only a short time, a very fair number—some 640—came up to make proof of the new syllabus. Of these, 348 were successful, 231 in the First and 117 in the Second Division, the Honours Division being abolished. The general opinion appears to be that on the whole the papers were well set, with a strong leaning, in many instances, to err on the side of mercy, and that the examination is certainly easier as a whole than before, or perhaps we should say "more accessible." A few noteworthy points: Some indignation was felt at history and geography being practically omitted from the English paper; the mathematics papers were simple, practical, and modern in character; the French grammar, specially the syntax, was absurdly easy. The new parts of the syllabus in chemistry were hardly represented, and the

mechanics was very easy. It has been proved that a young man of average ability, who may have forgotten much of his school work, and desires to enter one of the constituent colleges or hospitals, can, with a couple of months' good private tuition, pass the six papers now prescribed for Matriculation. We may reasonably complain of a larger crop than usual of misprints.

The Calendar is now issued on October 1, instead of in the spring, the examination papers thus being for the most part more belated than ever. They are to be found in Part III.—price 5s.

His Majesty the King has granted permission to the Senate to style the Chair of Music recently founded by Trinity College, London, "The King Edward Professorship of Music."

Recent appointments on the University staff are those of Mr. Arthur Watson, B.A., and Mr. Horace Mann, B.A., as Secretaries to the Academic Registrar, and of Mr. C. F. Trenerry, B.A., as Clerk of Committees.

Lord Rosebery, as Chancellor, paid a visit to the Physiological Laboratory, recently equipped by Mr. W. Palmer, M.P., and made a witty and interesting speech in praise of the spirit of research now seen, of the munificent founder, and the signs that the wealthy were inclined to give of their surplus toward such endowments.

Latin addresses have been sent to two Universities: the first to the University of Christiania on the Abel Centenary, and the second to the University of Oxford on the Bodleian Tercentenary. They are quaintly signed: "Archibaldus, Comes de Rosebery, Cancellarius; Archibaldus Robertson, Pro-Cancellarius; Eduardus Henricus Busk, Præses Graduatorum Convocatorium; Arturius Gulielmus Rücker, Præfectus." The first address contains the phrase, "Ex aquilone aurum," inquit propheta"; the second, "qui . . . hanc ædem Musis et Minervæ instauravit." We are not told who writes these specimens of Latinity.

Sir Owen Roberts has been elected by the City and Guilds Institute to the Senate in place of the late Sir Frederick Abel. The Vice-Principal, attended by Mace-bearer, the Chairman of Convocation, the Principal, and two members of the Senate, attended the Thanksgiving service at St. Paul's for the King's recovery on October 26.

Some interesting lectures are being held at King's College on Saturday mornings which are free to *bona-fide* teachers. A course on "The Psychology of Illustration," by Prof. John Adams, begins January 24, 1903. The subject will be so treated as to apply to the work of all classes of teachers. Very interesting courses of lectures are also being given at University College, Psychology, Greek Art, Greek Sculpture, Archaeology for the M.A., International Law, and Electro-chemistry being among the subjects.

The Standing Committee of Convocation is giving attention to the condition of the Library and will probably submit a short report and some resolutions on the subject to the meeting of Convocation in January.

In January last Convocation passed a resolution in favour of making the metric system of weights and measures compulsory in this kingdom for all purposes. It is gratifying to find that the lead thus given by our University has been followed by a great awakening throughout the country on this question, and has been endorsed by the Colonial Premiers, who, at the recent Conference, unanimously passed a resolution in favour of the adoption of the metric system throughout the Empire. Mr. Pringle, the mover of the resolution in Convocation, has recently received a letter from Downing Street informing him that "Mr. Chamberlain fully recognizes the importance of this matter, and is in correspondence with the Colonial Governments and the Board of Trade on the subject." The letter is published by permission.

OXFORD.

The chief incident of the month has been the Greek controversy, the debate, and the vote. The matter has been much discussed in the newspapers, but it is not superfluous to add a word, as some points in the contest present themselves at rather different angles to the residents, and to our instructors in the Press. The vote was an unusually heavy one—besides several known (and several more unknown) pairs, no less than 355 Masters of Arts actually voted, out of a possible total of 500. This is the largest vote of recent years, with (we believe) the single exception of the poll on the women's degree question, in 1896, when the numbers voting were exactly the same. But, whereas on the women's degree the adverse majority was 75, on the Greek vote it was only 23. The narrowness of the majority was a considerable surprise, certainly to the supporters of the change, and probably, judging from the expectations expressed in private, also to the opponents. As to the discussion of the issues, one point was most remarkable. The opponents of the change neither wrote any letters to the papers, nor did they put forward any statement of their reasons, except indeed a postcard, sent on the last day to every member of Congregation, quoting Lord Kelvin's opinion in favour of the maintenance of the universal requirement of Greek. Lord Kelvin is, of course, an exceedingly eminent mathematician and physicist; but what knowledge he has of the value of the Greek in Oxford Responsions, or of the position of the study of Greek in the English secondary schools, the postcard entirely omitted to explain.

In the correspondence published in the *Times* the balance both of

argument and of opinion was decidedly in favour of reform; and two leading articles in that journal—which certainly cannot be charged with being rashly progressive or educationally *doctrinaire*—advocated the proposed change, after a carefully balanced review of the arguments, in moderate and reasonable terms. And, lastly, what of the debate? The marked feature of the debate, apart from the ability and weight of Mr. Matheson's plea for reform, was that the central mass of the opponents was not represented at all. Mr. Phelps, to whom the leading part was entrusted, is usually an advocate of reasonable reform. The Warden of Keble is not a party man. As in the agitation, so in the debate, from the real opponents not a sound was heard. Votes, not speeches, were sought for; the least said was the soonest mended. Under these circumstances, the division, though formally settling the question for the moment, is not and cannot be regarded as decisive. It is the beginning and not the end of the discussion. What the next step will be it is too soon to forecast; but that some step will be taken is clear. It is hardly too much to say that the great majority of those who trooped down on November 11 "to defend Greek" neither believe the present Responsions can remain unreformed nor expect that Greek will long be retained as a universal requirement.

The elections to Council resulted pretty much as was anticipated in my letter last month. The Principal of Brasenose, who retired, was replaced by the Dean of Christ Church. The six Professors remain the same. Among the Masters of Arts, Mr. E. M. Walker has taken the place of Mr. Sidgwick. There is no doubt that the Principal of Brasenose will be a real loss to the Council, especially as his successor, though high anticipations are entertained of his usefulness, is at present, as far as University business goes, an untried man. By an arrangement which is highly convenient, though it has not in this case given entire satisfaction, the nominations were not in excess of the vacancies, and accordingly there was no contest.

The question of the Rhodes Scholars has passed out of its first stage, in which newspapers and undergraduates made premature and conjectural criticisms on the proposals, to the second stage, when the practical preliminaries are begun. The Secretary to the Rhodes Trustees, Mr. G. R. Parkin, LL.D., who is the Principal of Upper Canada College, Toronto, and a Canadian by birth, and also studied for some years in Oxford as a non-collegiate student and was a distinguished member of the Union in the palmy days of H. H. Asquith and Alfred Milner, was one of the guests at the recent Bodleian Tercentenary, and has recently been in communication with the various colleges on the subject of the number of the new scholars which they would be disposed to receive. There has been no official or authentic information as to the replies which the colleges have given; but it is understood that the general tenour of the replies so far received has been encouraging. The experiment of endowments for foreigners at Oxford is an exceedingly interesting one, and may have more important consequences than was at first anticipated. It is believed that there has so far been a general desire on the part of the colleges to view the scheme favourably, and to reserve places for the new scholars, varying, of course, in number, according to the size and resources of such foundation. It is pretty clear that the action of the colleges, if it proves to be generally decided in this spirit, may result further in a revision of the University arrangements in certain respects, which may lead to greater elasticity, and so assist reforms which are already, on other grounds, desirable.

The report of the Association for the Education of Women has just been issued, and it shows, for the first time for many years, a slight decrease in the number of students. The decrease is so small ('042) as to be insignificant, except in so far as it indicates a temporary *stationariness* in the development of the work. On the other hand, the more important test of the Class Lists, so far from any decrease of success, shows the highest point hitherto reached. Taking the First and Second Class Honours obtained, which (as the report says) is perhaps the best test of the efficiency of the work, the total amounts to 44 Honours among 243 students.

Of the Cambridge Conference on Secondary Training it is hardly necessary to speak, as the journal in which this letter appears will have a full report and discussion. To the Oxford representatives it seemed an interesting and profitable meeting, bringing out the really important points in a practical way. The general sense of the meeting was in favour of so arranging the schemes of training that they should be really thorough, and that a high standard should be maintained. The Conference was clearly indisposed to view with favour any plan which should make either the theoretic and historical study perfunctory, or should dissociate that study from genuine and adequate practical experience.

The following elections and appointments have been announced:—

To the City Council: W. B. Gamlen, M.A. (Exeter), A. J. Butler, D.Litt. (Brasenose), H. L. Thompson (Christ Church). To be Delegates (1) of Local Examinations: D. H. Nagel (Trinity), J. Wells (Wadham), A. A. David (Queen's), T. H. Warren (Magdalen), A. Hassall (Christ Church), W. Esson (New College), C. H. Sampson (Brasenose), A. Sidgwick (Corpus Christi); (2) for the Training of Secondary Teachers: W. W. Jackson (Exeter), H. B. George (New College), A. A. David (Queen's), R. H. Ferard (Keble); (3) of Lodg-

ing Houses: H. L. Thompson (Christ Church); (4) of the Museum: J. R. Magrath (Queen's); (5) for Inspection and Examination of Schools: T. H. Warren (Magdalen), J. Wells (Wadham), C. B. Heberden (Brasenose), J. R. King (Oriol), W. Esson (New College), A. Sidgwick (Corpus Christi). To be Curators (1) of the University Chest: J. R. Magrath (Queen's), C. L. Shadwell (Oriol), H. le B. Lightfoot (Corpus Christi); (2) of the Indian Institute: W. H. Hutton (St. John's), G. C. Brodrick (Merton); (3) of the Museum: T. H. Warren (Magdalen). To be Auditors: W. W. Merry (Lincoln), H. E. D. Blakiston (Trinity). To be Referees in matters of Audit: Sir W. Anson, M.P. (All Souls), J. C. Wilson (Exeter). To be Governors of Schools: L. R. Phelps (Oriol), Jones' Grammar School, Monmouth; F. S. Stevenson, M.P., Ipswich School; J. H. Maude (Hertford), Uppingham.

To Scholarships, &c.—Derby Scholar, R. Asquith (All Souls and Balliol); Burdett-Coutts Scholar, W. K. Spencer (Magdalen); Kennicott (Hebrew) Scholar, G. G. V. J. H. T. Stonehouse (Exeter); Pacey and Ellerton (Hebrew) Scholar, D. C. Simpson (Wadham); Taylorian (French) Scholar, S. E. Beaupré (Pembroke); Craven Fellow, M. N. Tod (St. John's). By the Common University Fund: R. L. Poole (Magdalen) to be Lecturer in Diplomatic; G. H. Grosvenor (New College) to be Biological Scholar at Naples.

Degrees.—B. Litt.: J. Garstang, B.A. (Jesus), for exploration at El Arabah and a work embodying the results thereof.

Special Lectures delivered or announced.—Taylorian, on "Lope de Vega and the Spanish Drama," by J. F. Kelly; on "Hegel's Theory of Tragedy," by the Professor of Poetry (A. C. Bradley); on "Types of Style," by the Professor of Music (Sir C. Hubert H. Parry); on "Knossos" (further results of explorations) by A. J. Evans (three lectures for University members only, the same repeated for the general public).

CAMBRIDGE.

Mr. John Morley's gift of the Acton Library has been gratefully accepted by the University, and handsomely acknowledged in an "Orator's letter" under the University Seal. "Velut alter Plinius, 'privatis utilitatibus publicas, mortalibus æternas anteferre' voluisti," is Dr. Sandys' classical compliment. Room for the collection has been found within the University Library buildings, in the apartments hitherto occupied by the Council and the Financial Board. These bodies will for the present find accommodation in Pembroke Lodge, which is not occupied by the present Master, Sir George Stokes.

An Allen Studentship of £250, for research in divinity, law, classics, Oriental studies, mediæval and modern languages, or history and archaeology, will be awarded next term. Candidates must be graduates of the University not over twenty-eight years of age.

Trinity College proposes to make a new statute by which the period of service required for the attainment of a life Fellowship will be extended from fifteen to twenty-five years. As the change will affect Professorial Fellows, and in particular the Regius Professor of Greek, who is entitled *ex officio* to a Fellowship at Trinity, the consent of the University is required by the Oxford and Cambridge Act, 1877.

The Syndicate appointed to consider whether candidates for the ordinary degree might be allowed to substitute two "Special" examinations for the "General" examination, which all have now to pass, have reported against making any change. The proposal will, therefore, probably be dropped.

The Library has received a further benefaction in the form of a large collection of Turkish and other Oriental books and pamphlets, made by the late Mr. E. J. W. Gibb, author of "A History of Ottoman Poetry," and generously presented by his widow. The books will be kept together as a separate collection, and will be accessible to all students of Oriental languages, whether members of the University or not.

In the recent open competition for the Indian and Home Civil Service, twenty-one Cambridge men were successful. Mr. Wakely, St. John's, heads the list in chemistry, in botany, in zoology, and in English law; Mr. Hopkins, Emmanuel, is first in classics; Mr. Porter, Caius, is first in mathematics, in physics, and in geology. Mr. Rose (St. John's), Mr. Darling (King's), and Mr. Patterson (Christ's) are second in the lists for mathematics, French, and German respectively. Thus, though the number who have gained places is somewhat smaller than last year, the standard of attainment is appreciably higher.

A portrait of Prof. P. G. Tait, painted by Sir George Reid, has been presented to his old College of Peterhouse. Lord Kelvin, his colleague in the authorship of "Thomson and Tait," and Senior Fellow of the College, made the presentation; and Sir George Stokes, Master of Pembroke, spoke of the genial versatility of the famous physicist. It is noteworthy that while Kelvin and Tait were professors at Glasgow and Edinburgh respectively the Mathematical Chairs at these Universities were (and are still) held by Peterhouse men, Prof. Jack and Prof. Chrystal.

On the much-debated question, whether dinners should be provided at the Union Society on Sundays, a poll was taken on November 5. The motion in favour of the proposal was carried by 203 votes to 160. Dinner in Hall on Sundays, never a very popular institution, will have a fresh rival.

Trinity College has added to the distinguished roll of its Honorary Fellows the names of Mr. A. J. Balfour, Dr. Francis Galton, Sir William V. Harcourt, Lord Macnaghten, and Prof. F. W. Maitland. Perhaps Mr. Balfour may thus be stimulated to end our long suspense regarding the successor to Lord Acton in the Regius Professorship of Modern History. Dr. Galton has received the first Darwin Medal of the Royal Society. Prof. J. J. Thomson also is the first recipient of the Hughes Medal, and Mr. C. A. Parsons, Honorary Fellow of St. John's, receives the Rumford Medal of the Society.

The following elections and appointments are announced:—Dr. Rogers and Mr. F. C. Kempson, Caius, to be Demonstrators of Anatomy; Mr. J. S. Gardiner, Caius, to be Demonstrator of Animal Morphology; Mr. S. W. Cole, Trinity, to be Gedge Prizeman for Physiological Research; Mr. I. G. Lloyd, Caius, to be Bhowanagar Medallist (Indian Civil Service); Mr. J. M. Dodds, Peterhouse, to be a University Member of the Borough Council; Mr. H. Owen Jones to be a Fellow of Caius College; Mr. J. H. A. Hart and Dr. W. H. R. Rivers to be Fellows of St. John's College; Mr. A. F. Stabb, Downing, to be University Lecturer in Midwifery; Mr. J. Holland Rose, Christ's, and Mr. E. S. Shuckburgh, Emmanuel, to be Doctors of Letters; Mr. Beck, Master of Trinity Hall, Prof. Sir R. S. Ball, Mr. Durnford, King's, and Mr. J. H. Gray, Queens', to be members of the Council of the Senate; Prof. Ridgeway to be a member of the Managing Committee of the British School at Athens; Mr. R. McG. Dawkins to a research studentship of £100 a year at Emmanuel College; Mr. H. S. Carslaw, Emmanuel, to be Professor of Mathematics in the University of Sydney; Mr. F. Deighton, Peterhouse, to be an authorized Teacher of Vaccination; Mr. S. M. Leathes, Trinity, to be an Elector to the Chair of Ancient History; Dr. Butler, Dr. James, and Mr. Burkitt, Trinity, to be managers of the Hort Memorial Fund; Mr. S. C. Carpenter, Caius, and Mr. G. B. Ekanayake, Selwyn, to be Carus (Greek Testament) Prizemen.

WALES.

A successful meeting has been held of the Court of Governors of Aberystwyth College, when it was reported that the Agricultural Department had given the greatest satisfaction to the Council of the College.

On this occasion the portrait of the late Mr. T. E. Ellis, M.P., was presented to the College by Mr. Edgar Jones, President of the Old Students' Association, and unveiled by Mr. Humphreys Owen, the Chairman of the Central Welsh Board.

A conference on agricultural co-operation has been arranged by the Agricultural Committee and the (Students') Agricultural Society of the University College, Aberystwyth, for Monday, December 1. The conference will be presided over by Mr. Vaughan Davies, M.P., and addresses will be delivered by the Right Hon. R. W. Hanbury, President of the Board of Agriculture; Mr. R. A. Yerburch, M.P., President of the (English) Agricultural Organization Society; Mr. P. J. Hannon, of the Irish Agricultural Organization Society; and others. It is intended not only to discuss the questions, but also to take practical steps to give an impetus to the movement in Wales.

On the following day (December 2) the English Agricultural Organization Society and the Irish Agricultural Organization Society will meet at Aberystwyth to consider a proposal to establish a joint wholesale farmers' supply society on co-operative lines.

The authorities of the University College, Bangor, have appointed an organizing secretary for the purpose of collecting moneys towards their building fund. He has been appointed definitely for five years.

The University College at Cardiff is engaged at present in discussing the question of whether the students should wear academical costume. The students appear to be divided in their opinions on the subject, and one of them has written to one of the local newspapers expressing a hope that the Governors will deal with the proposition "like the sailors of old dealt with Jonah." The leader writer of the *Western Mail* urges that "by not enforcing its use, the authorities at Cardiff deviate from a time-honoured custom observed the world over, except at certain Dissenting colleges, where caps and gowns probably were looked upon many years ago as relics of Popish times." On the other hand, the editor of the *South Wales Echo* asks: "Why in the name of common sense is it seriously proposed to burden the students of a democratic University with the cost of useless garments which should have been thrown aside as lumber or objects of curiosity with the rush-lights and the torch-extinguishers?"

Is the college lecture doomed? Principal Lloyd Morgan, of Bristol, one of the most eminent of living biologists, in the course of an address before the Cardiff Educational Society, referred to "the academic lecture" as a relic of the middle ages, and he was supported in his view by Prof. Mackenzie, who stated that the late Principal Viriamu Jones's views on the lecture system coincided with Principal Morgan's. Prof. Mackenzie stated that the only difficulty which he had experienced in carrying out that method was when dealing with junior classes.

In a speech at the Carnarvon County School, Principal Griffiths, of Cardiff, turned his attention chiefly to the need of more and better science teaching in the intermediate schools of Wales. He stated that the teachers' fault mostly was that they were bound by the traditions

regarding the pre-eminence of a classical education, a tradition from three to four hundred years ago, when education meant Latin and Greek. By degrees, mathematics came in, and was grudgingly allowed a place under the head of Arts. The claims of science as an educator were not fully admitted as yet. He contended that scientific instruction was one of the finest of all possible educations. He believed that the time was coming when it would be a national disaster if the compulsory study of classics was to continue to be the *sine qua non* of a liberal education. These remarks have given rise to considerable controversy, and Principal Griffiths has written to point out that he thinks compulsory subjects of any kind are a mistake, with the exception of the three R's and what we may regard as the tools of education. "I should much regret to see natural science made a compulsory subject. We want as little compulsion and as much freedom as possible in education. I do not in any way wish to make our education technical, but I do hope that we may make all technical subjects educational."

The annual collegiate meeting of the Court of the University of Wales was held at Bangor, Sir Isambard Owen, Senior Deputy-Chancellor, presiding. A letter from the Welsh County Schools Association was submitted on the question of the admission of primary teachers to Column B of the Teachers' Register referred to the association by the University of Wales. The association, whilst thinking it desirable that no artificial barrier should be set up against primary teachers desirous of being admitted to Column B of the Register, were of opinion that there was an essential difference between primary and secondary education, and that for the sake of the efficiency of the latter a course of training for secondary education and probation in a recognized secondary school should in any case be insisted upon. The questions relating to the registration of teachers were referred to a committee for report at the May meeting. The University fellowship was granted to Mr. Lewis, a young graduate from the University College of Wales, Aberystwyth, and, funds permitting, a special fellowship was awarded to Miss Bodkin. In the afternoon, a Congregation for the admission to degrees of a large number of candidates was held, and was a brilliant function, the candidates being received by Sir Isambard Owen and Principal Roberts, the Vice-Chancellor.

Carmarthen County Council has decided to present a petition to the Government praying that a Department of Agriculture and Technical Instruction, similar to that instituted in Ireland, be established in Wales, and that all Welsh County and County Borough Councils and all the M.P.'s for Wales and Monmouthshire be asked to co-operate in the movement.

The amendment to the Education Bill, proposed by Sir Alfred Thomas and accepted by the Government, according to which Wales will be dealt with as if it were a part of England, and the County Governing Bodies hitherto responsible for intermediate education in the several counties are abolished, has given rise to a great deal of discussion in Welsh educational circles. At the half-yearly meeting of the Central Welsh Board the standing orders were suspended in order that the whole question might be discussed, and the action of the Welsh members was condemned. Mr. Mansel Franklin, the Clerk of the County Council of Glamorgan, explained that some months ago the Glamorgan County Council had passed a resolution asking Parliament that the County Governing Body should be put an end to and the power transferred to the County Council. Ultimately the following resolution was passed:—"That the Board respectfully urges on the Welsh members of Parliament the desirability of taking steps to restore the original wording of the clause recommended on the motion of Sir Alfred Thomas, inasmuch as the maintenance of the option given by the original clause to the Welsh County Councils of either continuing the County Governing Bodies or amending their constitution so as to adapt them to deal with all forms of education, or of creating new bodies as the local committees under the Education Bill, is in the opinion of the Board a matter of the greatest importance to the future working of the Welsh educational system."

The need for trained teachers was also discussed, and a resolution was passed that, in view of the changes brought about by the Education Bill in respect of secondary education and the consequent greater need for trained teachers in our intermediate schools, it is desirable that greater inducement should be offered to desirable students to undertake the training.

It was resolved to adopt the pensions scheme and to put it in operation as from January 1, 1903.

The Education Bill raises also the whole question of the existence of the Central Welsh Board. Some educationists in Wales are of opinion that it stands in the way of the complete co-ordination of education in Wales; that its administration is expensive; that the academic element is too powerful in it; and that the work could be more effectively done by the University.

SCOTLAND.

Sir Henry Craik has sent a reply to the promoters of the meeting at Glasgow (mentioned in last month's notes) which passed resolutions condemning the Scotch Education Department for the treatment of modern languages in the new regulations for the Leaving Certificate.

He points out that there are two distinct sets of pupils to be provided for, and that at least two distinct forms of group certificate are necessary. For pupils who, contemplating a business career, leave school before they are sixteen the Intermediate Certificate has been provided. The only compulsory subjects for this certificate are English and Mathematics (or Higher Arithmetic). "In regard to the others, there is complete freedom of selection. Candidates may choose their languages, classical or modern, exactly as they please." "Each certificate bears upon its face a list of the subjects and grades in respect of which it has been awarded." Accordingly, if the teaching of modern languages for business purposes is to be encouraged, merchants and men of business have only to give a preference to applicants for employment who have certificates "recording success in, say, English, Mathematics, Higher French, and Higher German." "So far as 'foreign competition in commerce' is germane to the question, it is there that the key of the situation really lies." Sir H. Craik goes on to refer to the proposed "Commercial Certificate," and the corresponding Technical Certificate, which "are to be open to candidates who, after qualifying for an Intermediate Certificate, have remained at school for at least a year in order to receive specialized instruction." As to these certificates, he invites discussion of the proposals of the Department, which have been already published. For the second set of pupils, those who are qualifying for entrance to the University, the Intermediate Certificate suffices as regards the Faculty of Medicine, and the Leaving Certificate may be taken in such a form as to secure admission to the Faculties of Arts and Science. In the case of the Leaving Certificate, not in the scientific, but merely in the linguistic, form, modern languages cannot be taken without elementary Latin. This limitation "does not concern those who are training for a mercantile or a technical career. It does not concern the medical or the scientific student. It concerns only those who contemplate making modern languages a special study in the University." And "an elementary knowledge of Latin is, in the view of my Lords, an essential preliminary to the scientific and scholarly, as opposed to the purely practical, study of any modern language, above all, of a Romance language like French." As showing that the regulations "correspond remarkably well with the curricula actually in operation in schools," Sir H. Craik refers to the results of this year's Leaving Certificate Examination. "The total number of certificates gained was 364. Exclusive of those who qualified through practical science, there were in all 146 successful candidates, whose groups included both French and German. Of these only 33 would have been excluded by the new regulation requiring Lower Latin, and one of the 33 took Greek." "Against the 33 that remain there may fairly be set an equal number of other successful candidates, whose group included Latin and one modern language, but not Greek." In conclusion, the hope is expressed that "the new regulations will contribute in a marked degree to the prosperity of modern language study in the Universities, and, therefore, ultimately throughout the whole of Scotland. In Circular 340 a definite place is, for the first time, assigned to a school curriculum which aims at providing a training that may fit pupils for work in modern languages at a University level."

To this letter one of those to whom it is addressed (Mr. Wm. Thomson, of the Hutcheson's Girls' Grammar School, Glasgow) has written a somewhat violent rejoinder. He declares that "practically the whole teaching profession has decided against the action of the Department," and that their example has been followed by a considerable number of business and professional men in Glasgow, as well as by the meeting which passed the resolutions. He goes on to describe Sir H. Craik's letter as consisting of "official phrases, dexterously combined," and accuses its author of intending to "crush a really righteous, but to him distasteful, movement, feeble enough, as he may be informed, to be crushed with impunity." And he accuses Sir H. Craik of "cutting his children off with a shilling, merely to please another family over the way," that family being the University. Apart from all this, Mr. Thomson points out that three years ago a group Leaving Certificate was instituted, in which English, mathematics, French and German on the higher grade were an eligible group, and that Circular 340 has done away with this. He also maintains that the "additional burden of Latin" will lower the attainments of pupils in modern languages over the whole country, and that this lowered attainment will give the Department a reason for perpetuating the lower status. Further, the Department is taking no steps to remove "the rooted objections of authorities to accord just recognition to the highest proficiency attainable" in modern languages. Mr. Thomson also challenges the view that an elementary knowledge of Latin is essential to the scientific and scholarly study of any modern language. With reference to Sir H. Craik's figures, he makes an appeal *ad misericordiam* on behalf of the 33 candidates who would have been deprived of their certificates under the new regulations, and he points out that 65 per cent. of the girls in the "class of bifurcation" in his school are taking French and German, the remainder taking Latin and French. "These people do not want a 'practical' Intermediate, or Commercial, or Technical Certificate, nor is the school organized on the basis of any of these certificates." In short, Mr. Thomson maintains that the Department is neglecting "the large and increasing set of pupils who study or

(Continued on page 812.)

A Selection of BLACKIE'S PRIZE BOOKS.

Write for Complete List of New Books and Illustrated Catalogue.

MR. G. A. HENTY'S NEW STORIES.

WITH KITCHENER IN THE SOUDAN: A Tale of Atbara and Omdurman. With 10 Full-page Illustrations by W. RAINEY, R.I., and 3 Maps. Crown 8vo, cloth, olive edges, 6s.

WITH THE BRITISH LEGION: A Story of the Carlist Wars, With 10 Full-page Illustrations by WAL PAGET. Crown 8vo, cloth, olive edges, 6s.

THE TREASURE OF THE INCAS: A Tale of Adventure in Peru. With 8 Illustrations by WAL PAGET, and a Map. Crown 8vo, cloth, olive edges, 5s.

IN THE HANDS OF THE CAVE-DWELLERS. Illustrated by W. MILLER. Crown 8vo, cloth, 1s. 6d.
A notable addition to the list of Mr. Henty's shorter tales.

NEW AND CHEAPER EDITION OF MR HENTY'S BOOKS AT 3s. 6d.

THE LION OF ST. MARK: A Tale of Venice in the Fourteenth Century. With 6 Full-page Illustrations. Crown 8vo, cloth, 3s. 6d.

THROUGH THE FRAY: A Story of the Luddite Riots. With 6 Page Illustrations. Crown 8vo, cloth, 3s. 6d.

MR. HENTY'S RECENT BOOKS.

WITH ROBERTS TO PRETORIA: A Tale of the South African War. With 12 Full-page Illustrations by WILLIAM RAINEY, R.I., and a Map. Crown 8vo, cloth elegant, olive edges, 6s.

"Here Mr. Henty is at his very best. Martial ardour glows in every page, and the fortunes of the English boy who was at Magersfontein, Paardeberg, and Mafeking are calculated to hold all boy readers enthralled."—*Illustr.*

AT THE POINT OF THE BAYONET: A Tale of the Maharratta War. With 12 Full-page Illustrations by WAL PAGET, and 2 Maps. Cloth elegant, 6s.

"Altogether it is a most dramatic story, and the historical element is skilfully interwoven with the action."—*Standard.*

TO HERAT AND CABUL: A Story of the First Afghan War. With 8 Full-page Illustrations by C. M. SHELDON, and Map. Cloth elegant, 5s.

"The practiced narrator has done good service in reviving the recollections of a stirring episode in our long contest to strengthen our Indian frontier."—*Athenaeum.*

WITH BULLER IN NATAL; or, A Born Leader. With 10 Illustrations by W. RAINEY, R.I., and a Map. Crown 8vo, cloth elegant, olive edges, 6s.

"One of the most powerful of Mr. G. A. Henty's annual instalments of boys' books."—*Fall Mall Gazette.*
"Mr. Henty seems to have surpassed himself this year. Never has he done better work, if as good."—*Graphic.*

By FRANCES ARMSTRONG.

A Girl's Loyalty. With 6 Illustrations by JOHN H. BACON. 3s. 6d. New Edition.

BLACKIE & SON, LIMITED, 50 OLD BAILEY, LONDON, E.C.

wish to study modern languages at school to the highest possible point unhandicapped by Latin.

We have here the real centre of the controversy. Why do these pupils desire Leaving Certificates, unless it be that they may enter the University? But they practically cannot enter the University without a knowledge of elementary Latin. No doubt, Mr. Thomson would maintain that this is due to a blind prejudice on the part of the Universities, and that they ought to remove the limitation. The Department agrees with the Universities that the limitation is desirable, and, in any case, whether or not the limitation is right, it is useless to expect its removal at least for very many years. Even if the Department were wrong in its opinion as to the necessity of Lower Latin (which is, after all, a very modest requirement), it is surely right in accepting the facts.

Sir William Muir has intimated his intention to resign the Principalship of Edinburgh University. His age and the weakness of his health are the reasons for his retirement. Before his appointment to the Principalship in 1885 he had a distinguished career in India, lasting for forty years or more, and as Principal he has concerned himself rather with the social than the educational duties of his position. It is to be hoped that in making a new appointment the Curators of Patronage will break the old tradition that the Principals of our Universities should be men who have already practically completed their life work. It has been greatly to the advantage of the younger Universities, both in this country and in America, that they have usually appointed as their Principals men in the prime of life, with business capacity and some educational experience. We in Scotland would do well to follow their example. The duties of the Principal of a modern University are exacting and important enough to form the main life-work of an able man; and when the appointment is given to one who has passed middle life the office practically goes into commission, with evil results for the University.

Mr. H. S. Carslaw, M.A., D.Sc., who has been Assistant to the Professor of Mathematics at Glasgow University for the last five years, has been appointed Professor of Mathematics in the University of Sydney. Prof. Carslaw is a distinguished graduate of Glasgow and Cambridge, and he has done excellent work as Secretary of the Glasgow University Committee on Civil Service Examinations.

The University of Aberdeen has now come into possession of the bequest of the late Mr. John Reid, amounting to £21,000, which is intended to provide scholarships for distinguished graduates in Arts, who are "to continue to prosecute their studies in philology, philosophy, science, the fine arts, or any other branches of higher learning, at an English or foreign University."

IRELAND.

The Intermediate Board, to meet the general dissatisfaction with the results of the examinations held last June and the memorials laid before them on the subject, announced in the beginning of November that they would revise the results, now making 30 per cent., not 40 per cent., the percentage of marks required "for passing (in the examinations held last June) in each subject in the programme, except "English Composition" and "Experimental Science and Drawing." This will, of course, place many students who failed among those who passed, and necessitate changes in studies and classes in the schools more than two months after they have begun work. The decision was come to owing to the disastrous effect of so many failures in certain schools which largely depend on the Intermediate grant. The revision does not extend to Honour students—a great injustice, as these candidates have suffered far more from a percentage of 40 in six subjects being required than the pass students did, as the latter were not eligible for Honours and prizes. Many of the Honour candidates would have obtained valuable exhibitions had they not failed to make 40 per cent. in some one of the six subjects. The fact that additional exhibitions would have to be given, and the whole list of prizes revised, no doubt prevented justice being done to the most deserving of the sufferers from the mismanagement of the Board.

The Central Association of Irish Schoolmistresses, in conjunction with the Ulster Schoolmistresses' Association, sent in a memorial to the Board at the beginning of November, in which they supported the main points that had been put forward by the other educational associations. They added a strong protest against any differentiation being made between the rules and programmes for boys and girls respectively. This was done in consequence of its being stated that a proposal to alter and make easier the programme and conditions of passing for girls was under the consideration of the Board.

The English inspectors appointed by the Board for a year having concluded their work and reported, nothing is known as to what the Board intend to do in developing inspection in the future. Since the chief difficulty will be to obtain efficient inspectors, it would be extremely desirable that the qualifications required in inspectors and their proposed functions should be made known, as this might lead to suitable persons qualifying for the position.

At the conferring of degrees in the Royal University on October

LONDON: LOVELL REEVE & CO., LIMITED,
Publishers to the Home, Colonial, and Indian Governments
6 HENRIETTA STREET, COVENT GARDEN, W.C.

31 163 M.A. and B.A. degrees were conferred, 54 of which were obtained by women. About 36 of the men came from Roman Catholic colleges, about 39 from other colleges, and 25 prepared by private study. Of the men students 37 graduated with Honours; of the women students 19. In Modern Literature all the First Honours in both M.A. and B.A. were won by women, Miss Norah Scott, Alexandra College, obtaining the Studentship in M.A., and Miss Melissa Hull, Victoria College, the first place in B.A. The Queen's Colleges of Belfast and Galway and University College, Dublin, are, as usual, most prominent in the list of distinctions.

In the degree examinations in Trinity College, Dublin, Mr. S. B. Kelleher is the Student in Mathematics this year. He only entered Trinity College, Dublin, in 1898, after carrying off every possible distinction in the Royal University and Queen's College, Cork. Mr. D. M. Moffatt is the Classical Student. He is a pupil of Methodist College, Belfast, a school from which the two Classical Scholars in the Royal University come this year.

Much dissatisfaction is felt in Ireland at the position in which the introduction of registration for teachers in England and Wales places Irish teachers. There is no possibility of Scotch or Irish teachers being registered. Although degrees from Scotch and Irish Universities would be accepted, three years' teaching in a Scotch or Irish school would not; hence only Irish teachers working in England can obtain registration. This manifestly is injurious to the prospects of Irish teachers, not only in England, but even in Ireland, where they frequently have to compete for posts against English teachers.

A special Registration Bill for Ireland is required, but it is doubtful how far this would be supported by Catholic authorities. Not very long ago the Catholic Association of Head Masters passed a resolution that they would oppose registration as long as Catholics had not a University approved by the Church to which they could resort. As the vast majority of Catholic teachers are ecclesiastics and nuns, the question affects them differently as compared with Protestant teachers.

ALEXANDRA COLLEGE, DUBLIN.

The successes gained by Alexandra College this year in the Royal University include two of the highest distinctions awarded by the University—the studentship at the M.A. degree, value £100 a year for three years, which was gained by Miss Norah Scott, and a scholarship in modern literature of the value of £60 which was won

by Miss Dora Grace. The following distinctions have also been gained by students of the college:—At the B.A. degree Miss Janie Stephens obtained first place and first Honours in Biology and Geology, with an exhibition; Miss Fanny Stokes obtained Honours in History, Political Economy, and Jurisprudence; Miss Agnes Scott won Honours in Mathematical Science; and Miss Muriel Bennett Honours in Modern Literature. Miss M. Coffey, Miss E. Lipsett, Miss M. Mahaffy, Miss Ellen Perry, Miss Eleanor Symes, and Miss Marie Vance passed the degree examination.

At the Second University Examination Miss A. Johnston won second of the first Honours in French, and Miss M. Fottrell also obtained Honours in that subject. At the First University Examination, Miss Hilda Poole gained an exhibition, value £30, with Honours in French, Latin, and English. Miss Louisa Grone also obtained an exhibition, with Honours in Latin; Miss Dora Grace won first of the first Honours in German; and Miss Emily second of the first Honours in French; and first Honours in Latin. Several other honours were gained by students, fourteen of whom passed the examination.

At the Matriculation Examination Miss Vera Esposito gained first place and first Honours in French and first Honours in Latin; and Miss Muriel Hughes obtained first Honours in German. Ten students passed the examination.

VICTORIA COLLEGE, BELFAST.

The success of Victoria College, which supplies to its students the entire teaching in the Arts course for all the examinations of the Royal University, was again remarkable. In the number of exhibitions and honours won this College is again third of all the colleges for both men and women who send in candidates to the R.U.I.—nine exhibitions, First and Second Class, and a total of twenty-nine distinctions being awarded to Victoria College students. In his address on Conferring Day, the Pro-Vice-Chancellor called attention to the high position of the women graduates in the modern field of literature. There were thirty-one successful candidates in this group of subjects at the degree examination, nine men and thirty-two women. The only First Class Honours were carried off by women, Miss Melissa S. Hull, B.A., Victoria College, heading the list with First Class Honours and a First Class Exhibition—£42. The following twelve Victorians graduated with B.A. in Modern Literature, Mathematical Science, Ancient Classics, and Civil and Constitutional History, the first six obtaining First and Second Class Honours:—W. S. Hull, Grace, W. Spence, T.

SCHOOLS.

DULWICH, JAMES ALLEN'S GIRLS' SCHOOL.—The prize-giving took place on October 30, Canon Carver, former Master of Dulwich College, in the Chair. The Hon. Mrs. Pember, a Governor of the school, distributed the prizes. The Clothworkers' Exhibition of £60 a year for Girton College was awarded to Ellen Delf for Science. In the London Matriculation Examination of September last five girls passed in the First Division. In the Cambridge Junior and Preliminary Local Examinations of last December twelve Honours Certificates and thirty-one Pass Certificates were obtained, with thirteen distinctions. The London Institute for the Advancement of Plain Needlework awarded a hundred and twelve certificates to pupils of the school, four being special "Certificates of Skill." At the Nature-Study Exhibition held in July a bronze medal was awarded to the school exhibit, which was pronounced by the judges to be the best collective exhibit sent. The school also obtained a special prize given by Prof. Miall, F.R.S., for the best exhibit from any secondary school. The School Leaving Exhibition of £45 a year for three years was awarded to Mabel Gusterson.

HULL, HYMERS COLLEGE.—Entrance Scholarships for 1902 were won by H. Adams, R. H. Williams, C. H. Oliver, and E. Smith. Continuation Scholarships for 1902 were won by R. B. Potts, A. Manson, and H. Johnson (Honorary). County Council Exhibitions were awarded to F. England and W. Smith. In place of Messrs. Jagger, Hammond, Harper, and Briggs, we welcome Messrs. J. E. M. Carroll, M.A., G. Brackenbury, B.A., L. Davies, B.A., and W. Cobby, B.A. The addition to the Pavilion is now completed and proves most useful. At the present time the Cadet Corps numbers sixty and is extremely vigorous.

LONDON CENTRAL FOUNDATION SCHOOL.—Alley Exhibition (£50 for three years), W. T. Wilson; ditto (£30 for three years), F. Popham; Mitchell Exhibition (£50 for three years), H. Applebee; Skinners' Company's Scholarship (£50 for four years), A. Stansfeld; Fishmongers' Company's Scholarship (£50 for four years), E. Elliott; Gassiot Scholarships (£10 for two years), B. Felz, B. Rubinstein, H. Newland, A. Bieri, A. Hamilton. Distinctions outside the school: F. Clarke, eleventh Wrangler; R. French, First Class Natural Science Tripos; B. Kissan, Indian Civil Service, 51st place; E. Elliott, First

Class Mathematical Honours at London University Intermediate B.A.; H. Sacher, £20 scholarship, University College, for Political Economy; E. J. Elliott, £75 Mathematical Scholarship, Trinity College, Cambridge; A. Stansfeld, £80 Mathematical Scholarship, St. John's College, Cambridge; M. Hyman, £35 Mathematical Scholarship, Worcester College, Oxford; E. Turner, fifth, Indian Police; S. Brodetsky and L. Benny, first and second respectively in London County Council Intermediate Scholarship Examination. Lord Davey presented the prizes for the year 1901-2 at the end of last month. Sir Owen Roberts, D.C.L., was in the chair, and there was a large gathering of parents and friends, who listened with interest to his lordship's excellent address to the boys. The last school year has been an exceptionally successful one. In addition to the above honours, eight other London County Council Scholarships, varying in value from £50 to £20, have been gained, and nineteen boys have passed into the Civil Service.

LONDONDERRY, STRAND HOUSE SCHOOL.—At Magee College entrance scholarship examinations two pupils have gained the first places in the open competitions—Emma Moffat, first of first-year students, £30; Nettie Foster, first of second-year students, £25.

MARLBOROUGH COLLEGE.—The second edition of list of O.M.'s who have served in the war in South Africa, 1899-1902, has just been published. There are over 450 names, and of these 42 are dead. Two received the Victoria Cross, and no less than forty the D.S.O. A window designed by Mr. Bodley, has been placed in the college chapel, and a mural tablet inscribed with the names of those who fell in the war, will shortly be placed in the ante-chapel. The memorial fund now exceeds £1,400; and a scholarship has been founded tenable by the son of an O.M. officer in need of assistance.

NORTH LONDON COLLEGIATE SCHOOL FOR GIRLS.—The annual concert given by the pupils of the above school took place on Friday evening, November 7. The programme possessed many attractive features, and gave proof of the thorough training of the performers under the direction of Mrs. Green, Miss Miles, Miss Foksett, and Miss Ludovici, while the vocal selections were rendered under the able direction of Mrs. Carr Shaw. The pianoforte playing was the most prominent feature of the concert, and it was particularly noticeable that the solos, of which there were no less than nine, were rendered in every case without a note of music.

PORTSMOUTH HIGH SCHOOL.—On November 14 Lady Hotham distributed the prizes and certificates in the Town Hall, Portsmouth. Mr. Charles Roundell was prevented by illness from taking the chair.

SCHOOL OF THE WOODS. New Matter. Just published. By the Author of "Beasts of the Field" and "Fowls of the Air." Descriptions of Animal Life. By WILLIAM J. LONG. Copiously Illustrated by CHARLES COPELAND. Three Volumes, 5½ by 8 inches, uniform in style. Printed on heavy paper with full-page and marginal illustrations. Decorative satine-cloth cover stamped in full gold. Each 7s. 6d.

Excerpts from Reviews just received of "School of the Woods":—

Churchman.—"We would rank very high among our prize books 'School of the Woods,' by W. J. Long, as one of the most charmingly written and charmingly illustrated books that we have ever met. . . . Everybody, old and young, must be the better for reading this book."

St. James's Gazette.—"The author views the forest people as creatures rational with a human form of reason; and this discernment, followed up as it is with sincerity and sanity, makes the book one of unusual charm."

Daily Telegraph.—"No reservation is necessary in the praise bestowed upon this delightful work. . . . Would that the incidents of most novels were half as engrossing!"

Review of Reviews.—"Author, artist, and publisher have united in producing volumes that are a model of their kind. These books are sure of an especially warm welcome in any household where there are children, as their dainty illustrations make them doubly attractive to the little ones."

Special Christmas Prize Competition.

A PRIZE of One Guinea is offered by the Editor of the *University Correspondent*, Burlington House, Cambridge, for the best original collection of twelve "howlers" or schoolboy blunders.

Every contribution must be in a separate envelope and have the words "Howlers Prize" written on the outside of the envelope.

The Competition closes on December 6th.

The Head Mistress, Miss Adamson, read a report of the school, and short speeches were made by members of the Local Committee. The Company Scholarship for the year was awarded to Ruby Yates, but, as she is unable to hold it, the Council has transferred it to Mary Chalcraft.

SHREWSBURY HIGH SCHOOL FOR GIRLS.—The following distinctions have been gained during the past year:—Four higher certificates, with three distinctions in botany, and two letters from the Joint Board; forty-seven Honour and sixty-three pass certificates, and one full drawing certificate from the Royal Drawing Society. J. Llewellyn passed in Honours in Class II., Groups B and H, and O. Harding in Honours in Class II. in Group C of the Cambridge Higher Local Examinations. Two certificates were obtained from the Associated Board for Music. Three £20 scholarships, out of five awarded by the Salop County Council, were gained; one £10 scholarship was gained; and one pupil obtained qualifying marks for the £50 scholarship. The Company's Scholarship has been awarded to A. S. Wilkinson. D. Scott obtained a studentship in natural science at the Liverpool University College, and was specially commended for botany. M. Gough won Mr. Bousfield's prize, given for work sent to the Royal Drawing Society's Exhibition; she was afterwards requested by Mr. Ablett to send him a design for an address to be presented by the Royal Drawing Society to the King. The prize-giving took place on Wednesday, November 12, in the hall of the school, when there was a large gathering of parents of the pupils and other friends of the school. Mr. H. W. Eve was in the chair, and the Hon. Alice Bruce kindly distributed the prizes, in the absence of Lady Powis through illness. In addition to the prizes given by the Council, Lady Powis sent two beautifully bound books, which were given, at her suggestion, to girls who showed proficiency in history and music.

SOUTHWARK, SAINT OLAVE'S GRAMMAR SCHOOL.—Two University prizes have fallen to Old Olavians, this year. H. D. Wakely, Scholar of St. John's College, Cambridge, gained the Powis Medal for Latin Hexameters, while yet a freshman, and S. W. Cole, of Trinity College, has just won the Gedge Prize, awarded every two years for the best original observations in physiology. L. D. Wakely has gained the third place on the list in the Home Civil Service competition. At the Royal College of Science E. A. Wraight took a First Class in Assaying and a First in Metallurgy; in the Final A.R.S.M. he also took a First, being third on the list. Of distinctions gained from within the school, C. T. Robinson has taken a First Class, W. F. Collins and N. G. Scorgie, a Second Class, in the Intermediate B.Sc. of London.

National Scholarships for Biology of the nominal value of £100 a year have been won at the Royal College of Science by W. F. Collins and A. E. Pratt; Collins obtained the first, and Pratt the third, of the scholarships awarded. Among the signs of development is the growth of a new form on the modern side, due to our increasing numbers; we welcome as its first master Mr. W. M. Hardman, formerly Scholar of St. John's College, Cambridge. Mr. R. F. Lyne and Mr. E. P. Adam have left us, and in their place we have, as masters of the first and third forms respectively, Mr. E. G. Ellis, of London University, and Mr. H. Summersell-Davis, formerly scholar of Corpus Christi College, Oxford. Mr. Sharples, to our great regret, is absent through ill-health; his work is taken temporarily by Mr. F. S. Webb, formerly exhibitor of St. John's College, Cambridge.

PRIZE COMPETITIONS.

Winners of Holiday Prizes are: Miss I. Crawford, Broadlands House, Newport, Isle of Wight ("Growler"); W. Henderson, Esq., 43 Church Street, Chepstow, Mon. ("Kekragol"); Algernon Warren, Esq., 17 Welbeck Mansions, Inglewood Road, West Hampstead, N.W.; Mrs. P. A. Barnett, Heatherleigh, Spring Grove, Isleworth ("A.B.").

The winner of the Translation Prize for October is T. W. Gellibrand, Esq., 15 College Terrace, Brighton.

But there was another kind of beauty which they found it required effort to obtain, and which, when thoroughly obtained, seemed more glorious than any of this wild loveliness—the beauty of the human countenance and form. This, they perceived, could only be reached by continual exercise of virtue; and it was in Heaven's sight, and theirs, all the more beautiful because it needed this self-denial to obtain it. So they set themselves to reach this, and having gained it, gave it their principal thoughts, and set it off with beautiful dress, as best they might. But making this their object, they were obliged to pass their lives in simple exercise and disciplined employments. Living wholesomely, giving themselves no fever-fits, either by fasting or over-eating, constantly in the open air, and full of animal spirit and physical power, they became incapable of every morbid condition of mental emotion. Unhappy love, disappointed ambition, spiritual despondency, or any

THE MOST UP-TO-DATE ENCYCLOPÆDIA.

BY THE EDITOR OF

THE IMPERIAL DICTIONARY.

The POPULAR ENCYCLOPÆDIA is the leading reference book for people with modest purses. It is now being brought up to date by Dr. Charles Annandale, with the assistance of an army of experts.

The POPULAR ENCYCLOPÆDIA will consist of fourteen handsome Volumes, profusely illustrated, and bound in cloth with leather backs; the price of the whole being £8. 15s. Eight Volumes are ready for delivery, and the remainder will appear at intervals of two months.

By an arrangement with the Proprietors, the "Saturday Review" is enabled to offer the work on the instalment plan.

The POPULAR ENCYCLOPÆDIA is a Universal Gazetteer, an Atlas of the World, a Universal History, a Biographical Dictionary, a Commercial Dictionary, a Political Dictionary, a Dictionary of the Sciences, of Philosophy, of Theology and Religion, of the Fine Arts, of Handicrafts; in a word it is

A DICTIONARY OF GENERAL INFORMATION.

Dr. Annandale's name is a guarantee of the value of the new Edition.

ORDER FORM.

To the Proprietors of the "SATURDAY REVIEW," 38 Southampton Street, Strand, London, W.C.

Please supply me (carriage paid) with the eight volumes of the New POPULAR ENCYCLOPÆDIA, and the remaining six as published, on account of which I enclose initial payment of 5s., and agree to pay 10s. per month for seventeen months. I undertake not to part with the work until the payments are complete.

FREE LIFE ASSURANCE.

RODNEY & Co., Ltd.

(Associated with the Educational Supply Association),

Offer members of the SCHOLASTIC PROFESSION the means of obtaining sound, reliable, and artistic Furniture (whether for Cash or Credit) on exceptionally advantageous terms.

RODNEY & Co. have been established to supply Teachers with Household Furniture and other Requisites at Wholesale Prices, in the same way as the Educational Supply Association supplies them with General School Material. The want of such a firm has been long felt—a firm with whom teachers may do business with every confidence—thus avoiding the excessive charges but too often made, and the unscrupulous methods of business but too often pursued, by many of the advertising Furniture houses.

RODNEY & Co.'s connexion with the Educational Supply Association will, it is thought, be sufficient guarantee of their superior methods of doing business. One price only charged, the Cash purchaser having a liberal allowance made him for immediate payment, and the Credit purchaser being charged only a reasonable rate of interest for the convenience afforded him.

FREE LIFE ASSURANCE (To Credit Customers) covering Unpaid Installments in the event of Death.

RODNEY & CO.'S

POPULAR AND UNIQUE SYSTEM OF FURNISHING

Is fully described in a Booklet which may be had post free on application to the MANAGER,

other disturbing sensation, had little power over the well-braced nerves, and healthy flow of the blood; and what bitterness might yet fasten on them was soon boxed or raced out of a boy, and spun or woven out of a girl, or danced out of both.

By "FRACHT."

Or il y avait un autre genre de beauté, à laquelle, comme ils constataient, ils ne pouvaient atteindre qu'à force de peine, et que, lorsqu'on l'avait complètement atteinte, paraissait plus excellente que tout ce charme sauvage—à savoir, la beauté de la figure et de la forme humaines. Ils s'apercevaient que cette beauté n'était à atteindre que par l'exercice continue de la vertu; et elle n'était que plus belle, et devant Dieu et devant les hommes, parce qu'elle exigeait ce renoncement pour y atteindre. Ils s'appliquaient donc à l'obtenir; et, après l'avoir obtenue, ils lui consacraient la première place dans leur pensée, la rehaussant de leur mieux de beaux atours. Or, une fois qu'ils s'étaient donné cette beauté pour but, ils se trouvaient contraints à passer leurs vies dans de simples exercices et des occupations réglées. Comme ils vivaient d'une vie saine, ne se mettant point en fièvre, ni par le jeûne, ni par la gourmandise, se tenant constamment en plein air, pétris d'entrain et de vigueur, ils devenaient invulnérables à tout assaut de morbide émotion. L'amour malheureuse, l'ambition frustrée, l'abattement de l'âme, ainsi que toute autre sensation troublante, tout cela n'avait pas de prise sur leurs nerfs forts et leur circulation normale; et toute amertume qui pût encore s'emparer d'eux trouvait promptement son correctif, chez les garçons soit dans la boxe ou dans la course, chez les filles dans le rouet ou dans le métier, et dans la danse pour les deux.

We classify the 151 versions received as follows:—

First Class.—Nessko, N. or M., Qui Sçait, L.C.C., Chemineau, Fracht, Posà, B.W.H., Peashooter.

Second Class.—Nunquam infelix, E.E.C., Milon, Rabroc, H.J.J.K., Miggs, 509, Day Dawn, A.G.F., Wulfruna, Deauville, Gothicus, Wild Olive, Carnbhren, Nectarine, Primrose, Cruche, Kantendelein, Chingleput, Yeast, Hibernia, Erin, Phra, M.M.M., Tchichi, Menevia, Owleglass, Ergela, Egea, La Keine Margot, Cymro, 100,000, Isa. Heb., Thasso, Sandra, Minnehaha, Bagheera, Marguerite, R.T.M.R., Victa, Tricorne, ? (name omitted), Vlaamsche Meisje.

Third Class.—Merle, J.J.M.C., Syrtis, Paddy Aylescroft, Ute, J.Y., Killarney, N.D., Zoé, X.Y.Z., Jago, Inter. B.Sc., Fortis et Fidelis, A.W., Motocyclette, Hiawatha, T.E.M.P., Rajah of Bhong, Hannington, Francis, Accipiter, Benevenue, Hashkele, Quien sabe?, Muddies, Snow Flake, Miserrimus, A.H.G., Sirach, Stedye, Recta Certa, Veretz, Fénelon, M.P.Q., Chip of the Old Block, Olga von Stena, E.N.D.E., Lavengro, E.S.B., Kleeblat, Hausmaus, Madge Patey Grierson, Sophia Western, Donegal, Yberg, K.A.B., Gallio, Raté, C.C.C., Mac, Ignorance, Edythe, Peasblossom, Cara, M.C.K.K., Intermediate Arts, Nemesis, E.T., Denstone, B.C.I., Bella Voce, F.M., Crescent, H.M.A., Uneeda.

Fourth Class.—Ursuline, Colosse, J.D.A., Princess Maud, M.K.P., Yorkshireman, Celt, Elise, She, G.E., Mudjekeewis, C.J.T., Apathy, Fly, Great Western, Aramis, Emilia, S.M.J.Y., Tulip, Merrybent, M.P., Tête Blanche, Porthmere.

Fifth Class.—Le Noël, Junius Secundus, Hopeful Irish Lass, Beginner, Athos, P.T.E., Ruskin, Forsan, Jot, May.

FAIR COPY.

Mais il y avait une autre sorte de beauté, dont l'acquisition, à leur avis, exigeait des efforts, et qui, une fois acquise dans sa plénitude, semblait plus radieuse que tout autre charme inculte—la beauté de la physionomie et de la forme humaines. Cette beauté, ils sentaient qu'on n'y pouvait atteindre que par la pratique continue de la vertu. Elle était, aux yeux des dieux et aux leurs, d'autant plus parfaite qu'elle exigeait l'abnégation de soi pour y parvenir. Aussi s'efforçaient-ils de la réaliser, et, une fois atteinte, ils lui consacraient leurs meilleures pensées et la rehaussaient de leur mieux en la parant de beaux atours. Mais comme ils en faisaient leur objet, ils devaient passer leur vie à des exercices simples et à des occupations soumises à une discipline. Menant une vie saine, évitant toute fièvre provoquée soit par le jeûne, soit par les excès de table, toujours au grand air, pleins d'entrain et de vigueur physique, ils devenaient incapables de toute émotion morbide. L'amour malheureux, l'ambition déçue, l'abattement moral, ou toute autre sensation troublante, n'avaient que peu d'influence sur leurs nerfs bien trempés et sur la circulation régulière de leur sang; et si quelque amertume pouvait encore rester en eux, elle était vite chassée, chez les jeunes gens, par la lutte et la course, chez les jeunes filles, par le filage et le tissage, et chez les uns et les autres par la choristique.

The competition has not produced much superior work. We give a fair copy, which no doubt could be improved upon. It should be superfluous to state that Ruskin is writing of the Greeks, but many evidently thought that "they" in the first sentence referred to "Modern Painters." Such words as *Dieu, boxe, &c.*, are therefore out of place. Only two sentences—the first and last—presented much difficulty of construction. Not more than one in ten managed the first

(Late of 39 Holywell Street, Strand.)

successfully. Those who began with *ils trouvaient* spoiled the sense. A larger proportion were able to cope with the last, although such renderings as *il était boxé on courue hors d'un garçon et chassée par un soufflet* were common enough. Only five candidates were correct in the tense (the imperfect), which should be used throughout. We consider this a bad mistake. Another common error arose from the inability to distinguish between the participle and the gerundive. The mistakes in use of words were by far the largest crop. This shows the absurdity of the statement so often made by classical scholars, when comparing French with Latin, that in translating into French one wants merely a dictionary. All the competitors were at liberty to use both dictionary and grammar, and many of them have evidently great fluency in the use of the language; yet this did not prevent an average of from twenty to thirty mistakes in the best versions. Take, for instance, "countenance," which most rendered *figure*. Ruskin is contrasting *acquired* beauty, the beauty of expression acquired by leading a regular life, with the uncultivated beauty of nature (hence *inculte*, and not *sauvage*). To render "bitterness," we have *amertume*, *acreté*, *acrimonie*, *aigreur*, *acerbité*, *animosité*, *stévérité*, &c., but we must only choose one of the two first. "Sight" is not *vue*. *Aux yeux du ciel* is not French. *Genre* is incorrect for "kind." "Need" must not be rendered by *avoir besoin*. *Continuel* is not the same as *continu*. *En plein air* was a universal mistake. "Spiritual" has not a religious sense. *Tous les deux* should be *les uns et les autres*. *Une occupation* cannot be *discipline*. *Vêtement* does not give the idea of adornment. A literal rendering of "giving themselves" will not do.

EXTRA GUINEA PRIZE.

A LITERATURE AND LANGUAGE PAPER.

1. Comment on: "Carlyle called the City a 'wen.'" — *Daily Chronicle* leader, November 24.
2. Re-write the following sentences, with notes on corrections:—
 - (a) "When a variety of curricula are developed, each branching out into special directions, then only, I venture to think, can education really help us here."
 - (b) "It would most surely choke and probably nip in the bud that young and promising plant of an English school of modern languages which is only just beginning to take root and blossom on our soil."
3. How does Tennyson express euphuistically—a pigeon pie, and "she did not snore"?
4. Who called whom "the ordinary sensual man grandiloquent"?

5. What is the proper meaning of "Cui bono?" and "The exception proves the rule?"

6. "What if Mignon, and Margaret, and Goetz von Berlichingen are alive now, and Dugald Dalgetty and Ivanhoe were to step in at that open window by the little garden yonder? Suppose Uncas and our noble old Leather Stocking were to glide silent in? Suppose Athos, Porthos, and Aramis should enter with a noiseless swagger, curling their moustaches? And dearest Amelia Booth, on Uncle Toby's arm; and Tittlebat Titmouse, with his hair dyed green; and all the Crummies company of comedians, with the Gil Blas troop; and Sir Roger de Coverley; and the greatest of all crazy gentlemen, the Knight of La Mancha, with his blessed squire?"—Whence the quotation? Identify the characters, naming work and author.

7. Who of living authors has made the most by his pen?

A Prize of Two Guineas is offered for the best translation of the Preface to Charles Bonnier's "French Poets of the Nineteenth Century":—

Tantum juris habet quantum potentia valet.—SPINOZA.

Les Anthologies, ne sont-ce pas fleurs essemées, jetées à la volée, que le public met à de quelconques boutonnières, marguerite ou orchidée? "Flat ubi vult" fut jusqu'ici la devise des Editeurs—race infâme; on dirait voir, comme dans le conte d'Hawthorne, une végétation souffrante, avec cet éclat fauve et malade de créatures de serre-chaude. Quelle initiative pourtant serait-ce de suivre la sève, la voir se répandre en multiples canaux, sous l'impulsion d'un courant—deviné certes, charmant d'autant plus? Ceci comme essai.

Ni dates, ni détails contingents qui peu importent. Un seul, parmi les poètes, a cru devoir fournir son acte de naissance: "Ce siècle avait deux ans!"—Il reste à l'état civil comme sonorité. Pour d'autres, c'est la lignée qui compte, hors du temps et de l'espace historiques: un rayon inspiré, une émotion de rythme, les classent dans les spirituelles limites. Même de leur œuvre—pour leur d'Hozier—certains poèmes, deux vers parfois, sont manifestes, seuls, anneaux d'une chaîne ininterrompue, soudée par le frisson du contact.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by December 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

These School and Teachers' Advertisements are continued from page 781.

YOUNG FRENCHMAN (20), of good family, wishes Residence in an Educational Establishment, to acquire knowledge of English ways, and would teach French in return for board and lodging. Reply to LYON, c.o. T. B. Browne's Advertising Offices, 103 Queen Victoria Street, London, E.C.

THOROUGHLY experienced MATRON or MATRON-HOUSEKEEPER desires Re-engagement in a Public or high-class Private School. Excellent sick-nurse. Used to large numbers.—Miss DYER, Corfe, Melton Mowbray, Leicestershire.

ENGLISH Lady (four and a half years in Germany) desires Post as GERMAN MISTRESS (Non-resident preferred), or Visiting Engagement. Good certificates, experienced teacher, highly recommended.—Miss GIBSON, 8 Newcastle Street, North Shields.

JUNIOR MISTRESS requires Post for January (Church of England). Five years' experience. Excellent references. Subjects: English, French, Drawing, elementary Mathematics, Latin, and German.—Miss LEWTHWAITE, High School, Daventry.

JEUNE FRANÇAISE (18 ans), fille de Professeur de l'Université, ayant brevet, excellentes références, demande Place au pair, voyage payé, dans bonne pension ou famille Anglaise, en échange de leçons de Français. Passerait au moins un an. Adresse—Mlle. MADELINE ADAM, chez son père, Professeur au Lycée, Lorient (Morbihan), France.

FRANÇAIS (18 ans), sachant Allemand, demande Situation au pair de suite. Parfaites références.—A. B., 25 rue Demours, Paris.

ASSISTANT MISTRESS (26).—English, Latin, Sciences (L.L.A.), fluent German, good Music, Singing. Good at Games. Five years' experience. £45.—C. C., Mrs. Hooper, 13 Regent Street, Pall Mall. Many disengaged. List gratis.

AS GAMES MISTRESS (24).—Five years' experience. Gymnastics. Holds Teacher's Certificate, Dancing, Drill, Physiology, Hygiene. Cyclist, good at all Games.—H. H., Mrs. Hooper, 13 Regent Street, near Pall Mall, London.

KINDERGARTEN MISTRESS.—Higher Certificate Froebel. Good at Games. Two and a half years' reference. Daily or Resident.—K. G., Mrs. Hooper, 13 Regent Street, near Pall Mall. Many Governesses disengaged (English and Foreign). List gratis.

ART MISTRESS (23).—Four years' reference. Advanced Drawing (Freehand, Model, Light and Shade, Perspective, Antique). Ablett's system. Art Teacher's Certificate, S.K. Daily or resident.—S. N., Mrs. Hooper, 13 Regent Street, Pall Mall.

TRAINED Kindergarten Mistress requires Post in a School as KINDERGARTEN or FIRST FORM MISTRESS. Four years' experience. Non-resident preferred. Good testimonials. Address—Miss A. MOORE, Ipswich High School (G.P.D.S. Co.), Northgate Street, Ipswich.

LADY NURSE-MATRON.—Boys' School or School Boarding House. Doctor's Widow. Experienced Needlewoman, &c. Church. Disengaged Christmas. Seaside, North of England, preferred.—Mrs. FAIRWEATHER, Northcliff School, Margate, Kent.

AS MUSIC or GERMAN MISTRESS.—Piano, Violin, Singing, fluent German. Moderate salary accepted in good School to gain experience.—B. B., Hooper's, 13 Regent Street, Pall Mall. Established 20 years Compton Terrace.

RESIDENT FRENCH MISTRESS (native), at present Mistress in first-class Boarding School, desires Post in School. Experienced teacher. Protestant. Disengaged at Christmas. Address—Mlle. A., Sandecotes, Parkstone.

LADY, Undergraduate London University, experienced in teaching, Musical, Languages (four years in Germany), seeks Post in England or on the Continent. Address—Miss Brown, 192 Rue de Vaugirard, Paris.

LADY Principal warmly recommends her FRENCH MISTRESS. Brevet Supérieur. One year's reference. Always cheerful and obliging. Some German, Music. Excellent Needlework. Fond of Games.—DEMOISELLE, Hooper's, 13 Regent Street, London.

FRENCH MISTRESS desires Post in a large School for January. Prepares successfully for all Examinations. Would also receive Pupils or visit them at their residence. Excellent testimonials.—Mlle. LANS, 23 Cathcart Road, South Kensington, London, S.W.

LADY wishes an Engagement in January, in a good School, as VICE-PRINCIPAL (with or without a view to Partnership). Will go abroad. Eight years' experience in Public Schools. Certificated subjects: Classics (Newham College, Cambridge), French (Paris), English, Music, Games. Address—Miss E. B. TOMPKETT, Endcliffe, Eastbourne.

TRAINED KINDERGARTEN MISTRESS desires Post. Educated High School; three years Kelland College. All Kindergarten subjects, elementary Drawing, Brush Work, elementary Music and French, general Form subjects, Swedish Drill, Games, Science and Art Freehand, Model, Shading, Physiology, and Hygiene. Resident, £40; non-resident, £30.—N. L. C., Sunnyside, Springfield Road, Leicester.

BOYS' PREPARATORY SCHOOL.—Post as ASSISTANT MISTRESS required by experienced, Certificated Teacher. Age 25. Good Latin, French, and English, elementary Mathematics and Greek. Good testimonials.—X., 123 Adelaide Road, N.W.

ART MISTRESS desires further Teaching after Christmas. Over three years Slade Student. First Class Certificates and Prize for Drawing and Painting. Also Ablett's Teacher-Artist's Certificate. Excellent references. Experience. Many successes.—A. D. S., 15 Tavistock Square, W.C.

INTER. B.A. London desires Engagement as ASSISTANT MISTRESS in a Public School. English, Mathematics, Latin, elementary Brushwork and Drawing. Three years' experience.—J., 72 Howbury Street, Bedford.

MESSRS. BELL'S NEW LIST.

Educational Catalogue post free on application.

Now Ready. Second Edition, Revised. Crown 8vo, 2s. 6d.:
also Book I., separately, 1s.

Elementary Geometry.

By **W. M. BAKER, M.A.,**

Head Master of the Military and Civil Department of Cheltenham College; and

A. A. BOURNE, M.A.,

Head Mathematical Master on the Classical Side at Cheltenham College.

* * A Volume containing the substance of Euclid, Book II., the rest of Book III., and Books VI. and XI. is in the press and will be published shortly.

This volume is written on the lines recommended by a Committee of the Mathematical Association which was formed at the suggestion of the British Association for the purpose of making reforms in the teaching of Elementary Mathematics.

Crown 8vo, with or without Answers, 3s.

Examples in Algebra.

By **C. O. TUCKEY, B.A.,**

Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge.

These Examples are intended to provide a complete course of Elementary Algebra for classes in which the book-work is supplied by the teacher.

In the choice of the subjects included in their arrangement the recommendations of the Committee on the Teaching of Mathematics appointed by the Mathematical Association have been followed throughout.

Crown 8vo, 4s. 6d.

DIFFERENTIAL CALCULUS FOR BEGINNERS.

By **ALFRED LODGE, M.A.,** late Fereday Fellow of St. John's College, Oxford, Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill. With an Introduction by **SIR OLIVER LODGE, D.Sc., F.R.S., LL.D.,** Principal of the University of Birmingham.

Second Edition, Revised. Crown 8vo, 2s.

AN INTRODUCTION TO CHEMISTRY. By **D. S. MACNAIR, Ph.D. (Würzburg), B.Sc. (London),** late Lecturer in Chemistry at the Glasgow and West of Scotland Technical College and the East London Technical College.

Crown 8vo, 2s.

KINGSLEY'S HEROES. Edited, with Notes and Appendixes, by **A. E. ROBERTS, M.A.,** Classical Scholar of St. Catharine's College, Cambridge. With Illustrations and Maps.

Crown 8vo, 3s.

MILITARY AND NAVAL EPISODES. Selected for Translation into German, and edited, with English-German Vocabulary and Notes, by **ALOYS WEISS, Ph.D.,** Professor of German at the Royal Military Academy, Woolwich; President of the London Branch of the General German Language Association, &c.

The extracts forming the text of this volume have been selected from recent standard works on the military and naval history of the eighteenth and nineteenth centuries. Some of the most thrilling episodes in British warfare are brought before us in masterly descriptions written by leading strategists and well-known professional writers. All matters usually discussed in notes have been incorporated in the vocabulary, where, besides biographical, historical, and geographical notes, idiomatic expressions are translated, and hints for punctuation, grammatical rules, &c., are also given.

London: **GEORGE BELL & SONS, York Street, Covent Garden.**

CONFERENCE ON THE TRAINING OF TEACHERS IN SECONDARY SCHOOLS FOR BOYS.

HELD AT CAMBRIDGE, NOVEMBER 14 AND 15.

THE following is a full list of the representative members:—

UNIVERSITY OF CAMBRIDGE: Sir R. C. Jebb, M.P., the Rev. Dr. Butler, the Rev. C. A. Pollock, Mr. S. S. F. Fletcher, Mr. O. Browning and Dr. J. N. Keynes (Honorary Secretaries of the Conference). UNIVERSITY OF OXFORD: Mr T. H. Warren, Mr. P. E. Matheson, Mr. J. Wells, Mr. W. M. Keatinge. UNIVERSITY OF DURHAM: the Rev. Dr. Gurney, Dr. Jevons. UNIVERSITY OF LONDON: Sir A. W. Rücker, Prof. J. Adams, Dr. R. D. Roberts. VICTORIA UNIVERSITY: Dr. N. Bodington, Prof. S. Alexander, Prof. W. H. Woodward. UNIVERSITY OF WALES: Mr. W. Edwards, Prof. F. Spencer. UNIVERSITY OF BIRMINGHAM: Sir Oliver Lodge, Prof. J. H. Muirhead. HEAD MASTERS' CONFERENCE: the Rev. the Hon. E. Lytton, the Rev. G. C. Bell, the Rev. Dr. Gray, the Rev. M. G. Glazebrook, the Rev. H. W. Moss, Mr. J. S. Phillpotts. INCORPORATED ASSOCIATION OF HEAD MASTERS: Dr. Gow, Mr. J. Easterbrook, Mr. J. J. Findlay, Dr. R. P. Scott, the Rev. R. D. Swallow, the Rev. J. Went. COLLEGE OF PRECEPTORS: Mr. H. W. Eve, Dr. R. Wormell. TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND: Mr. F. Storr. WELSH COUNTY SCHOOLS ASSOCIATION: Mr. W. Jenkyn Thomas. CONFERENCE OF CATHOLIC COLLEGES: the Rev. J. Cremonini. PRIVATE SCHOOLS' ASSOCIATION: the Rev. J. B. Blomfield. ASSOCIATION OF HEAD MASTERS OF PREPARATORY SCHOOLS: Mr. E. D. Mansfield. INCORPORATED ASSOCIATION OF ASSISTANT MASTERS IN SECONDARY SCHOOLS: Mr. J. L. Holland. ASSOCIATION OF COUNTY COUNCILS IN ENGLAND AND WALES: Mr. A. Anderton, Mr. H. G. Fordham, the Right Hon. H. Hobhouse, M.P. ASSOCIATION OF DIRECTORS AND ORGANIZING SECRETARIES FOR TECHNICAL AND SECONDARY EDUCATION: Mr. A. Keen, Mr. W. Hewitt, Mr. J. H. Nicholas. TECHNICAL EDUCATION BOARD OF THE LONDON COUNTY COUNCIL: Mr. A. J. Shephard.

In addition, the following gentlemen, not directly representing any body, were specially invited by the Committee:—The Right Hon. A. H. D. Acland, Prof. H. E. Armstrong, the Rev. W. T. A. Barber, the Venerable J. Ingham Brooke (Archdeacon of Halifax), the Hon. W. N. Bruce, the Right Hon. Sir J. E. Gorst, M.P., Mr. A. C. Humphreys-Owen, M.P., Mr. H. Lee-Warner, Prof. J. Perry, Mr. W. H. D. Rouse, Mr. G. W. Rundall, Mr. M. E. Sadler, Mr. A. Sidgwick.

THE VICE-CHANCELLOR bade a hearty welcome to the representatives of Universities, schools, and other public institutions who had accepted the invitation of the University. This Conference had been first proposed in a letter addressed by Mr. Swallow, the Secretary of the Joint Training Committee, to the last Vice-Chancellor, in the June of 1901. Among those from a distance who had helped to bring this proposal to pass he would mention the Head Masters of Marlborough, Haileybury, and Chigwell, and Prof. Withers, whose absence from illness all would regret. The place of meeting was significant. It was a pledge of unity of action, and also a guarantee that they would proceed along the narrow path of safe and well considered reform rather than the broader road of revolutionary change. The present Conference differed in all respects from that convened in 1896 to consider Registration. That was large, and passed resolutions; this was small, and purely deliberative, its object being to discuss among experts alternative systems of training. The first paper, to be read by Sir R. Jebb, would give the history of the movement, and no discussion would follow.

SIR R. JEBB, after summarizing the antecedents of the Order in Council and analyzing the regulations for the Register, proceed to treat

The Bearing of the Order in Council on the Training of Teachers.

The first point to observe is that, under the Order, training is made an absolute condition of registration. This is the first great step towards organizing the profession of teaching, and giving it the *status* which is its due. The stringency of the Register not only protects the public, but safeguards the position of the teacher; the unity of the Register marks the unity of the profession. Registration under the Order is voluntary. No penalty, present or prospective, is there attached to non-registration. The earlier Registration Bills, promoted by associations of teachers and introduced by unofficial members of Parliament, usually proposed some penal sanction, to operate after a period of grace: e.g., that, after a certain number of years, an unregistered teacher should not be able to recover fees by process of law; or that he should be ineligible for a post in a secondary school recognized by the State. But no Government Bill has yet proposed such a sanction. And the fact seems to be that, even now, the vital importance of training—the benefit which it can confer even on “the born teacher”—must be more widely and more vividly appreciated, both by teachers themselves and by the public, before a penal sanction could wisely be imposed. But is it therefore to be feared that the Register will fail from lack of driving power? I do not think so. In the first place, it is obvious that there are large numbers of teachers to

whom registration will be a great and immediate gain. Then it may be expected that, by degrees, as the meaning of the Register comes to be generally understood, the force of example and the pressure of intelligent opinion will exercise a strong influence in favour of registration. From schemes recently published or passed by the Board of Education it would appear that the Board is disposed to require that in future the head master or head mistress of a school for which the Board makes a scheme shall be registered in Column B. Moreover it is likely that some of the new Local Authorities for Education may make the same requirement in regard to some of the schools aided by them. Such measures will doubtless have their effect. A good deal, however, will probably depend on the course adopted in the next few months by the head masters and assistant masters of secondary schools of every type. It rests with them to render a far-reaching service to education by giving the support of their names to the new Register. In conclusion, I would briefly touch on one point of great interest. The Order in Council contains the first express recognition of the "student-teacher" [Regulation 3 (2)]. No official definition of a student-teacher has yet been given, but he appears in the Order as a person who is studying the practice of education by teaching, "under supervision," in a recognized secondary school. Here the student-teacher system makes its official *début* as a regular and organized method, which may be employed as an alternative to residence at a University or at a training college. The two methods are to be in concurrent use. How far can they be combined; or on what terms should they be adjusted to each other? These are points which fall within the scope of a discussion which we are promised to-day. And I would venture to suggest two other questions. (1) Ought the student-teacher to be a graduate? (2) How should we interpret the "supervision" under which he is to work? Is it to be internal only—*i.e.*, exercised by the staff of the secondary school itself? Or is it to be (in part, at least) external: *e.g.*, is a master of method from a training college to visit the school occasionally, for the purpose of seeing how the student-teacher is doing his work? These are a few points out of many on which the opinions of the experts present at our Conference would be of great value.

Alternative System of Training.—(a) By a Course at a University.

The following paper, by Mr. ARTHUR SIDGWICK, we give in full, as it cannot be condensed:—

The questions which I have been asked to treat are two—both severely practical: (1) Should training be taken necessarily as a post-graduate course, or may it be concurrent with studies for a degree? (2) How are the difficulties of practice to be met? I had better say at once that since we established the system of teachers' training (secondary) at Oxford in 1897 I have been a member of the Managing Committee, and have been in constant communication with the teachers—especially Mr. Keatinge, with whom I have discussed the points treated in this paper. I have also had pupils who took the course; and I have examined five times for the University Diploma in Education. In the following remarks I confine myself to Oxford. (1) My answer to the first question is that *in itself*, and putting difficulties of time and expense aside, the post-graduate non-concurrent course is preferable. But the cases of different men seem to suggest different practical solutions: and I should strongly urge that hard and fast rules should be at present, as far as possible, avoided. The experience, though valuable, is not of long standing, and it would be a mistake by ill-considered rules to discourage candidates. More experience is wanted before rigid rules can be wisely made. Let us consider some of the cases that occur at Oxford. (a) There is the Honour man of the better type, scholar of his college, takes Honours both in Mods. and Finals, the latter in seven terms. His college has a hold on him: the tutors are exacting; the subject is very large. He simply would not be permitted to take the training course (if seriously pursued) concurrently with the Lit. Hum. course. He has not the time: as it is, the Lit. Hum. candidate who does his best is hard pressed. (b) There is the industrious man of fair intelligence who has taken Honour Mods., and but for the need of training might have proceeded to a Final Honour School. He has not the funds to stay up five years (for it must be remembered that, if Honours be taken both at Mods. and Finals, the course is *four years*, and the extra training year would make it five). Under this financial pressure it is better for this man to take a Pass degree (as he has already got his school-teaching qualification by his Class in Mods.) and take the training course *concurrently* with his last year's reading for the schools. Without undue pressure he can do justice to both studies. (c) There is also another type of man, who is intermediate between these two: he is bound to take a Final Honour course, as his abilities suggest and his prospects require; yet he simply cannot afford the fifth year. He must be trained; and the two courses therefore must be concurrent. The sacrifice he makes is that his Honours may suffer: he has to be content with a lower class. But it would be very hard to force such a man to choose between a Pass degree and the sacrifice of his chosen profession. It may be remarked that, even where concurrence is imposed (by regulation or individual circumstances), it is desirable that it should be to some extent elastic—*i.e.*, that the minimum number of hours required should be small *in full term*, but that these should be supplemented by a sufficient amount

of additional work in vacation, the time being specified, and the work out of full term being given entirely to training. The Oxford Delegacy which administers the Secondary Training Scheme has assented to this sort of arrangement being tried.

(2) *The Difficulties of Practice.*—Apart from the questions dealt with above, the difficulties of practice are all connected with the available supply of schools or classes to be taught by the students, whether regularly as part of a course, or occasionally for "criticism" lessons, or by the instructor sometimes (if he wish) in the presence of the students as a demonstration lesson. (a) The first difficulty concerns the *number* of the schools available. Oxford is fairly well supplied with secondary schools of different sorts. Besides private schools, few and small, there are two large and successful high schools, one for boys, and one for girls, three schools attached to colleges with musica foundations and two good preparatories for boys. The training centre cannot at present count on getting permission to use all the available schools. There are also, of course, the primary schools, both Board and voluntary, and a technical school under the County Council. With the comparatively small number of students that we have had, the school-supply has hitherto been sufficient. With a considerable increase in the students, the schools would no longer suffice. Under the Statute now in force, the Delegacy will be able in the last resort to establish a school themselves; though such an institution, competing with existing schools, would not be without difficulties of its own. The students *must* witness teaching in secondary schools; and some kind of demonstration school will in the near future be required for the training centre. (b) The second difficulty concerns the *status* of the schools. At first it would not have been wise to make much use of the primary schools for secondary training: for there were many susceptibilities and misgivings to consider. College tutors were many of them doubtful about the scheme; students were themselves public schoolmen; head masters naturally preferred men trained by teaching boys of the same class as they would afterwards have to deal with. Nevertheless, it is undoubtedly the case that for certain parts of the secondary training the primary schools can be very useful. For example, certain points of method, dealt with by the instructor in the course of his lectures, can be well illustrated by a demonstration given to a class drawn from a public elementary school. Or, again, when a student is at the stage where it is essential for him to learn coolness and confidence in holding and handling his boys, an elementary class may be quite first-rate material for the purpose. For the early stages of practice elementary schools are probably the best. (c) The third point concerns the *area* of schools to be used for training. There is no inherent reason why *only such schools as are in the town where the centre is* should be considered available. It would be very much better if the centre could work hand in hand with a large circle of schools beyond the limits of the town. Of course for many purposes distance would be a bar: but visits might be paid occasionally, demonstrations held, practice lessons given, to the outlying schools. To see a variety of kinds of school is an unmixed benefit to the students; and these schools themselves would be benefited by being brought into touch with the training centre. It has been found the best arrangement that the students should visit the schools for a certain period during that part of the training time which falls outside the University term. (d) The last point concerns *subsidies* to the schools which are used. It is obviously equitable that the convenience of being allowed to use the schools should be paid for. The arrangements cause trouble and a certain dislocation of routine to the schools. It is on every ground desirable, and necessary to the success of the arrangement, that the master should be present at lessons given by a novice. It may even happen that he may have to take the class out of the hand of a student not up to the work; or give the lesson over again after he has gone. The time saved by the student taking the lesson is on the whole a set-off to these extra liabilities, but not a complete equivalent. It is just that a fee should be paid.

The discussion was opened by Mr. O. BROWNING. He agreed that in the great majority of cases the training should be post-graduate, but the Oxford and Cambridge Day Training Colleges did manage successfully to combine training with a degree. With undergraduates a year's training might not be sufficient. The essential parts of training were: (1) the theory, history, and conduct of education. This part was best given at the Universities; at schools competent instructors could not be found. (2) Criticism, model, and visiting lessons. At Cambridge criticism lessons were given once or twice a week, and each term a student had a week's teaching under supervision in an attached school. For this purpose schools as far removed as Bedford had been used. Practical training had two objects in view—discipline and the art of imparting knowledge. At the beginning nearly all teachers committed *gaucheries* which were fatal to discipline, and in instruction they attempted too much or too little—either lectured or did nothing but question. Neophytes were often incompetent to take a class at all, and had to begin learning to teach with a small number of selected boys. The head masters of secondary schools were naturally unwilling to admit student-teachers until fully competent. For various reasons, too long to state, the same difficulties did not occur with elementary or

higher-grade schools. Therefore training could be carried out satisfactorily only when both primary and secondary schools were available. The Universities, and the Universities alone, could satisfy this double condition. Mr. P. A. BARNETT had said that the association of primary and secondary students in the technical work of training was most profitable for both bodies, and this opinion was borne out by the experience of the Cambridge Training College.

Mr. H. W. EVE urged that post-graduate study was a counsel of perfection, and that for the bulk of intending teachers, on the score of expense, training must be concurrent with preparation for a degree. Further, men after taking a degree were tired of being taught and loth to continue *in statu pupillari*. As it was, many men enter on their profession with an inadequate knowledge of the rudimentary subjects they will have to teach. At the risk of incurring the penalties of *scandalum magnatum*, he would venture even to surmise that some members of that august body the Head Masters' Conference were not capable of imparting the elements of arithmetic and geography to a junior class. He urged, therefore, that men destined for schoolmasters who were not within the range of a First Class in Finals should take a Tripos in their second year, and devote their third year mainly to training.

Mr. W. M. KEATINGE bore out Mr. Eve's remarks on the need of instructing candidates in elementary subjects. At Oxford they had made arrangements for a systematized course of school geography. He believed strongly in the use of elementary schools as practising schools for secondary teachers. In the first stage of apprenticeship he preferred them to secondary schools. The first difficulty of young teachers was order, and with a primary class it was a case of sink or swim. If the teacher could not command attention, his failure was at once self-evident, but in a well disciplined secondary school this need not be the case. On the other hand, he did not believe in the mixing up of primary and secondary candidates. At Oxford he had had some primary students, but had not found them a helpful element. The manner of manipulating subjects was not the same in a primary and a secondary school.

Mr. W. JENKYN THOMAS complained that in Wales secondary training was wholly subordinated to primary. In their University colleges they wanted as trainers men who had personal knowledge of secondary schools, and in determining the certificates of training the head masters of the schools in which the candidates had practised should be consulted.

Mr. J. J. FINDLAY reminded the Conference of the report of the Joint Training Committee, which was unanimously in favour of post-graduate training. One of the speeches by a signatory of that report seemed to him hardly consistent. He thought that, if a man could only devote two years to University studies, he had better enter the Day Training College. He did not believe in picking up the elements of geography or history or English by a casual course of lectures. If a man was going to teach these subjects, he ought to devote himself to their study. Nor had sufficient reason been shown for locating training colleges solely at the Universities. As far as Mr. Sidgwick and Mr. Keatinge had shown, the whole of the work now done at Oxford and Cambridge might be done equally well in any large town. The only reason why the Universities should be preferred was for the study of the theory; but at present Oxford and Cambridge did not believe in the theory of education. The fact was that at present we had no theory of education; and therefore training must at present be centred in the practical work, and theory must be gradually evolved from practice.

Mr. S. S. FLETCHER said that, if the Register of Teachers was going to be a reality, and not a farce, students would have to give their full time to training, and not divide it between training and general education. As it was, at Cambridge primary teachers put in three years, and secondary teachers one year, of partial training. Theory and practice must go hand in hand. The Engineering Department at Cambridge furnished an exact parallel. There was no essential distinction between the teaching of primary and secondary schools; between the higher-grade school and the lower grammar school there was a vanishing line of demarcation. There could be no difference of methods or manipulation of subjects.

Prof. JOHN ADAMS agreed with Mr. FINDLAY that every teacher, whether of English or arithmetic, should be a master in his own subject. In Scotland the concurrence of University and training work was complete, and he much regretted it. As to the theory of education, good work was being done in Germany, and to a less degree in the United States, and England was making a beginning.

Prof. MUIRHEAD said that in Birmingham, too, the chief difficulty that trainers felt was that their work had to be carried on simultaneously with the work for an ordinary degree. He hoped that the Conference would not give its authority to the separation of primary and secondary training. He deprecated the remuneration of teachers whose schools were used for practice; masters should not require extra pay for performing a public service.

The Rev. W. T. A. BARBER said that the Register, when it came into full force, would remove many of their difficulties as to training. Now the head master had to walk cautiously and consider the susceptibilities both of parents and of his staff before admitting apprentices to take

part in the work. Untrained masters were very shy of allowing outsiders to see their teaching. When all registered teachers were *ex vi termini* trained this obstacle would disappear.

Mr. T. H. WARREN said that at Oxford a large and increasing number of students—especially in History and English Literature—took their final schools at the end of their third year, and these students could well afford to give a fourth year to training. Schoolmasters should not go out less well prepared for their work than those in other professions.

The Advisability of Establishing Courses of Training at Non-University Residential Training Colleges for Secondary-School Masters.

In the absence of Mr. P. A. BARNETT his paper was read by Mr. O. BROWNING. It might be summarized in *Punch* fashion by one word, "Don't!" Such colleges are of value for women who have not enjoyed the common life of a University, but the training colleges for primary teachers are *peccati exempli* as hot-beds of narrow technicality, caste, and clique. It would seem, therefore, to be most undesirable that any sort of secondary training college for men should be established outside of the control and direct influence of the Universities, or at least of a great central public department, which (however imperfectly) might set up a University standard. On all grounds it would seem to be necessary that no training college for teachers, particularly for men, and, of all men, for men intended to work in secondary schools, should be established out of direct connexion with Universities. If they stand as seminaries by themselves, training colleges will certainly breed professional tricks and pedantries, and will be the less sensitive to general intellectual life and advance.

Training by a period of Probation as a Teacher at a Recognized Secondary School.

In opening the discussion, Canon LYTTLETON asked leave to amend the title—for "probation" read "student-teachership." He narrated an experiment he had made for two years at Haileybury. He had picked out a promising applicant, and had given him board and lodging free, in return for which the student took seven lessons a week. With regard to supervision, he had himself looked in often enough to see that things were going right in the class-room in matters of discipline, and the student was in close correspondence with Mr. Iliffe, the Master of Method in the Cambridge Training College, who came down twice in the term and heard lessons. He had had in all three students on a similar footing. But such an arrangement could not be made a precedent; student-teachers in the future would have to pay. The temptation to assistant masters to devolve their work on the student-teacher might be obviated by charging to the form master a fee of 5s. for every lesson so taken. Two terms should be a minimum for the student-teachership, and, as the lesser of two evils, he would rather see the training college course curtailed. As to supervision from outside, that was a point that would be seriously discussed by the Consultative Committee. He hoped that nothing would be said likely to lead to the shortening of a candidate's general studies. They were not at present overstocked with intellectual enthusiasm in public schools, and, though training might do much, it could not supply or supersede the culture given by a full University course. The supply of masters was dwindling, and we must be careful to do nothing that would tend still further to reduce it. A student-teachership would be far more attractive to a graduate than a residential college. The system could be extended all over the country, and in his opinion it was the best adapted to meet our present needs.

A paper prepared by Dr. Gow was, in his absence, read by the Rev. R. D. SWALLOW. He would not presume to criticize the Universities and University colleges which had started training departments. Training might be profitable, but he insisted that it was of the highest importance that men should be able to enter the profession by a short cut. It was essential that the teaching profession should contain men of learning, ability, and (he would venture to add) of gentle breeding. Even as it was, men of the best degrees were drawn off to the Civil Service. The scholastic profession differed from others in that it required a high degree of physical vigour. In schoolmastering the wisdom that came with years was at a discount. What in a cleric was a grace—to be bald, bent, and grizzled—was counted a disgrace or an actual disqualification in a schoolmaster. Many were tempted to enter the profession by the prospect of a decent, immediate salary, but the pay, though fair for a *tiro*, was bad for a veteran. They might find guidance in the clerical profession. There was hardly a cleric of eminence who had not obtained Orders in virtue of a college fellowship. If all candidates for Orders had to pass through a seminary, the Church would be depleted of intellect. As to student-teachers, he held that head masters would not be competent to certify their ability to teach. The best head masters had their hands already full and would not take upon themselves the extra responsibility. On what principle were heads of training colleges and masters of method appointed? Was it not on their supposed ability to teach? Had not head masters the same qualifications? Was there any need for a fifth wheel to the coach? A head master saw an assistant at his best, as would an inspector of

method, but also at his worst. He could dismiss for incompetence after appointment; why not also before?

Mr. J. EASTERBROOK said that some thirty years ago, when training was advocated on theoretical grounds, there might have been some excuse for the scepticism of head masters; now that it had been put into practice, there was none. The head masters of schools represented at the Head Masters' Conference did not consider it part of their duty to see that their assistants could teach. They preferred to give them a free hand and judge only by results. He was not suggesting that this trust was abused. Young masters, he believed, were, as a rule, enthusiasts in their work, but their zeal was rarely according to knowledge. He represented a very different class of school—a large day school of the middle-class type, and head masters like himself were convinced of the need of training. His predilection was for a training college under a principal who had had wide and varied experience as a master. The elementary training college and the pupil-teacher system were danger-signals to show them what to avoid. A training college on a sounder basis had been started by the London County Council, and secondary students would be admitted to it in January. As to student-teachers, he would enter two provisions. They should not be reckoned on the strength of the school—that was essential—and they should not be left to a visiting master of method. A man might give a very good show lesson and be a very bad master. If a year of probation be required of intending masters, salaries must improve.

Mr. J. S. PHILLPOTTS urged that, as the Civil Service now skims the cream of Honour men, we must lay no new burdens on teaching candidates. They should be allowed to combine their training with paid work in schools. Instruction should be given them partly by a visiting master of method, partly by a senior member of the staff. Existing methods of teaching wanted overhauling, and that would be done if there were one upholder of training on the staff. The school must prove to the Board of Education that it is suitable, and the student would have to pass for a diploma at the end of his time.

Mr. A. SIDGWICK desired to assure Mr. Findlay that he had not left his first faith, but still adhered to post-graduate training. But he thought that at this initial stage such arrangements should be made as to secure the maximum of students with the minimum of interference with the regular University course. If Mr. Lyttelton's course of student-teachership could be made of universal application, they would secure an ideal training, but ordinary head masters of secondary schools could not compete with professional trainers. Mr. Findlay asked them to accept a system of piecemeal, insufficient, and one-sided training in place of a well thought-out system conducted by University experts. He read a letter he had received from a head master of ten years' standing, who had passed through the Oxford course and taken the diploma. His correspondent said: "I would not have missed the course for anything. It taught me to regard things from the point of view of the child, and not of the coming examination."

Dr. WORMELL urged that the stage of student-teacher should be a starting, in order that there might be a wide selection among candidates for teaching. That was the great merit of the pupil-teacher system: the choice lay with the head master, and his selection was abundantly justified by the successful careers of those thus chosen. Some of them went on to Oxford and Cambridge; many more continued their studies at the University of London, that *alma mater* of the poor.

Sir A. W. RÜCKER described the system adopted by the Royal College of Science. There the best of the students were selected as assistant teachers in the laboratory. After two years they acted as demonstrators under the supervising demonstrator. They had to prepare a course of lectures looked over and corrected by the professor and then to deliver this course in a school of science. Use was made of the departmental inspectors to hear and report on lessons thus given. Once in two years each of the professors gave a course of lectures on the art of teaching his special subject. Lastly, the pick of these students were allowed to lecture in the college itself. He doubted whether any training so thorough and systematic could be given in an ordinary school.

The Rev. M. G. GLAZEBROOK doubted how Mr. Lyttelton's experiment would work on a larger scale. According to a scheme that had been circulated he should have twelve student-teachers assigned to him, and he could not help recalling the words of Edward Thring: "Six student-teachers, six ignorant young critics." One ignorant young man might learn a good deal, but his batch of twelve, with separate time-tables, would be sure to herd together. Suppose them third class men whose main interest was athletics: what would be their ordinary topic of conversation? He should support such a system only if tried as an alternative and very carefully guarded against abuses.

Mr. ARTHUR ACLAND said they had reached the point where they could see that those who might have wrecked the scheme of registration showed by their presence that they wanted to make the Register a success. He agreed with what had fallen from Mr. Glazebrook, and the Consultative Committee would take account of his suggestions before recognizing schools for the purpose of training. The Universities would have to make much larger provision than they had yet made, and

engage much abler men in the work. They were only at the beginning of the subject. The older Universities must find money to pay the leaders of the profession to become professors of education, second to none in authority. In laying down the conditions of the Order in Council for Registration the Consultative Committee were well aware that they were opening the door to second—he would almost say third or fourth—rate teachers; but the Order was provisional, and after four years a higher standard would be required. He had no doubt himself that eventually training should be post-graduate. The County Councils would be able to hasten this consummation by helping University students in their fourth year with scholarships.

Mr. KEATINGE said that head masters had not yet realized what a well organized course of training meant. In preparation for the Conference he had consulted old pupils of his, now masters in public schools, but their answers were so uncomplimentary to the head masters under whom they were serving that he could not bring himself to read them out. He must protest against the suggestion that the theoretical training should be given at the University and the practical training at schools. So long as the two were concurrent, and there was lots of both, he cared not greatly where it was done.

The Rev. J. B. BLOMFIELD said that among head masters of private schools there was a unanimous preference for student-teachers as against training colleges.

Mr. M. E. SADLER said the problem of training masters in English secondary schools was exceptional. The best in these schools was associated with practice, not with theory; it was to be gathered, not from treatises; it came out partly in conversation; it was an atmosphere that must be breathed. Therefore student-teachership was an essential part of training; but it should not be allowed to be the only part, for these reasons:—(1) The tradition of English secondary schools was literary, but we were on the edge of a great change. Manual training was destined to play a great part in the future. Therefore our leaders ought to be brought into contact with what before long will be the central subject. (2) Training will encourage in candidates a sense of professional unity and solidarity such as is found among German teachers. (3) We want to encourage in candidates a much keener sense of the obligation to meet social needs by reformed curricula adapted to the times. We must have in our higher secondary schools, as we have had in the past, the very best men. Therefore, let us set before ourselves a high aim and insist on a high standard both of liberal and of technical education.

Sir OLIVER LODGE summed up the results of the Conference as far as it had gone:—(1) The training of teachers is a necessity, to be secured, if needful, by State compulsion. (2) A great part of the training for primary and secondary teachers is common to both, and the first stage is even better taken in primary schools. (3) But there is a fresh series of problems for the secondary teacher not yet solved. (4) Training colleges should not be isolated, but associated with a University. (5) Training should never be regarded as a substitute for the learning of subjects. (6) A further year of student-teachership is necessary for masters in residential public schools.

SECOND DAY.

The Conference held its second session on Saturday, at 10 a.m.

A paper was read by the Rev. G. C. BELL on

Training by the combination of Training at a University with a period of Probation as a Teacher at a Secondary School.

The object of the paper was to urge the Board of Education so to modify the Order in Council as to allow candidates to divide the year between these two methods instead of presenting them as alternatives. This might not be considered an ideal plan, but it was a compromise well suited to meet present conditions. The profession was at present at a discount; and, further, some head masters, and many assistant masters, regarded schemes of training with lukewarmness, scepticism, or even hostility. If his proposal were accepted, such critics or opponents might be conciliated; otherwise they might stand aloof from a Register which imposed training, and so wreck the whole scheme. In favour of his proposal he urged:—

1. Capable witnesses before the Bryce Commission agreed that some actual experience of school work was the best way of preparing a candidate to accept and profit by the training college.

2. Such experience would be more attractive to men who have just gone through the strain of preparation for a degree.

3. Without such experience, a solid year at a training college might tend to develop priggishness and pedantry. It was one thing to pass the test of criticism lessons, another to maintain discipline when confronted with twenty-five lively boys in an isolated class-room. Technical training has often proved abortive because the candidate has not previously been forced to recognize his own needs and deficiencies.

4. Schools differ widely in character, and it were well that each intending master should have had experience of the type of school in which he will be employed.

On the other hand, student-teachership alone would not suffice to

give the technical preparation of a training college; and there was the danger that student-teachers might be exploited by employers who desired cheap labour. Even the better sort of head masters were rarely competent to give effective training, nor had they the time; and the supervision of a visiting master of method must be casual and intermittent.

Again, a student-teacher who spent his whole year in school was likely to be enured to the defective methods of science and modern language teaching that now prevailed.

To pass to details. If the year were divided, there were strong reasons for assigning the first term of it, and no more, to student-teachership. As to the conditions of the student-teacher's work, the head master may give general supervision, but he must delegate a member of his staff to act as adviser and tutor. If student-teachers came for only one term, a large school might receive four or five in the year, if these were distributed among the several departments. But such internal supervision cannot be adequate, and the services of a master of method must be retained.

The Joint Committee on the Training of Teachers estimated the cost of a training course, exclusive of residence, at £30 a year. A third of this would be a meagre fee for the master of method and the advising member of the staff, who must be likewise remunerated. But, if the student-teacher were receiving his maintenance free, or at a low cost, he might well afford to pay more than £10, and he might be subsidized by the Local Authority.

The proposed partition of the year might be objected to on the ground that two terms are not sufficient for the many subjects that have to be dealt with in a training course: experts have said that not less than thirty weeks are required for this purpose. If that is so, an obvious solution of the difficulty would be the following. The scheme of the Board of Education demands two years: one of student-teachership or training, one of "probation." Let these two years be otherwise divided thus: one term of student-teachership followed by a year at a training course; the two terms that remain would be quite sufficient to test the work of a "probationer" and ascertain whether he was fit to receive the final diploma.

A proposal has been made, and influentially supported, that not only may the whole of the first year of training be spent as student-teacher at a recognized school simply under the supervision of the head master and his staff; but also that graduates may be allowed to reckon the second year (or year of probation) as running concurrently with the first. There is no doubt something to be said for this proposal on economical grounds: but its adoption will be deprecated by those who agree with the drastic criticism that "apprenticeship, or the system of student-teachers, as hitherto practised in England, must be pronounced more or less of an imposture." ("National Education," page 66, 1901.)

Mr. GLAZEBROOK was called upon, in the absence of Dr. Gray, and said that he was wholly in accord with Mr. Bell's proposal, but ventured to offer one or two supplementary remarks. It was apt to be forgotten that there was a wide difference between a voluntary and a compulsory system. Hitherto training had been given only to young men who were sensible of their need, and therefore docile. It would be hard to convince the mass of candidates for masterships that they needed any training, especially in a country where every man thought himself provided with innate ideas of education. To do this they must have the discipline of failure, and nowhere was that lesson so clearly driven home as in school. Secondly, they must have the discipline of comparison by listening to lessons given by past-masters in the art. It was sometimes urged that a young master could not do better than continue the discipline that was so good for him at school. But there was the obvious danger that a young man, with the best intentions, tended to become the creature of his own failures. Far better for him to go right away to a different atmosphere, familiarize himself with new methods, and thus give himself time for unconscious cerebration. Then they were confronted with the difficulty how to get masters with knowledge and with time to give systematic training. The majority of public-school masters did not seriously believe in training. He himself had a profound conviction of the value of systematic training. He had examined for two years at Oxford at the School of Pedagogy, and had been struck by the obvious effect of thought and reading on the work of candidates. They knew much more of their profession than he had known at the end of five years of empirical struggle. He thought that too much emphasis had been laid yesterday on the practical side of training. What they most needed was to bring out the intellectual side—a large and liberal view of a science dealing with human souls, which was more readily accepted and entertained in a University.

Mr. P. E. MATHESON said it would be a great mistake if at this stage the University were to attempt to construct a Final School of Pedagogy. The science of education was still in its cradle. Whether University training or school apprenticeship should come first might well be left an open question. They were at the outset of a new experiment, and the more elasticity the better. As with the training of officers for the Army, they wanted variety, elasticity, and freedom.

Mr. WOODWARD said that head masters failed as yet to realize the

content of training. First must come the historical and scientific aspect of education as a whole (a University subject), and then experience in handling the materials of instruction.

Mr. KEATINGE said that Oxford granted no diploma till after the candidate had had a period in school, and satisfied not only the University authorities, but the head master under whom he had served. At Oxford the candidates had two periods of two weeks of actual class teaching.

Mr. FORDHAM, as a County Councillor, asked for guidance from the Conference as to how they could best further the teaching of modern languages, and the mother tongue—whether by granting scholarships to be held abroad or by encouraging teachers from foreign countries to come to England.

Mr. PHILLPOTTS called attention to a scheme of training that he had prepared for distribution among members.

Mr. LYTTELTON said he had been converted by Mr. Bell to one in place of two terms of student-teachership. He saw too that certain checks were needed to prevent head masters taking too great a share in the work of training. The two terms of University training should embrace visits to schools of various types, not necessarily close at hand.

Financial and other Economic Questions connected with Training as affecting (a) Local Education Authorities.

A paper was read by Mr. H. HOBHOUSE, M.P.

The training of teachers will be a material matter among the duties of the new Local Education Authorities in the event of the Education Bill passing into law. Hitherto little has been done, or has been expected to be done, by the Technical Instruction Committees of English County Councils towards the professional training of teachers. But they have given valuable assistance towards the instruction of both pupil-teachers and acting elementary-school teachers in various scientific and technical subjects. When, however, the County Councils become the Secondary Education Authorities, they will have to face the question of professional training, and (to quote Section 2 of the Bill) "take such steps as seem to them desirable after consultation with the Board of Education." But their funds available for higher education will, in most cases, be so limited, and the new calls on them so pressing, that some County Councils will probably shrink from the task unless they have a strong lead from the Central Authority or from an enlightened body of public opinion. There is, anyhow, considerable risk of their confining their operations to the more numerous, and as a rule more needy, class of teachers in elementary schools. It becomes, therefore, of importance to see what can and ought to be done in higher directions.

Here let me say that I do not propose to deal with the question as it will present itself to the Councils of large cities, where the problem is a simpler one, and where the excellent example of the London County Council, working in co-operation with the London University, will probably be imitated. My attempt will be rather to show how the Council of an ordinary county can best contribute to the end we have in view.

First, then, as to the probable cost. Judging from the few figures I have been able to collect, the charge for professional training in a University college may be estimated at £15 for the session, and the *minimum* boarding charges at a hostel at £45 for a man and £35 for a woman. Thus, the cost of a year's training and residence will be at least £60 and £50 for men and women respectively, without reckoning anything for dress or travelling expenses or recreation, or allowing for the loss of any salary which might have been earned during the year. A year's training will probably suffice for either graduates or well educated non-graduates, if they give their whole time to the work of professional study. In any case, a high standard of general education will, no doubt, be required as a preliminary to the award of any County Council scholarship, such standard being necessary to qualify the trained teacher for admission to Column B of the Register.

County scholarships for training might be awarded either (1) to acting teachers, who would usually be chosen from the junior members of the staff of the secondary schools within the county, or (2) to senior county scholars who have just completed their three years' degree course at a University or a University college. As time went on, the demand for training acting teachers would gradually diminish, and public assistance might be confined to completing the education of the county scholar who desires to become a secondary-school teacher. But, at first, it will be only fair to assist some of the poorer and more promising assistant masters and mistresses to obtain a proper position on the Register. They will, of course, require less practical training than the ordinary scholar, and have more time to devote to the theory and history of education. Such a policy will, moreover, make it easier for a County Authority to gradually require a certain proportion of registered teachers on the staff of every aided school.

It is difficult to estimate the number of training scholarships likely to be awarded to secondary-school teachers in any particular county; but, considering the more pressing demands on the ratepayers in other directions, and especially for training elementary teachers, it is not likely that this number will be large. Possibly in a county of average size (like my own) we might be able to train twenty elementary teachers

and two secondary teachers at a time, though this must be regarded as a mere conjecture. But, obviously, the number to be trained will depend to a large extent on the amount of the scholarship to be offered. Teachers without private means cannot be expected to give up a salary and devote a year to training, unless they have all their expenses paid, say, at least, £70 to £80 a year for a man, and rather less for a woman. Others, who have some savings, but who are not well-to-do, might perhaps be aided by bursaries of half that amount. In some cases the governors of an endowed school might be willing to aid a promising member of their staff by meeting a county grant, or by guaranteeing that he should be replaced, when trained, in his old position with an improved salary. In this and other ways there might well be co-operation between the County Authority and the governing bodies of recognized schools.

It is not part of my subject to deal with the arrangements for the reception of teachers at University colleges, but it is clear that the County Authorities must have cognizance of these arrangements, and must see that proper hostels are provided, at any rate, for the women teachers in training. In some cases it may be desirable, or even necessary, in order to start a hostel for secondary teachers alone, that a group of counties should combine to guarantee (say) at least two scholars a year from each county for a limited number of years. If the number guaranteed were proportioned to the population and ratable value of each county, it would secure a certain amount of uniformity of system.

This brings us to the greatest difficulty in the way of a local system of training, where there is no specific obligation thrown on any locality to take its due share of what is properly a national, and not a local, task. Unless the Board of Education can, in exercise of its powers of consultation and advice, induce each of the new Local Authorities to contribute proportionally to the training of teachers, many agricultural counties may shrink from the burden. They will, with some reason, anticipate that the trained teacher will prefer the more highly paid posts available in the large towns, instead of returning to the smaller schools of the county which has aided him. Possibly this danger may to some extent be safeguarded by only awarding training scholarships to those who will bind themselves to work for a time within the county or a group of combined counties. But it would clearly be unfair to exact, and well-nigh impossible to enforce, such a guarantee, except for a strictly limited time and within an area of sufficient size, to give adequate chances of promotion. In short, it will be found difficult to organize satisfactorily a local system of training teachers of any grade, unless the Government are prepared to offer substantial inducements to Local Authorities to take up a task which ought by rights to have been borne by central rather than by local funds.

Mr. W. EDWARDS said that, so far, all the University of Wales had done was to arrange for a diploma for graduates after a year's training on the secondary side of the normal department. He deprecated residential colleges for secondary teachers whether at the University or elsewhere. He wished to see established in every University a strong Chair of Education and an educational tripos.

The Rev. W. H. MOSS upheld training schools either in connexion with the Universities or in great cities. It would be a mistake at this stage to attempt too strict definition. Details should be left to be settled between the head masters and the principals of the training colleges. Not many head masters would be induced in the first instance to take student-teachers, and there was undoubtedly a strong body of feeling in public schools against the movement.

Prof. ARMSTRONG, as the only member of the Conference engaged in the training of secondary teachers, urged that variety of method was essential to the success of the movement. The primary schools should furnish a warning against the dead hand of uniformity. The workshop method was the method of the future. What did present teachers or trainers know of it? Scarcely a teacher had been taught the very elements of the scientific method. A distinct tripos of education should be established, as in the case of engineering, and a professional bias given to the University course of the intending teacher. Experience must be gained in the school itself, not in the artificial atmosphere of the model school.

Mr. LEE WARNER complimented Mr. Hobhouse on his late promotion. The King, in honouring him, had honoured education. In his own county, Norfolk, they had done what they could to promote training by augmenting the allowance of King's scholars, till they were warned that it was not lawful to help in the training of pupils for their profession. No County Council, he felt sure, would shrink from the effort to give effect to the permissive clause of the new Bill; but with a vote limited to 2d. it would be very difficult to provide all that they needed. He recalled his experiences as a young Rugby master under Dr. Temple—how the future Primate had put his pen through a set of history questions he had carefully prepared—"All these questions are too hard"—and how he had once exclaimed when hearing the speaker give a lesson: "How you do frighten your boys!" (the fact being he was rather frightened himself); but an ordinary head master had neither the knowledge nor the authority to deal thus frankly with his assistants. He hoped they should not see an eruption of local training colleges.

(b) *Governing Bodies and Head Masters.*

The Rev. R. D. SWALLOW read a paper. The branch of the subject entrusted to him was the most difficult, in so far as there was no basis of experience on which to build. Neither governors nor head masters had ever seriously faced the problem of student-teachers. Secondary schools might be divided into five classes, though, he regretfully confessed, the classification was mainly social. Each class demanded a different sort of teaching, and consequently a different training for their masters. Therefore a national practising school, such as was recently advocated in the *Times*, would not meet their need. It remained, then, that, unless the training college system was to be accepted, a pressure—almost coercive—must be put upon head masters of schools of every type to undertake the work, and that it must be done under efficient supervision of the Board of Education. There must be a chief inspector to organize the whole system, with masters of method under him—one or more for each county. In the case of poor schools the State must step in and pay, or partly pay, the student-teachers' fee. As to internal organization, in London and populous districts like the West Riding, within easy reach of a training college, no difficulty would arise. In other cases they must depend on masters of method. These would inspect, advise, but not control. The autocracy of the head master must be safeguarded. Every head master of a school recognized for the purpose should have a right to appoint two student-teachers, and to every assistant master of seven years' standing should be allotted one, provided that there is never more than one student-teacher to every fifty boys. The minimum fee should be £25 in a day school and £75 in a boarding school. Care should be taken to prevent the exploiting of student-teachers. Serious difficulties will have to be faced in the reluctance of governing bodies and of head masters to adapt their schools for the purpose, and in the unwillingness of parents to submit their sons to 'prentice hands. The head master, moreover, will have to "suffer fools gladly" if he is to maintain the authority of the student-teacher in the presence of a form of English schoolboys. His heart would not leap up within him at the sight of a student-teacher as Dean Stanley's did at the sight of an undergraduate.

Archdeacon BROOKE said that in the schools with which he was most conversant—small grammar schools with inadequate endowments—there was no possibility of meeting any call on their resources to provide for the training of teachers. As it was they were unable to pay their assistant masters an adequate wage. The only suggestion he could offer was to lessen rather than increase the number of existing schools, to get power to deal with local endowments and establish in their place central schools. The smaller schools were wholly unfitted to receive student-teachers, and should not be recognized.

Mr. FINDLAY regretted Mr. Swallow's attempt to formulate a settled plan. A travelling master of method was the most fatal arrangement that could be conceived. A master of method should never, with his consent, set foot in the school, if only because he was, and would be, mistrusted by the staff. And not without reason, seeing that the chief recent reforms in the teaching of modern languages, science, and geography had been initiated by assistant masters. A paper on reforms in geometry teaching in the current number of *The Journal of Education* was an instance in point. To secure training they must trust to the profession itself. Schools, it was true, would try to exploit the student-teacher, but they would trust to the Board of Education to check them.

Mr. HUMPHREYS-OWEN, M.P., as Chairman of the Central Welsh Board, bore out Archdeacon Brooke's complaint both as to the multiplicity of schools and the inadequacy of salaries. In Wales they had between seven thousand and eight thousand scholars in ninety-five schools. In spite of the ½d. Treasury grant to meet an equal county rate, they were hampered at every turn by lack of funds, and the salaries they could afford were wholly inadequate. It was astonishing to him how they secured such admirable material at so low a price. The only explanation was the initial enthusiasm aroused by a national system of secondary education. What they must aim at was to get the grant increased, and to get it released from the condition that now restricted it to one side of secondary education. This gave too entirely a scientific ply to the curriculum. The speech of Mr. Chamberlain at University College School held out hopes of larger State aid and larger liberty.

Prof. ADAMS said that education as a science contained one uniform and one variable element. The subjects as subjects to be taught and the boy as a pupil were constant factors. There must be one theory for all. But there must be difference of practice in different schools.

Dr. BODINGTON said their chief difficulty would be to find a sufficient number of recognized schools. The County Councils had it in their power to do a great service by renewing a scholarship for a fourth year in the case of student-teachers. This would be a far better plan than the creation of special scholarships.

The Rev. J. B. BLOMFIELD hoped that in any plan private schools would not be overlooked, and that it would be made clear that scholarships could be held in them.

(c) *Candidates for Masterships.*

A paper was read by Mr. J. L. HOLLAND. He drew a parallel between the England of to-day and Prussia in 1890, when the *Seminar-*

year for all secondary teachers was imposed. Then in Prussia the teacher market was glutted. So it was in England in 1896, when a similar Conference sat at Cambridge. But there is no such glut to-day. "There was never a time when the teaching profession was less attractive than now," so wrote a leading head master, and a crowd of witnesses were produced to bear him out. The chief cause was the low salaries that prevailed. The average salary of assistant masters in the Welsh intermediate schools was £125, and this figure might be taken for England. In the Eastern counties it was considerably lower. The consequences were disastrous: not only were the best men not attracted, but there were constant changes in the staff. The prospect for an assistant master was a bare pittance while engaged, and no pension for old age. Another deterrent was insecurity of tenure. Men would not enter a profession where they could be dismissed at the pleasure of an individual. The only remedy was to bring more money into our schools. This must be done, not by diminishing the salaries of head masters, but by levelling up. School fees must be raised.

Mr. F. STORR, like Burke's friend, said ditto to all Mr. Holland's remarks. On one single point he ventured to differ. He would cut down the salaries of the great head masters, not on economic grounds, but because it suggested a disparity of status that worked disastrously. In Prussia the most highly paid head might receive £500, and his senior assistant would get £450. In England the retiring pension of a head master was larger than the salary of any assistant, and it was the exception for an assistant to receive any retiring pension. As to the dearth of candidates for masterships, he quoted some striking statistics furnished by Messrs. Gabbitts. The remedy was to be sought not in making the conditions of entrance easy, but in raising the status of the profession. In the medical profession that had been done—seven years were required of a University medical student before he could practise—and fees had risen accordingly. He was a fanatic for training; yet, if he had to choose between the horns of a dilemma, he would rather forego the training than see the proper University course for teachers reduced from three years to two, or classmen converted into passmen. The first step was to make teaching a profession. In the words of a great teacher, himself a cleric: "The first condition of a good teacher is that he should be a teacher and nothing else; that he should be trained as a teacher and not brought up to some other profession. In a word, the schools will never be better as long as the schoolmasters are theologians by profession."

Sir OLIVER LODGE again presented a *résumé* of the discussion. (1) A short period of apprenticeship in a recognized public school should be interjected during the training course—not more than one term. (2) The theoretical aspect of educational science, illustrated, but not superseded, by experimental lessons, should be emphasized at University training colleges, and no training should be considered complete without some residence at a University. (3) There were two methods of aiding teachers in training to bear the expense of their college period: (a) by direct subsidy from central or local funds, with, if possible, adequate control and guarantee that the opportunities thus afforded should be subsequently supplied, a method which must necessarily put some incompetent person through a process not really useful or repaying to the country; (b) by employing public funds to increase the salaries of assistant teachers who had properly qualified themselves, and then leaving it to the normal instinct of parents and youths to undergo the expense of preparation for the teaching profession as for others, aided in exceptional cases by county or Government scholarships. (4) If the salaries were not raised, and the profession made in other ways more attractive, there would be a dearth of candidates, and any profession which did not attract good men, over whose entrance door a shadow hung, was badly in need of reform. He confessed that (3) rather formulated his own views than the sense of the Conference.

Dr. SCOTT said that there was another side to the question that had been overlooked both by Mr. Holland and Mr. Storr. Schools were made not for the head master or the assistant, but for boys. He agreed that schools ought to be amalgamated. The difficulties with which he had had to deal had arisen not from conditions of tenure, but of finance. In his own school the average salary was 40 per cent. higher than what had been quoted. He pointed out that the Order in Council for Registration did not admit of Mr. Bell's scheme. He hoped that the Board of Education, in whose hands lay wholly the recognition of schools, would allow only schools at large centres of population, large boarding schools and a few smaller schools which laid themselves out specially for the work. If this were done, the two systems of a University training college and student-teachership might be fairly compared. He hoped that this Conference would result in the appointment of a Training Committee.

Sir JOHN GORST rose to propose a vote of thanks to the Vice-Chancellor, the Secretaries of the Conference, and their entertainers. All present were agreed that, by training, teaching might be made more effective, but training was still in the experimental stage, and the precedent of elementary teachers' training showed that its effect might be to improve some and spoil others. He hoped that the duty of organizing methods might be left in the hands of the Universities rather than of Authorities either Central or Local. But, if the Universities are to remain at the head of the movement, they must be progressive. Teaching of all

professions was the most apt to be conservative; there was here no danger of over-activity. A good deal of revolutionary probability hung about the profession. They might be on the eve of a very great change, the renaissance of the workshop method, but in initiating this new movement he was inclined to trust the Universities rather than the revolutionary zeal either of the assistant masters or of Prof. Armstrong.

The vote was seconded by Mr. BELL, supported by Mr. WARREN, and passed with acclamation.

ASSOCIATION FOR PROMOTING EMPLOYMENT OF HIGH-SCHOOL GIRLS IN ELEMENTARY-SCHOOL WORK.

A PUBLIC MEETING in behalf of this Association was held in the Westminster Town Hall on November 12, the BISHOP OF ROCHESTER in the Chair.

The CHAIRMAN expressed his strong sympathy with the object of the Association as one effort among many that were being made to counteract the separation of different classes of society, which was stronger in England than in any other civilized country of Europe. By carrying the advantages of higher education down to the lower classes they were using one of the great normal forms of influence and tapping a vein of real gold that had hitherto been very imperfectly worked. The difficulty with which they had to contend was mainly social. For a girl of the upper classes to take up the position of a primary teacher would, not long ago, have been regarded as a social degradation; and this prejudice, though less strong than it was, still existed, especially with the mothers. They must trust to the innate democracy of Christianity, a democracy that sought to level up, not to level down, to overcome it. Those who tried to cross this line of social demarcation would be the teachers who would bring to primary education what was best and most humanizing—the visionaries in the best sense of the word. The chief objection urged against the scheme was that they were threatening existing interests. But no attack was intended on the present teachers of primary schools. They were a body of whom he always spoke with honour as devoted public servants, and of some even with reverence. No one sought to deny the differences between higher and lower education, nor were the advantages all on the side of the former. Both branches would profit by the interchange; there would be a give-and-take of training on the one side and of culture on the other.

Resolution I., "That it is desirable to introduce as teachers into elementary schools women who had received a secondary education," was proposed by Mr. M. E. SADLER. This movement, as the Bishop had pointed out, was one case of application of a large rule of social policy, one of the great changes in public opinion that come across a nation. The description of the schoolmistress in Crabbe's "Borough" showed that his generation had no notion as to what should be the equipment of a teacher. It was only in recent years, thanks mainly to the teaching of Pestalozzi, that we were coming to see that the training of children in their earliest years was a work of supreme importance, not only on its intellectual side, but the teaching of self-control, the formation of habits, the building up of character. For such a work no equipment could be too liberal. And, to guard against misconception, he would interpose the remark that the passing through a secondary school was of itself no guarantee of fitness. The main qualification was, after all, a love of children, a sympathetic understanding of children, which was a life-long process acquired partly by the actual work of teaching. It had been part of his official duties last year to select teachers for the concentration camps, and he had been delighted to see how many girls educated in secondary schools had volunteered for this work and taken hold of their arduous duties in a simple, brave way. To educate properly even the youngest children teachers must have a large reservoir of knowledge to draw upon. One subject ran into another, e.g., drawing, modelling, measuring led up to mathematics, as shown in the life of Pascal. Again, children were prone to ask questions, irrelevant it might be at first, but often how pertinent! To be able to answer these questions or say that you cannot answer with dignity requires deeper knowledge than the bulk of primary teachers now possessed.

Sir CHARLES ELLIOTT, in seconding, dwelt on the financial aspect of the question. The modern girl wished to strike out an independent line of life, but this particular line had failed hitherto to attract her. She preferred to be a governess, though the market was overstocked, and an advertisement for a governess produced two hundred and fifty answers, while one for a cook produced only two. Under the London School Board an assistant mistress (certificated) began at £80 or £85 and rose to £140; a head mistress began at £140 and rose to £300. The chief deterrent was the dread of uncongenial society; but among London School Board mistresses there was an increasing number of cultured women, and the more this movement spread the less would the objection become. A more serious obstacle should be fairly faced—the great physical strain of standing before a large class for five hours and a-half for five consecutive days a week. None but girls of strong physique

should attempt it. There were two ways of entering the profession—as a graduate with a teaching diploma, or as a pupil-teacher, and of these he, with Mrs. Bryant, preferred the latter. Sir John Gorst's sneer at "child drudges" certainly did not apply to pupil-teachers under the London School Board. These had, if anything, too little practice in teaching: they were well taught themselves and well paid—£16 in their second and £24 in their third year of apprenticeship. The complaint he heard from head mistresses was that secondary teachers had not the gift of discipline, and he believed that the old-fashioned way of pupil-teachdom was the best way of acquiring this.

Miss M. HUNTER, Head Mistress of Girls' Department, Higher-Grade School, Ilford, considered that the jealousy that was undoubtedly felt by some primary teachers was caused by the superior airs that secondary teachers gave themselves. In towns there was no social difficulty; in the country oil and water would not mix.

A paper by Miss HYDE, head mistress of a voluntary school, was read by the Hon. Secretary, Miss MERIVALE. She deprecated false sentiment—engaging in the work as if it were a mission. Much the same mental qualities were required in both classes of teachers, and the pay was at least as good; only the work was harder and the holidays shorter.

Resolution II., "That steps be taken to increase the powers for usefulness of this Association," was proposed by Miss BISHOP. The work of teaching was fundamentally one and indivisible. St. Gabriel's College, of which she was the Principal, was now in its fourth year, and had sent out two generations of trained teachers. The college began with thirty-two students, five of whom had received a secondary education. These five were now all employed. In the second year they had ten non-elementary out of sixty-nine students. Of these, five were retained for a second year of training, but the other five had all obtained posts. She insisted on the necessity of a full course of training, and this must not be got at the expense of general education. A girl removed from a high school at fifteen or sixteen could not be said to have received a secondary education. The bulk of primary teachers must always, of necessity, have received their education in primary schools, but the more cultured teachers who had gone through a high-school course might prove the leaven that would leaven the whole lump.

The motion was seconded by Sir JOSHUA FITCH, and a vote of thanks to the Chairman, proposed by Mr. F. STORR, ended the proceedings.

It was stated that the whole income of the Association, inclusive of the fee charged to applicants, is under £20. Subscriptions should be paid to the Hon. Secretary, the Rev. W. J. Frere, Stanway Rectory, Colchester.

THE PARIS INTERNATIONAL GUILD.

By CLOUDESLEY BREKETON.

THE Franco-English Guild, which has lately changed its name to the International Guild, has grown out of all knowledge during the last few years. Yet its commencement was on the most modest scale. In the autumn of 1891 its foundress, Miss Williams, held a drawing-room meeting of some dozen ladies with a view to founding an English library. The idea was favourably received, and the society started with ten members. Every month a literary *soirée* was held. New recruits were constantly joining, and Miss Williams's drawing-room soon became too small to accommodate the association. At this moment the Ministry of Public Instruction came to the rescue, and lent the society first one and then two rooms at the Musée Pédagogique. The *soirées* grew in importance, and in some cases blossomed out into regular courses of lectures. The English and American Embassies warmly supported the movement, Lord Dufferin and the American Ambassador each delivered several addresses, and since then the Guild has been lectured to by a large number of distinguished English educationists, such as the Bishop of Ripon, Miss Hughes, Mrs. Sidgwick, Mr. P. A. Barnett, &c. The number of adherents has been constantly increasing. From ten in 1891 they rose to seventy-nine in 1894, and at the present time are nearer four hundred than three hundred. The library has grown in the same rapid fashion. During the last two years the Guild has again shifted its quarters, and is now housed in No. 6 Rue de la Sorbonne, alongside of the University itself. With ample space at its disposal, it has been able to add to its attractions a reading-room and rooms for tea and lunch, as well as an "exchange room," in which English-speaking students may exchange lessons and converse with French members of the Guild. Those who are attempting to learn, or have learnt, a foreign language will appreciate this new departure. One of the chief obstacles

in mastering a foreign language is to find sufficient opportunities for practice in speaking. This system of exchange-lessons in the two languages, further, gets over the financial difficulty entailed by the cost of having to pay a retaining fee to some unfortunate person for the right of inflicting one's conversation on him, while the mere exercise of teaching one's own language is by no means to be regarded as a pure loss of time, affording as it does a valuable insight into the language, thought-forms, and racial idiosyncrasies of the would-be learner. On the social value of such mutual arrangements it is unnecessary to dilate here.

Another useful side of the Guild's work is the keeping of a register of French homes and boarding houses, which, being under the direct control of the Guild, offer guarantees that are lacking in the ordinary *pension*, in which far too often the foreign boarder is fleeced or neglected. But all these advantages are merely subsidiary to the main object of the Guild, which is to provide a full course of instruction in the French language, literature, and history, by professors of the highest University standing. Composition, both free and from the English, is taught by Mlle. Clanet, an *agregée d'anglais*. Other subjects in the course are modern and historical French grammar, French literature and history, and contemporary life in France. A special feature is made of pronunciation and phonetics, instruction being given by Mlle. Roussey, pupil of the celebrated Abbé Rousselot, Director of the Phonetic Laboratory at the Collège de France, who himself examines the students at the end of each term. The courses of the Guild are specially directed towards obtaining the *certificat d'études françaises*. The examination is conducted by M. Ernest Dupuy, *Inspecteur-général*, and two professors of the Sorbonne. This diploma is granted to students who are found capable of teaching French in English-speaking countries. The terms of membership are extremely moderate. The yearly subscription for use of rooms amounts to 10f.; for library, monthly meetings, and general lectures, 20f.; while the fees for all the classes amount to about 225f., or £9 a year for a session of thirty weeks. Originally confined to women, the Guild was induced a year ago to throw open its doors to men, with the happiest results; while the large number of German and Russian students who have since been enrolled has made it change its title to "International." Lately the Registration Council has recognized the Guild as a "foreign college" at which teachers who want to be registered may finish their University course, and more recently still the University of Chicago has declared the Guild "to be in co-operation with the University of Chicago," which means that the time spent in attending the Guild's regular course of lectures may count as a means of qualifying for the University's degrees. Those who have realized the superiority of well arranged holiday courses over the solitary *pension* life *en famille* will readily recognize the corresponding superiority of the advantages offered by the above institution over those of the holiday courses. It provides by means of its system of exchange lessons the one factor in which the holiday course, owing to no fault of its organizers, is generally the least satisfactory. Its lectures, being split up into classes for easy or advanced work, should appeal to students of every kind. Not only the *tiro* in French, but even those who have obtained a modern language degree in England, may greatly profit from them. The latter will find in the really modern and literary teaching of the Guild a valuable supplement to somewhat excessively academic and philological training they have received in England.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

THE Council met on November 6. Present: The Rev. Canon the Hon. E. Lyttelton, Chairman; Mr. A. T. Pollard, Vice-Chairman; Mr. J. W. Adamson, the Rev. J. O. Bevan, Mr. H. Courthope Bowen, Miss H. Busk, Mr. R. F. Charles, Mr. G. F. Daniell, Miss F. Edwards, Miss E. Gavin, Miss M. Green, Mr. J. R. Langer, Mr. J. W. Longsdon, Mr. H. A. Nesbitt, Miss E. Newton, Miss K. Stevens, Mr. F. Storr, and Mrs. J. S. Turner.

It was decided that it is desirable that the limiting words "not being an elementary school" should be expunged from the Order in Council of March 6, 1902 (Teachers' Registration).

The applicants for membership were elected, viz.:—Central Guild, 7; Branches: Brighton and Hove, 1; Dublin and Central Irish, 1.

The sum of 2 guineas was voted as the third and final contribution to the expenses of the Joint Committee on Training, on which the Guild has been represented from the first.

Miss Maitland, Somerville College, Oxford, and Miss H. Busk, the representatives of the Guild on the National Council of Women at the Conference of the National Union of Women Workers, held at Edinburgh in October, presented their report on the proceedings of the Conference and Council, in so far as they had to do with education. A vote of thanks for their attendance and report was unanimously passed.

Mr. G. F. Daniell was added to the Political Committee.

Mr. F. Storr was appointed Hon. Librarian in place of Mr. John Russell, resigned.

The Museum Committee was reappointed, with an instruction to report to Council at their next meeting on December 13.

A vote of condolence with the family of the late Dr. J. H. Gladstone, F.R.S., a Vice-President and an original member of the Guild, was passed.

The representatives of the Guild on the Committee of the Joint Agency for Women Teachers presented a report.

The Legal and Professional Advice Committee reported that they considered that it is desirable that a pamphlet should be prepared giving legal and professional advice, and suggested the following as specimen headings of the sub-divisions of the subject:—(a) Introductory; The Common Sense of the relations of Governors, Heads of Schools, and Assistants. (b) Engagements. (c) Dismissals; Cases that justify Instant Dismissal. (d) Principals of Schools under Schemes. (e) Relation of Heads of Schools to Governors. (f) Recovery of Salaries. (g) Absences through Ill-health and Substitutes. (h) Questions of Infection. (j) Specimen Forms of Simple Agreements. They also recommended that a notice should be put in the *Teachers' Guild Quarterly*, for December, inviting further suggestions from members of headings or details upon which instruction is needed, to be sent in before January 31, 1903.

It was also recommended that Mr. G. W. P. Mellor, B.A., (of the firm of Messrs. Busk, Mellor, & Norris, solicitors, Lincoln's Inn Fields,) and Mr. W. Trevor Walsh, B.A., (of the Mercers' School,) be invited to join the Committee, and that, for the purposes of the Pamphlet, a head master, a head mistress, an assistant master, and an assistant mistress in a private school, and an assistant mistress in an endowed school, be added to the Committee, with voting power.

The report was adopted, and the Committee were asked to draw up an article for the *Teachers' Guild Quarterly* early in 1903, stating what we are attempting and suggesting heads.

A report from the Thrift and Benefits Committee was received and considered. The Committee had been instructed to consider and report on the Pension Scheme of the Central Welsh Board, but reported that, in view of the fact that the scheme had not been adopted by the County Governing Bodies in Wales, whose support is essential, they had not pursued the consideration of it, but concurred with the view of their Chairman (Mr. E. Brabrook, C.B.) on the subject, communicated to them in a letter, owing to his unavoidable absence. On the general question, however, they agreed to recommend: "(1) That it is desirable, in the interest of efficient national education, that all school teachers, whether engaged in elementary or in other grades of education, should receive such salaries as may render it possible for the Board of Education to order such deductions from such salaries as shall secure for such teachers suitable pensions. (2) That the opinion of members of the Guild on this resolution, as a matter of principle, be sought through the *Teachers' Guild Quarterly*, and that the matter be then referred to your Committee for further consideration and report, especially on the question of the mode of providing such increase, and on the best form of necessary central control." The report was adopted.

The Modern Languages Holiday Courses Committee reported on the courses held at Tours, Hontleur, and Santander in August. It was recommended that the courses in the three centres be repeated in 1903, and it was announced that preliminary negotiations were on foot with a view to the establishment of courses at Jena and at Kiel, or at one of those centres. The report was adopted.

The following circular was issued after the adoption of the report:—

The Sixth Series of Holiday Courses for which the Guild has been responsible has proved thoroughly successful from the point of view of the Committee whose special duty it is to organize them, and also, it is believed, from that of the students who were present at the various centres. The multiplication of similar undertakings under other management, since the first starting of the courses by the independent Committee which transferred their organization to the Guild, has not produced any results to discourage the Council. On the contrary, the full number of students allowed for at Hontleur was reached, and at Tours there was an attendance higher than on any previous occasion. The Spanish Course was a fresh experiment this year, and, though the attendance was small (six persons), the experience of those who took part in it was so favourable that a repetition has been arranged for 1903.

The fees received from the Santander students were not sufficient to contribute anything towards the expenses of the English representative of the Committee, who gave his services without any reimbursement whatever.

As many as 36 County Council students took part in the French Courses, viz.: from the West Riding of Yorkshire, 20; from Derbyshire, 5; from Surrey, 2; from Berkshire, 2; from Cheshire, 1; from Wales, 3; from Bradford, 2; from Northumberland, 1.

The statement of accounts shows that the year began with the sum of £25. 11s. out of pocket, and ended, after payment of the full management fee to the Guild, with £3. 8s. in hand, towards the expenses of the year (October 1st, 1902—September 30, 1903) now running.

[The reports received from the English representatives, who took part in the local direction of the courses in France and in Spain followed here, but, as they were summarized in the Teachers' Guild Report in the *Journal of Education* for October, they are now omitted.]

STATEMENT OF ACCOUNTS, OCTOBER 1, 1901, TO SEPTEMBER 30, 1902.

[Summarized.]			
Dr.	£ s. d.	Cr.	£ s. d.
To Sale of Handbooks	4 14 6	By Debt to Guild at October 1, 1901.....	25 11 0
" Fees from Students at Tours	76 13 0	" Fees to Professors—Tours	51 2 0

Examined, compared with Vouchers, and found correct,
October 24, 1902. H. A. NESBITT, Hon. Auditor.

PRELIMINARY ANNOUNCEMENTS FOR 1903.

Courses, lasting from three to four weeks, will be held in August, 1903, at Tours and at Hontleur, and also at Santander, if a sufficient number of entries is received. The representatives of the English Committee for Tours will be Mr. E. C. Fisher, M.A., Cranbrook School, Kent, and, for Hontleur, Mr. E. W. Hensman, M.A., Head Master of the Rawlins School, Quorn. The representative for Santander has not yet been chosen.

A circular giving particulars and lists of books to be read in preparation for the courses will be ready in January next, and a handbook, price 6d., post free 6½d., giving fuller details and final arrangements, in May. The courses in each centre will be graduated to suit the relative proficiency of the students. To prevent disappointment, it is necessary to point out that all students should have a fair knowledge of the grammar of the country visited, and be able to read its literature with some facility, if they are to derive profit from the courses.

Reports were also received from the Finance Committee and from the Holiday Resorts Committee, and adopted.

The Organizing Committee met on November 20 to receive a report from the General Organizing Secretary on visits which he had recently paid to Bedford, Cambridge, Worcester, and Malvern, with a view to the formation of Branches in those centres. He reported that there were good prospects in all of these places, the leading teachers having expressed themselves willing to co-operate. It was recommended that he be instructed to visit Coventry, Leicester, Warwick, Leamington, and Nottingham, for purposes of organization early in 1903.

He informed the Committee that the following persons had consented to act as Local Correspondents of the Guild:—At Liverpool, Miss Maria Davies, 3 Falkner Square; at Uppingham, Mr. Horace Puckle, M.A., Uppingham School; at Saffron Walden, Miss J. M. Dunlop, the Training College; at High Wycombe, Miss Dove, Wycombe Abbey; and at Eastbourne, Miss M. E. Vinter, Math. Trip. Camb., Langland College.

The draft of a new abridged Prospectus of the Guild was settled for recommendation to Council for publication.

The following arrangements in the London Sections of the Central Guild for the year 1903 have already been made:—

January 28, 8 p.m.—Sections D and E. Lecture, "The Modernizing

of Modern Language Teaching in England," by Prof. Victor Spiers, B. ès L., M.A., King's College, London, Examiner to the College of Preceptors, at Notting Hill High School, 1 Norland Square, W.

February 4, 7 p.m.—Section A. Annual general meeting. To be followed by social meeting and entertainment at the Drapers' College, Tottenham.

February 6, 7.30 p.m.—Section G. Lecture at Aske's School, Hatcham, S.E. (Subject to be announced later.)

March 6, 8 p.m.—Conjoint meeting. Lecture on "Tennyson," by the Rev. A. Boyd-Carpenter, M.A., in the Botanical Theatre, University College, Gower Street, W.C.

March 13, 7.30 p.m.—Section G. Lecture on "Humour," by the Rev. Claude Tickell, M.A., at the Rev. A. F. Ryder Bird's School, Honor Oak Road, S.E.

March 19, 7.30 p.m.—Section A. Lecture on "Co-education" by Mr. John Russell, M.A., Head Master of the King Alfred Society School, Hampstead, at Mrs. Watkin's, The Ferns, 133 Green Lanes, N.

Prof. W. W. H. Hudson, M.A., King's College, London, is giving his course of free Saturday morning lectures on "The Teaching of Mathematics," to teachers, at 10 a.m., at the College, on alternate Saturdays. The course began on October 18, and will be continued after Christmas. The lectures include a recapitulation and continuation of those given previously on teaching arithmetic, geometry, algebra, and trigonometry. The object of these lectures is to help those who are practically engaged in teaching and wish to become acquainted with modern methods and improvements in order to render their teaching more effective. Attention will be paid not only to the general principles of the subject, but also to points of detail; and difficulties suggested by members of the class will be discussed. Teachers should send in their names, together with a statement of the teaching in which they are engaged, as soon as possible, to Prof. Hudson, 15 Altenburg Gardens, S.W.

Mr. J. W. Adamson, Lecturer on Education in King's College, London, is also holding a free course, in the College, on "Comenius, and the Beginning of Modern Educational Theory," on alternate Saturdays, from October 11, at 11.30 a.m. (to be continued after Christmas). Tickets admitting to the course may be obtained on application to the Secretary, King's College, London, W.C. Applicants are asked to name the schools in which they serve.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.]

THE next General Meeting is to be held, by kind permission of the Governors, at St. Olave's and St. Saviour's School, Southwark, on Saturday, January 10. The Executive Committee and the Council will meet on the previous day. One of the distinguished preachers of the Church is to address the Association on the Saturday at a special service to be held at 10 a.m. in the Collegiate Church of St. Saviour's. All the arrangements for the General Meeting are not yet completed, but it is hoped that Mr. Wimberley, of Abingdon School, and Mr. Morshead, of Winchester College, will read papers, and we all know that meetings addressed by them cannot fail to be interesting. These are our "May" meetings, on the warmth of which we rely for welding still more closely the links which bind together the scattered Branches of the Association.

The problem of securing for the Branches their proper share in shaping and controlling the policy of the I.A.A.M. has presented difficulties not unlike those which beset the way to Imperial Federation. Great James Street is as far from Newcastle as Whitehall is from New Zealand. We doubtless have amongst us many a Chamberlain (some of them born as yet to blush unseen) without Mr. Chamberlain's opportunities of putting ideas into practice. Still, Mr. Holland, in the midst of multifarious duties, finds time for flying visits to the country. Not long ago he was at Leeds; he will shortly be heard at Cheltenham. Mr. Holland is a man who knows his own mind, has the art of letting other people know it, and contrives to convince or conciliate those who dissent from his views and to stimulate those who agree with them. His visits also enable him, as Chairman, to keep the Executive in touch with the country members. Perhaps we may be pardoned, therefore, if we say that this domestic experience makes us regard with a special degree of hopefulness the visit of the Colonial Secretary to the Branches of the Empire in South Africa.

It is needless to dwell at any length on Mr. Holland's valuable contribution to the discussions of the Conference on Training at Cambridge.

Never has the unsatisfactory position of assistant masters been described with more masterly moderation. Most of us fully realize the lowness of salaries and the insecurity of tenure from which we suffer, but probably few will read without surprise his estimate that not one in six of us can hope to become a head master; that only one man in twelve is holding a head mastership worth £300 a year; that only about one in thirty has reached a head mastership worth £500 a year. Then turn to the competition for these lucrative appointments, which we may illustrate by the cases of Whitchurch and Stockport, congratulating by the way two of our members, Mr. Crofts and Mr. Daniels, of Nottingham High School, on their election. From a contemporary we learn that for the post of Head Master of Whitchurch Grammar School there were a hundred and forty-six applicants, several from distant places like Buenos Ayres, Jamaica, and Geneva. At Stockport the applicants numbered more than a hundred and fifty. This rush for "the land of the Olympians," where one may dwell in security, is an ominous sign—a sign not of health, but of fever and fear. The expense of electing a head master is a matter for serious consideration, when one remembers the urgent need for economizing the small funds available for secondary education in England. It must have cost not less than £200, and possibly as much as £400 to elect these two head masters. Most of this has gone from the pockets of assistant masters into the pockets of printers, who have produced some twenty thousand copies of testimonials, now absolutely useless, even as Christmas cards.

The I.A.A.M. must very soon make up its mind on the question of student-teachership. To what extent, and in what way, must the services of the master be recognized to whom a student-teacher is attached? He should not be expected as a matter of course to impart as a free gift to others the professional skill which he has acquired by years of toil and trouble, even though the gift entailed no special effort. The effort will, in fact, be considerable. Mr. Holland reminds us in his address to the Conference on Training that the majority of masters "are working under conditions which doom them perpetually to fall below their proper standard of efficiency." They teach for twenty-five or thirty hours a week, and give from twenty-five to thirty-five lessons a week. It is impossible for a master to make careful preparation for each of these. He can, for the most part, only see that he knows his subject-matter, and for the rest trust to his acquired skill applied under conditions which ensure ease and spontaneity. Once admit the critical student-teacher, accompanied possibly by the head master, and the family party is disturbed—"there's a chiel amang ye takin' notes," and careful preparation becomes necessary to success. The strain would be intolerable. How should it be relieved?

BOARD OF EDUCATION.

THE first two names actually entered on the Register of Teachers—and, we believe, the only two up to this date—are Mr. F. C. Kitchener, late Head Master of the Grammar School, Newcastle-under-Lyme, and Mrs. Withiel, late assistant mistress in the Notting Hill High School for Girls.

THE Board has issued a List of Special Schools or Classes for Defective Children certified by the Board of Education. It is remarkable that the majority of these are in London—64 out of 115 for the whole country. The explanation is, of course, not that London has the larger proportion of lame, halt, and feeble-minded children, but that the London School Board is more alive to its responsibilities.

RULES for planning and fitting up public elementary schools have been issued as a Parliamentary Paper. It may be well to recall the minimum floor space per scholar insisted on by the Board—10 square feet in ordinary schools, and 13 square feet in higher elementary schools. We know of at least one great London secondary school which would wholly fail to satisfy these conditions.

ON November 20 a conference was arranged by the Board between the Consultative Committee and the Registration Council. The proceedings were private, but it is a safe prediction that the upshot of the Conference will be a supplementary Order in Council on Registration. Hard cases have arisen, and anomalies have been discovered which urgently need rectification and amendment.

SIR G. KEKEWICH finds himself in a strange condition of suspended animation. It has now been definitely stated that Sir George Kekewich formally resigns his post on March 31, 1903, and that Mr. Morant is until then Acting Secretary of the Board of Education.

(Continued on page 842.)

MACMILLAN & CO.'S LIST.

LATIN ELEGIACS AND PROSODY RHYMES FOR BEGINNERS. By C. H. ST. L. RUSSELL, M.A. Globe 8vo, 1s. 6d.
EDUCATIONAL NEWS.—"Thoroughly deserves our heartiest commendation."

THE POEMS OF OVID.—SELECTIONS. Edited by Prof. C. W. BAIN. With Illustrations. Crown 8vo, 6s.
EDUCATIONAL NEWS.—"The extracts are copious and carefully graduated; the matter is interesting, and the aids are both full and judicious."

AN ANCIENT HISTORY FOR BEGINNERS. By G. W. BOTSFORD. With Maps and Numerous Illustrations. Extra crown 8vo, 7s. 6d.
EDUCATIONAL NEWS.—"It is impossible to exaggerate the importance of this publication. It is altogether unique."

THE FIRST PRINCIPLES OF RATIO AND PROPORTION, AND THEIR APPLICATION TO GEOMETRY. By H. W. CROOME SMITH, B.A. Crown 8vo, sewed, 1s.
SCHOOLMASTER.—"We commend the book."

NEW EDITION NOW READY CONTAINING THE REPORT OF THE BRITISH ASSOCIATION COMMITTEE.

British Association Meeting at Glasgow, 1901.

DISCUSSION ON THE TEACHING OF MATHEMATICS. Which took place on September 14 at a Joint Meeting of two Sections. Section A—Mathematics and Physics. Section L—Education. Chairman of the Joint Meeting, the Right Hon. Sir JOHN E. GOEST, K.O., M.P., President of Section L. Edited by Prof. PERREY. To which is now added the Report of the British Association Committee, drawn up by the Chairman, Prof. FORSYTH. Crown 8vo, stiff boards. 2s. net.

UNIFORM WITH "THE BOY'S ODYSSEY."
THE BOY'S ILIAD. By WALTER COPLAND PERRY. With Illustrations by JACOB HOOD. Crown 8vo, gilt edges, 6s.

INTRODUCTORY CHEMISTRY FOR INTERMEDIATE SCHOOLS. By LIONEL M. JONES, B.Sc., A.R.C.Sc. (Lond.), Head Master of the Municipal Technical Day School, Birmingham. Globe 8vo, 2s.

ROYAL COLLEGE OF SCIENCE MAGAZINE.—"Excellent arranged, and described in detail. Its author has made an attempt also to unite the two branches of theoretical and practical chemistry, so long divorced, and, we may add, has succeeded admirably. . . . We welcome this primer of chemistry."

LIGHT FOR STUDENTS. By EDWIN EDSER, Associate of the Royal College of Science. Globe 8vo, 6s.

PRACTICAL EXERCISES IN HEAT: Being a Laboratory Course for Schools of Science and Colleges, suitable for Students of Physics, Chemistry, and Engineering. By E. S. A. ROBSON, M.Sc. (Vict.), Associate of Owens College, Manchester. Globe 8vo, 2s. 6d.

EDUCATIONAL NEWS.—"We have not met with any book of this kind so entirely suited to its purpose. We strongly recommend it to the attention of masters who have to teach this or kindred subjects."

APPLIED MECHANICS FOR BEGINNERS. By J. DUNCAN, Wh.Ex., A.M.I.M.E., Head of the Department of Civil and Mechanical Engineering at the Municipal Technical Institute, West Ham. Globe 8vo, 2s. 6d.

SCHOOL WORLD.—"The book is well arranged and suitable to the wants of teachers and students."

MACMILLAN'S SHORT GEOGRAPHY OF THE WORLD. A New Handbook for Teachers and Students. By GEORGE F. BOSWORTH, F.R.G.S. With Maps. Globe 8vo, 2s. 6d.

LONDON MATRICULATION (New Regulations).

English. **ENGLISH GRAMMAR, PAST AND PRESENT.** Specially adapted to the requirements of candidates for Matriculation. By J. C. NESFIELD, M.A. 4s. 6d. Key, 2s. 6d. net.

COURSE OF ENGLISH COMPOSITION. By J. C. NESFIELD. JUNIOR, 1s. 6d.; SENIOR. [In the press.]

Algebra. **ELEMENTARY ALGEBRA FOR SCHOOLS.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. Seventh Edition. 3s. 6d. With Answers, 4s. 6d. Key, 8s. 6d. Answers, 1s.

A SHORT INTRODUCTION TO GRAPHICAL ALGEBRA. By H. S. HALL, M.A. Sewed, 6d.

History. **HISTORY OF ENGLAND FOR BEGINNERS.** By ARABELLA B. BUCKLEY. With Maps and Tables. 3s.

HISTORY OF ENGLAND. By E. THOMPSON. 2s. 6d.

Optional **ELEMENTARY MECHANICS OF SOLIDS.** By W. T. A. EMTAGE, M.A. 2s. 6d.

Sciences. **MECHANICS FOR BEGINNERS.** By W. GALLATLY, M.A. 2s. 6d.

HYDROSTATICS FOR BEGINNERS. By F. W. SANDERSON, M.A. 2s. 6d.

ELEMENTARY LESSONS IN HEAT, LIGHT, AND SOUND. By D. E. JONES, B.Sc. 2s. 6d.

THE ELEMENTS OF CHEMISTRY. By IRA REMSEN. 2s. 6d.

INORGANIC CHEMISTRY FOR BEGINNERS. By Sir H. E. ROSCOE, F.R.S., and J. LUNT, B.Sc. 2s. 6d.

LESSONS IN ELEMENTARY CHEMISTRY. By Sir H. E. ROSCOE, F.R.S. 4s. 6d.

BOTANY FOR BEGINNERS. By ERNEST EVANS. 2s. 6d.

CAMBRIDGE LOCAL EXAMINATIONS, 1903.

The Gospel according to St. Luke. The Greek Text. With Introduction and Notes. By Rev. J. BOND, M.A. 2s. 6d. [Junior and Senior.]

The Acts of the Apostles. Authorised Version. With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d. [Junior.]

The Greek Text. With Notes. By T. E. PAGE, M.A. 3s. 6d. [Junior.]

Scott—Marmion and The Lord of the Isles. Edited by F. T. PALGRAVE. 1s. [Preliminary and Junior.]

Kingsley—The Heroes. With Notes by H. B. COTTERILL, M.A. 1s. 6d. [Preliminary.]

Shakespeare—Julius Caesar. With Introduction and Notes. By K. DEIGHTON. 1s. 9d. [Junior and Senior.]

Pope—Essay on Criticism. With Introduction and Notes. By J. CHURTON COLLINS, M.A. 1s. 9d. [Junior.]

About—Le Roi des Montagnes. Edited by Prof. WEEKLEY. 2s. 6d. [Junior and Senior.]

Sandean—Mademoiselle de la Seiglière. Edited by H. C. STEEL. 1s. 6d. [Junior and Senior.]

Schiller—Wilhelm Tell. Edited by G. E. FASNACHT. 2s. 6d. [Junior and Senior.]

Schiller—Wilhelm Tell. Edited by W. H. CARRUTH, Ph.D. 3s. 6d. [Junior and Senior.]

Nepos—Lives. Vol. I. With Notes and Vocabulary. By H. WILKINSON, M.A. 1s. 6d. (This Edition contains the Lives of Lysander, Alcibiades, Thersybulus, Conon, Iphicrates, and Chabrias.) [Preliminary.]

Cæsar—De Bello Gallico. Books II. and III. With Notes and Vocabulary. By Rev. W. G. RUTHERFORD, LL.D. 1s. 6d. [Preliminary and Junior.]

Livy—Book V. With Notes and Vocabulary. By M. ALFORD. 1s. 6d. [Senior.]

Horace—Odes. Book III. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d. [Senior.]

Virgil—Æneid. Book X. With Notes and Vocabulary. By S. G. OWEN, M.A. 1s. 6d. [Junior and Senior.]

Xenophon—Anabasis. Book II. With Notes and Vocabulary. By Rev. A. S. WALPOLE, M.A. 1s. 6d. [Junior.]

Æschylus—Prometheus Vincit. With Notes and Vocabulary. By Rev. H. M. STEPHENSON, M.A. 1s. 6d. [Junior and Senior.]

Æschylus—Prometheus Vincit. Edited by E. E. SIKES, M.A., and St. J. B. W. WILLSON, M.A. 2s. 6d. [Junior and Senior.]

Thucydides—Book VII. Edited by E. C. MARCHANT, M.A. 3s. 6d. [Senior.]

Thucydides—Books VI. and VII. Edited by Rev. P. FROST, M.A. 3s. 6d. [Senior.]

OXFORD LOCAL EXAMINATIONS, 1903.

Scott—The Talisman. Border Edition. 3s. 6d. [Preliminary and Junior.]

Shakespeare—Macbeth. With Introduction and Notes. By K. DEIGHTON. 1s. 9d. [Junior and Senior.]

Chaucer—The Prologue, &c. Edited by M. H. LIDDELL. 3s. 6d. [Senior.]

Works. Edited by A. W. POLLARD, &c. 3s. 6d. [Senior.]

Cæsar—The Gallic War. Edited by Rev. JOHN BOND, M.A., and Rev. A. S. WALPOLE, M.A. 4s. 6d. [Senior.]

Cæsar—Gallic War. With Notes and Vocabulary. Book IV. By C. BRYANS, M.A. 1s. 6d. [Junior and Senior.] Book V. By C. COLBECK, M.A. 1s. 6d. [Senior.] Book VI. By C. COLBECK, M.A. 1s. 6d. [Senior.]

Virgil—Æneid. Book VI. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d. [Junior and Senior.]

Horace—Odes. Books III. and IV. With Notes and Vocabulary. By T. E. PAGE, M.A. (Elementary Classics.) 1s. 6d. each. (Classical Series.) 2s. each. [Junior and Senior.]

Horace—Select Epodes and Ars Poetica. With Introduction and Notes. By H. A. DALTON, M.A. 1s. 6d. [Junior.]

Horace—Epodes. Edited by T. E. PAGE, M.A. 2s. [Junior.]

Xenophon—Anabasis. With Notes and Vocabulary. Book V. By Rev. G. H. NALL, M.A. 1s. 6d. Book VI. By Rev. G. H. NALL, M.A. 1s. 6d. [Preliminary.]

Euripides—Medea. With Notes and Vocabulary. By Rev. M. A. BAYFIELD, M.A. 1s. 6d. [Junior and Senior.]

Euripides—Medea. Edited by A. W. VERRALL, Litt.D. 2s. 6d. [Junior and Senior.]

Hauff—Die Karavane. Containing "Kalif Storch" and "Das Gespenster-schiff." With Notes and Vocabulary. By H. HAGER, Ph.D. 3s. [Preliminary.]

The Acts of the Apostles.—Authorised Version. With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d.

The Gospel according to St. Luke.—The Greek Text. With Introduction and Notes. By Rev. J. BOND, M.A. 2s. 6d.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET LONDON, W.C.

AT the instigation of the Board of Education the National Union of Teachers prosecuted an elementary teacher upon a charge of impersonation. His own certificate had been cancelled, and he had annexed another's. The sentence was imprisonment for one month as a second-class misdemeanant.

PROF. WINDLE has resigned his seat upon the Teachers' Registration Council, and Mr. J. F. Hope, M.P., has been appointed in his place by the President of the Board of Education. We regret the resignation of an able and energetic member (Prof. Windle still retains his seat on the Consultative Committee). We regret also that the appointment of his successor confirms the unsound principle of denominational representation on what should be a purely educational body.

THE appointment of Colonel G. Malcolm Fox, late Inspector of Army Gymnasias at Aldershot, to the post of Inspector of Physical Training under the Board of Education will be welcomed as a sign that physical training is to receive serious consideration.

PROF. WITHERS' serious illness, resulting from a slight surgical operation, will be a subject of general regret. In his enforced absence, Dr. Scott has acted as Chairman of the Registration Council.

THE President has re-appointed as members of the Consultative Committee all those whose term of office expired on September 30, with the exception of Sir William Anson (resigned), whose place is taken by Mr. T. H. Warren, President of Magdalen College, Oxford.

THE HON. LIONEL A. TOLLEMACHE writes to the *Spectator*: "A quondam teacher in a school tells me of an odd answer which she herself saw in an examination paper. Q. 'What do you know of the Atlas Mountains?' A. 'The Atlas Mountains run all round Africa, closely followed by the Pyrenees.' The following answer my informant heard only at second-hand, but on good authority:—Q. 'What do you know of the cedar-tree?' A. 'It has dark leaves, and the pencils hang on the branches.'"

A SUMMER COURSE OF NATURE STUDY.

UNDER the auspices of the Hartley University College, Southampton, a summer course of Nature study was held at Sandown, Isle of Wight, from August 2 to 16, 1902. The Brading School Board kindly placed their Higher Elementary School at Sandown at the disposal of the organizers, and, as the building is well fitted up and provided with a large central hall, lecture-rooms, and laboratories, it proved well adapted for the lectures and the indoor practical work.

Sandown itself is an ideal centre for Nature study. Close at hand are a rich sea flora and fauna, and the environs furnish an epitome of secondary and tertiary strata of England. The work of the course was divided into two parts. In the morning there was a lecture, followed by practical work on the subject dealt with in the lecture. The afternoons were devoted to excursions. During the first week five lectures were delivered on "The Structure and Functions of a Flowering Plant," treated in an elementary manner. The practical work consisted in the making of microscopical preparations of plant cells and tissues. During the afternoon excursions were made to places of interest in the neighbourhood, and the plants and animals studied in the living state.

Botanical excursions during the first week were conducted to Sandown Common, for bog and heath plants; to Culver Cliff, for chalk down plants; to Sandown Bay, for seaweeds; to St. Helen's, for sand plants; and in the vicinity of Sandown the cornfield flora was investigated. Students were advised not to make collections or long lists of scientific names of plants, but to devote their energies to the observation of biological phenomena of interest, such as the various processes of pollination, the adaptation of the plant to its environment, &c. One afternoon was devoted to a delightful visit to the Roman Villa at Brading. Subsequent to the geological lectures, excursions were made to Alum Bay (whole day), Sandown Bay, Whitecliff Bay, and the Landslip. The broader geological phenomena were considered, and the students' energies were directed to reconstructing the past physiography. The class was well attended, and the students came from all parts of England and Wales. They comprised one of His Majesty's Inspectors of schools, lecturers from training colleges, head masters and mistresses from secondary schools and elementary schools, and the assistant teachers from each kind of school. The course seems to have met the wants of the students in a thoroughly acceptable form. In some instances students received grants from their respective County Councils.

Messrs. J. M. DENT & CO. beg to draw the attention of Teachers to the following New Books, especially prepared for the CAMBRIDGE LOCAL EXAMINATIONS, 1903, which are mostly now ready.

ENGLISH TEXTS.

SCOTT'S LORD OF THE ISLES. Edited by W. KEATH LEASK, M.A. (Edin. and Oxon.). With Illustrated Biography, Introduction, Illustrated Notes, and Glossary. Crown 8vo, 1s. 4d.

KINGSLEY'S THE HEROES. Edited by OLIPHANT SMEATON, M.A., late Principal, Whangarei Grammar School. With Introduction, Notes, and Illustrations. Fcap. 8vo, 1s. 4d.

MILTON'S PARADISE LOST. Books V. and VI. Edited by FLORA MASSON. With Introduction and Notes. Fcap. 8vo, 1s. 4d.

POPE'S ESSAY ON CRITICISM. Edited by B. M. WANTILLOVE, M.A., Litt.D. With Introduction and Notes. Fcap. 8vo, 1s. 4d.

Uniform with the above.

SCOTT'S MARMION. Edited by Rev. R. P. DAVIDSON, M.A. Oxon. With numerous Illustrations. 1s. 4d.

"A very useful edition. The introduction is sufficient, and the notes are good. The illustrations are copious, and of a high character. . . . A capital book for regular use."—*Schoolmaster*.

DENT'S ENGLISH GRAMMAR OF PARSING AND ANALYSIS. By W. BRYANT. Fcap. 8vo, 1s. 4d. [Just published.]

DENT'S FIRST LATIN BOOK. By HAROLD W. ATKINSON, of Rosall School, and J. W. E. PEARCE, Head Master of Merton College, Sidcup. With twelve Coloured Illustrations by M. E. DURHAM. Fcap. 8vo, cloth, 2s. 6d. net. [Just published.]

CLASSICAL TEXTS.

CÆSAR'S GALLIC WAR. Books II. and III., in one volume. Edited by A. CROOM PATTERSON, M.A. (Edin. and Oxon.). With numerous Illustrations. Fcap. 8vo, 1s. 4d.

Uniform with the above.

CÆSAR'S GALLIC WAR, Book I. Edited by A. S. WILKINS, LL.D., Litt.D. Illustrated, 1s. 4d.

"There is nothing but praise to give for the matter and manner of the introduction and notes. . . . The illustrations taken from ancient monuments are excellent, and the imaginative frontispiece is very creditable. The book is cheap at the price."—*School World*.

THE TEMPLE SHAKESPEARE FOR SCHOOLS.

Edited by OLIPHANT SMEATON, M.A.

SHAKESPEARE'S JULIUS CÆSAR. Edited by F. ARMITAGE MORLEY, M.A., D.C.L. With numerous Illustrations. Crown 8vo, 1s. 4d.

Also Ready immediately for King's Scholarship Examination, 1903.
AS YOU LIKE IT. Edited by Miss FLORA MASSON. With numerous Illustrations. 1s. 4d.

Uniform with the above. Illustrated, each 1s. 4d.

Tempest. By O. SMEATON, M.A. **Macbeth.** By G. SMITH, M.A., LL.D. "Everything about this edition speaks of unwonted care. . . . The artistic merits are unique. The editorial matter is carefully arranged, and the notes are splendid. If this series maintains such high interest at so cheap a price, it will speedily oust many others which are comparatively dull and unattractive."—*School World*.

DENT'S FIRST FRENCH BOOK. Based on the Hölzel Pictures of the Seasons. By S. ALGE and W. RIPPMAHN. Eighth Edition, completing 32,000 copies (with the Addition of Five Simple Songs and Music). 1s. 6d. net.
